"The British people have borne patiently, with unequalled determination, the burden of two vast wars, the one at sea and the other in many widely separated theaters on land. Since the beginning of the war 160 enemy submarines have been sunk, most of them by the British. One and one-half million men are occupied to-day in manning and maintaining the British Navy and merchant marine. Britain has lost 3,817,000 tons of her precious shipping. The other Allies and neutrals have gained 1,208,000 tons. She can not replace her tonnage sunk, for two reasons—she is using her man-power to the utmost, not for her own interests, but in the common cause. In her shipbuilding yards two-fifths of the labor and machinery are required for repair work done as much for her Allies as for herself. Yet in four years by an almost superhuman effort she has increased the strength of her Navy by fifty per cent. This means that in spite of all other calls she has, during four years of war-strain, constructed the second largest navy in the world—that is, a new navy larger than any other save her original fleet."

Finally, he gives us a hint of how much we should have to do if America's share of sacrifice is to approximate Britain's, altho he hopes that America will never be called upon to bear so great a burden:

"Upward of 1,000,000 British soldiers have given their lives in the last four years. Last year alone her list of casualties—dead, wounded, and missing—aggregated 880,000. Her donation of men to the Allied cause exceeds 8,000,000. In proportion to her population she has given nearly three times as many men as Canada. If Canada had done as much it would have 120,000 dead. Even as it is, half of the men in the Canadian Army were born in Great Britain. If the United States ever equals Britain's contribution to date the American Republic will have nearly 16,000,000 soldiers in khaki, and nearly 2,000,000 Americans will have given their lives for the common cause."

THE TURKISH EMPIRE AND THE SUGGESTED NEW STATES.

THE FATE OF THE OTTOMAN EMPIRE

TURKEY'S SURRENDER has brought once more into prominence the ultimate fate of what Lord Beaconsfield once described as "an anomaly in Europe." For some time past most Allied publicists have been agreed that one certain outcome of the war was the relegation of Turkey, once more, to her natural position as an Asiatic state. The *London New Europe* has an article on Turkey's future from the "pen of a contributor who has unusually wide and thorough knowledge of the Middle and Far East," and *The New Europe* hints that while his views as regards Turkey in Europe are open to correction, his solution of the Asiatic-Turkish problem comes very near the ideal. Here are his proposals for dealing with all that is now left of Turkey's European territory, which once "reached the walls of Vienna":

"There is a short strip of country behind Constantinople which includes the important fortress town of Adrianople, which contains the venerated holy places of the Mussulman world. This part has to be severed from Turkey and partitioned between Greece and Bulgaria, so that the frontier lines between Bulgaria and Greece will be drawn from Enos following up the River Maritza, and the remaining part, including Adrianople, will be given to Bulgaria, on condition that administration of the holy places in Adrianople should be placed in the hands of a special council representing Moslem communities of the world."

Constantinople should be left to the Turks at least nominally, thinks this authority:

"The city of Constantinople, together with the Straits of the Dardanelles and the Bosphorus, should be left under the nominal suzerainty of Turkey, but under the *de facto* control of an international commission, such commission to include all the countries bordering on the Black Sea. That means Greece, Bulgaria, Roumania, Georgia, Armenia, and Turkey, as only in that case will the future control of the Straits be effective and just. The maintenance and nominal suzerainty of Turkey will be necessary for the respect of religious traditions of the Mussulman communities, which would feel very deeply the complete ejection of Turkey from Constantinople."

Turning to Asiatic Turkey, the territory in the hands of the Allies is first considered, and it is agreed that most of Arabia will remain under the King of the Hedjaz. Proceeding:

"Palestine would be a separate entity, under the protection of the Great Powers; Syria would be constituted as an independent kingdom, to be ultimately connected with Mesopotamia.

All the islands round the western coast of Anatolia should be given to Greece, as a vast majority of the inhabitants are of Greek nationality. Turkey proper would be constituted as a separate kingdom, comprising the entire territory of western Anatolia and have as its eastern frontier a line from Adana to Kaisaria, Tokat, Samsun on the Black Sea, with the ancient capital at Brusa, and Smyrna as a free port. This territory would be more than ample; as the purely Turkish race does not number more than 9,000,000."

Our author, to settle the Middle-Eastern question, of which perhaps the Armenian problem is not the least thorny, would draw upon the Russian Caucasus:

"The future independent Armenia would comprise the province of Erzerum, Bitlis, Van, Diabekar, Sivas, and the eastern part of Adana, with the outlet at Alexandretta, in addition to the province of Erivan and part of the province of Kars, with the exception of the districts of Olti and Ardahan in the Caucasus. Half of the province of Trebizond, including the town of Trebizond and west of it, would be placed under the Italian control—with Trebizond as a free transit port for eastern Anatolia and Persia. The eastern part of the province of Trebizond, which is the ancient province of Georgia, Lazistan, would be joined to independent Georgia."

One entirely new state should be formed, we are told, and placed under an American protectorate:

"The province of Baku, Elizavetpol, and Daghestan would constitute the independent state of Azarbaijan, with the capital at Baku, and all these three states of Georgia, Armenia, and Azarbaijan, together with Mesopotamia, also an independent state, would be placed under the American protectorate, as the most disinterested Power. This is the more important, as America is absolutely free from any traditions of rivalry in the Near and Middle East, which is not the case with Great Britain, France, Russia, and Germany. Such division is just, as it is proposed on historical, racial, and geographical lines."

SPITZBERGEN NOW BRITISH—Reviving an ancient claim, the British have taken over this arctic island to prevent Germany establishing rights of occupation. The *London Spectator* says:

"The British flag was hoisted in Spitzbergen on October 1. Our Government have apparently decided that the arctic islands, rich in coal and iron deposits which are being worked by a British company, can no longer be regarded as No Man's Land. The Germans and the Bolsheviks in the Brest Treaty coolly proposed to share Spitzbergen between them, and Germany had a wireless station there. Our interest in Spitzbergen is of very long standing."

MODIFYING THE "FOURTEEN POINTS"

A GENERAL AGREEMENT between the Government at Washington and the leaders of the Allies regarding the famous "Fourteen Points" seems at last to have been reached. Unlike the Germans, who swallowed—or profess to swallow—the Fourteen Points with a bolt, the Allies have found it necessary to "reserve to themselves complete freedom" on one of them and to give much clearer definition to another. They thus virtually reject the point which deals with the "freedom of the seas," and it was this point that the *London Saturday Review* had in mind particularly when it described the President's points as being "too vague to be quite intelligible." The Congress of the Allies at Versailles have redefined another of the President's points thus:

"The President declared that invaded territories must be restored as well as evacuated and freed. The Allied governments feel that no doubt ought to be allowed to exist as to what this provision implies. By it they understand that compensation would be made by Germany for all damage done to the civilian population of the Allies and their property by the aggression of Germany by land, by sea, and from the air."

This Allied emphasis on the reparation to be exacted from Germany follows a very general demand somewhat insistently urged by all classes of opinion both in France and England, where there is a tendency to refuse to recognize the President's distinction between the German Government and the German people. For example, the influential Paris *L'Action Française* remarks:

"We can not accept a distinction between the various forms of German government. We might conceive of privileges accorded certain German states provided they agree to break away from Prussia, but we will pay no premium to a democratic Germany at the expense of our own interests and future security. Not eighteen months ago, like the United States, but a thousand years ago, France exposed the German aggressions."

Allied opinion seems to hold that individual Germans who have committed the acts of devastation and rapine are as guilty as the Government which instigated or tolerated them. Mr. Stephen Pichon, the French Minister for Foreign Affairs, has told the French Senate that the Government is determined to

fix the individual responsibility for each German outrage, and he is reported by the Paris *Journal des Débats* as saying:

"The atrocities committed shall have other punishments than that of the moral reprobation passed by the world's conscience. We, with our allies, will take care to see that exact justice shall be executed, so that any possible repetition of such monstrosities will have vanished forever from a reconstituted world."

In the English press there has been for a considerable period no little condemnation of President Wilson's doctrine of "the freedom of the seas," a point which the *London Globe* roundly avers is positively detrimental to British interests. *The Globe* protests that support of President Wilson is not a test of British political orthodoxy, and proceeds:

"It has apparently been represented as our duty to strengthen the details of his policy, which has been declared the same as those of Great Britain, France, and Italy. We do not know how the delusion has arisen. There may be inspired or semi-official propaganda behind the backs of the British people of which they are ignorant and innocent."

"When pressed for an explanation, Americans refer to some stray sentence or some extempore effort of Lloyd George during his visit to American troops in France, of which reports vary. In any case we feel sure the British Prime Minister never contemplated committing himself so far, nor had he any authority to do so, as among the fourteen points is the 'freedom of the seas.'"

"This phrase is understood by its advocates as signifying that the British Empire, which owes its existence to the sea and which has just saved the liberties of the world by its sea power, is to renounce its birthright and surrender the one effective weapon at the very moment when all British people, and many people who are not British, unite in acknowledging that without such sea-power we and they would have been doomed in 1914."

"Germany must have won the war had the freedom-of-the-seas school, which embraced conspicuous members of the Potsdam party, carried the day the time they tried to force peace upon us by the ghastly and grotesque Declaration of London."

"To-day, apart from a handful of cranks and apostles, this heresy in this country has been reduced to total silence. If we hold a general election no candidate will be returned on this platform."

"Americans in Europe, who are infinitely more numerous than ever before, smile at the suggestion that Great Britain should be invited to commit national suicide at this moment of all others. They generously inquire: 'Where would the United States be in 1918 but for the British Navy?'"

SHALL I?

ONE THING THEY DON'T DO BETTER IN FRANCE.

"Hardly larger than a push car," the average French locomotive impresses an American railroad man rather as a watch-charm than as a locomotive.

FRENCH RAILROADS AND AMERICAN ENGINEERS

AMERICAN RAILROAD MEN who are using French railroads and their equipment found a good deal of trouble, at first, in adjusting themselves. French tracks, cars, locomotives, and operating methods were all strange to them, and in particular they could not understand the French custom of getting along with a thing that is good enough, even if something vastly better has been devised and is available. Americans like to be up to date, even if it involves what the French would call waste. How our men feel about it is shown in a letter from a practical railway man printed in *The Railway Review* (Chicago, October 19). Much of it is too technical to quote, but most readers of *THE DIGGER* can understand and appreciate the few paragraphs that we quote and condense as follows:

"The French equipment was quite a 'come-down' from what they were used to back in the States. To come over here and to climb upon one of these French locomotives was enough almost to break some of them. The majority of French locomotives, and especially the ones in yard service, are not equipped with air-brakes, having only a hand-brake, and that connected to only one pair of drivers; if the locomotive is equipped with a tender, the brakes are then on the tender instead of the drivers. The reversing gear is of the screw type. The throttle levers are of all types, and not connected in the same place on any two locomotives.

"After the first of the year I was called to my regiment and sent out to this place for duty with them. The work was soon too heavy for one locomotive, and we had to make arrangements for another one.

"This new addition arrived a few days after I did, and it surely was a sight to look at—hardly larger than a push car, and resembled a watch-charm more than it did a locomotive. It was entirely too small for the work it was to do; but it was the best we could get just at that time, so we had to make it do. The French equipment, as I have stated before, is not what our men have been used to. In doing switching, the switchman has to crawl under the bumpers and unhook the link from the hook, and then kick the cars. As the *wagons* (this is the name the French have for cars) have no brakes, handholds, or ladders on which to hold or stop a car with, they have what is called a 'shoe' to do the stopping with. As a car or cut of cars comes down the

hump a shoe is placed on the rail a short distance from where they want the car to stop. As the wheels of the car strike this shoe, they are locked and the car skids to a stop. How would such a method as this work out in the States? Not a success, I should say, and the French have found out the same thing. When the United States cars began to arrive, the French tried this system on them. They stopped all right, but also succeeded in tying up the yards for about twelve hours.

"The whistles are all very small and have a shrill sound. To hear one of these French hoppers calling for the block or board, one would think that he was in some kind of trouble. An American hopper would certainly be pinched if he should try to pull off some of the musical serenades in the States that these fellows do.

"All of the locomotive cabs over here are very small, and have hardly any room in them, while other engines have practically no cab at all, only a deck plate and a windshield. The French don't seem to believe in the idea of their engine crews sitting down, as there are no seats of any kind in the cabs of their locomotives, tho they have a few ten-wheelers of the American type built in 1900 by the Baldwin Locomotive Works."

In editorial comment on this letter, *The Railway Review* calls attention to the fact that the ancient type of some of the French railway equipment, of which the writer complains, is due to the French policy of keeping a mechanical plant in working condition as long as possible, instead of replacing it, as we do, as soon as it is out of date. The French are rather proud of their ability in this direction and would regard the fact that so much of their old railway equipment is still doing good work as a point in its favor. This, it need not be said, is not believed by Americans to be good policy. Says the editor:

"Obviously the extreme care devoted by the French in selecting and working the materials entering into the building and maintenance of locomotives is conducive to longevity, but that of itself is not a thing to be aspired to with too much zeal. Possibly American policies and practices have unnecessarily shortened the life of some of our equipment, but even if they have, we believe it is a fair question as to whether or not that result, after all, is not to be preferred to the prolongation, through painful years, of the life of cars and locomotives that should more properly be given place in a museum than out on

the line in active service. Emphasis to this thought comes from reflection as to what would be the degree of usefulness of any American locomotive of the Civil War period had it been maintained in such shape as to be in operating condition to-day. French locomotives of a corresponding age, apparently, are very common, but notwithstanding the admirable workmanship that has been expended on them in all these years, very serious doubt as to their utility can be raised.

"The letter portrays a condition to be endured only through the utmost necessity, which doubtless prevailed at that time, and in all probability still holds in many parts of the fighting area. To apply the circumstances to our own conditions, however, immediately vindicates the policy that American railroads have been following in having no hesitation in discarding the old for that which is new and obviously better. The Railroad Administration pursues a most commendable policy when it effects a classification of freight-car equipment on a basis that will very soon relegate the inadequate to the discard and bring that which justifies the expense to a condition capable of fulfilling modern transportation requirements. The same is true with respect to locomotives wherein a pretty definite line is drawn between those that have outlived their usefulness and those that are seen to be worthy of the expense of modernization. This principle, to be sure, is not new, but it has not been as uniformly and generally acted upon as we may well hope to see in consequence of the precedent which the Administration has established."

THE DEADLY FEMALE

WHEN KIPLING wrote his famous lines asserting that "the female of the species must be deadlier than the male," he was eugenically correct, we are told by Dr. O. C. Glaser, professor of zoology in the University of Michigan. In the department of eugenics which he conducts in *Good Health* (Battle Creek, October), Professor Glaser describes the results of genealogical studies made recently by Major Charles B. Davenport, which, he says, indicate very clearly that efficiency in fighting is far more likely to be passed along the maternal than the paternal line of the family. The genius of Caesar, the career of Napoleon, the brutality of Nero, are all traceable to maternal inheritance. "We are now quite safe in predicting some bloodthirsty sons," says Dr. Glaser, "when the gentle daughter of a pirate marries a Philadelphia Quaker." He goes on:

"Major Davenport's study is largely based on the family histories of thirty officers, of whom fourteen were primarily fighters, the rest explorers, inventors, diplomats, and administrators. His purpose was to find, if possible, some scientific basis for the selection of men likely to be successful—more likely than if chosen at random—in any tasks that it might become necessary to assign to them.

"Briefly, the outcome was that coolness under fire, bravery, spirit, and actual fighting capacity all come principally from the maternal side. The daughter of a first-class fighting man is more likely to have a first-class fighting son than her own father, and her own brothers rarely make names for themselves unless perchance their mother bequeaths the necessary *Wanderlust* and love of adventure—essential elements in the fighting make-up.

"What other traits follow the same rules of inheritance? . . . Color blindness is one; night blindness, a condition in which the victim can not see by the mild diffuse light of the night, and hence, as the song puts it, is afraid to go home in the dark; bleeding—the defect in which the blood lacks the machinery necessary for clotting; baldness—the virulent type; and near-sightedness, are all traits which follow the law of sex-linked inheritance.

"The essentials needed to synthesize a naval fighter are:

- "1. Love of the sea.
- "2. The wandering impulse; love of adventure.
- "3. Energy; love of activity; push.
- "4. Absence of fear.
- "5. Ability to command men.

"Of these, absence of fear should perhaps be placed first. It has been, naturally, a marked characteristic of all the great fighting leaders, and not infrequently has manifested itself early in life. At the age of six Admiral Perkins was tied in a sleigh and sent twenty miles in an emergency; at ten, Maffit traveled alone in stage coaches from North Carolina to White Plains,

New York; at ten, likewise, Admiral Winslow went to sea in a skiff with a young cedar for mast and sail. He was picked up by an incoming vessel and thoroughly enjoyed the cruise. At the mouth of the Mississippi, Farragut 'damned' the torpedoes, and at Manila, Dewey's calm was quite unruffled when he ordered: 'You may fire when ready, Gridley.'

"That the immediate maternal inheritance is chiefly responsible for all this is shown not only by the family records of those referred to, but also by genealogical investigation of the families of Bainbridge, who commanded the *Constitution* when she captured the British frigate, *Jara*, in the War of 1812; of Barney, who in revolutionary times took the sloop *General Monk*; of Cushing, who blew up the ironclad *Albatross*; of Paul Jones, certainly one of the greatest of all naval heroes; of Porter and of Lawrence.

"Energy, aggressiveness, an eager desire to get things done, characterize leaders of all kinds, industrial, administrative, professional, and artistic. The naval leader, however, has in addition to these an instinct to wander, and the biographers have much to say about the early search of their heroes for changes of scene and for adventure. The future commander is apt to 'run away' or to 'go to sea' in his teens. Such *Wanderlust* is most clearly of all the traits that go to make up naval leaders a sex-linked inheritance of maternal origin.

"The point to be kept in mind in dealing with inheritance of this type is the fact that the mothers of fighting men are themselves placid enough and give no outward signs of the qualities which, bequeathed to their sons, break out in startling and often ingenious deviltry. The same thing is true of the other sex-linked characteristics. The female, unless in rare cases she receives a double dose—one from each side of the house—is merely a carrier of the elements in question. A single dose of these same units, however, will convert any one of her sons into a fire-eater from Hades.

"Kipling was entirely correct. You can not tell what lies hidden beneath the placid exterior of the female. You must wait until the savagery of her sons becomes manifest. This, alas! still has certain racial advantages, but we are obliged to go Kipling one better. In order to insure racial preservation, the female not only must be deadlier than the male; she actually is deadlier, because you can not tell how deadly she is. The harmlessness of a camouflaged fighter of the first magnitude is only skin deep."

AN ALL-STRAPHANGER CAR

THE STRAPHANGERS, we are told, pay the dividends. This being the case, why not increase the dividends by abolishing seats altogether, making room for more straphangers? In sober fact, a "seatless car" is at this very moment being tried out in Rome, Italy, or so we are somewhat incredibly informed by an editorial writer in *The Electric Railway Journal* (New York, August 17). It has been seriously considered also in New York, we are assured; but the transportation authorities have been a little shy, possibly because, on general principles, Americans are regarded as less lamblike than modern Romans. The plan would "relieve congestion," we are told; possibly for the same reason that the sardine in the box does not feel congested—he doesn't have space for any feelings at all. Says the paper just named:

"Inquiry among transportation engineers develops the fact that the idea is not entirely novel and that it has had some serious consideration in New York City during the period just prior to the present war. The idea was abandoned largely because of the fear that the public and the regulating commissions would not take kindly to any suggestion which would be so directly opposed to the 'seat for every fare' slogan.

"The shortage in man-power has crippled the railways so much that any plan to increase the carrying capacity of city cars, especially during the rush hours, deserves consideration. A simple computation shows that the average 45-foot cross-seat surface-car will seat about forty-eight people and carry about thirty-three standees comfortably, giving a total of eighty-one passengers. However, with the car thus filled the average speed is reduced greatly, due to delays in loading and unloading. The same car with all seats removed would carry a hundred people all standing, if an average of 2½ square feet of space be allowed for each person, and they would not be crowded as closely as the eighty-one people were in the car having seats."

THE SOLE TEST OF SANITY

THE SOLE DIFFERENCE between a sane and an insane man is that the former retains the power of adapting himself to his circumstances, while the latter has lost it. This is the definition of a contributor to *The Hospital* (London, September 14), who writes under the title that appears above. So long, he assures us, as we are able to alter our actions to suit any change in ourselves or our environment, so long we are mentally normal. We effect such alteration either by changing our circumstances, as when we put on more clothes in cold weather, or by changing our own actions, as when we go around a hole to avoid falling in. The madman fails to make adjustments of this kind, and he does not recognize such failure as an error, but persists in it. Here, the writer tells us, is where the boundary lies between mistake and madness. Insanity might be defined as permanent error. We read:

"Action is the adaptation of oneself to one's circumstances; and needs modification according as the circumstances change, and according as the self changes; and as long as we retain the capacity of altering our action so as to suit any change that may occur either in our circumstances or in ourselves, so long we retain our sanity.

"Madness is the loss of this power of adapting our action to suit our circumstances. If a man's circumstances change in such a manner as to affect his welfare, he will, as long as he is sane, alter his action so as to adapt himself to the change. If the weather becomes cold, he will light a fire, or put on more clothing, or both; and *vice versa* if the weather turns hot. If his income increases or diminishes, he will increase or diminish his expenditure accordingly. If a new law that affects him is passed, he will alter his conduct so as to conform to it. As his children arrive at an educable age, he will take measures for their education. . . .

"Normal action is such as to adjust the relation between the self and the circumstances, either by altering the circumstances, as when we put on more clothes in cold weather; or by altering ourselves, as when we learn a new language on going to a new country; or by altering our action, as when we stop at home and go to bed instead of going to business when we find ourselves suffering from fever. The relation between the self and the circumstances is thrown out of adjustment whenever there is a change in the self or a change in the circumstances, or a change in the relation of the one to the other, and every such change in the relation must be met by a readjustment. . . . Action which brings about or maintains the due adjustment of the relation between self and circumstance is sane action, and sanity consists in action of this kind. Action which disturbs the relation between self and circumstances and throws them out of adjustment is erroneous action, and may be merely sane mistake or may be mad action.

"There is, therefore, a certain similarity between error and madness. All mad action is erroneous, but erroneous action is not necessarily mad, and it is very important to find the true distinction between them, for in practise they are often confused. The distinction is this: a sane person who does a mistaken act recognizes, by the failure of the act to achieve his purpose, that the action is mistaken, and alters his mode of action accordingly. At the least he refrains from pursuing that mode of action as soon as it appears manifest that it will not achieve his purpose. The madman who does a mad act does that which is mistaken—that which will not achieve his ultimate purpose, that which fails to adjust or readjust himself to his circumstances or his circumstances to himself and his requirements. But when his action fails to achieve his purpose he does not change it. He persists in it. . . . This is the important difference between sane mistake and madness. The one can be corrected by the

actor, the other can not; and by observing whether the action is, on the face of it, useless, undesirable, or harmful, or whether, if not so on the face of it, it is persisted in even after its ultimate uselessness, undesirability, or harmfulness is become plainly apparent, we may judge without fail whether the action is sane or mad."

ROLLING DOWN THE SNOW

IN SOME NORTHERN TOWNS the snow is not cleared away from the streets after a heavy fall; it is rolled down instead. In a cold climate this makes a smooth, hard road. Charles A. French, the city engineer of Laconia, N. H.,

By courtesy of "The American City," New York

THE MACHINE THAT PACKS SNOW INTO A HARD, FIRM ROAD.

writes a letter to *The American City* (New York, October), telling how the thing is done in his own town. In the old days, New England towns simply floundered about in the snow until the ordinary traffic had packed it down. Laconia's use of a powerful roller simply hastens and systematizes the hardening process. Evidently the plan is not adapted to streets where there are trolley-tracks or to climates where the snow is soft or begins to thaw soon after it falls. Writes Mr. French:

"Because of the heavy falls of snow which occur in this climate, and the necessity of keeping our roads open for travel, Laconia has designed a snow-roller which serves the purpose admirably.

"These rollers consist of two cylindrical wooden drums, 6 feet 4 inches in diameter and 5 feet in length, mounted on an oak frame and surmounted by seats and tool-box as shown in the photograph. . . .

"These rollers, which have been used by our department for several years with good success, have an effective snow-compacting width of about twelve feet. They are used mostly for breaking country roads and are sent out when there is a snow-fall of four inches, or even less when it has drifted.

"One man drives the four or six horses, and other men are carried on the roller and sent ahead to shovel when drifts are encountered. The shovellers also level sliding places and chuck-holes, and when the roller passes over it compacts the snow so that it will hold a team, and the road needs no more attention until the next storm. . . .

"In the spring, when the snow begins to thaw, some of the deeper drifts have to be cut out with a road-machine, which we mount on runners. It is surprising to see how much is saved in hand-labor by this method.

"In the city, after the sidewalks have been cleared by the sidewalk plows, the ridge left at the edge of the sidewalk is spread over the street by means of the road-machine mounted on runners, and then rolled by the snow-roller. In cold weather we are able to use four-ton motor-trucks on these rolled snow-roads, but not when the snow is deep during a thaw. They are also much appreciated by the farmers and lumbermen, who find it much easier to haul larger loads on the firm, hard road left in the wake of the snow-rollers."

WOODEN-LEG TROUBLES

THE WOODEN-LEG PROBLEM promises to be one of the many inconveniences we must inherit from the mad dream of the Hohenzollern family that they could whip the world. A wooden leg must fit or it will cause trouble, as our crippled soldiers are now finding out, and an editorial writer in *The Lancet* (London, September 21) tells us that fully

Copyrighted by Underwood & Underwood, New York.

IN THEIR COMRADES' SERVICE.

Wounded men making artificial legs and arms for their fellow fighters.

half of the men supplied with artificial legs have returned to the hospital with complaints that they do not fit. This is despite the fact that special hospitals have been organized to care for this branch of the work. The first fitting of an artificial leg, the writer tells us, is only the beginning. In almost every case the limb requires readjustment, within a few months, owing to alterations in the stump. These changes go on for some time, so that other successive adjustments are necessary, and then repairs, and finally replacement of the whole leg. All this work requires an elaborate organization and must be done by experts. Says the *Lancet* writer:

"Very few medical men have sufficient experience of limb-fitting, and it is to be feared that many instrument-makers who describe themselves as limb-fitters have no real experience of the work. The results are already to be seen in the complaints that appear in the press of the unsatisfactory nature of the limbs supplied. It may be confidently stated that on the whole the artificial legs that have been supplied to soldiers and sailors in this country are as good as any that can be obtained, and that in the first place the fitting of the limbs has been satisfactory. In almost every case if the limb becomes unsatisfactory it is because it no longer fits. Unfortunately, when such an ill-fitting limb comes before a medical man, he, being inexperienced in the work, may be led to believe that the limb has been wrongly designed and constructed, and he is sometimes supported in this belief by a local limb-maker, who can not be acquitted of the desire for a condemnation of the original limb and an order for an entirely new one of his own make. It is to be feared that this trade interest has up to now entered to some extent into the reports upon limbs given by the small local makers."

It is now generally acknowledged, the writer goes on to say, that the American type of artificial leg possesses a mechanical superiority over the older English type, and that only the problem of material for use in its construction remains. We read further:

"Perhaps the time has come when a single pattern of artificial leg might be adopted and all makers obliged to conform to this. The question of discarding an ill-fitting limb and constructing a new one would disappear, for makers would have no excuse for prescribing a new one of the same pattern as the old one. The use of one standard type, allowing always for variations in the level of amputation, would simplify the problem of readjustment and repairs, but not solve it. Much would remain to be done, chiefly, however, in the direction of education. Certain members of the medical profession must educate themselves in the fitting of limbs, and local makers must be similarly instructed in the repairing of the standard type and in refitting the buckets. The men themselves must be educated to know that when the limb becomes unsatisfactory or uncomfortable it is because it no longer fits, and the public, and employers in particular, must be made to understand that readjustment of artificial limbs from time to time is essential. All this can best be carried out at the large limb-fitting hospitals, which should become centers of education in all that appertains to artificial limbs."

RATS IN THE TRENCHES

THE MEN IN THE TRENCHES have had to fight the rat for the same reason that we often have to fight him at home—namely, that he lives on precisely the same food as man, and that we carelessly leave it about where he can get at it. The whereabouts of man thus becomes the rat's happy hunting-ground, and the fact that he is an unwelcome guest does not seem to worry him in the least. Like the famous young man at the party, he

"... eats just as hearty
As if he'd been really invited."

Moreover, the rat is no fool, and efforts to get rid of the uninvited guest must be cunningly devised, and boldly carried out, to be successful. He and his wife not only stay, but they raise large families in brief spaces of time. This is what has happened in the trenches as it has happened in cottage and mansion. The moral is, we are told by Prof. P. Chavigny in the *Revue Générale des Sciences*, that we should beware of leaving waste food about—which is just what Mr. Hoover has been telling us. Says *Nature* (London, September 19) in a review of Professor Chavigny's article:

"Soon after trench warfare began the trenches were invaded by immense numbers of rats, which caused great damage and almost intolerable annoyance at night. Various measures, such as the use of poisons, infective virus, traps, terriers, etc., were taken to destroy the rats, but with very poor success; and it is shown that this was due to a lack of knowledge of the natural history and habits of the animals concerned."

"The rat which invades trenches is nearly always the ordinary brown or Norway rat, but in the case of dry trenches the black rat may be present. These rats sleep in places of retreat or holes during the day; it is at night that they cause all the trouble. The intelligence which they display in overcoming obstacles and avoiding traps, poison, etc., is extraordinary; and it is evident that they possess some means of communicating their knowledge to one another, since any particular means of killing them soon becomes of little use. Professor Chavigny lays special stress on the fact that they live on exactly the same food as man, and cooked in the same way. Of raw food they can make scarcely any use. For instance, they simply starve if given raw barley. They will gnaw and destroy almost anything that their teeth can penetrate, but what they actually live upon is simply the ordinary human food which they are able to reach, and particularly the remnants from meals. A rat consumes about thirty to fifty grams of food daily, and starvation kills it in about forty-eight hours. It neither lays up stores of food nor hibernates in winter."

"As ordinary brown and black rats will not breed in captivity, most of our knowledge as to their rate of reproduction is derived from observations on the albino variety, which breeds readily

in captivity. The period of gestation is twenty-one days, and the minimum time between two litters from the same female is sixty-two days. She may have as many as five litters in a year. A litter consists of about ten. A female at the age of two and a half to three months is capable of producing a litter. The young are very efficiently tended, so that scarcely any die. A simple calculation gives the surprising result that a single pair of rats is capable of producing twenty million descendants within three years.

"Reproduction ceases during cold weather, and rats can not reproduce themselves at all in cold climates. In temperate climates reproduction is at a standstill during the winter. The most important factor limiting reproduction is, however, the supply of nutriment. A female receiving only sufficient food to keep her in good condition does not reproduce at all, whereas with superabundance of food reproduction proceeds at its maximum rate.

"In his second paper Professor Chavigny describes and discusses the various methods used for destroying rats, and shows that the disappointing results obtained are due to neglect of the fact that multiplication of rats is simply the result of scattering human food within their reach. The essential step in controlling the rat invasions is to prevent the scattering about of remnants of food. For this purpose it is recommended that, where possible, all waste food should be collected and used for pigs. Where this is not possible the waste food should be thrown into pits and covered with earth before nightfall. Professor Chavigny proposes also that placards should be posted up saying that 'he who sows fragments of food will reap a harvest of rats.'"

DISASTROUS EMOTIONALISM

THAT "THE EMOTIONAL TEMPERAMENT has been responsible for most of the great disasters from which the human race has suffered" is the conclusion of an editorial writer in *The Hospital* (London, August 10). The emotional person, we are told, exaggerates to the point of extravagance; he is untruthful, a natural demagog, lacks self-control, is in too great a hurry, "boils over" easily, lets loose forces that he can not control or direct, and so is "the most dangerous person in the world." He has been responsible alike for the horrors of the Spanish Inquisition and for the financial wreckage of the latest stock-jobbing scheme. Our cousins overseas may read this indictment with complacency, for the writer takes pains to assure them at the outset that the English are the most unemotional persons in the world, and he holds up for our admiration the butler in the story who performed his duties calmly at the dinner-table and then went home to save his house from the flames which he had known all the time were devouring it. Whether a little emotionalism might not have been better for the house here, even tho at the expense of the dinner, might seem arguable. But hear the English physician's indictment of emotion:

"Emotion is exprest mainly in speech and in action, and in both ways the emotional person expresses his emotions readily, with freedom, and with exaggeration, often running into extravagance. In speech, he is prone to the use of strong expressions and superlatives. Emotional persons are perhaps more numerous than they used to be, and form a larger proportion of the population; at any rate, the misuse and degradation of strong and superlative expressions are become much more frequent of late years, possibly because of the permeation of the country [in Britain] by the Celtic fringes. Such words as awful, perfectly, infinitely, absolutely, frightfully, and so on have been so misused and vulgarized that they have lost their intensive meaning, and have almost lost their meaning altogether. The emotional person uses them perpetually. . . . but his emotion evaporates in talk, and his performance falls far short of his declared intention. He is apt to say more than he means, and much more than he will stick to.

"For the emotional person is by nature untruthful. He is untruthful in both ways—that is, he says carelessly and unthinkingly what is not in accordance with fact, not recognizing or not admitting the desirability of truthfulness, not caring whether what he says is true or not; and besides this, and no doubt on account and by reason of this, he often lies in the second of Dr. Johnson's senses. He lies, and he knows he lies.

His assertions are, like all his expressions, exaggerated; and they are variable. . . . He is constitutionally inaccurate. You can not believe a word he says.

"But his use of emotional speech is so frequent that he is fluent. . . . and his fluency often rises into eloquence. The emotional races, the Irish especially, are renowned for their eloquence. We are far from saying that eloquence is restricted to the emotional temperament. Were we to say so, the single case of John Bright would be enough to refute us; but undoubtedly eloquence and even oratory are frequent among the emotional, infrequent among the self-controlled, and the self-contained. The emotional orator easily becomes a demagog.

"In action, the emotional person is impulsive. Wanting as he is in self-restraint, he does not wait to act until he has balanced the advantages and disadvantages of action. He is wanting in circumspection and deliberation. The path from feeling to action is short-circuited. As the emotional can not bear pain without howling, so they can not bear suspense, which is a kind of pain, without a struggle to relieve it. They can not wait. Accustomed to express their emotion as soon as it is felt, they must express it so in action as well as in words, if it is susceptible of expression in action. They want results at once, and they think that, even in the most complicated affairs, results may be attained immediately. They rush direct for their goal, not recognizing that in complicated affairs, and especially in social affairs, direct action is usually the direct route to failure. They are too impatient to think out in detail an elaborate scheme requiring time to bring it to maturity, and needing scrupulous attention to detail to insure its success, so they rush at some crude project, and are content to take credit for good intentions, and to lay the blame of failure upon those who have to execute an impossible task.

"Emotional people act upon impulse. This does not necessarily mean that their action is sudden or abrupt. . . . The mark of impulsive action is not suddenness or abruptness, but want of due estimation of the advantages and disadvantages of the act. The emotional person is impatient. His emotion burns to express itself in action. He is long accustomed to let his emotion boil over in action, and he can not wait to consider, so his action is immediate and direct. . . . The emotional person is, in fact, very generally out of his depth. With a light heart and an ignorance of consequences he lets loose forces that he can not control or direct. He launches crude and undigested schemes that produce all kinds of results except that which he intended. The most dangerous person in the world, the fertile source of incalculable and innumerable mischiefs, disasters, and injustices, is the well-intentioned enthusiast who is also an emotional person.

"Enthusiasm is the great motive power of humanity, and without it no great unselfish project was ever carried through. Enthusiasm held in hand by self-restraint and guided by sound judgment has given us every great discovery, every difficult invention, every new religion, almost every great benefit that humanity has received, from geometry to porcelain, from the theory of gravitation to the steam-engine, from natural selection to electricity; but the unrestrained and unguided enthusiasm of the emotional temperament has been responsible for most of the great disasters from which the human race has suffered."

MINING THE WAR-ZONE—Europe's battle-fields, says an editorial writer in *The Mining and Scientific Press* (San Francisco), have been showered with steel and iron and brass from shells, exploded and unexploded, and from hand-grenades. He goes on:

"Much of this metal will be removed as a necessary preliminary to the resumption of peaceful pursuits. The quantity of metal is so great that it would be a source of annoyance, and even of danger to the tiller of the soil. A systematic sweeping, so to speak, of all the bombarded regions will be necessary. A French engineering journal describes an apparatus which, though created for this special purpose, can be applied to other uses, for it will indicate the presence of steel and iron not too deeply buried in the soil. This, however, is a slow way to proceed where long-continued bombardment has literally filled the soil with metallic fragments. Methods of salvaging are contemplated that involve passing the soil through plants for recovering the metal, and returning the soil to its place leveled and ready for tillage. It is also pointed out that the concentration of fixed nitrogen in these battle-field soils, resulting from the enormous quantities of explosives used, will make these areas exceptionally fertile."

LETTERS - AND - ART

SOME OF RUSSIA'S "YOUNG BARBARIANS" IN ART

THO BOLSHEVIK RUSSIA may support the fine arts and their producers with the same vehemence they apply to other endeavors of their own, they do not altogether inspire confidence in the breasts of their beneficiaries. For that reason America may profit where Russia fails. Two refugees have lately come among us from this uncertain land who

"If Serge Prokofieff be an *enfant terrible*, he is at least a most engaging one. Of the blond Slav—not Turco-Slav—type, tall, slender, distinguished, with honest gray eyes and a forceful, spontaneous manner, there is something prepossessingly direct and genuine about this composer in his twenties. When the writer made his acquaintance at the home of Adolf Bolm—who knew every one worth knowing in the prerevolutionary Petrograd world of art and music, and to whom temporary exiles from what might now be called 'Unholy Russia' naturally gravitate when they reach New York—he found no difficulty in inducing Mr. Prokofieff to talk of present-day musical conditions in his native land."

These conditions seem to be among the redeeming traits of Bolshevism, Mr. Prokofieff told Mr. Martens:

"Russia is a land of paradoxes. While the state of affairs in general grows darker and darker, and the whole social and economic equilibrium of the country has been overturned, one might think that the present Government, which I am convinced can not endure, and which is part and parcel of the existing chaos, would be the last to give time and money to the arts. And there we have one of the paradoxes in question. It is the Bolshevik Government, under which a clean collar has become a symbol of imperialism and the hall-mark of a *bourgeois*, and under which I found it necessary to wear a red shirt in Petrograd to show that my heart was not black—from its point of view—that is providing liberally for Russian art and artists."

"The Bolshevik Government keeps all the ex-Imperial theaters running in Petrograd and Moscow, and pays the artists and musicians well. The former 'Court Orchestra' plays on Sundays in what used to be the Imperial Chapel as before, under the name of the 'State Orchestra,' Kousswitsky directing, tho the Imperial Intendant, General Count Stachelberg, has disappeared. While I was in Petrograd last year during the season, there were sometimes as many as three important concerts given in the same hall the same day, and I had to wait a month for a hall in which to give a piano recital."

"Yes, these same Bolsheviks who seem to regard cleanliness and the little decencies of life as the sinister stigmata of reaction, are paying distinguished artists big salaries, 10,000 to 25,000 rubles; are paying for the production in sumptuous style of new operas, ballets, dramas; have made the famous painter Benoit an unofficial Minister of Fine Arts—for they say that artists work hard and are a genuine source of national wealth and glory. Their political principles and the application they make of them I can only condemn, but with their views regarding the fine arts I am heartily in accord. Of course, this active musical and theatrical life is more or less intermittent; and there were months when, during party struggles for supremacy, all theaters and concert-halls closed at nine, and the entire absence of police control exposed any one who ventured to use the streets much after that hour to robbery and assassination. It is a pleasure for me to think that the very valuable library of old music, much of it in manuscript, at the Petrograd Conservatory, has been safely removed to various central towns, where it is preserved."

Prokofieff, "fantasy composer," as the Boston *Transcript* calls him, might well help introduce Boris Anisfeld, "fantastic painter," also driven from Russia by the disorders of political revolution. Their long pilgrimages across Siberia and the Pacific merit for them whatever tranquillity their art allows them among us. Anisfeld's presence may help to recall what was perhaps but lightly noticed at the time—that he shared with Bakst in designing scenery and costumes for several of the Russian ballets disclosed here. Anisfeld, as quoted by Mr. Christian Brinton in the exhibition's catalog, disclaims belonging to any school "I strive not to be original, but merely to be independent, and to express myself in the most congenial manner of which I am capable." The public in Russia no longer laughs when he exhibits, "for we have to-day in Russia many artists who are more extreme than I. We call them, as

Courtesy of "Musical America," New York.

ONE OF THE RUSSIAN FANTASISTS.

Serge Prokofieff, who is introducing his own compositions at recitals here, having found Red Russia too red even for his advanced views.

through their art tell us something of the ferment of Russia, which indulges in all kinds of topsyturvydom. Prokofieff, the musician and composer, and Boris Anisfeld, the painter, are here with notes and pigment to shake us out of all ordinary and commonplace habits of esthetic emotionalism. It is perhaps fitting that when Anisfeld's pictures were set on exhibition at the Brooklyn Museum a week ago, Prokofieff should be on hand to assist at the inauguration with performances of his own compositions, and, too, that Adolf Bolm, formerly of the Diaghileff ballet, should dance to the broken measures of this new rhythmic to show that old laws, whatever the medium of expression, are held in defiance. Prokofieff is still in his twenties, but as long ago as 1913 he was said, so Frederick Martens tells us in *Musical America* (New York), to have "tweaked the ear of the pedagogue and warmed the cockles of the progressive musician's heart." More than that, his "'Scythian Suite' drove Glazounoff from the hall in which it was being performed," and raised the cry of "futurist," "barbarian," "*enfant terrible*." Mr. Martens favors us with introduction:

you know, the 'young barbarians' and some of them certainly seem to merit the term." Mr. Brinton speaks of Anisfeld's eclecticism:

"In the current exhibition you will be able to follow in its varied aspects the esthetic evolution of Boris Anisfeld. You will note its formative stages wherein he pays tribute to the sensitive Whistler and the serene, sumptuous masters of the Renaissance such as Il Tiziano. You will see its more advanced phases wherein he recognizes—as most modern painters have been compelled to do—the rigorous abstraction of Cézanne and Picasso. You can, if you are so disposed, trace the gradual progress of the artist from a more or less free interpretation of fact to a purely inspirational conception of form and color. Responsive tho he is to that which attracts him in the production of past or present, the achievement of Anisfeld offers an independent contribution to the shifting panorama of contemporary painting. At its best it reveals a chromatic opulence as rare as it is personal, and a sense of rhythm which is typically organic and individual.

"Despite its seeming complexity, there is something direct, instinctive, and elemental in the work of Boris Anisfeld. It displays to an uncommon degree that unity of mood and manner without which any esthetic expression must assuredly fail of effect. This art is a product of emotion rather than reason and observation. Typically Russian in their mysticism and power of psychic evocation, there is a festal, carnivalesque quality to these freely brushed pictorial syntheses and these gleaming little water-color panels. Lacking, if you choose, that sober, and sobering, stolidity to which we are accustomed, these paintings appeal primarily to our creative and imaginative sensibilities. It is easy to contend that a certain proportion of this work is fantastic in character, that it has no basis in actual fact, yet you can not deny that it possesses the secret of suggestion, that it makes for passion and aspiration.

"When confronting the production of Boris Anisfeld and kindred apostles of the new school of decorative idealism, it is well, for the time being, to forego reality and resign oneself to the subtle potency of the spirit and the senses. The art which endures longest is that which, other elements being equal, displays the superior measure of emotional intensity. And we can scarcely charge the latter-day Slavs with being deficient in emotional intensity."

USING UP STAGE WAR-VILLAINS—The progressive stimuli of the war have been such that the writer of a war-play in London, Mr. Walter Melville, does not trust his vehicle without the assistance of five villains. That the war must be near its end seems to be evidenced by the way material in the shape of German spies is being used up on the stage. The London *Times* speaks of the latest Lyceum melodrama, called "The Female Hun":

"Villain Number One was a butler, with the suspiciously English name of *John Brown*, who only survived through one act to be shot as a German spy in the second. Villain Number Two was a terribly dull person who gave himself away at every turn, but was lucky enough to be allowed to continue his villainy until the last act. Villains Numbers Three and Four, apparently from a German submarine, wandered at random about the East Coast at dead of night. But Villain Number Five, the 'Female Hun,' was Mr. Melville's superb creation. A tall, statuesque person, she dominated the proceedings throughout until the unfortunate moment at the end of the third act, when she was shot by her own husband, a British general, a very important person, whom the Secretary of State for War visited at his country seat at midnight to discuss with him a plan of attack. Despite his rows of ribbon, the general was one of the most unlucky persons in the Army. To have his wife and his butler denounced as German spies within the space of half an hour must have been a blow, but it is a tribute to the British Army and its chiefs that not even these disasters broke his proud spirit."

A NEW FRENCH LANGUAGE IN MAKING

A GOOD WAY TO JUDGE the mentality of the German and French armies is through the imaginative quality of their slang. In our issue of October 5 we saw that this quality was mainly lacking in words so employed by the *Boche*. A carefully compiled selection of the *argot* of the *poilu* shows that the French reputation for intellectual keen-

"THE BLUE STATUE."

A picture by Boris Anisfeld that was the sensation of the Vienna Secession in 1908. It is, says Mr. Christian Brinton, "remarkable for its sumptuous romantic appeal."

ness is not misplaced. The book that gathers up these words of the trench claims more reliability than the earlier lists much bruited in newspapers. These words, the French soldier protested, were "the invention of the *civelots*"—a word that the London *Times* thinks in itself one of "sterling formation, if ever there was one." The French soldier, it observes, is a "civilized being, not a strange animal speaking by miracle a strange tongue." The author of this new book, "*L'Argot de la Guerre*," is Albert Dauzat, who has "consulted the soldiers themselves, not his imagination and the most recent dictionary of prewar *argot*." He resorted to the novel method of applying to the soldiers through the *Journal de Suzette*, the name given to the *Bulletin des Armées*, and from them received some two hundred more or less comprehensive vocabularies. With the soldiers' own glosses and definitions, and, continues *The Times*, "on the basis of this most valuable evidence, he has given us the first scientific account of a phenomenon which will, without doubt, profoundly modify the French language in the future." We read on:

"In one respect his analysis confirms the protest made by the soldiers against the invention of the armchair journalists. Tho one-third of the words with which he was supplied are certainly new, these are in the main multiple surnames for new things. The traveling kitchen, the steel helmet, the gas-mask have, for instance, each been baptized some twenty times. These nicknames are often extremely witty, but they are too witty to become real words. And perhaps the only real words among all these names are the simplest. *La cuisine roulante* becomes simply *la roulante*, as the name for soup is *la bouillante*. The element which makes the thing new and important is thus immortalized. On the other hand, of the manifold names

applied to the steel helmet, hardly one indicates the material of which it is made. All the familiar Paris words for hat do duty, but not one is really as adequate to the innovation as the English 'tin hat.' Remarkable, however, among the new words is *Rosalie*, the bayonet. It is by far the most common term for that weapon in use among the soldiers, and yet, according to Mr. Dauzat, it is definitely known to have been originated by one who, in the view of the French soldier, is reckoned among the *bourreaux du crâne*. Since any one who writes from the rear about or for the front belongs, in the sensitive judgment of the soldier, to that category, it implies no great disrespect to Mr. Théodore Botrel to declare that the success of his invention—*Rosalie* was launched in a song of his which appeared in the *Bulletin des Armées* in the autumn of 1914—is little short of miraculous. It is the only creation of the civilian which has gained currency among the troops. . . . Nearly all the Paris argot has become current, and one of its most admirable locutions—*l'en fais pas*—is already classical. Much of the eastern garrison slang comes from the same source, for the Parisian elements were always strongest in those corps. But, in spite of this, many of the commonest, and therefore most intriguing, words are not particularly Parisian. Thus, for instance, *pinard*, wine, was all but unknown in Paris before the war, yet it is now perhaps the most famous word in the whole soldier vocabulary. *Pas de pinard, pas de poilu*. The origin of the word is not far to seek. The second syllable is an orthodox ending, and *pinard* is the name of a well-known small Burgundy grape. More difficult is the case of *gniole*, brandy—the correct spelling, according to Mr. Dauzat, is *niôle*—which is only less common than *pinard* in proportion as the occasion for its employment is less frequent. *Gniole* was also unknown in Paris before the war. It is a Lyons word of at least fifty years' standing, and is apparently derived through the Savoy patois *niôla* from *nebula* by a neat interchange of cause and effect. Stranger still is the history of another famous, non-Parisian word, *maous*, meaning big. Mr. Dauzat has tracked it down through *mahou* (heavy, in the patois of Anjou) to *mahoud*. *Mahoud* is an adjective formed from the proper name Mahault, which was in the fifteenth century the name given to the clumsy bird, the goose, as the fox was called Renard. It is simply a variant form of the name Mathilde."

Some old notions about words seem to be upset by this new work. For example, *marinite* for a certain caliber gun instead of being a new word is to be found in a military dictionary published in 1758; but the writer ventures the observation that "were it not that Mr. Dauzat tells us that the tradition of the word had been preserved in the military colleges, we should have been inclined to believe that the word had been invented a second time." Also:

"*Barbaque*, which has now largely supplanted *bidoche* and become the normal word for meat, whereas in the past it was opposed to *bidoche* as bad meat is to good, remains something of a mystery. It is suggested that it comes from the Roumanian *berbec*, a sheep, and dates from the Crimean War, when the troops had to subsist chiefly on scraggy Wallachian mutton; on the other hand, we feel that our own word barbecue, which was probably taken by the buccaneers from the Spanish, should yield some solution of the curious word. Another word to which Mr. Dauzat can supply no key is *cléber*, which means to eat. It has a shade of meaning which distinguishes it from the more ordinary *bequeter*. *Bequeter* means to eat in the ordinary routine; *cléber* means to eat after one has been almost or quite starving. Possibly, in the usual evolution of such words, the distinction has by now disappeared. It certainly existed a year ago, when it was made clear to the present writer, and it gives force to the explanation then proposed, that this word also belongs to the soldier slang of the First Empire. *Kléba* is the Russian for bread, and the starving soldiers in the retreat are said to have called out '*Papa, kléba!*' to Napoleon."

Some of the strange words now come into general use are noted:

"*Billard*, for instance, has two definite and common applications: in the military hospital it is the operating-table, at the front it is No Man's Land. It would be hard to decide which turn of sense displayed the more *macabre* humor. *Tacol* means both a clanking motor-car, and hence a light military railway, and brandy. In the first sense it was a Parisian word, in the second peculiar to the colonial armies. When it came to be used

in both senses throughout the Army in 1916-17 the confusion was found intolerable, and *gniole* gradually supplanted *tacol* in the second sense. *Trèfle* and *perlot* as names for coarse tobacco are giving way to the expressive and Rabelaisian *gros cul*. *Pou* was found to be too particular and probably too serious a word for the vermin with which the soldier had to contend. *Toto* is the universal term, which, as Mr. Dauzat neatly shows, was probably taken by the troops in the Champagne direct from the peasants there. *Panam* (Panama: Eldorado) has now completely replaced the familiar *Pantruche* as the Parisian's name for Paris; *cuisancier* is replacing *cuisot* and *cuisance*. *Bourrin* (from *bourrique*, the patois word for an ass in Charente and the Vendée) is now the general word for horse, at least among the cavalry and artillery. Finally, Mr. Dauzat omits to note that the famous word *as* (first the crack cavalryman, now the virtuoso airman), which has now passed into English, has lately acquired a derogatory nuance, a touch of the implication of *jeune premier*, so much that when an artilleryman, in sincere admiration, called a member of a bombing party an *acc*, he had great difficulty in persuading the bomber that he had not been insulted."

NO ART MATERIALS FROM GERMANY

AMERICAN ARCHITECTS have been the class owing most perhaps among our art-workers to the inspiration and practical teachings of France. It was they, too, who began the earliest measures for relief of their fellow art-workers there when the Hun came and despoiled their country and ruined so many of their lives. So we should expect to see these same architects forehanded in meting out punishment to the despoiler. The Architectural League has put into words what the artists of the country may be depended on to carry out, to no small displeasure, it may be imagined, of the Ravager. This is the pledge: "I do hereby pledge myself not to use German-made material in my office as long as I live, so help me God!" Every architect, artist, draftsman, and engineer in the country, says the *New York World*, will be asked to sign it. The Architectural League is reported to have the support of the Society of Illustrators, the American Academy of Design, the Arts Students' League, the Bureau of Pictorial Publicity, the American Guardian Society, and the Brooklyn Institute of American Architects. Prof. W. A. Boring, of the Department of Architecture at Columbia, is quoted as saying:

"I would go still further. For every dollar of drawing material we use, we use \$500 worth of construction material. Such things as hydrocarbonie waterproofing, that were formerly sold at ridiculously high prices by German firms—and, mind you, the material was made from American raw products—could easily be manufactured by Americans."

"It is about time that Americans woke up to the fact that it is necessary for us to be independent industrially as well as politically. We do not want Hun-made products when we can get American and Allied-made material."

Harry Van B. Magonigle, president of the League, is reported as saying that Germany's prestige in trade is due to her underhand methods in foisting goods upon the dealers, and he avers:

"If every one of the users of drawing material makes it plain to his dealer that he will not use German-made material, all the Hun duplicity in the world will not be able to sell one German-made pencil or one sheet of tracing-paper."

In discussing ways and means of helping the American manufacturer perfect his product so that it would excel the German product, Mr. Magonigle advises that:

"An advisory board of competent architects and artists could give constructive criticism to the manufacturers and thus enable them to know just what the technical man needs in his work. We have already appointed such a board, and if the manufacturers agree, as I have good reason to believe that they will, our campaign will profit greatly."

"We are willing to stand hardships for the achievement of our ideals. But we must have the perfect product eventually, or some of our architects will weaken and forget the German atrocities in Belgium and France."

REFLECTIONS FOR POETS

WITH AMY LOWELL and other *vers libristes* sending rime and even reason packing and getting a host of applauding supporters, it seems a pity that Alfred Noyes shouldn't be allowed a little license with his rimes. But he had the misfortune to rime "war" with "star" in his poem on "The Avenue of the Allies," and its whole columnful of other virtues, if such they are, do not avail him. Letters of protest are written to the press in such quantities that the New York *Sun* discusses the plausible surrender of all the conservative forces to the Free Verse Brotherhood. Safety from attack seems alone to reside in those ranks, or, at least, companions for defense are sufficient to support any poet's courage. Says *The Sun* in a recent editorial:

"The members of that circle at least are safe from the shafts of critics meticulous after assonantal perfection. And such critics abound in numbers and energy. It is only necessary for a poet to pen one imperfect rime and they are at his throat. No mark is too high for them and none too humble. Shakespeare, with his 'Jove' and 'love' and similar discrepancies, has had to accept their arrows into his breast. Milton's lapse, in the famous sonnet to his deceased wife, where he undertakes to rime 'save' and 'have,' has cost him many disparaging criticisms. Even the 'correct' Parnell—the only kind of poet with whom these critics can spend a civil evening—has not been allowed to pass with his attempt to rime 'appears' and 'airs.' Pope, one would suppose, with half the world his enemies eager for attack, would have taken due precautions; yet he left the gates wide open on one occasion by riming 'abodes' and 'gods'—and the regiments took him.

"John Masefield, a fellow Englishman of Mr. Noyes, is one of the recent victims of these criers after perfection. In a sonnet, admitted to be excellent otherwise, Masefield undertook to rime 'grass' and 'was.' He would have been wounded, in any event; but the fact that the crime occurred in the final couplet, where it was most glaring, resulted in his virtual annihilation.

"Pope, Parnell, and the others have gone where darts can not follow them. But Noyes and Masefield—both of them slapdash writers, not overnice in any particular—are enduring a great deal. The gates of *vers libre* must appear inviting to their wounded spirits. There no rime is tested; in fact, it is despised. Neither shall there be any standard meter—another score on which Masefield is belabored as a defective. Only rhythm is required in that happy country, and every inhabitant is permitted his own variety and his own definition. The attacks on the new school are easier to dodge than those directed at the regulars. The whole onslaught usually crystallizes into the charge: 'It is not poetry.' Amy Lowell has offered a hint as to means of immunity by plainly labeling her latest book polyphonic prose.

"It is not an unconditional surrender on either side; it is not even a negotiated peace. But it has resulted in an armistice that must appear tempting enough to the regulars still under fire."

If any riming poet has tried to shut his ears to lures of free

verse let him reflect on the troubles of these foregoing and measure the advantages of a situation which *The Sun* sets out in its department on "Books and Book World."

"The human intelligence has not slept since the birth of Voltaire. It has walked the floor of Knowledge and smashed the furniture of earth and the lusters and arc-lights of heaven to a billion splinters and flashing fragments. In art all unity is dead. Forms and rules lie murdered in their molds. In poetry we stand, not at Armageddon, but at a Tower of Babel.

"There is a jangle of schools and a jungle of isms. They come! they come!—the vorticists, the *vers libristes*, the pointillists, the imagists. There is a *cancan* of individualists. The indefinite, the uncertain, the new, the paradoxical, are the scarlet paradises of esthetic intoxication. We have gored the heart out of every artistic certainty. Each school has its own private Nine Muses. Unity sleeps; nothing remains but units.

"Poetry is to-day a matter of pure impressionism. Mood breeds mood, feeling breeds feeling, and our little poems are rounded with a quarrel. It is the decadence of an age. Find the word, find the nuance, find the image. The theme is of no consequence. Beyond Verlaine, Debussy, Symons, Maeterlinck, Strauss, Mallarmé, Remy, De Gourmont, Lafcadio Hearn, Richard Aldington there is nothing. They were the fathers of the Tower of Babel. They were the navvies of the great

Esthetic Crash. They sucked the marrow out of all their moods and pared thoughts to the quick. And the Jills came tumbling after."

STUDENTS IN GERMANY—Medicine first and theology last, with other subjects in between, occupy the student attention in German universities. Twenty-two such institutions had an attendance in the last summer semester of 20,928, of whom 6,809 were women, making their proportion 32.5 per cent. In the summer of 1917, we are told by *School Life* (Washington), which culls its facts from the *Frankfurter Zeitung*, there were 17,200 students, as against 61,000 before the war. Some other details furnish food for reflection:

"In addition to the 14,119 active men students there are 60,000 students serving in the Army. These are considered by the universities as on leave of absence.

"The present growth in the number of students is to be attributed not so much to the increase of women as to the increase of men who have returned from the front in large numbers, incapacitated or on furlough. This is true especially of the students of medicine. For that reason and because a great number of women take up this study, the medical faculties are at present well attended. As the conditions are unsettled, the changes in the choice of professions, brought about by the war, can hardly be predicted; it is clear, however, says the *Zeitung*, that the theological faculties of both confessions are attended very poorly. As to the attendance of single universities, there are considerable deviations from the prewar conditions. Berlin, with 3,432, and Munich, with 2,687, lead, to be sure, even now, but Leipzig, with 1,016, has surrendered its third place to the youngest Frankfort university with 1,738, and has been pushed itself to the sixth place."

"CLOUDS OVER THE BLACK SEA."

Nature can be more fantastic than a fantasist, so it provided Boris Anisfeld with something to hand in this scene. The ship far below in the water gives the note for the sense of space. The painter's feeling for design is well exhibited here.

RELIGION-AND-SOCIAL-SERVICE

REPRESENTATIVE LEADERS IN THE GREAT ARMY-WELFARE WORK.

Read from the reader's left they are Bishop Muldoon, K. of C.; Mrs. Henry T. Davison, Y. W. C. A.; Dr. Frank P. Hill, A. L. A.; Hon. Myron P. Herrick, War Community Service; Commander Eva Booth, Salvation Army; George W. Perkins, Y. M. C. A.; Mortimer L. Schiff, Jewish Welfare Board; William P. Larkin, K. of C.

IMPERFECT RELIGION IN THE Y. M. C. A.

THE Y. M. C. A. HAS REACHED so near to the heart of the soldier that any criticism brings forth his instant protest, yet no institution is perfect, tho in some places such an assumption is noted. A writer in *The Churchman* (New York) refers to articles appearing in the *New Republic* and elsewhere in criticism of the Y. M. C. A. as "deserved because of its assumption of impeccability." Dr. Mott and men like him, says this writer, have been "too wise to make such a claim"; but he maintains that it has "been all too common to have the Y. M. C. A. presented as the one perfect organization in a world at war, with no flaw or defect or spot or any such thing to mar it." The writer does not give his name, tho *The Churchman* regards him as a "trustworthy observer," and he speaks after having "personally studied in a quiet unofficial way the religious work, and particularly the Y. M. C. A. religious work, in three of the largest cantonments of the country." His friends, he tells us, have supplied him with full information of the nature of such work in six more. Also he "has been in a position where he has had written to him many letters, some of them very frank, from officers, Y. M. C. A. men, chaplains, and enlisted men upon this and related subjects. He writes:

"It has been all too frequent, that attitude which almost accuses a man of pro-Germanism who ventures in the least to suggest how Y. M. C. A. work may be improved. One of the author's friends recently talked in three different cities in the interest of the Chaplains' Support Fund, and said in each place that the Y. M. C. A. could not be relied upon completely to satisfy the religious longings of our enlisted men. His speech was reported in all three places to certain officials of the Y. M. C. A., who formally protested to those over him against his disloyalty. A 'Y' officer higher up, with a sense of humor, put a stop to what might else have proved a very embarrassing episode. Whenever any organization cries, 'We are perfect,' sooner or later

people of brains are going to say, 'You are not perfect'; and in their resentment at the attitude are going to criticize more bitterly than facts warrant. That flood of criticism is already commencing.

"All of this is perfectly well known to the Religious Work Council of the Y. M. C. A., and they have already taken steps to improve the religious work in the camps. The first step in this endeavor is the making of a careful and impartial study of what such work really amounts to now. This investigation, it is surely no secret to say, is already in progress. Much is sure to come of it.

"Now, possibly, with all this way of introduction, it may be well to state what are the principal defects of Y. M. C. A. religious work in the camps as one observer sees them.

"First, there is a lack of distinctness between religious services and recreational activities. Often they are on the same night, and immediately in conjunction with one another. The writer was present at one meeting where a very eminent and inspiring preacher was sandwiched between a jazz-band concert and a Chaplin movie. He has seen prayer-meetings tacked on the end of stunt nights with no intermission. He has been present at sings where 'Nearer, My God, to Thee,' was sung between 'The Henry Clay' and 'Katie.' He has been astonished to find that many of the secretaries, far from thinking this sort of thing objectionable, delight in it as 'showing how religion and life are bound up together.' It may seem that way to them; but to the ordinary decent-minded enlisted man it seems, as one of them once expressed it in this writer's hearing, 'a damn insult to the A'mighty.'

"This brings us to the second criticism. There is no such thing as reverence in most 'Y' religious meetings. I remember a certain English captain who visited one of these meetings and afterward said, 'Those men are like your Billy Sunday, very chummy with God. That sort of thing won't go down for a minute with us who have seen, in the white heat of battle, a vision of the clean, white, holy Christ.' The services are so conversational, the prayers are so smugly smiling, the talks are so casual! How rarely does one find moments of quiet, or

responsive prayers, or penetrating times of self-examination! There is no atmosphere. The men are tired of noise and restlessness. They dearly prize peace. Yet the services are always endeavoring to be 'heartily' and 'full of red-blooded pep.' It is not easy to be reverent in leading services. It is easy to 'get down to the men.' Well, the men don't want God and things holy brought down to the level of the barracks nearly so much as they wish to be lifted up out of the barracks into the peace of Heaven, and feel the quiet arms of God beneath them. If more complete separation of services and amusements is the first need, more emphasis upon quiet devotion is the second."

The third criticism, supported by examples, is in the nature of a variation of the second. One comes to wish, the writer says, that secretaries could preach without going out of their way to be slangy:

"Once I heard one of them talking to the men about 'a God with guts.' This is possibly the worst offense against decency ever heard in a 'Y,' but why some men think it necessary to use gutter language to win men to God is beyond understanding. There is a vicious tendency abroad to imitate Billy Sunday. One can be strong, virile, effective without this kind of talk. Even the men from the slums instinctively resent it. And the same thing applies to prayers. Addressing the Most High demands such reverence, surely at least, as one would render a commanding general. The secretary who began a prayer, 'O God, we men in the depot brigade are lonely to-night-and homesick for mother. We'd give a lot to see her and eat a piece of the good old home-made pie once more,' was probably, certainly, an exception; but his sort has been given too much free play so far in 'Y' work.

"The fourth criticism is that there has been too great a narrowing of leadership to men of one, and that to many a highly objectionable, type of piety. If one were to seek to characterize it in words, perhaps it might do to say it is 'the type of sentimentalized revivalism.' Its sole aim seems often to be to get men to 'accept Christ' without any explanation to them of what such acceptance may involve. 'Conversions' are sought which mean absolutely nothing. I know how in one camp there was an eminent 'Y' leader—in his own estimation—who used to stand at a narrow door and say, 'All who wish to accept Christ to-night shake my hand as they walk out.' Of course, most of the boys, to be polite, shook hands. One night he said, after the meeting: 'Wonderful, wonderful! Eighty-one accepted Christ this evening. Eighty-one souls saved. Eighty-one conversions.' The signing of decision-cards and 'war-rolls' is, as it is usually done, a fruitless, a meaningless thing. And yet that seems to be the principal endeavor in much of the religious work. There is in it neither the thoroughness of the sacramental method nor the downright sincerity of the evangelical method.

"This one type of conventional leaders, the type of the preponderating majority of 'Y' religious secretaries, conduct, naturally, a sentimentalized type of prayer-meeting. They talk in a sentimentalized pseudo-evangelical way. Perhaps this is why many of the lads unhesitatingly say that while the 'Y' men are fine fellows when they meet you any other way, they are all sissies in religion. One of the keenest young non-coms I have ever known, who had served in five camps, told me that in his opinion the 'Y' religious work amounted to nothing save with a certain exceptional type of boy whose previous religious training had been of the same sentimental sort. 'We all go to the "Y" gladly,' he said, 'except when they are likely to shove on the religion. Then we stay around the barracks or slip over to the K. of C.'s.' This boy was a religious boy and a good boy. His comrades who agree with him I have known by the hundreds. The 'Y' should provide scope for differing types of religious expression and not seek to bring all men to one type of piety, and that a type not particularly attractive to virile men."

In suggesting improvements the writer places emphasis on the matter of "better leadership." The religious leader he recommends to give all his time to this work and other men do the stamp-selling, sweeping out, cashing checks, running shows, etc. Then as to methods:

"First, have religious services distinct from all other activities. Clear the building for them. Let no men write or otherwise hang around the edges. Let decency and quiet prevail and let every one know just what they are getting into when they come. This will not mean smaller crowds. From what I have seen in most camps the crowds at religious services could not be much smaller than they are.

"Secondly, let the services be deeply reverent, with due simplicity, and a restrained sincerity as their dominant note. Let the prayers be simple, short, and quiet. Let the whole thing breathe the power of 'Him who sits between the Cherubim, be the earth never so unquiet.'

"Thirdly, let the speeches be couched in manly but decent terms, and let them deal of noble things without bombast, conventional pieties, or explosive emphasis.

"Fourth, encourage the boy who thinks sacramentally to find his sacraments, the man who has found Christ in the study to find him so still, the fellow who is esthetic to find a Christ of beauty. Let the whole thing not be narrowed down to a certain piety of a neo-evangelistic sort."

THE RUSSIAN CHURCH REVIVING

RUSSIA, THE LAND OF TOPSYTURVY, is most of all paradoxical perhaps in the relation of the Church to Bolshevism. Where the effect of the Red rule in nearly all directions is destruction, a Russian writer asserts in *The New Europe* (London) that the loss of material wealth has been the Church's salvation. Its emancipation came about first through its own effort. It was submissive enough to Rasputin when he ruled the Czar, who was official head of the Church. But once Rasputin and the Czar were removed, the Russian Church became its own master and through the Patriarch anathematized the Bolshevik usurpers. An epistle from this dignitary cursed them as "sons of perdition" who were "crucifying the Church and had sold Russia to the hereditary enemy of the Slavs—Germany." This letter of the Patriarch, says Ariadna Tyrkova, was the "boldest and most solemn and public protest that has yet been made against the Bolshevik power." The papers that printed extracts were fined or suspended, but even Bolshevism did not dare attack the Patriarch. Neither was its decree for the separation of the Church systematically carried out. We read:

"The attitude of the Government encouraged all the elements of anarchy and disorder, and the transfer of the churches and monasteries to the local *Soviets* in many cases gave the mob a welcome opportunity for plunder. Churches were robbed. In the Kremlin itself, where at every gate and at every corner stood a Bolshevik guard, 'unknown' robbers carried off from the Patriarch's clearstory in the Cathedral of the Assumption tens of millions' worth of ancient church treasures. Naturally the robbers were not discovered. More than that, priests were insulted and beaten, bishops were imprisoned, church processions were violently dispersed, and in Kiev the Metropolitan Vladimir was shot dead.

"The Bolsheviks are not afraid to murder. One morning, before breakfast, they murdered the ex-Czar. But they refrain from touching the Patriarch. They feel that a new power is growing beneath the gilded domes of the ancient churches, a power menacing, tho physically impotent. They try to subdue it not only by force but by decrees and proclamations."

The vital principle in the Church is in no wise weakened by the loss of material goods. On the contrary, the Church is being strengthened. Within her, new leaders are coming to the front, new characters are being formed; and from without there are gravitating to her honest patriots who long for the resurrection of a united Russia. Further:

"Among the Orthodox are people of various classes and various political views; but it is possible that there are few Socialists among them, and that is a cause of alarm to those who wish to see Russia continuing her socialistic experiments. When I left Russia in March there was no definite political aim in the new church movement. It was spiritual, but it was also distinctively national. But the suffering of the people and the humiliation of the State naturally tend to make the Church a center of national revival. . . .

"Only those who know, who have seen, who have shared with the Russian people the fierce trial through which we are passing—only they can understand with what passionate longing, with what despairing trust millions of Russians are pressing to the foot of the Cross. For many of them the Church was remote and strange so long as she was merely an official institution; but

scorned and insulted, shorn of her pristine external splendor, she has become very near and very dear.

"And she herself is changed, she is being born anew in suffering, she is awaking from her lethargic sleep, is girding herself, as it were, for new tasks. Now prominent laymen are entering her ranks. She has broken with the exclusiveness of official routine. She is becoming that community of believers which from the first centuries onward has been the ideal of all Christians. Meetings of parishioners discuss with priests the affairs of the church—yes, and secular affairs too. In the churches, laymen give addresses, usually after vespers, which is the most intimate of all the Russian services. Distinguished scholars and public workers take part in the Church Council—many of them belong to that group of idealists and mystics of which I have spoken. One, Serge Boulgakov, has even been ordained to the priesthood, thus completing a spiritual quest of many years. Once he was a Marxist. Then he was a Radical deputy in the Duma. He held chairs of political economy in Petrograd and Moscow. But as the years passed he devoted himself more and more to the interests of Orthodoxy. And now at last he has given himself wholly to the Church.

"Around these leaders are grouped a number of younger men. Formerly indifferent to religion, the youth of Russia has emerged from the tragedy of the war and revolution with a deepened spiritual sense and with a new respect for traditional values. And this new religious experience is bringing together the *intelligentsia* and the people. This is not the ephemeral intimacy of public meetings, where speakers eager for applause are tempted to flatter and pander to the crowd. The Church promises no material benefits. She demands sacrifices rather, and her wealth is not of this world.

"But the Bolsheviks are quite right in fearing the growth of political power in the Church. What this power will be, what influence it will have in determining the future form of the Russian state, it is hard to say. But it is not at all unlikely that now the struggle for national liberty will assume the character of a crusade. When the country shakes off the fanatics and robbers who betrayed her, and a genuine popular Government is at last established, this Government will have to take the Church far more seriously into account than any Russian Government has for the last two centuries."

MORAL PRIDE IN THE ARMY

GENERAL PERSHING is declared to be "just as anxious to see his soldiers maintain a clean, faithful standard of manly integrity as to see them come off victorious in battle." And this from a moral view-point, thinks Nolan Rice Best, is "the proudest thing to be said about and for the American Army in France." General Pershing's sentiments are further declared "not merely utilitarian," tho he knows that men of sound and strong personal character are more dependable in a military sense than an army made up of rogues and ruffians. It is declared that General Pershing's own "personal valuation of religious faith—his own experience of it"—leads him to "set his heart on having every soldier under his command preserve in France whatever religious faith he brought from the homeland—all of it at full strength—and get more of it if he can." The General wants his men under the influence of those four great agencies, the Y. M. C. A., the Knights of Columbus, the Jewish Welfare Board, and the Salvation Army. In *The Congregationalist* (Boston), Mr. Best enlarges on the fact and the contrast between this and an earlier time in the American leader's experience:

"It is the secret, also, of his quite unexampled pains to develop the power and use of the chaplaincy among his troops—the reason why he insisted on creating the heretofore unheard-of office of 'senior chaplain' of the Army and on appointing to the position the man who had been his own most strengthening spiritual counselor—Bishop Brent. No great soldier ever issued before to his troops any such moving religious appeal as that unofficial but mightily effective word of counsel, so widely circulated by the Y. M. C. A., in which General Pershing, like an older brother, begs his soldiers to be true to the precepts of the Savior. And these public signs confirm the reality of the conviction which an innocent revelation of headquarters secrets tells of his expressing to his staff: 'Gentlemen, this army of ours has a heart and a conscience, and that heart and that conscience must be fed.'

"If so much plain speech is to be tolerated in war-time, candor would confess that one thing alone has troubled the confidence of church people at home in the moral steadfastness of General Pershing. That is the report of certain Y. M. C. A. authorities on the conditions attending his march into Mexico two years ago. But any criticism that might fairly be directed toward his policy regarding camp-followers on that expedition is surely canceled *in toto* by the General's own frank confession to-day that he was mistaken then. The cause of his taking at that time a course which he now regrets was not any lack of revulsion in his own soul, but merely the dominance of the old iron-clad army tradition which taught that certain evils are inevitable in army life. To-day with larger outlook General Pershing stoutly refuses to regard any wrong thing as inevitable in the Army or anywhere else. He does not hesitate to acknowledge to intimate friends a complete reversal of attitude on this subject since his Mexican experience. Morals and science, as he sees the matter, conspire to condemn the ancient military toleration of vice."

Such avowals from the Commanding General naturally have a tremendous effect on his subordinate officers. The influence may be slow in filtering down to the subalterns, this writer admits, but among the higher grades it is insisted that "a remarkable consensus of sentiments sustains the Commander's eagerness for keeping the Army morally fine." An incident in one of the best disciplined regiments of the front line reveals how strongly this better ideal is already entrenched in the thought of army leaders.

"A lieutenant newly assigned to the regiment lectured his platoon on the military duty of avoiding contagious disease. 'Understand me now,' he said sternly to the men, 'I don't give a hang about your morals or your character; that's no concern of mine; but I am responsible for your keeping in fit condition to do your work as soldiers, and therefore I demand that you keep out of places where you might contract contagion that would disable you.'

"The colonel of the regiment sent for the lieutenant. 'Did you talk to your men in the way that has been reported to me?' he asked. The lieutenant acknowledged the accuracy of the quotation. 'Do you think that talk of that kind stands for the mind of your superiors and represents the spirit of the A. E. F.?' was the question. The lieutenant thought it did. The colonel was almost fierce. 'Well, I tell you it doesn't. The business of an A. E. F. officer is to look out for the moral character of his men just as much as for their physical efficiency. You have been assigned to this regiment. You think you belong to it, but I want to tell you you are never going to belong to us until you revise your opinion about what you are here for. This regiment runs on a different idea.'

The question of drink rests on the same basis:

"The higher up in the Army an officer stands, the stronger, generally speaking, is his earnestness about inducing his men not to drink even the permitted French wines. One colonel said: 'What made a prohibitionist out of me was seeing National Army regiments that have been organized out of the draft from the dry States—the States that have been dry for a long time, so that their present generation of draft age has grown up without even seeing saloons. The draft men from Kansas, for instance, are simply magnificent. If that's what prohibition can do for an army, I'm certainly for prohibition all the way through.'

"Rev. Paul Moody, younger son of the great evangelist, Dwight L. Moody, is Bishop Brent's Protestant associate at chaplaincy headquarters; Father Doherty is his Catholic associate. These three have already attained church unity; their harmony of fellowship is a parable of what ought to be in the whole Christian world. And they are conspicuously harmonious in their optimism about the American Army in France. 'It is an army on a higher plane in every way—more moral far—than in the training-camps at home,' said Chaplain Moody. 'Inspiration and high ideals are at a maximum in the trenches; everything degrading and base at a minimum. And it is wonderful how these newly appointed National Army chaplains contribute to the atmosphere that stimulates and inspires. They are the finest ever. It is a miracle how these young men right out of civil life adapt themselves instantaneously to army ways and win the officers and men from their very first arrival in camp or trench. They fear nothing, risk everything, and the Army loves them.'

These are times to know what you buy

Uncle Sam expects every dollar to do its duty.

It is up to every man to buy with both eyes open—buy only what he needs and be sure that he is getting full value at a thrift price.

You know just what you are getting when you buy Styleplus.

The *prices* are known—one price for each grade the nation over.

The quality is reliable—always a big value at the price.

The Styleplus plan is to *concentrate*—make a few grades in big volume—reduce costs—produce exceptional clothing value at each price.

Two grades in Styleplus suits: \$25 and \$30.

Three grades in Styleplus overcoats: \$25, \$30 and \$35.

If you want the style touches that make the well-dressed man *at thrift prices*, visit your local Styleplus Store.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. 5) for Styleplus booklet and name of local dealer.

Here's What I'm Drinking

HAVE you noticed how many middle aged and elderly people drink Postum instead of coffee?

However much one may like this or that beverage it is an unmistakable fact that coffee *does* prove harmful. Its unfortunate influence upon the nerves, as shown by wakefulness, headaches, and so on, makes it undesirable for many.

POSTUM

meets such situations exactly, for it provides an invigorating table drink much like superior coffees in flavor, but as it is made from cereals and a small portion of wholesome molasses, it never produces the ill effects that often result from regular coffee drinking.

**"There's a Reason"
for POSTUM**

CURRENT POETRY

THE joyous soldier, the man who steadfastly refuses to let the horror of war touch his soul, is a man to prize, but when he happens to be a poet as well he is doubly precious. We are introduced to such a one in the *Chicago Tribune*, by John Masefield, who says: "There is a gay young singer named Robert Graves who has written poetry about the war that will live." His book, "Fairies and Fusiliers" (Alfred Knopf, New York), has just appeared and it is gay, charming, buoyant, and courageous. Let us take a poem that justifies the first of his titles:

BABYLON

By ROBERT GRAVES

The child alone a poet is;
Spring and Fairyland are his.
Truth and Reason show but dim,
And all's poetry with him.
Rime and music flow in plenty
For the lad of one-and-twenty,
But spring for him is no more now
Than daisies to a munching cow;
Just a cheery pleasant season,
Daisy buds to live at ease on.
He's forgotten how he smiled
And shrieked at snowdrops when a child.
Or wept one evening secretly
For April's glorious misery.
Wisdom made him old and wary,
Banishing the Lords of Faery,
Wisdom made a breach and battered
Babylon to bits: she scattered
To the hedges and the ditches
All our nursery gnomes and witches,
Lob and Puck, poor frantic elves,
Drag their treasures from the shelves.
Jack the Giant-killer's gone,
Mother Goose and Oberon,
Bluebeard and King Solomon,
Robin and Red Riding Hood
Take together to the wood,
And Sir Galahad lies hid
In a cave with Captain Kidd.
None of all the magic hosts,
None remain but a few ghosts
Of timorous heart, to linger on
Weeping for lost Babylon.

Here we have a poet's recipe for making a fine poem:

A PINCH OF SALT

By ROBERT GRAVES

When a dream is born in you
With a sudden clamorous pain,
When you know the dream is true
And lovely, with no flaw nor stain,
Oh, then, be careful, or with sudden clutch
You'll hurt the delicate thing you prize so much.

Dreams are like a bird that mocks,
Flirting the feathers of his tail.
When you seize at the salt-box
Over the hedge you'll see him sail.
Old birds are neither caught with salt nor chaff
They watch you from the apple-bough and laugh.

Poet, never chase the dream,
Laugh yourself and turn away;
Mask your hunger, let it sear
Small matter if he come or stay;
But when he nestles in your hand at last,
Close up your fingers tight and hold him fast.

Next we are given a pathetic little poem into the Poor House with an aspect of it which we fear is too true.

THE LADY VISITOR IN THE PAUPER WARD

By ROBERT GRAVES

Why do you break upon this old, cool peace—
This painted peace of ours,
With harsh dress hissing like a flock of geese
With garish flowers?

One abiding principle

*unscathed by the
industrial hardships
imposed by this or
any other war--*

*every bristle
gripped
EVERLASTINGLY
in hard rubber*

RUBBERSET BRUSHES

Cocoanut Shells Needed For Gas Masks

The carbon from charred cocoanut shells is the best absorbent of poisonous gases yet discovered. Hundreds of tons of cocoanut shells a day are needed by the Government for the manufacture of gas masks.

Only manufacturers of cocoanut products are permitted to receive importations of whole nuts.

The more cocoanut American housewives use, the more shells are turned over and hence the more gas masks can be produced.

The food value of cocoanut is now appreciated. Pound for pound it is richer in nourishment than bread, eggs or steak.

Dromedary Cocoanut is Economical

It is safe to buy Dromedary Cocoanut in large quantities because there is no waste. The cover of the "Ever-Sealed" package may be replaced, thus keeping the unused portion fresh, moist and full flavored.

Write today for our new book "Dromedary War-time Recipes" which gives many appetizing suggestions for patriotic housewives.

The HILLS BROS. Co., Dept. J, 375 Washington St., N. Y.

Add Dromedary Cocoanut to Your Favorite Recipe for Corn Muffins

Dromedary Cocoanut can be used in a number of ways to add food value, flavor and variety to timely conservation dishes.

Dromedary Cocoanut is the universal favorite, because it is so delicious in corn muffins, waffles and griddle cakes, cookies, gelatines, rice and bread puddings and fruit desserts, and as sugarless frosting for coffee cakes and war cakes.

FOR MOTOR CAR UPHOLSTERY

CHASE
Leatherwove
*'Tis like the hide in most respects
In some respects 'tis better*

Made by Sanford Mills

TODAY more than ever, thrifty housewives and motorists are anxious to do re-upholstering.

Leather is scarce and costly, therefore Chase Leatherwove, which is purchased by the U. S. Government for upholstery purposes, should be used.

All the merits of hide at less cost—beautiful, durable, weather and stain proof, sanitary, and plenty of patterns to choose from.

For upholstery use:
*Leatherwove Galloway or
Leatherwove Gibraltar.*

Other grades for scores of uses.

Why do you churn smooth waters rough again,
Selfish old skin-and-bone?
Leave us to quiet dreaming and slow pain,
Leave us alone.

Turning to the "Fusileer" part of his volume, Robert Graves reveals himself as a true "soldier full of strange oaths" and presents us with a breezy and quite unconventional farewell to his Beloved.

TO LUCASTA ON GOING TO THE WAR
—FOR THE FOURTH TIME

BY ROBERT GRAVES

It doesn't matter what's the cause,
What wrong they say we're righting,
A curse for treaties, bonds, and laws,
When we're to do the fighting!
And since we lads are proud and true,
What else remains to do?
Lucasta, when to France your man
Returns his fourth time, hating war,
Yet laughs as calmly as he can
And flings an oath, but says no more.
That is not courage, that's not fear—
Lucasta, he's a Fusileer,
And his pride sends him here.

Let statesmen bluster, bark, and bray,
And so decide who started
This bloody war, and who's to pay,
But he must be stout-hearted,
Must sit and stake with quiet breath,
Playing at cards with Death,
Don't plume yourself he fights for you;
It is no courage, love, nor hate,
But let us do the things we do:
It's pride that makes the heart be great;
It is not anger, no, nor fear—
Lucasta, he's a Fusileer,
And his pride keeps him here.

A little touch of a grim subject treated
in anything but a grim way is

THE LAST POST

BY ROBERT GRAVES

The bugler sent a call of high romance—
"Lights out! Lights out!" to the deserted square.
On the thin, brazen notes he threw a prayer,
"God, if it's this for me next time in France . . .
O spare the phantom bugle as I lie
Dead in the gas and smoke and roar of guns,
Dead in a row with the other broken ones
Lying so stiff and still under the sky,
Jolly young Fusileers too good to die."

Let us once more quote John Masefield—
this time in the *New York Evening Post*.
"Graves was picked up for dead," said
Masefield. "He heard them say he was
dead, and he called out: 'I'm not dead.
I'm damned if I'll die.' And he didn't.
He wrote a poem about it." And here is
the poem.

ESCAPE

BY ROBERT GRAVES

(August 6, 1916.—Officer previously reported
died of wounds, now reported wounded. Graves,
Capt. R., Royal Welsh Fusileers.)

. . . But I was dead, an hour or more.
I woke when I'd already passed the door
That Cerberus guards, and half-way down the road
To Lethe, as an old Greek sign-post showed.
Above me, on my stretcher swinging by,
I saw new stars in the subterranean sky:
A Cross, a Rose in bloom, a Cage with bars,
And a barbed Arrow feathered in fine stars.
I felt the vapors of forgetfulness
Float in my nostrils. Oh, may Heaven bless
Dear Lady Proserpine, who saw me wake,
And, stooping over me, for Henna's sake
Cleared my poor buzzing head and sent me back
Breathless, with leaping heart along the track.
After me roared and clattered angry hosts
Of demons, heroes, and policemen-ghosts.
"Life! life! I can't be dead! I won't be dead!
Damned if I'll die for any one!" I said.

Cerberus stands and grins above me now,
Wearing three heads—lion, and lynx, and sow.

"Quick, a revolver! But my Webley's gone,
Stolen! . . . No bombs. . . . no knife. . . . The
crowd swarms on,
Bellows, hurls stones. . . . Not even a honeyed
sop. . . .
Nothing . . . Good Cerberus! . . . Good dog!
. . . but stop!
Stay! . . . A great luminous thought . . . I do
believe
There's still some morphia that I bought on leave."
Then swiftly Cerberus' wide mouths I cram
With army biscuit smeared with ration jam;
And sleep lurks in the luscious plum and apple.
He crunches, swallows, stiffens, seems to grapple
With the all-powerful poppy . . . then a snore,
A crash; the beast blocks up the corridor
With monstrous hairy carcass, red and dun—
Too late! for I've sped through. O Life! O Sun!

Having been "dead," it is not surprising that the poet can contemplate his latter end with a touch of somewhat naughty humor.

WHEN I'M KILLED

BY ROBERT GRAVES

When I'm killed, don't think of me
Buried there in Cambrin Wood,
Nor as in Zion think of me
With the Intolerable Good,
And there's one thing that I know well,
I'm damned if I'll be damned to Hell!

So when I'm killed, don't wait for me,
Walking the dim corridor;
In Heaven or Hell, don't wait for me,
Or you must wait forevermore.
You'll find me buried, living-dead
In these verses that you've read.

So when I'm killed, don't mourn for me,
Shot, poor lad, so bold and young,
Killed and gone—don't mourn for me.
On your lips my life is hung:
O friends and lovers, you can save
Your playfellow from the grave.

Finally, Robert Graves is a fine storyteller. Most of them have a whimsical ending like this:

THE SHIVERING BEGGAR

BY ROBERT GRAVES

Near Clapham village, where fields began,
Saint Edward met a beggar man.
It was Christmas morning, the church bells tolled,
The old man trembled for the fierce cold.

Saint Edward cried, "It is monstrous sin
A beggar to lie in rags so thin!
An old gray-beard and the frost so keen:
I shall give him my fur-lined gabardine."

He stripped off his gabardine of scarlet
And wraps it round the aged varlet.
Who clutched at the folds with a muttered curse,
Quaking and chattering seven times worse.

Said Edward, "Sir, it would seem you freeze
Most bitter at your extremities.
Here are gloves and shoes and stockings, also, . . .
That warm upon your way you may go."

The man took stocking and shoe and glove,
Blaspheming Christ our Savior's love,
Yet seemed to find but little relief,
Shaking and shivering like a leaf.

Said the saint again, "I have no great riches,
Yet take this tunic, take these breeches,
My shirt and my vest, take everything,
And give due thanks to Jesus the King."

The saint stood naked upon the snow
Long miles from where he was lodged at Rowe,
Praying, O God! my faith, it grows faint!
This would try the temper of any saint.

"Make clean my heart, Almighty, I pray
And drive these sinful thoughts away.
Make clean my heart if it be thy will,
This damned old rascal's shivering still!"

He stooped, he touched the beggar man's shoulder;
He asked him did the frost nip colder?
"Frost!" said the beggar, "no, stupid lad!
'Tis the palsy makes me shiver so bad!"

ROADS or NO ROADS

On forest trail or city street, the hum of MACK Trucks tells of a new industrial awakening—a growing sense of importance of efficient hauling. In times of war or peace, MACK Trucks build for national prosperity. They are making transportation a known quantity—as dependable as MACK Reliability itself.

MACK Trucks carry heavy, cumbersome machinery for manufacturing enterprises—keep raw materials coming in, finished products going out, true to schedule. Super-strength of construction, Power and Stamina beyond the ordinary, make MACK Trucks logical carriers for local and interstate freighting.

From 1 to 7½ tons capacity—trailers to 15 tons. Special bodies for individual needs. Write to Dept. 12 for further information.

WAR-TIME-FOOD-PROBLEMS

*Prepared for THE LITERARY DIGEST by the UNITED STATES FOOD ADMINISTRATION
and especially designed for High School Use*

SUGAR:—KEEPING SUPPLIES UP AND PRICES DOWN

AMERICA IS TO-DAY the world's sugar-bowl. That was explained in full in the article printed October 5 in this series. Owing to the decrease in sugar-production in the Allied countries, the distance which ships must traverse to reach the Java supply, and finally the lack of ships available to go to Java when all are needed to carry troops, food, and war-materials to Europe—we must without stint send sugar to the Allies out of our own supply.

And the more we can send, the better. But it is impossible to send every bit of our sugar and get along altogether without. This country must have enough—and only enough—to maintain its health and strength. Unfortunately sugar is not an abstract quality—like patriotism, or hope, or courage—which, the more it is shared, the more it increases. Sugar is a tangible substance, measured in pounds and tons, and when it is once gone there is no replacing it until Nature comes along with another crop.

Hence it is necessary that when we have shared every ounce possible with the nations allied with us, we must somehow contrive to make what is left go round. That is a problem which the Food Administration, all the manufacturers and dealers in sugar, and the public, must share between them.

ALLOTMENT—In other words, here in this country the adequacy of the sugar-supply is, in addition to being a matter of personal self-sacrifice, also a matter of distribution.

Now what is the method and procedure of allotment, so that each State in the Union may have a fair amount of sugar?

Obviously it has to be based upon population. Of course, some States have more industries requiring sugar than others; but for home consumption the amount needed will be determined by the number of people in each State. Vermont can not be assigned as much sugar as New York; North Dakota's share can not equal Pennsylvania's. And yet each individual, wherever he may be, will have an equal chance to buy his three pounds per month—his voluntary honor ration.

But, of course, in addition to population, the amount of sugar needed for certain industries (such as condensed milk and fruit-preserving) in any State is taken into account before determining the allotment for that State.

THE TRADES NEEDING SUGAR—The United States Food Administration, therefore, having in hand statistics covering the amount of sugar available for the whole country for a month, and knowing just what the population and sugar-using industries of each State are, from month to month, notifies the Federal Food Administrator of each State just what the State's allotment for the coming months will be. He in turn conveys this information to his Sugar Division, which is in existence in every State. Each retailer in the State submits to the Sugar Division a sworn statement showing the retailer's distribution of sugar in the past, the number of families he is serving, and the number of persons per family. The Sugar Division thereupon issues to the retailer sugar-certificates equivalent to three pounds per person per month; and the retailer, in buying his sugar must surrender the certificates thus obtained, which represent the total amount of sugar he can obtain. It therefore follows that the retailer must use extreme care in the distribution of sugar to his customers.

The individual in each State is entitled to his three pounds of sugar a month (tho if he eats less, of course, there will be just that much more available for overseas shipment). But there still remains the intricate task of allotting sugar to hotels, public eating-places, bakeries, and other industries requiring it. This is accomplished by means of issuing sugar-certificates allotting to each applicant only the specified number of pounds permitted.

The sugar-using industries, whatever they may be, are arranged into classes. And the class any industry is put into is determined by how important to the conduct of the war, or to the maintenance of necessary domestic conditions, that industry happens to be.

The amount of sugar to which each separate concern is entitled, is established by finding out how much sugar it used, on a monthly average in normal prewar times, and then letting it have whatever fraction of that is permissible to the class of industries in which it is included. (Some industries are allotted no sugar at all, either because they play so small a part in the conduct of war-activities or because they can use some other substance in place of sugar.)

Thus, at the date of writing, soft drinks and some other manufacturers are entitled to only one-half of the sugar used by them in normal times. Bakers are given a seventy per cent. allotment. Hotels are permitted three pounds of sugar to every ninety meals served, including cooking.

Such are instances of how sugar is allotted on the certificate basis.

And to complete this method of enforcement, *every sugar refiner, beet-sugar manufacturer, and wholesale grocer in the country is notified that no sugar is to be delivered except upon the presentation of the properly authorized certificate.*

THE SUGAR EQUALIZATION BOARD—All this naturally leads to the queries: How are this country's vast resources of sugar, as they come from the cane or beet-fields in the first place, controlled and held ready for distribution? And how is the sugar price regulated?

The answer is: Through the Sugar Equalization Board.

This Board is a part of the Food Administration and approved by the President. Its purpose is to equalize the cost of various sugars and to secure better distribution. It can also cooperate with the Allies in the procurement of sugar for them and in the adjustment of overseas freight-rates. Through capital supplied by the President through his special funds, it is enabled, when desirable, to buy up all available sugars at different prices and resell them at one flat and even rate.

In other words, it provides a sort of vast storehouse of sugar, which may be doled out where it is most needed, at a price secure from the fluctuations otherwise inevitable in war-time.

KEEPING DOWN THE PRICE—What might happen without this Sugar Equalization Board is illustrated by the Civil War, when sugar, because of speculation, went as high as thirty-five cents a pound. And at that time there was no world shortage of sugar. If there were no sort of sugar control to-day, it may readily be believed that the consumer might have to pay sugar prices soaring far above those Civil-War levels.

It costs more to produce and market some sugars (such as domestic beet-sugar and Louisiana cane) than it does others, such as Cuban cane-sugar. But that is no reason why the sugar-manufacturer, whose production costs are high, should suffer, even to the extent of being forced out of the market. Nor can the country afford to have this happen under present war-time shortage of near-by supplies. Consequently, when it becomes necessary, the Sugar Equalization Board through its purchasing powers can insure fair profits to the manufacturers. Then the Board may resell this sugar, so that it reaches the public at a price lower than what the maximum would otherwise be.

Such are the methods of regulating our home supplies, prices, and distribution of sugar, so that this country may have all it needs, while the remainder moves steadily overseas to the Allies and our own soldiers.

Jiffy-Jell

For Desserts and Salads—Fruit Flavors in Vials

We Will Pay You

In Dessert Molds, if You Will Try Two of These Favorite Flavors

Loganberry

The finest berry flavor in existence. We use many of these famous Oregon berries in the bottled flavor for one Jiffy-Jell dessert. There is a wealth of fresh Loganberry taste.

Pineapple

A favorite fruit flavor, impossible without the vial. It must be sealed to keep. Half a ripe pineapple is used in the flavor for each Jiffy-Jell dessert.

Mint

Flavored with the liquid essence of fresh mint. It makes an instant garnish jelly, rich in mint-leaf flavor. Serve with meats.

Lime Fruit

Makes a tart, green salad jelly. Serve with the salad; or mix cooked or uncooked vegetables into the jelly before cooling. Or put in meat scraps and make a delicious meat loaf.

Aluminum Molds

Style 6

Style 5

Style 4

Individual Molds
Value, 60c for Six

This is the time of all times when you need Jiffy-Jell.

The fresh-fruit season is over, and Jiffy-Jell brings you quick, economical desserts, rich in fresh-fruit flavor.

These are times to save money. A single package of Jiffy-Jell serves six in mold form. Or it serves 12 if you whip the jelly.

These are sugar-ration times. Jiffy-Jell uses little or no sweetening. Most other desserts are large consumers of sugar.

These are times to save left-overs. With Jiffy-Jell you can make them into delightful salads and meat loaves.

Not Like Old-Time Jells

Jiffy-Jell is not like old-style quick gelatine desserts. The fruit flavors are made from the fresh-ripe fruits. They come in liquid form, sealed in glass vials—a bottle in each package. Their fragrant freshness keeps. And the flavors are abundant.

We picture at the side four favorite flavors. Each serves a major purpose.

We ask you now to try two of these flavors. The two at your grocer's will cost 25 cents. They will be a revelation to you in quick, fruity desserts and salads.

Then send us the coupon, and any mold offer we make below is open to your acceptance.

Do this now. Begin to enjoy Jiffy-Jell at its best, as a million homes are doing.

10 Flavors in Glass Vials

One in Each Package

Mint

A Serviceable Gift for This Christmas

To keep up with the demands of these strenuous times you need a Simplex Ironer in your home. It will save you money, time and strength and make you independent of help which is becoming scarcer every day.

SIMPLEX IRONER

"THE BEST IRONER"

Sold on Easy Payments and on Approval

The Simplex does in one hour what it takes four or five hours to do by hand. It does it far better and at a cost of less than five cents. No headaches or backaches! No worry! When the ironing is finished you still have the whole day before you.

Thousands of women are enjoying the benefits of the Simplex Ironer. So can you. There never was a time in the history of our country when so much was demanded of women. Every man appreciates the great need of supplying his wife with up-to-date labor-saving household equipment.

Electric Drive Simplex for homes with electricity.
Power Ironer for use with washing machine or gasoline engine. Hand Power Simplex for homes without power.

Write for free illustrated literature.

AMERICAN IRONING MACHINE CO.

506, 168 North Michigan Ave., Chicago

Eastern Sales Office:
70 West 45th St., New York City

An illustration of a man and a woman standing behind a large, vintage Simplex Ironer machine. The woman is on the left, wearing a light-colored dress, and the man is on the right, wearing a dark suit. They are both looking at the machine with interest. The machine is a large, dark-colored unit with a prominent roller and a hand crank. It sits on a wooden table. The background is a simple, light-colored wall.

REVIEWS - OF - NEW - BOOKS

AS TO GEORGE BERNARD SHAW

Henderson, Archibald, M.A., Ph.D. *George Bernard Shaw: His Life and Works. A Critical Biography (Authorized).* Pp. 528. New York: Boni & Liveright. \$1.50 net. Postage, 15 cents.

In this popularized edition of a standard biography an American professor (in the University of North Carolina) writes at great length of an Irishman who has long been a conspicuous figure on the literary stage. In its original five-dollar form the book has been seven years before the public. Its claim to being "authorized" is justified throughout; and Mr. Shaw's right of authority for such an exhaustive portrayal of himself seems well established by the work he has done, as a Socialist, as a critic, and as a playwright. "I am of the opinion that my life belongs to the whole community," Mr. Shaw is allowed to say in his biographer's preface to the American edition, "and as long as I live it is my privilege to do for it whatsoever I can." How much his life has done for the world, through Professor Henderson's careful and critical study of it, can not be calculated now.

"I was first drawn to Shaw," his biographer says in the author's introduction, "not because he was a Socialist, a publicist, an economist. I had seen his plays produced in America, had followed the ups and downs of his career as a dramatist, and was marking the rise of his star successively in Austria and Germany. The Shaw who caught and held my interest was the dramatist of a new type. I planned writing a brief study of Bernard Shaw and his plays. . . . Mr. Shaw furnished me with a brief outline of his career and I set to work. After studying his works for some months, I sent a series of queries to Mr. Shaw. Fear fell upon me when, some time later, I received from him a card saying that he had only come to the forty-first page of his reply; and he assured me that if this business was to come off, it might as well be done thoroughly."

So, thoroughly, Dr. Henderson did his work, with the unstinted help of his subject. "A thorough biography of any man who is up to the chin in the life of his time as I have been," Mr. Shaw had said, "is worth writing as a historical document." Mr. Shaw is an Irishman, let it be respectfully repeated, and "up to the chin" in everything to which he lays his hand. He had, as his biographer asserts,

"Taken the public by storm, and become the most universally popular living dramatist and the most frequently paragraphed man in the world. No British dramatist—not even Shakespeare—had conquered the world during his lifetime; yet Shaw, just past fifty, had succeeded in turning this cosmic trick. Clippings, pictures, journals, and books poured in upon me from every quarter of the globe. I discovered that Shaw was a man with a past as well as a genius with a future, and I realized the truth of his cryptic boast that he had lived for three centuries."

As a result we have the man here, in pictures at different ages, beginning at twenty-three, and in many poses; we have him in facsimiles of his manuscript and of playbills announcing his various plays; we have him in sixteen chapters, half of which consider him as the art critic, the dramatic critic, the music critic, the playwright, the technician, the dramatist, and the artist and philosopher. As a music

critic he rather seems most to have astonished his widening public; for he did know something of music and was not supposed to. It was from a dramatic critic that he grew into a dramatist; and it is in this character that he is known best and widest.

Describing himself, once, as "a Socialist, an atheist, and a vegetarian," Shaw has also admitted that he did not make the headway he should have made because people did not believe him whatever he said or did. He was long taken only as a joke and regarded a joker. Yet he was a very sincere propagandist, in those years when he lectured often—those dozen years when he spoke every Sunday for the general good, as he saw it, and would not accept money for his service. He would speak without charge, for economics or religion, at any time; and if he was not at all times consistent with himself the fact did not trouble him. He was brilliant and witty; and what he was not he would capitalize to help him in being what he was. "A man of his power of mind can do nothing that is altogether contemptible," William Archer wrote of him, but Archer tried to dissuade him from becoming a dramatist, in which rôle was to follow Shaw's largest success. He succeeded, perhaps, in that rôle because he carried into it so much of himself in the other rôles which made his life. For his plays became the vehicles for carrying to multitudes his philosophy, if not his propaganda. "In all my plays," he wrote, even as late as 1904, "my economic studies have played as important a part as a knowledge of anatomy does in the works of Michelangelo."

NOTABLE RECENT FICTION

Wagnalls, Mabel. *The Rosebush of a Thousand Years.* Pp. 77. New York and London: Funk & Wagnalls Company. 75 cents. Postage, 5 cents.

Value is not always commensurate with size, which is another way of saying that this little story is more important and more beautiful than its modest form and cover would indicate. A note tells of its unusual popularity, and the author describes the source of its inspiration. Only a personal perusal can give an adequate idea of its magic spell and spiritual message. The legend of the rosebush of the cathedral of Hildesheim inspires one Granville, an artist, to paint a picture of the Madonna of the Rosebush, and he brings with him his model, Joline, a happy, care-free girl of Paris, who enters the cloistered garden disguised as a boy, there poses, and is seen by one of the aged brothers who dies believing he has seen the Holy Virgin in a vision. True to his prediction, the rosebush blossoms and all rejoice at the miracle. The picture of Joline when she hears this story is most convincing: amused, impishly anxious to tell the truth, she goes to the holy prior determined to tell her story. Miss Wagnalls is powerful in this scene in the cathedral and makes real the effect of silence and the peace of the quiet church in preparing Joline's heart and soul for the complete change that comes over her spirit when the prior assures her that her heart must have been pure at the moment of vision and that God's message, "Go and sin no more," is meant for her. The author paints a vivid picture of personality, and tells a beautiful story of vivid atmosphere and charm,

Utica Drop Forge & Tool Co., Dept. C, Utica, N. Y.

a story which, as "Revelation," has made, under Nazimova's clever presentation, one of the most picturesque, thrilling, and perfect screen plays of the year.

Martin, Helen R. Maggie of Virginsburg. Pp. 409. New York: The Century Company. \$1.40. Postage, 12 cents.

Mrs. Martin is wise in retaining her "Pennsylvania Dutch" background, for in that she is peculiarly at home. In the light of such a childhood as here pictured, the friendship of Maggie Wentzler and Henry Butz seems natural, especially considering their peculiar home life and their "outsider" parentage. It is an unattractive life pictured in Maggie's home when "we just longed to take a whack at the persecuting old Aunt Susan," but she gets her "come-uppance" later when Maggie grows up, and the irate reader sighs with satisfaction. Henry, fatherless, is less to be pitied than Maggie with two mothers. It was a pity that one of them could not have given her the affection she so deeply craved! As the young people grow up, the scene shifts to the city and the theme changes to a consideration of the struggle between conservative and conventional smugness and progressive thought. Bishop Sturgiss, for whom Maggie is private secretary, embodies hypocritical cant and toadyism, while Maggie and Henry stand for the universal brotherhood of man. Some of the discussions are clever and convincing. It is a live story and a love-story, involving varied vicissitudes of fortune while Maggie attempts to solve the mystery of her birth, but it takes some surprising situations and some thrilling adventures to bring about the "happy-ever-after" stage.

Seaman, Augusta Hulell. Three Sides of Paradise Green. Pp. 275. New York: The Century Company. \$1.35. Postage, 12 cents.

This is a story for girls, with a plot which involves a mystery in the solution of which three girls play important parts. Paradise Green was a garden-spot far from the little town of Stafford. Around a triangular park stood three houses: one the home of Carol, one of Sue, Dave, and "the Imp" as Sue's twelve-year-old sister was called, and the third the home of Louis Durant, a lad whom they all liked and who dwelt alone with two old French guardians. Most of the story is in diary form and gives an account of the discoveries made by Carol and Sue in attempting to solve the mysteries surrounding Louis, his visiting friend "Monsieur," the evident search for hidden treasure or papers, and the explanation of the three concealed pictures in Monsieur's room. There is much friendly rivalry chronicled, and much that is naturally "kiddish" in the way the "Imp" taunts and tantalizes the older girls, for she seems to know by intuition the facts that the older girls ferret out only by close application. The author allows her meaning to be a little too evident, but the events and situations have the lure of mystery and historical interest. In the final solution there is a clever turn given to the evident part Louis has to play. The result is highly satisfactory.

Hagedorn, Hermann. Barbara Picks a Husband. Pp. 271. New York: The Macmillan Company. \$1.50.

This story is so well told that the reader wonders why the author didn't choose some more worthy subject. Why even three eligible young men should be competing for such an erratic and irresponsible person as Barbara Collingwood is difficult to explain, and if her mother had administered "the medicine that always helps" instead

of arguing with her, it would have seemed more credible. For three days three youths complicate a harrowing situation, and Barbara makes and unmakes her mind through scenes of comedy, tragedy, and idiocy. Imagine a sane girl of refined upbringing being wildly in love with a rounder who outrages every rule of common decency and right living—with a man who allows his machine to climb a tree, dump them into a reservoir, and then to sit for an hour in dripping garments contentedly making love in a zero atmosphere. That situation is a sample of many others equally ridiculous, but the author makes his conversation natural and stimulating, holding his reader's attention by keen insight into the mental gymnastics of his characters who are decidedly unattractive. We do not even like Tom Paraway when he succeeds in getting what he wants.

Barry, Alfred Scott. The Little Girl Who Couldn't Get Over It. Pp. 317. New York: E. P. Dutton & Co. \$1.

The spirit and charm of this imaginative and delicate romance are as elusive as the story is fascinating and difficult of description. The little girl was a loyal little soul, whose spirit reveled in mysterious imagery and visions, but her environment taught her that she must be silent or be misunderstood. Her life with her foster-parents, Jim and Mrs. Kernochan, makes her more avid for the spiritual comradeship of a German bookseller, Otto. His sweet nature did much to reconcile her to the world's realities, while she reached out for the "Fair Kingdom of Never Come, the Kingdom of Kindness." "It is a shifting kind of thing, and when we come near, it lifts and moves along like the moon in a winter's night." Some of the coincidences introduced are almost incredible, but there is always Margarita, with her beautiful child nature, her dreams, her faith, and her ambition. It is only when she has crept to the borders of the "Kingdom" that she finds again the Otto who taught her happiness and the Prince who wakens her from the sleep of hopelessness. It is a sweet story and told with wonderful delicacy and fanciful power, touching the hearts of its readers and inspiring wholesome thought, while it amuses with its delicious humor and keen appreciation of the real youthful spirit.

Haggard, H. Rider. Love Eternal. Pp. 368. New York: Longmans, Green & Co. \$1.50.

Rider Haggard, in his new novel, "Love Eternal," has employed rather a new medium for him—spiritualism and clairvoyance. The theme is sweet and convincing, and we fancy that the author thinks in these dreadful days of strife and bloodshed that many bleeding hearts will be consoled by the thought that true love can never die and the spirits of those who have passed are merely watching and waiting. Godfrey Knight and Isobel Blake grew up together and loved as Fate willed, but how the author found models for two such unnatural and disgusting fathers is hard to understand. The blackmailing activity of Mme. Riennes in trying to coerce Godfrey is also repulsive and disagreeable, but the devotion of the two lovers is charming, and the Great War is introduced in the last scenes of the tragedy by a Zeppelin-raid with dire results.

Rice, Alice Hegan. Miss Mink's Soldier, and Other Stories. Pp. 125. New York: The Century Company. \$1.25.

Mrs. Rice has been a popular favorite ever since she wrote "Mrs. Wiggs of the Cabbage Patch." Her popularity rests,

Pennsylvania **VACUUM CUP TIRES**

FOR those emergencies which must be anticipated in motor-ing, there is opportunity for sound strategy in choosing reserve tire equipment.

Once selected as "spares," Vacuum Cup Tires become regular equipment as a matter of course.

The tread of massive Vacuum Cups is the only tread *guaranteed* not to skid on oil-treacherous, water-wet pavements.

In the matter of economy, Vacuum Cup Tires are sold at approximately the same price as ordinary 3,500 mile tires, and at much less than any other make carrying equal mileage surety.

They also offer a definite certainty of greater mileage. Vacuum Cup Tires usually roll up a generous excess over what they are *guaranteed* for—per warranty tag—

"Suppose I could paint it?"

ANYONE can paint his car with Da-cote and be well satisfied with results.

It would take more professional auto painters than there are in the country to paint the cars that need painting. Many of the best painters have volunteered for war work. A professional job is worth all it costs, but an amateur job is a lot better than a dingy, shabby car.

The professional very probably would use Murphy materials. Da-cote is simply the same quality of varnish and pigments, ground into a creamy, brilliant enamel for quick, amateur application.

Da-cote flows on so smoothly that no brush marks are left. It dries over night.

Da-cote is made in black and white and eight popular colors.

Get a can of Da-cote from your dealer and paint your car this afternoon. Run it out new tomorrow.

If your dealer hasn't Da-cote, write to us for color card and name of nearest Merchant who sells Murphy's.

Murphy Varnish Company

Newark *Franklin Murphy, Jr., President* Chicago
Dugall Varnish Co., Ltd., Montreal, Canadian Agents

deservedly, on style and methods—in other words, is based on a powerful personality. She has the gift of well-chosen diction, a hearty sympathy with every stratum of society, and an appreciation of the faults and foibles, as well as the innate virtues, of so-called ordinary people, and a skilful way of depicting tragedy or comedy with a light but potent touch. There are eight stories in all, amusing, convincing, and touching, sometimes sad, sometimes full of wit, and all radiant with keen human sympathy. It is impossible as well as unwise to choose one as any better than the others, but "Hoodooed" seemed the most amusing and "The Soul of O Sana San," the sweetest of them all.

Wells, Carolyn. The Room with the Tassels. Pp. 283. New York: George H. Doran Company. \$1.40.

Miss Wells's book deals with murder, mystery, mediocre minds, and detectives. Out of a conversation in which spirit-manifestation is "cussed and discusst" grows a half-serious, half-humorous suggestion to have a house-party in a real "haunted" house, and, strangely enough, eight people of supposedly sound minds are found foolish enough to lend themselves to such a crazy scheme. The frolic loses its spontaneous merriment almost immediately, and when two of the party are murdered under startling and impossible conditions all the fun disappears. Tragedy takes its place, and detectives are called in. The story is in Carolyn Wells's usual style and will please a certain class of readers, but it is difficult to satisfy any intelligent reader with a story whose premises are impossible, whose situations are forced and foolish, whose artificiality was so plainly created to hoodwink one's intelligence, and whose conversations are so plainly calculated to place suspicion on each character in turn, except, perhaps, the guilty one. After pages of ghosts, spirits, and criminal—the solution comes on the last page and is supposed to startle and surprise every one.

OTHER BOOKS WORTH WHILE

Johnston, J., M.D., and Wallace, J. W. Visits to Walt Whitman, in 1890-1891. By Two Lancashire Friends. With twenty illustrations. Pp. 279. New York: Egmont Arena. \$2 net. Postage, 12 cents.

Lovers of Walt Whitman will delight in the familiar intimacy of this book. Whitman always had more admirers, proportionally, in England than in America. From a little group of his English friends, in Lancashire, two gentlemen came, each by himself, to see "the good gray poet," each made notes of all the poet said, and reported later to the group interested. Their reports were printed for home circulation; now these are brought together in this volume to serve a wider circle. Both Dr. Johnston and Mr. Wallace became Whitman worshipers, the former summarizing his impressions in these words:

"He is by far the most impressive personality with whom I ever came in contact. Joylike in majesty, he is yet childlike in simplicity; and he is natural, unaffected, and sincere in every fiber. His presence makes the same indefinable impression upon one as Nature herself in her grandest scenes, and reminds one of the cliffs, the sea, the mountains, and the prairies. It has the same tonic and life-giving influence, the same uplifting and expanding power, and the same charm."

Saerchinger, César. The International Who's Who in Music. 12mo. New York: Current Literature Publishing Company. 46 postpaid.

Mr. Saerchinger, during his experience as editor of *The Art of Music*, discovered, as many others have, the paucity of information about present-day musicians. To fill this lack, he has edited the present

PRINCE ALBERT

the national joy smoke

You just get-put with a jimmy pipe brimful of Prince Albert—*more-ishly good tobacco*—like your next job was next week, and, you didn't even have to worry about taking-time-out-to-eat! For, P. A. quality and P. A. fragrance and flavor skip into your good graces so flashquick, and dig-in-so-deep, you'll put P. A. on the payroll as ok essential-standard-satisfaction-equipment and run-up the smoke-pennant sky-high!

Prince Albert cuts the fuss-fret out of tobacco! That's why every day more men talk P. A. and sing P. A. and smoke P. A. than the day before! It gives every man everything he ever hankered for in the smoke-line—and without bite or parch! Our exclusive patented process frees Prince Albert from bite and parch and lets you smoke-your-fill for the first time in your smokecareer! Your tongue's at concert pitch all the time, no matter how much Prince Albert you get-away-with!

Go on and buy a pippin-of-a-pipe and get jimmy-pipe-joy'us via P. A.! Why, it's as easy as cutting cross lots even for the man who figured it out a long-spell-since that he *never could* smoke a pipe! We tell you that Prince Albert will cut loose a bucket of smokesunshine for your little old particular benefit every time you fire up!

The busiest thing you've got on your mind next is to see how fast you can get down to the nearest store that sells tobacco!

Choose any one of these popular P. A. packages—the toppy red bag, the tidy red tin, the handsome pound or half pound tin humidors—or—that classy, practical pound crystal glass humidor with sponge moistener top that keeps the tobacco in such perfect condition. Stock up and get going for what's wrong with your smokeapparatus!

volume, a most excellent and comprehensive work, tabulating as completely as possible contemporary musicians all over the world. Added to the familiar "Who's Who" information, there is at the back of the book a geographical index, with the various musical activities carefully classified, including not only actual musicians, but also all the allied interests and professions. The volume ends with what is called a "Musical Gazetteer," which enumerates, also geographically, the music-schools of the world, opera-houses, orchestral organizations, choral societies, publishing houses, and concert managers. The volume is undoubtedly a needed one and will be welcomed by every one wishing to keep abreast with the modern musical world.

Comfort, Will Lexington. The Hive. Pp. 324. New York: George H. Doran Company. 1918. \$1.50.

This is neither a story nor an essay, but reflections and abstracts from writings of the author and his young people, trying to voice the ideals of his Stone Study Community—to sketch the beauties of nature and to portray its fascination—a plea for the "New Race," the "New Democracy," and comments on world-conditions under the clouds of war and strife, "whose issue has to do with the painful groping consciousness of the peasant mind—the slow and tortuous awakening to the fact that royalty in its utmost pomp and glow does not enfold God." "The people must learn before they can be free. Hitherto they have been duped by the nation; and the nations are now being duped by each other; but there is a greater plan at work . . . to do away with boundaries and hatred and preying . . . to establish democracy in place of imperialism." The author is potently spiritual, delicate in his imagery, and clear in vision, tho rather too poetic and flowery at times for the ordinary reader. His title is well chosen, being descriptive of the brotherhood of man, the "Great Fatherland," the "Planetary Hive," and his reflections give hope to the discouraged and vision to the blinded. The book would be enigmatic to one who lives on concrete facts, but to the thinker it will be a message and an inspiration. The point of it all is that man is "spiritually woven to his brother and to the race; giving himself and his service to his brother and to the race, he glorifies the texture and stature of his own soul."

Blatch, Harriet Stanton. Mobilizing Woman-Power. Foreword by Theodore Roosevelt. Pp. 196. New York: The Woman's Press. \$1.25. Postage, 15 cents.

There have been many books written recording the war-achievements of women in all countries, stimulating and inspiring our American women to face the war-problems and to do bravely and gladly the work which so evidently lies in their power. This one is particularly commended by Mr. Theodore Roosevelt in an appreciative foreword, and he urges the women to service and the Government to acceptance of such service. Enthusiastic and comprehensive chapters chronicle the varied accomplishments of the women of Great Britain and France, even of the women of Germany, in their ready response to the call early in 1914, and she draws therefrom the conclusion of what America needs. "The Great War is a conflict between the ideals of the peoples. 'Tis a peoples' war, and with women as half the people." "Women can save civilization only by the broadest cooperative action, by daring to think, by daring to be themselves. The world is entering an heroic age, calling for heroic women; they must labor, economize, and pool their brains."

The Royal Road to Wiping Wisdom.—

I FEEL that buying is like reading a book and that the buyer who "takes a chance" on his Wiping Waste is like the student who studies part of his lesson and guesses the rest.

There still are commodities that have to be bought on "specification" because no one has standardized the product in manufacture nor guaranteed it in distribution. BUT—

Two things I want to say:

First: Wiping Waste is an important item in costs and in efficiency.

Secondly: Royal Cotton Waste is standardized and guaranteed for uniform quality, even weight, 6% "tare" (wrappings) and utter cleanness.

I want you who buy or use wiping materials to write my company for your free copy of "Producing the Fittest in Waste." It's a convincing and true history of Cotton Waste development from a casual, crude product into the high type standardized specialty—Royal Cotton Waste—the logical wiping stuff.

Ask your jobber or us for the Royal Sampling Catalogue of the 12 standardized Royal grades.

PERSONAL GLIMPSES

UNCLE SAM'S BLUNT LETTER TO KAISER BILL

IF Wilhelm reads all the letters addressed to him these days, he must be having a delightful time in the solitude of his war-library. Some of the missives are full of good advice, others are grimly critical and a trifle abusive, but most of them contain epithets that would naturally affect a sensitive nature, which, perhaps, fortunately for himself, to say nothing of mankind, the Kaiser does not seem to possess.

What Uncle Sam should write him is indicated by Dr. Frank Crane in the *New York Globe*, in an epistle which bristles with the ideas and language of most Americans concerning the Kaiser's peace overtures. Briefly acknowledging the receipt of Bill's peace letter, Uncle Sam is made to say:

You suggest that we get together, bury the hatchet, smoke the pipe of peace, let bygones be bygones, and everything.

I am willing to get, bury, smoke, and let, as per request, but I do not want to be friends. I might want to be your friend, but I don't want you to be mine.

I can conceive of no greater calamity. You have injured your enemies some, as you have caused England, France, and America much expense and wounds, but it is not a patching to the damage you have done to your friends, among whom I believe you reckoned Belgium and Russia.

I should not like to think of you as praising me behind my back, nor to hear that you are appreciating highly my good points. Please don't do anything like this, Bill. Curse me, lie about me, accuse me of having intentions as rotten as you know your own to be—do this, and I shall be happy, for posterity will say, "Uncle Sam must have been rather a decent fellow if Bill blackguarded him so."

And please don't speak to me again. I may speak to you, but I don't want you to speak to me. And don't write. My man Pershing will be over to your house pretty soon, and he will hear what you have to say.

For I don't like your face. And I don't like the way your mustaches are put on. I don't like your uniforms and I don't like lots of your little ways. This being the case, why should I subject my nervous system to the strain of trying to act friendly?

Still, I am kinda glad I met you. You are so darned low-down and contemptible that it makes me love my fellow men the more. I want to go and kiss all the chicken thieves and murderers in the county jail when I think of you. Yes, when I think of you, Bill, I say to myself that surely everybody outside of your bunch of thugs and pirates is going to heaven.

I am getting along, Bill. I am over a hundred years old now. There was a time when I dreaded that any one should think ill of me. It made me unhappy. But I have learned that nothing adds to a man's reputation among decent people like the hate of a whelp like you.

Don't misunderstand me. I don't hate you. Only I want you to hate me. Keep it up. My most soothing thought as I lapse into slumber is that you are gnashing your teeth, whetting your snickersnee, and

This new **MUELLER** Sink Combination Faucet and Spray is the latest improvement in Plumbing for the kitchen. Any plumber can quickly install it—at modest cost.

Make a Christmas Gift to Your Home

Put a Mueller Sink Combination Faucet and Spray in your kitchen and let it make your work easier—for help is hard to get and time is doubly precious in these days of war activities.

This Mueller Plumbing Fixture delivers water at any temperature desired—either from the spout or from the spray—hot for scalding dishes—cold for washing vegetables—warm for sprinkling clothes, etc. Ask your plumber to tell you how little it will cost to make your home this Christmas gift.

MUELLER PLUMBING FIXTURES

Built to Wear Without Repair

For sixty years, the name **MUELLER** has been the mark of master craftsmen, and has stood for leadership in quality—for precision in manufacture—for dependability in service. It is your protection against constant repairs. Ask your architect to specify **MUELLER** Fixtures—ask your plumber to use **MUELLER** Fixtures. See that the name **MUELLER** is on them before they are installed.

MUELLER Rapidac (rapid action) Faucets—with which this Sink Combination is equipped—are built to withstand four times the normal water pressure; and are fully warranted.

7 Point Supremacy Mueller Rapidac Faucets

- 1—Made of Muellerite—instead of common brass.
- 2—Extra Heavy Nickel Plating—has lasting luster.
- 3—Corrugated stems—any style lever handle at any angle.
- 4—Special Cap Packing—absolutely water-tight.
- 5—Double pitch Thread—quick opening and quick closing.
- 6—Cone-seat Washer—prevents leakage—reduces wear.
- 7—Anti-spreader Device—stops splashing.

Every **MUELLER** Fixture is made of *Muellerite*—a metal that is 85% pure copper (ordinary brass rarely contains 60% copper). *Muellerite* is more durable, takes and holds a finer finish, and resists corrosion better than common brass. Note carefully the Seven Points of Supremacy—each a vital part of the perfect faucet.

MUELLER manufactures a complete line of Plumbing Fixtures—including many new devices of unique merit—all described and illustrated in the interesting book, "Dependable Plumbing," which will be mailed you free, upon request. Write for it today.

Iron-Steel-Copper-Brass Paint-Labor

A Suggestion In The Program Of Saving To Those Who Buy Washing Machines

UNDER normal conditions it is the right and privilege of every woman to procure the best washing machine she can afford.

Under normal conditions it is the business of every merchant to sell as many washing machines as he possibly can sell.

Under normal conditions the manufacturer is privileged to use all materials necessary to produce maximum output.

But—conditions are not normal.

Conservation must be practiced in all ways. Particularly must metals, basic and alloyed, and the other essential materials used in the making of washing machines, be conserved.

All of these materials are widely used in fabricating the sinews of war. Therefore, none must be wasted. To save—to conserve—is to forge humanity's weapons.

The Government must not only have materials, but personal service, as well. Washing machines are essential to the thrifty and efficient utilization of time in the home. The housewife who is giving her time to war-winning work, must have facilities to perform her household tasks with minimized effort and in the least possible time.

No other labor saving device enables the housewife to cope so successfully with the situation created by the transfer of household domestics to the work-rooms of the great war industries.

War and the resultant shortage of domestic service have brought about a definite appreciation of the modern washing machine.

What was once indifferently looked upon as merely a device for performing an onerous household task, is now recognized as an established essential in the maintenance of that greatest of all institutions—the American home.

The power-driven washing machine of today has reduced days to hours and hard labor to mere superintendence. It not only saves time and labor, but

conserves materials as well, by prolonging the life of washable garments.

Since our participation in the war, the demand for dependable, efficient washing machines, has become so great that with the prevailing restriction of materials, it will be impossible to supply all who would like to obtain them.

Yet every home requires one. The saving of time and hard work and betterment of health resulting from the abandonment of the old-fashioned tub and board, are beyond calculation.

Therefore, in order that the available supply may do the maximum good, every owner of a washing machine is beseeched to use it and take good care of it.

No matter what type of machine you have, whether electric, multi-motor, belt, water or hand power—don't discard it to buy a new machine. Many a machine that has long out-lived the manufacturer's guarantee is still serviceable. If it is out of repair have it fixed. For a small sum your hardware dealer's repair department can probably put it in perfect running order.

No matter how well you can afford to buy a new one—don't do so if you can possibly avoid it, for you will probably prevent someone who seriously needs a washing machine from getting it.

If you can sell or give your old washing machine to someone who needs, and will use it; then only are you justified in buying a new one.

In making your selection, look first for simplicity in design and construction. Avoid whimsical or unnecessary accessories or contrivances. By doing so you will aid the industry in its effort towards standardization and simplification of types and parts.

In short, this is an appeal to the people to practice an economy that will avoid a disastrous disarrangement of household conduct and management, and make it possible for the washing machine industry to give its whole-hearted assistance to the Government in bringing to a successful issue its fight for PEACE and DEMOCRACY.

Aluminum-Wood-Rubber Time-Money

An Appeal From An Essential Industry To Those Who Sell Washing Machines

YOU will best serve your community and your country if you endeavor to put all new washing machines into homes where they will do the most good. If your prospective customer does not own a washing machine, urge her to buy the best one she can afford.

¶ If you can supply her with an electric or power-driven washer, and she can afford to buy it, urge her to do so rather than buy a hand-power machine. But if any circumstances whatever limit the sale to a hand-power machine, sell it by all means, for the Nation must conserve woman-power as well as man-power.

¶ You are justified in selling a new machine to anyone who now has a workable one, only when you can find a place for the old one to serve another family. Washing machines are too great an asset to the womanhood of America to permit even one to be idle.

¶ Make it a point to ascertain whether or not your prospective customer now has a washing machine. If her reason for buying a new machine is that her old one is not usable, persuade her to let your repair-man look it over with a view to putting it in running order. Every manufacturer stands ready to co-operate with you in supplying parts and repairs that will place old washing machines in working order.

¶ Show the prospective buyer why it is her patriotic duty to continue using the washing machine she now has if it is at all possible to do so. Explain to her the material and labor situation. Let her understand that if she discards a still usable machine and buys a new one she will probably be the cause of hardship to some overworked housewife. Offer suggestions

that will assist your patrons to properly operate and care for their machines.

¶ By doing so you will save money for your customer, prove your continued interest and willingness to serve, gain her everlasting good will and, at the same time, render a valuable service to your country.

¶ Keep in mind the fact that idle washing machines, if at all usable, are a positive waste of the Nation's resources. Remember, too, that the modern washing machine is the housewife's greatest economizer of time, labor and strength.

¶ You know, of course, that present output is not equal to the demand. You know, too, that further shortage will probably limit the supply for the coming year. War-time demands upon labor and materials make conservation imperative.

¶ In view of these conditions, you are urged not to make any attempt to displace any washing machine with a new one, unless you can dispose of the old one to someone who will use it.

¶ In times like these, it devolves upon you to operate your business on a war basis. The co-operation requested will effect a conservation of an essential, the demand for which is greater than the supply.

¶ Therefore, if the washing machine user, the washing machine dealer, and the washing machine manufacturer work together in the proper spirit, then, indeed, can much good be accomplished for the housewives of America—and vast quantities of materials, time, labor and money be converted to the winning of a complete and decisive VICTORY.

Bradley

SPEEDMASK

For Soldier—For Civilian

NOW—let the wind whirl and the snow swirl! Let the old storm king rage and snarl! Winter is robbed of its wrath and rigor when you venture forth in a Bradley Speedmask.

Style, warmth, comfort, protection—these you get in the fullest measure from this new, practical, sensible, Bradley garment for sport and hard winter wear.

For hiking, for sentry duty, for aviation and for motor-cycling "Over There." For riding, driving, walking, skating, coasting, or motoring over here.

A close-fitting, hood-fashioned, armor-like garment, knitted of warm, worsted yarn—cap and muffler combined.

Long in front to protect the chest—short in the back to snuggle under the coat. Dips low over the forehead, reaches high on the cheeks, leaves only the eyes and nose exposed.

For men, women, and children, olive drab and colors, and two sizes. Ask your dealer, or write for Bradley Style Book.

BRADLEY KNITTING CO.
Delavan, Wis.

There are Bradley sweaters, socks, gloves and caps to help you laugh at winter weather—all warm, well-made and very stylish.

PRICE

planning to get me. Your animosity is my most treasured possession.

If I discovered that you really liked me I should go and take a Turkish bath.

So don't worry about our little difference. There is no use trying to patch things up. After all, it is not so much what you have done that offends me, it is what you are, and that will not be cured until your grateful people hang you to a lamp-post somewhere in Berlin.

Don't imagine that I think you are dangerous, Bill. Doubtless you think you are a wolf. You are not. You are a skunk.

Meanwhile, proud it is that I am to have the heartfelt malice of the likes of you.

Continue, old top, to be, as always, my enemy, and I beg to remain, yours truly,
UNCLE SAM.

BARBARITY IN THE GERMAN COLONIES

WHILE Germany whines for the return of her colonies so that she may still have "a place in the sun," travelers acquainted with her rule in Africa say she is really looking for an outlet for the innate barbarity of her officials. These men have rendered themselves unspeakably odious to the natives, and Miss Ida Vera Simonton, African traveler and student, believes that their reinstatement would cause a rebellion from Cairo to the Cape and endanger the life of every white man between.

In an article in the New York Sun Miss Simonton thus describes German atrocities witnessed by herself:

I have seen youth and old age chained neck to neck, ankle to ankle, and waist to waist with shackles reminiscent of the Middle Ages, goaded with rifle butt and bayonet-point, flogged with the *sjambok*—that dreaded lash of rhinoceros hide—and forced to labor from sunup to sundown on the land that had been theirs from time out of mind!

I've seen youth and old age drop dead in their tracks, their bodies dragged on by their helpless companions in agony because the German overlords would not let them rest long enough to remove the dead body from its shackles and give it burial!

I've seen youth and old age, women and little children, after a day of the hardest kind of labor—road-making, jungle-clearing, and working timber—crowded for the night into huge barracoons without windows or beds, filthy and vermin-ridden beyond description, veritable hotbeds of contagion and disease and charnel-houses for more wretches than could be counted!

I've seen mothers, ten minutes after the experience of maternity, hurry piteously to catch up with the caravan of which they were a part to avoid the *sjamboking* they knew would be theirs if they and their loads did not arrive at a given factory on a given day!

I've known girl children from five years up the victims of German soldiers; I've seen girls still in childhood set adrift in the hope that they and their young might perish!

For the cowardly Hun hasn't the courage of his crimes. He feared a race of Euro-Africans, a race that would in time become powerful enough to exact retribution. Any babies who survived were

Disston— The International Saw

DISSTON Saws did not seek trade conquests on foreign shores, but were invited there by craftsmen who knew Disston quality by experience or reputation.

Every country has its toolmakers who produce good tools, yet in every country you will find Disston Saws in the hands of many expert workmen.

The word quality as applied to Disston Saws means a steel formula to produce the proper degree of hardness, toughness and elasticity.

It means design and form for fast, clean cutting. It means exact temper and workmanship.

Disston Quality is the result of over three quarters of a century of development.

Disston is truly the International Saw.

Disston Saws and Tools are sold by all progressive hardware stores.

Send for the free "Disston Handbook of Saws." It contains many valuable suggestions on the care of Disston Saws and Tools.

The saw most carpenters use

blinded, mutilated, and poisoned for life with germs.

But the German's bestiality was not confined to his treatment of his half-caste children. To overcome the Euro-African danger the Government, under the pretense of offering lucrative positions as barmaids, typists, and telephonists, lured young healthy German peasant girls to the colonies and, denied matrimony, they were forced to live with German soldiers and farmers. Many of these women and children, three thousand of them, if memory serves, were deserted by their men when Britain and Boer invaded Southwest Africa in the present war.

Over the length and breadth of Africa has traveled the news of Germany's blackest wholesale crime, striking terror into the heart of every black man, woman, and child, and implanting ineradicable hatred of the Hun. That crime was "the slaughter, according to Germany's own figures, of 200,000 Hereros, the most cruel, unnecessary, and most systematic extermination known to history." And while Africa and the rest of the world stood appalled at this dastardly outrage, Prof. Moritz Bonn, of Munich, speaking before the Royal Colonial Institute, on January 13, 1914, boasted: "We have solved the native problem by smashing tribal life." Miss Simonton continues:

While the Herero rebellion cost Germany the huge sum of \$150,000,000 and more than two-thirds of the native population, it enabled her to introduce great numbers of troops and vast military supplies into the colony and otherwise to prepare for The Day.

But when The Day finally arrived in August, 1914, despite her preparations and her intriguing to foment trouble between Briton and Boer, Germany was amazed and disgusted to find Briton and Boer fighting shoulder to shoulder, and after nine short months of the most strenuous and bitter fighting known in this great war of hard and bitter fighting she was in full retreat in Southwest Africa, and over Windhoek, its capital, was hoisted the Union Jack. Among other German supplies captured were enough steel horse-shoes to shoe all the horses in South Africa for the next twenty years!

The foundations of Germany's other African colonies were also laid in blood.

From 1891 to 1903 there was constant warfare in the Kameruns and Togoland on the northwest coast and in German East Africa.

There were no fewer than twenty-nine punitive expeditions during that time, and altho they were spread over an immense amount of territory, they are also eloquent of Germany's inability to impose her imperialistic rule upon subject peoples without the aid of gun and bayonet.

Her trail in East Africa was particularly bloody, and it was left principally by one Dr. Karl Peters.

In the year 1884 and under the guise of an individual trader, by so-called "treaties" secured from native chiefs and in defiance of the prior rights of the Sultan of Zanzibar and of England and Spain, Peters got possession of a solid block of territory comprising upward of 600,000 square miles in extent and lying almost due north of the port of Bagamoyo.

In one of those "treaties" Sultan Hugo not only placed all of his "land on the

Timing Barrage Fire

The artillery goes into action with a deafening roar. Shell-fire concentrated on the tangle of wires this side of the enemy trench. Suddenly the guns are elevated. They are shelling the trench. Our men rush over the top.

The signal to advance, if given too soon or too late, may engulf them in their own barrage-fire.

One exact time-piece measures keenly up to the modern requirements of both war and peace—the Hamilton Watch.

The style and beauty of Hamilton cases make many of them objects of art. The works within are the same un-failing works that time America's most famous express trains. Every Hamilton is guaranteed to give you exact and continuous service.

Hamilton Watch

"The Watch of Railroad Accuracy"

You may choose your Hamilton from a gallery of 22 models. Prices, \$30 to \$135. Movements alone, \$16 (\$18 in Canada) and up.

Tana, from Massa to Kenia, under the protection of Peters," but he gave Peters the right to work the country "above and below the ground in every direction . . . and Dr. Karl Peters is to be supreme lord in the country of the Gallas, to command the armed forces and to judge the people. This is done for the blessing and welfare of the Galla land."

The first act of the new supreme Galla lord was to personally shoot the chief of the Gallas, at Bokore, when, to use Peters's own words, "he felt the proud intoxication of the victor." He also destroyed the stations of the British company and publicly burned their official papers and shot down all who opposed him!

The Huns now have the supreme and colossal impudence to declare through Dr. Solf, their Colonial Minister, "that the African colonies must be returned to Germany, even if Belgium and occupied France and Alsace-Lorraine must be given in exchange therefor."

"For Germany's future position as a world-Power seems most closely bound up with her colonial future. . . . This balance of power created in the colonial field will, by removing future possibilities of conflict, constitute one of the best guarantees for lasting world peace!"

Germany was never more brutally and frankly Prussian than when this pedagog, this mouthpiece of the All Highest and the rest of the Potsdam gang so put himself on record. She has given further notice that her idea of a lasting peace is one where she, triumphant, will control the rest of the world and make it dance to her bidding.

But the blacks from Africa, fighting side by side with our own black, patriotic, courageous troops, aided by our white troops and those of our allies, are seeing to it that Germany does the dancing.

GALLANT FEATS IN THE BLUE

FORMERLY, when an ordinary mortal was "in the clouds," he was considered a fit subject for fraternal commiseration. Nowadays, however, the man aloft is a popular hero whose adventures not only bring disasters to the Huns, but thrill the bosoms of countless thousands whose duties, if not their inclinations, shackle them to *terra firma*. What men can do in the sky is partially shown by a correspondent of the *London Times*, in an account of the brilliant exploits of the Royal Air Force:

One of our two-seaters, when out alone, was attacked by no fewer than twenty enemies. It shot down two of its assailants, but was, as may be imagined, itself almost shot to ribbons. By getting behind clouds, it managed to evade its pursuers and got home, but arrived with one of its occupants wounded in ten places by as many different bullets, all its petrol-tank shot through, its engine hit several times, and all the instruments on its dashboard broken. But it is amazing under what parlous conditions our men will sometimes get back safely.

Two cases are known lately in which men have climbed out on the planes and plugged a hole in the petrol-tank. In one case the man had nothing better than a pocket-handkerchief to use as a plug, and stayed out on the wing holding the stopper in place till the machine landed. On another occasion both planes on the star-

Men, Metal and Mission

Yesterday a chugging, wheezing, rattling contraption—the "horseless carriage." Today a long, low, clean-limbed, powerful carrier—the motor car.

Yesterday a feeble, fluttering, derided thing—the flying machine. Today the marvelously swift, far-ranging airplane—a mainstay of a civilization's hopes.

That which was not even in the dreams of men a few decades past now stands accomplished.

But with the coming of tomorrow, today shall be as yesterday, for even as the world celebrates these triumphs, science and engineering are carrying them on to new greatness.

In the transformation of the automobile and the airplane from the crude beginnings of a few years ago, *Lynite* has had no small part.

Simply to have created a metal combining such lightness and strength might well have been regarded as paying the debt to progress owed by any one man or group of men.

To those men who accomplished it, however, the creation of *Lynite* meant only that they were launched upon their mission.

Swift as is the airplane, it must be swifter, safer and more enduring. Efficient and economical as are the motor-car and the motor-truck, they must be still more efficient, still more saving of fuel and tires. And all around are cumbrous products of varying character

to be lightened and made easier and less costly to handle or use.

Here is a mission worth the supreme efforts of any one organization, and as such the makers of *Lynite* view it.

That's why today it does not satisfy them to look back over the long distance they have come in a few years.

That's why today they are not content with having reached the point where *Lynite* parts in airplanes and automobiles are counted in scores and savings of pounds in hundreds.

That's why today they do not consider their task ended with the production of a remarkable piston three times as light and with twice the heat-conductivity of cast-iron.

To them, these achievements are but beginnings. Therefore to their aid they have summoned scientists and engineers—experts in metallurgy, metallography, aerodynamics, gas-engine design and foundry practice. For these men they have erected and equipped some of the finest laboratories in America, and to these men they have said:

"These laboratories are not only your workshop but also your opportunity—let none invade nor interfere. Big as are the tasks of today, yours, which are those of tomorrow, are bigger."

Society Brand Clothes

THESE are times when people are changing their mode of life and forming new habits. They are good times to form the habit of wearing better Clothes—better because they last longer and look quality—even when they get old. And they work out every dollar that you put into them.

Such clothes are Society Brand, known and worn in five countries. As a rule we distribute them through only one store in each city—"Style Headquarters."

You'll recognize something agreeably different the moment you lay eyes on these styles. That's why clothing dealers seek to get them—because they win trade.

Watch for the store that is called "Style Headquarters." That's another way of saying "Society Brand headquarters."

Our winter Style Book is full of smart ideas. Write for it.

board side had been shot in half by anti-aircraft fire and broken off, but the observer leaned over the side holding his Lewis gun in his hands to increase the weight of the ballast, and so kept the machine level till she got home.

In another case, one of our two-seaters had shot down two enemies, but the observer was badly wounded and the petrol-tank pierced, so that the fuselage took fire. The pilot managed to keep the fire down while still guiding the machine over our lines to the ground. As she landed, flames burst out everywhere, but he succeeded in getting out himself and dragging his wounded comrade clear before the fire caught him. Another of our machines had an exciting time when attacked, first by a party of seven biplanes, then by one triplane, and finally by twelve of the enemy at once, of which eight flew above and four below it. Our men shot down one of the enemy, but one of the occupants of our machine was badly wounded. The other brought the aeroplane home, while keeping the enemy off with occasional bursts of fire with his left hand.

Characteristic, again, was the conduct of one of our pilots, who saw thirty enemy below him, and promptly dived into them, both he and the observer firing continuously right and left and everywhere. In the first flurry three enemy machines were shot down, one bursting into flames, one diving headlong to crash on the ground, and the third spinning out of control. By this time the enemy had discovered how few their assailants were, and four of them together got over our machine's tail. By very clever dodging and shooting two of them were shot down, and then our machine climbed and lost itself in the clouds, the last thing that the occupants saw of the earth being three columns of flame and smoke rising from the spots where three of their victims lay burning simultaneously.

Sometimes the airmen are forced by unforeseen circumstances to make a premature landing. But even then they manage to give a good account of themselves. For instance:

Another of our men met an enemy machine and shot it down, but was then forced by engine trouble to land behind the enemy lines. While trying to get the engine to go he was shot at by a German officer with a revolver from a distance of fifteen yards. The bullets missed him, but pierced the petrol-tanks. In the nick of time, however, the engine started again, and the petrol lasted long enough to enable him to lift over to the right side of the lines, but he was still so close that he was under machine-gun and rifle-fire. In spite of this, the pilot climbed out and stripped the machine of the locks of the guns, the sights, and all the instruments, before leaving it to lie and be shot to pieces.

One of our pilots shot down four enemy observation balloons in succession on a single trip. Another man shot down one balloon, and was then chased off by a large patrol of enemy machines, while a new balloon rose in the destroyed one's place. Our man ran away from the enemy, letting them get near enough to keep tempting them on, then suddenly rose above the clouds. Thus hidden, he went back on his tracks, dived out of the clouds immediately above the new balloon, and shot it down like the other. One of our balloons also was shot down, tho not by an airplane, but by gun fire. The occupants knew their work at the moment was of

great importance, and, instead of taking to the parachutes, they went on observing and reporting while the balloon sank, until getting near the ground, when both men climbed into the rigging and awaited the shock, neither being badly hurt. The enemy is still occasionally seen to make use of the parachute for escape from an airplane. In one case lately one of our patrols fell in with four *Fokkers* and wiped out the whole party clean. From one of the four, as it fell, the airman was seen to be pulled out by a parachute and land apparently in safety.

LETTERS FROM THE FRONT TO THE FOLKS AT HOME.

THOSE German-Americans who are serving in our Army abroad form decided opinions about the duties of loyal American citizens and the use of the German language in this country. Earl B. Mahle, second lieutenant of a machine-gun company, takes up this subject in a letter to his uncle, Rev. W. E. Mahle, of Blooming Prairie, Minn., which is printed in the *Mason City Globe-Gazette and Times*. The lieutenant used to think that he would have to reconstitute his ideals, to allow them to descend to a lower plane, if he wanted to derive any satisfaction from killing the enemy in battle. Now he admires the man who asks the doctor to patch him up a bit so that he can get out and kill a few more *Boches* before they finish him. He then asks:

Why shouldn't we derive some satisfaction at being able to help do away with a breed that is cowardly to the core, that can not deal honestly, but practises deception at every turn; a breed that delights in flying above a procession of innocent women and children refugees and shooting them down like dogs with the aviator's machine gun; that will swoop down upon a Red-Cross hospital-tent and deliberately inflict wounds on those already terribly wounded, and deliberately shoot down those beautiful souls, the Red-Cross nurses, as they minister to those who are suffering; that practises the bombing of hospitals, and uses its own Red-Cross hospital-tents as a camouflage for ammunition-dumps; that after the battle is over deliberately shoots down our Red-Cross personnel as they make an attempt to bring help to the wounded; a breed that sees nothing sacred in womanhood, that has no religion but its own desires, and knows no law but its own passions. Really I do not think even the most exacting of persons could have any compunctions about shooting down the class of people we have as our enemy. I have a firm conviction that our nation has been divinely called or favored to show to Germany and her allies that they can not continue in their criminal policy indefinitely without answering for all the suffering and devastation that have been caused. After seeing what I have I am firmly convinced that our dead will not have died in vain, that those Americans who have lost loved ones in this war should not mourn but should take satisfaction. The greater the sacrifice, the greater will be their reward.

Before he left the United States Lieutenant Mahle opposed the agitation to bar the German language from our schools, but he is now strongly in favor of it. The

PRESERVE THE LEATHER

IT is just as important to choose a shoe polish which will keep the leather in good condition as it is to select one which will give a brilliant shine. 2 in 1 Shoe Polishes do both. They give a quick, perfect shine, keep the leather soft and pliable and thus add months of wear to your shoes. The use of 2 in 1 Shoe Polishes is the best way to economize on the present high prices of leather.

The F.F. DALLEY CORPORATIONS, LIMITED

BUFFALO, N.Y.
HAMILTON, CANADA

German-Americans and other citizens may still love Goethe and Schiller, he says, but at the same time realize that to-day their language is the language of "Kaiserism" and *Kultur*, which "stands for everything that is low and mean and deceitful." He then proceeds:

To-day the average American with average information knows that it was part of a preconceived plan of Kaiser Wilhelm and his band of Potsdam cutthroats to have German taught in our schools, to have German used in our churches, to have newspapers published in the German language which should exert an ever-increasing influence upon millions of people in America of German descent, who in turn would by their vote have a tremendous influence upon the political situations, gradually bringing about a turn of events highly favorable to the propagation of German autocracy in America.

We are at war with Germany, with Germans who speak as their language the German language. It can no longer be said of our troops that "they are going and will soon give an account of themselves." They are already here. They have shown on numerous occasions that they have the true American spirit. They have never yet been defeated—no, not even by superior numbers. (I say this with some degree of pride, and I know it is pardonable.) But to-day the American Army does not consist alone of the men who are in France. Every American man, woman, and child, whether in America or abroad, is a soldier in our Army. We have all enlisted. Those at home must be just as much one-hundred-per-cent. Americans as those keeping eternal vigilance in the dead of night at the edge of No Man's Land. The man who has lived in America and still enjoys its advantages and promises, and can speak only the German language, is not a one-hundred-per-cent. American. He does not and will not comprehend our American ideals and standards.

He bears watching. The man who prefers to speak German, even tho he can speak some English, is an enemy of the United States. Every American knows what should be done with him. Do you imagine that we allow our soldiers to speak the German language among themselves? I have never yet seen where they wanted to do it, but if they did, would we be right in allowing it? If I were to hear two men in America conversing in the enemy tongue, it would be my business to find out "why."

Turning to the heroic conduct of our fighting boys, who endure privations and suffer loss of limbs and eyesight without complaint, he says they should not be insulted on their return by hearing the German language spoken, seeing it in the German papers, or listening to it preaching Christianity. The lieutenant concludes:

Yes, these are tremendous times. There was a time when we would have said of a man who so desired, that he was an American until he proved by his conduct that he was otherwise. To-day it is different. To-day we do not accept mere statements. To-day no man is a loyal American until he has proved himself to be one. What I mean to say is that to-day there is no passive Americanism, to-day every loyal American must be an active American willing to cooperate in every way for the promotion of Americanism, ready to do all in his power to advance the cause for which

The Warning of the White Mice

THREE or four white mice peer out through the wires of a cage, in a front line trench "over there." A soldier near-by keeps a watchful eye on them.

Let even a trace of gas taint the air, and the mice, far more sensitive than man to the fumes, show distress. The soldier gives the alarm, masks are adjusted, the gas attack is defeated.

In every business there are gas attacks as insidious and dangerous as those of the trenches. There are also the white mice of business, to give warning, and there must be men on the alert, to discern the approaching peril and act quickly.

The gas attacks of business are costs that run up too high before they are perceived.

The white mice of business are the little cost sheets that tell an exact story of manufacturing and selling costs of a job, during a given period, or of a line of goods. One job may typify a thousand, and a small loss on one job may threaten a big loss, escaped only if the danger is seen and averted in time.

Our Hammermill Portfolios of office forms are valuable to manufacturers because they include cost forms, factory records and job sheets—helpful in meeting today's rising prices of materials and labor with accurately-kept cost figures. Only in this way can the responsible executive expect to arrive at a selling price which will get the business, and at the same time yield a profit.

As a matter of war economy and in co-operation with the Government, we have cut six colors from our line, and Hammermill Bond is now made in Pink, Blue, Green, Canary, Goldenrod, Buff and White, and in three finishes, producing a bond, a ripple, and a linen effect. Your printer knows this dependable, economically priced paper; and will welcome your instructions to use it for all your office printing—for this will enable him to give you satisfying service on every order.

There are more than thirty Hammermill Portfolios, containing time-saving, system-creating office forms, printed on Hammermill Bond, each portfolio applying to a different line of business. Write us, and we will send you the one that will be of greatest help to you. Any printer may have the complete set.

RELIABLE
POWER

Keeps the Water Coming

"We just start her up in the morning and let her run—and we have mighty little trouble with her."

That's what T. J. George, general foreman, says about this Novo Type U Pumping Outfit owned by the Standard Bitulithic Company.

The accompanying photographs were taken near Elsmere, Delaware. The pump, driven by 4 H. P. Novo Engine, was pumping a 2-inch stream, 3700 feet, up grade, to a concrete mixer used in construction work on the Lincoln Highway.

This Novo Outfit was handling from 5000 to 5500 gallons of water a day, with practically no attention. The engineer of the mixer simply started the pump going, in the morning, and stopped it at night.

There's Novo Reliability for you—on the job, delivering the goods.

we are struggling, and to suppress pro-Germanism and Pan-Germanism in whatever form it may appear.

When you go to conference you will meet many with whom I am acquainted, probably many who have loved ones over here. Tell them for me that they shall be proud of their American soldiers, and even if there will be those who will not return, as there will be, they should not mourn, but should have the same faith that their boys had, a faith in God, and in their cause, and an ever-readiness to do the thing that was expected of them.

Neither cooties nor shrapnel have any lasting effect on the cheerful spirit of the American soldier. He turns a smiling face to all the "fortunes of war," and proves himself a hero both at the front and in the hospital. This gratifying fact is finely illustrated in a letter written by Private A. B. Callow, of the 49th Company, United States Marine Corps, to a former associate in the Armstrong Cork and Insulation Company of Pittsburg. One can scarcely believe that a wounded man could run on in this strain:

I got hit with a little chunk of shrapnel in the last drive and am now resting my exceedingly weary limbs in a hospital. I have a fine iron hospital bed to sleep in; *beaucoup* bewitching little Red-Cross nurses flitting about, a phonograph right at the end of my bed, a hot shower-bath when I want it, *beaucoup* reading matter, and last but not least, old friend, a beer "parlor" right alongside of the building.

I want to tell you, friend, that two or three days ago I wouldn't believe there were such luxuries in this country. There is as much difference between this hospital life and the one I had been leading as there is between Pittsburg and Chicago on Sunday. And that is some difference.

A week before I came to the hospital, while I was at the front, I indulged me in a little cootie hunt and broke the record that day by finding fifty-two of them. Not a bad average, eh! That is not exaggeration. I had a fellow alongside of me counting them on an adding machine.

When I hit this heaven I turned in all my clothes, and after they come through the incinerator I will have lost all my little pets. When I hit this place I had not washed my face, hands, or teeth for three weeks, and my breeches and blouse were all ripped and torn to pieces. I believe they thought I was one of those Moroccans that are fighting for the French.

But, boy, you ought to see me now. I have had about "steen" hundred external water-baths and the same number internal beer-baths; my mustache curled up at the ends, hair combed, rest of the upper part of the body shaved, nice clean pair of pajamas and bath-robe on, with a Prussian Guard belt, that I got off a dead machine-gunner, around my waist.

I have lots of souvenirs with me, and I have quite a time keeping them, as these hospital fellows all want to buy them from me. This is an American hospital, but there are all sorts here. At the chow-table to-night there were the following nationalities represented: French, American white man, American negro, French Moroccan, Russian, Italian and a Chinaman. Some gathering, eh! If I could just lingo a few of those tongues I would sure have some time. There are some of those d— Huns

The champion worry-chaser

WHEN a pipe smoker gets to worrying, he has the answer right in his pocket. Worry simply can't stand up and make a fight against the steady, comfortable puff-puffing of a good pipe filled with good tobacco. A fellow's thoughts begin to run smooth and steady. He sees things their right size.

To get the champion worry-chaser on your side, you just get a

Wellington

THE UNIVERSAL PIPE

The W. D. C. triangle trademark has been the sign of supreme pipe value for more than 50 years. It is not only on every Wellington, but also on pipes that we make of every other style, size and grade. Grade for grade, price for price, there is no better pipe made than a W. D. C.

You will take a lot of pleasure in your Wellington. It has a well that catches all moisture and tobacco crumbs. There is no wheezing or bubbling. No tobacco comes through into your mouth. All you get is clean, cool, dry smoke, which the top opening in the bit sends up away from your tongue.

The bowl of every Wellington is expertly made of genuine French Briar, seasoned by our own special process so that it breaks-in sweet and mellow. It is guaranteed against cracking or burning through. No wonder the Wellington is the most popular pipe in the world!

All good dealers sell Wellington Pipes in many sizes, shapes and grades from 75 cents up. Get one. You will be glad you did it.

After Shaving

Hinds Honey and Almond Cream will make the skin soft and comfortable. 'Twill stop the smarting, heal the scraped or cut skin and even though you shave every day 'twill keep the face in fine condition. A few drops on the brush with the lather makes shaving easier. It prevents chapping.

SAMPLES: Be sure to enclose stamps with your request. Hinds Honey and Almond Cream 2c. Bath Cold and Disappearing Cream 4c. Talcum 2c. Trial cake Soap 6c. Sample Face Powder 2c. Trial Size 15c. Attractive Weekend Box 39c.

Hinds Cream Toilet Necessities are selling everywhere or will be mailed, postpaid in U. S. A., from Laboratory.

A. S. HINDS, 241 West St., Portland, Maine

here also. They keep them busy cleaning up the place. In this last drive I took some prisoners back to headquarters and while there guarded a herd of Hun wounded. There were some awful sights. This modern warfare maims a man up horribly. There was one German wounded who was a pitiful case especially to look at. Other Germans were sitting about, but made no attempt whatsoever to help him. We went up and helped him as best we could.

That is one of the many sights you see up there, and of course there are *beaucoup* of them about here in the hospital.

Do you know, these American boys are wonders. There are fellows in this ward with me with arms and legs off that are as cheerful and hilarious as any of us. There is one kid especially whose right hand was blown off just above the wrist by a hand-grenade who is making fun continually. They all seem to take it as a matter of course and count it as part of the game. And it is the same up at the front. I have seen fellows maimed up horribly, some mortally wounded, laughing and joking. In fact, I have ridden in the same ambulance with them. And they die the same way. In coming up to this last front I was with a fellow I had been "palling" a little with. He and I had come through the Château-Thierry affair without a scratch, and he was saying continually on our hike to this last front that he felt it in his bones that he was going to get his on this coming drive. And he did. Three machine-gun bullets through the stomach. I was with him when he died and he left with a smile on his face. He said, "What did I tell you? Part of the game, you know."

This letter is getting rather blue in spirit. I didn't mean it that way, tho I just wanted to show you the wonderful spirit these guys are showing over here. It is the typical American spirit. Everything is a game and there is a chance to be taken.

I don't expect to be here very long, as mine doesn't amount to much. They can keep me just as long as they want, as I have no kick coming. Say, Skotchie, I forgot to mention these American nurses. They are humdingers, I want to tell you. I have seen *beaucoup* of these French girls, and it did my heart good to lay my eyes on a trim, clean little American figure when I hit this place. And, Skotchie, these girls are all for you here. There isn't anything they won't do for you. There is one in my ward who certainly has my eye. She is a little queen and is from Boston. Me for the baked beans!

Stories of the fortunate deflection of bullets by carrying "good books" next the heart are often told in war-times, but it is the lot of few soldiers to be saved by the "toting" of a canteen. This odd experience happened to Corporal H. E. Hilty, A. E. F., who details the circumstances in the following letter to a friend in Los Angeles:

Am sending home my "wounded canteen" and will try, in a few words, to tell you its history and my experiences in the big battle that halted the Boche last Monday, before he even got a good start. Toward bedtime the order came to sleep with all our clothes on and have everything where we could get hold of it quickly. I even went one better and rearranged my pack, putting all my toilet articles in the top with my emergency rations, and made my bed so that when I got out I could roll

The Government Orders American Footwear to be Simplified, Economized and Standardized!

NOW IS THE TIME TO INSIST ON BRANDED SHOES

THE United States War Industries Board, whose duty it is to conserve every possible ounce of industrial energy and to effect every possible manufacturing economy, to help win the war, has established certain shoe making regulations that vitally concern shoe values and prices.

All shoes made after October 15, 1918, are to be graded according to retail prices.

*A grade includes shoes retailing from \$9.00 to \$12.00.
B grade includes shoes retailing from \$6.00 to \$8.50.
C grade includes shoes retailing from \$3.00 to \$5.50.*

No shoes are to be made to retail at over \$12 the pair.

Every shoe must be stamped with the serial number of the manufacturer and the grade—A, B, or C, to which it has been appointed by the Government.

This standardization limits shoe manufacturers to the use of black, one shade of brown and white leathers. These cannot be used in combination. This will simplify tanning processes and eliminate all fancy, expensive and unstable leathers, release tanning equipment for other purposes, conserve labor and money invested.

Certain technical manufacturing restrictions are imposed that will limit the number and variety of styles that may be made. This will reduce the number of styles usually carried by dealers to meet individual fancies. With fewer styles to choose from, it will be easier and quicker to fit the customer. This should effect an economy in retail store keeping. The reduced man power will be better able to carry on the work of the nation and less capital will be tied up in slow moving, capricious shoe stocks.

Manifestly there will be several standards of value in each grade. All shoes marked "A" will legitimately belong in that grade by Government authorization. But—the maximum meaning of "A" value will depend on who makes the shoe so marked.

Now as never before it behooves the consumer to know the standing of the manufacturer who makes his shoes. Now it is vital to know if that manufacturer has been accustomed to making the bulk of his shoes in the highest grades or in lower grades.

It stands to reason that the manufacturer who has never employed anything but the finest materials,

whose workmen have never made anything but the highest quality of shoes, who has special technical knowledge of how to secure the ultra refinements of fit and finish, is prepared to put the utmost quality in the "A" grade shoe.

The name of "Nettleton" has always stood for the very zenith of shoe craftsmanship. For over 40 years it has meant—the finest leathers tanned, the most stylish lasts, the most exquisite carefulness in making. Now it stands for highest possible values among "A" grade shoes.

Nettleton shoes will be made only in "A" grade.

The name "Nettleton" means highest quality.

Nettleton interpretation of "A" grade means the same careful workmanship that has always distinguished Nettleton footwear. It means the same careful selection of leathers, without blemish, of finest known tannage. It means we will cheerfully co-operate with the Government by conforming Nettleton workmanship to the limited number of styles and leathers that we are permitted to use, but that the utmost Nettleton skill and the highest quality materials allowed us will go into these models. These war time styles will include a choice of popular Nettleton lasts that permit the perfect fitting of every foot.

Today is the time to insist on branded shoes. "A" grade is protection within certain broad lines. Shoes branded "Nettleton" represent assured quality by the largest manufacturers in America of men's fine shoes exclusively.

Nettleton Shoes are sold by representative dealers throughout the country. Their stocks now include a limited quantity of Nettleton Shoes made before the Government order took effect. Men who appreciate the exclusive refinements of Nettleton workmanship are able today to exercise a broader choice and individual taste, than will be possible when these stocks are exhausted.

If you are not sure where Nettleton Shoes are to be had in your vicinity and are persuaded that the name Nettleton represents a definitely assured and desirable value, write direct to us here at the factory for booklet "Economy Through Quality" and the name of our agent nearest you.

*U. S. Army officers have set the seal of their approval
on Nettleton Military Footwear Extraordinary*

it up and strap it into the pack-carrier without losing any time at all.

Had only been asleep a short time when I awoke with a start to hear a roaring as if every gun in the universe had opened up at once. Every one in the barrack was up and I didn't waste any time in carrying out my program. Had just about completed rolling my pack when I heard the sergeant calling for his detail, so I got into my equipment of belt, pack, gas-mask, steel helmet, and two bandoleers of cartridges and was off. Outside it looked as if hell had broken loose. The night was inky black and broken in all directions by the flash of guns and exploding shells, while the noise was deafening. The report of the guns, the exploding shells, the whistle of them overhead and the scream of the shrapnel and shell-fragments combined to make one mighty roar. But soon my ears got accustomed to it and I could distinguish the various sounds. After going about a hundred yards my eyes were burning and watering and my throat was dry from the smoke, and fearing there might be gas about, which there was in small quantities, I stopt long enough to adjust my mask and then proceeded to my post. Another man was to be there too, and he did not arrive, so I started to look around for shelter, but I knew of none and naturally didn't find any.

As we were supposed to keep up a *liaison* with the next post where the sergeant was, I crouched by a tree to sort of get a hold of myself and decide what to do, for I couldn't keep up the *liaison* myself and watch the post too. While crouching there the shells were breaking everywhere. How anybody could live out there I don't know, unless the good Lord sure enough loved them.

But while debating as to what I should do, the *Boche* decided for me. A shell broke directly across the road, not over fifteen feet in front of me, and as I ducked my head to get what protection I could from my helmet, something hit me on the right hip with force enough that I rolled completely over before I could stop. I straightened out my right leg and it was still in working order. So I got up and was surprised that I could stand with only a little pain. I got a hold of my gun and took a few steps about and could hardly realize that I was still all there. Next I gingerly put my hand back, expecting to feel blood. Well, it was all wet, but cold, and I knew well I wasn't that cold-blooded, and then proceeded to forget about it. Toward dawn the firing increased in volume, just before the *Boche* advanced. And his surprise and defeat by the Americans you have all read about.

When it was daylight I started in to examine myself, and the canteen I am sending tells the story of my escape from a serious wound much better than I ever could. As you will notice, the piece of shell-fragment hit the very thickest place it could. The edge of the cup was hit first, and then the fact that the canteen was full of water helped slow it up. Coming out, it again struck the edge of the cup, and last but not least, the double canvas that fastens the cover to the belt. This was barely penetrated. Notice also that the end of the fragment is covered with aluminum from the cup.

Can't let you see what it did to me, but I have a black and blue spot about as big as the size of the cup on my hip directly over the hip joint. So all together I think I was pretty lucky and would not trade that night of thrills for anything, but wouldn't bid a cent for another.

When a Preventable Accident is a Crime

Before the war a preventable motor car or motor truck accident—if no one was hurt—was merely an inconvenience and an extravagance.

Usually the burden fell upon the insurance company.

Now a preventable motor car or motor truck accident is a crime.

It means an additional drain upon steel, upon labor, to supply new parts, and a burden on over-taxed transportation.

Criminal wastage means clogging the national machinery, placing obstacles in the way of winning the war.

Were not Weed Chains so absolutely necessary, if there was any way to get along without them, and escape accidents and the destruction of tires, the problem would be simple.

Failure to use chains on slippery roads means multiplying accidents. Non-creeping chains cut the tires to pieces.

Reckless use of Weed Chains means there will not be enough to meet the needs of war, and of motor cars and motor trucks necessary to essential industries.

Every pound of steel is needed to do important work.

“If You Please”

You Are Asked to Subscribe to This Pledge:

To save gasoline I will stop my engine when I leave my car idle.

To save my Weed Chains I will use my car in bad road weather only when necessity compels.

If I use my car when roads are slippery I will not leave the garage without putting on my Weed Chains.

To safeguard against accidents and repairs, I will put on my Weed Chains at the first drop of rain.

To prolong the life of my Weed Chains I will take them off the moment the roads are safe; later I will make sure they are cleaned and dried.

No Passing Through

The main road—the only good one for miles around. A tree falls across it—and traffic is paralyzed. You don't want to go around. Bad luck indeed.

It's more than bad luck when it occurs in your own body. Constipation can wreck your system, because *there isn't any way around*. Food waste collects in your lower intestines and blocks the passage. Leave it there, and it stagnates and causes increased fermentation and production of poisonous substances, which are absorbed into the blood and carried all over the body.

But the Nujol Treatment will help Nature to clear the passage, easily, smoothly and harmlessly. Pills, salts, castor oil, mineral waters, *may* clear the way temporarily, but they are attended by griping pains, weakening of the muscles of the intestines, induction of abnormal dryness, all of which increase liability to another and more serious traffic jam before long.

Police your own body-traffic with Nujol. Pass your food waste out of your system at regular hours, just as you wash your face at *habitual* times. Nujol is not a drug. It acts easily, harmlessly, naturally. Nature intends your bowels to be regular. A bottle of Nujol on the shelf of the medicine cupboard will remind you to *help* them in the natural way. Ask your druggist.

Warning: Nujol is sold only in sealed bottles bearing the Nujol Trade Mark. All druggists in U. S. and Canada. Insist on Nujol. You may suffer from substitutes.

"Regular as Clockwork"

THE SPICE OF LIFE

Time to Cut It.—"Don't you think her voice ought to be cultivated?"

"No, I think it should be harvested."—*Boston Transcript*.

Can This Be True?—A cynical bachelor says that when a girl asks time to consider she wants to consider her chances of getting another fellow.—*Boston Transcript*.

Military Exercise.—"My daughter is taking fencing lessons and you should see how she can feint."

"That's nothing. You ought to see how mine can throw a fit."—*Baltimore American*.

A Proper Start.—"So your husband refused to buy you an automobile?"

"Not exactly refused; he said I ought first to become familiar with machinery in general, so he bought me a sewing-machine."—*Boston Transcript*.

Has Another Think Coming.—PICKPOCKET (visiting friend in jail)—"I hired a lawyer for you this morning, Slim, but I had to hand him my watch as a retainer."

PAL—"And did he keep it?"

PICKPOCKET—"He thinks he did."—*Buffalo Express*.

Isn't It Awful?—"What is the matter now?" asked her mother.

"Matter enough, I should say. Now that we poor girls are making enough money in the munition-factories to buy a lot of clothes we have to wear overalls."—*Indianapolis Star*.

Hurry Call for Doctors.—BACON—"I saw by the paper that at one station in France Salvation Army girls make and serve 2,000 doughnuts a day to our soldiers."

EQUERT—"Well, I saw they were calling for more doctors and nurses Over There."—*Yonkers Statesman*.

History's Verdict.—THE KAISER—"You told me they had no ships, but they are here. You told me they could not charter any ships, but they are here. What ship brought them?"

ADJUTANT-GENERAL—"The *Lusitania*, your Majesty."—*Kansas City Star*.

A Fair Exchange.—MAID (from next door)—"Mr. Jones sends his compliments, and would you please shoot your dog, as it keeps him awake?"

MR. SNAPP—"Give my respects to Mr. Jones and tell him I shall greatly be his debtor if he will poison his daughter and burn her piano."—*Boston Transcript*.

Helping the Food Administrator.—One industrious war-gardener is pictured as working busily and reflecting on the virtue of raising his own food-supply.

"If everybody grew his own vegetables and ate less meat," he soliloquized, "we'd put old Bill on the bum in a hurry. This is tough work, but I'll stick to it if it kills me. I'm with Hoover on this."

At this point a fine assortment of earth-worms was unearthed. The digger's reflections immediately shifted to a shady stream and the final scene shows him happily fishing.

"Oh, well," he reflects to soothe his conscience, "vegetables or fish; it's all the same to Mr. Hoover."—*War-Garden Gazed*.

Is Your Car Protected With Radiator Insurance?

DON'T let radiator trouble and worry interfere with your business or mar your pleasure. Use Johnson's Freeze-Proof, then forget there is such a thing as a frozen radiator. Leave your radiator uncovered on the coldest day—leave your car at night in an unheated garage—*It Can't Freeze.*

JOHNSON'S FREEZE-PROOF

is the logical anti-freeze preparation to use. It is inexpensive—does not evaporate—is non-inflammable—easy to use—and guaranteed.

Does Not Evaporate

Johnson's Freeze-Proof does not evaporate or steam so one application is sufficient for the whole winter. It raises the boiling point of water 20° to 40°—chances of overheating are reduced correspondingly.

Truck and fleet owners will find Johnson's Freeze-Proof a great time and money saver. Your trucks will always be on the job, and in the coldest weather it will be "Business as Usual" for you.

Farmers will find Johnson's Freeze-Proof a utility product—for automobiles—tractors—gas engines—trucks—and electro lighting and heating plants.

Do It Now!

Don't wait until zero weather to protect your car. Decide now to use Johnson's Freeze-Proof purchase your supply from your dealer and read and follow the directions carefully.

A little time spent now cleaning the radiator and putting on new hose connections will save you unlimited time, trouble, worry and expense during the winter months.

One package will protect a Ford to 5° below zero, and two packages will protect a Ford to 50° below zero. See scale on package. Cost \$1.50 per package in U. S. A. East of Rockies. Get it from your local dealer.

Navy and War Departments' Office Building, Washington, D.C.

Turner Construction Co., Engineers and Constructors

The Government Buys Daylight, Ventilation, Fire Protection & Durability

The new Navy and War Departments' Offices, the largest concrete building in the world, contain 396,000 square feet of Fenestra Solid Steel Windows, as compared with forty-two acres of floor space.

The insistent demand for uninterrupted quantity and quality in Government production and other wartime work, has created new standards. Well lighted interiors are necessary to avoid expensive delays and costly errors. Shadow zones are not tolerated. Ample fresh air ventilation is a requisite for healthy, happy workers and continuous output. Products and production must be protected from fire peril. Hence—the big majority of buildings erected during the past year, for Government production, are equipped with Fenestra windows. This national endorsement is your best building guide.

Detroit Steel Products Company, 4301 E. Grand Blvd., Detroit, Mich.

Here are a few of the structures where Fenestra alone meets the standards

Plant, Kearney, N. J.

Fenestra

SOLID STEEL WINDOWS

When Steel meets Steel

Rub two highly-polished bars of finest steel together. *Without* oil or with an inferior oil you will get *friction*.

With a quality oil at the places of contact, you could rub till doomsday, but the bars would never wear out. The oil literally spreads a film between the places of contact and keeps the metal separated.

A film of poor oil will break down and give friction its deadly chance.

This is why you should see to it that the lubricating oil in your motor is a quality oil, why you should use Havoline Oil.

HAVOLINE OIL

REG. U.S. PAT. OFF.

"It makes a difference"

Your motor, bearings, and cylinder must be protected by oil that does not break—no matter what the weather or speed at which you drive, no matter how hot the engine becomes. You can depend upon Havoline.

There is no practical way to test motor oil unless you use it in your automobile. No "free sample" will prove anything, except to the expert analytical chemist. But if the experience of a vast majority of the better class of car owners all over the country is worth anything, you can empty your crank-case today, clean it out with kerosene, buy a can of Havoline, fill up your motor, and start her running. You'll be surprised at the new lease of life your good old car will take, running on Havoline. You may find it necessary to drive your present car next year, and the year after that. The oil you use is important to the life of your car, whether you continue to drive it yourself or want a good price for it when you sell it or trade it in.

Havoline Oil comes in sealed containers, your guarantee of uniform quality.

Havoline greases are compounded of Havoline Oil and pure, sweet tallow. Clean to handle and correct in body.

CURRENT EVENTS

THE WAR

THE WESTERN FRONT

October 30.—Paris reports spirited engagements west of St. Fergeux and advances on the north bank of the Oise and east of Monceau-le-Neuf. There is a comparative lull in fighting on the British fronts.

West of the Meuse General Pershing's men capture Ainereville and hills beyond.

October 31.—The British Second Army and French and Belgian divisions launch an attack on a wide front along the Scheldt and push their way east of Tournai, the enemy falling back rapidly. Every objective was carried and 1,000 prisoners taken by the British.

A violent German counter-attack west of St. Fergeux is repulsed by the French who in two days capture 1,453 men.

American troops advance their line north of Grandpré and occupy the Bellejoyeuse Farm and the southern edges of the Bois des Loges.

November 1.—In spite of resistance, says the Paris official report, the enemy was forced to give up ground in the region of Banogne and Recouvance. In conjunction with the Americans, French troops on the Aisne front captured Rilly-aux-Oise. Farther south the Aisne is crossed and Semuy and Voucy carried in sharp fighting. East of Vouziers a foothold is gained on Le-Alleux plateau and the western outskirts of the Vandy Wood are reached. Several hundred prisoners and a number of guns are taken.

In the course of operations west of the Preseau-Valenciennes road the British capture between 2,000 and 3,000 Germans. During October their forces in France capture 49,000 men, including 1,200 officers, 925 guns, 7,000 machine guns and 670 trench mortars.

West of the Meuse the Americans advance about three miles and take 3,000 prisoners.

November 2.—Under Franco-American attacks between the Aisne and the Meuse the Germans break into full retreat. Pursuing the enemy, the Allies advance four miles in the center of the fourteen-mile front. On the right the Americans capture eight villages, sixty cannon, and many prisoners. Semuy is taken on the left, and the south bank of the Ardennes Canal is reached. Farther south, after capturing Bois Vandy and the village of Ballay, the troops reach the outskirts of Les Alleux, Quatre Champs, and Le-Croix-aux-Bois.

General Haig's men surround and occupy Valenciennes and push a mile beyond the city. East of Valenciennes they hold the village of Marly and advanced detachments enter St. Saulve.

November 3.—Official dispatches show the Germans in full retreat on three fronts. French and Americans sweep ahead on a fifty-mile-front line above Verdun. The Argonne region is cleared and additional prisoners and stores captured. The Belgians advance thirteen miles along the Dutch border and reach the approaches to Ghent. South and west of Valenciennes the British are pursuing and inflicting heavy losses on the fleeing enemy.

General Pershing announces that he is driving forward three miles west of the Meuse, 4,000 prisoners, including four battalion commanders and their staff, are taken by the Americans.

Since the great offensive began on July 18, Paris reports, the Allied armies have captured 362,355 men, including 7,900 officers, as well as 6,217 cannon, 38,622 machine guns, and 3,907 mine-throwers.

November 4.—General Haig reports that

Business that Stays

The business that stays is the business that pays. Business that has to be turned away is no more profitable than business which never presented itself.

When the sales manager goes to the production manager and knows that the factory will take care of him on every order, it makes a big hit with him, the production manager himself, and the others in the front office.

It all gets down to a matter of adequate production, of keeping every machine operating at top speed through efficient driving equipment—a consideration particularly worth while in these days of unusual demand.

Hence the great and growing demand for Robbins & Myers Motors in a thousand industries. These are the motors that keep wheels turning, speed the work, increase output, make workers contented, insure profits.

Robbins & Myers Motors have been doing this for twenty-one years. In this time the

name has come to be a guarantee of motor dependability, whether the size of the motor be 1-40 or 30 horsepower.

For the same reason, makers of the better motor-driven devices equip their product with R&M Motors. To be Robbins & Myers equipped is a sign of the best, whether the device be a washing machine or vacuum cleaner for the home, an addressing or mailing machine for the office, or a coffee grinder or meat chopper for the store.

Dealers who sell R&M Motors or R&M equipped products have learned that they stay sold. And the sale that stays is the sale that pays.

Power users, electrical-device manufacturers and dealers find in Robbins & Myers Motors an unusual value of performance, quality and salability.

Harrison Works, Philadelphia, Pa.....Paints, Pigments, Acids & Chemicals
Du Pont Dyesuffs Co., Wilmington, Delaware.....Coal Tar Dyesuffs

breaking deeply into the enemy positions along a thirty-mile front, the British capture more than 10,000 prisoners and 200 guns.

Clearing the last of the wooded defenses west of the Meuse, the Americans start a new attack against the enemy's line east of the river. On Pershing's flank Gouraud's army force the Germans to fall back behind the Ardennes Canal to Le Chesne.

The American First Army, states another dispatch, has passed beyond Stenay and is now striking for Sedan. The advance is within a mile and a quarter of Beaumont. Further west the troops reach Vernières, about ten miles north-east of Vouziers.

In Picardy the enemy is thrown back from two or three miles and half the Mormal Forest is wrested from him, the troops sweeping in force across the Sambre-Oise Canal.

A correspondent on the Verdun front states that General Pershing's forces have taken over 5,000 prisoners in the present movement and occupied about forty villages in the territory reconquered from the Germans.

November 5.—London reports the Germans retreating on a seventy-five-mile front from the Scheldt to the Aisne. The Allies have crossed the Franco-Belgian frontier between Valenciennes and Bavay, eight miles west of Mauberge. They are now within two miles of Bavay and have captured the whole of Mormal Forest.

American forces take Liny-devant-Dun and Milly-devant-Dun, east of the Meuse, and occupy the hills on the east bank of the river. The enemy's resistance is reported broken to the point of demoralization.

General Haig announces that twenty-five German divisions have been beaten in the last two days' battle. Between the Oise and the Meuse the French gain six miles at some points and smash the Hunding defense line.

THE ITALIAN FRONT

October 30.—While the enemy is stubbornly resisting, states an official dispatch from Rome, he has been unable to stem the victorious onslaught of Italian and Allied troops. Diaz's men advance six miles, reaching the foe's great base of Vittorio, twelve miles beyond the Piave. On the left wide gains carry them far into the mountains, while on the right the drive spreads to the Adriatic as new forces cross the lower Piave. Thirty-three thousand prisoners, 100 villages, and hundreds of guns have been captured.

October 31.—The Italian troops sweep northward fifteen miles through the Venetian Alps and reach Ponte nell'Alpi, four miles northeast of the enemy's base of Belluno on the Upper Piave. Through the capture of the mountain pass of Vadal, the retreat of fifteen Austrian divisions operating between the Brenta and the Piave is cut off. East of the Piave the enemy is completely routed and "the successes of our armies are becoming more and more stupendous." The number of prisoners captured exceeds 50,000 and over 300 guns have been counted.

November 1.—The Austrians are in utter rout on the east half of the battle-line. In the mountains the foe's defense is faltering and he is hurled back eight miles by an Italian drive west of the Piave.

November 2.—Rome reports the Austrians fleeing from Udine, fifty miles east of the Piave. On every sector of the 125-mile front the enemy is giving way before the smashing blows of the Allies. Eighty thousand prisoners and 1,600 guns have been counted up to this date.

W.S.S.
WAR SAVINGS STAMPS
ISSUED BY THE
UNITED STATES
GOVERNMENT

IN 1886 W. L. DOUGLAS WENT WEST AND LOCATED IN BLACK HAWK, COLO., A ROUGH AND READY PIONEERTOWN, WHERE HE CONTINUED HIS CHOSEN TRADE OF SHOE-MAKING.

W.L. DOUGLAS WAS PUT TO WORK PEGGING SHOES AT SEVEN YEARS OF AGE

STAMPING THE RETAIL PRICE ON THE BOTTOM AT THE FACTORY PROTECTS THE WEARER AGAINST UNREASONABLE PROFITS.

FOR MEN AND WOMEN

W. L. DOUGLAS

"THE SHOE THAT HOLDS ITS SHAPE"

\$3.50 \$4.00 \$4.50 \$5.00 \$6.00 \$7.00 & \$8.00

BOYS SHOES \$2.50 \$3.00 \$3.50

You'll never need to ask "What is the price?" when the shoe salesman is showing you W. L. Douglas shoes because the actual value is determined and the retail price fixed at the factory before W. L. Douglas name and the retail price is stamped on the bottom. The stamped price is W. L. Douglas personal guarantee that the shoes are always worth the price paid for them.

Stamping the price on every pair of shoes as a protection against high prices and unreasonable profits is only one example of the constant endeavor of W. L. Douglas to protect his customers. W. L. Douglas name on shoe is his pledge that they are the best in materials, workmanship and style possible to produce at the price. Into every pair go the results of sixty-six years experience in making shoes, dating back to the time when W. L. Douglas was a lad of seven, pegging shoes.

The quality of W. L. Douglas product is guaranteed by more than 40 years experience in making fine shoes. The smart styles are the leaders in the fashion centres of America. They are made in a well-equipped factory at Brockton, Mass., by the highest paid, skilled shoemakers, under the direction and supervision of experienced men, all working with an honest determination to make the best shoes for the price that money can buy. The retail prices are the same everywhere. They cost no more in San Francisco than they do in New York.

CAUTION—Before you buy be sure W. L. Douglas name and the retail price is stamped on the bottom and the inside top facing. If the stamped price has been mutilated, BEWARE OF FRAUD.

For sale by 105 W. L. Douglas stores and over 5000 W. L. Douglas dealers, or can be ordered direct from W. L. Douglas by mail. Send for booklet telling how to order shoes through the mail, postage free.

1004 Cutler Building, Rochester, New York
On the Market 10 years

Washington says Vienna regards the situation on the Italian front as absolutely hopeless. Seventy-three divisions are said to have mutinied and quit the battle-field, and American troops have landed at Pola.

November 3.—Rome announces the capture of Trent and Trieste, and whole regiments of Austrians surrendering during the advance. Italian cavalry have entered Udine, fifty miles beyond the Piave.

November 4.—Before the armistice went into effect at 3 P.M., November 3, states an official dispatch from Rome, 300,000 Austrian soldiers and not less than 5,000 guns had been captured by the victorious Italian armies.

London reports that the Italians have landed at Zara, Dalmatia, and Washington gets official information of their advanced guards occupying Scutari in Albania. East of the Piave, 16,000 prisoners are taken.

November 5.—Trieste advices note that Italian naval vessels have landed troops on the Dalmatian islands of Lissa and Lagosta and at Fiume and hoisted the Italian flag.

Rome now estimates that 500,000 prisoners were taken before the armistice went into effect and that the booty includes 250,000 horses.

THE WAR IN THE AIR

October 30.—A dispatch from the Verdun front reports a banner day in American aviation. Various enemy points of troop concentrations were attacked and twenty-one German machines downed.

October 31.—London reports sixty-four enemy machines destroyed and fifteen driven down out of control on the Western Front. Eighteen British machines are missing.

November 1.—Rome official advices note that great numbers of airplanes are preceding the Italian troops and operating their machine guns on the retreating enemy columns.

It is officially admitted at Berlin that serious damage has been done in Heidelberg by an Allied air-raid.

November 2.—Italian and Allied aviators, states a Rome dispatch, are "complete masters of the air and continue without pause their daring activities." The railway stations in the Sugana Valley were bombed at night.

November 3.—London reports thirty-one raids over Germany by the independent air-force last week. Fifty tons of bombs were dropped and considerable damage done to some of the enemy's most vital war-industries.

American bombing machines made two attacks on the Verdun front. At Beaumont a warehouse was destroyed and an ammunition dump exploded. In Stenay another ammunition-dump was exploded.

Washington reports that the German Government has notified the United States that since October 1 German air-forces have been under orders to bomb only important hostile military objects within the immediate operations of war on the assumption that the Allied air forces were to receive similar instructions. The note protests against recent raids on seven German towns, with loss of life among the civilian population, and says that unless such raids cease Germany can not refrain from similar attacks on Allied territory outside the war-zone.

A dispatch from the Verdun front reports thirty German airplanes brought down by American fliers and three balloons destroyed. Seven American planes are missing.

Since the resumption of the American

It's the Chassis that Gets the Try-Out

—An Advertisement to Car Dealers

These Cadillac cars under test are typical of the care exercised by the most successful car builders to assure quality and reliability in the fundamental working parts of the chassis.

Your customer often buys a car simply because of its body lines, finish, quality of upholstery, accessories and conveniences.

But sooner or later the purchaser finds out—by what happens, and what *doesn't* happen, on the road—that *there is another car inside the one he or she has bought.*

That inside car expresses the maker's conception of the value of performance and durability.

The outside car makes the first impression on your customer—but *the inside car leaves the last, and permanent, impression.*

There is no advantage in passing over the chassis in silence: for every word you express in sincerity now, *means a better satisfied customer later on.*

Tell a man what he can expect of his starting, lighting and ig-

nition system, and that he cannot abuse it, and he won't blame you if it sometimes needs attention.

Tell him his engine will someday have to be overhauled, and why, and when the time comes he will be glad to pay for good service.

Tell him about lubrication, carburetor adjustment, brake adjustment and so on and he'll thank you.

Tell him how the adjustability of Timken Bearings enables him

to take up the effects of wear, avoiding repairs and replacements, and how they preserve the efficiency of gears and axles.

Thus if he has some trouble elsewhere, he won't condemn the car. He'll realize how many troubles are due simply to neglect. He'll appreciate all the more his Timken Bearings, and other parts that never need repair and will say, "There's a lot of good stuff in this car after all." He might never give the car credit for some of these things, if you don't tell him—because they *haven't called attention to themselves.*

Timken Bearings are but one of many quality points in a high-quality car, of course, but it's worth while to know each one.

If you'd like to be on the mailing list of the Timken Magazine, which publishes many valuable pointers about Timken Bearings, drop us a line on your business letter-head.

FOWNES

offensive on the Sedan front, says
another dispatch, our aviators brought
down 124 enemy airplanes, losing
twenty machines during the operations.

November 5.—American fliers bomb
Mouzon and Raucourt on the Verdun
front as enemy troops are passing
through the villages. Fourteen Fokkers
are brought down and three American
machines are missing.

THE WAR AT SEA

October 30.—Paris has a telegram from
Rome stating that the Austrian Fleet
has been concentrated at Fiume.

November 1.—A large fleet of British
mine-sweepers begin to clear the Darda-
nelles of mines.

The British Admiralty picks up a German
wireless stating that, according to an
imperial proclamation, the Austro-
Hungarian Navy has been turned over
to the South Slav National Council.

Copenhagen publishes Hungarian reports
that sailors at Pola, the Austrian base
on the Adriatic, have mutinied and
seized the war-ships.

November 2.—A Budapest dispatch says
the crews of the entire Austrian Fleet at
Pola have mutinied, seized all the ships
of various nationalities there, and
declared they will only obey their
respective national councils.

Basel reports that the Committee on
Public Safety in Trieste sent a torpedo-
boat to Venice to ask the commander
of the Allied fleet in the Adriatic to oc-
cupy Trieste and that a naval force has
been dispatched for that purpose.

An official telegram from Rome states
that Italian naval detachments have
cleared the coast region on the right
of the battle-front and reached the
Tagliamento. Monitors aided the land
forces.

Washington is informed that the Austrian
super-dreadnought *Viribus Unitis*, flag-
ship at the naval base of Pola, was
torpedoed and sunk November 1, by
an Italian naval tank.

November 3.—An authoritative statement
received in Paris says Jugo-Slav leaders
have informed President Wilson by
wireless of their seizure of the Austro-
Hungarian Fleet and announced their
readiness to hand over the vessels to
the United States Government or
representatives of the Allied navies.

AFFAIRS IN RUSSIA

October 30.—A dispatch from Copen-
hagen says the Bolsheviks have decided
upon a general massacre of all the
upper classes on November 10.

Petrograd newspapers report that Foreign
Minister Tchitcherin address a note to
President Wilson, October 24, stating
that Russia was ready to conclude an
armistice on the evacuation of occupied
territory, and asking to be informed
when "you intend to withdraw your
troops from Murman, Archangel, and
Siberia."

October 31.—The Copenhagen office of the
Moscow Prisoners' War Relief Com-
mittee appeals to America in behalf of
the 2,000,000 Russian prisoners in
Germany and Austria, 200,000 of whom
are ill.

According to a Petrograd telegram re-
ceived at Amsterdam, Mme. Bresh-
kovskaya was shot October 27 on the
charge of opposing the Bolshevik
régime.

November 1.—Addressing the House of
Commons, Lord Robert Cecil, As-
sistant Secretary of State for Foreign
Affairs, refers to the amount of blood
shed by the present government of
Russia, and adds: "The British Gov-
ernment will shrink from nothing
within their power to get every British
subject out of Russia, and unquestion-

A Path-Finder on Danger Trails

A first-hand picture of the war recently reached an American mother from her only son "Somewhere in France." Part of the letter follows:

"Early this morning we moved forward from . . . through a blinding fog, a sort of a time-out, and later in the day with the mist still hanging thick from our bodies. I felt as though I were somewhere in No Man's Land. We stopped for a few hours. The mist would lift, but not for long. The air was filled with various shells and more than an equal number of ours. We could hear the strapping of machine guns going at the same time. 'Let's go,' said someone. And then we suddenly realized that we had lost all sense of direction and in that uncharted landscape I stand now, facing a host of feelings and emotions."

"Then happened one of those little things in life which happen to everyone. I had been feeling that I had taken a great moment. One of the boys had produced a compass. It was the only thing that was then used only one out of the five of us had thought of bringing a compass. After that we were glad we had it. The boy who had the compass guided us back to the 'line' and then we went home. That was the end."

And so, you fathers and mothers, sisters and brothers, when you want to give something of vital value to the wonderful person you are sending "Over There" to put his shoulder to the wheel of the most just war humanity ever fought,

Give Him a Taylor Quality Compass

The compass which for years has won and held the confidence of outdoor men—proved to them that they could unhesitatingly entrust their lives to its direction because each of our Taylor Quality Compasses, building upon its sturdy permanent accuracy, has the expert care of the workmanship and supervision—the exact selection of the material and the nearly seventy years' experience gained in making delicate indicating and recording instruments that are correct.

All Taylor Quality Compasses have heavily magnified needles, fully and accurately balanced and extremely sensitive. Also jeweled centers and watch stops.

USANITE. As illustrated. Heavy case. The needle is protected with rubber in the handle—equally true at night. White metal case. As shown, \$7.50.

CEEBYNITE. As illustrated. Heavy case. The needle is protected with rubber in the handle—equally true at night. White metal case. As shown, \$7.50.

Applied Patriotism

Woman has made herself indispensable to the Nation's war activities. This is being demonstrated daily in many splendid ways. The telephone operator takes her place in the front ranks of our "national army" of women.

Back of the scenes, invisible, her war work is to make telephone communication possible. Through her the Chief of Staff in Washington speaks to the Cantonment Commandant in a far-off state. The touch of her fingers forges a chain of conversation from Shipping Board to shipyard, Quartermaster General to supply depot, merchant to manufacturer, city to country, office to home.

Without her this increasing complexity of military, business and civil life could not be kept smoothly working. Hers is patriotism applied. She is performing her part with enthusiasm and fidelity.

The increasing pressure of war work continually calls for more and more telephone operators, and young women in every community are answering the summons—cheerfully and thoughtfully shouldering the responsibilities of the telephone service upon which the Nation depends. Each one who answers the call helps speed up the winning of the war.

ably mean to exact justice on the people guilty of these outrages when they are able to get them in their power."

November 5.—The American-Russian Chamber of Commerce declares that German officials could prevent the massacre advertised by the Bolsheviks for November 10, and calls upon all religious and civic organizations to memorialize their governments to unite with the Allies in warning Germany and Russia that all participants will be outlawed and held to strict account for the crimes.

London learns that the Bolshevik Government has handed neutral ministers a note to the Entente nations asking for the opening of peace negotiations so that hostilities between the Allies and Soviet Government may end.

THE BALKAN SITUATION

October 30.—Saloniki reports Serbian cavalry reaching the Danube east of Semendria, twenty-four miles southeast of Belgrade, and occupying Pozharevatz.

October 31.—Vienna sends out an official statement that Austro-Hungarian forces are withdrawing from occupied territory in Serbia and have completed the crossing of the Danube.

November 1.—Saloniki has official information that French and Serbian cavalry have reached the outer defenses of Belgrade, capital of Serbia.

November 2.—The Exchange Telegraph Company learns that the Serbian Army has taken an oath of allegiance to the new constitution of the Greater Serbian Kingdom.

A Zurich dispatch reports that King Boris of Bulgaria, who ascended the throne October 8, has abdicated and a peasant government has been established at Tirnova under the leadership of Mr. Stambuliwsky, who is said to be in command of a Republican army of 40,000 men.

November 3.—The French War Office announces that the Serbian Army has reoccupied Belgrade and reached the Bosnian frontier, and Serbia is almost entirely freed from the enemy.

THE CENTRAL POWERS

October 30.—Addressing the new State Secretary on October 21, states an Amsterdam dispatch, the Kaiser declares that "The German people shall be the freest people in the world."

October 31.—Berlin newspapers report military insurrections in Vienna and Budapest, October 30, the people and troops acclaiming a republic.

A Bern dispatch says the German State of Austria has been created by act of the German National Council of Austria and that President Wilson has been notified of the fact.

Geneva advises note that the Croatian Parliament in Agram has voted for a total separation of Croatia, Slavonia and Dalmatia from Hungary, and that the Hungarian Diet has adopted a resolution declaring that the constitutional relations between Hungary and Dalmatia, Slavonia, and Fiume have ceased to exist.

Basel has a Vienna telegram reporting that the kingdom of Greater Serbia has been proclaimed at Serajevo, Bosnia and that the assassins of Archduke Franz Ferdinand have been released by soldiers.

London receives semiofficial estimate that the German losses since January were 2,500,000, of which 1,000,000 are permanent.

November 1.—Messages from several European centers repeat reports that Austria-Hungary has split up into a group of independent states. Emperor Charles is said to have left Vienna and Count

Tisza is shot dead by a soldier. Count Karolyi announces that the Hungarian National Council has taken over the government of Hungary; the Croats, who are in control of Fiume, declare their union with Italy; the Adriatic fleet has been turned over to the Southern Slavs and the Danube flotilla to Hungary; and Germany has recognized the new Czechoslovak Government in Prague.

November 2.—Basel reports a new Hungarian ministry formed at Budapest with Count Karolyi as Premier and Count Batthyanyi as Foreign Minister.

A Hague dispatch says the Bavarian Premier has notified Berlin that the Bavarian royal family claims the imperial throne in the event of Emperor William's abdication.

Amsterdam has a Vienna telegram reporting the formation of a Provisional Soldiers' Central Committee in the State Council hall.

November 3.—An official telegram from Berlin says that when the constitutional amendment went into force Emperor William addressed to the German Imperial Chancellor a decree indorsing the decisions of the Reichstag and avowing his firm determination to cooperate in the full development of the new laws which shear him of autocratic power.

The Berlin *Tageblatt's* Vienna correspondent telegraphs that Emperor Charles conferred with members of the Cabinet and political leaders November 2, and announced his intention to abdicate and go to Switzerland.

A dispatch from Basel states that Count Karolyi informs the Hungarian National Council in Budapest that King Charles has freed the government from its oath of fidelity.

November 4.—Berlin newspapers publish a message from Field-Marshal von Hindenburg declaring that "our honor, freedom, and future are now at stake. We are invincible if we are united." He adds that if the German Army is strongly supported, "our Fatherland will brave all onslaughts."

Secretary Lansing announces that the Polish Army, under the supreme political authority of the Polish National Committee, is recognized by the United States Government as autonomous and belligerent.

November 5.—An Amsterdam dispatch states that the State Council at Vienna has issued an appeal to the German people of Austria, declaring that the country is in danger and the army breaking up in disorder, and exhorting the soldiers to join the German-Austrian army corps.

THE TURKISH SITUATION

October 30.—Washington is advised from Teheran that the Turkish forces are withdrawing from Tabriz, and that the Turkish positions in Persia are menaced by the British advance from Mesopotamia, Syria, and Palestine.

October 31.—The capture of the entire Turkish force which has been opposing the British on the Tigris is officially announced in London. The prisoners are estimated at 7,000.

November 2.—The Armenian Correspondence Bureau at Amsterdam is informed that a state of anarchy prevails throughout Turkey and hundreds of thousands of deserters are subsisting by robbing the population.

PEACE NEGOTIATIONS

October 30.—Another note from the German Government, explanatory of changes made or projected in the German constitution and form of government, is received at the State Department in Washington, but is not made public.

A Vienna telegram received in Copen-

They Shoot Puffed Grains From Guns

Yes, that's a curious fact.

These thin, flimsy bubbles—the daintiest grain foods in existence—are created in that way.

Sealed in those guns, the grains are subjected to an hour of fearful heat. The moisture in each food cell is thus changed to steam.

Then the guns are shot, the steam explodes. Every food cell is blasted to pieces.

The grains come out as airy globules, flaky and toasted, puffed to eight times normal size.

Not Merely To Delight You

But this whole process serves a scientific purpose. It was invented by Prof. A. P. Anderson. And the object is to fit the food cells to digest.

Each kernel of grain contains millions of food cells. Ordinary cooking doesn't break half of them. This gun-shooting method is the only way known to break all of them.

Remember that. These flavory, fragile bubble grains seem like food confections. But they are whole wheat, whole rice or corn hearts made so digestible that every atom feeds.

It's the ideal way to serve these grain foods, as well as the most enticing. Every child should get them every day.

Puffed Wheat being a whole-wheat product, no substitute need be bought with it.

Puffed Wheat Puffed Rice Corn Puffs
All Bubble Grains*
Each 15c Except in Far West

In these sugar-saving times a good way to serve them is with melted butter. Or in bowls of milk.

Mix them with your fruits. Scatter in your soups.

Crisp and lightly butter for hungry children after school.

These are more than breakfast cereals. They are ideal bedtime and between-meal foods, because of their ease of digestion.

hagen says Count Andrássy, Austro-Hungarian Foreign Minister, has resolved to initiate direct peace negotiations with Italy. A subsequent official statement says, "In view of our desire for peace, our troops on Italian soil are evacuating occupied regions."

Sir George Cave, British Home Secretary, tells the House of Commons that if any armistice with either Germany or Austria-Hungary is reached, the Government would see that one of its primary conditions would be the immediate and unconditional release of all prisoners of war in enemy countries.

October 31.—Turkey has surrendered, states a London dispatch, the armistice taking effect at noon. The conditions include free passage of the Dardanelles and the immediate repatriation of British war-prisoners.

A Vienna dispatch reports that an Austrian deputation has been permitted to cross the fighting-line for preliminary *paraplers* with the Italian commander. Every effort is to be made "for the avoidance of further useless sacrifice of blood, for the cessation of hostilities, and the conclusion of an armistice."

According to a German wireless published in London, German newspapers assert that on September 26 Emperor Charles sent a friendly telegram to Emperor William announcing that Austria-Hungary was obliged to take a decisive step and that the peace offer was irrevocable.

November 1.—London reports that the conference of Allied representatives at Versailles has agreed on the armistice terms governing the maritime powers of the Central Empires.

November 2.—An Amsterdam dispatch states that German bankers and commercial men have sent the Government a declaration in favor of acceptance of the Entente's armistice conditions, even if sacrifices are required.

At the next sitting of the National Assembly, says a dispatch from Vienna, a resolution will be introduced banishing Count Andrássy on account of his note to President Wilson.

November 3.—London gets an official announcement from the Prime Minister in Paris that an armistice has been signed by General Diaz and Austria-Hungary has gone out of the war.

A dispatch from Amsterdam states that according to Vienna advices, Premier Lammasch of Austria has written a letter to Secretary Lansing discussing the situation in Germany and appealing for clemency in peace terms.

November 4.—Full terms of the Austrian armistice are received in Washington, and Secretary Lansing announces that the terms upon which Germany may obtain an immediate armistice and end the war have been signed in Paris. He also states that complete diplomatic unity has been achieved by the Allied and American conferees under conditions of utmost harmony.

A committee waits upon Ambassador Page in Rome and asks him to assure President Wilson that he can count on the constant support of the Italian nation for the triumph of his principles.

November 5.—The German Government is informed by Secretary Lansing that Marshal Foch has been authorized by the United States and the Allies to communicate the terms of an armistice to its official representatives. The note intimates that the Allies are willing to make peace on the terms laid down by President Wilson, reserving complete freedom, however, on Clause 2 of the fourteen conditions, relating to the freedom of the seas, and emphasizing their understanding "that compen-

This Shoe Renews the Arch

IT helps the misplaced instep bones and strained foot muscles to help themselves. If worn before the arch has sagged too far, its use is only temporary.

It places a flexible arched shank beneath your instep that permits the muscles to resume their normal duties, encouraging their exercise while holding up the arch. There is no rigid prop to perform the functions your foot itself should perform.

For men, women and children. We are experienced in fitting by mail.

sation will be made by Germany for all damage done to the civilian population of the Allies and their property by the aggression of Germany by land, by sea, and from the air."

Premier Lloyd George tells the House of Commons of the Washington note and says, whatever Germany's reply may be, the associated Powers await the issue with perfect confidence. It has been decided, he added, that if Germany makes the proposed application, British naval representatives would be associated with Marshal Foch at the conference.

FOREIGN

October 30.—The City Council of Melbourne passes a resolution requesting Great Britain to insist on an adequate indemnity for Australia, the German flag to be kept off every sea until such indemnity is paid.

October 31.—A memorandum setting forth the claims, aims, and ambitions of Roumania in the war is presented to Secretary Lansing by Capt. Basil Stoica, president of the Roumanian National Council of America.

November 3.—Paris reports the outbreak of influenza, assuming alarming proportions in the city.

November 4.—The Industrial and Commercial Federation, the most influential business men's organization in France, holds a luncheon in Paris in support of the movement for the creation of an economic union among the Allies.

A dispatch from Buenos Aires states that all the German mercantile vessels interned in Chilean harbors have been seized by the Chilean Government.

November 5.—Earthquake tremors are felt in Chicoutimi, 111 miles northeast of Quebec.

Sir George Cave, British Home Secretary, announces that all army commanders and other persons guilty of encouraging cruelty to war-prisoners will be included in the list of persons whose trial and punishment will be demanded by the Allies.

A dispatch from Peking states that the British Minister to China, with the concurrence of the other Allied legations, has handed the Chinese Foreign Office a memorandum concerning matters in which China is regarded as having been remiss as an ally.

DOMESTIC

October 30.—A Washington dispatch states that plans have been approved for the immediate construction of an engineer training-camp with accommodations for 16,000 men at Fort Leavenworth, Kansas. The estimated cost is \$5,000,000.

The American Manufacturers' Export Association pledges itself "to lend every possible assistance to the rehabilitation of France and Belgium after victory has been achieved."

October 31.—The report of Charles Evans Hughes on the results of his five months' inquiry into aircraft production is placed before the President and then made public. It praises the Aero Board, pronounces the Liberty motor supreme, and urges court martial of Col. E. A. Deeds, head of the equipment division, and others, for alleged improper activities.

Colonel Roosevelt and William H. Taft join in a reply to President Wilson's appeal to the voters to elect a Democratic Congress. They "urge all Americans who are Americans first to vote for a Republican Congress."

November 1.—The Treasury Department announces that the total subscriptions to the Fourth Liberty Loan were

*Are you drawing Power
from this great reservoir?*

ELECTRICITY has become recognized as one of the great elements of modern life. As a factor for industrial and household economy and convenience it ranks first among the world's most practical and adaptable forces.

Electricity for the Factory

Electrical current is the master workman of any shop. As motive power for enormous cranes or for the most delicate machine, it is always adequate—unlike other forms of power—its cost is applied only when in actual use.

Electricity for the Home

Electricity is the universal servant in the house. By means of the many devices now obtainable, housewives are, more than ever before, independent of servants. Electricity is clean, obviously economical and always a willing, handy helper in the home.

Consult an Expert

Electricity is safe and simple to use—it is only necessary to have an expert to plan and install the equipment. The electrical contractor, the electrical dealer, the architect, the central power company, and the manufacturers of electrical devices are all experts and will gladly assist you in getting the best service.

Dependable Wire

All electrical current is finally delivered by insulated wire. The usefulness of electricity, therefore, is dependent upon the quality of wire used and its correct installation.

Ecco Wire is always dependable and is so recognized by experts. It is a standard of quality and by its use can be judged the quality of materials and workmanship of an entire installation. Call in an expert at once. Connect up to the great reservoir of electricity with Ecco Wire and begin to enjoy its benefits and economies.

Send for this better DIARY for 1919

Diaries have been the same for centuries, you say, but this one's different. Twelve, neatly-bound, vest-pocket monthly diaries, each 4 1/4 x 2 1/4 inches, 32 pages.

A page for each day—a book for each month

The current month's happenings right in your pocket. Don't carry a bulky yearbook. Here's the handiest, most convenient, pocket diary and DAILY REMINDER ever devised—the 12 books in a neat holding box will be sent, P.P. prepaid on receipt of 75 cents. Great for your "Buy Over There." Send one a month, to be returned each month—*but* order right now.

The J. C. Hall Company
Providence, R. I.

\$6,866,000,000 from more than 21,000,000 persons.

The American Defense Society sends a request to the State Department that no more German-made goods be permitted to reach this country.

An accident on the Brighton Beach line of the Brooklyn Rapid Transit kills 90 passengers and injures about 200 more.

November 2.—Proceedings are started to fix the criminal responsibility for the Brooklyn Rapid Transit calamity. Three of the train crew are under arrest.

The Federal Grand Jury in Chicago returns indictments against twelve men in connection with the aircraft construction scandal.

Washington reports nineteen coal-mines closed by the Fuel Administration for offering improperly prepared coal for sale. This makes a total of 111 mines closed for this offense.

During the fiscal year ending October 10, reports the Commissioner of Excise, 6,500 saloons went out of business in New York State, causing a loss of \$4,775,854 in revenue.

Draft calls for the mobilization of 290,773 additional men at army training-camps before November 21 are announced by Provost Marshal-General Crowder.

November 3.—Fifteen thousand Protestants, Catholics, and Jews meet in Madison Square Garden, New York, and pledge themselves to give to their utmost in the coming campaign of the United War-Work Committee.

The Treasury Department reports war-expenses for October totaling \$1,604,862,000, including \$489,100,000 in loans to Allies. The total war-cost to this date is calculated at \$20,561,000,000, of which \$7,017,000,000 has been loaned to the Allies.

The Connecticut Bar Association issues a statement urging the various States in general assembly to refuse to ratify the proposed Federal prohibition amendment on the ground that it is "a national menace."

Health officials report the epidemic of influenza in New York rapidly subsiding. New cases reported totaled 1,567, a drop of 1,384 from the previous day's figures.

November 4.—The Alien Property Custodian announces that he has recently taken over property worth many millions of dollars belonging to women of American birth now married to German or Austrian subjects.

The National Committee of Patriotic Societies sends a message to thousands of war-organizations and local committees urging them to have a job ready for every returning soldier who is able to work.

Health authorities of New York declare that the influenza epidemic is over and lift the restrictions on the hours of business in the city.

November 5.—Early election returns indicate that, while the Senate is in doubt, the House of Representatives, will be Republican. In New York State 1,000,000 women vote for the first time.

The War Department issues a call for 17,000 candidates for training as infantry officers at the school to be opened at Camp Fremont, Palo Alto, Cal., December 1.

Two Mines with but a single thought

The coal mine and the asbestos mine have a big job in common — maximum production of power.

With the burning of coal in these times goes the obligation to use its heat efficiently. So every ton of fuel mined summons more asbestos from another mine, automatically, to guard jealously the heat from that fuel.

The two mines are racing together toward a common goal.

As the largest factor in the mining and fabrication of asbestos, Johns-Manville bears a burden of heavy responsibility. Asbestos is the fibrous mineral base of the most efficient heat insulations. It is the necessary other 15% in 85% Magnesia.

It is, as well, the basic material for many economical packings which reduce friction, prevent leakage, resist wear, and save power. In almost every plant improvement or extension, asbestos in one form or another is practically indispensable.

This development of asbestos from the status of a little-known curiosity to its present rating as an industrial necessity, is due in no small part to Johns-Manville. So we can be doubly proud that when the nation needed Asbestos, our mines and factories, our laboratories and mills, our engineers and chemists, all were ready to play their part in the nation's service.

There is danger in tender gums

Forhan's
FOR THE GUMS

TO preserve healthy teeth the ordinary tooth-paste is futile. You must first care for the gums, on which tooth health depends.

How many people think of that? Yet four out of five people over forty suffer from gum-disease or Pyorrhea (Riggs Disease).

At first the gums become tender, though actual gum-shrinkage is imperceptible. For in time receding gums will surely loosen your teeth, and then extra dentists can move them. The tender, bleeding gums of Pyorrhea also act as so many doorways for disease germs to enter the system—infusing some or, possibly, causing other ailments.

Forhan's (For the Gums) prevents Pyorrhea, if used in time and used consistently. This means that it prevents gum-shrinkage, gum-tenderness, gum-bleeding, so automatically Forhan's prevents tooth loosening.

Brush your teeth with it. It scientifically cleans the teeth—keeps them white and free from tartar.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for treatment.

INVESTMENTS-AND-FINANCE

THE MORTALITY FROM SUICIDE IN AMERICAN CITIES

FREDERICK L. HOFFMAN recently prepared for *The Spectator*, the life-insurance paper published in New York, an article setting forth the suicide record in American cities for 1917 and earlier years. It appears from this record that our annual loss of life through self-murder is approaching twenty thousand. Looking backward throughout the period of a hundred and forty-two years since America became a nation, he believes it "may be conservatively estimated that not far from a million people have ended their own existence, regardless of the fact that no country in the world, during a corresponding period of time, has experienced a higher degree of material and social well-being and provided more abundant opportunities for the pursuit of happiness."

As a problem in social economics, this waste of human lives "is more appalling than the corresponding and largely inevitable sacrifice of life in every-day industry." Against nearly seventeen thousand suicides in 1917, "there were certainly not more than twenty-five thousand, and possibly not more than twenty-two thousand fatal industrial accidents, of which a very considerable proportion represents an inherent trade risk, against which any and all safety precautions are likely to prove ineffective." Mr. Hoffman laments the indifference of the church and state to suicide. "Practically no suicide," he says, "attracts the slightest attention of the pulpit." The state also is indifferent. No qualified and thoroughgoing investigation of the subject has ever been made by public authority. Equally indifferent is the press, "for it is the rarest occurrence that a suicide attracts editorial attention."

For 1917 the suicide record of American cities reveals a decline in the rate over the preceding year, "reaching, in fact, the lowest figure on record for a considerable period of time." Mr. Hoffman believes "there can be no more convincing evidence of the correlation of suicidal frequency with economic conditions than that the prevailing era of unusual prosperity is also represented by a decided falling off in the relative frequency of suicide, at least in the large cities."

He gives a table of mortality from suicide in one hundred American cities during each of the years 1902-1917, and by quinquennial periods for the first fifteen years of the period under review:

SUICIDES IN 100 AMERICAN CITIES, 1902-1917

	Population	Suicides	Rate per 100,000 of Population	Business Failures per 1,000 Concerns
1902.....	17,818,091	3,022	17.0	9.3
1903.....	18,313,175	3,361	18.4	9.4
1904.....	18,809,587	3,588	19.1	9.2
1905.....	19,121,548	3,625	18.9	8.8
1906.....	19,922,617	3,406	17.1	7.7
1907.....	20,511,267	3,889	19.0	8.3
1908.....	21,098,858	4,569	21.7	10.8
1909.....	21,686,530	4,144	20.5	8.7
1910.....	22,263,089	4,370	19.7	8.4
1911.....	22,821,267	4,874	20.5	8.8
1912.....	23,426,355	4,551	19.4	9.9
1913.....	24,000,854	4,798	19.6	9.9
1914.....	24,553,940	5,089	20.7	11.0
1915.....	25,143,497	5,084	20.2	13.2
1916.....	25,829,127	4,525	17.6	10.0
1917.....	26,377,897	4,374	16.2	8.0
1902-1906.....	82,988,918	17,000	18.1	8.8
1907-1911.....	108,284,501	21,957	20.3	9.0
1912-1916.....	122,953,772	21,967	19.5	10.8

In another table Mr. Hoffman presents the suicide rate for individual cities:

COMPARATIVE MORTALITY FROM SUICIDE IN 100 AMERICAN CITIES, 1902-1917. RATE PER 100,000 OF POPULATION

Cities	1902-1911	1912-1916	1917	Difference in the 1917 Rate from that of 1912-1916	Actual Per cent.

It appears that the suicide rate increased in twenty-four cities and decreased in seventy-six. The principal cities of California exhibit the highest rates now, as in

A Haulage Prophecy Fulfilled

Have a Railroad of Your Own

This article of the month will show you how to have a railroad of your own, and how to make it pay for itself. It is a practical plan, and it is a plan that can be carried out by anyone who has the money to do so. It is a plan that will give you a steady income, and it is a plan that will give you a chance to make a fortune.

FEDERAL MOTOR TRUCKS

The advantages of Federal Motor Trucks are many. They are fast, they are reliable, and they are economical. They are also easy to operate, and they are easy to maintain. They are a real asset to any business, and they are a real asset to any individual.

Federal Motor Trucks are available in a variety of models, and they are available in a variety of colors. They are also available in a variety of sizes, and they are available in a variety of configurations. They are a real asset to any business, and they are a real asset to any individual.

FEDERAL MOTOR TRUCK COMPANY
Detroit, Michigan

SEVERAL years ago Federal, anticipating the need for greater transportation facilities, published the advertisement entitled, "Have a Railroad of Your Own." Today, Federal sees that suggestion as reality. In fact, the prophecy has been fulfilled in a far greater measure than Federal believed possible, even surpassing the most optimistic expectations. On every thoroughfare, motor trucks are maintaining daily schedules — inter-city, interstate, transcontinental. Federal is justly proud of its important part in this national co-operation.

You'll Appreciate Its Warmth and Comfort

THIS winter you can do your part in saving coal by sleeping as you should always have slept—the healthful, invigorating way—in a heatless bedroom. Wear Brighton-Carlbad sleeping garments for warmth.

See the new Brighton-Carlbad fall and winter designs at your dealer's. There is smart, comfortable nightwear in all weights and sizes and all *scientifically sealed to size*. Our 517 styles include Pajunions for men, women and children; one-piece union sleepers; night-gowns; out-door sleeping robes; two-piece pajamas; infants' and children's sleepers, in flannelette and other fabrics.

The Pajunion (pictured at right), is made union suit style. Coat can't creep and bunch up, nor trousers slip down. No blinding draw strings. Popular for women and misses as well as for men and boys.

Have the clerk *unpin* the garments. See the value hidden in the folds. Look for the Brighton-Carlbad *blue label*—a guide you can today depend upon when your night garments cost almost as much as this quality brand.

Send for FREE "Nightie Book" If your dealer hasn't what you want, send for "Nightie Book," showing styles, so he can order what you require.

Founders Court Lathbury LONDON, E. C. Office for Travelers 123 Pall Mall LONDON, S. W.

former reports. Making every possible allowance for erroneous population estimates, Mr. Hoffman asserts that "there can be no question of doubt but that suicidal frequency is higher in California than in any other section of the country." He also presents the variations in the geographical distribution of suicides as 11 groups of States:

Geographical Incidence of Suicides in the United States Rates per 100,000 of Population, 1907-1917

No. of Cities	1907-1911		1912-1916		1917		Decrease in the 1917 Rate from that of 1912-1916
	Suicides	Rate	Suicides	Rate	Suicides	Rate	
Eastern (15)...	10,039	17.5	10,298	15.9	1,857	13.5	-2.4 (5)
Central (10)...	6,808	22.4	7,905	23.8	1,426	10.1	-5.7 (15)
Southern (14)...	1,883	17.3	2,080	17.6	323	15.0	-4.6 (20)
Rocky Mt. (3)...	492	28.9	486	23.9	84	18.8	-5.1 (21)
Pacific Coast (9)...	2,638	14.5	3,310	13.1	586	25.5	-7.6 (23)
100 Cities,	21,050	20.7	24,142	19.6	4,274	16.2	-3.4 (17)

From this table it appears that the urban suicide rate "declined during 1917 in every geographical section of the country, but relatively the decline was most pronounced in the Southern cities," and that the Pacific Coast cities were second in this respect. There was a wide variation in relative mortality from suicide for white and colored. The following table shows the rates for twenty Southern cities by race. For those cities combined, the white rate was 22.6 per 100,000 of population against a colored rate of only 5.6:

Suicides in Twenty Southern Cities. By Color, 1912-1916

City	White		Colored	
	No. of Suicides	Rate per 100,000 of Population	No. of Suicides	Rate per 100,000 of Population
Atlanta, Ga.	118	19.4	16	5.6
Baltimore, Md.	512	20.8	24	4.4
Birmingham, Ala.	97	17.0	14	4.4
Charleston, S. C.	21	14.5	1	0.0
Charlotte, N. C.	16	12.6	2	0.0
Galveston, Texas	64	40.7	8	18.0
Jacksonville, Fla.	66	37.7	4	0.0
Lexington, Ky.	46	35.8	5	0.0
Louisville, Ky.	222	23.0	8	5.0
Memphis, Tenn.	126	28.4	24	8.0
Mobile, Ala.	31	29.0	4	2.0
Montgomery, Ala.	22	20.9	5	4.0
Nashville, Tenn.	86	22.0	15	8.0
New Orleans, La.	280	21.0	34	12.0
Norfolk, Va.	77	28.5	4	2.0
Richmond, Va.	82	17.6	8	3.0
San Antonio, Texas	135	20.3	1	1.0
Savannah, Ga.	40	23.7	2	1.0
Washington, D. C.	353	27.8	49	9.0
Wilmington, Del.	62	14.9	3	6.0
Total,	2,440	22.6	231	5.6

A writer in the New York Sun finds in the figures for individual cities several interesting suggestions. One is that the war "has taken from Hoboken its unenviable distinction of being among the American cities having an abnormal percentage of suicides." In the first dozen years of the present century that German steamship landing town lost annually, through suicide, thirty-three in each 100,000 of population. One had to cross the Rockies to find a gloomier record, but last year the Hoboken suicides numbered only twelve in 100,000. The writer asks whether this is "because the military population has been so largely increased, or because the German immigrants, to whom Hoboken was the beginning of the New World, no longer arrive."

He notes again that one might expect to find the suicide rate large where the factory system is strongest, but, Fall River "has a rate of only six, while Newport's rate is twenty-two." High wages may be conducive to love of life, but Detroit, which had thirteen suicides in 100,000 population a dozen years ago, recorded twenty-four last year, "making her the eighth city in the ignoble list." On the other hand, Bridgeport, Conn., which had a rate of twenty-three in the

years 1907-1911, had only fourteen in 1917. Manhattan and the Bronx, which used to have a rate of twenty suicides in 100,000, lowered it last year to 14.3. Brooklyn was even better, while Washington, "a home of ambition, is a far sadder city with 23.8."

WAR-TAXES AFTER PEACE IS SIGNED

That heavy expenses will continue for a long time and that taxes will be reduced only gradually, are the points of an article recently printed in *The Financial World*. The writer says "a great many people who didn't think very deeply on the subject were asking during the Fourth Liberty Loan campaign what was the need of subscribing to Liberty bonds when the war was so near over," and then declares that "if the war were to end to-morrow, it could not lessen the burdens on the Government." A fifth and possibly a sixth Liberty Loan will have to be sold, "irrespective of whether the war ends now or not." This means that the Government will have to continue its present scheme of taxation and bond issues for some time, "tho the total of the bond issues and the taxation will gradually lessen." With the more than \$6,800,000,000 Liberty bonds just sold, the total of Liberty issues is now close to \$16,000,000,000. Annual interest charge and sinking-fund requirements will total somewhere in the neighborhood of \$650,000,000, and it "will take at least a year and a half to demobilize the Army and Navy and place them once again on a peace basis." We must therefore count our yearly expenditures in billions instead of hundreds of millions. That being so, 1919 "is not likely to bring about any modification of the 1918 revenue act now being framed." Two more Liberty Loans and a continuation of the taxation based on the 1918 act "seem assured at least," according to this writer. Indeed, it "may not be until the winter session of Congress of 1919 that modification of war-taxes can be considered." He goes back to previous wars to find proof of this line of reasoning:

"Two months after the surrender of General Lee in 1865, the War Department's expenditures had reached \$1,030,500,000, and twelve months later the War Department had succeeded in reducing the Army expenses to \$283,154,000, but the revenue from taxes, which had been \$327,283,000 in the year 1865, was \$557,317,000 in the fiscal year 1866. The War Department cut its expenses in the year after the Spanish War from \$229,841,000 to \$134,774,000, but the revenue from taxation increased from \$405,321,000 to \$515,900,000. In other words, Congress allowed the war-taxes to go on for a time after peace so as to cut down quickly a considerable share of the war's cost and then, too, Government loans being abandoned, reliance on taxation alone for revenue precluded any sudden reduction in taxes. After each war the United States has been in, it has been the policy of Congress to reduce or abolish the most onerous tax burdens, but income taxation and much of the internal-revenue taxation will continue for some years and remind us that the cost of war does not instantly cease the moment peace is declared."

Not Good Mixers.—"The Blanks and the Browns are both newly rich, but they don't associate."

"Why not?"

"The Blanks feel above the Browns. They made their money in refined sugar, while the Browns made theirs in crude oil."—*Boston Transcript*.

Getting Out the Spruce

JOLTING, pounding over rough mountain trails, hub-deep with the weight of giant timbers—here is work for no human or mechanical weakling.

Service which calls upon the reserve power afforded by superior design and the ruggedness of careful and massive construction, dependability that is absolute—such service reveals unmistakably the dominating, incomparable excellence of

BOSCH MAGNETO IGNITION

Bosch on the motor-truck or tractor promises ignition that will not fail, however severe and continuous its task. It promises the rip-roaring sparks that drive into the mixture with such penetrating force that every drop of "gas" yields its full power. It promises the long life that results from the characteristic Bosch care in every structural detail.

For your new truck, tractor, car or gas engine, specify: "Bosch Magneto Ignition."

THE First National Bank, of Kalamazoo, Michigan, is one of the many recently erected Banking Institutions whose toilets are equipped with ONLIWON HYGIENE

ONLIWON HYGIENE

is the system specified by Architects—recommended by Physicians—demanded by Health Authorities and installed by Banks, Office Buildings, Hospitals, Sanitariums, Modern Factories and Homes because it is so Sanitary, Attractive, Efficient and Economical.

ONLIWON HYGIENE is the combination of an interfolded package of high grade toilet paper and a handsome nickle-plated cabinet that protects each sheet from dust and germs and serves just two sheets at a time. PREVENTS WASTE and saves from 15 to 30 per cent wherever used.

ONLIWON Toilet Paper is excellent quality, moderate in price; cut and folded by machinery—1,000 sheets to a package—reaches you untouched and uncontaminated.

ONLIWON Cabinets are handsome fixtures—simple to operate—hold 1,000 sheets—very durable—use cannot injure them—can't catch or tear your clothing—and can't get out of order.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"J. K.," Williamsburg, N. Y.—The word *colicist* to which you refer is a nonce word coined by a writer possibly ignorant of the fact that it was unnecessary, inasmuch as the correct word is *colic*, which was in use before the War of the Revolution.

"B. L. G.," Sea Cliff, N. Y.—"Can you tell me the author of the following quotation—'Get thy spindle and distaff ready and God will send thee flax'?"

The quotation is a paraphrase of verses 13 and 19 of Chapter xxxi of the Book of Proverbs.

"B. F. B.," Augusta, Ga.—"In the Established Church of England, the Archbishop of Canterbury is called Primate of all England and the Archbishop of York Primate of England. In what respect does the jurisdiction or authority of the Archbishop of York differ from that of the Archbishop of Canterbury?"

For Church purposes, England is divided into two sections, northern England and southern England. The authority of the Archbishop of York is exercised over the northern section, and that of the Archbishop of Canterbury over the southern section, but in addition to his functions as Primate over the south of England, the Archbishop of Canterbury exercises certain authority also over the northern section.

"G. K. G.," Chattanooga, Tenn.—"In speaking of the breakfast food *grits*, does good usage regard the word as singular or plural?"

The term *grits* is correctly used when the intention is to describe "grain much like coarse corn-meal mush." There is also *grouts*, which is used to designate hulled or crushed oats or wheat or fragments of wheat larger than *grits*. Both words should be used with a verb in the plural, notwithstanding the cant of the grain trade in which they are used with a verb in the singular.

"I. M.," Jr., Stockton, Cal.—"In editing copy, I often find the expressions 'two weeks' vacation,' 'a month's stay,' etc. It is not practicable to rewrite the copy into 'A stay of two weeks,' etc. What is the best form: 'A two weeks vacation,' 'A two weeks' vacation,' or 'A two-week vacation'?"

The correct forms are: "Two weeks' vacation" and "A month's stay," etc.

"M. F. H.," Jersey City, N. J.—"Which is correct, 'Under the circumstances,' or 'In the circumstances'?"

Mere situation is expressed by "in the circumstances"; action affected is performed "under the circumstances."

TO SEVERAL READERS:—The words attributed by "C. C. H.," Los Angeles, Cal., to Alexander Graham Bell were selected by Annie G. Ellsworth, daughter of Henry L. Ellsworth, Commissioner of Patents at the time Samuel F. B. Morse sent his first message by telegraph, May 24, 1844. They were taken from the Book of Numbers, Chapter xxiii, verse 23, and are: "What hath God wrought!"

LEARN SPANISH IN A FEW DAYS

It will make things easier for you in a hundred ways and will put many dollars in your pocket. Remember that new avenues of trade are opening up every day with the Latin-American republics, and the man who can speak Spanish will be at a premium. You can soon become fluent—a little spare time daily makes you so.—The Rosenthal Common-Sense Method of Practical Linguistics will teach you to speak, read, and write Spanish readily if you will devote few minutes of your leisure time each day to this wonderful system which teaches you in the way a child learns to speak, by nature's method. Write now for free booklet, "Revolution in the Study and Teaching of Foreign Languages."

BOLSHEVISM THREATENING THE WORLD

A SHUDDER runs through the Western nations as they watch the millions of Central Europe plunge from autoeracy to anarchy, and our publicists begin to ask if we must fight again against the new foe. "Must we save the world from anarchy?" is on every lip, and the fact

that such questions as these are being asked everywhere is proof enough, as *The New Republic* (New York) notes, that "the war does not end when the enemy surrenders." Ex-President Taft, calling attention in the *Philadelphia Public Ledger* to the sweep of Bolshevism through Germany and Austria, declares that this new movement may "stop short of nothing but a massacre of all who are respectable, thrifty, educated, or decent," and he hints that our armies may yet be needed to aid Russia to her feet, and to help the Austrian people "regain self-control denied them by the bloody hands of anarchy and mob rule." The Socialist New York *Call* protests against this as a demand for the inauguration of "a war of imperialism," in which our own "financial and commercial dynasties" would seek to aid the like "German brood." In other words, "it is a Holy Alliance of the

'respectable, thrifty, educated, or decent,'" which *The Call* thinks the ex-President would form against the "mob." Yet some of our most representative editors, as they watch the progress of the German revolution, are by no means certain that the war for democracy is not to be followed by a war against anarchy. Press dispatches tell us that the all-Socialist Gov-

ernment of Germany is aiming at an understanding with Russia, and one correspondent hears that "some of the German and Russian Bolsheviki go so far as to talk of a common resistance to the Western Powers." Other dispatches tell how thousands of German soldiers, without orders and unrestrained by their

officers, are filling the long troop-trains and coming back to the German cities over which the red flag now floats. If Germany's "wild men succeed in enlisting in their support the brutish elements of the German Army" it will be a serious thing for the world, the *New York Globe* believes. Bolshevism, this New York daily warns its readers, is not only "antidemocratic and autocratic, but is aggressive," and "if the power that remains with Russia and Germany is hurled at the democratic world in a new enterprise of conquest, the peace may not be of long duration." Mr. Frank H. Simonds, the conservative and well-informed military critic of the *New York Tribune*, turns his attention from problems of strategy to those of peace, and comes to the similar conclusion that there is no sound reason for indulging in "immediate expectations of a return to old conditions

of peace and quiet." He notes the parallelism between the early events of the respective revolutions in Russia and Germany, and reminds us that the Russian revolution was brought about by German influence "and based upon the ideas of the German Socialists." He further recalls the fact that in both countries the basis of revolution was "hunger, aggravated by

BEFORE AND AFTER.

The Imperial ruler and Friedrich Ebert, the Socialist tailor, who succeeded him as head of the German Government.

BISMARCK IN VERSAILLES—1871.

At the left the painting from the seventies shows Bismarck as the dominant standing figure. Mr. Thiers, representing the French Government, is sinking in his chair, and Mr. Favre is seen leaning across the table as the Iron Chancellor demands the surrender of Alsace-Lorraine.

FOCH IN VERSAILLES—1918.

RETRIBUTION.

At the right the drawing by McCutcheon (with due apologies to Wagner, painter of the picture on the left) shows figures reasonably familiar to the world. This time the dominating person, however, is Marshal Foch, and among the topics discussed is Alsace-Lorraine.

military defeat." But Russia's progress from the Lvoff-Miliukoff cabinet to that of Kerensky and from that to the rule of Lenine and Trotzky took months, whereas within a week after the Kaiser's abdication the German Government was controlled by the independent or radical Socialists, and the *bourgeoisie* were entirely excluded. This, says Mr. Simonds, is passing "very rapidly from the tyranny of autocracy to the tyranny of anarchy," and he continues:

"If the recent course of events in Germany be not promptly changed, nothing seems more certain than that we shall at no distant time find ourselves facing eastward over the Rhine upon a vast seething mass of anarchy, extending from the Rhine to the Siberian wastes and including within its limits the 300,000,000 people of Russia, Germany, and Austria.

"If the present movement in Germany continues we shall find also that the hostility which swept over Russia after the revolution, the hostility for the Western nations, the hatred of Britain and of America as reactionary states, will appear in Germany.

"All contemporary signs point to the swift arrival in Germany of exactly the same sort of control which has plunged Russia into anarchy and ruin. German autocracy has failed in its effort to make over the world, but German socialism, which has already conquered Russia and Germany and has invaded Austria and Bulgaria, is not less hostile to the Western form of democracy than was German autocracy.

"The thing Americans as a mass do not and can not understand is that to the German and Russian Socialists the American form of democracy seems more hideous than their own expiring autocracies. The men who now control the German and Russian revolutions are as hostile to the form of representative democracy under which we live as we should be to the Hohenzollern or Hapsburg rule, which was for them but an intermediate stage between slavery and complete liberation.

"A new war of ideas has begun between Central Europe and the Western nations. It may lead to a new war before the old war has finally been liquidated. It seems bound to lead to new horrors and fresh anarchy. It may preclude any settlement such as the league of nations provided, because the Germans and Russians of the revolution may refuse to deal with nations which they regard as reactionary and capitalistic. To national war international class war may now succeed, will now succeed if Germany and Russia can bring it about."

The Kaiser, who, it was said, had violently protested that he would never abandon his people in their hour of distress, abdicated on November 9, and fled to a castle in Holland, where he was interned by the Dutch Government. For the present,

Wilhelm, Count von Hohenzollern, seems to be safe from such a fate as overtook Nicholas Romanof, but it is impossible to pick up any newspaper without reading suggestions for inflicting upon him a punishment fitting his crimes. Before and after the Kaiser's abdication, Germany's minor princes were accepting the situation and abdicating at the rate of two or three a day. The red wave within a week was sweeping away all of Germany's dynasties, a Red Guard like that in Russia appeared as if by magic to defend the red flags that were soon flying over the cities and factories and fortresses and palaces of the most thickly populated regions of Germany. This guard soon took control of all news channels and the train service. Bavarian Socialists declared an independent republic, but the German revolution soon appeared to lose its separatist character, and the aim of the Socialists now seems to be a single German republic, which, it may be noted, German Austria is thought likely to enter. *Soviets* or Soldiers' and Workmen's Councils were at once organized in the chief cities of northern Germany, as well as among the soldiers and sailors. Amsterdam dispatches told of the conversion of the Reichstag building into a soldiers' camp where travel-stained Red Guards munched their army bread in luxurious upholstered chairs. Loyal officers in Berlin fought the crowds with machine guns, but if the dispatches may be believed there was comparatively little bloodshed during the first days following the Kaiser's exit. Perhaps one reason for this was the prompt announcement of Field-Marshal von Hindenburg and of the Commander of the Eastern Army that they and their troops would support the new régime. Upon the abdication of the Kaiser, Prince Max was succeeded as Chancellor by the Socialist Friedrich Ebert. Germany's Government by November 14 consisted "exclusively of Socialists, responsible to *Soviets* chosen by organized workers and in which the remainder of the population has no voice." This, continues Mr. Arno Dorsch-Fleuret, the New York *World's* Copenhagen correspondent, "is Lenine's program and is as conscious a form of Bolshevism as the present Russian Government." While the new régime was forming at Berlin, radical doctrines were being openly preached in Sweden, Holland, Spain, and Switzerland.

The raising of the red flag in Austria and Germany as well as Russia, and the possible spread of what our editors generally call Bolshevism to other countries, is described by the St. Louis

Star "as the worst menace to democracy that now exists since autocracy has been overthrown." It has been predicted again and again that a German revolution would be impossible, because of the discipline, comparative prosperity, and temperament of the German people. It was a German philosopher, the St. Louis *Globe-Democrat* recalls, who said, "Germany can never have a revolution, because it is *verboten*." But, this newspaper observes, the might that enforces obedience has been broken and with its passing "the potency of *verboten* has disappeared." When a people long regulated by superior authority find that authority removed, they have, it is remarked, "no inherent restraints from the excesses of individual license." As *The Globe-Democrat* sums it up:

"Autocracy and anarchy would seem to be at opposite poles, but it is only a step from one to the other. Lower the eagles of despotic imperialism and instantly the red flag is raised."

Similarly, the New York *Evening Sun* finds the most unfortunate feature of the situation to be the fact that the German people have been so long left "utterly untutored in the art of self-government." It declares that there is not "in all Germany one-hundredth part of the political knowledge which was assembled in Philadelphia one hundred and thirty-one years ago, to give this people the constitution which has proved so efficient and enduring." The New York *Tribune* tells its readers that "there is more in common, emotionally and psychically, between Russian and German proletarians than has often been clear"—

"The soul of the proletariat in both countries is a peasant, envious, gloomy soul. The Russian got his socialism from the German; and it suited both equally, because it was a socialism of fear, hatred, and revenge. The German, like the Russian, submitted to a million tyrannies in helpless despair, sublimated his grievances by faith in the divine right of kings, believing it less and less, and went stolidly on with an existence of terrible repressions."

"Now suddenly banish all the *verboten* signs, lift the private and social and political restraints, give control of Germany

Empire if, recognizing enemies at home, the people in their wrath apply to them the practices in which they have become so expert when operating on foreign soil. . . .

"In Russia brutish ignorance long oppressed produced its perfect fruit. In Germany frightfulness as a national trait may yet find tragic illustration at home."

On the other hand, we find the *Hartford Courant* convinced that the scientific socialism of Germany can never develop the

THE HOUSE OF HOHENZOLLERN.

—Kirby in the New York World.

disorder that was bound to accompany the Bolshevism inherited from the old Russian nihilism. The Boston *Globe* lays stress on the superior education of the German people, reminding us that whereas "Russia was predominantly illiterate, in Germany illiteracy is less than 1 per cent." "By as much as Germany is better educated than Russia," we are told, "her revolution ought to be an orderly process from bondage to freedom." The New York *Evening Post* argues against an imitation of the Russian revolution in Germany on the score of the difference in the relative strength of proletariat and bourgeoisie in the two countries. It estimates the combined peasants and working classes of the towns at 85 per cent. of the total population of Russia. Thus "the conflict would be one of the 'submerged' 95 per cent. against the middle class 5 per cent." But in Germany the middle class compose 25 per cent. of the population and have old artisan and burgher traditions which strongly differentiate them from the proletariat. This journal, therefore, thinks a proletariat supremacy is quite unlikely. It further reminds us that the demand for peace which stirred up both revolutions has been granted almost at the outset in Germany. Besides, there is no land problem in Germany, and the factory-workers of Germany and Austria will "hesitate before turning privation into actual destitution by proletarianizing the factories on the Russian model." But *The Evening Post* believes that the strongest guaranty against Bolshevism in Central Europe is "the triumphant principle of nationalism," by which, particularly in Austria, subject peoples will "not have been defeated if they emerge from the war as free nations in alliance with the victorious democracies of the West." Mr. Hearst's New York *American* makes the point that the German people are revolting chiefly against political rather than economic ills. The German state has gone to the extreme of paternalism in caring for its subjects, it is noted. "Public ownership of public utilities, government supervision of housing and of labor conditions, middle-age pensions and insurance—all the palliatives of the

BREAKING UP HOUSEKEEPING IN AUSTRIA.

—Hanny in the St. Joseph News-Press.

to the Bolshevik proletariat of Berlin—and what will happen? "Nobody knows."

The New York *World* recalls that the Germans have long been taught that "regard for the rights of others is an unworthy manifestation of weakness," and continues:

"It will be a sorry day for the overlords and supermen of the

present industrial state have been granted the German of the middle class." The German will have no more of the Government which granted all this to keep him "serviceable for use in war," "but neither will he in overthrowing it sacrifice those comfortable conditions of life which it had for a long time assured him, and which his brother the Russian peasant never knew."

The Socialist New York *Call* denounces the way non-Socialist editors "conjure blood and massacre" out of the "compara-

IN MEMORY OF WILHELM II.

—Orr in the Chicago Tribune.

tively peaceful changes" in Germany. It insists that the transfer of power in Austria, Bohemia, Bavaria, and a number of German cities was accomplished with a minimum of disorder, and that "on the whole there was less violence than occurs in a New York election with Tammany thugs on the job."

A weekly magazine which is looked upon as a representative of "liberal" thought, *The New Republic*, is inclined to think that the Austrians and Germans will "prove to be more circumspectly revolutionary" than the Russians. But it refuses to prophesy, and asks whether these countries can "assure us that they will keep their revolutionary virus at home so that our peoples, especially those of France, Belgium, and Italy, should remain uncontaminated." It sees the possible danger of "a new tho concealed war against social revolutionaries in all countries, enemy and Allied, in order to prevent the contagion from spreading," and even a possibility that what was to have been a "League of Nations" will become in these circumstances a "Holy Alliance." It concludes: "How far we shall go in guiding, restraining, or defeating the probably unruly and immoderate democracies in what was Austria-Hungary, and perhaps Germany, may well prove to be one of those contests that the battle-field bequeaths to the peace table."

Allied statesmen are at work already in advance of the peace conference to prevent anarchy and despair in Germany by their insistence on a peace of justice and not of revenge, and by their plans for feeding the starving people of Central Europe. In his address to Congress, in which he announced the terms of the armistice with Germany, President Wilson declared that by organizing relief work in the Central Empires "it ought presently to be possible to lift the fear of utter misery from their oppressed populations and set their minds and energies free for the great and hazardous tasks of political reconstruction which now face them on every hand." The President continued:

"Hunger does not breed reform; it breeds madness and all the ugly distempers that make an ordered life impossible. . . .

"The present and all that it holds belongs to the nations and the peoples who preserve their self-control and the orderly processes of their governments; the future to those who prove themselves the true friends of mankind. . . .

"The peoples who have but just come out from under the yoke of arbitrary government and who are now coming at last into their freedom will never find the treasures of liberty they are in search of if they look for them by the light of the torch. They will find that every pathway that is stained with the blood of their own brothers leads to the wilderness, not to the seat of their hope. They are now face to face with their initial test. We must hold the light steady until they find themselves. And in the meantime, if it be possible, we must establish a peace that will justly define their place among the nations, remove all fear of their neighbors and of their former masters, and enable them to live in security and contentment when they have set their own affairs in order. I, for one, do not doubt their purpose or their capacity."

AN "UNCONDITIONAL SURRENDER"

"THE UTTER SUBMISSION and stripping of the Hun," "A surrender unexampled in the history of the world," "If ever in the world's history there was an Unconditional Surrender, it is this of Germany"—these are some typical expressions of the reaction of the country's editors to the terms of the armistice that ended the Great War. The New York *Herald*, since the early days of the war most bitterly insistent on German defeat, exults that "German militarism is not only defeated, but crushed; not only prone, but bound hand and foot. Did ever another truculent militarism meet such a débâcle?" The New York *Evening Post*, whose attitude has been characterized by that coolness which much ratiocination is supposed to bring to the emotions, is equally enthusiastic. Says *The Post*: "To have lived to see this day fills up the measure of happiness of uncounted millions." "They are very adequate. The armistice was admirably drawn by the best military minds of the United States, Great Britain, and France," in the opinion of a famous international lawyer, and the New York *Journal of Commerce* declares that the armistice "means that for years the German states will be unable to think in terms of armed force against any of the Powers associated against them."

According to the Washington *Post's* summary of the revised terms, Germany has been forced to agree to (1) the immediate evacuation of all invaded countries. (2) The imprisonment of all German troops not so withdrawn. (3) The repatriation, within two weeks, of all citizens of Allied or associated countries imprisoned in Germany. (4) The surrender of 5,000 guns, 25,000 machine guns, 3,000 *Minenwerfer*, and 1,700 airplanes. (5) The occupation by Allied troops of the German lands on the left bank of the Rhine, with frequent bridgeheads, making the further invasion of Germany comparatively easy. (6) The support of the Allied army of occupation to be at the cost of Germany. (7) All poisoned wells and mines in evacuated territory are to be revealed, and no damage shall be done by the evacuating German troops. (8) Surrender of 5,000 locomotives, 150,000 cars, and 5,000 motor-cars. (9) Surrender of all German submarines (including submarine cruisers and all mine-laying submarines) now existing, with their complete armament. (10) Repatriation of all war-prisoners in Germany without reciprocity. (11) All German troops to withdraw within German frontiers. (12) German troops immediately to cease all requisitions. (13) All stolen money must be restored. (14) Treaties of Bucharest and Brest-Litovsk abandoned. (15) Unconditional capitulation of German forces in East Africa. (16) Reparation for damage done in invaded countries. (17) Location of all German ships revealed. (18) Six German battle-cruisers, ten battleships, eight light cruisers, and fifty destroyers of the latest type are to be disarmed and interned in neutral ports. All other surface war-ships are to be concentrated in German ports,

completely disarmed, and placed under Allied supervision. (19) All naval aircraft must be concentrated. (20) Associated Powers have access to Baltic Sea. (21) Associated Powers occupy German shore defenses. (22) Blockade of Germany continues. (23) Germany evacuates Black Sea ports. (24) Germany must locate all marine mine-fields. (25) All neutral merchant vessels must be released. (26) All merchant vessels of associated Powers must be restored without reciprocity. (27) No transfer of German merchant shipping. (28) All restrictions on neutral commerce withdrawn by Germany. (29) Armistice runs thirty days, with option to extend. (30) Armistice may be denounced on forty-eight hours' notice.

"Eminently satisfactory," the *New York Evening Sun* calls these terms, and discusses them in their practical application:

"They safeguard the interests of the Allies and the United States; they are sternly severe to the culprit nation which has deluged the world in blood; withal, they are humane, since they promise sustenance to the beaten people; they impose no permanent subjection upon them; on the contrary, they open the way for reorganization of the German body politic upon a civilized basis.

"Despite their severity, it is impossible to regard the stipulations as crushing or cruel. They are strictly military in character and leave all adjustments of civil questions to the future. They are not deliberately humiliating; their obvious motive is military precaution, and if they deeply mortify the pride of the German people, it is solely because all penalty is destructive of self-respect in that it involves the establishment of guilt.

"The disgrace to Germany lies wholly in the offense which has deserved such a visitation of wrath at the hands of God and man. It can not be said that the terms are easy; and still, if we consider the proposals that the Kaiser's Government would have made to the opposed Powers had Germany been victorious, if we consider the programs of insult and spoliation so often exploited by German publicists in books, in speeches, and in the daily press, we are forced to think that Germany is getting off far better than she deserved or than she had any right to expect. The terms are far from being the maximum that might have been imposed had the Allies had any schemes of aggrandizement in their minds.

"It must be remembered that this present array of conditions is not a final peace program. It merely covers a suspension of hostilities for the negotiation of a peace. But, in fact, on the one hand, it places the military situation so completely in the hands of America and the Allies that they will be able to dictate any terms to Germany that they elect; on the other hand, it adumbrates with tolerable clearness the lengths to which these terms will be pushed. Restitution, restoration, emancipation, safety for the future are the four heads in the Ally program. These, it is clear, will be insisted upon to the full degree, but there the hostile purpose ends. There is no project of subjugation or dismemberment."

The *New York Times* gives this summary of what Germany will lose with the land that she is now in process of evacuating:

"The territory lying on the western or left bank of the Rhine within the German Empire to be evacuated by the German troops represents in productivity about twenty-five per cent.

of the entire Empire's manufacturing industry, omitting ship-building, over seventy per cent. of its mining products, and over ten per cent. of its agriculture. It includes an area of nearly 20,000 square miles, which had before the war a civil population of over 11,000,000.

"The importance of the industrial region of the Prussian Province, and even that of the fortifications of Metz and Strassburg, is completely discounted by the iron region of the Bassin de Briey, in Lorraine, which, beginning over the Belgian and Luxemburg frontiers, ascends the Moselle to within a few miles of Pont-à-Mousson. This mining region, with an area of 225 square miles, was cut in two by the treaty of Frankfurt, which closed the Franco-Prussian War of 1870-71, and was entirely occupied by the Germans in August-December, 1914. On September 13 last the First American Army in wiping out the St. Mihiel salient reached its southern confines.

"During the war the Bassin de Briey has provided the German armaments with eighty per cent. of their steel, and without it, according to the most famous Düsseldorf ironmasters, the Empire could not have conducted the war for three months.

"When the war began France was obtaining yearly from the Bassin de Briey 15,000,000 tons of iron out of her total productivity of 22,000,000. Of Germany's total of 28,000,000 tons 21,000,000 came from the Bassin de Briey. Since the war began Germany has mined the French area together with the Luxemburg area (6,000,000 tons annually), giving her a total of 42,000,000 tons, to be added to only 7,000,000 tons, which she has obtained outside the Bassin.

"Aside from the mineral products of the now recovered provinces, which include annually 3,795,932 tons of coal, also gypsum and limestone, the cotton manufacture of the region had become the most important in Germany; also the yield of wheat, rye, barley, potatoes, oats, and hay (respectively 300,000, 93,000, 109,000, 1,266,000, 210,000, and 1,138,000 metric tons a year) was great. The vineyards in 1917, with a cultivation of 62,122 acres, yielded 2,672,318 gallons of wine."

THE REPUBLICAN OPPORTUNITY

IN THE MIDST OF REJOICING over their victory in securing control of the Sixty-sixth Congress, Republicans are warned by their leaders against the factionalism that has cost them so much in recent years. It is urged upon them also, to use the words of ex-President Taft, that the people will hold

HE GOT THERE.

—Fitzpatrick in the St. Louis Post-Dispatch.

them "to a strict accountability for the way in which they use their power," and "should they develop obstructive tactics while the President is attempting to carry out a policy in the interest of the country and the world, the party will be made to suffer for it in the next election." The same thought is expressed in other quarters, and Mr. William Allen White, of the *Emporia Gazette* (Ind.) says bluntly that if the Republican party does not take advantage of its chance to redeem itself now that its two wings are united, the Democratic party will "come into power for a generation as the liberal party of this nation." Such is the prediction of this progressive editor, who says that this hour of triumph is the time "not for rejoicing, but for prayer." Meanwhile, some editors of Democratic conviction discount the power of the Republican majority in the coming Congress and emphasize the fact that both houses as at present constituted have four months in which to make good in the afterwar reconstruction. The whole matter is of less importance now than it seemed the day before election, remarks the *Baltimore Sun* (Ind. Dem.), when it appeared that a Republican Congress might dangerously interfere with the President's peace program. Now the Allies have accepted the program as their own, no faction or party can prevent the ratification of a peace treaty which represents the combined judgment of the governments associated against Germany. Nevertheless, this *Baltimore* daily reminds us that two years hence there will be another election, which will turn solely on national issues and in which local influences will exercise comparatively little control, and we hear it echo the counsel uttered by Republican leaders themselves that if the Republican party "permits itself to play simply the rôle of an obstructionist, of an envious backbiter, carper, and nagger, it will commit political suicide." In line with this is the thought of other pro-Administration journals, including the *New Orleans Times-Picayune* (Ind. Dem.), which says that the record of the Republicans in the next Congress will be passed upon two years hence, not only by the voters of the recent election, but "by hundreds of thousands of the patriotic Americans now overseas, whose votes, testimony, and influence

in all probability will determine the result of the greater political struggle in 1920." Associated Press dispatches from Washington inform us that the Republican majority in the next Congress will consist of at least two in the Senate and not less than forty-five in the House. On the face of the completed unofficial returns the political line-up of the next House is given as follows: Republicans, 239; Democrats, 194; Independent, 1; Socialist, 1.

The *New York Times* notes a popular generalization about the election—that the West swung to Republicanism and the East to Democracy. This is open to question, *The Times* thinks, because the East certainly did not swing to Democracy. True, in Massachusetts, Senator Weeks (Rep.) was defeated by Senator-elect Walsh, a Democrat, but, we are reminded, New Hampshire returned to the Republican ranks and, "what is much more disconcerting to Democrats, Rhode Island, which had been believed to be good Democratic ground, this year went solidly Republican." The probable defeat of the Republican Governor Whitman in New York was a personal defeat according to this daily, which points out that New Jersey stayed Republican in spite of President Wilson's personal appeal and the bitter fight waged against Senator Baird by the suffragists. Delaware reversed herself in favor of Republicanism, turning out such a good Senator as Saulsbury, and *The Times* adds:

"The prominence of Massachusetts and the landslide Republican majority in Kansas may be responsible for the generalization. But the great Republican State of Michigan was in doubt over the Senatorship. Illinois went Republican, but not by the predicted landslide. Idaho elected one Republican and one Democratic Senator. Montana, which elected Miss Rankin as a Republican Representative two years ago, reelected a Democratic Senator, Walsh. Ohio reelected her Democratic governor over her Republican ex-governor. Kansas was the only landslide State.

"No sectional generalizations are possible."

The Times remarks further that the Republican majority in the Senate is not a working majority, for there are at least two Republicans, La Follette and Gronna, who "would rather work

DITCHED!

—Orr in the Chicago Tribune.

with the Democrats than with the Republicans if a colorable excuse is to be found," but the Republican *Syracuse Post-Standard* observes:

"The new Senate will have few of those elements in either party which the President described upon a notable occasion as 'wilful.' La Follette holds over and Norris, of Nebraska, is retained, but Vardaman has gone, and Hardwick. Others who

found it at first expedient to cater to the pro-German vote have become noisily militant. While the next Senate will be Republican, the President, so far as he shall ask for legislation for military purposes or for purposes of reconstruction, should find the next Senate easier to deal with than the last one."

While some Republican organs consider the Democratic setback at the election a rebuke to the President for his appeal for votes to the country, there are dailies, such as the *Cincinnati Commercial-Tribune* (Rep.), that say it would be a mistake to describe the result of the election as a rebuke to President Wilson's administration. On the contrary, it was merely a rebuke "to the small and narrow partizanship which is utterly unworthy of a President so big." The one outstanding conclusion to be drawn from the election, says the *Pittsburg Chronicle-Telegraph* (Rep.), is that the people have greater confidence in Republican legislators and Republican principles for meeting the problems of the closing days of the war and the coming of peace. In the view of this journal the defeat of certain distinguished Democratic Senators, such as Lewis, of Illinois; Saulsbury, of Delaware; Owen, of Oklahoma; Shafroth, of Colorado, and Thompson, of Kansas, is even more significant than the numerical result. As a summing up of the duty that lies before the Republican party, the *Chicago Tribune* (Ind. Rep.) represents a different standpoint:

"We are entering upon a most crucial trial not only of the country but of the party. A Bourbon control means the destruction of Republicanism. The real party leaders can not afford to permit it and the party press should insist upon reform."

"Besides the abolition of the seniority rule, there should be an abolition of useless committees. Perhaps twenty per cent. of present committees in the House are useless."

"Finally, there should be a consolidation of appropriating committees and the establishment of the budget system."

Among the high lights of the election results noted are the defeat of Joseph Folk in Missouri, who, as the *Nashville Tennessean* (Ind. Dem.) puts it, "went down with prohibition, the object of the concentrated attack of the Republican machine," and the fact that Champ Clark "pulls through by the skin of his teeth."

San Francisco dispatches relate that altho the women that sought seats in Congress from far-Western constituencies failed without exception, many other women candidates for lesser honors won success in their campaigns for State, county, and municipal offices. In the eleven far-Western States where woman suffrage prevails, we are told, sixteen women were elected to the legislatures. Furthermore, the *Syracuse Post-Standard* points out that Michigan has elected to admit women to equal rights with men in the franchise and South Dakota has done likewise. And this journal believes the Congressional elections "give assurance that the suffrage amendment will pass the next Congress." The *Springfield Republican* holds that "the notion that the South is peculiarly hostile to woman suffrage on account of the negro is severely discredited by the result of the referendum in Louisiana, where the woman-suffrage amendment has been defeated by fewer than two thousand votes."

Prohibitionists also are jubilant over the results of the election, for, as various editors remark, the country is getting drier all the time. The "greatest feat" of prohibition was scored at the recent election, say some observers, when Ohio, the fourth State in the Union in population, went dry. The new States on the prohibition list make the total thirty-two, we are reminded by the *Providence Journal*, which adds:

"They are Maine, New Hampshire, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Alabama, Mississippi, Tennessee, Ohio, Indiana, Iowa, Arkansas, Texas, Michigan, North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Colorado, New Mexico, Montana, Wyoming, Idaho, Utah, Arizona, Nevada, Washington, and Oregon. In other words, only sixteen of the forty-eight States of the Union have failed to outlaw the saloon. At the beginning of the war there

were only nine States on the 'dry' roll. The change in four years is little short of marvelous."

"These figures, however, do not fully represent the present situation. Most of the non-prohibition States have, under local option laws, banished the liquor business from large areas. Thus Minnesota, which declined to adopt State-wide prohibition, is, nevertheless, in a geographical sense, almost wholly dry, while in Connecticut more than one hundred of the one hundred and sixty-eight cities and towns are under a no-license régime."

THE SPECTER OF FAMINE OVER EUROPE

NO ARMISTICE HAS BEEN SIGNED with two very ancient and relentless enemies—Famine and Pestilence. Food-shortage of the utmost seriousness, "in Russia, in Central Europe, in more than one Allied nation, and in the Near East" has created a situation in which "famine

VIENNA: PLEASE PASS THE ROLLS!

—Fitzpatrick in the St. Louis Post-Dispatch.

and pestilence of unprecedented proportions are possibilities," declares the conservative *Montreal Star* in an editorial which is quoted with approval by the *Boston Transcript*, and fairly expresses the main current of American opinion. A special cable to the *New York Times* bears confirmation in the news that "the flow of refugees from Russia continues," and that "Petrograd is actually starving at present. Bread costs about \$8 a pound." From Germany Foreign Secretary Solf cables Secretary Lansing: "As there is a pressing danger of famine, the German Government is particularly anxious for the peace negotiations to begin immediately." Even France, no doubt because she chose that available shipping should bring American soldiers and arms rather than food, is suffering acutely. According to a member of the Federal Food Administration, the time has come for "dispelling the popular impression here that food is plentiful in France. All through the country districts not included in the battle-zone, practically the only food which any one can afford is bread."

Another danger, hardly less deadly than famine and the train of epidemics that follow chronic hunger, has been recognized by President Wilson as attendant upon the present food-shortage. In the address with which he accompanied his announcement of the terms which Germany has signed, he definitely took a stand in favor of provisioning the country, explaining that—

"By the use of the idle tonnage of the Central Empires it ought presently to be possible to lift the fear of utter misery

from their oppressed populations and set their minds and energies free for the great and hazardous tasks of political reconstruction which now face them on every hand. Hunger does not breed reform; it breeds madness and all the ugly distempers that make an ordered life impossible.

"For with the fall of the ancient governments which rested like an incubus on the peoples of the Central Empires has come political change not merely, but revolution."

Putting this danger into a nutshell, *The Wall Street Journal* asks whether Central Europe shall have "bread or Bolshevism"? This strong exponent of a firm social order is of the opinion that "we must recognize the fact that hunger breeds anarchy, and that the most effective weapon against Bolshevism is a loaf of bread." Victory has made the Allied peoples, "through their governments, responsible for world conditions," in the opinion of this paper as well as of the *Montreal Star* quoted above, and Food Administrator Hoover declares that "the specter of famine abroad now haunts the abundance of our tables at home."

"We still have 220,000,000 Allies dependent on us for a large measure of their food," the *Portland Oregonian* points out, "and our own forces across the water now number close to 2,500,000 men." "Germany and her allies of yesterday count perhaps 125,000,000 more," adds the *New York Evening Sun*. Besides, says the *Anaconda Standard*, "there are famine conditions in Serbia, Albania, Macedonia, Roumania, Poland, Armenia, Syria, and Arabia." But "before we can feed our foes, we must feed the victims of our foes," this Western editor declares. The *Houston Post*, reasoning along the same line, points out Germany's responsibility for the present serious situation in which she finds herself along with the nations whose territory she has deliberately devastated. The farm-lands of Belgium and northern France, says *The Post*, "have been rendered sterile and practically uninhabitable by the Hun, who has shown a malicious delight in destroying vines and fruit-trees in addition to the damage done to the soil. They have carried off the stock and destroyed farming implements." The *London Daily Chronicle* comments that "Germany, which never showed mercy, now has to implore it." It adds that the Allies no doubt will take such steps as humanity dictates, so far as they can consistently do so and feed their own populations. "But that is no trivial proviso," *The Daily Chronicle* concludes, "and the food-cargoes that Ger-

many has criminally sent to the bottom of the sea can not be fished up even to feed Germany."

Premier Clemenceau has announced France's readiness to come to Germany's aid "in this first hour," but it is generally conceded that the brunt of saving the world, associated, neutral, and conquered, from actual starvation, especially for the next few months, must fall on America. The one bright spot on the horizon is the fact, pointed out by the *Cincinnati Enquirer*, the *New York Times*, and several other papers, that "the clearance of the Mediterranean of submarines has opened the way for large imports of wheat from India and Australia through the shorter haul made possible in drawing upon the reserves in those countries." Says *The Times*:

"Mr. Hoover expects that enough wheat will be brought from those countries to permit reduction of the percentage of substitutes now required in bread, and thus release fodder grain for dairy use. The change, it is said, may take place within three months. But it will not reduce the total of foodstuffs which we must supply. He predicts that 'our load will be increased,' and that there will be a greater demand for economy."

"The available quantities of grain are sufficient. From our great crop of wheat we can spare more than 300,000,000 bushels. Canada, with a yield almost equal to last year's, has a surplus. While our crop of corn shows a decline of 441,000,000 bushels from that of a year ago, it is very near to recent averages and of very good quality. The output of home gardens, increased by one-half, is not included in official reports, altho its value exceeds \$500,000,000. Australia has on hand the surplus of three wheat crops, India is said to have 120,000,000 bushels for shipment, and much can be taken from Argentina. As a rule, our war-partners in Europe increased their crops this year. England gains 30,000,000 bushels of wheat, Italy 24,000,000, and France 35,000,000. But other crops in France are short, and the nutritive value of the entire yield is less than that of last year's harvest. It is well known that the Central Powers have very little food; and no help can come to them from the East. Before the war Russia exported a large surplus of wheat. Many of her people are now starving. So far as can be learned, she has no grain to sell. Bulgaria and Roumania have the smallest crops in fifty years. Germany and Austria can get no grain from the northern neutrals; we are sending wheat to them. There is food enough to supply the wants of our European friends and foes until the next harvest if it can be carefully distributed. But if the plans for helping those who have fought against us, as well as our partners in the war, are carried out, the American people must practise economy and submit to restrictions for some time to come."

FOREIGN COMMENT

Copyrighted by Underwood & Underwood, New York.

THE ENEMY IN SIGHT. THE DESTROYERS AT WORK. AN IMPORTANT CAUSE OF THE GERMAN DEFEAT.

"Events," said Mr. Lloyd George, paying a tribute to the work of the British Navy, "take place in the vast wilderness of the sea, over hundreds of square miles, with no one to witness them or describe them, except those who take part in the grim struggle." Yet it is the silent vigilance of those fast-moving sailors which kept the Huns from our shores.

AMERICAN AND BRITISH NAVIES IN THE WAR

THE TRADITION OF SILENCE, that proud reticence which has always marked the British Navy, has its drawbacks in war-time. It has led to a good deal of misunderstanding on the part of the people both of Britain and her Allies, and there have been constant appeals in the British press that the naval authorities lift the pall of silence so that we may see what the great fleets are doing. Admiral Sims, the commander of our fleet which is now cooperating with the British Fleet off the coast of Ireland, has joined in the protest, and at a luncheon given in London urged the British Admiralty to let us all know what is being done. London papers have taken up this speech, and that outspoken censor of British manners and methods, the editor of the *London Truth*, remarks:

"It is a pity that the truth about the astonishing efforts made by Great Britain in the war has not been published in America yet." So said Admiral Sims, of the United States Navy, in London a few days ago. Coming so soon after Sir Conan Doyle's recent insistence on the overwhelming share of English troops in the operations of the first four years of the war—an insistence suggested by his observations on the Western Front—these generous words are not without significance. Seventy-five per cent. of the British casualties have been suffered by troops from these islands—men who stemmed the first tide of the invasion of France and Belgium and saved the Channel ports. Admiral Sims points out that ninety-seven per cent. of the antisubmarine craft that are at work day and night are English, that British ships have brought over two-thirds of the American troops, and that our Navy has escorted one-half of them. The Navy may be silent, but it has in effect won the war—it is 'the foundation-stone of the cause of the whole of the Allies.' Our persistent hiding of our light under a bushel has caused more or less of misunderstanding in every Allied country at one time or another, and, without any departure from becoming modesty, it is right that the facts should be known."

Another influential London paper, *The British Weekly*, comments on the policy of the British Admiralty somewhat acridly,

and after discussing the Admiral's figures with regard to transport and submarines, it proceeds:

"He mentioned that when, in April, 1917, America came into the war the Central Powers were winning with great rapidity. He paid an eloquent tribute to the British Navy. 'If a catastrophe should happen to the British Grand Fleet, there is no power on earth that can save us, for then the German High Seas Fleet can come out and sweep the seas. The British Grand Fleet is the foundation-stone of the cause of the whole of the Allies.'

"We must all echo Admiral Sims's regret that the official policy of silence has been so rigorously and so stupidly pursued. We met recently a distinguished man who has just returned from America after fulfilling the duties of a very important mission. He assured us that he was disappointed everywhere by the contempt with which the Americans regarded the British effort during the war. Men who should have known much better were fully of opinion that the British had left the main part of the fighting to be carried on by France. They had no conception of the work of the British Navy. Their view of the situation was that America had come to the aid of Britain in an hour when the mother country was nearly over the precipice. We do not know how to apportion the blame for the most mischievous silence which has only now been broken through. Perhaps American newspapers or the American press censor here may be charged with some of it. Perhaps our own editors may have been somewhat lacking. But no doubt it is officialism, which blunders everywhere, darkens counsel, and makes misunderstandings not merely possible, but certain."

These protests appear to have roused the press section of the British Admiralty from its wonted somnolence, and it has issued an official summary of what the British Navy has done during the war. It runs:

"In comparing the effort of Britain with that of her Allies, there is a tendency in certain quarters to discount the British contribution by pointing to the fact that these islands have hitherto enjoyed immunity from invasion. It is probable that those who hold such a view have failed to take into account the

enormous sacrifices in men, money, and material which Britain has made, and is making, in defense not of her freedom only, but of that of the civilized world.

	August, 1914	August, 1918
Personnel (officers and men).....	145,000	450,000
Tonnage employed in naval service....	2,500,000	8,000,000
Mine-sweepers and patrol-boats.....	12	3,300

"The 140,000 square nautical miles of the North Sea, an area larger than Germany, are patrolled incessantly, in all weathers.

"In one month British war-ships proper traveled 1,000,000 sea-miles in home waters alone. In the same period the mileage of auxiliary vessels, including mine-sweepers and patrol-boats, was 6,000,000—250 times the circuit of the globe.

"British submarines have attacked successfully forty enemy war-ships and 270 other vessels. Over 150 enemy submarines are known to have been destroyed.

"Transport. Since war broke out the Navy, with its auxiliary vessels, has been instrumental in transporting to the British armies and those of our Allies:

20,000,000 men (1,304 only lost by enemy action).
2,000,000 horses and mules.
500,000 vehicles.
25,000,000 tons of explosives and supplies.
51,000,000 tons of oil and fuel.
130,000,000 tons of food and other materials.

"During 1917, 7,000,000 men, 500,000 animals, over 200,000 vehicles, and 9,500,000 tons of stores were conveyed to the various fronts.

"Over 2,000,000 tons dead-weight of British shipping are continuously employed in French service. Of this rather more than 1,000,000 tons are employed in carrying food and coal to France. About forty-five per cent. of French and Italian imports are carried in British ships."

Meanwhile the American Navy has been doing good work. Here is a generous appreciation from the *London Times*:

"The American naval forces at Queenstown perform a service the effect of which can only be properly appreciated with the end of the war, when the work of all the Allies is reviewed in its due proportion. This, however, may be said: There was a 'gap' in the defenses against submarines, and the coming in of the Americans filled it. Had Great Britain sufficient additional forces, equal to America's contribution before the war, the losses in shipping would have been considerably less. The arrival of the American naval forces, therefore, made comparatively more secure the safety of the seas which they patrol. These forces are under the orders of the British Vice-Admiral commanding in Irish waters, Sir Lewis Bayly. But, so far as supplies, repairs, discipline, etc., are concerned, they are controlled by the American senior naval officer.

"Most harmonious is the working of the two navies. Admiralty House is quite a home for the Americans, and, needless to say, the British Vice-Admiral, with his years of sea-life, is an interesting figure to the young officers from the States. So close is the cooperation of the two services that when the British Vice-Admiral was on leave some time ago, Admiral Sims, the senior American naval officer, hoisted his flag at Queenstown, and through the island went the rumor that Ireland had been handed over to the United States!

"Destroyers, submarine-chasers, and Curtiss flying-boats comprise the main American forces here. The work is most exacting, particularly as the weather has been none too pleasant lately. And neither a destroyer nor a chaser is the most comfortable of vessels in a heavy sea. But no one complains, and there is the same keenness that one finds in the British Navy to 'down Fritz.' Submarine-hunting and convoy escorting are not without peril or excitement, and while one finds an eagerness to explain the organization side of their work, the Americans are very reticent about relating any incidents of personal valor."

Perhaps the naval effort on our part which is exciting the

greatest admiration in England, herself a maritime country, is our extraordinary output in ship-building. *The Westminster Gazette* says:

"There is not a particle of envy on this side of the Atlantic that the circumstances of the war should have made the United States the greatest ship-building center of the world. That was the inevitable outcome of the fact that our own yards had to give first attention to naval work, secondary attention to repairs for all the Allied Powers, and that new mercantile construction had to take the third place. Our feeling is one of gratitude to the United States that with her immense resources she has

filled the most obvious gap in the Allied defenses. The position at the end of the war will be adjusted in good feeling, and if America, as is probable, becomes the great maritime Power that she should rightly be, we shall compete with her with friendship unbroken and untouched by envy on either side."

THEY MUST PAY—

The British Socialist papers are demanding that the Kaiser be held responsible for the crimes of the war and that he be extradited and formally tried. Robert Arch, in the oldest Socialist journal in England, the *London Justice*, writes:

"Hold the authors of all atrocities—from the big, thundering atrocity of the war itself down to the latest little murder or rape or arson that can be brought home to its perpetrator—personally responsible. We have their names, I understand, in a very great number of cases—enough, at least, to provide some entertainment for the most bloodthirsty of us when the time comes.

"The object of punishment is the prevention of crime. Some crimes are adequately met by corrective treatment; others call for no lesser remedy than the extirpation of the offending individual. The men who let loose this present scourge upon the earth are, I consider, in the category of the incorrigible. If the war is to end with the Kaiser . . . relegated to luxurious exile in a neutral country, while so many well-intentioned, stupid common folk have paid the extremest penalties for his crime, there will be a very big fly in the ointment of any league of nations that ensues. If we hear that he, and a few dozen others of his ilk, have met with a suitable end by bayonet, bullet, or bomb, a cloud will be lifted from the world. Are the Allied governments capable of proclaiming, at this psychological moment, their resolve to pay this elementary tribute to common justice? Or is the Monarchical Trade Union to have the laugh of us after all?"

The Clarion, Robert Blatchford's organ, supports its contemporary thus:

"Think of it! If, after capture and trial, it were established that the Kaiser or the Crown Prince had been personally guilty of launching the curse and blight which have fallen upon Europe—if either or both were convicted of responsibility for the invasion and martyrdom of Belgium, the *Zeppelin* raids on sleeping babies, the drowning of women and children on the *Lusitania* and the *Leinster*, the murders of Nurse Cavell and Captain Fryatt, the savage cruelty of the Lille and Roubaix slave-drives—if it were proved that either or both had instigated, sanctioned, or condoned even one of these crimes, the least of which exceeds 'all that the Devil would do if run stark mad'—if the inevitably ensuing sentence of the Court were carried out in the devastated market square of Louvain, amid the execration of the people whose lands have been ravaged and whose homes have been steeped in suffering and sorrow—the Great Chastisement would stand in human memory as an awful example to bloody megalomaniacs for ever and ever."

THE DOGS OF WAR.

—Daily Mail (London).

MR. WILSON'S IDEALISM AT THE PEACE TABLE

A FIXT IDEA seems to exist in the German mind that in some mysterious way the President will be kinder to a defeated Germany than any of the other leaders in Allied countries. The *Frankfurter Zeitung*, in discussing the exchange of notes between Berlin and Washington, emphasizes this idea:

"Mr. Wilson has honor to lose. He will know how to secure victory, for his leading principle is that he will tolerate no oppression, whomsoever it concerns. . . . We have not hesitated to look upon the full seriousness—and, on the whole, unfavorableness—of Mr. Wilson's demands. We ought not, however, to forget the good. Mr. Wilson encourages us to make sacrifices, but it is also he who will fight on our side for the freedom of trade and the freedom of navigation, and will thereby fight for exceedingly valuable points in the future of Germany."

Gustave Hervé, the editor of the *Paris Victoire*, tells us that this belief is induced by "the theoretical character of the fourteen points," and he looks forward to the President's influence at the coming Peace Conference with some trepidation of mind. "The President," he says, "will be at one with the delegates of the Entente so long as he can hold back his dangerous fondness for the abstract."

It is, however, in Conservative circles in England where most disquiet is felt, and this finds expression in the *London Saturday Review*, in an article headed "The Danger of Mr. Wilson," which runs, in part:

"Frankly, there is no person of whom we are so much afraid at this hour as President Wilson, and we say it with a profound respect for his high character and station. Indeed, it is just because we know the independence of his mind and the purity of his purpose that we are afraid of him. President Wilson is an idealist, and idealists are sometimes very dangerous people. The Americans, taken in the mass, are a curious compound of sentimentality and realism. But their President's idealism is an Idol of the Theater, and is quite untouched by the realism of the Forum or the Tribe."

"Let us consider two or three of the articles of the President's message. Article II runs: 'Absolute freedom of navigation upon the seas outside territorial waters alike in peace and in war, except as the seas may be closed in whole or in part by international action for the enforcement of international covenants.' The limit of territorial waters is three miles, which was fixt in the time of sailing-vessels, or when steam-navigation was in its infancy. In these days, when guns have been built to carry seventy miles, and can easily hit a mark at fifteen miles, when steam and electricity have developed all kinds of methods of warfare, the three-mile limit would be absurd. It would be necessary to return to the *mare clausum* for the Channel and our coasts. We could never accept this."

The article concludes:

"President Wilson's message and address ignore the fact that the peace, now slowly emerging from the smoke of the guns, is not the President's peace, and has not been won by the abstract doctrines of democracy or the Utopian propositions of a league of nations, but by the blood and the money of England, France, and Italy, poured out like water during

four terrible years. It is true that without the American troops the Entente Allies could not have turned the tide of war toward the German frontier. But it is equally true that without the four years' fighting by the French, British, and Italian armies the present military situation could not have been achieved. President Wilson would be the first to admit this; he must already have realized it. When it comes to the application of abstract principles to concrete details we feel sure that the American President will perceive that some of his propositions or terms of peace can not possibly be accepted by the Governments of the Allies without the grossest injustice and the gravest injury to their national interests."

The *London Evening Standard* has the odd idea that the President desires "to let the Germans down lightly," and that he will not exact "stern reparation for German crimes in France and Belgium." It says:

"In his notes, otherwise strong and timely, President Wilson did not refer to punishment for these vile outrages. The German criminals approach the dock, proposing to argue with the judge and stabbing right and left as proof of their goodness of heart. Presently they will be in the dock, and there will be no evading the sentence, which ought to be exemplary. 'Justice must be stern. Justice is only merciful where there are extenuating circumstances.' The conduct of Germany's rulers shows no extenuating circumstances, and the penalty of her crimes must be exacted in full."

On the other hand, in English Liberal circles the President is hailed, as the *London Daily News* puts it, as "an ideal negotiator." Here is the opinion of the *Manchester Guardian*:

"Surely no man has ever occupied quite so tremendous a position as negotiator and arbiter of the world's affairs. His word is the word of a hundred million people, and no one of the hundred million dare dispute its legitimacy and binding force. Such is the mighty prerogative reserved by the Constitution of the United States for their elective head. And now the President is spokesman not for his own people only but for three of the great nations of Europe and for many other nations the world over. For the moment, by the choice of the common enemy, it is for him to speak and to act. . . ."

"There have of late been some signs, happily of small account, of chagrin, or even jealousy, at the overshadowing part which circumstances, backed by his own powerful personality, have called on him to play. Let us be devoutly thankful rather that we have at our service and at the service of the common cause so much of courage, of conscience, and of statesmanship."

THE GERMAN ANGEL OF PEACE.

—Punch (London).

DENMARK WANTS SCHLESWIG

"THE WRONG OF 1866 must now be righted," cries the Copenhagen *Politiken*, but, curiously enough, the Danes protest that if the wrong be entirely righted they will be worse off than before. It will be recalled that as a result of the war between Prussia and Austria in 1866, the two duchies of Schleswig and Holstein, previously Danish, passed to Prussia. Since then, the Danish papers remind us, the Kiel Canal has been built, and should the two duchies be returned, Denmark would find the Canal an embarrassing possession. Denmark, however, does demand the return of northern Schleswig, which, she affirms, is entirely Danish, both in language and sentiment. Here is the Danish case as set forth in the Copenhagen *National Tidende* by Prof. L. V. Birk. He first defines Danish sentiment in the war:

"When the Danish Government, at the outbreak of the war, declared its neutrality, the absolute will of the whole Danish

THE SCARECROW OF PEACE

—Kladderadatsch (Berlin).

The Germans hope for his favor, yet they abuse him.

people was expressed therein. Denmark has no quarrel with the Entente. As to Germany, it was recognized that the situation of Denmark might expose that country to the fate of Belgium, and, no matter what the outcome of the war, a defeated Germany would still be many times stronger and remain a neighbor with whose good will we should have to reckon. The neutrality was honest because no mental reservation was behind it.

"The Danes are no jackals, and it is against their nature to attack a weak opponent when we held back at a time when he was strong. This defines Denmark's attitude toward Germany, whom we recognize as a stronger neighbor. This, however, is not at variance with the fact that the feeling of the Danish population during the war has been frosty toward Germany, and it would be futile to conceal the fact that a great majority of the Danish people were far from wishing a German victory because of Germany's treatment of the Danes in 1864, in South Jutland and the many Scandinavian victims of the submarine war."

Should Germany wish to change this frame of mind, she must carry out the undertaking she made in the treaty of Prague in 1866:

"It must at once be said that if Germany in the future wishes more than a correct attitude of our side it must create a basis

of a friendlier feeling, which is impossible as long as the Danes in South Jutland are not satisfied with their international position. Kaiser Wilhelm and Emperor Francis Joseph in the treaty of Prague gave the people of North Schleswig a justified reason to expect an opportunity to determine which state they wanted to belong to. This promise can not be taken back, and Denmark can not, on behalf of the people of North Schleswig, renounce the right they have. If Germany really means what she has said about a league of nations and right to replace might, it must carry out this promise contained in paragraph 5 of the treaty of Prague."

The Professor thinks that President Wilson could help to right the wrong:

"President Wilson's fourteen points do not directly recognize the people's right of self-determination, but in a later addition the President holds that the nationalities' own will should be considered by redrawing the map of Europe. In so far as the President will carry out this principle, not merely to hurt Germany or help the Allied nations, but will let it be applied in a wider sense, which must be a condition of political cooperation between the European nations, the question of North Schleswig, too, will have claims upon the President's attention."

"That part of Europe and America which, in 1864, looked on while two great Powers defied Providence by fighting a small country, and which, in 1878, acquiesced in letting two kaisers take back their promise to the Danes in North Schleswig, owe a debt to the Danes of North Schleswig which statesmen with the lofty political aims of President Wilson ought to feel it an honor to discharge."

The Danes, however, do not want the Kiel Canal. Dr. Birk says:

"It must be said clearly and plainly that we do not wish a frontier regulation which merely shifts the injustice. We wish a regulation that will wipe it out. The history of Schleswig has given us a lesson we ought not to forget. Therefore, we must have the right to declare that we will, under no conditions, be the guardians of the Kiel Canal."

The *National Tidende* also publishes the views of a prominent Schleswig merchant, Mr. Peschke Koeedt, who says:

"Nobody wishes the two dukedoms of Schleswig and Holstein to be given back to Denmark, nor the Kiel Canal to be given over to the care of Denmark. Everybody agrees that the Germans, who are in the minority, and who by a frontier regulation happen to be Danish subjects, should preserve their language and culture. If any doubt should arise, necessitating the taking of a plebiscite, the people of Schleswig themselves must decide this, and if they decide that the frontier language shall be the frontier nationality this decision must not be objected to, either from the German or Danish side. The inhabitants of Schleswig who now prefer to belong to Denmark must declare loyally: 'We have chosen of our own free will, and it is our firm intention in future to act as loyal Danish subjects.'"

POISONING THE WELLS—Despite all their protests before the outer world, the Huns did their utmost to ravage and destroy the territory they evacuated. Here is a fresh example of German *Kultur* working undisturbed. An army order, captured by General Pershing's men, address to the 108th Brigade of German Infantry, runs:

"A recent army order requires that we shall proceed in the future with more method and less haste in the destruction of property which has been marked out. Divisions have already been notified that they will be held responsible for buildings not destroyed in their area. In consequence, all preparations should be made for firing straw which has been collected."

Here follows a long list of villages to be burned. The order concludes:

"All soldiers are bound to assist to the best of their ability in the execution of this mission. The rear-guard battalion will select the groups to complete the work of destruction. These detachments will not set fire to things till 3 A.M. It will be remembered that there are means to defile all wells. Mines must not be exploded too soon. It is the duty of every man to co-operate in the work of destruction."

SCIENCE - AND - INVENTION

WHEN THE TANKS WERE GASSED

AN INGENIOUS DEFENSE against tank-attacks, which for the moment put an end to their usefulness, was used by the Germans some time ago, according to Paul S. Baley, who writes in *The Illustrated World* (New York, November). According to Mr. Baley the unexplained lull in the use of tanks by the Allies was due to this successful defense, and hence the sudden and effective renewal of their activity in recent months must have been caused by some new device for nullifying or overcoming it, altho he does not even suggest its nature. The German defense, as described by Mr. Baley, was due to the use of gas—not against the pilots and gunners in the tanks, but against the motor-mechanism of the tanks themselves, paralyzing them and putting them out of commission. How this was possible is described by Mr. Baley as follows:

"The steel-sided monsters no longer were the mystery they had been at the Ancre. The Germans had captured some and even built a few ponderous units for their own use. Going into close action in a tank had become far more risky than it had been in the months of the inception of the land dreadnoughts.

"The 'typewriters' still could stutter out their leaden hail, and the courage of the drivers was unimpaired, but lately the Germans had been matching wits against the big machines with more success than before. They had been digging chasms in unexpected places—chasms not very deep, but wide enough so the caterpillar tread could not negotiate them. Several tanks had been caught in this way, but if the drivers were on the alert the danger could be avoided.

"Near Nancy another expedient had been adopted by the Huns. Behind a machine-gun-proof shelter of steel they had advanced a three-pound cannon to within 'open-sight' distance of the tanks. One of the machines had been put out of action in this manner.

"The men who manned the tanks in this action, however, were certain of disaster from still another source, provided none of these means succeeded against them. They were going straight into the heart of a mass-attack. Men would surround them. Sooner or later the stanch machine must succumb to bomb-attack; the end might come all too speedily if a skulking enemy could get near enough to toss a 'fumer' inside. Their resolve was to kill enough Huns first so that their sacrifice would dismay the enemy.

"It is not possible yet to get the stories of the men who actually did go into action. Those who were not killed are prisoners in Germany. From the Allied lines this is the narrative of what took place:

"The heavy tanks rolled and swayed over the shell-pits, not particularly bothered by the barrage that was falling in front of the advancing ranks of field gray. In a few seconds the 'typewriters' would have begun their slaughter.

"Suddenly the Huns crouched to the ground, and from behind them came a veritable snare-drum succession of mild 'plops.'

In the neighborhood of the advancing tanks tons and tons of unwieldy projectiles were dropped. These were apparently innocuous enough in their action. Each one exploded with a noise no louder than that made by a small-calibered pistol. Not suspecting anything terribly dangerous, the tanks continued on their way methodically.

"That is, they continued for about twenty feet more. Then one after another each came to an unexplained stop. The 'popping' continued, but with it now came the sterner voice of high explosive. The latter shells located the tanks, and destroyed one after another. The big machines seemed utterly helpless. Most of them were blown to bits, while others, apparently seeing the hopelessness of it all, surrendered.

"Some allowances must be made for piecing out the story from the tales of Hun captives secured later. The explanation given, however, is that all along the line where an attack by tanks had been anticipated by the Germans, a new defense had been prepared. Each individual tank was to be caught in a slight gully that ran nearly the entire length of the attack. While the tanks were going through this gully they were to be gassed.

"The program was carried out with more success than even the Germans themselves expected. When the slow-moving forts reached the given point they were met by the

mysterious and seemingly futile bombardment. This was really cleverly schemed, however. Each of the impotent-appearing projectiles was a carbon-dioxid bomb, fired from a hand-mortar. On bursting, each projectile filled the atmosphere in that vicinity with a tremendous amount of the gas.

"Now, carbon-dioxid gas is not really dangerous to human life. It is only when the oxygen is vitiated in a stuffy room that it really has the ability to do much harm.

"The gas did not inconvenience the drivers or gunners inside the tanks in the least. It simply stopt the engines!

"How this was done can be understood readily when it is remembered that a tank is nothing but an armored fort set down on top of a gasoline-truck chassis. As long as the gas-motor runs, the tank can move. When it stops, the tank is immovable. No gasoline-engine can deliver an explosive mixture to the carburetor in an atmosphere of carbon dioxid. When the air became filled with this gas the tanks became useless. Not all the efforts of a million skilled mechanics could have started the motors until the air intakes could suck in pure air again. Meanwhile the high-explosive shells got in their deadly work.

"Shortly after this the opinion was officially voiced that

ATTACKING THE MACHINE, NOT THE MAN.

Carbon-dioxid bombs fired from hand-mortars at Allied tanks did no harm to the drivers or gunners but asphyxiated their engines.

the tanks never would enter into serious action again. . . . Now, however, it seems from reports from the front that the tanks actually are back again. This can mean but one thing, and that is, that some Allied engineer has evolved a gas-mask of some kind which can be fitted over the air-intakes of the tank carbureters—a mask that not only shuts out the gas, but that

A NEW FETISH OF THE ORIENT.

The American oil-can is treasured in the Far East as an object of good luck and as a universal receptacle, and thus gives American oil the preference over the native product.

lets in the necessary air without impairing the suction. . . . Recent successes simply mean, then, that the engineering brains of the Allied nations have conquered the problem. We'll bet it was a Yankee!"

A WAY TO SAVE WOOL—The following suggestion comes to THE DIGEST in a letter from Prof. E. W. Gudger, of the department of biology in the North Carolina State Normal College. He writes:

"I have just read your interesting article entitled 'No Wool Famine' in this week's issue of THE DIGEST. May I call your attention in this connection to another way in which wool might be conserved? This is not original with me, but was brought to my attention last summer by a surgeon in one of our United States General Military Hospitals. The suggestion is this—that if the tops of men's wool socks were made of cotton instead of wool, enough wool would be saved in every pair of socks to knit at least one sock of another pair. This use is absolutely unnecessary. The surgeon pointed out that the ankle and calf of the soldier's leg are clothed, first with the leg of the drawers; secondly, with the leg of the sock; thirdly, with the leg of the trousers; fourthly, with the puttee—four thicknesses in all—and as he expressed it, this makes the lower part of the soldier's leg really too warm. It seems to me that if publicity could be given this suggestion and cotton used for socks tops, there might be a larger saving of wool."

THE OIL-CAN AS A GLOBE-TROTTER

AMERICAN OIL and the American oil-can have circumnavigated the globe. In India, Arabia, Persia, Borneo, New Zealand, and Tibet the former turns night into day and the latter serves as a universal receptacle—so we are told by Mabel H. Wharton in *The Nation's Business* (Washington). The can, Miss Wharton assures us, is no small factor in giving the oil preferential value. In India it bears the elephant on its label; in Tibet, the monkey; in China, the tiger. Its purchase becomes an act of religion, and its purchasers prefer American oil shipped in it thousands of miles to that which originates near at hand. It is thus, she assures us, a "fore-runner of civilization. American oil-cans hold burning incense in the sacred temples along the hills of India. Song-birds are caged in them to sing outside the huts. In the bazaars of Lucknow and Calcutta you may buy your curry and rice from a dish of Standard Oil origin. They hold water and milk, store your food against rats and your money against thieves." She goes on:

"How did this come to be? It didn't just happen so. It took years of study. Between 1880 and 1885 this company was busy with its commercial missionary work. Its men gathered statistics from weird and wonderful capitals of Asia. They worked for the repeal of age-old restriction and duties; they studied native religions, and fought and downed prejudices that were rock-ribbed and hoary.

"In China they fought the mandarins, for the mandarins had a little corner in native vegetable oils themselves—so they shut out the 'foreign devil' and his oils. At first they made it a capital offense to be caught using petroleum. These prejudices were not conquered in a day, but the Standard Oil has used brains as well as brawn to fight them.

"In China Standard Oil is like the light of a missionary. It has uplifted the nation and promoted industry. After four o'clock the people of China could not see to work on the fine silk whereby so many make a living. A rag soaked in crude vegetable oil does not promote industry.

"The Company came to the conclusion that they needed lamps in China, and needed them badly, so they put careful study to the matter and produced a lamp to suit the people—a small tin affair lacquered in color. It is broad at the base to stand, or may hang on the wall by a hook. 'Mei Foo' is the inscription on the chimney, meaning amiable, trustworthy, and it surely has been both to the people of China and to Standard Oil. They cost the Company eleven cents to make them, and they sold them for seven and one-half cents. The first year they made them they sold 875,000. The next year they sold 2,000,000, and the sale of oil went up by leaps and bounds.

"Posters advertise the lamps on the streets, and the learned scholar expounds to the gathering crowd that the lamp will bring happiness, prosperity, and long life—which is quite true, and fits in with their belief as well.

"So the Company meets these people on their own ground. At first they use their credulity as an advertising basis. After winning them over, they light their way to bigger, better things—education, industry, and happiness.

"The five-gallon tin came into being originally to cut down the cost in transportation. Case oil it is called, the cases consisting of two five-gallon tins in a box. These cases cut transportation costs in two, for case-oil vessels can take a return cargo from a foreign port, where a tanker can take but a specified cargo, and not a very large one at that. . . .

"There has been no special reason why the people of those distant lands should not have had oil and oil-lamps long ago—no reason, except the lack of the spirit that has made us, since the 50's, the greatest oil-producing nation in the world. They have known of oil, most of them, for centuries; and have dug for it and drilled for it with their crude devices.

"In some countries they still go after oil by hand, so to speak. They dig a well. And a man goes down with a lantern and a bucket. A big bellows sends air down into the depths so that he may breathe, and the plan works very well except when he stumbles on a discharge of gas—in which case he never lives to tell the tale.

"Or, in another neck of the woods, you find something now nearly approaching the American method—a crude percussion bit, and a plan for laboriously carrying off the broken earth with water. They can't dig deep; they get only oil that is near the surface, and they don't know what to do with it when they get it.

FILLING THE PLACES OF THOUSANDS GONE "OVER THERE."

Thirty-five thousand strong, our army of farm-tractors is replacing a million and a half horses and mules and a quarter of a million men.

"American oil-drilling methods, by reason of their effectiveness, speed, and economy, almost at once displaced the best foreign methods known, and since the development of our oil-fields began those methods have improved, and have become the standard all over the world.

"It has meant more than the carrying of the oil-lamp to the corners of the earth.

"It has been for us a corner-stone of modern civilization as well. If it has meant light for the remote peoples, it has meant for us the internal combustion engine and all that it implies—the automobile, the airplane, the motor-boat, and hundreds of machines that do everything from crossing the ocean to turning the buttons on our coats. Thus oil has spread through the world—a lubricant for the wheels of civilization. And the can—well, the can not only spreads this lubricant of civilization, but it continues its usefulness long after the lubricant is gone."

AMERICA: FIRST IN FARM-TRACTORS

THAT NO COUNTRY IN THE WORLD to-day compares with the United States in the use of power on the farm, and that in particular we lead the world in tractors, is the assertion of W. A. Stone, writing in *The Tractor and Gas Engine Review* (Madison, Wis., October). The tractors on our farms, he says, will replace 1,500,000 horses and mules, and 250,000 men, gone "over there." Twenty years ago, an emergency like the present would have spelled failure for the United States, he asserts. It is the tractor that is not only pulling us through, but pushing us up to a strategic position among nations. Thirty-five thousand strong, and working in many cases twenty-four hours a day, they prepare our supply of staple food crops and later cultivate and harvest them. The man who farmed one hundred acres a few years ago now has a tractor and does his five hundred. Writes Mr. Stone:

"No country in the world to-day compares with the United States in the adoption of mechanical energy for agricultural purposes. Not even Germany, in her heyday, held a candle to the tillers of our soil, who, instead of being crowded on to small acreages, for the most part possess land as far as the eye can reach. This wide expansion of land-holding gave our farmers the wider production vision as well as wider governmental viewpoint. Tractors are the direct result of this conception.

"The United States would be placed at a great disadvantage, as a military Power, were there not tractors to step in and take the place of the men and horses gone to war. Tractors have demonstrated their ability to not only do this, but a single machine will do the work of several teams and men at a lower cost and in quicker time. The tractor is the most efficient power confined to a small, portable area, in existence. It is the development, in its modern form, of the best mechanical brains of American genius.

"Each day finds the tractor performing some new and important work in the welfare of the country. If it is not aiding in increasing the sugar-production of Hawaii, then it is in the wheat-fields of the Northwest, or, possibly, in the corn-belt of the Middle West. Our present food emergency, unprecedented in our history, is to be solved by the tractor. The 1918 food crisis

is more acute than that of 1917. Not only must our farmers till 330,000,000 acres of staple food crops this year, but they must produce on this enormous area more than \$20,000,000,000 worth of farm products if they are to meet the demands of the Allied nations.

"Without the tractor, it would have been little short of an idle dream to undertake such a great undertaking, facing a great labor shortage and a shortage of horse-power. If the farm-boy or hired man has not gone to war, he has, in the majority of cases, answered the call of high wages in munition-, steel-, and war-order shops. Then the farmer faces a shortage of farm implements. It is only by the increased efficiency of the tractor that the present supply of these is to be made useful."

Armed with the tractor, one man can do the work that required fifty men in the time of Napoleon. In Kansas, altho more than fifty thousand men, mostly farmers, are in military service, 9,500,000 acres were seeded to wheat last fall. The farmers planted more than 24,000,000 acres to crops this spring. This means that approximately 35,000,000 acres of crops were harvested. Under ordinary conditions, between sixty and seventy thousand transient laborers come into the State to help harvest, but this year the enormous acreage was handled with tractors. The secretary of the Kansas Board of Agriculture is quoted as saying:

"The tractor is doing the work of eighteen thousand to twenty thousand men in Kansas. In the past two years the farmers of the State have increased their ownership of tractors by one hundred per cent., so satisfactory have been the results. . . . The tractor operator can raise larger crops because he plows deeper, can make a better seed-bed, can cultivate and till the soil more and better after the crop has been planted; he can double his output—that is, he can tend more than twice as much land, and he can do it better and with less labor and with less expense. Therefore, he can make more crops grow on the same area that he heretofore farmed with horses, but in addition he can accomplish this same result over more than twice the area."

Mr. Stone goes on to say:

"The acreage sown to crops in the uninvaded portion of France was one-fourth less in 1917 than in 1913. The total crop-production in France last year was almost forty per cent. less than in 1913. As long as France and other countries whose production has been greatly decreased by the war could purchase necessary supplies from America the situation was not serious. But with America in the war and our own man-power and horse-power being heavily drawn upon, the situation assumes a different aspect. There is no source from which we can purchase the supply of food-products which we must have. It is imperative that we grow enough for our own one hundred and ten millions, our fighting men, and also supply a large share of the decreased production of those who are helping to fight our battles. It is only the tractor that can answer this urgent call for food.

"Not only are present cultivated acreages being worked with the tractor, but also increased acreages under the same management. Many farmers are managing from four hundred to eight hundred acres with tractors who a few years ago were operating but one hundred to one hundred and sixty acres."

FIRE AS A WEAPON

THE FEASIBILITY of bringing up to date all the hellish methods of ancient and medieval warfare, to which mankind thought it had bidden farewell permanently, was amply demonstrated by the Germans. Hand-thrown missiles, evil-smelling vapors, flaming liquids—all have been as much in evidence on the Western Front as they

FIRE-BREATHING IMAGES OF MEDIEVAL DAYS.
Germany's liquid-fire barbarism again proves the Teutonic talent for imitation rather than invention.

were in the era of the Crusades. The historically inclined are now busy tracing back the history of these interesting devices, and some of them, such as the use of fire as a weapon, have been found to antedate recorded history. Mr. H. H. Manchester, writing in *The American Machinist* (New York, October 24), notes that the use of fire in war is represented in a bas-relief found at Nineveh and believed to have been made in 800 B.C. It showed besieged soldiers hurling fire-brands. The ancient Greeks, as frequently recorded by their historians, were familiar with this method of warfare. The Romans used "liquid fire"—doubtless burning bitumen or naphtha; and a Chinese war-book of the fifth century B.C. gives recipes for certain inflammable mixtures to be used as weapons. Says Mr. Manchester:

"A picture by a Chinese artist, dated perhaps 1000 A.D., shows that such inflammable materials were frequently made up in tubes of bamboo, which were cast at the foe. Tubes of this sort were at times thrown by engines of war having bows or springboards after the fashion of the artillery employed by Roman armies in ancient times. The greatest development of liquid fire took place in the Middle Ages. The Emperor Constantine VII. in his directions for the administration of the empire, written for his son, has the following account of its introduction: 'Know that during the reign of Constantine Pogonatus (668-685 A.D.) one Kallinikos, who fled from Heliopolis to the Romans (at Constantinople) made a wet fire to be discharged from siphons' [probably a form of syringe—Editor] 'by means of which the Romans burned the fleet of the Saracens at Kuzikos and gained the victory.' This battle took place during the first siege of Constantinople by the Moslems. The records state that the Saracens came down upon the city in 1,800 ships, most of which must have been small. Constantine removed the chain guarding the narrows, and when the ships were crowded into a small space he sent boats carrying Greek fire against them."

Regarding the exact nature of this "Greek fire," which some think was a precursor and near relative of gunpowder, there has been much controversy. Anna Comnena, the daughter of the Eastern Emperor Alexis, familiar to readers of Scott's "Count Robert of Paris," reveals to some extent the method of using it. In her narrative of a battle between the Greeks and the Pisans, near Rhodes in 1103 A.D., she is quoted by Mr. Manchester as saying:

"In the bow of each ship he put the heads of lions and other land animals made of brass and iron and painted so as to be

frightful to look at, and he contrived that from their mouths, which were open, should pour the fire which should be delivered by the soldiers through the flexible apparatus."

He proceeds:

"The Princess Anna does not state what this 'flexible apparatus' was, but the term would fit in very well with the siphon mentioned by the Emperor Constantine if it were a hose for the wet fire, for it will be remembered that the Romans had long used a siphon, and even a double siphon, or forcing pump, as a fire-engine to throw a stream of water. . . ."

"The tremendous psychological effect of such fire, as well as some of the methods of using it, is brought out in de Joinville's memoirs of St. Louis IX. in his crusade, 1249 A.D. Near Damietta in Egypt the Turks brought up against the camp an engine called *la perriere*, 'from which the Turks flung such great quantities of Greek fire that it was the most horrible sight ever witnessed. . . . Sir Walter cried out, 'Whenever they throw any of this Greek fire, cast yourself on your knees and cry to our Lord for mercy.' This Greek fire in appearance was like a large hogshead and its tail was like a long spear; the noise which it made was like thunder, and it seemed a great dragon of fire flying through the air, giving so great a light with its flames that we saw our camp as clearly as in broad day. Thrice this night did they throw the fire from *la perriere* and four times from crossbows. Each time that our good king Saint Louis heard them discharge the fire he cast himself on the ground and prayed.' Twice the Saracens with this fire burned the castles protecting the camp."

"An interesting medieval picture illustrates a great throwing-machine hurling a hogshead of fire in much the same way as described by de Joinville. In this case the throw was accomplished by hauling down the long, light end of the beam to which the sling was fastened, inserting the hogshead in the sling and letting go, whereupon the falling of the tremendously heavy end of the beam whirled the sling up and over and cast the hogshead against the enemy."

"In a later battle, according to de Joinville, 'their infantry ran toward our men and burned them with Greek fire, which they cast from instruments made for that purpose.'"

"The use of fire continued for some time after the discovery of gunpowder. Konrad Kyeser, for example, in 1405 illustrated a man on horseback, above whom floats a fiery dragon similar to

FIRE FRIGHTFULNESS IN 800 B.C.

This bas-relief found at Nineveh shows besieged soldiers hurling fire-brands at their enemy twenty-seven centuries in the dim past.

those used by the Chinese in comparatively recent times. A rather quaint medieval cut depicts a cavalryman who has in front of him a hollow statue from the mouth of which issues the fire. In the foreground four other men are pushing a cart upon which is the figure of a fire-breathing steed. As late as 1647, Nathaniel Nye, in his work, "The Art of Gunnery," included an engraving, which illustrated the throwing of wreaths of fire against the besiegers."

WHEN THE BREWERIES GO DRY

IN A VERY FEW WEEKS our huge brewing plants are to discontinue the work for which they were built. But it will be easy to make them produce food instead of drink by turning them into drying plants for vegetables and fruits, as has already been done in Switzerland. We are familiar with a few dried fruits, such as the prune, the raisin, and dried apples and peaches. Others may be dried as easily, and the dried vegetable, with which we have scarcely a bowing acquaintance, ought to become a daily adjunct to our bill of fare. Vast economies of raw material, transportation, and packing are made possible by the dehydration process, we are told by a writer in the *New York Sun*. Dried food can be carried in bulk, takes up little room, and is easily cooked. Says the writer of the *Sun* article:

"According to figures supplied by the Fuel Administration, the brewing industry in the United States burns yearly 3,100,000 tons of coal. It is not stated whether this includes the drying of hops. On the Pacific coast alone there are approximately 2,500 hop-kilns, all located in the richest agricultural districts. These kilns could be used just as well for the desiccation of vegetables or fruits. In Switzerland, as in Germany, there has been a notable movement in the direction of converting breweries into drying plants.

"Those who have followed the subject carefully are fully alive to the part played by dried foodstuffs on the other side of the Atlantic. In Germany the industry has developed tremendously during the last four years. . . . Latterly the Krayeska method has acquired prominence, and it is used in drying eggs, fruit-juice, and blood.

"The dried product is in the form of a powder and will keep for a long time. As the desiccated substances are not subjected to a chemical process, their treatment is rather simple, and they are readily soluble in water. Drying plants of this type are about to be erected in Berlin and Bucharest, and they will be able to treat daily something like 140,000 eggs each. . . .

"The dried-milk industry is already flourishing in the United States and could be expanded to economic advantage. . . . It is declared that milk so treated is very much more profitable than when utilized in the making of butter or cheese.

"England's armies have been very extensively maintained in a dietary way through the employment of desiccated vegetables. The British Government has bought in Canada since the beginning of the war 44,000,000 pounds of mixed dried vegetables and potatoes.

"According to testimony given before a committee of the United States Senate early this year the British Government placed in the latter part of 1917 orders for 400,000,000 pounds of fine-cut dried potatoes, which were to be used only for soup. The prices, to take care of market conditions, were to average twenty-seven and a half cents a pound. It was declared that by substituting dried fruit for fresh potatoes at that price for a period of six months in the feeding of a billion men it would be possible to effect a saving of \$10,580,000. It was, therefore, urged that the United States authorities adopt the dried potato as a part of our fighting man's ration.

"It is estimated that it takes two men all day to prepare the potatoes and other vegetables required in the feeding of 100 men. Therefore, figuring on the basis of providing for 1,000,000 men it would require the continuous daily labor of 20,000 men for this kitchen work. In other words, recourse to desiccated vegetables would release for military service 2 per cent. of the Army's man-power now engaged in preparing vegetables. But this does not cover the entire range of potential economies. . . .

"One American drier of vegetables brought out some amazing figures when he appeared before the Congressional committee already referred to.

"'Just before I left California,' he testified, 'I saw a shipment of fifty pounds of green sprouts from California to some point East, where the express-rate is twelve cents a pound. In order to ship these fifty pounds of green sprouts to the East, they had to ship a 100-pound cake of ice and pay the expressage at the rate of twelve cents on the hundred pounds of ice and the fifty pounds of sprouts, making 150 pounds at twelve cents a pound, which amounted to \$18.

"'The whole fifty pounds could have been dried and shipped as three pounds by parcel post at a cost of thirty-five or thirty-

six cents instead of \$18 for expressage alone, not counting the cost of the sprouts and the ice.' . . .

"The public does not realize it, but it is paying heavily for water whenever it buys fresh vegetables. This will be perfectly plain if one keep in mind the difference between the weight of the fresh and the dried vegetable."

When canned goods are shipped, the writer next reminds us, there must be moved in the first place to the cannery just so many car-loads of empty cans. A car-load of canned tomatoes includes 10,000 pounds of tin and 14,000 pounds of lumber, a total of twelve tons. And to transport the products that would make just one car-load when dried, no less than 105 car-loads are necessary, including the carrying of tin ore from the mines, tin-plate from the factory, logs to the saw-mill, and lumber to the box-plant. The writer goes on:

"The curious-minded will naturally ask: Will desiccated vegetables keep satisfactorily for any considerable length of time? This can best be answered by the experience of a Californian who . . . provided the British Government with large quantities of dehydrated products for the troops in South Africa. . . .

"The Boer War terminated somewhat abruptly and the manufacturer was left with 30,000 pounds of the products on his hands. At that time there was no demand for the commodity in either Canada or the United States. He packed it away in barrels, which he sealed up with paraffin.

"When the present conflict broke out in Europe he received another order from England. He opened the barrels after they had been sealed for fifteen years and three months. The dried vegetables appeared to be perfectly good, so he shipped them, and when received in Europe they were found to be all right in every particular. . . .

"Roughly, a pound of coal will dry two pounds of raw vegetables; and if the Government's figures of the fuel consumption of the breweries are correct, then in the course of a year the coal they now burn might be utilized in desiccating 6,200,000 tons of green foodstuffs. . . .

"According to official figures the government ration is based upon twenty ounces of food a day per fighting man. Therefore, to feed 1,000,000 soldiers would call for 650 tons of green vegetables every twenty-four hours. Clearly, if our hop-kilns and some, if not all, of our breweries were devoted to the drying of foodstuffs, it would be practicable to effect an enormous conservation of farm products and at the same time reduce to an amazing extent the total amount of coal now required every twelve months for the making of beer.

"Our problem is not alone that of feeding our soldiers and sailors both here and abroad, but also that of utilizing the fruits of our fields to the utmost. The Department of Agriculture has stated that we are now losing approximately 54 per cent. of our fruits and vegetables that come to maturity. . . .

"If we dry in breweries and hop-kilns only half of this reported wastage we shall be able not only to feed ourselves abundantly, but have a still larger surplus with which to help out our Allies."

WOMAN'S EYE FOR COLOR UTILIZED—Everybody knows that a woman can match colors better than a man. When it is realized that some of the most delicate chemical tests depend on this ability, it may be understood why women are making good in certain branches of the chemical industries. Says a writer in *The American Exporter* (New York, October):

"The entrance of chemically trained men into the army munition-plants and dye industries of the United States has created a labor shortage in the laboratories of the commercial chemist. To meet this contingency, women are being impressed into service as laboratory assistants. The type of work for which the women are fitted appears to be routine determinations such as silicon, evolution sulfur, and color carbon. At one leading plant all tests are run in duplicate until sufficient confidence can be placed in the ability of the women to do accurate work. By observing the results of numerous duplicate determinations which have extended over a period of several months it appears that the new coworkers are extremely accurate in the use of the analytical balance. The same applies to filtering and titration. The results obtained for color carbon were fully as good. In titration work the women are able to distinguish the end points with ease. This is equally true in matching colors. Their work is characterized by neatness and order."

LETTERS - AND - ART

ART THEFTS IN FRANCE AND ITALY

THE PLIGHT of Italy and of France in respect to their art-treasures lying in the path of the Hun is one of pitiable contrasts. A passion and will to defend was equal in both cases; nor can foresight be claimed for one and lack of it in another. The blight fell upon France without warning, and Cambrai, just recovered, shows a typical case of many art-centers in the eastern part of France. When the Austrian horde descended into Italy it found bare cupboards, and now that this danger is passed "there will return to the northern towns and villages, besides the stream of refugees, a collection of priceless art-treasures." Cambrai's case is told in the Paris correspondence of the New York *Evening Post*:

"The Museum of Cambrai had, like all chief cities of the French provinces, a collection of paintings of considerable value. There were inheritances at home from the past and present, for such cities always have public-spirited benefactors among their sons; and there were purchases made annually by the French Government from the various art-salons. All that remains at Cambrai now is a half-dozen inferior paintings, and these have been pierced by bayonet-thrusts or slashed by knives. For example, the eyes of every personage represented in them have been torn out. There is a single exception hanging in the great stairway. It represents a group of Prussian officers rendering the last salute to the corpse of a French Zouave in the other war.

"Sculpture has fared no better. The people of Cambrai were proud of the well-deserved fame of their fellow citizen, Carlier. His chief work—a marble and bronze 'Mirror'—was in the fourth hall of the Museum; it is no longer to be found anywhere. It is the same for his group of animals, and, in fact, for all his works that were in the possession of his native city. They have simply been carried off and annexed; and only victory can recover them for their rightful owners.

"A few marble busts, perhaps because they were too heavy, have been left behind—but in what a state! Ariana has been endowed with the Kaiser's upturned mustaches and Henry the Fourth's pointed chin-beard. Cicero, besides mustaches, wears a boat hat; and Voltaire has the disappearing top-hat. Even if the damage can be repaired in a few instances, the poor joke speaks ill for the *Kultur* as well as for the sense of right and wrong and discipline among officers and men that perpetrated it.

"The Cambrai Library was one of the richest in France, particularly in *incunabula* and specimens of the printer's art. The collection had a rank of its own, and was known to all bibliophiles. Not a single piece of the collection is left. There are a few books of no value still remaining; the precious volumes have all followed painting and sculpture into Germany.

"On the other hand, the invaders on the eve of their retreat held to leaving memorials of themselves in museum and library, and even in the historic Archbishopric. Polite language has no name for such things. They are disgusting beyond measure, and even Zola's 'coprolalia' would not suffice to indicate them to clean ears. The fact is that weeks will be required to disinfect these buildings, which were the city's monuments and pride."

Northern Italy was the home of Titian, of Cennino, and Giovanni da Pordenone, and all, as the New York *Sun* points out, left here fine examples of their work. At Udine and Belluno were important schools of Renaissance art, and even among the peasants there was great pride in these traditions of the past. The writer in *The Sun* continues:

"When the Austrian invasion began it was feared that these treasures would be either destroyed or carried away. The Germans attempted to give the impression that they had

secured much loot in this region when the Government recently announced that it had on exhibition in Berlin 'a valuable collection of Italian paintings and sculptures captured by the armies in their advance into northern Italy last fall.'

"This boast, however, amused the Italians. They knew, better than the Prussians themselves, the value of what the Teutons had carried away. The Italians of each town and village had such a keen appreciation of their treasures and such an affectionate regard for them that they saved, often at the peril of their lives, everything of real artistic worth. This work of salvage, in the face of the panic and terror inspired by the invasion, was one of the little known romantic incidents of the Caporetto disaster.

"As soon as it became evident that the Italian line was wavering the threatened region was surveyed by a representative of the Minister of Public Instruction, and trucks, materials, and men for safeguarding works of art were placed at his disposal by the Army. He was to keep in touch with the enemy along a front of four hundred miles, and remove objects of art when it was apparent that a town was to fall. In the meantime the

CAMBRAI WHEN RECOVERED.

The church here shows that, contrary to German practise, the guns trained on the town by British and American forces did not make it their target.

citizens of all threatened towns prepared their art-treasures for transportation. 'It often happened,' said Dr. Felice Ferrero, 'that the trucks would be departing from one side of a town with their precious burdens just as the Austrians were entering from the other side.'

"At San Vito a painting by Palma was rescued, at Vittorio several Titians were saved, and at Oderzo a masterpiece by Previtali. When the rescuing party reached Belluno it found the collection in the museum packed, but no trucks. 'The High Command,' says Dr. Ferrero, 'however, supplied the trucks at once, despite the pressure of the moment.' While the rescuers were carrying off a painting by Bellunello and memoirs in the original manuscript of Pietro Calvi from Pieve di Cadore, Titian's birthplace, the Austrians were already in the village. The work of rescue extended as far behind the lines as Padua. The Austrian airmen caused much damage to the city by dropping bombs, but not until there had been removed to a place of safety the famous painting by Veronese from the Church of Santo Giustina, the altar of Donatello, the great statue of Gattamelata, and the entire collection of the city's museum."

BARRIE PUTTING WILHELM IN HIS PLACE

THE KAISER chose Holland as his first asylum after the *débâcle*. It proved Sir J. M. Barrie not a literal prophet, but Wilhelm may be merely on his way to London. We prepared this quotation of Barrie's article for our columns several weeks ago, but the printers' strike made it possible for only a few of our readers to see it. We give it now to the larger audience, who are all asking themselves what to do with the Kaiser. St. Helena has a tradition rather glorified in the haze of history; Devil's Island would satisfy many who would not lead William to the dangling end of a hempen rope. Each of these has been suggested; but one wouldn't expect the enemy the Kaiser loves to call his bitterest to take him to their bosoms and let him settle down contentedly in the suburbs of their capital on the mere statement of his conversion to democracy. Such, however, is the fanciful span of his later years that Sir J. M. Barrie weaves for him, perhaps with some deeper intent of satirizing his own people than outsiders divine. If Shaw were the author of the article it would be safe to assume that he meant as between Shepherd's Bush and Devil's Island there could be no choice as a place of punishment. Of course, Sir James is ostensibly writing a final chapter to Dr. Davis's book on the Kaiser that has recently appeared serially in American papers and in the *London Times*, and his letter comes out in the *London Daily Mail* the day following the conclusion of the reminiscences of the American dentist. The pen of the dentist is, in fact, snatched by Barrie as it falls and the narrative continued as by the doctor, tho we are asked to assume an interval before the events here recorded take place. They are, indeed, in connection with the Doctor's "last meeting with him, which took place on September 20, 1924, on the anniversary, as it happened, of the day on which the war ended." Perhaps Sir James means to put the Doctor's whole book in the same category of foolishness that this supposititious last chapter occupies. Whatever the satirist's purpose, Dr. Davis is made to say that he "ran over to England from America on a professional matter connected with porcelain," and filled up a few spare hours in visiting his "erst-while patient." And the Doctor could not entirely disassociate professionalism from this final visit. As Barrie has him say:

"I must confess also to having a curiosity to see how that part of him was faring with which I was most intimate, and I contemplated taking a last look at it, of course gratuitously. I may mention here that just as it was the Kaiser's custom to speak arrogantly of 'my people,' never 'the people,' he always spoke of 'my teeth,' tho they might really be mine."

"After traveling a few miles westward by bus—for the Kaiser lays stress on his residence being in the W. district—I had no great difficulty in finding his new abode in one of the pleasantest streets in Shepherd's Bush. The house is No. 20 in the directory, but the more cozy name, 'The Rhubarbs,' is

painted on the glass above the door. My first impressions of the new home of the Kaiser were decidedly favorable. It is what is called in England a 'semidetached,' or more familiarly, a 'semi,' the term preferred by the Kaiser himself and frequently used by him with some pride when later in the day he showed me over his various rooms. These are on two floors and are seven in number if you include the bathroom, which he always did."

"It was pleasant to me to note his pride in 'The Rhubarbs.' As he flung open one door after another he exclaimed with all the glee of a young bride: 'This is the dining-room. Davis, try those chairs, second-hand things, I don't think'; or, 'Observe the painted glass on the landing window—a little bit of all right, eh, what?' or, 'Now I'll show you Willie's bedroom.' Here I may mention that he has already picked up many of the English colloquialisms and speaks with a decided cockney accent, of which he is legitimately proud."

"But I anticipate. I rang the bell, recalling as I did so the somewhat different circumstances in which I had previously visited my patient at Potsdam and elsewhere, when more formality had to be observed. My summons was answered by the Kaiser himself, but this was not, as he hastened to assure me, because there is no domestic in the house. There is a very competent female 'general,' called by Willie (who *will* have his fun) 'Hindenburg,' and by the Kaiser simply 'the girl.' She was out, however, at the pictures at present, and the Kaiser did the honors himself, and did them right heartily. He was looking much better than when I saw him last, which was at a time when the responsibilities of the war had greatly aged both of us and given a pallor to his countenance. The nervous twitching of the eye was gone and he had ceased to stare apprehensively behind him."

"But it was not merely physically that there was a change for the better; the inner man had enormously improved; the morale, so to speak, of which we talked so much during the war, was a hundred per cent. stronger. This was no haughty monarch, but a jolly little fellow, happy in himself, happy in his neighbors—a sane mind, in short, in a sane body. He was in his shirt-sleeves, because, as he laughingly apologized, he had been engaged about the house on a culinary matter. Otherwise he was in a serviceable suit of gray tweeds, with apron."

"He recognized me at once and said: 'This is a pleasant surprise, Davis; come right in, mind the step, you will stay and have a snack of supper with us,' or words to that effect. He explained that Willie was at the office, but was sure to be back by the 6:42, which was his invariable train. After I had been shown over the house and praised it in answer to his eager looks, we adjourned to the kitchen, where the evening meal was already spread, the dining-room being reserved for 'company' ('and I feel sure, Davis, that as an old friend you would prefer to take pot-luck cozily here'). Lighting a woodbine which he had courteously offered me, I sat down with him to chat of old times and the unexpected incidents which had led to his taking up his domicile in Britain."

"'You remember, Davis,' he said, 'how, as the war progressed latterly in an unexpected manner, there was a deal of talk among the Allies about what should be done with me and Willie on the declaration of peace. In your great country, Davis, there seemed to be a general movement in favor of making use of a hempen rope and a stout tree, such as play an important part in your ravishing cinema plays of cowboys. For my own part, as you may remember, I held out for being treated as Napoleon was, and sent to St. Helena, not necessarily to St. Helena, but to some island as far as possible from Germany.'"

"Here he slapped his hand on his thigh in the old familiar way and exclaimed, 'But Great Britain knew better!' His whole face beamed as he mentioned the word 'Britain'—indeed, throughout our interview he never could speak that word without fond emotion; his pride in the land of his adoption was beyond anything of the kind I have ever seen."

Only one other word made the Kaiser hang on the "more lovingly," and that was the word "democracy." It fairly brought tears to his eyes, and he quite forgot that Davis could be supposed to know anything about it:

"'Davis,' he said, 'this wonderful Britain saved me; this land of the free proved itself incapable of malice, the democratic spirit of Britain cried out that every one had a right to live if he worked for his living, and that no exception should be made of me and Willie.' I noticed that the old arrogant 'I and you' had gone from his talk; he always now said 'You and I,' or 'He and I,' except when speaking of Willie. When speaking of his son he continued to say 'I and Willie.'"

"'I and Willie took the British at their word and came over

here without molestation, once we had left German shores. No obstacles were put in our way; we were told that if we could find a way of making a living we might settle down and be comfortable, and we have found a way. Davis—here he grasped my hand—"I am now in the dentist line myself. I had learned so much of the business from you, during our stirring talks while I was in my chair, that I decided to be a dentist. Of course, I can never have such a position as yours, Davis, for I am not qualified, but this is a poor neighborhood and they don't mind that. If you would like me to have a look at your mouth, Davis—"

"But I excused myself, and he continued: 'Tho I don't pretend to be the best dentist in Shepherd's Bush, there are people who say I am the second best; and, at any rate, I am doing well.'

ANDRÉ MESSAGER,

Leader of the French orchestra now in America, who declares that our musical and artistic future should be conserved by the establishment of a national conservatory and a Ministry of Fine Arts.

He looked at me longingly. "I don't suppose, Davis," he said, "that you would consider a proposal for our going into partnership?" I had to nip this suggestion in the bud, and, to change the conversation, asked him about Willie.

"He frowned a little. 'Willie had a bad time at first,' he admitted, 'but it was his own fault; there was so little he could do. Also he sulked a bit. I don't know if you ever noticed it, Davis, but Willie's tendency was to be a lazy fellow. I hadn't been here a month myself before I got a job, but Willie used to sprawl about smoking, and saying it was *infra dig.* for him to work. Of course, we weren't set up so comfortably then as we are now. We were digging in a second-floor back, and at last I had to tell Willie that I would fire him unless he paid for his own keep.

"After that he got an occasional shilling by running after cabs and the like; but I was against it, Davis; the glorious spirit of democracy had sprung to life in me, and I looked on Willie's hand-to-mouth way of living as little better than cadging. I made him go to the newspaper offices and look over the advertisements, and after many disappointments he at last got a place as a clerk in the Dental Emporium. He gets thirty-five bob a week, Davis, and was complimented by his master last Christmas. It has been the making of Willie; a more sober, industrious lad you wouldn't meet anywhere. And it's English democracy that has done it. England, oh! my England!"

"I hastened to say that tho all had turned out so well for him he could not, strictly speaking, call this land his England, but

he took me up stoutly. He told me that he now was an Englishman, for those hospitable people had allowed him to become naturalized. He had also dropt the name Hohenzollern (by letters poll) and taken that of Holly. He gave me with not unnatural elation one of his business-cards, with 'William Holly for the Guinea Jaw' on it. He told me that he had voted for Havelock Wilson at the last election."

At this point we are introduced to Willie, who arrives home from his job:

"I saw him first from the window, as he walked smartly up the two-yard garden, and I thought him the *beau-ideal* of a brisk London clerk. He was in a silk hat, black coat, and dark gray trousers, with neat paper cuffs, and carried a little black bag. His lackadaisical manner had quite gone, and he was cheery and friendly. He received me warmly, and asked me to leave my card with him, as they made a hobby of collecting visiting-cards. 'They impress the neighbors,' he explained, and he showed me a saucer containing already nearly twenty cards. I willingly added mine to the saucer.

"While he changed his coat and cuffs he talked to me freely of his situation and work, and especially of the stamp-licking part of it, at which he is evidently an adept, for his hours are largely confined to it. 'My chin never gets in the way,' he said simply. I asked him if he was happy in the new life, and he assured me he had never been so happy. 'It is so satisfying,' he said, 'to have at last found something that I can really do well.'

"He was as enthusiastic as his father about the British, and I noticed that in any reference to the Germans he always added parenthetically, '*Gott strafe them!*' I pointed out that they were now a very harmless people, and he replied heartily, 'True, Davis, true; but still *Gott strafe them.*' He and his father were on the best of terms, but during supper, to which we presently drew in, they had a few momentary tiffs, in which I noticed that they called each other Huns.

"I was particularly pleased with the frankness with which Willie spoke to me of his only trouble at the office. Only one of the bad old ways sticks to him, he said; he still finds it difficult not to pick up and take away with him any little articles of value that he sees lying about the office. He does not take them consciously, but somehow they find their way into his bag.

"The firm have been very considerate with him in the matter, and have made an arrangement that 'the girl' is to search his bag every evening and return anything it contains that was not there when he set off in the morning. They are seldom articles that he would have cared to take in the old days, he said—"the clock would not go into my bag"—chiefly pen-wipers, pieces of india-rubber or sealing-wax, and the like. 'I suppose I have an instinct, Mr. Davis,' he said thoughtfully, 'against arriving back absolutely empty-handed.'"

LONDON'S THEATER PROSPERITY—While plays come and go in New York and never find their way to the envied "road," it must make managers green to read how easy a time such wares are having in London. The Manchester *Guardian* pictures that town at present as the Elysian Fields of theatrical prosperity. Thus:

"Visitors to London who have the time and the taste for the theater must have noticed the great difficulties that have to be surmounted before they can see even the worst of the many poor plays that occupy at present the London theaters. There has never been quite such a flood of prosperity there. When you ask a playwright, for instance, why he does not produce the fine play which he told you months ago was about to 'knock the town,' he replies with groans about all the plays being overdue, and most theaters now being five deep in plays to be produced.

"The fact is that almost anything will go just now. People are simply fighting to fling their money into the box-office. No one will take off a play if he can help it, and no manager will part with a lease without a premium that may be as low as £500, but is likely to be £1,000. Two years ago things seemed to be all up with the London theaters. Four years ago soldiers were being invited to come in free, and prices of seats were being reduced. To-day there is talk of further increases in the present high figures.

"And it is not all officers on leave. The prosperity of almost every class in London, along with the curtailment of holidays and the closing of many former outlets of luxury, such as motor-cars for one class and skating rinks and beanfeasts for others, accounts for the main part of it."

TURNING FRENCH LIGHT ON OUR MUSIC

OUR NERVOUS SELF-CONSCIOUSNESS will never desert us. No foreigner lands on our shores but we must know what he thinks of us. Time was when these opinions were demanded of visitors while they were coming up the Bay; now we let them get ashore and quiet down a bit. André Messenger, who has brought the great French orchestra to us and given delight with the organization that is the oldest and best in the French capital, has one advantage over many. He had already paid us a previous visit, tho he did not find us enthusiastically appreciative of his operetta, "Véronique," which he came here a number of years ago to conduct. It is safe to assume, tho, that he has known something of music in America, so that when Mr. O. P. Jacob asked him, in behalf of *Musical America* (New York), what effect he thought the war would have on our artistic endeavors, he did not need to fall back on academic generalities. Indeed, he puts America more or less in a class by itself, for as to Europe he declares that he doesn't "know of a single instance in which anything of artistic merit has resulted from the war," nor does he think that the war and the many changes it has wrought will have been influential in the future development of French music. Because war is no new thing to France:

"To us French, for example, the war has not, exactly, been a revelation. For forty-four years we have had this possible war hanging over us as a sword of Damocles. Whatever we undertook, whatever were our pleasures or enterprises, there was always that menacing specter looming up over the horizon. For the threatening German military Colossus across the border would insist that ever-increasing armaments beyond the power of human endurance had become urgent to safeguard the Fatherland against the dangers of French chauvinism. Our life therefore, and with it, of course, our musical life, has continued more or less along the same lines as before."

Mr. Jacob is nonplussed at the breakdown of his own prophetic divagations, and, in the inevitable language of our own social efforts, asks the visiting Frenchman how he "accounts for the unprecedented musical uplift in America since our entry into the war." And Mr. Jacob learns that "that is an entirely different matter." Such as this:

"If to us French the war has only represented but another step in the last half-century's evolution, a consummation, so to speak, of forty-four years of impending war-atmosphere, and therefore has not been able to change us vitally, you in America have been completely transformed. The war has changed your habits, your economic and social customs, your ideas, possibly also your ideals, and even your laws. The moment the United States hurried so nobly to the assistance of her French sister republic and the other Allies, your Monroe Doctrine became obsolete. For it became evident that such a doctrine could no longer remain in force in the face of such a threatening common enemy. What will you have? The world changes continually, and every country therefore must change with it. Did any one believe that you would ever change for the time being to the military nation you have become? Who ever thought that Americans could be brought to sacrifice their most important interests so whole-heartedly for war-purposes? Assuredly, then, it is but natural that with such a complete and vital transformation there should also have come a greater stimulus, a warmer inspiration for musical art. But to what extent this emotional musical uplift eventually will lead to a higher state of artistic culture will largely depend, I think, on the establishment of a national conservatory and, of course, a Ministry of Fine Arts."

"It is odd, is it not, that among all the great Powers it is only the United States and England that still lack such self-evident governmental institutions? But herein rests the salvation for a country's musical and artistic future. Just see what the state conservatories of Rome, of Bologna, of Milan have done for Italy's musical cultivation. The influence of the Paris Conservatoire requires no discussion. Look at Russia, at Germany. . . . A Ministry of Fine Arts and the National Conservatory not only lend the appropriate significance to a country's musical art as an educational factor, but through their controlling influence also exterminate in embryo all contaminating aberrating mediocrities."

Mr. Jacob queries whether Mr. Messenger was "really convinced that in all European countries equipped with such national institutions musical art has been markedly developed," and he got this retort:

"Frankly speaking, I am not! Outside of Russia and France I fail to see much progression. In Russia it has been the national folk-lore upon which musical art has been developed to such a striking degree. And in France it has been artists like Vincent d'Indy, César Frank, Debussy, if you will, who have striven and who have succeeded in breaking away from the limitations of the classical, the iron-bound sonata form. No one

ALFRED CORTOT.

The French pianist who accompanies the Paris orchestra, and has played with success both with the orchestra and in recital.

can deny the value of the classics. But just as you can not crowd a number of people into a room ever so spacious without opening the windows and replenishing the air—if the people are to live—so no art can remain alive that is not replenished with newer, fresher elements. And an art that does not progress is not alive, it is dead."

The "delicate subject" was there ready to hand, "Had Germany progressed musically?"

"Since Wagner, certainly not. I do not ignore the ability, yes, even genius, of a Strauss. But I look upon him as a supreme artist of the orchestra rather than as a musical creative genius. He has not said a single thing musically that has not been said before. Where has he created anything new, as did a Wagner, a Beethoven? No, Wagner seems to have been the last of what may be termed the Beethoven era in Germany. And since Wagner—rien!"

The inevitable question after this enthusiasm for the German musical classics—one of which figured on Messenger's earliest programs here—was whether voices are raised in objection to the production of Beethoven, Schubert, and Schumann in France. We reproduce the interviewer's report thus:

"Why, no." Here Mr. Messenger became infinitely diplomatic. "You see the question has never been raised as to whether or not these works should be produced. Of course, I can not tell you what the answer to such a question would have been."

RELIGION-AND-SOCIAL-SERVICE

TO CHARGE, OR NOT, FOR SOLDIERS' COMFORTS?

SHALL THE SOLDIER PAY, or shall he have "everything free" that the Y. M. C. A. and the Knights of Columbus provide for his comfort? The policies of the two organizations are at variance both in theory and practice, and the discussion of their change to uniformity is still on.

The Y. M. C. A. charges, and must charge, since its ministrations are in an allied sense a part of the army organization. Report, according to the Catholic organ *America* (New York), represents General Pershing as requesting the Knights of Columbus "to establish canteens in France and to retail the little comforts and luxuries they have been giving away at prices tallying with those charged by the Quartermaster's Department." Some misunderstandings have arisen over the canteen or post exchange conducted by the Y. M. C. A. in France, and a statement has been submitted by Mr. Fred B. Shipp, who, according to Dr. John R. Mott, "knows more about the facts involved than any other man in the United States." In an official statement issued by the Association he clears up some points that were apparently misunderstood by our boys who were among the first over there, who bore the brunt of our initial efforts when organization was in its earliest stages, and who are with us again with the honorable badges of their devotion. We read:

"In the summer of 1917 the military authorities inquired as to how fully the 'Y' was prepared to assume responsibility for canteen service with the American Expeditionary Force. After several conferences with General Pershing's Headquarters, it was agreed that we should assume full charge of this service, including the purchase of stock in America, in Great Britain, in France, and in the neutral countries of Europe.

"Bulletin No. 33, issued by General Pershing's Chief of Staff, stated that goods were to be sold at the several 'Y' centers at purchase cost price, plus cost of transportation, with a slight margin added to cover goods lost in transit; that if any profit should arise, the 'Y' would use it exclusively for the men of the Army; that these canteens would be operated under the general direction of the respective army officers; and that the plan was designed to release enlisted men for direct military service.

"A few of the men, accustomed to the canteens operated by the Army, were not entirely pleased with this arrangement. Several 'Y' leaders also felt that the plan had in it possibilities of embarrassment for the Association, particularly in view of the shortage of supplies under war-conditions and of the scarcity and excessive cost of ocean transportation. When the Army Bulletin authorizing the arrangement was issued, however, we all entered heartily into the plan.

"Unfortunately for the 'Y,' the ship carrying our first cargo of supplies was submarined off the French coast. Before another ship arrived it was necessary, in order to meet the demands of the men, to pick up in the cities and towns of France at retail war-prices such small quantities of supplies as could be found. No profit was attempted on these high-cost goods,

and frequently they were sold much below the purchase price. Many of the soldiers, however, accustomed to prewar prices at home, could not understand what seemed like 'high prices,' and thus the charge of profiteering began.

"About the time our first shipment from America arrived, the Quartermaster's Department also received a large stock of canteen supplies which had been ordered before this service was turned over to the 'Y.' These goods were placed on sale to the soldiers at the few Commissary Sales Stores which the Army had established and were sold at government prices—cost at the factory in America, with nothing added for transportation. The contrast between these prices and ours, which included the heavy ocean transportation cost, again placed the Association in an unfavorable light, notwithstanding the fact that we added nothing for motor-transportation or for overhead expenses.

"The fact that one or two other organizations were, by agreement, allowed to furnish limited canteen service at a few designated points, and that this service was usually free, established a precedent in the minds of some of the soldiers which they felt the 'Y' should follow at its many

hundreds of centers. While our free distribution of supplies on the front line in times of important actions aggregated considerably more than the free distribution of other organizations, the average soldier was impressed by the fact that most of the time he paid for his supplies at the 'Y' canteens, while on such special occasions as this other canteen service was available to him it was on a free basis. It was unfortunate that the plan provided in Bulletin No. 33 placed the Association in the position of being practically the only American agency in France dealing with the soldier on a commercial basis. Our extensive program of regular service to him, at the base ports, in the training areas, and in the front-line trenches: for example, the furnishing of reading matter, writing materials, movies, concerts, theatrical entertainments, athletic supplies, and all else that goes with a 'Y' hut or dugout in France—all of it without charge—was obscured in the minds of many because we were also handling merchandise at what often appears to them to be exorbitant prices."

A further occasion for misunderstanding with some, and especially among those of our boys whose patriotism tolerates no language but English and no economic system but that of "good old United States," is the fact that business is necessarily done with French money. Mr. Shipp offers a simple explanation:

"In appearance the franc looks much like our twenty-five-

A SALVATION LASSIE.

She takes the soldier's nose, if he has any to give; but he gets the doughnuts just the same, anyway.

cent piece, and unconsciously one feels that it should have the same purchasing power. Its actual value, however, is about seventeen and a half cents. When used in one of our canteens to purchase a standard article which until recently retailed at home for ten cents, but which now costs probably that much at wholesale, and to which increased cost the 'Y' has added five cents for ocean transportation, it yields the soldier so little change that unless he takes all the facts into consideration he feels he is being robbed.

"We must also recognize that among the several thousand workers whom the 'Y' has sent to France, there are necessarily some who are entirely unsuited to this service, and altho these workers, after a fair trial, are sent home, their stay is often long enough for them greatly to injure the Association, particularly when they are employed in canteen service. I am glad, however, to bear testimony to the fact that while most of our workers in France came to us without previous experience in Y. M. C. A. service, these lawyers, manufacturers, merchants, clergymen, college professors, and men and women from nearly every other walk of life in America, have in most cases 'made good,' and have performed an unselfish service for the welfare of the soldiers. A significant testimony to this is the fact that many of them have been wounded or gassed and that several, including two women, have lost their lives under enemy fire.

"The cause, I believe, of a good deal of recent criticism has not been so much the prices charged as the fact that the 'Y' in certain instances was unable fully to carry out its plan to provide free canteen supplies to the men as they were going into action or as they were coming out. The reason for this was not a shortage of supplies, but the absolute inability to secure the necessary motor transportation. Over and over again, the Y. M. C. A. worker has found himself on the extreme front battle-line with absolutely no supplies to give to the fighting and wounded men, while at the same time our stores back of the line were well stocked. Any one familiar with the motor-transport situation in France during the past few months will immediately free the 'Y' from responsibility in this matter. It is one of the inevitable results of the exceptional fighting activity of recent weeks."

The Knights of Columbus, however, prefer to stick to their original principle. Mr. William J. Mulligan, Chairman of the K. of C. Committee on War Activities, is quoted by the New York Times as saying: "We have made it a first principle of our work to charge for nothing, and that principle will be maintained by the Knights of Columbus. The other war-relief organizations cooperating with us have given their concurrence to this policy." America answers the criticism that the free policy is "pauperizing" the men, and goes on to consider the financial condition of the average soldier:

"His overseas pay is very limited, when allotments, insurance, and so on, are deducted. He receives his leave and naturally 'blows' himself to elaborate food and entertainment in any near-by city that has these things for sale. When young men have been through mankind's finest imitation of Hades, they emerge a little eager for the good things of life, and who shall deny them? The good things of life are only to be obtained upon a certain tariff, which, if sedulously consulted, will be found to bear rather a condescending relation toward a soldier's spending money. The soldier, then, often finds himself in a position where he is not able to afford the light little luxuries given to him by the Knights. Now who shall say that he be denied these luxuries until such time as he earns more money to pay for them?

"Take the case of our men at home. Refer to the newspapers again, and this time we are sure of the truth of the reports because we have witnessed the fact with our own eyes. Our soldiers and sailors, in a big city, spending their furloughs, exhaust their scanty funds, carelessly, perhaps, but do we stipulate that they must consider all the risks before they plunge into an enemy barrage? They have nowhere to lay their heads, and they have no money, or very, very little. Is it better for them to go to a cheap lodging-house, where they will meet some of the vile specimens of humanity which our grotesque civilization produces? Or would you, were the particular soldier or sailor your own son or your own brother, prefer to have him accept the beneficence of the American people through the Knights of Columbus, who conduct service-houses containing good, clean beds in good, wholesome surroundings, for these very boys?

"Moreover, the Knights are the trustees of a public fund

raised for the benefit of the nation's defenders. If, through wise and economical administration, the Knights find that they are able to supply the boys with beds and other necessities or luxuries entirely free of charge, why in the sacred name of charity should anybody challenge their right to do so? Scout the thought that our soldiers and sailors are spoiled by this happy application of a public fund. Our soldiers and sailors may have a cogent reply to this ridiculous assertion when they return from the wars; they may even go so far as to say that we have been spoiled, that we have sat at home investing our money at four and more per cent, a year after Uncle Samuel has dusted his knees in an attempt to get us to do so, while they have been facing the dangers of the sea and struggling through the horrors of the battle-field."

CHRISTIANITY'S VICTORY

GLOOMY WORDS uttered during the past four years about the failure of Christianity have their very corrective in concurrent events. It only needs a historic sense, as *The Churchman* (New York) points out, to prove the falsity of these dark forebodings. Moreover, the prospect of victory in no wise offers us the likelihood of its acceptance in unchristian mood. In fact, to prove the enormous advance of present-day Christianity over that of earlier days, the writer turns to the records of "Christian wrath" shown by Godfrey of Bouillon, "type of the perfect crusading knight, fighting solely for the faith with Christian devotion and humility." How his behavior at the capture of Jerusalem "differs from plain brutal cruelty is not clear to the disinterested reader of history." The writer quoted from is Raymond of Agiles, who was one of the clergy in the train of Count Raymond of Toulouse and an eyewitness of this event ending the first crusade:

"Among the first to enter was Tancred and the Duke of Lothringia (Godfrey), who on that day shed quantities of blood almost beyond belief. After them, the host mounted the walls and now the Saracens suffered. Yet, altho the city was all but in the hands of the Franks, the Saracens resisted the party of Count Raymond as if they were never going to be taken. But when our men had mastered the walls of the city and the towers, then wonderful things were to be seen. Numbers of the Saracens were beheaded—which was the easiest for them; others were shot with arrows, or forced to jump from the towers; others were slowly tortured and were burned in flames. In the streets and open places of the town were seen piles of heads and hands and feet. One rode about everywhere amid the corpses of men and horses. But these were small matters! Let us go to Solomon's temple, where they were wont to chant their rites and solemnities. What had been done there? If we speak the truth, we exceed belief; let this suffice. In the temple and porch of Solomon one rode in blood up to the knees and even to the horses' bridles by the just and marvelous Judgment of God, in order that the same place which so long had endured their blasphemies against him should receive their blood."

So the Crusaders wrought; and what joy did they feel! Raymond continues:

"When the city was taken it was worth the whole long labor to witness the devotion of the pilgrims to the sepulcher of the Lord. For their hearts presented to God, victor and triumphant, vows of praise which they were unable to explain. A new day, new joy and exultation, new and perpetual gladness, the consummation of toil and devotion drew forth from all new words, new songs. This day, I say, glorious in every age to come, turned all our griefs and toils into joy and exultation."

Eight centuries after the First Crusade, "General Allenby, merely a British soldier with no crusader's pretensions, enters the Holy City as conqueror, but he passes through the gate on foot and he issues orders that the Mosque of Omar is to be respected, and he places a guard to enforce his order." This is an augury for the future that "we shall behave better than Godfrey." The writer concludes:

"What, after all, gives us ground as we look back over history for not being altogether crushed to earth by the war's revelations of bestiality and materialism, is that some things which

so-called Christians did in the Middle Ages, without self-rebuke or scandalizing public opinion, could not be done to-day under any circumstances by Christian nations. Even the German High Command could not go the whole length that the good Christian knight Godfrey went in his victory over the Saracen. When we get too downhearted about the failure of twentieth-century Christianity or the utter materialism of the modern world, let us remember that it was Germany's sin of cruelty more than any other cause which brought upon her the wrath of the world. An age less Christian than ours would not have felt the concern about Belgium which the nations allied against Germany have felt. It may also be considered an asset in modernity's favor that the altruistic and Christian sentiments of Mr. Wilson's program for world peace have been willingly espoused by his countrymen at the sacrifice of, if need be, five millions of men and billions of wealth.

"But we think that victory will offer us the opportunity to reveal still further gains over the Middle Ages in Christian mood."

THE SOLDIER'S LACK OF HATE

HOW THE SOLDIER VIEWS THE ENEMY is one of the paradoxical but cheering manifestations of the war. Tho he has seen hell let loose he can speak of his brutal foe with a calm that is bewildering to the civilian. The blood has often boiled as we have read of wanton destruction of property and pitiless cruelty to people helpless in the German's hand. An intimate picture of the French soldier's attitude toward the German is given by Dr. Karl Reiland, of St. George's Church, New York. Dr. Reiland was asked by the Red Cross to go before the men in the cantonments here and present particularly to them the assurance of the care their families would receive from the Red Cross while they were absent in France. He felt, says the *New York Sun*, that "it was not right for any man to appear before men who were going into the inferno of the battle-field unless he, too, knew something of what they were to go through." So he has visited the battle-line from Soissons to Reims, and his testimony on the particular point we mention is valuable for those who hold bitterness in their hearts toward a defeated foe, particularly those of them who were helpless instruments in the hands of ruthless leaders. He says:

"In spite of what France has suffered at the hands of Germany, her soldiers have the least hatred in their hearts and display the most kindness toward the German prisoners of any of the Allied soldiers. Why, when I was talking to the little *Boche* in the hospital a French general who was passing through the ward came up, looked down at him, patted his blond head, and sighed with a shake of his head, 'Too young! too young for war!'

"I saw another French officer lift a wounded German up and take a pillow from under his head because the pillow was too high and, when the ambulance moved or went over a rut, the German's head would be bumped. He held the man's head on his arm until the stretcher was lowered, when he put the pillow back. You can't put down a spirit as divine as that."

That this can be the spirit in face of Germany's military rôle is matter for wonder. The thing that is overpowered at last is not changed, as is shown in the dispatch dated November 11 to the *New York Times* by Walter Duranty, concerning the fate in the very last hours of the struggle of the city that had been the Kaiser's headquarters:

"Even in its death agony German militarism clung fast to its principle of hideous savagery. All this morning the German batteries have been pouring a deluge of high explosives and poison-gas on Mézières, where 20,000 civilians—men, women, and children—are penned like trapt rats without possibility of escape.

"Words can not depict the plight of the victims of this crowning German atrocity. Westward the broad stream of the Meuse cuts them off from an army of their countrymen, whose soldiers, maddened to frenzy, are giving their lives without a thought in

the effort to reenforce under the pitiless hail-storm their scanty detachments on the eastern bank. For the moment no other succor is possible. . . .

"At six last night the torment of Mézières began. Incendiary shells fired a hospital, and by the glare of a hundred fires the wounded were evacuated to the shelter of the cellars in which the whole population was crouching. That was not enough to appease the bitter blood-lust of the Germans in defeat. Cellars may give protection from fire or melinite, but they are worse than death-traps against the heavy fumes of poisonous gas.

"So the murderous order was given to-day, and faithfully the German gunners carried it out. In a town that has been protected by miles of invaded territory from war's horrors there were no gas-masks for the civilians and no chemicals that might permit them to save lives with improvised head-coverings. Here and there, perhaps, a mother fixes a mask, found as by miracle on the body of a dead enemy, across her son's face, that he, at least, may escape the death she knows will take her. Others may pass the shell-barrier and reach, stunned and torn, the comparative shelter of the neighboring woods, but they will be fortunate exceptions. The great majority must submit to martyrdom—final testimony that civilization is a thing apart from the unclean barbarism of the *Boche*."

GERMANY'S MORAL DEFEAT

TO TURN A PROPHECY INTO A MORAL is all that one needs in reconsidering many of the things written in the early days of the war. In *THE LITERARY DIGEST* for December 19, 1914, we printed an article on "Germany's Moral Force," which makes illuminative reading at this time. It ran thus:

German defeat is figured out by Prof. Henri Bergson, the French philosopher and academician, in the *Bulletin des Armées* (Paris). He bases his statement on the fact that she is destined to exhaust her stores not only of material but also of moral forces. Quite contrary is the condition of France, as he sees it, whose power, both moral and material, "does not exhaust itself," but "renews itself unceasingly." Professor Bergson's argument is that Germany's spirit is animated by false ideals, which will fade when she begins to want for material resources. After canvassing the resources of both sides, in foodstuffs, munitions, and men, and striking a balance in favor of the Allies, he asks:

"What of moral forces, which are invisible, tho of the greater importance, because they can supplement the others, and because without them material forces are worth nothing?"

"The moral energy of races, as of individuals, subsists only through an ideal that is superior to them and stronger than they. When courage wanes, they hold fast to this ideal. Now, what is the ideal of Germany to-day? The time is past when her philosophers proclaimed the inviolability of right, the eminent dignity of the person, the obligation of one people to respect another. Germany, militarized by Prussia, has cast aside these noble ideas, which for the most part she imbibed from France of the eighteenth century and of the Revolution. She has created a new soul for herself, or rather she has meekly accepted the one that Bismarck gave her. The famous line, 'Might makes Right,' has been attributed to this statesman. In truth, Bismarck never said it, for he knew the distinction between right and might. Right, in his eyes, was simply the will of the strongest, which is embodied in the law that the conqueror imposes on the conquered. In this consisted his morality; and Germany of to-day knows no other."

Furthermore, Professor Bergson says Germany makes a cult of "brute force," and, believing herself the most powerful among the nations of the earth, "she is wholly absorbed in self-adoration." We read then that—

"From this pride proceeds her energy. Her moral force is only the confidence that her material force inspires. That is to say, here again she is living on her reserves, and has no means of replenishment. Long before England began to blockade her coast, she had blockaded herself morally by isolating herself from all ideals capable of revivifying her."

Right in line

In line with the Nation's need—and yours

Every time you use Campbell's wholesome and economical *Tomato Soup* on your table you benefit yourself and your family, and you help the national food program, too.

Made from choice and nutritious materials, prepared with extreme care and daintiness in the immaculate Campbell kitchens, perfectly cooked and blended by expert soup-makers—this tempting soup comes to you all pure nourishment. You have no waste, no cooking cost, no labor. And the contents of every can gives you two cans of rich satisfying soup.

Above all is its value as a promoter of energy and health

Beside its own nourishing quality it tones and strengthens the digestive powers and helps the body processes to obtain more nourishment from all the food you eat. It is a distinct aid in promoting vigorous physical condition.

Served as a Cream of Tomato it is even more strengthening as well as more delicious.

You can serve it in various easy ways to make it as light or as hearty as you choose; so that it fits many different tastes and occasions.

Children enjoy it and thrive on it. And it is especially helpful to them during their long hard period of winter study and work. Give them as much and as often as they want—of this sustaining soup.

Order it from your grocer by the case. This saves extra deliveries. And you have it ready for your table any time at three minutes' notice.

CURRENT - POETRY

ONE of the most difficult of all the arts is that of parody, yet, when it is well done, it is one of the most delightful. To see some of the pomposities of our pet poets deftly held up to ridicule is a joy which increases in proportion to the seriousness with which our bards take themselves. We are indebted to Carolyn Wells for an anthology of wit and fun which she has entitled "Such Nonsense," and, now that the war is over, we are free to indulge in a little fun, and she provides it with a generous hand. What could be more neat than this parody of the Neo-Celts done by the master of humorous verse in America:

MAVRONE

One of Those Sad Irish Poems

By ARTHUR GUERMAN

From Arranmore the weary miles I've come;
An' all the way I've heard
A shrawn that's kep' me silent, speechless, dumb,
Not sayin' any word.
An' was it then the Shrawn of Eire, you'll say,
For him that died the death on Carrisboof?
It was not that; nor was it, by the way,
The Sons of Garraim blitherin' their drool;
Nor was it any Crowdie of the Shree,
Or Itt, or Himm, nor wail of Barryhoo
Nor Barrywhick that stilled the tone of me.
'Twas but my own heart cryin' out for you
Magraw, Bulleen, shinnauigan, Bora,
Aroon, Machree, Ahoo!

Turning now to the undisputed ruler of England's humorous versifiers, we find Sir Owen Seaman, the editor of *Punch*, poking fun at those solemn fellows who regale us with ponderous poems from Asia—in translation:

FROM THE SANSKRIT OF MATABILIWAJO

By SIR OWEN SEAMAN

Wind! a word with thee! thou goest where my
Well-Preserved lies
On her bed of bonny briars keeping off the wicked
flies.
Thou shalt know her by th' aroma of her bosom,
which is musk,
And her ivoryies that glisten like an elephantine
tusk.
Seek her coral-guarded tympanum and whisper
"Poppinjal!"
And (referring to her lover) kindly add, "A-
lal-lal-lal!"
Breeze! thou knowest my condition; state it
broadly, if you please.
In a smattering of Indo-Turco-Perso-Japanese.
Say my youth is flitting freely, and before the
season goes
From the garden of my Tutsi I am fain to pluck a
rose.
Tell her I'm a wanton Sufi (what a Sufi really is
She may know, perhaps—I count it one of
Allah's mysteries).
Fly, O blessed Breeze, and thither bring me back
the net result;
Fly as flies the rude mosquito from Abdullah's
catapult.
Fly as flies the rusty rickshaw of the Kurumay-
asan,
When he scents a Hippopotam down the groves
of Gulistan.
Fly and cull, O cull, a section of my Pipkin's
purple tress;
Thou shalt find me drinking deeply with the
Lords that rule the mess;
Quaffing mead and mighty sodas with the Johnis,
Lords of War,
Talking "jungle in the gun-room" underneath
the deodar.

Hoo Tawá! I go to join them; he that cometh
late is curst.
For the Lords of War (by Akbar) have a most
amazing thirst!

Here is a neat "take off" of the senti-
mental cradle song, and the lure of the
lullaby lies in its lilting refrain.

A LULLABY

A little old man came riding by,
Says I, says I.
Says I: "Old man, your horse will die,"
Says I, says I.
"And, if he dies, I'll tan his skin,"
Says he, says he.
"And, if he lives, I'll ride him agin,"
Says he, says he.

Carolyn Wells herself is an apt paro-
dist and she gives us several examples of
how some of the great poets would have
written the famous "Purple Cow." Last
any one should have forgotten it, we give
it once more before we turn to its varied
versions.

PURPLE COW

By GLETT BURGESS

I never saw a Purple Cow,
I never hope to see one;
But I can tell you, anyhow,
I'd rather see than be one.

Hear Shelley celebrate, not a skylark,
but a cow.

MR. P. BYSSHE SHELLEY

Hail to thee, blithe spirit!
Cow thou never wert;
But in life to cheer it
Playest thy full part
In purple lines of unpremeditated art.

The pale purple color
Melts around thy sight
Like a star, but duller,
In the broad daylight,
I'd see thee, but I would not be thee if I might.

We look before and after
At cattle as they browse;
Our most hearty laughter
Something sad must rouse.
Our sweetest songs are those that tell of Purple
Cows.

Then we get the quintessence of the
Lake School in this.

MR. W. WORDSWORTH

She dwelt among the untrodden ways
Beside the springs of Dee;
A Cow whom there were few to praise
And very few to see.
A violet by a mossy stone
Greeting the smiling East
Is not so purple, I must own,
As that erratic beast.
She lived unknown, that Cow, and so
I never chanced to see;
But if I had to be one, oh,
The difference to me!

This has all the music of the authentic
Swinburne.

MR. A. SWINBURNE

Oh, Cow of rare, rapturous vision,
Oh, purple, impalpable Cow,
Do you browse in a Dream Field Elysian,
Are you purpling pleasantly now?
By the side of wan waves do you languish?
Or in the lute hush of the grove?
While vainly I search in my anguish,
O Bovine of mauve!
Despair in my bosom is sighing,
Hope's star has sunk sadly to rest;
The cows of rare sorts I am buying,
Not one breathes a balm to my breast.

Oh, rapturous rose-crowned occasion,
When I such a glory might see!
But a cow of a purple persuasion
I never would be.

Let us take another master of this
difficult art. J. C. Squire, who is not
only a poet, but also editor of that brilliant
Fabian Socialist weekly, the London
New Statesman, has brought out a volume
of parodies called "Tricks of the Trade"
(G. P. Putnam's Sons, New York), and
he gives us the portly Chesterton to the
life.

MR. G. K. CHESTERTON

By J. C. SQUIRE

When I leapt over Tower Bridge
There were three that watched below,
A bald man and a hairy man,
And a man like Ikeby Mo.

When I leapt over London Bridge
They quailed to see my tears,
As terrible as a shaken sword
And many shining spears.

But when I leapt over Blackfriars
The pigeons on St. Paul's
Grew ghastly white as they saw the sight
Like an awful sun that falls;

And all along from Ludgate
To the wonder of Charing Cross,
The devil flew through a host of hearts—
A messenger of loss.

With a rumor of ghostly things that pass
With a thunderous pennon of pain,
To a land where the sky is as red as the grass,
And the sun as green as the rain.

Next we get a diverting imitation of
those annoying people who will insist on
writing "poems of the people," manu-
factured by highbrows in horn spectacles:

THE PEOPLE WHO WRITE IN SECRET WHAT IN PUBLIC THEY ALLEGE TO BE FOLK-SONGS

By J. C. SQUIRE

The night it was so cold, and the moon it was so
clear
When I stood at the churchyard gate a-parting
from my dear,
A-parting from my dear, for to bid my dear good-
by!
And I parted from my dear when the moon was
in the sky.

"I never shall forget," said he, "wherever I may
roam,
The day that I parted from my own true love at
home,
My own true love at home that was always true
to me,
I never shall forget my love wherever I may be.

"But I must off to Barbary for good King George
to fight!
And it's farewell to Bayswater and to the Isle of
Wight,
And it's farewell to my true love, it's farewell to
you,
It's farewell to my own dear love, so faithful
and so true."

He kissed me good-by, and he gave me a ring,
And he rode away to Lannon for to fight for the
King;
Oh! lonely am I now, and sair, sair cold my
pillow,
And I must bind my head with O the green willow.

For last night there came a white angel to my
bed,
And he told to me that my own dear love was dead,
My own dear love is dead, and I am all alone,
(So it's surely rather obtuse of you to ask me why
I moan.)

Overcoats

you will be proud of the coat and the price

Overcoats require fabrics of heavy weight and the long models take more cloth than a suit.

That is the reason why good overcoats as a rule cost so much now.

The Styleplus idea of concentrating big volume on a few grades puts extra value into the clothes because it reduces costs.

This explains why Styleplus overcoats are possible this year at prices never considered unreasonable even in normal times.

The known price idea—exclusive to Styleplus—should prove to you that the quality and the price *both* must be right.

Three grades in Styleplus overcoats: \$25, \$30 and \$35—the latter including the long models.

Two grades in Styleplus suits: \$25 and \$30.

You can dress smartly and practice thrift—if you wear Styleplus.

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. 5) for Styleplus booklet and name of local dealer.

Styleplus Clothes

\$25-\$30-\$35

TRADE MARK REGISTERED

"Each grade one price the nation over"

Note—This is the York model—medium weight—very stylish. Some one of the popular Styleplus overcoat models will surely please you.

Let a Styleplus merchant show you his assortment.

PERSONAL GLIMPSES

FRENCH BLESSINGS FOR AMERICAN "BLESSÉS"

PARIS is captivated by the efficiency of the American Red Cross and the cheerfulness of our wounded, or *blessés*, to use their term. The newspapers teem with glowing accounts of this trait of our boys, who are affectionately classed as "big children, idealistic, valiant, and good-humored." The *Paris Excelsior* tells about their reception in the French capital:

American Red-Cross *camions* have been going back and forth across Paris to-day and the people in the street have greeted with lively emotion the American wounded who are to be cared for in the capital or in the hospitals in the suburbs. And the wounded on their hanging stretchers answered the greeting with confident good humor. The larger part of them are only slightly hurt. They are brave fellows who are the first to say: "Don't get excited; it's nothing." The war has produced among the combatants a smiling stoicism whose purpose seems to be to allay the fears of those who are watching them.

We saw at the *Secours de Guerre*, in the thickly populated corridors of the ancient seminary of Saint-Sulpice, some of these wounded men. They have been received like brothers by the refugees, the *évacués*, the *permissionnaires*, from the invaded districts, the homeless who have found there much more than a refuge—a home.

And rapid, touching colloquies take place between people who can use only a few words to exchange ideas and impressions. "Ah, you come from such and such a place? How did you leave the village? I have some relatives who stayed behind there." Three or four Americans pool the sounds whose sense they have been able to gather, and the same sort of collective effort enables them to give replies as precise as any one could wish. They are astonished to find a whole city—built from the ruins of how many cities?—there where they expected to find only a hospital. Children—poor little children who know war at an age when they should know nothing but play—hold out armfuls of flowers to them. Slowly, some limping, others with arms in slings, they reach the rooms which have been prepared for them with such thought and care.

The *Petit Parisien* is charmed with the efficiency of our hospital service, the "beds everywhere, gray beds with gray blankets, their flowers and little star-spangled banners." The *Éclair* gives an instance of the "rapid installation of this new organization":

Three days ago the directors of the *Secours de Guerre* received a telephone-call from the American Red Cross:

"Hello! Can you take in four hundred of our wounded soldiers?"

"Perfectly."

"All right. We'll come and install ourselves with you."

Forty-eight hours later everything was ready. The creative genius of our allies and the spirit of initiative of the

A Pillow for the Body

THE Sanitary Sealy Tuftless Mattress provides uniform, resilient and soothing support for the body. It assists in quickly bringing sleep to persons fatigued in mind or body. Reclining upon the hygienically clean, snow-white cotton, you relax and experience the utmost in luxurious comfort, obtainable through the use of a body-rest.

The Sealy cotton is inseparably interwoven by the Exclusive Sealy Air-Weave Process into a single, light, fluffy batt, five feet high. This batt is then gently pressed down to the required softness, buoyancy and generous depth of the mattress.

The Sealy retains its shape and body-conforming resiliency at least a score of years. With proper use it will not grow hard, uneven or lumpy.

Your request will bring attractive cover samples, interesting descriptive literature and the name of the Sealy Dealer in your city.

Coal

Don't Waste It!

YOU can buy only two-thirds as much coal as formerly.

Will it be possible for you to comfortably heat your house on this two-thirds supply?

We say it can be done.

Alternately over-heating and under-heating the house is one of the chief causes of wasted fuel. This can be entirely overcome by the installation of

The "MINNEAPOLIS" HEAT REGULATOR

"The Heart of the Heating Plant"

Will keep the temperature during the day at exactly 68 as the Government recommends and an exact lower degree for the night. Your home will be really more comfortable and healthful with less worry and attention than ever before.

It is entirely automatic in its operations and takes over the bothersome work of managing the furnace.

This time-tested and absolutely reliable device can be used on any kind of heating plant, burning coal or gas. Easily and quickly installed by your dealer under a positive guarantee of satisfaction.

directors of the Secours de Guerre made it possible.

A visit to the Secours de Guerre is described by the *Petit Journal*:

Conducted by the secretary of the society, we visited first of all the big garden where our Americans are walking or sitting, according to the nature of their wounds. It is five o'clock and we notice that, tho they arrived only three hours ago, all the men are shaved, washed, and drest in clean clothes.

One of them smiles at our approach. He has his arm in a sling and as he speaks French very well, he explains that he was wounded in the elbow by a shell-splinter. He was wounded at dawn on July 15 where the *Boches* launched themselves for the fifth time against our lines.

Another walks, leaning on two sticks and accompanied by a refugee baby, one of those whom the society has already received by thousands. The Americans wear enormous round glasses through which smile eyes with blond lashes. The baby seems perfectly happy beside the big, husky boy who represents the strength his country is lending to those whom the Germans have driven from their homes.

In the same symbolic manner all over the garden soldiers from America are mixing with refugees from Artois, from Picardy, from Champagne, and from Soissons.

OUR ARMY SLANG CHARMS THE BRITISH

"SAMMY'S" appearance, social conduct, and conversation, to say nothing of his military prowess, have endeared him to all classes in France and England. French newspapers tell of his chivalrous attitude toward the fair sex generally, and his kindly, paternal way with children in war-racked villages; the English dailies print columns about his alert, military bearing, and the charm of his native slang. This last characteristic draws forth the following letter on "What Sammy Says," which is taken from the *London Daily Mail*:

Sammy is in my ward, and I like him. His face he describes as "one of the sort that only a mother could love," but somehow, lantern-jawed and high-cheeked as it is, it appeals to me.

Even more than his face I like his conversation. His experiences during the war are, I suppose, much the same as those of other men; his mode of relating them is peculiarly his own. The picturesque imagery with which he adorns his speech may be an old story in "God's country"—to me it is a thing of wonder and a joy forever.

He came over "the big drink" some months ago. He had a pleasant voyage, saw no "tin fish," and had plenty to eat—"six meals a day, three up and three down." On arrival at the port they got into "the dinkiest little train ever." Before it started, the captain asked for a key to wind it up with. Sammy says that personally he intends to take one home as a charm to hang on his watch-chain.

They went into camp, where they spent their time "hiking" about the countryside. The "eats" here were not overgood. They were given tea "which tasted like the last water Noah kept afloat in" and fish "that

Elgin—

A War Essential of the First Rank

ZERO HOUR in a great munition plant! Uncle Sam's massive moguls are on track, the great ships of his Emergency Fleet are straining at their cables, ready to dash to the front with the stupendous machinery of war—on schedule time! America's genius for organization strikes twelve in those magic words, *on schedule time*. The executive's desk is Industry's "fire control."

Uncle Sam wants every Elgin military watch the factory can possibly turn out for the boys over there—wants more Elgins for his Navy, his Railways and his Emergency Fleet. All this automatically reduces the output of civilian watches, denying Elgin the pleasure of serving many thousands of waiting customers.

Patriots agree that Uncle Sam's wartime watch needs are absolutely *priority orders*. Every ounce of Elgin energy and skill is being poured into their execution—with full confidence that loyal citizens will cheerfully stand back of this policy of giving *Uncle Sam priority* first, last and all the time till this war is won.

*One of the famous
Streamline models*

Elgin quality never wavers. Each Elgin produced is the best that modern skill can build for the purpose and the price—whether Elgin Streamline, Lord or Lady Elgin, B. W. Raymond, Father Time, Elgin Military Watch—or any other model that bears the time-honored name of Elgin.

ELGIN NATIONAL WATCH CO., ELGIN, U.S.A.

"It Solves the Farm Help Problem"

THE Moline-Universal Tractor doubles a farmer's efficiency and reduces the use of horses to a minimum. Now when farms are drained of labor the Moline-Universal Tractor fills the breach and enables fewer men to produce more food. In Iowa, for instance, a corn farm of 400 acres is now operated with two men, two Moline-Universal Tractors and one team. Heretofore this farm required from 4 to 5 men and 8 to 10 teams. This instance is by no means exceptional, as many 160-acre farms are now operated by one man, a Moline-Universal Tractor and a single team. This is possible with the Moline-Universal Tractor because—

- (1) It does all farm work, INCLUDING CULTIVATING.
- (2) It attaches direct to the implement, forming one compact unit. ONE MAN controls both tractor and implement from the seat of the implement, where he should sit in order to do good work.
- (3) It has PLENTY OF POWER for all heavy work, yet is light enough to run economically on light jobs. We rate it at 9 h. p. on the draw bar and 18 h. p. at the belt. Under official test at the National Tractor Demonstration at Salina, Kan., it developed 20.05 h. p. on the drawbar and 26.48 h. p. at the belt—3 h. p. on the drawbar for each 169 lbs. of weight, establishing a new record in tractor efficiency.

Far sighted business men are recognizing the wonderful sales possibilities of the Moline-Universal Tractor and Moline power farming implements. Our new factory, which is the largest and best equipped exclusive tractor factory in the world, is working to full capacity, and we are now in position to add a limited number of progressive dealers.

Every person interested in increasing food production with less help will find our tractor catalog interesting. Send for it. Address Dept. 63.

Moline Plow Co., Moline, Ill.

Manufacturers of Quality Farm Implements since 1865

MOLINE

UNIVERSAL TRACTOR

was never caught but must have given itself up." However, they made their motto, "Work like Helen B. Happy," and stuck it out bravely. The one thing that really "got their goat" was having to sleep on *terra firma*. That, Sammy says, is Latin for "terribly hard."

Ultimately he and his companions crossed to the front. The country pleased Sammy, but he found the language difficult and the French people slow of comprehension. On one occasion he wanted a pair of duck shoes, so he went into a boot-maker's and quacked—but he couldn't get the old dame "wise" to it.

For the fight that put him out of action Sammy says his lieutenant was responsible. "He was sure tired of his position and crazy on becoming a captain or an angel." Sammy was ready enough to help, but a Boche shell intervened and insisted on sending in his name with an application "for immediate transfer to the Flying Corps."

Hence his presence in hospital.

It is my duty to give Sammy his letters, and to-day, as he read a voluminous epistle his face brightened to such an extent that I was forced to inquire what good tidings had arrived. He hesitated, then grinned. "I don't mind telling you, nurse," he said. "It's my wife writing, and from what she says I calculate when I get home there'll be something besides a fence running around my little place in Seattle."

Sammy goes to-morrow, and I shall miss him badly. He himself is all anxiety for an early return to a front where he anticipates a real good time for the Yanks and a correspondingly bad one for Jerry. The latter is assuredly up against the "straight goods" at last. Anyway, whatever happens to the English, for the U. S. A. forces it is going to be "heaven, hell, or Hoboken by Christmas."

Sammy says so.

FOCH'S THEORY OF WAR IN A NUTSHELL.

"ONE Who Knows Him" gives a sketch of Marshal Foch in the London *Sunday Pictorial*, which explains why the retreating Germans were unable either to understand or withstand the attacks of the great French commander. It reveals a character rather different from that which the newspapers have impressed upon the public mind, but the picture is none the less interesting and soul-filling. His theory of war, translated into Yankee terms, seems to be that the army that "never knows when it is licked" will always be the winner. To quote:

"A battle won is a battle in which one will not admit oneself vanquished."

The author of this aphorism was a slimly built man of middle height, who had been quietly smoking cigars throughout a memorable February day just three years ago.

"And a battle is lost?" I ventured.

The gray-blue eyes twinkled into a smile.

"A battle lost," he said, "is a battle which one believes to be lost, for battles are not lost materially."

There was a pause, and the speaker's cigar-ash flickered to the ground.

"My friends," he continued, "it is therefore true that battles are won morally."

It was General Foch who address us—

General Foch, who is to-day in supreme command of the Allied armies, the elected champion of civilization against Hindenburg and his Hunnish hordes.

"That is Foch all over—Foch always," said an old and intimate friend when the General had left us for a few minutes. "He was born a mathematician, but he has the temperament of a philosopher."

And this idle, smoking-room description adequately fits the man to whom the world in its hour of agony to-day looks for victory. He has always regarded with philosophic doubt the wisdom of applying to war the exact science of mathematics.

At the battle of the Marne, which his brilliant strategy did so much to win, the forces of General von Hausen smashed in both wings of Foch's army. By all the rules of military mathematics he should have withdrawn his center. Instead, with instant decision, he struck at the enemy's center, and von Hausen's legions fell back in dismay.

When three years ago I had the honor of staying with General Foch at his northern headquarters—a delightful old house, built by some old Flemish architect for the arts of peace rather than the arts of war—he frequently elaborated this view.

War, he told me, was not an exact science. The developments of science had, indeed, but increased the mental and moral effort required of each participant. It is only in the passions aroused in each man by the conflict that the combatant gains strength of will to face the hell of modern war. In the end the more enduring passion prevails.

The man who talked like this in the old Flemish house in the winter of 1915 has studied the mere mathematics of war all his working life. About the same age as his chief mental antagonist, Ludendorff, he was as a youth a gunner.

At the outbreak of the present war Foch, altho already famous as a writer on military strategy, was simply a corps commander at Nancy. Then, as now, a great German army of maneuver under the eyes of the Kaiser was seeking a swift decision. Foch's remarkable strategy cheated the Germans then, and he woke up one morning to find himself in command of an army.

Afterward came Ypres.

It was at two o'clock in the morning of November 1 that Foch met French when the tide of battle was running strongly against us. It was suggested, for the sake of prudence, that the British should retire. The development of this suggestion was scattered by Foch's interruption, uttered in those stirring, machine-gun-like sentences of his which I know so well. This is what he said:

"The Germans have sixteen corps. Very well. We have only ten, with yours. If you retire I shall remain. Remain! The British Army never drew back in its history. As for myself, I give you my word as a soldier that I will die rather than retreat. Give me yours!"

The soldiers round him listened in silence. It was Lord French who stepped forward and grasped Foch firmly by the hand. In that handshake the doom of the Germans at Ypres was sealed.

A single incident will often illuminate a character more than pages of description. That memorable incident at Ypres explains General Foch.

"Gentlemen, you have a great General," said Lord Roberts to the staff of General Foch when the British veteran visited the front after the battle of Ypres.

I believe that Britain, France, America

Good Intentions and Edgeworth

It's the easiest thing in the world to intend to do something, and then to put off doing it from time to time.

You may, for instance, after reading our advertisements, have thought several times of sending for a sample of Edgeworth Tobacco and then failed to do it.

That was our loss. But if you should later on discover that Edgeworth is the smoking tobacco just suited to your taste, you would regret not having sent for it years before.

The right tobacco has a flavor for your tongue and a fragrance for your nose that brings you more daily comfort than you can easily foresee.

If you are thinking once again of sending for a sample of Edgeworth, we wish you would.

It may not be the tobacco that you will like better than any other, but on the other hand, it may be.

If you're willing to take the trouble of learning for yourself, we're ready to do our part.

Just send us on a postcard your address together with that of the dealer usually supplying your smoking needs,

and we will dispatch to you immediately generous samples of Edgeworth in both forms—Plug Slice and Ready-Rubbed.

Edgeworth Plug Slice is made in cakes, then cut into very thin moist slices. One slice rubbed in hand makes an average pipe load.

Edgeworth Ready-Rubbed, as its name hints, comes ready for you to pour right from the can into your pipe. It packs well. It burns freely—to the very bottom of your pipe.

Edgeworth is sold in the different sizes various men prefer. Edgeworth Ready-Rubbed in pocket-size packages sells for 15c; large sizes, 30c and 65c; tin humidor, \$1.25; in glass jars, \$1.30. Edgeworth Plug Slice costs 15c, 30c, 65c and \$1.20.

Edgeworth Tobacco seems to satisfy the cravings of many critical smokers who come to it after trying other kinds. They swear by it.

It is one of the tobaccos the United States Government has requisitioned for our fighting men to smoke over there. They wanted it. It soothes shell-shocked nerves and heartens them with one of the comforts they were formerly accustomed to over here.

When civilians, they learned to smoke Edgeworth. When they became soldiers, no other tobacco would do for them. Thousands of men in all walks of life just downright will smoke nothing but Edgeworth.

When the samples reach you, prepare to sit as judge on their merits. Scrape out the bowl of your pipe thoroughly so that you will be passing judgment on only one kind of tobacco. Load. Drop into the chair in which you take your greatest comfort. Light up, slowly, lingeringly. Give no heed to the first few puffs. Your mind is on the lighting. But now—puff!—puff!—puff!—why didn't you send for this Edgeworth Tobacco years ago!

If you're already an Edgeworth "fan," we respectfully suggest that you try buying it in the humidor size. You secure more tobacco proportionately for your money. You save tin or glass, and both are in short supply. Your supply doesn't give out so quickly and you save time not having to buy so often.

For the free samples address Larus & Brother Co., 5 South 21st Street, Richmond, Va.

To Retail Tobacco Merchants—If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

W WHITE TRUCKS *have the* STAMINA

Digitized by Google

First in War

WHITE TRUCKS have won distinguished recognition in all the main theaters of war. Prolonged military service is a drastic test. It searches the very marrow of truck capacity and endurance. In the great emergencies of modern battle, motor transport furnishes the life blood of the armies, renewing and maintaining their fighting strength at widely distant points. Motor transport was

Essential in the Mexican Expedition
Indispensable to the defense of Verdun
A Mainstay in the Battle of the Somme
A Foil to the Great German Offensive last March.

These were but high points in a wide range of war service in which White Trucks, honored by a leading part, met every demand and measured up to the highest ideals of motor transport service.

In Mexico. On March 19th, 1916, five days after the order was received in Cleveland, a complete motor train of White Trucks reached Columbus, New Mexico, and crossed the border with rations and supplies for Casas Grande, the first of a chain of field bases established by General

Pershing's army. The line of communication was rapidly extended four hundred miles into a hostile and almost impassable country.

The first train was quickly followed by nineteen others, which day after day during the entire campaign operated with the utmost regularity over sharp, rocky trails, up steep grades, through deep sand and boggy morasses.

At the French and Russian Fronts. Over ten thousand White Trucks have been put into field service by the Allied armies abroad. During four years of warfare these trucks have stood up in a manner to merit the admiration and confidence of their military users. Order after order has been placed by the French and Russian Governments, based upon performance.

So satisfactory has been this performance that thousands of White Trucks were selected by the French

General Staff, early in the war, to compose part of the Great Headquarters Reserve—a high tribute to pay any equipment in a modern army. Should all other truck organizations or transport facilities fail, the Great Headquarters Reserve would stand in the breach.

And these trucks DID stand in the breach on several critical occasions. They took a vital part in the prolonged defense of Verdun—three thousand strong. They assisted in rushing 350,000 French troops to the front to stay the German onslaught last March, an achievement in speed and endurance which won for the truck personnel repeated citations for distinguished service in battle.

In This Country. In building and supplying the sixteen army cantonments, White Trucks performed surprising feats. At Camp Funston, for instance, three truck companies hauled three thousand freight car loads of material in ninety days and relieved a serious congestion. The loads varied from tooth picks to five-foot water mains and included 35,000,000 feet of timber. White Trucks are now hauling immense quantities of food, clothing and other supplies needed by the soldiers.

As a result of their military record, the demand for White Trucks in both the French and American armies has reached such proportions that the factory production is now devoted entirely to war work—100% production of the company's own truck product.

This record of war service visualizes the important part played by motor trucks in fighting at the front and in sustaining intense industrial effort at home. In sparsely settled Mexico, along trails which other vehicles had difficulty in traveling, motor trucks kept supplies following on the very heels of the advancing cavalry. In densely populated France, where railroads abound, motor trucks have been indispensable as an *additional* means of transport.

In this country war production might have broken down had there not been motor truck service to relieve the railroads. The war is bringing home to the American people, as nothing else could, the economic value of motor trucks and good roads, in peace and in war, as a vital link in our transportation system. It is thus evident that "The Road to Berlin begins in America."

The WHITE COMPANY, CLEVELAND

Here is *Real* Check Protection

SEE how clearly this check is written—how business-like it looks—how *safe* it is! The New Era Checkwriter quickly writes these checks and protects them so completely that even the cleverest check raiser cannot alter a single word.

Not only is the exact amount written with ineradicable ink, but each word is cut through and through the paper by tiny metal-pointed letters that force the ink into every fibre with the unalterable cobweb shredding process. Proof against pen—proof against acid. This is the way the writing looks:

•••• TEN DOLLARS TWENTY FIVE CENTS ••••

This is *real* check protection. So write all your checks on the New Era—the small checks that you think hardly worth protecting are the very ones the check raiser is looking for. Every unprotected check you sign is a gamble with every dollar of your bank balance, because *you*—not the bank—must pay if your check is raised.

The New Era brings you a life-time of this universal protection. It is sturdily built, simple in mechanical construction, and so light and handy that you can easily move it from desk to desk. It writes quickly—legibly—*safely*, and is the only *visible* checkwriter made. Price but \$25—why pay more? It is sold under the personal guarantee of Robt. H. Ingersoll.

Decide today—let the New Era protect your bank account—mail the coupon now for examples of this 100% protection. New Era Mfg. Co., Robert H. Ingersoll, Pres., 452 Fourth Ave., New York. Canadian Distributors: Menzies & Co., Limited, Toronto. Use the coupon.

"You See What You Write As You Write It"

Don't Blame Your Factory Manager

when costs are higher than they ought to be and output falls behind and profits seem to almost disappear—if you're not using modern ways of checking costs of every operation; if you're not keeping track of every minute used on every job; if you're not making work sheets, cost cards, time cards and time studies of every part of every operation, show just what you're accomplishing and what you're not.

Don't blame your factory manager either for a *labor turnover* that is higher than it ought to be, or for a lack of proper spirit and enthusiasm among your employees—if you are not issuing bulletins and house organs and words of commendation to your workers regularly, to show you have some interest in them, to draw them closer to you, to get them out of humdrum habits and give them something more to work for besides the money that they get on pay day. Far-seeing and progressive men have found it's as important to build good will amongst the men and women in their employ as it is to build good will in the minds of their prospective customers.

And all these things—from factory forms and cost cards to bulletins and house organs—should for the very best of reasons be printed on the **MULTIGRAPH**. You can get them out on the Multigraph at anywhere from 25 to 75% lower cost than you can by having them printed in the ordinary way. You can get them out on the *same day you want them*—oftentimes *within an hour*—instead of telephoning, getting estimates, waiting for messengers and proofs and type corrections, and finally getting the finished job a day or two or three or four *after you ought to have it*. And with the Multigraph you can get them out in the *privacy of your own shop or office* and that alone is very important, as any business man will realize.

We'll gladly show you samples of bulletins and house organs and factory and office forms, *all printed on the Multigraph*, if you'll fill out the coupon and send it in.

You Can't Buy a Multigraph Unless You Need It

U. S. Government munitions of a most particular and exacting nature require the entire capacity of our new plant as well as a large portion of our old one, working night and day. Government work takes unquestioned precedence. All else is secondary. But unless government demands of a magnitude not now foreseen arise, we shall be able to continue supplying the urgent need for Multigraphs.

THE Multigraph renders real printing and fast typewriting in the privacy of your own establishment. Large and small equipment for any size business. Easy payments, if desired.

her, dismissed it from my mind. But when the same thing happened again a few days later I made a mental note of the fact, and as soon as I got back from the reconnaissance wrote to my friend. His reply solved the mystery. 'Poor Dolly! I had no idea that she also was suffering from shell-shock,' he said, in substance. 'But she's really not as bad as her old master. The fact of the matter is, it was on that very avenue, near the village of —, that the shell fell which led to my return to Blighty. She evidently remembers it as keenly as I do. But take her anywhere else than there, and I think you will find she will behave like a thoroughbred lady.'"

More than one instance has been related to me in which horses have endeavored to save their wounded riders who have fallen by lifting them with their teeth and helping to drag them to a place of safety. And the extraordinary sympathy that exists between man and beast has been displayed in innumerable instances where a wounded man unable to mount has managed to hold on to the saddle or harness of an unwounded or only slightly wounded horse, and has thus been sympathetically and understandingly assisted in his progress toward a dressing station.

SOUL SURGERY, MENTAL HEALTH, AND "TRENCH DREAMS"

SHELL-SHOCK, or "war-strain," at the outset of the war presented what appeared to be an entirely new disorder. Two theories were put forth as to what it is and how it should be handled. The first was that the sufferer from shell-shock was simply humbugging and taking the first chance to get away from the front. The other theory was that there was a real injury; that the bodily and mental signs were due to tears or ruptures of some of the delicate brain-tissues.

Now it is known that this is not absolutely true. The war has shown that while there are many cases where lesions or ruptures may cause shell-shock, the vast majority are due to psychic causes. This discovery is one of the greatest that has been made during the war.

Treating of the subject in *Munsey's Magazine*, Hereward Carrington says:

In a recent paper read before the Philadelphia Neurological Society, and printed in *The Medical Record*, Dr. E. Murray Auer, who for some time was attached to the Twenty-second General Hospital of the British Expeditionary Force, drew attention to many cases of this character. Speaking of the after-effects of shell-shock, and comparing them with such cases as those of men buried by mine-explosions and afterward rescued, he stated that in his opinion these accidents or shocks often leave more or less permanent effects upon the men who undergo them. It may be said, however, that a greater and greater percentage of cases is now cured, under the latest methods of treatment.

In practically all cases which were observed by Dr. Auer, the patient had received no appreciable injury, the effect being purely mental. One such instance was that of a boy nineteen years old, who had been for three days under a sustained and heavy shell-fire. At the end of that time he was threatened by his sergeant with court martial for sleeping while on

sentry-duty. This led to an examination, and the sending of the boy to the hospital. He was in a stupor for ten days. The same was true of another soldier who had seen his chum blown to pieces.

During the period of coma, which in some cases lasted more than a week, the soldiers gave the impression that they again were living through the experiences which had brought on the stupor. This was evidenced by their terrified expression. They crouched, started, and stared wildly when spoken to. One such man rose from his bed in the middle of the night and recited in a one-sided conversation his experience of a charge and of being buried by a mine-explosion. Then he relapsed into his state of coma.

Another result of shock is a continued shaking of the entire body accompanied by various pains and severe headaches. In some cases this shaking has been observed to last several days, and even weeks, altho in most instances its duration is only a few hours. One patient had twice been buried in a mine-explosion, had been through an attack and under heavy bombardment in a trench, and finally was hit by a piece of rock, which, while not injuring him, knocked him down. In this case the tremor of the head was marked, and lasted for some time.

Temporary loss of memory is a common thing with men who have been through some extremely trying period or have suffered a sudden shock. The recovery of the faculty is generally as sudden as its loss.

One soldier, after being near a shell which exploded, could remember nothing that happened to him until he came to himself, walking along a road, some time later. Another man in the hospital thought himself back in the trenches and became violent, moving his cupboard about as if it were a machine gun and pointing it at his enemies. When he suddenly returned to a normal state, he could remember nothing of his experience.

One of the most common, and at the same time most pitiful, of the many mental phenomena of the war is the inability to sleep soundly, and the recurrence of so-called "trench-dreams." It is not uncommon to see soldiers start from their beds in the middle of the night, crying out and weeping, their bodies bathed in perspiration, as they dream of being chased by Germans with bayonets, or of being buried under débris by a mine-explosion, or of losing the trench in a fog and being unable to get back.

The fear that is found is not the kind the layman might expect. The soldier does not, as a rule, fear injury to himself. He is afraid of doing something wrong, of an emergency in which he may fail and lose the confidence of his comrades. His fear is the fear of being a coward.

It will be noticed that fear plays a prominent part: one man fears to go to sleep lest he will not awake; another fears noise. Photophobia, the fear of looking, is common. Many complain that they can not see. A curious example of this was the case of a soldier who had a "trench-dream" in which he lived again his experience of the month previous, when he was buried by a mine-explosion. When he awoke he thought he had been blinded by the explosion, yet when his eyelids were lifted his sight was as good as ever. The writer proceeds:

The reader may think that all this is a

Dollars or Hours or Pounds or Miles

\times or \div or $-$ or $+$

Down at the bottom of all business is *figuring—calculating*.

Go behind your well-kept books, or your invoices or reports or statistics or costs and payroll figures, and there's *plus* and *minus* and *times* and *divided by*.

Somebody has to add and subtract and multiply and divide before there are any figures to *make* bookkeeping and statistics.

And that *fundamental* figure-work bulks larger, in the time it takes and the money it costs you, than all the rest.

That's why the Burroughs Calculator is here today—to give you better *cal-*

culating at lower cost; to bring to the *bulk of your figure-work* the time-saving and money-saving that other Burroughs Machines have brought to your adding and bookkeeping.

It doesn't print figures on paper, nor enter them on a ledger sheet. It's a *calculator*, not a maker of records.

But it adds, subtracts, multiplies and divides with almost unbelievable speed and accuracy and ease.

To have clerks doing, with brain and pencil, the work which the Burroughs Calculator can do more quickly and economically, is to waste both man-power and money.

FOR figuring payrolls and costs, extending or checking invoices and freight bills, figuring single and chain discounts and percentages; compiling estimates and data and statistics—for all the hundreds of daily jobs that are done merely to *get an answer which is to be recorded* elsewhere—use the Burroughs Calculator. It's not only better; it's also more economical.

Behind the Calculator is the Burroughs Adding Machine Co.'s thirty years of experience in designing and building machines to fit the various figuring needs of business. The Calculator is as valuable in its field of *pure calculating* as the Burroughs Posting Machine is in bookkeeping, or the Burroughs Listing and Adding Machine in figuring which requires a record of the various items.

\times \div $-$ $+$
This light, convenient, durable Calculator multiplies, divides, subtracts, adds, without the writing down or printing of figures. It costs but \$175 (\$220 in Canada).

The Burroughs Calculator \$175

50,000 Cards Here

And Every Card In Plain Sight Kardex

That's the story in thousands of institutions using KARDEX MACHINES.

No matter how many you have—50 or 50,000—you can find any card many times quicker with KARDEX than with old style "card-in-the-box" systems.

Any standard size cards—your present ones or new, 3x3, 6x4, 8x5,—fit in the translucent holders with index items exposed, yet protected from damage or soiling.

One Clerk Does the Work of Four

Cards in sight give speedier reference and greater accuracy—an essential time saver. Saves clerical salaries and turns your pay roll into profit or releases clerks for other labor. By changing to KARDEX, thousands of firms make their card records instantly accessible, highly serviceable, compact, convenient and easily classified by "in-sight" color signals. Adaptable to any records in any department of your business.

Get Your Free Copy of the KARDEX Book

An authority on accessible card systems. Tells of a KARDEX machine for a small desk (not a huge credit record) for making lists, personnel lists, perpetual inventories, etc. Shows in an economical, efficient, speedy KARDEX machine for your requirements. Send sample of your cards, outline purpose for which used, and let our Service Department make recommendations for increased efficiency—or with your request.

American KARDEX Company

14 Kardex Building, Tonawanda, N. Y.

Offices in Principal Cities

HIGH GRADE SPECIALTY SALESMEN can make big money with KARDEX. Must have financial responsibility. A few choice, exclusive sales territories open. Write without delay.

long way from the subject of shell-shock, but as a matter of fact it is not so. These very symptoms—dreams and all, in fact—enable us to understand the innermost nature of the disease. They have afforded a key to the mystery, and have enabled our doctors to effect thousands of cures which would never have been made along the old lines of pure pathology and *materia medica*.

Both the mental and physical symptoms of shell-shock are really mental, or rather emotional, at their basis. The outward manifestations are expressions of injuries and lesions, not of the body, but of the psychic life.

It was long ago pointed out that civilized men seemed to withstand shell-fire better than natives of semicivilized countries; but the cause was not understood. We can now see why it should be so. We can also understand the rationale of most of the so-called miraculous cures—of which there have been many. All this is readily intelligible in the light of the newer psychology.

One word more. Shell-shock—or "war-strain," which is virtually the same thing—has been shown to involve no essentially new disorders. Every one of the symptoms was known beforehand in civil life. If by any stretch of the imagination we could speak of a specific variety of disease called shell-shock, it would be new only in its unusually great number of ingredients; and the most gratifying truth of all is that even this hydra-headed monster, if caught young, can be destroyed.

THE FAITH THAT IS IN THE COMMON SOLDIER

A "KIND of fatalism, not without its sublimity," is the central fact in the modern fighting man's religion, says a writer who has gained a reputation here and in England under the pseudonym of "Centurion." While admitting that it is a fact that "a soldier going into action is much more exercised about the condition of his rifle than the state of his soul," he contrasts the modern soldier's creed, "Save others," with the too common religious exhortation to "save yourself," very much to the advantage of the soldier.

The last chapter of "Centurion's" new book, "Gentlemen-at-Arms" (Doubleday, Page & Co.), is given up to considerations of questions that might come under the head either of "morale" or "religion" as applied to the fighting man. The writer has this to say regarding the soldier's attitude toward death, and what may come after:

The language in which he speaks of death is, in fact, often picturesque, but it is rarely devout. A pal may have "gone West" or "stopt one" or been "outed"; he is never spoken of as being "with God." Death is rarely alluded to as being the will of God; it is frequently characterized in terms of luck.

There are, of course, exceptions, but the average soldier does not seem to feel any confidence that he is in the hands of a Divine Providence; he is fatalistic rather than religious. After all, if you have looked on the obscene havoc of a battlefield, as the writer has done, and seen all the profane dismemberment of that which

STYLE and fit were at one time the *first* consideration in the selection of a suit. But now it is *Value* that is vital, for value embraces not only appearance, but price and wear as well.

Moderate price, long wear, pleasing style and exceptional fit distinguish

Forms! Since Old Adam's day men have used pictures as the simplest means of conveying important ideas *clearly* and *forcefully*. A cartoon or a diagram often "gets over" where words would utterly fail. ¶ ¶ ¶ A unique distinction of the Mimeograph is its ability quickly to reproduce designs, plans, maps, and kindred drawings, along with typewritten or handwritten text. No cuts or particular skill required. Thousands of Mimeograph users are finding in this *remarkable* feature an easy way of promulgating new kinds of forward work, or of doing the usual work *quicker* and more economically. The Mimeograph duplicates illustrated letters, and all kinds of sketches, blanks and forms, with *surprising sharpness*—and at minimum cost. Get booklet "L" today—from A. B. Dick Company, Chicago—and New York.

A Call To The

Germany's Weakness

At the end of September, Baron von Ardenne, German military critic, said: *"Circumstances are now such that successful defense only can be our aim. For they (the Allies and Americans) can transfer reserves all over the front by means of a COUNTLESS COLUMN OF MOTOR WAGONS. But such wealth in vehicles is denied the German command."*

THIS confession of the enemy is full proof of the prime importance of the Motor Truck in deciding the world struggle.

¶ But let us keep in mind that the farther and the faster the Hun withdraws, the more motor trucks it requires to serve the extended territory, also that increased truck service *here* is as important as over there. For, our whole war transportation system, on two continents and across the connecting *bridge of ships*, is a unit, "one and inseparable." The motor truck has assumed its position of predominating importance in the system, because it is the beginning as well as the end of it all.

¶ At the beginning here, the truck must deliver the freights to railway and wharf and take the place of steam cars in short hauls.

¶ Over there, the truck is the indispensable link connecting seaport and rail-head with all occupied territory, delivering every form of supplies and construction material.

¶ The maneuvers of the armies themselves are dependent upon truck transportation, and the ambulance is the swift and all-important servitor of hospital and Red Cross work.

* * *

¶ Truck efficiency, both in the war despoiled countries and at *home*, must be

greatly increased *with the least possible increase of new truck tonnage.*

¶ In the face of the urgent demand for increased truck service everywhere there exists a great shortage of materials and labor needed in the building of trucks due to the demands of both war and reconstruction.

¶ Now, it is up to the operators, owners, dealers and manufacturers of trucks to meet and solve this "impossible" problem of more trucks from less material, as our soldiers are solving the "impossible" problem of the enemy's defenses.

¶ And the key to the solution is *conservation of old trucks and truck tonnage.*

¶ There are half a million trucks in action in America, and an average increase of one ton per day per truck means an increase of 500,000 tons—twenty-five great shiploads daily, towards maintaining our armies and the war devastated countries of Europe.

¶ No matter if some of these trucks are not employed directly in this work, but are simply serving to keep American industries moving, American business active, American labor earning, and American homes and schools fed and warmed, they are performing a fundamental service in *maintaining American institutions*; and that is what we are all fighting for—the whole nation, not the armies alone.

Motor Truck World

America's Strength

A Returned American Officer said: "*The alignment of war necessities was something like this: 70 per cent transportation, 20 per cent industry, 10 per cent men.*" And that referred not merely to the army truck service in France, but to our whole truck transport system, including every truck in any form of service here at home.

TO the truck drivers of America is presented a large responsibility and a great opportunity for service.

¶ You and your truck are as essential to success, for neither war nor reconstruction can be carried on without the initial service you and your truck contribute at home.

¶ It is important that every driver get the best and the most service possible out of his truck; that it be kept in perfect order, that it is not overloaded to its injury nor underloaded to its inefficiency; that it works to the very limit of its capacity and lasts as long as possible.

¶ Every increase or decrease of your service is felt all along the line and reflected finally at the other end—where your support is vital.

* * *

¶ Truck owners occupy a highly responsible position in relation to the army of half a million trucks at this end of the vast system that reaches overseas and almost up to the Rhine.

¶ Your drivers look to you for direction and co-operation. You best serve your own and the Government's interests by exercising such supervision as will secure the fullest and the longest service from every truck. You are not justified in buying new trucks as long as your old ones can be made to serve. If you must enlarge your facilities, keep the old truck in

service with the new, or dispose of it where it will be employed.

¶ Truck distributors can contribute correspondingly to conservation of trucks and truck tonnage.

¶ You know where each truck will do the best service, and you can do much to insure a wise distribution of the trucks you handle.

¶ Owners and drivers should be helped to prolong the life and utilize the capacity of all trucks to the limit. Remember, there is a waiting demand for more trucks than your manufacturer will be able to allot you.

* * *

¶ The manufacturer's policy in the production of new trucks is controlled by the Government in behalf of the Nation's need. Their great opportunity to serve in the solution of the home truck shortage lies in rendering the fullest co-operation to distributors and owners of their particular trucks in producing and installing parts and repairs.

¶ The needs of the country demand that not one usable truck be scrapped.

¶ Motor trucks have won the war.

¶ Reconstruction cannot go on without them.

according to the teaching of the Church, is the temple of the soul, you find it rather difficult at times to believe that the fate of the individual, whatever may be the case with the type, is of any concern to the Creator. For the soldier who ponders on the realities of war, the judgments of God may be a great deep; what he feels to be certain is that they are past finding out.

As to whether this agnosticism is real or assumed, transient or permanent, the writer offers no opinion. But he will hazard the conjecture that it is not without its sublimity. To go into action with a conviction that your cause is everything and yourself nothing, to face death without any assurance that in dying you achieve your own salvation, whether victorious or not, is surely a nobler state of mind than that of the old Protestant and Catholic armies in the "wars of religion," equally assured of their own personal salvation and of the damnation of their opponents. The religious soldier of history may have been devout, he was certainly fanatical. And as he was fanatical, so he was cruel. Regarding himself as the chosen instrument of God, he assumed he did but anticipate the divine judgment—and incidentally insure his own salvation—by giving "no quarter to the papist or the infidel." The morning psalm ended in the evening massacre.

Attempts to bring the soldier to some formal religion by playing on his fear of death, says the writer, were never very successful. The soldier is not alarmed by the idea of death, nor especially fearful when he finds himself facing the end. Several such incidents are mentioned:

I remember reading some words of that fine soldier, Donald Hankey, in which he speaks with something like indignation of the attempt of a desperately well-meaning chaplain at an open-air service the night before the men went into the trenches to "frighten" them with the prospect of death. They refused to be frightened and the chaplain's bag was very small. I have seen many soldiers die. I do not know what, if anything, they would have said to a padre. I only know that all I ever heard them say was, "I've done my bit"; "What must be must be"; "It wur worth it"; "It hain't no use grouching"; or "I'm all right—I'm topping." I've often thought that the secret of their fortitude was that they had done what they could.

What the soldier might teach the Churches is that there is only one thing that really counts, and that is character. In the Army it is the only chance of distinction a man has, and nowhere is it so quickly grasped. The soldier is less concerned with whether a man's beliefs are "true" than with whether he truly believes them. He has no respect for the sacerdotal character as such; what interests him is not the priest but the man. He is not interested in religion as a science, but he has some respect for it as an art. If a padre is a good fellow and sincere, the soldier will accept him as such, but he will not tolerate the attitude of a man who assumes that he and his alone possess the keys of heaven and hell. It is only when the priest secularizes himself that he can command a sympathetic hearing. The Church will have to renounce all its worldly prestige, forget its hierarchical character, and go forth like the Twelve, without gold or silver or scrip if it is to get hold of the men after this war.

A COLLEGE GIRL "SLUMMING" IN THE NEW JERSEY MILLS

EXPERIENCE shows that it is one thing to don working-clothes, leave your money behind, and start an investigating tour, always knowing there are a nice room, and money, and "eats" when you are tired of the job; it is an entirely different thing to know you must work or starve. There are writers who have done both, and it isn't difficult to tell which is which when reading their articles.

A woman-writer in *The Survey*, graduate of a woman's college, who had, for years, "investigated" under State and Federal bureaus, discovered that she knew little, practically, of what she had been investigating. So she determined to spend "a few days" in learning the life of "an unskilled worker." Newspaper advertisements said that weavers could easily earn twenty-five dollars to thirty dollars per week in New Jersey mills. Thither she went. After some preliminary skirmishing she got inside one of the mill-employment offices. She writes:

For nearly an hour we waited, standing. At last a company man in uniform appeared, looked us over, and sent most of the women to the spinning-room. Spinning, a slip of a girl next to me whispered, was unskilled work and terribly dirty. The girl was a twister, and followed in the direction of the others, escorted by a guard. At last the man looked at my card and said:

"Have you some one inside, a friend, to learn you?"

"No," I replied. "How could I? I only came to town yesterday."

"We don't want you," he declared gruffly, "unless you have some one to learn you." And then, seeing that I did not go, he added, "If you want to go in and do plain sewing, maybe you can get acquainted with some one who can learn you."

At the next mill I was admonished that the foreman would probably not allow me to learn weaving as I was too old—I acknowledge a grandmotherly twenty-eight!

So much for twenty-five-dollar-a-week advertisements. I set off in another direction and was allowed to begin work next morning, when I found myself walking down the long aisle of the weaving-room, led by the time clerk. The room was nearly 500 yards in length, and filled with looms which wove an infinite variety of material from wool velours to men's suiting and soldiers' khaki-colored cloth. All I was aware of, at first, however, was the deafening roar.

We finally stopt at the machines of a tall Italian woman, a woman with fine physique, black, flashing eyes, and a belligerent attitude that was most disconcerting. She knew what was coming. She was going to be asked to teach another ignorant the gentle art of weaving. And teaching one to weave meant a decrease of output, and decrease of output, when one was paid by the piece, meant less money at the end of the week. And so the "Italian Queen"—for so her stately mien and hauteur made me inwardly call her—prepared to resist this imposition to the end. A wordy combat followed for fifteen minutes, but at last my escort told her

Terrific road impact causes wheel of five ton truck to leave ground when traveling twenty miles per hour.

How the Motor Truck upset Wheel Custom

THE wheel that 'rattled along the broad ways' three thousand years ago, differed little from the present dray wheel. From the early Egyptian times to the day of Queen Elizabeth, but few changes were made in wheel design and construction. Even today, excepting for more and lighter spokes, the commercial vehicle wheel resembles closely the wheel of that period—and is quite satisfactory for slow haulage purposes. But the advent of the motor truck brought with it a new problem. The wheel which history handed down to us proved unequal to the terrific road shocks of fast, heavy-load, motor truck hauling. Designing the correct wheel was now no longer the problem of the wheelwright, but that of the automotive engineer—and it was an engineer who finally solved it.

For some time engineers have endeavored to design a wheel not only of sufficient strength, but one with ample resiliency to absorb or distribute road 'shocks'—shocks that would otherwise reach the vital parts of the truck. Many types were evolved, but all were lacking in one or more of the essential qualities.

Now, after years of experimenting, a wheel has been perfected which absolutely solves this problem. The Dayton Steel Wheel meets every requirement for

grueling truck service with great resiliency, strength, lightness and durability.

Tested at the Government Bureau of Standards, tried and proven in war and peace, it is the ultimate truck wheel. A wheel that will not only prolong the life of the truck but one that will outlast it.

Dayton Steel Wheels increase tire mileage, often from 10 to 25 per cent, because they never become "out of round." The wheel holds its original shape under all conditions of service. There are no built-up parts to work loose, no shrinkage, no worn bearings, no "flats" to pound the tires. All wheel troubles are eliminated.

Dayton Steel Wheels correct the last weakness of motor truck construction. They add the final look of efficiency and live up to their looks by providing more economical truck service—lower tire, fuel and operating costs.

At present our entire output is being devoted to the purpose of winning the war. For after-war delivery specify Dayton Steel Wheel equipment on the trucks you buy.

Send for the interesting story of Dayton Steel Wheels.

that there was no alternative and she succumbed.

And while the factory clock slowly counted out another quarter of an hour, she left me standing in the aisle, without a word from her, all the time exchanging looks with the other workers, a bid for sympathy because she had this nuisance on her hands. It seemed as if every eye in the room was glued on me, and not in sympathy either. I felt for all the world like fleeing, but decided to stay and see it through.

After what seems cons of time, the "Queen" nodded her head in my direction and sullenly ordered me to put my wraps in a pile beside a box of spools. For several minutes she had me watch those heaving monsters—the looms—as they transformed the threads into cloth, and I soon lost myself, fascinated by the deft and skilful movements of her arms and shoulders as she stooped and started her machines and refilled the empty shuttles.

I was rudely awakened to consciousness again when she asked me whether I thought that I could refill the shuttles. I tried, but my clumsy fingers became all mixed up with the delicate woolen threads, and these all had to be retied. Weaving was not included in my college curriculum. The woman beside me flashed a look of scorn. I had never felt so awkward, ashamed, impotent.

And what a relief to hear the twelve o'clock whistle! The factory had just opened a new lunch-room, and Mary, my "learner," introduced me to a little Italian girl and asked her to take me to lunch with her. When we pushed our way into the room, we found a long line extending clear across—lunch was served on a cafeteria plan—so I lost twenty minutes of my precious leisure period waiting to get my tray filled. The waiting seemed doubly hard that noon, because continual standing at the loom, tho' for only part of the morning, had made me very tired. The lunch was good, however, consisting of Hungarian goulash, rye bread without butter, and an apple. It cost seventeen cents. Furthermore, the new lunch-room was light, airy, and clean. But I must confess that I enjoyed the chance to sit down more than the food.

On returning to work after lunch I had more time to take in my surroundings. A great prison the weaving-room seemed, except that the inmates were working more incessantly than prisoners usually do and appeared more tired. There were no windows on the side, just frosted skylights overhead, so that one could not tell whether it was raining or shining outside. The prison feeling was increased by the knowledge that the gates were locked during working-hours and opened only when the whistles blew. This plan undoubtedly has its good points, but somehow it made me feel as if I were in jail. And the necessity of getting one's piece of work finished by a specified time furnished a driving force more urgent than any jailer.

At the end of that afternoon things became less confused, and I was rejoiced to find that I began to refill the shuttles more to the satisfaction of the "Queen." And this fact seemed to make her more resigned to "learning" me. Toward night she asked whether I had any family, and when I answered that I was alone, her wells of sympathy were opened. At the end of the day I gratefully saw her gathering into her apron all of the spools spoiled by me, and hustling them away so that I would not get a scolding.

When the day's work was over, and the whistle blew at 6 P.M., I felt scarcely able

to walk. However, the sight of the workers clambering toward the three busses which took them to town made me temporarily forget my weariness and I rushed pell-mell across the yard, hoping for a seat. But I had to content myself with a foothold on the step. I began to wonder about the lives of these tired-eyed, shawled women, most of whom had to start another day's work when they reached home. For there was supper to be prepared, dishes to be washed, and children to be cared for.

The few days' experience, and immense difficulty in getting her eighty cents a day—the rate when learning—gave the investigator some new ideas on American industrial methods. She sums up:

After all that has been said and written about the cost of the shifting of labor, the expensive waste in poor adaptation to occupation, and modern methods of efficiency with regard to labor, it seemed to me there was still a great field to develop. I was allowed to learn weaving on a notion of my own that I would like to weave. No one tried to find out whether my eyes were strong enough, which they aren't for fine pieces, or whether my back and arms were equal to the strain of pulling the heavy looms back and forth. Yet there may have been other occupations in any of these mills for which I was better fitted. I was allowed to drift from place to place, no one seeming greatly concerned as to what happened to me. It made me wonder whether these mills really need new workers, as their advertisements suggest, or whether after all they are only anxious to keep up an over-supply of labor such as they have had in the past.

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

WHILE bringing solace and satisfaction to relatives and friends, these "Letters from the Front" appear to have aroused a peculiar kind of dissatisfaction in other quarters. Many of the "stay-at-homes" for instance, were driven to complain of their enforced absence from the battlefields and would gladly have given up their work in "essential industries" for a chance to join in the fray on the fighting-lines.

George E. Deatherage, of Cleveland, Ohio, fretted over the fate which pinned him to these bloodless shores while thousands of our boys were busily employed in crushing the Huns. He voices the complaint of many others in the following letter to THE LITERARY DIGEST:

DEAR MR. EDITOR: I have been reading to-night some of the letters published in your column, "Letters from the Front to the Folks at Home." Kinda got it in my head you are playing that game a little one-sided.

How about the boys at home in the home-trenches, making munitions for the boys at the front? Did you ever stop to realize what it means for some of us boys to stay at home? Especially a young fellow like me: six feet two and full of Scotch-Irish pugnacity inherited from a family that has been in every scrap they could get in; unless it was a private one. I was brought up in the woods of the Northwest, reared like a young animal; as free as the clouds that skimmed over the Norway tops in the forests of Minnesota.

Never took my hat off to any one except

A WAR MESSAGE FOR THE FURNITURE BUYER

America must win the war—and the big job of American manufacturers is the production of war essentials.

To this vital task many of the skilled Berkey & Gay workers are now applying themselves. Naturally our normal output of furniture is, therefore, diminished.

However, our reserve stock in Grand Rapids and New York with such other furniture as we may be able to manufacture, in addition to goods of our make now in the stores of our dealers, will, we hope, be sufficient to supply necessary requirements during the period of the war.

Where the purchase of new furniture is necessary, choose Berkey & Gay furniture. Each piece bears our inlaid Shop Mark—the symbol of excellence in material, in cabinet work and design.

Berkey & Gay Furniture Company
446 Monroe Avenue
Grand Rapids Michigan

A new and comprehensive exhibit comprising thousands of pieces of Berkey & Gay Furniture may be seen at our New York showrooms, 113-115 West 40th St., or at Grand Rapids. Visitors should be accompanied by, or have a letter of introduction from, their furniture dealer.

WIRELESS TELEGRAPHY

AND HOW TO MAKE THE APPARATUS, a handy manual for the amateur or the expert. Shows how to make, erect, and use every part of a small working wireless plant. Clear, illustrated with helpful diagrams, by mail, 35 cents. Funk & Wagnall Company, 354 Fourth Ave., New York

THE EDUCATION OF THE WILL

by Jules Fayol, Rector of the Academy of Aix, France. Authorized translation. Thirty editions in fifteen years. Shows the way to success and happiness by proper training of the will. COMFY SLIPPERS

a woman, care free and as wild as the wily deer that fill that country. Never had an inside job and all my spare moments were spent in the open with an old Winchester rifle and a dog.

Kinda gets under the hide when you have to stay home and see the other fellows going to this big scrap. Have to stay home because at the time the show started was working in the munition-game, and as I had the misfortune to be holding down an executive position they told me I was needed more here. Still, when I pass some of the boys in uniform there is a feeling comes over me that I can't explain. It is as if they were looking at me and saying, "I wonder why that big stiff isn't in the service."

We men in this game haven't anything to distinguish us from a stinking slacker. Uncle Sam better get busy and give us something to distinguish munition-workers from slackers such as exist in this town, slinging hash and fitting women's corsets.

Great shades of Paul Bunyan! And they wear pants, too, and walk like regular men.

I am not kicking on you boosting the boys Over There, for they deserve every bit of it, and more too, but, for the love of Mike, get busy and publish something that will help to get some button or badge, backed by Uncle Sam through the draft board, that will separate us from that corset-fitting guy. You will have to excuse the stationery, but I felt downright mean to-night and had to get it off my chest quick. By the way, if you know something downright mean to do, let me know and I'll do it.

During a great battle the work of the medical staff is enormous and performed under difficulties which are appalling to the lay mind. The doctors stand up to it bravely, however, and are inclined to make light of their services. "I have worked day after day and night after night without rest," writes Dr. Frank H. McGregor to his brother at Chickasha, Okla., "but the stimulus of the battles seems to hold one to it."

This brief sketch of Dr. McGregor's experience during the push on the Marne is taken from the *Mangum Star*:

We have just come out of the trenches for a much-needed rest, when Old Jerry started the push against the French on the Marne. My division was immediately entrained for that front and in forty-eight hours we were giving the Boche h—l. We met him again in the open where he had broken through and gave him the surprise of his life, as he was sure the Highland Division was up Flanders way. We immediately attacked with the French on either side. We not only stopt him, but we sent his line rolling backward, and, thank God, they are still rolling. However, we had an awful struggle and our casualties were heavy. We fought for ten long weary days before we were returned. We were two weeks without having our clothes off. We had no trenches or dugouts, and as the Boche kept up a tremendous amount of shelling to cover his retreat, hell could not have been a hotter place. The medical officers had to place their dressing-stations right up in the lines and attend the wounded under heavy shell and machine-gun fire. God alone knows why more of us were not killed. I never expected to come through it all. The shelling was so intense

Master of Road and Load

The Victors

What have they done—these Motor Trucks of Uncle Sam? They have carried our War Sinews from Inland Factory to Atlantic Transport and straight up to the Firing Lines. They have carried our Fighting Boys, our Wounded Boys, our Invincible Boys to this Incomparable Fulfillment. Truly, these Motor Trucks have been the vehicle of Triumphant Democracy. Truly, they have been Uncle Sam's most powerful Ally and deadliest Weapon.

The realization of what our engineering staff, our manufacturing experience, the dedication of all our energy and brains and brawn have contributed to this glorious Achievement of Our Motor Truck, brings a feeling of great pride and deep content to us of the Russel Motor Axle Company. We joyfully greet and acclaim "THE VICTORS."

Russel Motor Axle Company, Detroit, U. S. A.

Following oil: Veedol
after oil: Standard
Showing reduced amount
of sediment in Veedol

When the starter won't turn the engine over

COLD WEATHER brings days when the starter has hardly enough power to turn the engine over. Often you have to use the hand crank even on a light car.

It is time to look to your oil

The oil which has been correct in warm weather will now be found so stiff that it will not flow. Oil left on the bearing surfaces is used up before the entire supply is warm enough to flow properly. Many a bearing has been burned out because oil that would not flow at low temperatures was used in winter weather.

Ordinary Zero oil, however, when exposed to the disintegrating heat of the engine—200° to 1000° F—breaks down rapidly forming a large part of its bulk in black sediment.

Veedol Zero—Light is made so that it flows readily in the coldest weather and yet it has properties that prevent the formation of sediment under the terrific engine heat.

The danger from oil that breaks down under heat

Sediment in your oil is the greatest cause of friction and wear. When oil which contains sediment is carried up to the cylinder walls by the pistons, the film becomes "patchy" and breaks. Rapid carbonization,

Veedol Grease and Gear Compound

Veedol Gear Compound gives efficient lubrication with the minimum leakage. Veedol Graphite Grease is recommended for lubricating water pump shafts; Veedol Cup Grease is made in three grades, all of the same high quality as Veedol Motor Oils.

Cold weather hints for motorists

To prevent freezing in the radiator, use wood alcohol or calcium chloride in proportions to meet weather conditions.

If engine refuses to start pour hot water on intake manifold.

Keep radiator covered to conserve gasoline.

Disengage clutch before using starting motor.

If stuck in deep snow partially deflate tires.

If radiator steams immediately after starting stop and thaw with warm water.

contamination by gasoline of the oil in the crankcase, scored cylinders and broken piston rings are directly caused by breaking the piston oil "seal." Yet an oil which will flow in cold weather must be used.

After years of experiments Veedol engineers evolved a new method of refining by which an oil is produced that resists heat. This—the famous Faulkner Process—is used exclusively for the production of Veedol the scientific lubricant.

Solving the sediment problem

The famous Sediment Test, illustrated above, shows how the sediment problem has been solved. Veedol, the lubricant that resists heat, reduces the amount of sediment 86%. A million motorists have solved the sediment problem by using only Veedol in their engines.

Buy Veedol today

Leading dealers have Veedol in stock. The new 100-page Veedol book describes Internal Combustion Engines; Transmission; Differentials; Oils and their Characteristics; Oil Refining. It also contains the Veedol lubrication chart. This book will save you many dollars and help you to keep your car running at minimum cost. Send 10c for a copy.

it seemed that shells were hitting everywhere but where one happened to be standing. One after another of our gallant officers paid the great price and are now sleeping in the valley of the Marne beneath French soil that has become sacred after so much bloody fighting. Time after time our boys charged into the face of a liquid hell and time after time pushed the tenacious *Boches* back who clung to every foot of ground that had cost them so dearly. I lost a score of dear friends in the Highland Division. One gallant captain who was killed while launching our second great attack was the fifth son to die on French or Belgian soil. Another young lieutenant only nineteen years of age was the fourth and last son to make the great sacrifice. But still they "carry on" without a murmur. Such is the fortitude of the British. A Scottish gentleman is a gentleman *par excellence*, and God never put braver hearts in any race.

When we were relieved and had the opportunity, we gathered our remaining dead and buried them on the field where they had fought so nobly, and died in the cause of liberty. I shall never forget the sad, touching lament played over the graves by the Highland pipers, "The Flowers ha' Withered Awa'." And a sadder and more weird piece of music I never want to hear. We have all grown old in battle and used to seeing our comrades fall.

But in this wonderful natural setting of vales and wooded hills, with a wet sun hanging low in the west, with villages close by laid low by the devastation of war, and the stench of the battle-field permeating the air, the pipe music, with its wild, weird sadness, had its effect on all present, and as the last notes died away we saluted the gallant dead, turned and walked silently away with a pang in our hearts and tears in our eyes for the first time since the battle began.

While a German retreat was inspiring enough to the Allied troops, it was usually accompanied by hardships and perils that cling to the memory of the pursuers. Unless the enemy was hitting the Berlin trail in utter rout, he hurled back shells which caused a great deal of dodging, if nothing more serious. In a letter to his mother, Mrs. Emily E. Elliot, of Montclair, N. J., which is published in the New York *Evening Sun*, Sergt. Arthur C. Elliot, of Battery D, 16th Field Artillery, tells of stirring times in the wake of the German retirement:

We rode for two days and nights and finally arrived at a town that has figured in a whole lot of dispatches lately. It was all shot to pieces, great shell-holes all over the place, roofs gone, bridges down, everything knocked around.

We unloaded and went into camp a short distance out of town. We were told that we would be there about a week, so everybody lay around the next day. About 3:30 we got forced marching orders, be on your way immediately. So we packed up the stuff we had on hand and got out. Our barracks bags, with all our personal stuff in them, were left behind and (damn the system!) thrown into the salvage pile.

Everything gone; all we own is what we have on our backs. I lost a bunch of stuff, two pairs of new shoes, extra suit of clothes, all that knitted stuff, including that peach of a sweater that kept me warm last winter, a dozen pair

Are your nerves like this ?

Are you easily irritated? Easily annoyed? Do children get on your nerves? Do you fly off the handle and then feel ashamed of yourself?

When nerves are right—when health is right—you shouldn't be this way. Ask any doctor.

If you're a smoker, try this: switch to Girards; give them a good fair trial—say a couple of weeks—and smoke nothing else. The Girard is famous for the fact that it *never gets on your nerves*. Doctors recommend it, and smoke it, too. Thousands of smokers from coast to coast have put Girards to this test—and *mighty glad they are today that they did it*.

First, because it never gets on their nerves; and second, because as a smoke, it's a ripe, mellow, full-flavored, Havana delight—good right down to the last long puff. We have heard men say that they never knew what real smoke-joy was until they switched to Girards. Put it to the test yourself—get a box today.

Any cigar man in America can sell you Girards. If he hasn't them in stock he can get them from us.

Antonio Roig & Langsdorf
Established 1871 Philadelphia

Cigar
Never gets on your nerves

of socks, my "housewife," leather leggings, all kinds of stuff gone. Everybody, including officers, lost their clothes. It sure made us sore.

Well, we rode all that afternoon and well into the evening over ground that the Boches had owned not so very long before. Camped that night near the "Big Boys." Every little while the sky would be lighted up and we would almost be deafened as they started them over.

Slept the best we could that night and made camp there the next day, dug small dugouts; etc. The day after that I had to go up to the front line with a reconnaissance party. I got my baptism of shell-fire there. We got 'way up, ahead of the artillery, in some woods, and the Huns started shelling the woods. I wasn't exactly scared, but I was sure interested in the route to the rear, and my strength seemed all to leave my knees and go to my feet.

Anyhow, my knees shook, and a half can of corned beef (I've eaten two at a time myself) and a half box of hard tack (same thing goes here), did for supper for ten officers and six enlisted men, so you see we all kind of lost our interest in ordinary things. Slept that night in a big, good-looking dugout, fortunately without any gas to disturb us. Came back the next morning with a lame horse and much experience.

We moved up nearer the line the next night, when we could see occasional air-fights and endless transport-trains carrying everything imaginable to the front. Saw lots of new graves, dead horses, and cast-off equipment, both Boche and American. Had a pretty uncomfortable time of it, as it started raining, and chow was scarce at times. However, we made out.

A couple of days later we "moved in." What I mean is that we did move in, too. All the way in, where the little fellows and the big fellows and all the intermediate-size fellows play their hell chorus day and night.

About the ensuing time I can't tell you, mother—that is, I can't tell you much. Sherman was right. I've seen hell. I personally got out of it all right, altho my blouse, lying in front of my dug-out, was all torn to pieces, and a shell fragment went through the shoulder and collar of my overcoat while I had it on. It was sure a narrow escape. I've seen lost of sights, tragic and some humorous.

Forget the tragic ones, we have to, and some of the funny ones might change to tragedy very quickly. For instance, one of the most humorous things is the beautiful disregard a man has for when or how he lands when he is dodging shell-fragments. You will see a man running across a field full tilt. Suddenly he will hear a shell coming and he will just lift his feet off the ground and land. If there is an old shell-hole near he dives in, it being a matter of no interest whether the hole is empty or whether water, tin cans, or any kind of rubbish has a previous claim. He just goes in. Same thing with dug-outs. You hear one coming and you dive for the nearest one, no difference whether it is already occupied or not. You go in and tell them about it afterward.

Everybody works like the dickens. I think I average about eighteen hours a day, doing all kinds of work and sleeping with everything on.

Every day brings additional proof that our men are deservedly popular abroad. While the English is quaint and curious,

— as Transportation Makes Greater Demands
Upon the MOTOR TRUCK

Republic nation-wide service is a big advantage

Greater demands are constantly being made upon motor trucks everywhere. Transportation needs are urgent. Every truck must be kept at work day-in and day-out. Each truck must be made to haul every ton of freight that it is capable of hauling.

Republic Nation-wide Service makes this possible for the owners of Republic Trucks.

There are more than 1300 Republic Service Stations, distributed all over the United States, making Republic Service available to Republic Truck users in city and country alike.

Republic Service is uniformly dependable. Each Republic Service Station is interested in keeping every Republic Truck in its territory working at highest efficiency at all times.

It is this conscientious service together with the quality built into all Republic Trucks that is responsible for Republic attaining the leadership in the entire motor truck industry within five years. Last year Republic built and sold more than twice as many trucks as the next largest manufacturer.

There is a Republic Truck to meet every hauling requirement. Seven Models— $\frac{1}{2}$ ton to 5 ton. The Republic dealer will help you decide which model will best meet your needs.

Republic Motor Truck Co., Inc., Alma, Michigan

The Torbensen Internal Gear Drive used in all Republic Trucks, delivers 92% of the motor power to the wheels. We know of no other type of drive that delivers as much.

the following letter from a French girl to the American parents of a soldier visitor speaks straight from the heart:

Madam—Sir,

I take the freedom of write to you for to offer to you my sincere congratulations as my papa and mamma for your son. We have had the gladness of receive he at home during one week. It is a good and lovely boy whom my papa, my mamma and me, we like well. He is very suitable and well-bred. We forget he never, we shall regret always. The time, during which he has lived with us has been sufficing to we for to know and like.

Since some days he is go away from our village. My papa and me, we have been to make a visit by bicyclette. He has been very glad.

We have confidence in Amerique and her courageous soldiers. Your son and the American soldiers will deliver France.

I hope, Madam and Sir, that you will understand my letter. I speak not well English, but I do my utmost for that you understand me. My papa, my mamma and me, we shall be happy to receive your news.

Will you to accept, Madam and Sir, our better friendships, respectful of your friends of France.

GEORGETTE HOUDOIRE.

Every phase of modern warfare and its results came under the observation of our boys in France. The formation of the country, a series of hills and valleys, writes Private McComas, of the Ambulance Service, to a friend in Germantown, Pa., presented a good picture of the whole thing. Wherever they could, the *Boches* held the heights, but the French and Americans and British blew the ground up from under them and they were seen hurrying away to temporarily safer places. Along the whole front, says Private McComas:

The *Boches* are falling back, never to regain what they are leaving. At night the sky is red with the flash of the guns, and the burning of stores and supplies. It certainly is a wonderful sight, and one wonders how any person can live under such shelling. Not many do. The main body of troops retreat, leaving a rear-guard to check the French progress.

The prisoners for the most part, good troops that they were, are certainly low in morale. One man told how he had lived for four days in his gas-mask. For the most part, they seemed to have given up all hopes of winning the war, and they were all fooled in regard to our country's participation. The Americans, they believe, are not counting for much, and they fully believe in the success of their submarine warfare. Newspaper reports now show how low the *Boche* man-power really is. Austrians are used on the Western Front, brigades and regiments are broken up and reformed.

All men back of the lines, men who are needed so much to make the fighting man successful, are being put into the trenches, divisions are moved about from place to place with very little rest; and in all ways the country is being combed for every available man.

Of course, there can be no talk of peace until the *Boches* step out and away from Russia. No matter how attractive are the

propositions they make in regard to Belgium, Alsace-Lorraine, colonies, we can not afford to consider them unless Russia is safe. With the war over, and Russia in *Boche* hands, they would overrun Asia and dominate Europe. The idea of the war would then be lost. Russia is a prize they will give up anything to keep, and it is here that we must see clearly, and prevent them from controlling anything that would bring them back in power.

They are making plans, through Spain especially, for trade and commerce after the war. Knowing what effect "Made in Germany" will have on goods, they are marking them with Spanish and Swiss trade-marks. Here, again, we will have to be watchful. The *Boche* can never safely come into France after the war. The spirit of the Frenchman is dead against him, and it is a hatred that will not die. The feeling after our own Civil War between the North and South was mild in comparison to the feeling between these two nations. After seeing what the *Boches* have done in France, I would not like to answer for the conduct of the Frenchman, should we push forward into Germany. Of course, the same horrors would not be repeated, but there would be some old scores settled. These are great times in which we live.

Affection for France has become very strong among our fighting boys. They all recognize the manifold wrongs Germany has inflicted and insisted upon doing their level best to alleviate the suffering evident everywhere. It was a common sight, writes Private John C. Birk, to his mother at Conemaugh, Pa., to see soldiers of the French sky-blue and the American olive-drab arm in arm, brothers in a common cause. He finds proof in this that "the friendship between the two countries is being cemented so that it can never be broken." Private Birk's letter, which is printed in the *Johnstown Tribune*, continues:

Vive la France! How she has suffered and bled and been shaken in this awful conflict! You can not imagine conditions here. I weep for France. As I write, my eyes are overflowing. Maybe it is that I have developed the French spirit and passion, but it is true. I love her spirit, and say, mother, dear, if I am to stay over here and eventually die on French soil, it's worth the price. I would not be elsewhere in this time of need. I am glad I am here doing a man's duty, if I am only seventeen. And as much as I want to be with you all, I'm willing to stay here until the Huns are annihilated. If you all wonder why we are at war, forget it and take my word for it that it had to come, and our only mistake was in not getting in it sooner, instead of prospering on human souls.

A day in this country would open your eyes—just a few glimpses. Everywhere women in black, a few tottering old men trying to do a day's work, nowhere strong men except on furlough, on crutches, or drilling. Women working as baggage smashers in stations; buildings in the course of erection four years ago still uncompleted; buildings lacking paint, etc. Only that which is absolutely essential for daily existence or war-purposes is done. A stranger can not get a meal in town, and even those who live in the town must get their bread-cards and get war-bread, and every day they come to see

2 out of 3
every 3
have gone-

Two out of every three experienced wiremen have been called into our Nation's Service.

Wiremold goes far toward offsetting this loss because the average job of surface wiring which takes 9 hours when ordinary conduit is used can be completed in 6 hours by using Wiremold. It makes possible an average saving of 35% in labor.

Wiremold is a metal raceway specially designed for the proper protection of surface wiring. For this purpose it is, therefore, far superior to ordinary conduit. It costs only about half as much and saves 70% in steel.

Wiremold does not require experienced workmen to install—inexperienced men will make a good, quick, safe job with it.

Do not compare Wiremold with ordinary metal molding. It is a surface conduit, not a metal molding.

We will send you an introductory quantity of 100 feet of Wiremold and 15 packages of fittings (covering all requirements for the average job) for \$15.88.

Send for illustrated Catalogue and Installation Manual that shows many model installations. Free on request.

WIREMOLD
A Surface Conduit—Not A Metal Molding

what we eat and peep into the garbage-can. Is that enough? Every day for a week, two long trains (freight-cars) of wounded in blue go through, and one, a long train of sixteen luxurious cars, loaded with Americans, pulled in slowly—for it bore our brothers, fellows I know, torn to pieces. And Huns don't stop at anything. I saw pictures last night of women and newborn babies who were victims of the big gun which bombarded Paris. Think of it—babies at birth.

And there are fellows blinded for life by that terrible mustard-gas. But the worst of all, mother, is the train-loads of refugees, containing thousands of helpless women and children, herded like animals and driven from their home by the *Boche* (pronounced "bush"). You should hear that word uttered by the French. It's a curse. I heard it first from the lips of one of the women in black, whose husband was shot by a *Boche*, and her lips curled into a snarl and her eyes flashed and her teeth clicked. And so, mother, we must all forget our inconveniences, grievances, sadnesses, and heartaches, and get down earnestly to the world's work, the extermination of the pest.

And I am glad America is getting aroused. We are not fighting any one else's fight. Rather, England and France have been fighting for us and we must get going to pay up for lost time, and we are going to drive them out of their homes and see how they like it. I think they will holler "Kamerad, Kamerad!" like the snakes they are, and I hope then that dear old Woody will be firm and take nothing less than an unconditional surrender, and then we will all come back and live happy ever after. Won't that be fine? That is worth struggling for, and worth dying for, don't you think so? I'm glad I'm in the uniform of God's country. It is the best on the globe, and it has its biggest task laid out for it right now, and it is not going to disappoint the world.

"Don't worry and keep well," is the closing injunction of Corporal Noel E. Paton, of Company A, 326th Battalion, Tank Corps, in a letter to his mother in Fayetteville, N. C. At the time of writing he was in Base Hospital 66 recovering from a wound received in the battle of St. Mihiel, but, like thousands of other American boys who get hurt in the fray, his first thoughts were for the people at home.

Corporal Paton was one of a patrol sent out to ascertain the whereabouts of the Germans, and he describes what happened in cheerful style:

We had advanced to within perhaps five or six hundred yards of the fatal forest, and nothing had been seen. And still we advanced. The tanks were ahead, advancing in line with about seventy-five yards between. We were, perhaps, twenty-five yards behind them, also spread out with fifteen to twenty yards separating us. We were admirably situated—the tanks would draw the fire, and who would absorb it? We.

The Germans were then spotted running back into the woods. We opened fire. Several dropt. Whether hit or ducking, I don't know. They reached the edge of the woods and disappeared. We ran on until they opened up with their machine guns, toward which they had been running. We dropt, of course. There was not much space they didn't bulletize. They

250 PER MONTH

HAVE YOU A SWEETHEART,

Son or Brother in training camps in the American Army or Navy? If so, mail him a package of ALLEN'S FOOT-EASE, the antiseptic, healing powder to be shaken into the shoes and sprinkled in the foot-bath. The American, British and French troops use Allen's Foot-Ease, because it takes the friction from the shoe and freshens the feet. It is the greatest comforter for tired, aching, tender, swollen feet, and gives relief to corns and bunions.

The Plattsburg Camp Manual advises men in training to shake Foot-Ease in their shoes each morning. Ask your dealer to-day for a box of Allen's Foot-Ease, and for a 2c. stamp he will mail it for you. What remembrance could be so acceptable?

About Dollars and Gears

This Torbensen talk is about saving money. You may consult engineers as to the mechanical efficiency of different types of truck drives, but what you yourself are interested in will be the *commercial efficiency*; that is, the relation between the *ton miles of service* and the *cost of gasoline, oil, tires, maintenance and depreciation*. The following paragraphs will show you why Torbensen Internal Gear Drive is so economical to operate and maintain.

Savings in Gas and Oil The reason why the ablest truck engineers have adopted the Torbensen Drive may be summed up in this bare statement:—The Torbensen Internal Gear Drive loses through friction the smallest amount of engine power at all speeds and loads of any form of truck drive.

The little pinion within the internal gear *rolls*—other types of gears have a sliding action. The friction in rolling contact is much less than in sliding contact and absorbs less power. Saving power means lower cost for gasoline and oil.

Savings in Tires Tires are a big item of truck upkeep cost. One of the biggest tire manufacturers has made precise tests which prove conclusively that one pound carried on the axle without springs will cause as much tire wear as nine or ten pounds carried on the rear axle springs.

On a one-ton truck, the Torbensen rear axle weighs 365 pounds, while another design of truck axle of the same carrying capacity weighs 750 pounds. This gives Torbensen an advantage of 385 pounds less unsprung weight. This means that the other form of truck drive involves a tire expense when operated without load as great as the Torbensen equipped truck carrying 3465 pounds of payload.

The Torbensen equipped truck will give very much greater tire mileage than the truck which has the heavier axle. The heavier axle will pound itself into the repair shop or scrap heap long before the Torbensen axle shows undue evidence of wear and tear.

Savings on Repairs Speaking of repairs, compare the Torbensen Axle with any other form. Note how all revolving parts are protected by

roller bearings or ball bearings which will wear for hundreds of thousands of miles. No chains or sprockets exposed to the dust and dirt, and no gears with sliding tooth contacts which can be ruined completely by operating five minutes without oiling. We certainly do not want to encourage neglect, but the Torbensen axle will stand more abuse in the way of lack of lubrication and overloading than any other form of axle. Note Torbensen accessibility. The inspection cap can be taken off the differential housing in three minutes, enabling you to inspect the differential and bevel gears. See how easily the jack shaft and pinion can be removed. With some axles it is necessary to remove the axle from under the truck to enable you to examine the differential.

There are more Torbensen Internal Gear Drive axles in service than any other commercial car truck axle ever built. Any man who is familiar with one size is able to adjust and repair any size, because they are all similar. Mechanics know the Torbensen axle and can repair it quickly and economically.

It is these basic economies of a Torbensen Drive—savings on gas and oil, savings on tires, savings on repairs, which have made us the largest builders in the world of rear axles for trucks.

PROFITABLE TIRES

2 Tires — 6 Months — \$264.61 Saved

UNQUESTIONABLY the most authoritative and utterly conclusive proof of the special advantages of Goodyear Pneumatic Cord Truck Tires is found in the cost records of users.

At Cleveland, The Ohio Furniture Company has kept such records covering the simultaneous operation over a six-months' period of a truck with solid tires on the rear wheels and another with a rear equipment of Goodyear Pneumatics; the trucks are identical in make and size—both have pneumatics on the front wheels.

The first figures set down show that the all-pneumatic truck has traveled 6,000 miles or 25% farther than the other which has gone 4,800 miles.

Then it is found that the repairs on this truck amounted to \$63.09 while the repairs on the truck with solid tires cost \$129.55, giving a saving of \$66.46 for the unit with pneumatic rear equipment.

A still greater proportion of saving is shown in the gasoline record due to the fact that the solid-tired truck used 1,812 gallons of gasoline over 4,800 miles whereas its partner used just 1,320 gallons while running 6,000 miles; at the prevailing rate, this represented a difference of \$197.47.

And a further item charged against the

truck with solid tires is the fact that it required 504 quarts of oil, or 144 more than the other truck, which adds to the credit of the pneumatics the sum of \$55.18.

Again the better economy of the all-pneumatic truck persists in the depreciation account, where 1 cent is charged off for every mile run by this carrier as against 3 cents for the other and where, as a result, there now is a margin of \$84.

"The reason why we intend to make Goodyear Pneumatic Cord Truck Tires standard equipment on our trucks is because the pair we have in service have paid for themselves in six months and, in addition, have given us a profit of 88%."— Mr. B. Silver, President, Ohio Sample Furniture Co., Cleveland.

Finally, the company's books show that the driver of this truck, in traversing 25% more ground, saved his employer \$161.50 in wages, and therefore, that this one pair of 38 x 7 Goodyear Pneumatic Cord Truck Tires costing \$300, paid for themselves in the six months' period and yielded a profit of \$264.61.

It must be added that this figure by no means represents the total profit of which these tires are capable inasmuch as the owner states they can be expected to travel four or five times the distance they have gone.

The plain mathematics of many similar records are showing to constantly increasing numbers of executives that the speed, traction and cushioning power of Goodyear Pneumatic Cord Truck Tires are sources of appreciable financial return.

CORD TIRES

The History of a Van Camp Soup

A Parisian Chef

In the Hotel Ritz, created the original recipe. It embodied some 20 ingredients, and 23 hours were required in the making.

In a culinary contest held in Paris this recipe took the prize. Thus this soup became the leader in that city of fine cookery.

Scientific Cooks

Later this chef was employed by Van Camp, and that recipe came with him. Here our culinary experts, college trained, worked three years to improve it. By testing countless blends they evolved a savor which amazed the chef himself.

All Van Camp Soups are perfected in that way. Our scientific cooks start with a famous recipe. They try out hundreds of ways to improve it. And they never stop until they reach the limit in deliciousness.

Materials Analyzed

These Van Camp scientists fix a standard for every ingredient. Every material must come up to that standard. Some materials are selected by analysis to insure against variation.

Thus a Van Camp Soup is always at its best—exactly like the model soup adopted.

The Final Formula

Then every step and detail is recorded in formula. And that formula is always followed to the dot.

In every Van Camp Soup you get a famous recipe perfected in this way. You get the very utmost in blend and ingredients.

They come to you ready to serve, at a trifling cost—the finest soups ever created.

Try two or three, and you will never again be content to serve an ordinary soup.

VAN CAMP'S

Soups — 18 Kinds

Other Van Camp Products Include

Pork and Beans Evaporated Milk Spaghetti Peanut Butter Chili Con Carne Catsup

Prepared in the Van Camp Kitchens at Indianapolis

Van Camp's Pork and Beans

Also perfected by these culinary experts. Beans selected by analysis are baked for hours by super-heated steam. Baked with a sauce which is the final result of testing 856 formulas.

Van Camp's Spaghetti

Based on a famous Italian recipe which our experts spent years in perfecting. Never in Naples or anywhere has one ever tasted a Spaghetti which compares with this.

Van Camp's Peanut Butter

Made from a perfect blend of Spanish and Virginia peanuts, with every germ removed. The germs are slightly bitter. It means a new delight to lovers of peanut butter.

mowed that field thoroughly. I flattened and flattened and tried to flatten more. It couldn't be done. I was flat.

It was early in the festivities that I got mine. If bullets were only like measles I could have risen, made my bow to Fritz, and calmly withdrawn. But such was not the case, and I delayed my departure until a more propitious time. After I had remained there a month or two in about forty-five minutes, the tanks must have succeeded in silencing the Dutch, for blessed quiet replaced that awful song of lead looking for a home. As soon as it became evident that they had really ceased firing and weren't kidding us along, as they had done once or twice, the lieutenant, who must have been doing some thinking himself the past three-quarters of an hour, called a retreat. I suppose he remembered that we had only come for information—and Lord knows we had that—and that discretion was the better part of valor, so retreat we did. I won't describe the retreat in detail, for it would reflect on the dignity of all concerned. Anyway, our objective was gained, so to speak, and as it was time to retreat, what matters it how it was done?

There was a large clump of bushes thirty yards to the left and rear. Those bushes were my goal. I felt if I could get there I would never ask for another thing as long as I lived. The getting there was just a matter of imitating a snake as nearly as possible. It was rather uncomfortable, considering my useless arm, and rather costly as to buttons, but I finally made it. As soon as the lieutenant saw my trouble, he ordered me back and sent one of the men with me.

I have no idea what became of the tanks—whether they succeeded in routing the machine guns or not. Two of the men were given up as dead, one of them being a sergeant and the other a private. As soon as I got back to the tanks, I reported all that had happened to the Battalion Commander, and was then ordered to the rear. I came back in a car as far as the first dressing-station and from there to Toul in ambulances. I stayed in Toul several days. From there I went to another evacuation hospital at Neufchâteau, and finally I am here—where, I don't know. I am just "somewhere in France"—I believe about a hundred miles south of Paris and not even near a town. I feel as well as I ever did, but am in bed. I have to stay there, for my clothes were taken from me—a simple reason, but what a good one!

Hospital life is all right for a day or so as a change from the noise and the rush and excitement, but it is very wearing after that. I am ready to go back now, but they won't tell me a thing here as to when I may be discharged.

Anyway, it is good to hear American women talk again, and they are fine to the men. And they should be, for the boys are doing fine work—drafted men as well as regulars. In action you can not tell the difference, for they all fight like the "devil."

So long, mother mine. Don't worry and keep well.

"Going up" for the first time took on somewhat of the aspect of a newsboys' picnic to Private Robert T. Herz, 136th Field Artillery, whose home is in Logansport, Indiana. His chief concern was for the guns, which, he explains in a letter to his sister in Indianapolis, "aren't wholly

named." Private Herz is one of the corps of young defenders who left the university for the drill-field. He was a junior in the University of Wisconsin when he enlisted. He writes:

From now on I expect to have something worth while to write about. We leave within twenty-four hours for the front. Doesn't that sound real thrillin'? Better break it gentle like to the folks. Probably you had not better show them this letter. I'll tell them after we get back to rest billets—wherever that is and whenever we do.

Everything is in readiness except the guns which aren't wholly named. One of them tho is "Dutch Cleanser," which is original with us as far as I know. They are offering a cake to the person who names ours. Almost all guns are christened. We passed one bunch of six-inch rifles the other day with some good monickers—"Death Nell," "Liberty Girl," "Lucky Strike," etc.

Everybody is giving things away or throwing them away. We are cutting down our packs, and this afternoon is the final inspection before we leave. I had to throw away four suits of B. V. D.'s, several pairs of socks, a razor, brush, soap, towels, and books, and they will probably tell us this afternoon to get rid of more.

You may not think this nifty *papier*. But then the Army sorta teaches one not to be overly particular. Of course a certain degree of fastidiousness is tolerated. One may drink his coffee without milk or sugar, or one may leave one's coffee undrunk; one may go to bed at taps and go right to sleep or one may go to bed at taps and lie awake for a while dreaming of chocolate sundaes and other essentials of existence in the States.

Funny thing that about ice-cream—just like pie—unobtainable as a general rule. At the American "Y" in Bordeaux enormous crowds of men and officers stand in line for ice-cream tickets, and a bunch is always disappointed. It's pretty poor ice-cream at that, but we sat down one day and ate four big dishes apiece. One reason why stuff like that is so scarce is because there is so little milk in this country. I don't know why there should be fewer cows in France than in America, but we certainly have a terrible time getting *café au lait*. The French like to serve cognac in their coffee, and I have always wanted to smack my lips over some, as they do. But I tried it once and that was enough. I like it just as well as I like the French tobacco, and I haven't found any *tabac* yet that was usable. I have bought French cigarets, tried one, and given the pack away to a smiling, grateful *poilu*; and I have taken a chance at French cigars, but, as the ex-Cincinnati cop remarked, "You can't smoke 'em or chew 'em."

We have two ex-cops in the outfit. One of them, a great large hulk of a fellow, good-natured always, gets drunk every Saturday night and makes a speech in behalf of his candidacy for mayor. As taps blow, we always elect him. He is a great friend of our ex-professional ash-can man.

After having one of "these so-called baptisms of fire and surviving it without scratch either to myself or men," writes Capt. Reese T. Amis, of Battery C, 114 F. A., to his home paper, the Columbia (Tenn.) *Herald*, he declared himself ready

Costly Foods

Cannot Compare with Quaker Oats in Value

Measure your food by calories, the energy unit which our Government adopts.

The average man at average work needs 3,000 calories per day. A boy of ten needs 1,800.

The problem today is to meet those needs at not too high a cost.

This is how Quaker Oats compares with some foods in cost per thousand calories:

Cost of 1,000 Calories

In Quaker Oats . . . 5 cents	In Halibut . . . 53 cents
In Round Steak . . . 41 "	In Canned Salmon . . . 33 "
In Leg of Lamb . . . 48 "	In Canned Corn . . . 30 "
In Veal Cutlets . . . 57 "	In Canned Peas . . . 54 "
In Salt Cod . . . 78 "	In Potatoes . . . 13 "

Thus meat foods cost from 8 to 10 times Quaker Oats for every calory unit. And nearly every food you use costs vastly more than oats.

And Quaker Oats is vastly better-balanced. It is more complete. It is rich in protein, phosphorus, lime and iron. It comes close to the ideal food.

Make it your main dish at breakfast. Mix it with your flour foods. The more you use the more you save, and the better folks are fed.

Quaker Oats

Just the Rich, Flavoury Flakes

Use Quaker Oats because of its wondrous flavor. It is flaked from queen grains only — just the rich, plump oats. We get but ten pounds from a bushel. When this extra quality costs no extra price, it is due to yourself that you get it.

Two Sizes: 12c to 13c—32c to 32c

Except in the Far West and South

Cross-section Austin No. 3 Standard. Built 100 feet wide and any length in multiples of 20 feet.

The 30-Working-Day Result of

If you passed a vacant lot on your way to work one day, and found a construction force there with excavation well under way the next morning, you would be surprised.

If structural steel stood up in view on the morning of the twelfth working-day and a roof was on by the nineteenth, you would wonder how such progress was possible.

But if the owner of this permanent and substantial building began to move in on the morning of the thirtieth working-day, and actual production started *months ahead of the usual time*, you would realize that more than an ordinary job had been completed and that some well-laid plan must be back of such unusual building speed.

This is just what thousands of busy people have been thinking who daily pass any one

of a hundred Austin jobs. They wonder how Austin can do it.

True enough, every Austin job is the result of a plan. It's the result of a standardized plan of erecting factory-buildings known as the Austin Method, which consists of the following essentials—

1. *Standardized designs* developed through 40 years of experience in the construction of special industrial buildings of practically every kind. Time and expense ordinarily taken in preparing special plans and specifications are saved.

2. *Essential Materials* in Stock at strategic points east of the Mississippi—ready for immediate shipment. These materials are purchased in quantity on advantageous contracts, and by pre-construction work are made ready for quick erection.

The First Standard Factory-Building ever erected was built by Austin in 1909.

Since then 16 linear miles of Austin Standard Buildings have been erected for 240 concerns in 46 lines of business.

AUSTIN STANDARD FACTORY-BUILDINGS

Austin No. 3 Standard, showing brick front which can be varied to conform to the architectural treatment of surrounding buildings.

a 40-Year Building Experience

3. *A construction force trained in every step of the work.* Costly delays are eliminated. The Austin Method is a co-ordination of all building operations.

4. *An Equipment Department* which designs, purchases and completely installs heating, lighting, plumbing and sprinkler systems, and as you suggest all necessary power-equipment and production machinery.

5. *A method* which delivers a thoroughly satisfactory building, meeting every requirement of the business with the least expenditure of the owner's time and money.

Austin Standards, Wood or Steel, Meet All Requirements

There are ten types of Austin Standard Factory-Buildings. With their unlimited adaptations and combinations practically

all industrial requirements can be easily met.

No. 1 Standard is 60 feet wide, No. 2 is 90 feet, and No. 3 is 100 feet; the length in each case can be any multiple of 20 feet. These are the 30 working-day types.

No. 4 Standard is the saw-tooth type which can be built any size in bays, 20 feet x 30 feet. Nos. 5, 6, and 7 Standards are for heavy machine-shops and foundries. They are approximately 100 feet, 110 feet, and 120 feet wide respectively. No. 10 Standard is another heavy type of structure built for crane operation. It is approximately 150 feet wide and any length in multiples of 20 feet. These fine standard types can be built in 60 working-days.

Nos. 8 and 9 are the multi-story mill types which require a slightly longer time.

All of these Austin Standards are described and illustrated by cross-sections and photographs in the Austin Books of Wood and Steel Buildings. Send for a copy today, but if your needs are urgent use the wires. Austin Engineers will arrange for an immediate conference.

The Clouds May Pour Torrents But The Sargent Lock Will Not Rust

Let the drenching rains come down and beat a tattoo against your doorway—your smooth working Sargent Lock will never rust and disfigure your entrance—because it is protected from the weather by the Parker Process.

The Sargent Lock is only one of the wide variety of iron and steel products you see every day which are manufactured with the aid of the Parker Process.

From the Packard Automobile which carries you to your work, to the self-filling Parker Fountain Pen you use to sign your checks—from the Underwood or Remington typewriter in your office to the household range in your kitchen; on every side of you are metal articles in constant use which furnish final evidence that the Parker Process does prevent rust.

Sargent Locks are furnished in both bronze and iron—and the iron models are protected from rust by the Parker Process.

A Practical Book on Rustproofing for You

Manufacturers and industrial executives who use steel or iron will find it profitable to read the Parker Process Book—a plain practical talk on rustproofing which not only explains how the Parker Process is being used on many nationally known products, but suggests how easily you can adopt it for your own product without interfering in any way with your present manufacturing plans. Your copy will be mailed immediately upon request.

What 15¢ will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

The little paper of 15¢ is stamped or color will bring you the Pathfinder 13 weeks on trial. The Pathfinder is an illustrated weekly, published at the Nation's center for the Nation's paper that prints all the news of the world and tells the truth and only the truth; now in its 25th year. This powerful little bill without expending the paper, it costs but 15¢ a year. If you want to keep posted on what is going on in the world, at the least expense of time or money, this is your chance. If you want a paper to put some which is sincere, reliable, nationalistic, wholesome, the Pathfinder is yours. If you would appreciate a paper which is pure, everlastingly timely, lively, breezy—send 15¢ now that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15¢ does not repay us, but we are glad to accept in new friends. The Pathfinder, Box 56, Washington, D.C.

for another and hoped that his wish would soon be gratified. In fact, the captain seemed to enjoy fighting the Huns. According to his limited observation, he says:

The curious thing about this war-business is that the fighting is the least boring, least tiresome part of it. At least, it is the only part of it that I get much pleasure from. But it constitutes only about 5 per cent. of the whole. The rest of the time is spent in the tiresome, wearying task of hauling ammunition, moving long distances by night, usually from about seven o'clock at night to six or seven o'clock the next morning, grooming and taking care of 125 or 150 of these brittle French horses, cleaning guns, disciplining men, and doing ten thousand other things that come up in the course of a day or night. Sometimes we get six or eight hours of sleep, again we do well to get two or three hours. My trench-coat is bedding-roll, blankets, bath-robe, and bed. When a halt comes, I simply lie down in it by the side of the road, not infrequently in the middle of it, and grab off a nap of a few minutes.

We were a part of the American army which made the spirited dash toward Hunland recently. Really, it was a very easy victory and cheaply bought in manpower, for our artillery simply overwhelmed the Huns. They put up a fight with machine guns for a while and then beat it on back toward Deutschland, "according to previously made plans." The bag of prisoners was very good—around 16,000 or 17,000, while the 200 guns which were captured will be used to good advantage.

But let me tell you what I can of the artillery preparation. You can not conceive of anything so immense or terrible. I am not "stretching the blanket" very much when I tell you that there were more guns in "gas-hollow," a long ravine in which we were located, than there were in the American Army before the war started. I learned from a very reliable source that there was a battery of light artillery every thirty-seven yards on our part of the front. When the normal front of a battery is eighty yards, you may gain some idea of how much chance the Huns had to withstand such an attack.

The drive began shortly before one o'clock in the morning. Rain had been falling for several days and mud was knee-deep. A thick bank of clouds hung over the battle area, making the darkness so dense that I knocked off a good part of my nose and about half of my left eye out in trying to get back to my battery position. The guns started with a slow, drum-like monotony, but soon increased to their full cadence. In a few minutes the whole heavens were bright with the glare from their flashes and the earth was shaking from their pounding. The firing continued by spurts until even 5 p.m., when every gun on the front burst into full tongue, laying down a barrage ahead of the infantry, who jumped out of their trenches to get the Huns. My battery was an accompanying one and pulled out a short time later to follow and cover their advance. However, all plans went wrong, for the Huns had dug such a depth and width of trenches that the engineers were until five o'clock in the afternoon leveling a road for us to get over them. The next two or three days were the hardest of my life, for there was no sleep, the roads were bad, the weather cold and disagreeable, and the Huns were dropping shells over among us every now and then.

An Eye on the Future.—Maggie had a new baby brother, which everybody agreed was such a baby as had never been seen before. One day the baby was being weighed, and Maggie asked what that was for.

"Oh," said her father, "Uncle George has taken a great fancy to baby, and he's offered to buy him for a shilling an ounce."

Maggie looked startled. "You're not going to sell him, are you, daddy?"

"Of course not, precious," answered daddy, proud to see his little girl loved her brother so.

"No. Keep him till he gets a bit bigger," the child went on; "he'll fetch more money then."—*Tit-Bits*.

Disliked Absent Treatment.—"Even the field-hospitals close up to the firing-line in France find time for an occasional laugh," writes Malcolm Adams, of the Red Cross.

A party of wounded marines were being taken to a base-hospital on a much overcrowded motor-truck. The nurse accompanying them became anxious about their wounds.

"I hope I am not hurting any of you," she said.

"You're hurting me a lot," replied one of the soldiers.

"But I am nowhere near you," exclaimed the nurse indignantly.

"That's what's hurting me," was the calm reply.—*Washington Star*.

BRASS

Metals come from Mother Earth in many combinations, but it remained for science to make the combination that gives us our brass hydrants, brass electric fans, brass lighting fixtures, brass scientific instruments, brass bearings for machinery and brass shells for munitions.

Brass is an alloy of zinc and copper, and only zinc as pure as that smelted by The New Jersey Zinc Company from the virgin ore of its Franklin mines will insure the durability and working qualities required by high-grade manufacturers of brass products.

With its many mines and plants, its extensive resources and 70 years' experience in zinc production, The New Jersey Zinc Company is able to serve many industries with products of unvarying quality.

CURRENT EVENTS

THE WAR

THE WESTERN FRONT

November 6.—Rapid advances are made by the Allied armies on the battle-line from the Belgian border to the Meuse. The French drive forward five to seven miles and inflict severe punishment upon the retreating enemy. They capture Vervins, Montcornet, and Rethel, and Rozoy is taken by Italian troops.

The Americans push forward three miles on their whole front, reaching Chemery and Nouzon. They are now engaged within sight of Sedan, which has been fired in parts by the Germans.

The British sweep two miles beyond the Mormal Forest and capture Aulnoy Junction. Sharp fighting is reported within a short distance of Bavay.

According to reports reaching American headquarters, the Germans are destroying property and cutting down trees in their retreat east of the Meuse.

November 7.—General Pershing reports the Rainbow Division and units of the First Division entering the suburbs of Sedan. The entire region between the Meuse and the Bar has now been liberated by the First American Army in close cooperation with the French Fourth Army.

Continuing their progress astride the Franco-Belgian border, General Haig's men meet little opposition. Bavay is in their hands and the western outskirts of Avesnes have been gained.

The French reach a line running through Effry, along the Thon River, on the southern outskirts of Signy Forest and beyond La Horgne and St Aignan-sur-Bar.

Ground is rapidly gained on the whole 120-mile front and the Germans lose many men and important material during their flight.

November 8.—Official dispatches show the French making rapid progress on the entire front. On their left the Fortress of Hirson is reached and on the right they are along the Meuse to the neighborhood of Bazeilles. More than 2,000 prisoners and a large quantity of war-material are taken.

The British make substantial gains south of the Mons-Condé Canal. On the right they capture Avesnes; they have cleared Hautmont in the center, and on the left taken Malillaquet, Fayt-le-Franc, Dour, and Thuin, and are approaching the railway west of Maubeuge. Further north they have taken La Plaigne and Belloy, and hold the western portion of Tournai. Since November 1 they have captured 18,000 prisoners and 700 guns.

The Americans on the Meuse advance eastward into the edge of the Woëvre Forest. The Germans are moving men and supplies hastily away. The towns of Stenay and Nouzon and a part of Sedan are reported on fire.

November 9.—Official communications show the Allies still forging ahead, the advance on some sectors being ten miles to-day. French troops cross the Meuse between Mézières and Sedan, and Pétain's cavalry sweep over the Belgian boundary near the Chimay-Guise road. In the center of their line the railroad center of Hirson is captured and Mézières and Mohon surrounded.

General Haig announces the capture of Maubeuge, the last important French fortress in the hands of the Germans. South of this point, British are

Hadn't Sense Enough.—THE HUNS—"Peace! Peace! We must have peace!"
THE ALLIES—"Well, why didn't you keep it when you had it?"—*Kansas City Star.*

Where Money Counts.—"Darling," he said, "I have lost all my money."
"How careless of you," she replied. "The next thing you know you'll be losing me."—*Detroit Free Press.*

Didn't Know the Taste.—"Don't those parvenus make you sick?" asked a young man of his partner at a dinner.
"I don't know," she replied innocently, "I never ate any."—*Jersey City Journal.*

Answers an Easy One.—"How did so many of the men who are in training-camps happen to get influenza?"
"We give up."
"Because they were in the draft."—*Nashville Tennessean.*

Delicate Hint.—"Shall I sing Tosti's 'Good-by'?" inquired the young man who tries so hard to be entertaining.
"I don't care whose you use," replied Miss Cayenne. "And don't bother to sing it. Just say it."—*Washington Star.*

What More Could He Wish?—"You ask for my daughter? What are your prospects young man? Do you own the house you live in?"
"No, I rent it, but I have five tons of coal in the cellar."
"Take her."—*Louisville Courier-Journal.*

Wanted to Help Both.—A little boy at school saw his teacher faint and fall. In the confusion it was impossible to keep so many heads cool, and the little ones flocked round the unconscious lady and her sympathetic colleagues. But this small boy kept both his color and his coolness. Standing on a bench and raising his hand, he exclaimed: "Please, teacher, can I run and fetch father? He makes coffins."—*Pittsburg Chronicle-Telegraph.*

Well, Maybe You're Right, Butch.—The following contribution comes from Wilkes-Barre, Pa.:

EDITOR LITERARY DIGEST: As a reader of your periodical or weekly I have as a matter of fact figured out in my own way that you are all bad in your humorous dept. and if you don't mind I would advise your getting together some afternoon and talking it over with the boys and make a change.

It is a characteristic of you high brows to dissect a letter with a touch of satire which comes rather natural and I feel as you read this you will smile and under your breath damn the author. But I can't resist the writing and like a good clean class, A late draft I take this liberty to assert myself regardless.

If you need a few good stories, as needless to say you do, write and let me know, and since I am not overly busy I will let you have them.

I will write again and tell you what I think about your high brow poetry. It might be all right for the fellow who reads Browning for a bluff or talks Grand Opera, but to me and many others its a bit misty, and the general structure is to artistic for the foundation, give us something with the human touch and the Gettysburg simplicity, we get this. Your Friend, if you wish.

"Never Again"

"After this I'll stop springing around the quick, clean, easy way that Jim Brown told me about. Just get me one of those 250 Handy Oil Cans and squirt 3-in-One Oil along the edges of the leaves and on the ends of the springs. Jim says I'm foolish going to all this bother—jacking the car up, loosening the clips, spreading the leaves apart and getting myself messed up with this graphite-and-oil paste. Jim's right. Never again!"

3-in-One Oil

stops spring squeaks so quick and easy because it's the most penetrating oil in the world. Works right in between the leaves—lubricates them perfectly. Absolutely prevents rust, the prime cause of spring leakage. Takes strain out of the springs—makes any spring ride easier. 3-in-One is the ideal oil for maintenance—manufacturers recommend it. Ford owners use it on the compressor—makes checking much easier. Polishes car bodies beautifully. Buy it in the Handy Oil Can—25c at all stores.

Free to Car-Owners

Car-owners will find other uses in our Special Auto Circular. Write for it and we will also send you a liberal sample of 3-in-One Oil—FREE.

Three-in-One Oil Co.
165 KAG. Broadway, New York

pushing eastward and are well beyond the Avesnes-Maubeuge road.

The Americans are advancing on a wide front eastward of the Meuse, and hold both banks of the river from Verdun to Sedan.

Lively artillery-duels are reported on the Belgian front and the Belgian troops are standing along the Ghent-Terneuzen Canal from the Dutch frontier to the Ghent station.

November 10.—General Pershing reports considerable gains by the First and Second American armies along the line between the Meuse and Moselle. Troops of the First occupy Bois de Chenois, south of Baulon, and three villages are taken. In the Woëvre, despite stubborn resistance, troops of the Second penetrate the enemy's line and drive him from several strongly held positions. Marcheville and St. Hilaire are captured and the Bois Dommartin cleared of the foe.

On the American left Gouraud's men cross the Meuse on a wide front between Mézières and Sedan and pursue the retreating Germans, while the French astride the Belgian boundary capture Charleville and continue their rout of the enemy.

General Haig reports advanced troops reaching the Franco-Belgian frontier. North of the Mons-Condé Canal Leuze is taken and the British cavalry is approaching Ath. The troops progressed four miles east of Renaix. On the railways east of Maubeuge great quantities of rolling-stock and war-material fall into the hands of the British.

The French Army in Belgium is still forcing back the enemy and has reached the eastern outskirts of Nederwalm-Herengem, Bonde St. Denis, and Segelsem. On the left, American units cross the Scheldt east of Heuvel.

November 11.—A dispatch from the Sedan front states that thousands of American heavy guns fired the parting shot to the Germans at exactly 11 o'clock this morning, and the Germans hurled a few shells into Verdun just before that hour. As soon as firing ceased, the Americans unfurled the Stars and Stripes, shook hands, and cheered.

General Haig reports the capture of Mons early this morning. At the cessation of hostilities the British had reached the general line of the Franco-Belgian frontier, east of Avesnes, Jeumont, and Sivry, and four miles east of Mons, Chievres, Lessines, and Grammont.

The Paris War Office announces that the Belgian frontier east of the Forest of Trelon, east of Avesnes, was reached by the French before hostilities ceased, and Italian troops entered Rocroi, less than two miles from the frontier.

OTHER WAR-NOTES

November 8.—An official dispatch from Rome states that Italian war-ships have entered the port of Zara, capital of Dalmatia, and that the booty taken during the Austrian retreat included 3,000 railroad cars and 100 locomotives.

November 10.—The Associated Press correspondent reports that more than 250,000 Italian prisoners of war in Austria have been returned to Italy. Returning Italian officers do not expect disturbances in Austria like those in Russia.

A Paris official communication states that Servian troops have advanced in the direction of Waiskrishen and Reeskerek, driving back German troops retreating to the north, and entered Serajevo.

November 11.—The British Admiralty announces the torpedoing of the battle-

This Bar,

Woodwork, Too, Can Have the New Hand Rubbed Effect

Many women have modernized the out-of-date finish on their furniture with Velvo-Tone. Woodwork, too, can have the same rich, dull finish. It's no more trouble to do the woodwork over than it is to refinish the furniture. If you prefer, any painter will Velvo-Tone it for you. The cost will not be great, for Velvo-Tone does in one operation what was before three separate pieces of work; stains, varnishes and produces the hand-rubbed effect. No other product gives this result; so be sure to ask for

ship *Britannia* near the west entrance to the Strait of Gibraltar on November 9. Paris reports Franco-British naval forces occupying Alexandretta, an Asiatic seaport in the Mediterranean, and torpedo-boats entering the Dardanelles.

PEACE NEGOTIATIONS

November 6.—London gets news of the German armistice delegation reaching the Allied lines, where they are to be received by Marshal Foch early tomorrow morning.

Secretary Lansing sends a message to the Roumanian Government giving assurance that the United States will exert its influence to aid Roumania to secure justice and political and territorial rights at the final Peace Conference.

Rome reports the conditions of the armistice between the Entente nations and Austria being carried out without delay.

November 7.—Paris advises note that the German truce mission, which is headed by Matthias Erzberger, is due to arrive at the French outposts between 8 and 10 p.m. The Allied commander orders firing to cease on that front at 3 p.m. until further orders.

Secretary Lansing makes public a message to the German Government protesting against the reported intention of German authorities in Belgium to destroy coal-mines on evacuation. If such acts are perpetrated, declares the note, they "will confirm the belief that the solemn assurances of the German Government are not given in good faith."

November 8.—Paris issues an official note announcing the arrival of the German delegates at Marshal Foch's headquarters. The text of the Allies' conditions was read and delivered to them. They asked a cessation of fighting, which was refused, and were given seventy-two hours in which to accept or reject them.

In their message conveying this information to the Imperial Chancellor and the German High Command the delegates add: "The German proposal for an immediate conclusion and provisional suspension of hostilities was rejected by Marshal Foch."

Admiral Wilson, of the United States Navy, cables from Brest taking responsibility for the premature peace report, which, he says, was the result of an error.

Deputy State's Attorney-General Becker, who investigated the Bolo Pasha work in this country, makes public evidence showing that Matthias Erzberger, leader of the German truce delegates, has been the directing head of the most dangerous system of intrigue that Continental Europe has ever known.

Washington reports the Secretary of War and the Secretary of the Navy stating positively that the military program of the United States is unchanged by the armistice proposal under consideration by the Germans.

November 9.—The British Press Bureau reports that, owing to heavy German barrage and machine-gun fire on the battle-front, the journey of the courier from Marshal Foch's headquarters to the German High Command at Spa was delayed until this afternoon.

November 11.—At 2:45 a.m. Washington announces that the armistice has been signed and hostilities will cease at eleven o'clock this morning, Paris time, 6 a.m. New York time. The terms will be made public later. Sirens and bells started peace celebrations in all parts of the United States and Canada.

At 10 a.m. the President issued a proclamation announcing the signing of the armistice and adding: "Everything for which America fought, has

HERCULES POWDER CO.

Thirty Thousand Tons of Power

PICTURE yourself in Potomac Park, Washington, D. C., close to the towering white shaft of the Washington Monument. Then imagine that you see, lying across the lawn, an enormous yellow stick of dynamite; a stick greater in bulk than the Monument itself, thicker through than the height of an ordinary six story building and more than 450 feet long.

If all the 117,000,000 dynamite sticks produced by the Hercules Powder Co. in 1917 were gathered up and packed in a single wrapper they would make such a giant cartridge.

Yet all this dynamite and more has been needed in carrying on the work of the Nation in the production, not only of war materials but of the most ordinary and necessary things of daily life. Because it works for all the people, dynamite works for you. You could not be happy or even comfortable without the many things that explosives help to bring you—such as coal and the iron stove in which you burn it, copper wire that gives you electric light or the pipes which carry your water.

And so the thousands of workers in the vast plants of the Hercules Powder Co.—plants that cover an area of more than 22 square miles—have been working with the loyal determination of making the year 1918 a record breaker of production.

been accomplished. It will now be our fortunate duty to assist by example, by sober, friendly council, and by material aid in the establishment of just democracy throughout the world."

President Wilson reads the terms of the armistice before Congress shortly after noon. They require of Germany: Immediate evacuation of all invaded territory—Belgium, France, Alsace-Lorraine, and Luxembourg. Evacuation of countries on left bank of the Rhine and occupation by Allied forces of the principal gateways to Germany. Reparation for all damage done and restitution of moneys seized in invaded lands. Surrender of principal units of the High Seas Fleet, including all submarines. Surrender of enough war-material practically to disarm the German forces. Abandonment of the treaties with Russia and Roumania, with evacuation of all conquered territory in the East. Surrender of forts and ships in the Baltic and Black seas. Return of Allied merchant ships in German ports. Duration of armistice shall be thirty days, with option to extend.

London reports that Dr. Solf, German Foreign Secretary, has addressed a message to Secretary Lansing drawing attention to the fact that the surrender of transports required by the armistice "means the starvation of millions," and requesting President Wilson to use his influence with the Allied Powers to "mitigate the fearful conditions" imposed on Germany.

A German wireless intercepted at London shows "the command and Soldiers' Council on the cruiser *Strasbourg*" calling to "all ships, torpedo-boats, destroyers, and submarines in the North Sea," declaring that the terms of the armistice "would entail the destruction of us all," and asking their German comrades to "defend our country against this unheard-of presumption."

London gets word from Paris that a supplementary article in the armistice terms provides for the occupation of Helgoland by the Allies in the event of the German war-ships not being handed over, owing to the mutinous state of their crews.

November 12.—Changes in the armistice terms, which were not known in Washington when the President addressed Congress, are made public by the State Department. While in some respects the conditions are stiffened, the amended terms relate chiefly to the amount and time of surrender of material, submarines, and railroad cars, and do not affect the general purport of the contract.

Dr. Solf's appeal for mitigation of the armistice terms is delivered at the State Department by the Swiss Minister at Washington and is sent to the President.

Senator Poindexter, of Washington, introduces a resolution in the Senate proposing that the United States enter into full alliance with the Entente and decline to open separate peace negotiations with the German Government.

THE CENTRAL POWERS

November 6.—Bern reports that the German Socialist party has issued a manifesto asking the Imperial Chancellor to advise or request Emperor William to abdicate.

A dispatch from Vienna states that Eastern Silesia has been placed under the administration of a German People's Council.

November 7.—Dispatches from The Hague and other European points report a general revolt of the German Navy, the men becoming complete masters at Kiel, Wilhelmshaven, Helgoland,

Borkum, and Cuxhaven. A great part of Schleswig is also in the hands of revolutionists, and 20,000 deserters from the Army march through the streets of Berlin. Serious riots break out in Hamburg and Lübeck and the red flag is hoisted at Warnemünde, a seaport of northern Germany, and Rostock on the Baltic. The military governor of Kiel concedes the demands of the Workers' and Soldiers' Council for the release of political and military prisoners and complete freedom of speaking and writing. Peace demonstrations and riots are occurring at several other places in Germany.

Chaos prevails in Austria, according to travelers arriving at Bern, and breadless troops are plundering and requisitioning supplies.

Paris hears from Bern that the Premier of Bavaria has notified the German Government that if an armistice is not speedily concluded he will be obliged to order the Bavarian troops from the front.

Field-Marshal Mackensen's Army is to be permitted to pass through Hungary to Germany, states another Bern dispatch, providing they lay down their arms on entering Hungarian territory.

November 8.—European advices dwell upon the spread of revolutionary movements in Germany. A dispatch from Munich states that the Diet has passed a decree deposing the Wittelsbach dynasty and a republic proclaimed in Bavaria. Hamburg is reported completely in the hands of revolutionists, and Bremen, Schwerin, and Tilsit join in the movement and form Soldiers' Councils, which have already control of Bremerhaven and Cuxhaven. Red flags have been hoisted on the ships in several ports, and London hears that the naval authorities at Wilhelmshaven agreed to hand over authority to the rebels if they promised to resist a British attack on that port.

Basel gets word of a dispatch sent to the Imperial Chancellor by the German Socialist party demanding the abdication of Emperor William and the renunciation of the throne by the Crown Prince by noon. Amsterdam reports that the Emperor declines to abdicate on the ground that he could not undertake the terrible responsibility of delivering up the country to anarchy.

November 9.—Berlin messages report the abdication of the Kaiser and renunciation of the throne by the Crown Prince, Prince Maximilian, of Baden, announces that he will retain the office of Imperial Chancellor until consequent questions and the setting up of a regency, for which he intends to appoint the Socialist leader, Friedrich Ebert, chancellor, are settled. Other dispatches assert that the Prince has been appointed Regent of the Empire.

Bern is informed that the majority groups of the Reichstag have agreed upon a plan of elections to that body and the lower houses of the confederated states by equal, direct, secret ballot, without distinction of sex, the voting age to be twenty-four. Cabinet ministers send in their resignations, and a Copenhagen telegram asserts that the Emperor's son-in-law, the Duke of Brunswick, and his heir have abdicated.

Vienna newspapers report orders given for the arrest of Archduke Maximilian, brother of Emperor Charles.

Rebellions in Hanover, Cologne, Brunswick, and Magdeburg are announced in Berlin, and Copenhagen reports the revolutionary movement spreading throughout western Germany. Further disturbances occur in Hamburg, but Schleswig is quiet. German guards at the Danish border are ordered by the Soldiers' Council to remain temporarily at their posts.

It sells for a dollar. We were advised not to make so good a hand-brush, but we did. Its bristles are the stub end of selected imported bristles, flexible enough not to scratch, with stamina enough for years. These selected tufts are fastened for good in an aluminum plate. That plate is riveted forever to a hard-wood, chemically-treated back. These bristles won't wilt or mat down. That back won't warp or crack when left soaking in hot water.

One purchaser writes: "I have used it on my hide for nearly four years—no sign of senile decay—other brushes came and went."

Ask your druggist for it first. If necessary, send a dollar to us for the brush. If you don't feel you have more than your dollar's worth, send to us for your dollar. Keep the brush.

WHICH ARM IS ARTIFICIAL?

This is a photograph of Mr. H. F. Wenrich of Lebanon, Penn. One of his arms is amputated three inches below the shoulder. Can you tell which it is by looking at the picture? Mr. Wenrich wears

A Carnes Artificial Arm

With it he is able to continue his work as a traveling salesman. He can carry a grip, dress and wash himself. By glancing at him you could not tell his right arm was artificial. The Carnes Arm is totally different from any other artificial arm in that it has an elbow that bends, a wrist that turns, and fingers that flex. It enables its wearer to perform easily his ordinary daily work. It is natural in appearance, inconspicuous, graceful, useful, and is the only substitute for the natural arm.

It was invented and is made by Mr. Carnes, who himself has lost an arm. Wearers of this arm are machinists, farmers, clerks, salesmen, carpenters, etc. They can run an automobile, write, use telephone, ride bicycle, use knife and fork, sweep, run sewing machine, saw, etc., and take care of themselves in every way. It puts and keeps men on the payroll.

Catalog Free. If you are anxious, or have a friend or loved one who is, we will immediately send you our catalog, which fully explains just what this remarkable arm is, and what it can do for the amputee. Ask for Catalog No. A-7.

Please mention Literary Digest, this year to 40% discount. Therefore order immediately.

Six German battle-ships anchored outside of Flensburg, states a Copenhagen message, have directed their guns against the revolutionists and bombardment is expected. Another dispatch from this point declares that a general railway strike has begun in Germany.

The United States asks the Spanish Minister in Berlin to submit its vigorous protest to the German Government against the ill-treatment of American prisoners of war.

According to the Vienna *Neue Freie Presse*, the Austro-Hungarian supreme command has protested to Berlin against the passage of German troops through Austrian territory on the ground that the armistice may be endangered thereby.

November 10.—A Berlin wireless to London reports a people's government instituted in the city. Troops and machine guns are placed at the disposal of the Workmen's and Soldiers' Council, which has declared a general strike. Friedrich Ebert is carrying on the Chancellorship. News of similar revolutions is reaching the capital from all parts of Germany.

Other dispatches state that severe fighting occurred in Berlin and many persons were killed and wounded before the officers of the garrison surrendered. The Red forces are in control and have restored order.

Deputy Schiedemann, leader of the majority Socialists in the Reichstag, tells the populace that the Hohenzollern dynasty has been overthrown and that Herr Ebert has been charged with the formation of a new government in which all shades of the Social-Democratic party are to participate. Copenhagen learns of an official announcement that the War Ministry has placed itself at the disposal of Ebert.

Crews of the dreadnoughts in Kiel Harbor join the revolutionists, six cruisers flying the red flag arrive at Ostmoor, and marines occupy the lock-gates at Ostmoor after overcoming the resistance of a coast-artillery division.

An Exchange Telegraph dispatch from Copenhagen says Schleswig-Holstein is to be proclaimed an independent republic. Announcement of the formation of a Bavarian republic is issued at Munich. It is to "complete the self-government of the people" before further military disaster and "make Germany ready for a league of nations."

The Hague wires Washington that the ex-Kaiser has arrived in Holland on his way to De Steeg, near Utrecht. The Crown Prince and virtually the whole German General Staff accompanied him.

November 11.—Wireless dispatches from Berlin report the revolution progressing steadily throughout Germany. Soldiers' and Workmen's Councils being established everywhere. Field-Marshal von Hindenburg has placed himself and the German Army at the disposition of the new people's government at the capital "in order to avoid chaos."

Amsterdam telegrams report German garrisons along the Dutch frontier in revolt. At Potsdam and Doberitz the garrisons are in the hands of the new authorities.

Copenhagen regards the revolution as an accomplished fact. Fourteen of the twenty-six states, including all the four kingdoms, are reported securely in the hands of the Reds. Wurttemberg has been declared a republic, the king stating that he will not oppose the will of the people. Hamburg, Bremen, and Lübeck are ruled by Socialists, and the power of the rulers is gone from the Grand Duchies of Oldenburg, Baden, Hesse, Mecklenburg-Schwerin, and Mecklenburg-Strelitz.

Save Big Money on Underwoods!

I Will Show You How!

A corner of the Typewriter Emporium showing our Progressive Assembling System

Read This Big Generous Offer!

The Government took over the entire output of the Underwood factory. Underwoods are scarce. The shortage of typewriters of standard makes IS SERIOUS. You know Underwoods — their world-wide reputation—the satisfaction they have given you. Your office force demands them, because they give best service.

Guarantee same as Manufacturer's

I will furnish you with genuine \$100 Underwood Typewriters (rebuilt) in exchange for your old Underwoods plus the cost of rebuilding. If you have Underwoods that are not giving 100% service, do not tinker with them — do not suffer delays, inconvenience — do not put up with poor work. At slight cost you can replace them with my Underwood machines. I GUARANTEE MY MACHINES, and if you do not say they are the equal in appearance and efficiency of new machines of the same model, you may return them at my expense.

This is How I Rebuild Underwoods

My plant is the largest of its kind in the world. I handle only Underwoods and buy all parts from the Underwood Company direct. I can rebuild Underwoods at low cost because I handle a huge volume of them and do it efficiently. Every machine is taken entirely apart. All parts are re-enameled or renicked; all worn parts replaced. Each machine is equipped with new type, new platen, new ribbon, new ribbon vibrator, new front scale, new feed rolls, space bar, key rings, key glasses, rubber

feet, etc. Each machine passes through 20 different operations by 20 different mechanics, each a specialist.

You Take No Trouble or Risk

We ship you as many machines as you want—you try them ten days—then ship us yours, in the cases ours came in (no trouble to pack). I WANT TO SATISFY YOU ABSOLUTELY. You are dealing with a concern 25 years in this business; see our rating in Dun's and Bradstreet's; refer to the National Bank of the Republic, Chicago.

Do Not Hesitate—Write Me Today

You are losing dollars every day if you are putting up with poor typewriter work. Write me at once on the coupon below, checking which of the five propositions No. 58 interests you. Do this now before you forget it.

E. W. S. SHIPMAN, Pres.

Books of intense story interest that entertain and educate; of highest literary quality, beautiful in typography and binding---such are

Bradley Quality Books

"Mothers who care" find here the kind of literature they want their children to know. Bradley Quality Books provide stories to tell to the youngest child and for the child to read as he grows older. The authors of these books are recognized authorities on the subject of child training, who know what literature children want as well as what they should have.

They are gifts of value in keeping with the prevalent spirit of judicious giving. Some of the titles are:

	Price		Price
TELL ME ANOTHER STORY.	\$1.50	FIRELIGHT STORIES.	\$1.00
FOR THE CHILDREN'S HOUR.	1.50	MOTHER STORIES.	1.00
STORIES CHILDREN NEED.	1.50	MORE MOTHER STORIES.	1.00
WORTH WHILE STORIES.	1.50	ALL ABOUT JOHNNIE JONES.	1.00
ONCE UPON A TIME ANIMAL STORIES. Price 75c.			

All good bookstores sell Bradley Quality Books. Ask for them.

MILTON BRADLEY COMPANY, Springfield, Massachusetts

Varnish Efficiency

Varnishes vary greatly in quality. Good varnish makes a finish of lasting beauty, poor or unsuitable varnish does not. They cost the same to apply, and the difference in the price per gallon is nominal. Cheap varnish is costly economy.

For architectural work and every other purpose for which varnishes and their allied products are used, Berry Brothers' varnishes, enamels and stains are 100 per cent efficient. The name of Berry Brothers guarantees the utmost in quality and dependability.

Liquid Granite FLOOR VARNISH **Luxeberry** WHITE ENAMEL

A semiofficial telegram from Berlin states that the Soldiers' Council has taken over military administration and that its orders must be obeyed.

Amsterdam learns on good authority that the ex-Kaiser will be interned in Holland. The *Handelsblad* understands that the Dutch Government will object to his residence in the country. Meantime, according to other accounts, the former Emperor and staff are in a railway train near Eysden awaiting the decision of the Dutch Government.

Washington experts in international law recognize that Holland is in a difficult and embarrassing situation owing to the arrival of her notorious guests, and discuss the possibility of bringing William and his arch-accessories to account for high crimes against the laws of nations and humanity.

November 12.—The *Paris Matin* hears of the death of the Crown Prince, who was reported shot by an assassin while on his way to Holland.

Copenhagen reports that the abdication of Emperor Charles of Austria is officially announced at Vienna.

Amsterdam gets a telegram from Bremen stating that the entire German North Sea Fleet and Helgoland are in the hands of Soldiers' Councils.

The Wolff Bureau announces that German Socialists and Independent Socialists have agreed to form a joint cabinet from both parties.

Berlin reports that the Provisional Government at Karlsruhe has proclaimed that Baden will remain part of the German Empire. Königsberg, Frankfurt-on-Main, and Strassburg are now controlled by the *Soviets*.

RUSSIAN AFFAIRS

November 6.—Amsterdam has a Berlin telegram announcing that the withdrawal of all Russian representatives in Germany has been demanded and that German representatives in Russia have been recalled.

Washington reports the organization of the War Trade Board of the United States - Russian Bureau, Incorporated, with a capital of \$5,000,000, to render unselfish economic aid to Russia.

November 7.—Secretary Lansing receives an appeal from the Consolidated Russian Provisional Government at Omsk for further and immediate aid from the Allied and American governments in ridding Russia of Bolshevik control.

The United States and Allied governments are asked by the Russian Ambassador at Washington to take all possible steps to prevent the Bolsheviks carrying out their plans for a general massacre on November 10.

November 8.—Diplomatic circles in Washington regard it as certain that the Allied governments and the United States will soon extend recognition to the All-Russian Government at Omsk.

November 9.—Bern reports that the Swiss Federal Council has asked the Russian *Soviet* mission to leave Switzerland because of their participation in revolutionary propaganda.

A Tokyo dispatch says the Bolshevik forces and Austro-German prisoners in Siberia are almost completely scattered.

November 10.—A delayed message from Harbin reports that a train of forty-two cars carrying ammunition, grenades, and twelve Japanese guns has been blown up between Irkutsk and Rasnoyarsk.

FOREIGN

November 6.—The American Committee for Armenian and Syrian Relief is informed by cable that a chain of relief-

stations has been established between Bagdad and Teheran, where conditions are desperate and fully 1,000,000 persons are needing immediate attention.

The British Admiralty announces that the output of world-tonnage in the last quarter exceeded the losses from all causes by nearly half a million gross tons.

By a vote of 196 to 115 the British House of Commons rejects a motion that the Irish question be settled without delay on President Wilson's principle of self-determination.

Manchester reports that a British Manufacturers' Corporation is being formed to establish agencies in foreign countries for the promotion of British export trade after the war.

November 7.—Writing to Viscount Bryce, Lord Robert Cecil, Under-Secretary of State for Foreign Affairs, declares that the British Government is determined that the wrong suffered by the Armenians at the hands of the Turks shall be righted and their recurrence made impossible.

The aim of France and Great Britain, says a statement issued by the British Embassy at Washington, is the complete and final liberation of the peoples of the eastern Mediterranean countries from Turkish oppression and the establishment of governments and administrations deriving their authority from the initiative and free choice of the native populations.

Former King Nicholas tells the Associated Press in Paris that Montenegro looks to President Wilson to obtain for it a safe and independent future.

Since the war began Belgium has been compelled to pay \$500,000,000 to Germany, according to a compilation made by the Belgian Legation at Washington. This amount is exclusive of the large sums extorted from corporations, cities, towns, and civilians.

November 8.—A Bern dispatch states that the populations of Tyrol and Vorarlberg, the westernmost part of Austria, have appealed to the Swiss Federal Council to help them secure food.

The British Minister of Blockade announces that the Government will refuse to recognize, either during or after the war, any transfer of enemy tonnage to neutral flag or ownership before the final conclusion of peace, except with special consent.

The Greek Legation in Washington is informed of the arrival of an American Red Cross mission in Athens, whose task will be to aid the ill and wounded of Greece and promote the revival of Greek agriculture.

November 12.—An official statement by the Belgian Legation in Washington announces that Belgium will no longer submit to a status of "guaranteed neutrality," which existed before the war, but aspires to "complete independence; to the rights common to all free peoples."

Reports are received at the American consulate in Bagdad that 15,000 Armenians have been massacred at "Tasy," which is presumed to mean Hasu, fifty miles southwest of Bitlis, Asiatic Turkey.

DOMESTIC

November 6.—Fuller election returns indicate that the Republicans will have a majority of four in the Senate and a plurality of twenty-four in the House.

Florida, Wyoming, Nevada, and Ohio voted themselves dry on the 5th inst. There are now thirty-two dry States in the Union.

Reports received by the Children's

Save gasoline for them!

Gasoline is the motive power over there. Save it. Your car undoubtedly has worn piston rings, if it has been run much. This means that it is wasting from 25% to 50% of the oil and gas. It means that gas is escaping past the piston head and that oil is getting up into the combustion chamber, causing carbonization, sooted spark plugs and pitted valves. Worn, weakened piston rings also permit the cylinder head to slap and knock, making the motor noisy.

Put Inland gas-tight piston rings in your motor now

and stop the waste and trouble. The Inland Piston Ring is absolutely gas-tight because it has no gap and because it uncoils in a perfect circle. Its patented Spiral Cut construction causes it to cling against the cylinder wall all around, making a positively gas-tight seal. The Spiral Cut produces an absolutely gas-tight ring in one-piece, which makes it low priced, saving you money over any other type of gas-tight ring. This construction also makes the Inland strongest and most durable because it is of equal width and thickness all around—no weak or thin places.

INLAND

ONE-PIECE PISTON RING

Overhaul now! Don't let your car get "down and out" from failure to keep it in condition. Put your car in A-1 shape now. See your garage man about Inlands today.

3,000,000 Inlands Now in Use

Inland Machine Works, 1636 Locust St., St. Louis, Mo., U.S.A.

Dealers—Jobbers everywhere stock Inlands—ask yours.

How to identify the People's Films

Over 30,000 War Photographs of different scenes, similar to the above, are available to the public at a nominal cost, through the Bureau of War Photographs, a department of the Committee on Public Information. Address—6 West 48th Street, New York.

Below we reproduce the Official Seal of the People's Films. This seal is found on every film produced by the Government for the People. It is the Government's trademark, signifying that every foot of film has been "shot" on the spot, by photographers of the U. S. Signal Corps and Navy, appointed specially for this work.

THE DIVISION OF FILMS

Is the people's Division of Films and these are the people's own films.

THE U. S. Government recog-

nizes the enormous educational value of authentic motion pictures in systematically acquainting the people with the progress and achievements of the United States in the World War.

In no other way, indeed, can America's part in the war be so clearly visualized, so faithfully interpreted to all the people, as through the medium of these official films.

When we consider that there is now hardly a family in this country but has a boy of its own, or a blood relative, in

khaki or blue, we can easily account for the intensely loyal and patriotic interest with which the Government war pictures are welcomed wherever they are shown.

This keen interest in the Government's films is only natural, to be sure. Pictures produce an indelible impression. They tell a story which every one can understand. In this case, a story of such vital import to all the people, that the people can not but be deeply interested.

The Government war films are signed by the Division of Films, which is a part of the Committee on Public Information.

The Bureau of War Photographs is a department of the Division of Films

The Division of Films also directs the great War Expositions presented by U. S. and Allied Governments

Presented by

COMMITTEE ON PUBLIC INFORMATION

George Creel, Chairman

Through the Division of Films, Charles S. Hart, Director, Washington, D. C.

Bureau of the Department of Labor show that the employment of children has increased since the Federal Child Labor Law was declared unconstitutional, June 3, 1918.

A Washington dispatch states that of 30,000 nurses enrolled up to October 1 more than 17,000 are now actually serving American soldiers and sailors. To meet Army needs between 8,000 and 9,000 more nurses must be obtained before January 1.

American shipyards established a new record in October, reports the Shipping Board, by delivering seventy-seven ships of 398,100 dead-weight tons.

November 7.—A premature report of peace causes wild celebrations throughout the country.

The War Department authorizes work on thirteen war-projects, involving an expenditure of \$18,000,000.

An advance of \$1.05 a ton for anthracite coal, effective from November 1, is announced by the Fuel Administration. Only careful use of this coal by householders, it is stated, will prevent suffering this winter.

The Board of Foreign Missions of the Methodist Episcopal Church appropriates \$5,000,000 for the establishment of 2,000 college scholarships for students called into the Army, aiding Methodist families whose bread-winners have been killed or incapacitated in the war, and to furnish engineers and agricultural experts to assist France in reconstruction problems.

November 8.—Complete unofficial election returns assure a Republican majority in the next Congress of at least two in the Senate and not less than forty-five in the House.

Mrs. Carrie Chapman Catt, president of the National American Woman Suffrage Association, issues an appeal to all women's organizations to demand adequate representation on the prospective peace commission.

The National Foreign Trade Council holds its annual meeting in New York and urges a government maritime policy that will insure the future of the American merchant marine and the kind of peace that will end economic warfare between nations.

The Street Cleaning Commissioner reports that the "property snowfall" launched from the sky-scraper windows in New York yesterday as a peace celebration consumed 155 tons of paper and cost the city \$80,000 to clean up.

A meeting called in New York City by the American Defense Society, and attended by a large number of representative men and women, protests against Germany's attempt to force Hun-made toys on this country, and begins plans for a nation-wide movement for an absolute boycott of all German goods.

November 9.—The Navy Department issues an order discontinuing, until further notice, all Sunday work in navy-yards and shore stations.

The Food Administration asks the American people to discontinue afternoon teas, theater supper parties, and all meals, except the usual three a day. The appeal states that the conservation of cereals and sugar is now of vital importance.

Washington announces that immediate arrangements are to be made by the American and Allied governments for supplying food to the people of northern France and Belgium and the demoralized civilian populations in southern Europe.

Fearing an imminent slump in prices when peace comes, bituminous coal-producers ask the Fuel Administration

to have price-fixing continued for a year after the armistice is signed.

The Assistant Secretary of the Treasury tells the Association of Life Agency Officers in Chicago that it has cost the Government only \$1,500,000 to write \$36,250,000,000 of life-insurance on the lives of soldiers and sailors within the last year. Ninety-five per cent. of the men in the Army and Navy are insured.

At the request of the French Government, states a Washington dispatch, the United States will send a housing commission to France to advise and assist in the rebuilding of French areas destroyed by the Germans.

November 10.—The United War Work Campaign starts throughout the country to raise a fund of \$170,500,000 to add to the comfort and happiness of soldiers and sailors.

The National War Work Council of the Y. M. C. A. reports that up to July 31, the organization handled \$54,354,034 in running its various enterprises in aid of American fighters.

November 11.—All outstanding draft calls are canceled and the November calls are set aside. This order affects more than 500,000 men.

November 12.—The War Industries Board announces that all industries whose output was curtailed in the interest of the nation's war-program may increase their output 50 per cent. of the amount of restriction imposed by the Board.

Secretary McAdoo warns the public that taxes will be necessarily high for many years to pay off war-debts and that additional government loans will be required.

The Director-General of the Emergency Fleet Corporation states that the signing of the armistice will not affect the Government's ship-building program, which "will be the biggest factor in tiding over the period between war-production and peace conditions."

Orders to stop the issuance of new commissions in the Army and the promotion of men already in the service are given by Secretary of War Baker.

Double Returns.—I dug up my last ten-spot and I put it in a bond, and Baker put it into shells and sent it o'er the pond. A Pershing had picked up a shell and stuck it in a gun that sent it screeching through the sky with message for the Hun. The shell arrived in Fritz's "midst" just as his German finger reached out to fire a shell of gas and give our boys a "blinger." That Boche shell will never start to gas a Yankee boy; and every time I miss that ten my heart's a well of joy. I know I only loaned it and it's going to be paid back, but I'd be glad to lose it, just to give the Hun that crack.—H. B. Milward, in *Over the Top*.

WARNING!

BEWARE OF SUBSCRIPTION SWINDLERS!

Swindlers are at work throughout the country soliciting subscriptions for popular periodicals. We urge that no money be paid to strangers even though they exhibit printed matter apparently authorizing them to represent us, and especially when they offer cut rates or a bonus. The LITERARY DIGEST mailing list showing dates of expiration of subscriptions is never given out to any one for collection of renewals. Better send subscriptions direct, or postpone giving your order until you can make inquiry. If you have reason to suspect that the members of your community are being swindled, notify your chief of police or sheriff, and the publishers, and arrange another interview with the agent at which you can take such action jointly as may seem proper.

FUNK & WAGNALLS COMPANY,

New York City.

Once a Private Brand Now Famous Everywhere

These Rare Havanas

were originally made up for my private use from the choicest leaf obtainable in the mountainous district of Cuba—the Vuelta district. Friends soon insisted that I include them in my buying. As others learned of these super-delightful smokes, they, too, wanted my brand.

This demand kept a friend busy buying the selected leaf I used. Being a connoisseur, he accepted only the cream of the crop. Now thousands of men smoke my monogram brand and I give my whole time to the enormous business that has resulted.

A Real Thrift Smoke

I Save You Many Profits
Cigar value is limited to quality. Prices that exceed that value include many profits and many expenses—salaries of salesmen and their expenses, store upkeep and other items. I save you all these. You cannot buy my cigars in any store. I deal direct only. You get these savings.

For The Fighters, Too

I have recently received many orders for J. R. W. Havanas to be sent direct to "our boys" in camp. These orders have come from my regular customers—men who know and appreciate a rare smoke. Their thoughtfulness might well be followed by you.

Take advantage of my free offer. Try five free. Decide for yourself. Then order for yourself and "the boys" you are so proud of. Prices today are \$5.50 for 100 or \$2.25 for 50. War conditions, of course, make these prices subject to change, so I would advise quick action.

First Five FREE!
Just to convince you that you cannot duplicate these cigars for twice the cost—smoke five at my expense. Merely send 10c for packing, postage and revenue, with your letterhead, business card or reference.

INVESTMENTS - AND - FINANCE

A FOUR YEARS' SURVEY OF THE COST OF LIVING IN THIS COUNTRY

ON a basis of family budgets divided under five heads—food, shelter, clothing, fuel and light, and sundries—the National Industrial Conference Board, after a country-wide survey, recently published its conclusions for the four years' period, July, 1914–June, 1918. Taking into consideration all of the factors in the problem, it says "the evidence points strongly to the conclusion that for the great majority of American communities the average increase for the period lies between 50 per cent. and 55 per cent." Clothing showed the most marked advance—77 per cent.—but quantitatively this was less important than the 62 per cent. increase in the cost of food, "since food represents about 43 per cent. of the average expenditure, while clothing represents only 13 per cent."

Attention is called in the report to the important fact that it has been "a common practise to base conclusions regarding changes in the cost of living on the whole-sale prices of a number of articles, some of which enter directly, but many only indirectly, into the budget of the average family." Hence the report emphasizes a statement that "changes in wholesale prices and changes in the cost of living are by no means synonymous." For example, while leather goes into shoes, lumber into houses, cattle and grain into foodstuffs, and chemicals into a large variety of articles of common use, "changes in the wholesale prices of such primary articles are not a fair indication of changes in the cost of the final products." Wholesale prices may be a satisfactory measure of market conditions, but taken alone "they are not a reliable index of changes in prices to the retail purchaser, especially in the times of rapidly rising prices." It is further pointed out that the advance in wholesale prices is not reflected in retail prices until months later, which gives another reason why an inaccurate indication of changes is given when the increased cost of foodstuffs to the consumer is measured by wholesale prices.

In reaching 52.3 per cent. as the amount of increase in the cost of living for the four years' period, the expenditures of 11,000 families were considered. Following is a table in which besides the 52.3 per cent. for all items entering into the family budget, the percentage for rent, clothing, fuel, and light, and sundries are given:

Budget Item	Per Cent. Distribution of Family Expenditure	Per Cent. Inc. in Cost Due to War Period to June, 1918	Per Cent. Increase as Related to Total Budget
All items.....	100.0	52.3	52.3
Food.....	43.1	62	26.7
Rent.....	17.7	13	2.7
Clothing.....	13.2	77	10.2
Fuel and light.....	5.6	45	2.5
Sundries.....	20.4	50	10.2

In some comments on these percentages, the report remarks that in order to measure precisely the changes in the cost of the various items making up the family budget it would be necessary for the standard of living to have remained constant, which has not been the case, because official regulations such as those of the Food and Fuel Administrations, patriotic impulses to thrift, economies forced by necessity, the tendency to raise standards

as wages have advanced, and other influences "have inevitably brought about considerable alterations in the scale in living." As far as possible, the same standards were observed in making comparisons, the disturbing influences injected into the problem by the war having been minimized so far as were reasonably possible. Analyzing the averages, the report says:

"When the war started, at the end of July, 1914, retail prices of food were slightly higher than in immediately preceding months. In August and September they continued to advance, but in the latter part of the year they fell, not to mount so high again until January, 1916. During 1916 they rose more rapidly, and this upward movement continued in 1917 and 1918. Between the outbreak of the war in July, 1914, and June, 1918, retail food prices advanced 59 per cent. Between June, 1914, and June, 1918, the increase was 64 per cent. Taking the average price of food for the entire year 1913 as 100, the average price in June, 1918, was 162, an increase of 62 per cent."

As to different sections of the country, it is shown in the report that a fair similarity of increase prevailed. With the following items included in the calculation, tea, coffee, sugar, bacon, cheese, butter, eggs, milk, potatoes, flour, bread, beef, mutton, veal, and pork, the increase in price of these articles, combined, was as shown in the following table for a selected number of States:

State	Locality	Per Cent. Inc.	State	Locality	Per Cent. Inc.
California	A	50.9	Maryland	I	56.7
Colorado	B	55.4	Montana	J	60.6
	C	33.4	Nebraska	K	34.9
	D	36.7	New Jersey	L	56.3
	E	58.2	Texas	M	45.0
	F	49.5	Utah	N	62.3
Idaho	G	55.4		O	64.8
Illinois	H	47.2	Washington	P	38.6

Inquiries were made among real-estate associations and brokers and others in a large number of industrial cities as to rent increases. The conclusion reached was that rent constitutes from 12 to 20 per cent. of the total annual expenditures of a representative wage-earner's family, a working average being fixed at 17.65 per cent., and that on the whole an estimate of 15 per cent. increase in the rent of workingmen's houses would be high enough, "except for communities subject to peculiar conditions."

No authoritative record covering increases in clothing prices was available, and therefore an original investigation had to be undertaken. This was carried on by means of a questionnaire address to retail merchants in representative cities, manufacturers' and jobbers' associations, commercial and trade papers, and by field investigations. Twenty-five articles in common use were chosen as likely to show the general trend of prices. Questionnaires were sent to 106 retail stores in forty-five cities. The replies being geographically grouped to cover the Eastern, Middle-Western, Far-Western, and Southern sections. It appears that budgets for a wage-earner and his wife showed increased costs averaging from 73.3 to 80.6 per cent. for the man's and 71.4 to 78.7 for the woman's wearing apparel. The report adds:

"It is evident that the price of every article important in the clothing budget of the average family increased greatly

Get more work out of your clothes

CLOTHES are like men in the service they render; some do so much work and do it so well they're cheap at \$50; others are a waste at \$25. There is no place in the world these days for a wasteful man—nor for wasteful clothes either.

Save money for yourself and release labor and material for war work by getting all-wool clothes that last. Don't buy until you need clothes; you won't need them so often if they're good ones.

Hart Schaffner & Marx

CAN'T PUNCTURE NOR BLOW OUT

DAYTON AIRLESS TIRES in the past 6 years have been used by thousands of owners of

light passenger and delivery cars in all parts of the civilized world, and have conclusively demonstrated:

1st—They can't puncture nor blow out.

2nd—They ride as smoothly as pneumatics.

3rd—They give much longer wear than the average pneumatic.

4th—They absolutely will not injure the car.

They have been endorsed by 50,000 or more satisfied users including the late George Westinghouse and

Edward Grey, formerly Chief Engineer of the Ford Motor Company.

Piers of live, elastic rubber built about one inch apart inside the casing and vulcanized or welded to it take the place of an inner tube.

Nothing can happen but wear.

We have standardized on 30 x 3 and 30 x 3½ and the price is right.

We sell direct where we have no dealer.

We want an exclusive dealer in every county—tire experience not necessary. Excellent chance to build up in a protected territory a very profitable business either by itself or as a side line.

STANDARD DICTIONARY superiority quickly becomes plain to the man or woman who investigates.

The name is always
in the glove.

"In the Service!"
Among the military, as with glove wearers generally, FOWNES is reputedly the standard of glove quality and value. Leather, fur, silk or fabric.

At the Principal Shops.

American art and skill have produced
FILOSETTE
surpassing any fabric glove imported before the war.

FOWNES

between 1914 and 1918. The price of yard goods showed the greatest advance. Cotton fabrics have mounted higher in price than have woollens, and the cheaper grades of all fabrics advanced more than the finer and more expensive grades. Increases in the price of wearing apparel seem to have been greatest for work-clothes and for the less expensive clothing. Hosiery and underwear advanced in price more than outer garments and furnishings, with the exception of shoes and gloves. Considering all of these factors in connection with the price data and trial budgets, it appears that a fair estimate of the increase in the cost of clothing for a wage-earner's family between July, 1914, and June, 1918, would be 70 per cent. to 80 per cent. As the increase for lower-cost budgets tends to approach 80 per cent. rather than 70 per cent., the average increase has been placed at 77 per cent."

A general summary is given of changes in the cost of living among industrial workers as presented by the Railroad Wage Commission for the period between December, 1915, and the end of April, 1918, as follows:

	Per Cent.
For families with incomes up to \$400.....	43
For families with incomes from \$400 to \$1,000.....	41
For families with incomes from \$1,000 to \$2,000.....	40

By the Brotherhood of Locomotive Firemen and Enginemen the advances in living costs between 1914 and 1917 was placed at 43 per cent. Conditions among ship-building workers on the Pacific coast, as arrived at by the United States Shipping Board, indicated that between June, 1916, and February, 1918, living costs had gone up 46 per cent. A table is given which shows relative increase in the cost of food as measured by wholesale and retail prices for the past six years.

OUR ALARMING TENDENCY TOWARD INFLATION

The National City Bank, in one of its recent bulletins, discusses the strong tendency toward inflation discoverable in the condition of our twelve Federal Reserve banks. Members of the system have expressed some alarm over the rapid increase in bank loans. The writer in this bulletin intimates that the pace at which the country has been recently traveling in this direction "is beginning to rival that of Germany, tho, of course, the credit situation here has not as yet come to the pass it has there." He says further:

"On June 21 the twelve Federal Reserve banks held bills discounted to the amount of \$1,086,023,000 and government securities to the amount of \$259,066,000. On

Salesmen Wanted— For Balance of 1918 and 1919

R. G. SMYTHE
have energy and determination.

Men like Mr. R. G. Smythe, who in June made \$800; in July made \$900, and whose average monthly commission for the six months ended October, 1918, was \$408.00.

Previous experience is desirable, but not necessary. Some of the best producers on the Bixler force are men whose past experience has been in different, such as merchants, real estate and insurance salesmen, etc. The Bixler line offers remarkable possibilities right now—especially to men who

BIXLER
STAPLE JEWELRY
Guaranteed

Men and women who have never had the opportunity before of satisfying their desire for better things are now able to purchase whatever their fancy dictates. One of our departments well selected and displayed can be easily handled by any merchant with good profit to himself and satisfaction to his customers.

Our new co-operative proposition just completed is of great interest to dealers in any line, especially drug, clothing, dry goods, millinery, variety, general store, grocery, hardware, and even the shoe trade.

Our plan is liberal. Profits are unusual. The demand is constant. The goods are staple. They are essential. They are necessary—articles used by everyone. Refinements for taste, but popular priced articles in every-day demand, sold under an absolute guarantee.

We employ salesmen on commission basis. Compensation allowed on all orders. We advance money for expenses.

This is a limited and substantial proposition for business men, in every section, whose activities have been interrupted by the war. You need no experience to sell our line. All details sent on request. Address R. J. Arlett, General Manager.

THE MILES F. BIXLER CO.

DUST PROOF PACKAGE

October 25 these items had risen to \$1,944,787,000 and \$450,311,000. Their consolidated cash reserve against note and deposit liabilities on June 21 was 61.7 per cent. and on October 25 it was 49.6 per cent. The member banks reporting to the Federal Reserve Board held \$1,582,211,000 of government securities on June 21, and \$2,539,109,000 of such securities on October 25. Their loans and investments outside of war and government financing were \$10,328,617,000 on June 21, and \$10,507,763,000 on October 25.

"This is inflation at a galloping pace. The growth of loans means more than one-time use of the new purchasing power, for the payments return to the banks as deposits in other accounts and become purchasing power to the new owners, and so are passed on indefinitely until some one checks on them to pay a debt. An attempt to use more purchasing power, if unaccompanied by a corresponding increase of productive capacity, means higher prices; in other words, inflation. There will be more of it when subscribers to the Fourth Loan borrow to make their payments. It is not pleasant to watch it, but we should watch it. We have not gone as far as Germany, but Germany never traveled faster. After the war, earnings will have to be diverted from productive use to sponge out this indebtedness, a payment without return because the return has been had.

"The improvement in the war-situation has naturally affected the stock market favorably and a moderate rise has occurred in stocks most likely to benefit by peace, the railways among them. As speculation in stocks would be unwelcome at this time, the New York banks at the recommendation of the Money Committee have put in force a rule that the minimum margin upon loans secured by stocks shall be raised from 20 to 30 per cent. and given notice that if this is not sufficient to check the rise of loans of this class further steps will be taken."

THE WORLD'S FINANCIAL RECONSTRUCTION AND OUR PART IN IT

It is declared by a writer in *The Wall Street Journal* that the end of the war means the coming of "one of the most interesting developments known in financial history." Financial waste and emergency measures more or less ephemeral have prevailed since the war began; but now must come a "reconstruction that will last." While developments will not come quickly nor will they be so dramatic as those which occurred during the war, they will be none the less important. But what happened during the war was not altogether financial waste. A great upheaval took place in the world of finance. Credit resources were brought to the fore and nations established on a financial basis of far-reaching importance, but of a kind that had only a secondary place before.

The war has turned the United States from a debtor to a creditor nation. Formerly we owed abroad something like \$4,000,000,000, about three-quarters of which sum we have bought back. Moreover, Europe now owes us about \$9,000,000,000—on private account, about \$2,000,000,000 in securities, in United States Government obligations over \$7,000,000,000. The world is under obligations to us in interest alone of between \$400,000,000 and \$500,000,000 a year. We must add to this not only our usual credit balance in world-trade, but the fact that for several years our manufacturers and exports will be stimulated by the demand for goods in the rehabilitation of Europe. For years to come we will be able to count on an annual credit balance of from \$1,500,000,000 to \$2,000,000,000

a year. That annual indebtedness Europe can not possibly settle, so that we shall have to leave our money abroad, invested in foreign securities or otherwise participating in foreign industries, all of which will "continue to build up our credit position in world-finance." The war has placed us in the same position England was in, an exceptional credit position which gave her control of world-finance. The writer says further:

"The United States will not, of course, have the financial field to herself. Altho England is saddled with a heavy debt, it is not to be supposed that she will remain prostrate. On the contrary, the burden will stimulate her to greater efforts, just as after the Napoleonic Wars the debt she incurred then brought her to the fore in the financial field. The French people have lived up to their reputation of thriftiness and the French Government has been highly conservative in the handling of its finances. It is said that the French Government has been for some time buying up its obligations in foreign markets, notably in London and New York. Much of the advance in the price of French war issues in this country lately has been due to this shrewd action of the French. Italy, tho a much poorer country, relatively, than her two great Allies in Europe, is better off financially to-day than she was four years ago. Her bankers have built up connections in London and New York which will stand her in good stead for years to come.

"With the defeat of the Central Powers there is brought to ruin a country that occupied the third place in the world, from the point of national wealth and resources. What the state of Germany's finances is at present is uncertain. What they will be in the future is mere guesswork. With her foreign trade gone, her people loaded with the obligations of a discredited Government, and with the prospects of an enormous indemnity, Germany's financial greatness can be nothing but a byword for generations to come. The same may be said of Austria."

FUNK & WAGNALLS COMPANY, New York

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

TO SEVERAL CORRESPONDENTS:—The pronunciation of the word *armistice* is *ar'mi-stis* (a as in *art*, i as in *habit*, i as in *hit*), the stress being placed upon the first syllable. It is never correctly pronounced *ar'mi-stis* (a as in *artistic*, i as in *hit*, i as in *police*), nor *ar-mis'tis* (a as in *artistic*, i's as in *hit*) by persons of refined diction to-day.

"S. F. A., Cameron, Tex.—(1) Please tell me the meaning of the expression, 'Between the walnuts and the wine.' (2) Can you tell me anything about the English ballad 'Greensleeves'?"

(1) The expression to which you refer is "Across the walnuts and the wine," and refers to post-prandial remarks or discussions, and to stories told while the nuts and wine are being passed toward the close of a dinner. You will find it used by Tennyson in "The Miller's Daughter," 4th stanza. (2) "The New International Encyclopedia" (Volume 10) gives the following: "*Greensleeves*. An old English ballad, first printed in 1580 as 'A New Northern Dittie of the Lady Greene Sleeves,' tho the ballad was popular before that time. It appeared in 'A Handful of Pleasant Delites,' 1584, as 'A New Courtly Sonnet of the Lady Greensleeves, to the new tune of Greensleeves.' The lively tune, the air of 'Christmas comes but once a year,' has been popular since the time of Elizabeth. Shakespeare mentions it twice in 'The Merry Wives of Windsor.' The words are found in Child's 'English and Scottish Ballads,' and the tune in Chappell's 'Old English Popular Music' (1893)."

TO SEVERAL CORRESPONDENTS:—"Spanish influenza" is a very old complaint. It is "epidemic catarrh characterized by acute inflammation of the mucous membrane of the air-passages, attended by severe constitutional disturbances, followed by great debility, sometimes continuing for several months." It is moderately infectious and is caused by the *Haecilia influenza*, and has been known as a catarrhal disease since 1323.

In Andrew Jackson's time (1829) it was known as "Jackson's Itch." When Tyler was in the political arena his opponents called it "Tyler's gripe"—a name of which the latter word has survived for years and is still in use in our own time. This word "gripe" is one of the French names for influenza. To the Russians it is known as the "Chinese catarrh." The Germans were wont to call it the Russian pest. The Italians appropriately call it the German disease, for it reached them through Teutonic sources; and the French called it also the Italian fever, no doubt associating it with the Roman fever and Spanish catarrh, but to them belongs the credit of introducing the term "influenza" as a generic name. This they are said to have done in the seventeenth century, when they attributed the disease to certain astronomical influences.

"H. C. F., Altoona, Pa.—The plural of *souvenir* is formed by adding *s* to the singular.

"W. N. G., St. Marys, Pa.—Please distinguish between the words *invoice*, *bill*, and *statement*, as used in the ordinary course of business.

An *invoice* is "a list sent to a purchaser, factor, consignee, etc., containing the items, together with the prices and charges, of merchandise sent or to be sent to him." A *bill* is "a statement of an account or of money due; a paper setting forth the amount of a debt, as for goods delivered or services rendered." A *statement* is "a copy or summary of an account covering a stated period," or "a summary of assets and liabilities, as of a bank or firm."

"S. C., Fort Deposit, Ala.—Is the following sentence correct, 'Why do the United States think it best to purchase a canal route?'"

The usage as indicated by the official documents promulgated is our guide for referring to "The United States" in the plural. If you will read the Declaration of Independence and examine the Constitution of the United States, you will find therein ample justification for this, which is certainly preferable to the anomalous use of the singular affected by persons who have not investigated the subject.

Inexpensive Old Violins

The famous Lyon & Healy collection of rare old violins is singularly rich in interest to violin-lovers of moderate means whose keen appreciation of their art makes musical quality their first requirement.

Magnificent instruments—products of the 18th and 19th century masters—are offered at from \$100 to \$500. Choice examples of the more famous makers are also available; only last month a \$15,000 Stradivarius was purchased from our collection.

Bows of the finest grades, including rare pieces by such famed makers as Tourte, Peccatte, etc., are here; and modern bows by Hill & Sons are obtainable from Lyon & Healy alone.

A Liberal Payment and Exchange Policy

Easy terms of payment may be arranged. And a liberal allowance will be made for your present instrument, if you wish to "trade it in."

Send for Your Copy of "Rare Old Violins"

TOPICS - OF - THE - DAY

SHALL WE GO WITHOUT TO FEED GERMANY?

GERMANY HAS ENOUGH FOOD, according to some estimates, to last two-thirds of the time to the next harvest, and workmen along the frontier are reported in cable dispatches as saying that "food-conditions are exaggerated in the press . . . obviously to appeal to the Entente sympathies." German harvests fed the population all through the war, and only a few weeks have gone by since the 1918 crops were garnered, so that a famine now would be an economic phenomenon. Yet the air fairly thrills with wireless waves piteously begging bread. Shall we send it, when the scarcity here makes prices exorbitant to the American poor and to workers facing unemployment this winter? "They will get some," sternly replies *The Journal* of the great flour-milling city of Minneapolis, "but not until the mouths of those whom they have starved have been fed. . . . When there is a shortage, who should be fed first, the Belgian women and children, or the sniveling Hun?" An examination of the American press shows that the German wail, which was the first sign of life of the newborn German Government, has not aroused any large amount of compassion over here. It is remarked everywhere that German diplomacy, when it began this latest propaganda, knew that the Allied leaders, from Premiers Clemenceau and Lloyd George and President Wilson down to the wise country editors all over America, had agreed to the provisioning of Germany. Does this sudden and continued whine, in which German diplomats have utilized the voices of women and children, mean merely that Germany wants "more," or are we in the midst of another German offensive, a hunger-offensive, intended by its Teutonic contrivers to split the Allies on the question of pity, provisions, and loving-kindness for our enemy? "From all this clamor of appeal," the usually kind-hearted *New York World* remarks, "one gets the idea that the propaganda of *Kultur* is one institution that has survived the wreck of revolution and shock of defeat, shorn

not even of its clumsiness." To many observers this "propaganda" is important as the opening gun of Germany's fight for a victory at the peace table. All our late full-Germans, pro-Germans, and pacifists are expected to come out of hiding forthwith and "show mercy to the defeated." "They will come," predicts the *Kansas City Star*, "bearing bouquets, asking permission to offer consolation to the prisoner and to leave tracts and flowers in the cell. . . . Heaven spare us now from mush!"

On the basis of a summary of the best available information in the case, the *Rochester Democrat and Chronicle* agrees that the German superdiplomats are resorting "to their old tricks to pull the wool over the eyes of the 'stupid Yankees.'" Official advices from Washington and Paris, as this and several other papers point out, indicate that "it is untrue that Germany is starving." She "reaped a harvest only three months ago, and cleared Belgium and northern France of everything." Besides, "she has requisitioned supplies from Roumania and the Ukraine." "Germany has the nerve of a pirate," cries a French editor, "to raise the cry of hunger after robbing us and Belgium." Considering the general food-situation, no less than the resolution adopted at Versailles pledging aid to the Central Powers, our editors agree almost *en masse* on the "nerve" shown by Dr. Solf's appeals to President

Wilson "to save Germany from starvation," and by the German women's use of the government-controlled wireless to send similar appeals to Mrs. Wilson and Jane Addams. "These are they," comments the *New York Times*, in amazement rather than in anger, after a brief recapitulation of the German attitude toward hunger, deportation, and infanticide in other nations, "who, on the very day of their surrender, begin to use the exposition of their own deprivations as a plea for the mercy they have never shown—for the help they have never given!" There is a "peculiar shamelessness" in this attitude, the writer continues:

"A strange lack of pride and dignity, an amazingly childish

TIMELY ADVICE FROM THE FOOD ADMINISTRATION.

lack of the sense of responsibility. But they are entirely consistent. When they were strong they took what they wanted; now that they are weak they ask for it. In neither case have they shown the feelings or observed the obligations that are supposed to be recognized by all human beings, merely as such, unless suffering from moral imbecility. Their latest device to excite sympathy is to have their women address to ours a

HE'LL HAVE TO TAKE HIS PLACE IN THE LINE.

—Darling in the New York Tribune.

cry for help! They would appeal to the women of Belgium if the women of Belgium had any help to give, and would be astonished and resentful, doubtless, if response were slow to come."

It is this moral and mental state of Germany rather than any question as to whether or not she shall be kept from starvation that has roused a "furor of resentment" in this country and throughout the Allied nations. "One thing is lacking in the appeals which come by wireless from Germany," says the *Cleveland Press*. "That is, the lack of any expression of apology or repentance. One thing remains unchanged. That is egoism and selfishness." Another editor suggests: "If the German women who are appealing to American women for special favors would kindly hold aloof until some evidence is forthcoming that Germany is not still a rapacious wolf, harmless only because overpowered, there might be a better chance of them in the forthcoming drastic rationing of the world." "Their songs and shouts of hatred were as strident as the men's," declares the *Syracuse Post-Standard*. "We want returned the prisoners they spat upon that they may be brought back from semistarvation, before we feed their persecutors." "Right upon the heels" of revelations that "the worst rumors of the horrors inflicted by the Huns in Belgium and northern France were short of the actual facts," the editor of the *Venango (Pennsylvania) Herald* comments, comes this plea for assistance. He declares:

"We indignantly protest. We are willing to go without to the last possibility of self-denial to feed France, to feed glorious Belgium, to feed England, if she needs it; but, by all that is decent, we are not willing to eat one more mouthful of war-bread or go without one more helping of meat to feed the brutes who ravaged Belgium, the savages who bayoneted little children, the cities that rung their church bells when the women and children of the *Lusitania* were murdered, and gave holidays to their schools when the schoolchildren of London and Paris were mangled by the air-raiders.

"We have no desire to add to the sufferings of the common

people of Germany, but we are perfectly willing that they should suffer enough to bring them to a realization of their sins."

Nor does the common plea, advanced by *The Wall Street Journal*, the *Baltimore News*, the *Seattle Daily Times*, the *Duluth Herald*, and numerous other papers, that we must feed Germany to keep her from anarchy, appeal to this editor. He writes:

"Berlin need not whine to us that the Germans must be fed or they will become even wickeder than they are. As well may a pickpocket, after stealing our purse, demand of us a dinner, with the threat of becoming a highwayman. If Germany is in danger of anarchy, it means, not that we should feed her and hope that she will be good, but that we should garrison her and make her be good."

Into the midst of this heated controversy, which seems not so much a controversy as a united and nation-wide berating of the German attitude of mind, Mr. Herbert C. Hoover, our Food Administrator, projects a rebuke. "There has been a great deal of unnecessary furor in this country about feeding the Germans," remarked Mr. Hoover on the occasion of his recent departure for Europe to look over the international food situation. "We are not calling upon the American people to make any sacrifice with a view to feeding the Germans. Remove the water-tight blockade, and the Germans will take care of themselves." The *New York Evening Post* hails this as a masterly solution, but several other editors are moved to wonder whether Germany won't "take care of herself" by removing food from America, to the benefit of the German people and the American food profiteers rather than of the American people at large. "Of course the people were wrong again," remarks the *New York Evening Telegram*. "It was all furor about giving up our daily bread to feed the Hun enemy. . . . But we doubt whether Mr. Hoover will be able to persuade the Allies to lift the blockade of Germany, to permit the Scandinavian countries to fatten her up (via America) for better or for worse. Looks like more furor coming." Food prices went up two per cent. during the month of October, 200,000 tons of American food, part of it

AT THE PEACE TABLE.

—Tuthill in the St. Louis Star.

supposedly bound for Germany, were on the ocean "under sealed orders" late in November, the heads of the great Armour and Wilson food interests predict continued high prices, and the Government plans a "Food Conservation Week" on December 1, when Mr. Hoover's "message on the program of conservation for the immediate future" will be read in churches, clubs,

and other organizations. "It requires the highest possible courage to be magnanimous," remarks the *Cleveland Press*, "when the exercise of magnanimity means painful, pinching, long-drawn-out sacrifice." "The thing that makes the people sore," remarks the *Helena Independent*, is that "every time the Food Administration urges conservation" prices go up. "No famine, but famine prices," comments the *Boston Christian Science Monitor*, in a widely quoted editorial.

Nevertheless, "civilization can not afford to deal with barbarism as barbarism deals with civilization unless it wishes to descend to the level of barbarism," declares the *Detroit Free Press* in substantial agreement with editors north, south, east, and west, and we will feed even Germany. A new note of grimness, significant not only of our attitude toward the present provisioning of Germany, but of the spirit in which American public opinion will turn to the final peace settlement, is the chief visible reaction to the Tanton appeal for American sympathy. "Justice, tempered with mercy—but still justice," demands the *Christian Science Monitor*. Russia deserves consideration before Germany, declare the *Watertown (N. Y.) Standard*, the *Pittsburg Dispatch*, the *Boston Globe*, and the *Lancaster (Pa.) News-Journal*. The *St. Joseph (Mo.) News-Press* declares: "We will feed Germany that she may be able to bring forth the fruits of atonement—and that we may not, through refusal to do so, sink to her own level." "But we will feed her last," add a dozen other dailies, and the *Minneapolis Journal* comments:

"There is hunger in Italy, in France, in Britain, in Belgium, in Serbia, in Poland, shortage in neutral countries, every evil throughout Russia. The Germans have ravaged, ravished, ravened in the fashion of Attila, their exemplar Hun, have stolen goods out of households and machinery out of factories, have destroyed what they could not carry off, have sunk food cargoes innumerable. To the charity of Christendom the Germans have committed millions upon millions of their victims. And now they ask charity for themselves!"

"They will get what food is necessary," in the opinion of the *Baltimore Sun*, "but that is because the rest of the world has more conscience and more humanity than Germany. They should be thankful for that fact, and stop whining."

On the side of purely practical considerations, it is noted by several editors that the Allies' control of the food situation gives them a powerful argument, and one likely to appeal to the Teutonic temperament, in case of hitches in the peace negotiations. "President Wilson does not misjudge Germany when he takes it that the closest road to her tractability is through her stomach," announces the *Macon (Ga.) Telegraph*, which explains with mixed truth and humor:

"As long as Germany conducts herself properly . . . Mr. Hoover will keep her stomach full. If she backjumps, off go the rations. Worked properly and with firmness, this simply can't lose. Not with a German. . . ."

"After the first train-load of food in each province is well digested, then the general scheme for Germany should be presented. Full knowledge that non-acceptance would mean failure to eat further would do the job. That's a safe bet if ever there was one."

HOW THE WAR WAS WON

THE CONFESSION of the German armistice envoys to Marshal Foch that the German Army was at his mercy, with its reserves of men and munitions quite exhausted, is recalled by our editors as they hear German assertions that Hindenburg's army was still unbroken at the end and gave up the fight only because of unfortunate non-military circumstances. Due credit is given to President Wilson's successful attempts to drive a wedge between the

Kaiser and his people; the pressure of hunger and discontent in Germany is not underestimated. But, the *New York World* points out, the German war-party "would pay little heed to civilian sufferings and consequent turbulence if it could still make headway in the field; Germans might still be shot and hanged into subjection if the Allies and the Americans could be withstood." Only three days, writes a *New York Tribune* correspondent from London, separated the German Army "from complete collapse." Foch, we are told, "had prepared another great attack east of the Meuse which would have been the *coup de grace*." And "even without this, after three more days of fighting, the German Army would have broken in two." The Allied armies, it is explained, had made

EUROPE'S CRADLE OF ANARCHY.

—Fitzpatrick in the *St. Louis Post-Dispatch*.

such progress in the last days of fighting that Prince Rupprecht's seventy divisions and the German Crown Prince's sixty-odd could not both have escaped through the narrowing gap between the Dutch border and the advancing Allied armies.

At the last, according to a correspondent of the *New York Globe* and *Chicago Daily News*, Germany was losing, on an average, a division a day in effective strength and had only nine divisions in reserve, none of them fresh. From January 1 to November 5, according to a British announcement, 405,000 prisoners were taken by the Allies in France and Belgium. During the last six weeks of the fighting twenty-five German divisions were decimated, writes Mr. William Cook from Paris to the *New York World*, and he points out that Germany's material losses have been as heavy as her losses in men: "out of 18,000 guns of all calibers that the German Army had in France July 15, 1918," a third have been captured. The last divisions brought back from Russia are said to have been "thrown into the battle without any artillery, trench-mortar, or machine-gun support." These losses in men and equipment, Mr. Cook hears, were causing a rapid decline in the German morale.

Now that the war is won, the experts are beginning to ask who did it. Well, answers the *New York Tribune*, it was "actually won" by "everybody who put his heart and soul to the job and risked his all." Statesmen, generals, editors, the soldiers who did the fighting, and the citizens who paid the bills have, in each of the associated countries, been generously giving the credit to their allies. The *Emporia Gazette* calls especial attention to the characteristically brief and modest statement in the British War Office's announcement of the end of the war: "In the fifty-second month of a war without precedent in history, the French Army, with the aid of the Allies, has achieved the defeat of the enemy." Marshal Foch has told Sir Douglas Haig that the terrific smash of the British Army through the Hindenburg

positions between Cambrai and St. Quentin was the blow that killed German hopes of maintaining a successful defensive. Marshal Foch has likewise spoken to General Pershing of the importance of the American drive in the Argonne region and told him that the words "the Meuse" "can be borne with pride upon the standards of the American Army." But all are agreed that no one army won the war. It was a joint victory, and the military expert of the *New York Times* thinks it "doubtful if the military history of the world records a more perfect example of cooperation of armies of different countries in the same battle than that of the British, the French, and the American armies."

Why, asks the *New York Evening Sun*, was it that after waging for four long years a defensive and generally a losing struggle, the alliance should have "of a sudden, in less than four months, overthrown completely every one of its adversaries?" It seems to this *New York* paper that four causes united to bring about this year's climax: "They were the single command of Foch; the American reinforcement; the quitting spirit of the Germans; and, strange to say, the elimination of Russia." In reviewing the history of the war, it points out that the Battle of the Marne proved Germany's inferiority, man for man, to the Western Allies. In 1918, Germany, having disposed of Russia, started in to dispose of its opponents in the West. The effort at first succeeded, but led to the selection of Foch as the common leader of the Allied armies. Germany at the end was no longer in a mood to fight, and "the combined aid of soldierly superiority, American aid, the removal of Russian drain on Ally power, and, above all, the unity of command was irresistible."

The admission of the *Frankfurter Zeitung's* military critic that "the Entente's Generalissimo has shown that he has some understanding in the province of strategy," is a clumsy German recognition of the preeminent military genius which all our writers gladly ascribe to the man whom our leading journalistic student of military history calls "one of the half dozen great commanders of armies" and "the successful wielder of the most intricate and colossal military machine of which we have any knowledge." This "simple French soldier, a soldier of a republican nation, has broken, smashed, and wholly demolished not alone the German Army, but the legend of German militarism"; and Mr. Simonds declares in the *New York Tribune* that "in combining the military genius of Napoleon with the patriotic loyalty of Washington, Foch has written a new and splendid chapter in military history, imperishable henceforth."

Foch's campaign from the time he accepted the German challenge is made up of three great battles, according to Mr. Simonds. In the Second Marne, beginning July 15, he defeated the Germans, wrested the initiative from Ludendorff, and ended the German advance which had lasted from March 21 until July 18. In the Third Somme, beginning on August 8 and closing in the middle of September, he forced the Germans back to the Hindenburg line. In the battle of the Hindenburg line, "which began with the Anglo-Belgian offensive in Flanders and the Franco-American thrust in Lorraine on September 26 and culminated in the gigantic and magnificent British thrust between Cambrai and St. Quentin on October 8, Foch broke the German hold upon France, shattered their whole colossal defense system, and compelled a retreat" which released Laon, Lille, St. Quentin, Cambrai, and Douai, and made certain the liberation of all of France and most of Belgium. This battle "was not a series of detached movements, but one perfectly coordinated operation" over a two-hundred-mile front "by nearly a dozen armies, each of them larger than the combined forces of Meade and Lee at Gettysburg."

The November story, continues Mr. Simonds, "is one of swift and relentless pursuit": "by the British down the valley of the Sambre through Maubeuge and across the Belgian frontier," "to the Belgian frontier in the center by the French Armies," "to and beyond the Meuse by Pershing's young army." Thus,

"By Sunday, November 10, whose official statements, in fact, close the military history of the war, the broken German armies were fleeing eastward from the Dutch frontier to the outskirts of Metz. They were still fighting back as they retired at certain points. They were not yet routed, in the narrow sense of the word, but their power for offensive or even for prolonged defensive operations was at an end."

What was the strategy that won? According to Mr. Simonds:

"The trouble with all previous Allied offensives had lain in the fact that all resources were concentrated on a narrow front and the concentration betrayed to the enemy the direction in which the attack was coming and enabled him to make a counter-concentration. The fault with the German offensives of this year has lain in the fact that they consumed all their energy and resources in dealing one colossal blow, and when that failed to achieve a decision they had to stop and prepare a new blow, giving the enemy equal opportunity to prepare and to recover from the consequences of the first blow."

"The merit of Foch's strategy has lain in his ability to expand the pressure over a very wide front and multiply his partial thrusts so that the enemy was never able to get his breath or to anticipate in which direction the next blow was to fall."

This contemporary historian of the war asks us to look at Foch's successful campaign "from the side of the obstacles":

"The four lines of defense; the innumerable switch-lines, the rivers, and the canals; an opposing army which fights well even in defeat, still provided with all the modern weapons of war. . . . But this great army, these unparalleled defenses, are all mastered in less than four months; the war is won, for even had there been no defeats in the East the long succession of German reverses would have brought Bulgaria and Turkey to the point of surrender and Austria to the verge of revolution."

"What Napoleonic campaign can be hereafter reckoned to surpass that of Foch as a merely military achievement? British, French, American, Italian, Belgian troops, all perfectly controlled by a single hand, all used with exact coordination, all made to contribute to the uttermost of their possibilities, and—in less than four months—supreme victory, the smashing of the German machine, the Germany Army plucked bodily from its vast defenses and flung out of France."

In the final scene of this triumphant last act, the young American Army played a rôle which the *Dallas News* fears has been overlooked in the rejoicing over the ending of the great tragedy. One of the clearest brief narratives of our last great achievement was cabled over by an Associated Press correspondent last week. He first informs us that twenty-one American divisions, more than 750,000 fighters, took part in the action beginning September 26, known both as the battle of the Argonne and the battle of the Meuse. American troops had shown what they could do at St. Mihiel and Pershing was called on to take the difficult Argonne sector. This is a densely wooded, broken country, almost roadless and fortified by the Germans to the last degree of military skill, but behind it ran the Mézières-Sedan-Metz railroad, which the Germans knew to be their "life artery." Pershing's first success was in bringing the First Army so promptly from St. Mihiel to the Argonne line. Nine divisions were thrown in on September 26, the others coming in later, the some divisions remained on the line for three weeks. The first phase of the action ended October 31, up to which time American gains were small, but it was bitter fighting in woods, brush, and ravines, and it engaged thirty-six German divisions, which were, of course, unable to go to the help of the German armies being hammered by the French and British on the west. The attack delivered on the morning of November 1 "was the death-blow to the German Army." In the next six days "the enemy threw in fourteen fresh divisions, but all in vain." Fighting every foot of the way, our Army averaged an advance of three or four miles a day, and "for every mile the Germans gave way before them, they were yielding another mile to the British and French on the left." On November 2, the German official statement admitted that "the American attack had effected a break-through." On the 6th American soldiers entered Sedan. On the morning of the 11th the armistice was signed.

WILHELM TO THE BAR OF JUSTICE

THE INDICTMENT of William Hohenzollern, alias the Kaiser, by civilization, stands whether he abdicated or merely went through a pretense of abdication in order to trick the Allies, and if he returns to Germany, as some predict, the call for his punishment will only grow more imperative. As the promoter and chief plotter of the war that has drenched Europe and the seas of the world with blood, he is regarded with an abhorrence that now seems to have been turned to contempt because of his inglorious escape into Holland. No action of his long theatrical career has shown him up so miserably, for think of the former Emperor of Germany, who plotted mastery of the world, says the *Buffalo News*, fleeing from his people in the hour of defeat like the meanest criminal. He stands alone, this journal adds, as the lowest outlaw that has come into the world "since the record of a man has been kept." Yet there are editorial observers who can not overlook farcical aspects of the downfall of the All-Highest to the abyss of the All-Lowest. It is recalled that when the Kaiser and his accompanying generals were awaiting their train in Belgium, some Belgian bystanders asked sardonically whether the party was bound for Paris, and the fact of Mr. William Hohenzollern traveling somewhere in Holland strikes the *Detroit News* as so commonplace and ordinary one might take him for "a salesman for a toy-factory or a buyer for a nursery, seeking tulip-bulbs in the Netherlands," or then again, he might be traveling "for his health." Divers forms of vengeance are suggested by press observers, tho the *Toledo Blade* believes "few of the things that ought to be done to the Kaiser are humane enough for a civilized world to inflict on him." While not harboring any especial vindictiveness, the *Columbus Ohio State Journal* feels it would not be any more than even-handed justice to "take the entire Hohenzollern fortune and give it to the Belgians and place the family in such straitened circumstances that father's lace-curtain pants would have to be cut down for Willie." That bristling Lucifer, observes the *Seattle Post-Intelligencer*, he of the shining armor, the super-Hohenzollern of nine centuries of generous breeding, scurries into Holland, with who knows what visions of kingly heads on the block—Charles, Louis XVI., Nicholas, among the more notable, who had obstinate obsessions as to the divine right of kings. With him go variously, this journal reminds us, Ludwig of Bavaria, August of Saxony, and the small German king fry generally, all buried under the ruin of the House of Hohenzollern.

Altho the Kaiser was reported to have abdicated before his flight into Holland, the singular fact remains, as noted by the *New York Sun* and other journals, that no document bearing his sign manual renouncing his authority and power as German Emperor and King of Prussia has been given to the public in his behalf or in behalf of the people of Germany. *The Sun* proceeds:

"This curious omission is the more worthy of remark because the paper in which Charles of Austria remitted his authority has been published throughout the world.

"It can not be argued that an embargo on official utterances from Germany has prevented the communication of the text of Wilhelm's abdication to the belligerent and neutral peoples

The various channels for the dissemination of news from Berlin are notoriously free. The propagandists, headed by Herr Solf, find them ample for the circulation of their documents. Yet not one word of the supremely important writing by which the head of the Hohenzollern is declared to have quit his imperial and kingly offices has reached the deeply interested peoples of other nations.

"Why is the Wolff Bureau, official vehicle for the transmission of *Kultur* to the far ends of the earth, silent about this matter of gravest international import?"

While the authorities on international law are debating what to do with the ex-Kaiser, writes Mr. Judson C. Welliver, a Washington correspondent of the *New York Globe*, opinion in the capital is developing in line with the program that for a long time has been favored by many leaders in Europe, and he adds:

"Cabled reports say that the former Emperor was trying to get to the British lines and surrender himself when he was turned back by German revolutionaries and forced to enter Holland without permission or arrangement. If he had succeeded in giving himself to General Haig the British Government would have faced the question of trying him for murder, of which he has been indicted by British grand juries. I think two or three times, on the ground of responsibility for air-raid killings.

"Had he fallen into the custody of the British Army there would have been instant demand for procedure under the indictments; something that would have perplexed both the law officers of the crown and the politicians. With a general election impending, the disposal of the case might have become difficult because of its effect on the public mind.

"But with the Kaiser in a neutral country and in one that has no ambition to become his permanent refuge, it is possible for his case to await attention without prejudice. If the new German Government should ask his return to Germany, he doubtless would be sent, especially if there were general agreement among the Powers on such a course."

The *Richmond Virginian* protests that there can be for the "arch-criminal of the ages" no such oblivion as that into which his puppets Constantine, Ferdinand, and the rest have disappeared, and we hear from sundry quarters the serious warning that the Kaiser is still a menace. Whatever may be the immediate form of government in Germany, the *Charleston Mail* believes there is always the danger of a reaction, and we read:

"The Junkers will never be satisfied with any save the old régime. They will plot the return of the Kaiser, and the ex-Kaiser, who, in his day, has been a considerable plotter himself, may reciprocate.

"The mere abdication of the Kaiser does not necessarily end all the troubles for which he, and the system under which he ruled, stand sponsors."

The *Milwaukee Journal* suspects that the Kaiser, safe in Holland, may be watching for some juncture of affairs which he can turn to his own advantage, yet this daily thus analyzes the situation:

"Within Germany, he would have been helpless. Outside of Germany, he remains a menace. Possibly he may dream in his disordered mind of a Napoleonic 'return from Elba,' whereby he may be able to gather together the remnants of his power and hazard another throw of fortune. If so, he is tragically mistaken. Germany is through with him. These four years he has been on trial. Judgment has been given against him. He is an outlaw from justice."

William Hohenzollern must be tried for his high crimes against

CAMOUFLAGE—THE LATEST PHASE.

—From *The Westminster Gazette* (London).

civilization for two reasons, says the *St. Louis Globe-Democrat*. One is "firmly to establish the doctrine of personal responsibility of rulers and the other is to settle once for all, in a high tribunal on a full hearing of all the evidence, all the disputed questions as to responsibility for this war and for the barbarous practices that have distinguished it from other modern wars." The *St. Louis* paper claims that—

"This will be the only certain way, while witnesses are yet living and documents are available, for ascertaining the historical facts. We owe it to the future to uncover all things that are hidden, to winnow official statements of their half truths and falsehoods and get at the truth, the whole truth, and nothing but the truth. In this manner we shall render it impossible for special pleaders to present their conflicting theories to confuse the future."

"The late Kaiser is not the only German in high place who must be brought to trial, but his trial will surpass all others in historic interest and permanent value as an object-lesson."

While some journals, including the *New York Morning Telegraph*, believe the ex-Kaiser should be brought to the bar of justice with his chief associates and punished as any other criminals, others hold that no sentence, even death by hanging, can equal the punishment he must undergo by merely living. To quote the *St. Louis Star*:

"What can compare to the punishment which the chief war-lord's insane scheme brought upon himself? An outcast from the country of his birth, the country of his fathers, the country in which he was the revered monarch for thirty-one years. A fugitive! A soul reeking with blood, with the agonized cries of women and babies! Brought face to face with defeat, disowned by his people, hooted by all mankind! Death would not compare to that punishment."

"Haunted by a shattered dream, menaced by a guilty soul, looking upon the ruins of his frenzied folly, despised, disgraced! If he has a conscience at all (and there is a time in the lives of all men when conscience stalks in unbid) William Hohenzollern to-day is suffering a punishment beyond the power of mankind to impose."

Nevertheless, it is recalled by the *Columbus Dispatch* that some years ago the British courts indicted William Hohen-

perfectly legal way. So we predict that William Hohenzollern will be tried in England, and hanged."

The *Hartford Courant* would have Mr. Hohenzollern live, and, if possible, make him earn his living, and it expresses the grim wish that his days be long in order that he "may have time to think of the hell which he turned loose upon earth."

ANXIOUS MOMENTS FOR A WELL-KNOWN CITIZEN.
—Kirby in the *New York World*.

Whatever is done with William, remarks the *Baltimore Sun*, there are other supercriminals who must not escape if justice is to be done.

"The instigators and perpetrators of U-boat infamies, the murderers of Edith Cavell and Captain Fryatt, the officers who permitted crucifixion of prisoners and mangling of children, if they can be identified, and many other such, including all those responsible for throwing gas-shells into a French town full of civilians in the closing hours of hostilities. It would be unpardonable if any of these should be allowed to escape swift and terrible punishment."

As a caution against a too hasty forgetfulness of what Germany has been during the past four years, the *Sioux Falls Press* observes:

"It was not consciousness that the Emperor had made Germany the foulest criminal nation that ever infested this troubled earth, it was not remorse, it was not a revulsion of sentiment against the horrid felonies and hideous doctrines of German *Kultur* as exemplified by Wilhelm II.—no reformation of a race prompted the demand that the Emperor abdicate. The Prussian All-Highest is kicked out in disgrace because he failed to accomplish the thing his hoch-hoehing goose-steppers expected of him. He failed to win the war, he failed to annex the territory of other and better peoples, he failed to spread the coarse tenets of *Kultur* to the uttermost corners of the earth. With extravagant promise he led his people into an enterprise which brought upon their nation the unutterable detestation of all the civilized world—and brought them no loot. They could forgive the disgrace and the degradation were they in possession of loot; they have shown that a thousand times by glorifying, deifying, the fiendish crimes committed by the Kaiser and his brutal minions. Plaintively they have whined a protest against the universal contempt that has been heaped upon them, and protest not to understand it; but not once, so far as has ever become known in this country, has any important element of the German people yet rebelled against the frightful immorality of German practice and the German standard of thought, not once has any considerable faction in that now unhappy land sought to rid the German race of the rottenness in the Potsdam palace on the ground that the royal family had done a wrong against peaceful civilization."

"DROPPING THE PILOT."
—Clubb in the *Rochester Herald*.

zollern for murder, the crime consisting of having ordered the sinking of the *Lusitania*, and we read:

"Our prediction is that England will hang William Hohenzollern, late Emperor of Germany. And the prediction is based upon a knowledge of England's record for meting out justice to criminals. She is the one nation that does not forget, nor forgive. Also she has a habit of going about things in a

GERMANY'S "NEW FREEDOM."

THE PRESIDENT AT THE PEACE TABLE

THE SEAT AT THE PEACE TABLE reserved for President Wilson is heartily offered by the Allied Governments, editorial observers admit, but some of them urge strongly that he should have declined the invitation, on the idea that he can do no more at Versailles, or wherever the Peace Conference may be held, than he can do in Washington through the medium of this Government's peace representatives. Moreover, by going abroad he will be violating the almost unbroken precedent that no President should leave United States soil and he will be leaving this country at a time when home problems as vital and complex as any across the Atlantic will be engaging Congress. Fear is expressed in some quarters also that the traditional Wilsonian idealism may be too strongly injected into the consultations of the conferees. Another apprehension, felt by some journals, is stated by the *Boston Herald* (Ind. Rep.) in these words: "With our President at the Peace Conference, the world would naturally believe we expected to assume a leadership in the reconstruction of the map, and that, we think, we have no right to ask for ourselves or for the chosen head of our Republic." This is a time for "a certain national modesty," the *Boston* daily points out, reminding us that in proportion to participating populations, Great Britain has had fifty boys killed where we have lost one and France has suffered at a higher ratio. And because our services were of value in turning the scale, "we ought not to arrogate to ourselves a dominance of the situation." In the statement from the White House announcing President Wilson's intention to attend the Peace Conference, we read the following:

"The President expects to sail for France immediately after the opening of the regular session of Congress, for the purpose of taking part in the discussion and settlement of the main features of the treaty of peace. It is not likely that it will be possible for him to remain throughout the sessions of the formal Peace Conference, but his presence at the outset is necessary in order to obviate the manifest disadvantages of discussion by cable in determining the greater outlines of the final treaty about which he must necessarily be consulted. He will, of course, be accompanied by delegates who will sit as the representatives of the United States throughout the Conference."

In the view of the *New York Globe* (Rep.), when the President

returns, leaving behind the formal peace delegation, the American representatives will be much dwarfed and what the President has said may be quoted to them with varying interpretations. In the confusion their weight may be less, and *The Globe* adds:

"In another respect the President's appearance at Versailles and on European rostrums will scarcely be welcome. If David Lawrence, his faithful Rosier, is to be believed, the President entertains ideas akin to those entertained by the British Labor party and the minority of French Socialists. If this is so, his advocacy of them in Europe will necessarily savor of intrusion into delicate domestic controversies concerning which all peoples are sensitive."

Some journals, including the *New York Times* (Ind. Dem.), wonder whether the President has "so little confidence in his judgment in the choice of men for these high errands that he must needs go himself," and the *New York World* (Dem.) says:

"The evident purpose is to place himself in a position where his views can the more readily be impressed upon the Conference, whether in the shaping of its peace treaties or in forwarding his own cherished ideal of a league of nations."

"But where in Europe can there be found a rostrum for such expression equal to that of the Hall of the House at Washington, in the immediate presence of the representatives of 100,000,000 people?"

But among dailies that believe the President ought to attend the Conference is the *Baltimore Sun* (Ind. Dem.), which observes:

"It now appears that the proposal that President Wilson should attend the Peace Conference contemplates no extended stay, but merely attendance at the opening or a few of the more important sessions. In such an adventure we can see no possibilities of great harm and tremendous possibilities of good. The President stands in a peculiar way for a peace of justice as compared with a peace of bargaining. There is no other living statesman whose words would carry so much weight with the people of every country who yearn for such a peace."

While it is a bold decision that Mr. Wilson makes to sit at the peace table, remarks the *Springfield Republican* (Ind.), even those who for widely different reasons have doubted the wisdom of the step will perhaps agree that he is in a better position than the public to measure the urgency of the need for it, and this journal adds:

"For the very reason that the United States stands somewhat

apart, with no direct concern in many of the important concrete issues to be settled, its influence for a right settlement must be made chiefly by winning acceptance for right general propositions.

"If soundly laid down, clearly defined and accepted by all in the same sense, general principles go far toward the settlement of details; if there is no such clear and cordial preliminary understanding the best thought-out formulas help little. It is quite conceivable that a frank exchange of opinion at the outset might not merely hasten the desired settlement, but lift the entire proceedings to a higher level. Tho Mr. Wilson has been accused of 'note-writing,' nobody has a keener sense of the value of the spoken word, as was shown when he amazed Congress by addressing it instead of sending it a voluminous message."

Among other journals that approve the President's decision are the *Brooklyn Eagle* (Ind. Dem.) and *The Christian Science Monitor* (Ind.), which reminds us that almost a year ago it discuss the presence of Mr. Wilson at the Peace Conference "as something more than a possibility, as a practical inevitability," and it now adds:

A FEW PEACE POINTERS

Now the war's over our troubles begin.—*Chicago Tribune*.

The finest thing about a war is the end of it.—*Detroit News*.

You may swallow your peach-stones now.—*Chicago Tribune*.

Won't somebody tell the profiteers the war is over?—*Detroit Journal*.

RETRIBUTION for the Germans may take the form of supplying them with American food at present prices.—*Brooklyn Eagle*.

THE Kaiser's greatest needs right now are an officiating clergyman and some paid-up life-insurance.—*Council Bluffs Nonpareil*.

THAT boasted German efficiency, it now develops, could do everything but get results.—*Detroit Free Press*.

THE "work or flight order" found the Clown Prince all ready.—*Columbia Record*.

WE have now to supply the one omission in our war-machine—brakes.—*Boston Herald*.

THE world has at last been made safe for churches and hospitals.—*Washington Star*.

NOW, is there any other gentleman in the audience who has a hankering for world-domination?—*Columbus Dispatch*.

WE surmise that the cooties will regret to learn that the war is over. A pleasant time was had by them.—*Columbia Record*.

HOSTILITIES of the world-war ceased at the eleventh hour on the eleventh day of the eleventh month of the year.—*New York Evening Post*.

EVERY German family should be furnished with an appetizing list of food-cargoes sent to the bottom by U-boats.—*Wall Street Journal*.

THE Huns think the armistice terms are harsh. The Hun, of course, is noted for the gentleness of his peace conditions.—*Detroit Free Press*.

THE trouble with this war-game was that it ran into extra innings and Germany had no relief pitcher or pinch-hitter.—*Rochester Post-Express*.

REPORTS that the Hohenzollern family managed to salvage \$98,000,000 out of the wreck won't buoy the spirits of those left to pay off the indemnity.—*Newark News*.

"The broad questions of policy, laid down in his own fourteen points, may be and will be rapidly settled. When that has been accomplished none of the principal plenipotentiaries will remain, month after month, while the question is settled whether this village or that village shall remain on this side or that side of the new frontier. The British plenipotentiaries will as certainly return to London, long before all these details are fixed, as the Italians will return to Rome, and there will be nothing whatever to prevent Mr. Wilson's ship from steering for New York within a quite reasonable time.

"Even, however, if there should be some slight inconvenience suffered through the President's departure from Washington, it is nothing to the inconvenience which would be suffered by his absence from the Conference. Not even Colonel House nor Mr. Lansing could speak with his authority at the meeting of the Conference. Nor would the democracies of Europe pay quite the same attention to their utterances as to those of the President of the Republic. The fact is that Mr. Wilson has made for himself a place in the regard of the democracies of Europe which no other man in the United States could possibly hope to hold."

It was quite a war while it lasted.—*Detroit News*.

THE Kaiser is welcome in no man's land.—*Columbia Record*.

THE Italian "boot" proved that it had the kick.—*Savannah News*.

BIG BILL has quit Germany, but a big bill remains.—*Brooklyn Eagle*.

HOHENZOLLERN dynasty is "versenkt," but not "spurious."—*Wall Street Journal*.

CAN it be possible that the Czechs-Slovaks are to get home rule ahead of the Emerald Isle?—*New York Morning Telegraph*.

GERMANY is nevertheless ahead of the game, tho it has lost the whole world. ~~It~~ has gained its own soul.—*Houston Post*.

GAVRILO PRINZIP is dead, but his bullet goes on knocking off crowns.—*New York Sun*.

WE may now have to march in and make Germany safe for the Germans.—*Columbia State*.

NEEDED: One new excuse. We can't go on blaming everything on the war.—*Watertown Standard*.

THE prediction is that army cooks who get safely back home will experience no difficulty in finding a wife.—*Knexville Journal and Tribune*.

WHEN news came from Holland that the Kaiser had been interned many hoped that the word had been mis-spelled.—*St. Louis Star*.

GERMANY can not expand without colonies, cries Dr. Solf. Well, who wants the accursed country to expand?—*Kingston (New York) Whig*.

WILHELM wanted to go down in history as the greatest of the great. He has succeeded. But the greatest of the great what?—*Knexville Journal and Tribune*.

ANYHOW, the men between thirty-seven and forty-six who laboriously prepared to answer all the queries in the questionnaire learned a lot about themselves.—*Boston Globe*.

SEEKING as how Bill has been crying for a place in the sun ever since Cleveland's first term, we'd like to put in a good word for him so he'll get a sunny cell.—*Columbia Record*.

SUPPOSE the Kaiser will now be referred to as "pretender" to the throne of Prussia. The rôle will come easy to him. He has been a pretender all his life.—*New York Morning Telegraph*.

THE new Hun régime declares that the German Republic will be held open for all foreign peoples that may wish to join. No great rush to get in has yet been noticed.—*Cleveland Press*.

THE German naval officer who regretted that the German Fleet had to be surrendered without being beaten unknowingly express the sentiments of every English and American sailor.—*New York Sun*.

"WHAT enemies the Britons are! Ye gods! They are murderous cut-throats, thugs, murderers, thieves, putrid decadents, descendants of criminals, the sediment of the scum of Europe."—*Rheinische Westfälische Zeitung*. But otherwise, of course, we are all right.—*Cassell's Saturday Review (London)*.

"THERE IS A DESTINY THAT SHAPES OUR ENDS."

—Morris for the George Matthew Adams Service.

A FEW SUPPLEMENTARY PEACE PROPOSITIONS TO THE PRESIDENT'S FOURTEEN

XV. Germany must abandon all its claims to Shakespeare and publicly apologize to his memory for having asserted that he was a German.

XVI. Unless otherwise disposed of, the Crown Prince must grow a full beard, wear smoked glasses, and take other steps that may be suggested later to disguise a mug of which the world has become very tired.

XVII. Hindenburg shall be required to spend the rest of his days pulling the nails out of that wooden statue of him in Berlin for use in the rebuilding of Belgium.

XVIII. The Turks shall be forbidden to live in Europe, Asia, Africa, South America, or Australia. They can use their own judgment about attempting to settle in North America.—*Syracuse Herald*.

FOREIGN - COMMENT

British official photograph. Copyrighted by Underwood & Underwood, New York.

BRITISH TOMMIES CHEERING THEIR VICTORY AT ST. QUENTIN.

These are members of a South Stafford and North Stafford regiment who gained their objective by swimming the St. Quentin Canal with life-belts. Aside from this, they captured two bridges across the canal, which enabled them to move their guns. This was at one time a part of the Hindenburg line, which crumbled under the "hammer-blows" which boys like these delivered.

THE COMING BRITISH ELECTIONS

A MOST INTERESTING ELECTION, upon the haziest issues, is now about to be fought in Britain. The London papers tell us that never before in the history of Parliament have the old-time political parties been in such a chaotic condition, and, to cap all, they remind us that Mr. Lloyd George, the Premier, is a man without a party. No one quite seems to know where the Liberal party, led by Mr. Asquith, stands, tho the Unionists, led by Mr. Bonar Law, are more or less supporters of Mr. Lloyd George. The Labor party, up to the present rather wavering allies of the Premier, will, say most of the prophets, go to the poll in opposition in the hope of securing a Labor Ministry. Whatever happens, we are told, the next House of Commons will not present the exceptional features of the last. In 1910, when the present Parliament was elected, the Liberals secured 272 members and their Conservative opponents came back with exactly the same number, the result being that the sixty-five Irish Nationalist members, had the whip-hand of Parliament, which they used to force the Liberals to pass the Home-Rule Bill. This time entirely new conditions prevail. The rise of Sinn Fein in Ireland, in the opinion of the strongly Home-Rule Manchester *Guardian*, spells defeat for the Nationalists, who will be replaced in most instances by Sinn-Fein members who will never appear at Westminster. Another interesting feature results from the Representation of the People's Act of 1918, which not only largely increases the electorate, but permits women to vote for the first time. Prior to the act about 8,000,000 males were qualified to vote. Now about 10,000,000 men and 6,000,000 women will go to the polls, being represented by one member for 70,000 of the population in Great Britain and one member for every 43,000 in Ireland. What the outcome will be no one can predict. But journals of every variety of political shade

admit that there is no direct issue to put before the country, and many are of the opinion a new party will come to birth during the election campaign. The Tory London *Saturday Review* puts the situation thus:

"The next election will be a repetition on a large scale of the Khaki election of 1900. The country will be asked to support the Government in bringing the war to a successful conclusion. This will be the Central party. . . . It will sweep the country, and the greater part of its majority will be contributed by voters who in normal times would be described as Conservative. . . . There will be five or six parties, or factions, who will run candidates in opposition to the Ministerialists, and, in the confusion, many of them will be returned. The most respectable of the opponent factions will be the remnant of the Liberal party, led by Mr. Asquith, and his lieutenants, Messrs. Herbert Samuel and Runciman, a party still strong with the strength of the non-conformist conscience and with the adherence of free trade. In the Bolshevik attempt to rob the upper and middle classes which will follow the end of the war, most of the old Liberals will join the Central or Conservative party. The number of this party returned at the ensuing polls will largely depend on Mr. Asquith's rhetorical success and on the use he makes of the free-trade policy.

"The Labor party will be split into three sections—the old Trade Unionists, led by Messrs. Barnes and Hodge, possibly supported by Mr. Havelock Wilson and the Sailors' and Firemen's Union; the Internationalists, or Bolsheviks, led by Mr. Henderson; and that concourse of mutually repulsive atoms, sometimes called the Independent Labor party, and made up of the Union of Democratic Control, the Fabians, and Messrs. Ramsay MacDonald and Snowden."

The frank acknowledgment, by the Unionist and Lloyd George papers, that the election will be "Khaki" moves the editor of the Liberal London *Daily News*—a bitter opponent of Lloyd George—to fury. He writes:

"So far as can be ascertained, no one, either inside or outside

the Government, wants an election except Mr. Lloyd George. It is claimed by his inspired voices in the press that he wants it in order that he may have a mandate for the Peace Conference. But a mandate can not be given without an issue being raised. Is it the intention to present the country with a peace policy and ask it to vote on that? Nothing is less likely. There is no peace policy, and quite recently Mr. Bonar Law declared that it was impossible to discuss the subject either in the House of Commons 'or in any other House.' Is it conceivable that a subject which can not be mentioned in Parliament can be suddenly presented to the country as the issue in the midst of a rough-and-tumble election? The suggestion is plainly dishonest. No one knows what the Government policy is—not even the Government. For there is no policy. . . .

"In these circumstances we know that the election would not turn on the peace policy or the future. It would turn on khaki. It would be an election for 'catching flats'—for obtaining a blank check for five years on a wave of momentary feeling. 'I have prepared my election address,' said a supporter of the Government the other day. 'It is brief. This is it: "I appeal to you for your support on behalf of the Government that has won the war."' An election fought on those lines, and at this time it would be fought on no other, would be an insult to the nation."

The Westminster Gazette, another Liberal paper generally reported to be the mouthpiece of Mr. Asquith, thinks that the election should not be held, altho it admits that under the Constitution a new Parliament is long overdue: *

"There will be a large number of three-cornered contests in which anything may happen, and a great many others in which there will be none but personal issues between candidates protesting that their policy is identical. A House so elected can not have any permanent authority or be more than the child of emergency. The real motive—as is perfectly well known to every one who can read large print and remembers the election of 1900—is not to regularize the constitutional position, but to catch the favorable tide of military success and turn it to account for the people in power. . . .

"When the peace comes and the new issues are straightened out, it will be necessary at once to hold another election, and any attempt to strain the authority of a Parliament elected in the present exceptional circumstances would certainly land us in most serious trouble."

The Parliamentary correspondent of *The Westminster Gazette* tells us that—

"The Prime Minister is to go to the country with the cry of 'Vote for the man who won the war.' He is thus to get a free hand in the peace terms, and I am assured that, unless his Conservative friends prevent him, Mr. Lloyd George will put

forward a social program which is to prove very alluring to the working classes. In this way Labor discontent is to be converted into votes for the Coalition, which, it is hoped, will sail into office as the new and really popular 'National party.'"

The *Conservative Evening Standard* thinks that this is a golden moment to form a new party—under Lloyd George, who is now as popular with the Tories as he was execrated ten years ago:

"Our younger statesmen, both Conservative, Liberal, and Labor, with their eyes on the present and the future rather than on the past, will have a great opportunity presented to them to evolve from the Coalition a new Center or National party free from the prejudices which had grown up during the Victorian era till they became second nature to many misguided men."

The Socialist *London New Statesman* sees trouble ahead:

"An election, it is generally supposed, would replace the Nationalist majority by a Sinn-Fein majority. How would that help us at the Peace Conference? And there is the special position of Labor. Mr. Lloyd George's cue, it would appear, is to bring a general charge of unpatriotism against the Labor party chiefs. Already one of his most intimate organs refers regularly to Mr. Henderson as 'the Bolshevik leader.' What effect can such misrepresentations of Labor's prowar majority have but to strengthen the hands of its antiwar minority? It would be the story of the Redmonites and Sinn Fein over again. And suppose Mr. Lloyd George's chicanery triumphed and the responsible leaders of Labor were prostrated, does any one suppose that the millions of trade-unionists in the workshops would take it lying down? Obviously the strike problem would assume a new sharpness, in proportion as Labor felt the strike-weapon to be the only weapon left to it. . . .

"That Mr. Lloyd George has some new and great qualities as a Premier only a churl would deny. His defect is a habit of keeping his action and utterance on a lower moral level than that of any of his great predecessors. How far he is or is not chained to this level and unable to shake clear of it posterity will judge, especially from his action now. It is not parties alone that a khaki election may divide off into sheep and goats."

So far no election slogan has been invented by any party, but in a speech to his Liberal followers Lloyd George thus defined the issue on which he will go to the polls on December 14:

"The mandate of this Government at the forthcoming election will mean that the British delegation to the Peace Conference will be in favor of a just peace."

This looks like the revival of Disraeli's slogan at the election of 1880, after the treaty of Berlin, of "Peace with Honor."

ONE OF GERMANY'S CRIMES AGAINST HUMANITY.

A hospital bombed by the Huns. Fourteen large Red-Cross signs, distinctly painted, refuted any claim of a mistake. After killing and maiming our helpless wounded, the Huns now ask, in the name of "humanity," that we grant them a "magnanimous" peace.

GERMANY PLAYING THE "BABY ACT"

PEOPLE DROPT DOWN DEAD in the streets from starvation in Poland during the long years of war-agony hatched by Germany, without one word of pity so far as we could discover in the German papers reaching this office. Armenians, too, died like flies from mere thirst while portly German guards kept the Moslem Turks from giving water to them. Yet not a German word of regret was heard in the homeland, even when the German missionaries in Turkey wrote

THE LAST LINE OF DEFENSE

—Passing Show (London)

home a stinging rebuke to their own Government that would raise blisters on any less hardened psychology. But, to use a naive Teutonic expression, "that is war." When the fighting ended, no doubt the air would be filled with pathetic appeals for food for the starving Poles, Armenians, Servians, and the 2,000,000 Russian prisoners. So one might think. Thus far, however, the appeals coming from Germany seem to be entirely and absolutely for aid for the oppressors, and not one word for the oppressed. Indications in the news are that food will be sent, but purely to prevent the rise of Bolshevism that may infect other lands. Since the armistice was signed, we have been assailed by a constant series of notes, wireless messages, and appeals to women telling us that the poor dear Germans are starving, and sending heart-rending appeals for food. On this point the *London Saturday Review* has a word to say which at the moment is singularly apt:

"The Germans must either bully or cringe to somebody—it is their nature to." They thought that they had got hold of 'a softy' in President Wilson, and so they began to beseech him with compliments as their protector, the savior of the world, who was going to fight with them for the freedom of the seas and the freedom of commerce. But the Puritan professor, who happens just now to be the absolute ruler of a hundred million of the richest and most powerful nation in the world, was not to be caught by the chaff of Prince Max or Dr. Solf, being quite aware that there are some animals of whom, as Pope said,

"It is the slaver kills, and not the bite."

All the sentimentalists, all the pacifists, all the concealed pro-

Germans, are now reminding us that in the hour of victory it is our duty to be "magnanimous." The German sympathizers are letting no grass grow under their feet. On the day after the armistice was signed, the *New-Yorker Staats-Zeitung* wrote:

"The end of active hostilities finds Germany in a state of extreme exhaustion and internal unrest such as is inevitable after the radical governmental changes. It seems remarkable, however, in these circumstances, that so far the radical upheaval has not manifested itself in bloody excesses.

"This gives rise to the hope that the German nation in setting its house in order will avoid anarchy; a comparatively calm evolution is, of course, to be heartily wished for in the interests of the German people themselves.

"In its present condition the German nation needs sympathetic support from all sides. It needs the material and moral aid of the rest of the world in order to get back on its feet and reorganize its national existence under new conditions.

"In this dark and fateful hour, the German nation needs the sympathy of the world, and particularly the United States, and this sympathy will not be withheld if the reorganization goes on in an orderly manner."

Another New York German paper makes a strong bid for our sympathy for the poor Germans, so distressed with the aftermath of war. The *New-Yorker Herald* says:

"The great upheaval in Germany, according to all the news at hand, has been as thorough as could possibly be imagined. The mood of the masses for a political change was so overwhelming and manifested itself with such force and directness that the classes which hitherto ruled and their representatives could not even dream of offering resistance. . . .

"We express the view weeks ago that a revolution in Germany would not bring about such chaotic conditions as we saw arise in Russia. Owing to its organizing power and its love of order, the German nation will promptly overcome disorder. The need of peace and bread, that was what made the force of the German revolution so irresistible. The masses in the Allied countries will now be able to concentrate upon their needs."

Stephane Lauzanne, the editor of the *Paris Motin*—a paper which above all others has stimulated the French morale, even in the darkest days—bids us beware of all this "sob stuff." He reminds us that these "good Germans" who are now pitifully extending their empty plates toward us are the same "good Germans" who cheered the torpedoing of the *Lusitania*, with its freight of innocent women and children, who permitted the sinking of hospital-ships without "batting an eyelid," who looked on calmly and even approvingly while their sons ravished and raped and pillaged in defenseless Belgium. He proceeds:

"It is ridiculous to speak of the 'good German people'—the same German people who shouted with glee when the *Lusitania* was sunk and little American children drowned. The German Socialists are noisy now; they were silent when Belgium was invaded, when the Brest-Litovsk treaty was signed. Let them be silent now. When the American boys arrived in Chateau-Thierry they found packages wrapt up and addressed to the 'good people of Germany'—packages which contained things stolen from our homes in the French city—there were letters found also—letters from 'the good people of Germany'—expressing gratitude for similar 'presents' sent them in the past. 'There are no 'good German people' except those that are dead."

Mr. Lauzanne reminds us that "there is no magic in the word democracy," and that because a people assume, more or less sincerely, a democratic form of government, they do not change their nature overnight. He reminds us that the hungry German appealing for our aid to-day is the same hectoring German who has consistently despised us in the past. How far he is right can be seen from what the *Frankfurter Zeitung* had to say a few short weeks ago when it wrote:

"We are not criminals in chains who need to do penance in sackcloth and ashes. We want to reach an understanding and compensate differences as equals among equals, but we would rather shed the last drop of our blood than make any disgraceful submission."

The *London Times* quite solemnly bids America to beware of

the Germans, who, it says, "are attempting to maneuver President Wilson into the position of trustee for Germany," and it goes on to warn us to beware of magnanimity both now and at the Peace Conference. It continues:

"President Wilson is unlikely to be the victim of Prussian guile. The main interest of the German people, as distinguished from the interests of those who have made its name a byword, is that out of this conflict shall come a peace just and lasting. Such a peace can not be the work of Germany or of the German people, who have shown no sense of justice, or mercy, or uprightness, but have consistently measured morality by the standard of ruthless force. The peace must be the work of the Allied peoples and of the people of the United States, whose governments have now to face and to discharge a task of immeasurable responsibility in a spirit of trusteeship for the future of mankind.

"Whatever intercourse may be necessary with enemy representatives must be strictly limited to the practical application of negotiable details. The indisputable terms of a just peace must be agreed upon by the Allies and the United States in advance, and accepted unchanged by the enemy."

THE SWISS CENTER OF BOLSHEVISM

PERSISTENT PROPAGANDA of the Bolshevik gospel has been undertaken by Lenin and Trotsky, whose desire to convert the world to their way of thinking is almost religious in its intense fervor. Switzerland they have selected as an ideal center for the dissemination of their topsyturvy doctrines, and this excites the apprehension of the *Journal de Genève*, which devoted several columns for four days to the "menace." The *London New Europe* has carefully digested this mass of material and tells us that "it is quite clear that Lenin's intention was to make Switzerland the source of discontent and unrest expressed in extreme revolutionary forms, and from there spread his doctrines into France, Italy, Germany, and Austria." How Lenin hopes to stir up the Swiss *The New Europe* describes:

"The first place in Lenin's program is occupied by a recommendation that, as far as possible, Switzerland shall be denationalized. He wishes to see brought about, he says, a close union between Swiss workers and workers of foreign nationality for common action against all forms of *Socialpatriotism*. It will be necessary, in order that Lenin's program shall be carried out, for the Socialist party of Switzerland to be captured by the extreme revolutionary section.

"But Lenin's interference with Swiss domestic policy goes even further. One of the most hotly contested proposals put forward during the war was the Socialist popular initiative for a direct Federal tax. If this had been carried, a decisive blow, it was thought, would have been dealt at the Swiss cantonal system and the federal constitution. . . .

"Wherever a strike movement has manifested itself, from just causes or not, there Lenin's followers are to direct their attention and turn the tide of discontent into the channel of revolutionary action. These are Lenin's words on the subject: 'The best means of dragging concessions from the *bourgeoisie* is not that of transactions or arrangements touching their interests or their prejudices, but the organization and the preparation of the revolutionary struggle of the masses against the *bourgeoisie*. Thus we may be certain that the more wide-spread our propaganda the wider will be the extent of the public which we may be able to persuade of the necessity for this progressive tax, and the greater will be the anxiety of the *bourgeoisie* to make concessions, and we shall profit by each one of these concessions, be it never so small, to extend and strengthen our struggle for the integral expropriation of the *bourgeoisie*.'

"Finally, Lenin urges the inculcation into the mind of the Swiss people of the doctrines of antimilitarism. In his view the Swiss Army and all national armies exist not for the purpose of their country's defense or the maintenance of its neutrality, but for the sole benefit of the *bourgeoisie*. At no time are Socialists justified in giving their support to votes of credit for military purposes, and even if Switzerland were dragged into the war Socialists would be expected to oppose with all their energy the principle of national defense. Only in one instance could support for a war by Socialists be justified, namely, when

the country has been converted into a Socialist state, and the armies are to be used for the defense of the proletariat against the *bourgeoisie*.

"Lenin would not have Socialists refuse to serve in the Army. It is their duty to acquaint themselves with the use of arms, so as to be able to turn them against the *bourgeoisie* when the proper moment arrives."

A cable dispatch from Bern draws attention to the danger that Lenin's activities in Switzerland bring to Anglo-Saxondom:

"Many will think the Bolshevik alarm is German propaganda trying to frighten England from America, but one can not too

THE LIBERATORS.

FIRST BOLSHEVIK—"Let me see! we've made an end of law, credit, treaties, the Army and the Navy. Is there anything else to abolish?"

SECOND BOLSHEVIK—"What about war?"

FIRST BOLSHEVIK—"Good! And peace, too. Away with both of 'em!"

—*Punch* (London).

strongly insist that Bolshevism must not be ridiculed, but taken very seriously. Already such Swiss bookshops and kiosks as Germany controls display books, pamphlets, and periodicals by Lenin, Trotsky, and other Bolshevik leaders and writers. They are published in German, Italian, French, and English.

"The Bolsheviks have their own printing-works near Bern and 10,000,000 rubles are admitted to have been placed in the Swiss Bank to the credit of their propaganda."

On the other hand, the Swiss correspondent of the *London Morning Post* considers that there is much cry over little wool, and that all this Bolshevik excitement is artificially engineered by German agents in an endeavor to temper the wind to their own shorn lamb. He writes:

"We are repeatedly told that if the Allies insist upon too hard terms the result will be the outbreak of Bolshevism in Germany, which will involve, first, neutrals and then the whole world. This warning is particularly well calculated to appeal to the peace-loving Swiss, altho unfortunately for the argument such manifestations of disorder as have occurred in Switzerland have been deliberately engineered by German agents. Such Bolshevik tendencies as have manifested themselves in Switzerland appear to me entirely alien in character, in so far as they are not, on the one hand, outbreaks of youthful indiscipline on the part of larrikins corrupted by German influence, and, on the other, an expression of impatience on the part of the Swiss at the manner in which it is considered that the full powers entrusted to the Federal Council have occasionally been exercised."

SCIENCE - AND - INVENTION

From the *Evening Illustrating Review*.

THE MAN AND THE MACHINE.

One of the great Caproni planes, monsters of the air, that are the latest achievement of the impossible.

HOW AVIATION HAS DONE THE IMPOSSIBLE

INVENTION IS LARGELY the achievement of the impossible—or of that which was always considered impossible until somebody did it. This has been especially true of aviation. The airplane itself was an impossibility until it actually flew, and almost every improvement on the original machine has been voted an impossibility until it was proved a success. The great Caproni planes—aerial cruisers—are the latest practical contradictions of asserted impossibility. Henry Woodhouse, vice-president of the Aerial League of America, writing in *The American Machinist* (New York, October 31), quotes the following dictum as everywhere accepted until very recently, and as having greatly delayed the building of large planes: "Airplanes twice or three times the size of the present ones are impossible because as the size of the wings are doubled the thickness of the wings must also be doubled, and you soon reach the point where the airplane can only lift its wings." He goes on:

"As late as March, 1917, when Admiral Fiske urged the building of large torpedo planes he was begged by 'experts' not to risk his wonderful reputation by urging something mechanically impossible. Immediately after, the country was thrilled with the cross-country flights made by Captain Resnati with a Caproni biplane, which was sent to the United States with a larger Caproni triplane by the Italian Government to demonstrate the value of large airplanes. One of Captain Resnati's flights took him to Washington, where the machine was held on exhibition for a number of days. While it was on exhibition Admiral Fiske went to see it and received an offer from the Italian authorities to use the machine to conduct his experiments in launching torpedoes.

"Those who said large airplanes were impossible had failed to take into consideration the fact that the wing of the average-sized airplane weighs a fraction over one pound per square foot, and is supposed to lift close to ten pounds per square foot at the normal lift-drift pressure, so that if the thickness and weight of the wing should even be trebled the argument advanced against the large machine would still be fallacious. But as a matter of fact, in judging large airplanes it is absolutely necessary to consider that on the whole they are more efficient than small

ones, because they lend themselves to many more improvements in wing curves, stream-line members, and mountings than do small machines. It may also be considered that there is a rather great saving in weight in that it is not necessary to have three sets of instruments and control wheels because the machine is three times as large as the average-sized machine, nor is it necessary to increase the weight of the engine mountings by three or four times because the machine is three or four times larger than the average airplane.

"I recall how Prof. Simon Newcomb in 1902 'proved beyond question' that it would be 'impossible' for a heavier-than-air machine to rise from the ground.

"After the Wright brothers made their first flight on December 17, 1903, and for five years after, people all over the world disbelieved that an airplane could actually fly. Some admitted that it could rise, like a skipping-stone, but would be unable to turn in the air. The reports of the Wrights' circular flights before 1908 were not believed, and the circle of Henri Farman in France in 1907 was held as being a stunt. Then in 1908, Wilbur Wright proved beyond doubt in his flights in France that circling was part of flying. He took the word 'impossible' out of the aerial dictionary.

"Only six years ago, when the Aero Club of America offered to order several airplanes to compete for the International Aviation Trophy and required that the airplane make a speed of one hundred miles an hour, it was criticized very generally by people who held that airplanes could only be used for scouting, and that for that purpose a speed of from fifty to sixty miles an hour was best. They held that beyond that speed the observer could not get a good view of what was going on below him. When the Aero Club of America authorities answered that speed would be one of the principal factors in military airplanes, because they would be employed in fighting and for bomb-dropping, the so-called authorities then asked, 'What will you fight with—your fists?' The Aero Club authorities stated that machine guns and bombs would be used, and the technical obstructionists presented mathematical computations to show that the recoil of a gun and the dropping of a bomb weighing more than fifty pounds would upset the airplane. We know now that it does not, but many people believed them.

"Those who express the possibility of equipping airplanes with two or more motors were considered visionary, and again mathematical computations were presented to show first that a machine equipped with two motors would be unable to lift its

own weight, and, secondly, that if one motor stopt, the other would make the machine spin around and, presumably, disaster would follow.

"The United States is indebted to Caproni and his very able representatives, Capt. Silvio Resnati, Capt. Ugo d'Annunzio, and Leopoldo Belloni, for demonstrating the value of the large machines and proving that large machines do not grow old while they are being manufactured, as is often the case with small machines — because large machines can be used for night-bombing, when they cannot be seen by the enemy, and therefore do not have to fight the enemy's combat airplanes or to continually dodge the fire of anti-aircraft batteries. The only time that the latter has to be done is when the bombing begins and the enemy's search-lights search the sky for the bombing airplanes and the anti-aircraft batteries try to build a barrage fire to make the progress of the bombers difficult."

NEAR-GLASS

SUBSTITUTES for glass are in demand, owing to the shortage of the real thing due to the exigencies of the war. Even in this country it has been felt by milkmen, manufacturers of bottled goods, and even the thrifty housewife, trying to do her bit by

preserving fruits and vegetables. In France, where heavy bombardment has been going on for four years, the losses in window-panes and glassware of all kinds are many times as great. In those regained areas where the work of reconstruction has already begun, many ingenious substitutes are being proposed. Says a writer in *The Scientific American Supplement* (New York, November 2):

"One admirable suggestion is that window space shall be divided by bars of lead, wood, or other suitable material into small partitions as was the common practise among our ancestors, to which the diamond-shaped panes in old houses bear witness. Large panes which have been cracked can be cut up to fill these smaller spaces. Another advantage is that small panes can be shipped with much less expensive packing and with far less loss by breakage than the large sheets to which we have become accustomed.

"Another proposition is to make use of various substitutes which lack the perfect transparency of glass to fill the windows of cellars, stables, garages, etc., where a bright light is not required. . . .

"Siloxid is a glass having a blue tinge; it is composed of silica and certain acid oxids such as those of zirconium and of titanium. Artificial mica is made by mixing 45.5 parts of green sand with 12 parts of bauxite and 30.5 parts of calcined magnesia, the mixture being fused in the electric furnace; 14 parts of alkali are then added to 90 per cent. of this and it is allowed to cool slowly. While these products are transparent they are comparatively costly. There are various derivatives of cellulose, however, which are quite inexpensive and which make excellent

substitutes for glass where full transparency is not demanded. Among these are cellophane, which is made by coagulating cellulose in a solution of viscose by means of a salt of ammonia, and cellite, which dissolves in acetic acid and gives with camphor a mass which resembles celluloid. Other substances proposed are gelatin, which has been dissolved and then dried in sheets

of the size required, and various products derived from casein and albuminoid bodies, such as bakelite; again, we may employ synthetic resin, which is prepared by the condensation of the phenols under the influence of formol. . . .

The exhibit offered under the name 'P. A. T.' is formed of two sheets of paper which adhere closely but are strengthened by the interposition between them of stout strands of hemp; translucency is imparted by a special sort of glue which unites the two sheets, and by a flexible varnish covering the exterior. . . .

"So-called 'Vitro-Cellose,' which is insoluble in water and impervious to atmospheric attack, is composed of an extremely fine and light metal-lattice work covered with a substance which is neither inflammable nor explosive, as is celluloid. This sort of pane can be set in windows like glass either by moldings or by means of putty. The price in France is 16.5 francs (\$3.30) per square meter. Another substitute offered is 'flexible glass,' constituted like the preceding by a product which is trans-

lucent and impervious to both air and water combined with an openwork support (tarlatan, muslin, gauze, fine light metal cloth, etc.), the whole then being covered with an even and flexible film. This kind of pane is exceedingly flexible so that it can be rolled up when it is to be transported; it is put in position in window-sashes by means of strips of wood tacked in. This is sold, when the support consists of tulle, at 5 francs (\$1) per square meter, and for 12.5 francs (\$2.50) per square meter when the support is metal textile."

BABY AIRPLANES — Airplanes of less wing-spread than some of the largest albatross of the South Seas are being produced in England, according to *Popular Mechanics* (Chicago, November). Says this magazine:

"The wings of these tiny machines extend only 15 feet, while albatross have been known to measure 17 and 18 feet from tip to tip. It is considered likely that aircraft of this type will prove valuable to the aerial mail service after the war is won. Large machines will no doubt be used for long non-stop flights, but for maintaining interurban service the small, less expensive planes quite probably will be employed, at least in England, it is contended. The artist's drawing presented herewith is intended chiefly for comparative purposes. It shows one of the small airplanes taking on fuel in a village street, while a mail-bearing parachute floats earthward from a large 'through express' flying aloft. One is struck by the thought that a 15-foot airplane would occupy no more space in a village street than some farmer's hayrack, altho it is hoped that airmen will not get in the habit of alighting in such places."

THE WORLD'S STRONGEST FIBER

THE STRONGEST, most durable textile fiber in the world, a native of our island territory of Hawaii, will be a candidate for introduction in the fiber markets of the nations as soon as Yankee ingenuity discovers methods for cultivating and working it. *Olona* is its native name, and it has been prized by the islanders for generations. Tests have shown it to be eight times as strong as ordinary hemp, asserts Vaughan McCaughey, writing from the College of Hawaii, Honolulu, to *Science* (New York), and three times as strong as the famous Manila fiber. Its pliability is remarkable, and its durability is shown by the fact that *olona* fishing nets over a hundred years old are still used by Hawaiian fishermen. Especially considering that its habitat is swampy, wooded localities, commonly considered useless, it is remarkable, says Mr. McCaughey, that the plant should not be widely cultivated and commercially exploited. The fiber plant investigator of the Bureau of Plant Industry, United States Department of Agriculture, objects that, as the results of experiments made in 1907, it was discovered that no American spinning-mills were equipped with machinery suitable for handling the peculiarly long and tough fibers, while, as for cultivating the plant, says this same authority, experiments would be necessary "which would probably be no less expensive than the designing of proper machinery to handle the fiber," objections which seem to be rather indictments of our cultivators and manufacturers than reasons for not availing ourselves of this fiber.

Mr. McCaughey gives, so far as is known to him, "the first and only extant concise and comprehensive account" of the plant with the poetical name and the highly practical characteristics. The *olona* is mentioned in many of the old Hawaiian songs and legends, he says, and continues:

"The single species *latifolia* was named with reference to the large, broad leaves, which form a conspicuous feature of the plant. It is an erect, woody shrub, four to ten feet high, and sparingly dividing into stout branches. It is from the thick bark of these wandlike erect shoots that the highly prized fiber is obtained.

"The natural habitat of the *olona* is the lower and middle forest zone, lying on the mountains between elevations of 800 to 1,800 feet. It never occurs naturally in the open or in dry sections. The favorite habitats are deep, cool, gloomy ravines, or moist slopes that are well screened by forest cover. It inhabits all of the larger islands of the archipelago. It occurs in little patches or thickets here and there in the forest, but is nowhere abundant. It does not form continuous stands; reproduction is not vegetative but apparently always from seed. In any one spot the collector is not likely to find more than a few score individual plants.

"The Hawaiians formerly cultivated the *olona* in a primitive manner. They did not prepare the land or plant seed, but merely searched out good patches of the wild plants. Such a patch was cleared of any obstructing vegetation, not disturbing, however, the large trees which shaded the plants. If the *olona* plants were too crowded they were thinned out. The old plants were pruned so as to give a number of young, straight shoots.

"At irregular intervals, as convenience or necessity dictated, the grove was visited and the crop harvested. This process consisted in cutting all the long, straight shoots that had reached a diameter of about one inch. The bark of such shoots was rich in bast fibers, and these were of maximum length. Six feet was an average length. The bark was carefully stripped from the wands, in one or more pieces, packed into rolls or bundles, and carried down to the settlements on the lowlands, where the final operations were performed.

"A suitable situation was found along a stream or irrigation ditch. The bundles of bark were opened and spread out in the shallow running water, where they were allowed to partially macerate. This required several days; then the long strips were removed from the water and the remaining pulpy matter was scraped from them while still wet. The prepared fiber was carefully dried and rolled into cordage of various sizes.

"In ancient Hawaii the *olona* was venerated as a sort of deity or lesser god. Before spinning the fibers the natives made libations, and offered sacrifices of hogs, fowls, etc.

"Formerly every chief had in the mountains one or more plantations of *olona*, which were tended by his dependents and which supplied him with sufficient quantities of this valuable product. Taxes were not infrequently paid with *olona*, as the fiber was nowhere so abundant as to depreciate its exchange value.

"Among the Hawaiians it was put to a great variety of uses. All fishing lines and nets of the best quality were invariably made of *olona*, because of its high resistance to the action of salt water. *Olona* lines and nets which have been in more or less constant use for over a century are almost as good as new, and are handed down from generation to generation as precious objects. Most of the natives are very unwilling to part with any of their fishing gear that is made of *olona*. A stout cord of *olona* was usually attached to the wooden war-clubs and dagger-like swords, for suspending the weapon from the wrist. This prevented the loss of the weapon during the fray.

"It was used for the very fine and pliable netting which served as a groundwork for the feathers, in the construction of the splendid garments and insignia of the ancient royalty.

"Mr. William Weinrich, manager of the Hawaiian Sisal Company's extensive plantation, has made an exhaustive study of fibers in the Hawaiian Islands, and has kindly prepared for the writer the following statement concerning *olona*:

"This fiber not only partakes of all the best characteristics of this genus, but is superior to any of its members, producing the best of all fibers known at the present time. The three dominant features are:

"First—The great tensile strength. I estimate that the strength of *olona* is about three times the strength of commercial Manila. So far as I can gather, this great strength is due to the unusual length of the cell in proportion to its width.

"Secondly—Its great resistance to deterioration in salt water.

"Thirdly—Its pliability, and thus its adaptability for spinning by hand.

"It was the writer's pleasure, some years ago, to send samples of the *olona* fiber to the manufacturers in the East. To my surprise, the fiber was found to be absolutely unknown in that market.

"A fiber with these characteristics should be exploited to the fullest measure. The extraction of this fiber is not a difficult process. In the history of Hawaii we find references to this fiber as having been grown on a large scale as a source of revenue; but, like many other things Hawaiian, its usefulness has been lost sight of during the progress of civilization.

"The key to the situation lies in transforming this plant from its wild state to a cultural form. When this is done, the world will be in possession of a new fiber, having a greater tensile strength, weight for weight, than any other fiber known."

THE RIGHT BLOOD-PRESSURE—It has been assumed, says *Good Health* (Battle Creek, Mich., November), that the average blood-pressure for a given age is normal and proper. This is an error, we are told:

"The average blood-pressure is by no means the normal blood-pressure. Really there is only one standard for normal blood-pressure, and that is the pressure always found in a healthy person twenty or thirty years of age, which may vary between one hundred and one hundred and twenty. The blood-pressure rises when old-age processes begin, by which the small arteries are narrowed and the resistance which must be overcome by the heart thus increased. As age advances, the pressure rises more and more, increasing the work of the heart until finally the task becomes so great that it is no longer able to perform it efficiently. Then it gradually weakens, the blood-pressure falls, and finally heart-failure closes the scene. This is the natural old-age process, but it must not be forgotten that old age is a disease and a man is 'as old as his arteries.' So, high blood-pressure means old arteries, no matter whether this condition be found at forty or at eighty, but it is evident that a person who has at forty the blood-pressure of another person at eighty is older than he ought to be at forty, while the man who has at sixty or seventy the blood-pressure of a man of thirty is still young, notwithstanding the number of years that he has lived. The normal blood-pressure is that of youth, and high blood-pressure is always abnormal, whether it be found in a person of thirty or of sixty. A person who at sixty or seventy years still has healthy arteries should have the same blood-pressure as a person twenty or thirty years of age whose arteries are healthy."

FACIAL ARMOR FOR THE INFLUENZA.

This plague has caused "more casualties and deaths in the homeland than occurred among our troops in the great world-war." Over 82,000 deaths were attributed to influenza and pneumonia between September 8 and November 9, according to reports from forty-six large cities with a combined population of 23,000,000. The estimate of deaths from all causes in the American Expeditionary Forces is 43,000.

HOW INFLUENZA GOT IN

INFLUENZA DOES NOT ARISE: it travels. It reached the United States by crossing the Atlantic, and it would seem that it might have been kept out. This is, in fact, the editorial opinion of *The Scientific American* (New York, November 2), which under the heading "A Carelessly Guarded Gate," charges that the laxity of port authorities on our Eastern coast is responsible for an invasion that has caused more deaths among peaceful citizens than the deadly weapons of the enemy have effected on the front of battle. Instead of establishing a rigid quarantine, the authorities seem to have ignored the infectious character of the disease and placed its victims in the open wards of hospitals, where it quickly spread. This all took place in the land of Gorgas, whose people can tame a fever-infected swamp one day and then calmly take disease to their own bosoms the next! Says the paper named above:

"There is a growing conviction that the sudden invasion of the United States by that European epidemic known as Spanish influenza, and the speed with which it has spread throughout the country, are due to the laxity with which the port authorities along the Atlantic seaboard have carried out their duties. . . .

"If ever there was a period when the quarantine laws for guarding the ports of the United States against the entrance of disease should have been enforced with redoubled vigilance, it was during the summer and autumn of the present year, when it was known that a highly infectious and fatal disease was sweeping through Europe like a scourge of the Middle Ages.

"In view of the imminence and deadly character of the disease, we had every reason to expect that the Federal authorities would set a double guard at our ports of entry, and instruct our quarantine officials to take every possible preventive measure against the landing, not merely of influenza patients, but of every passenger who had been exposed, during the ocean voyage, to infection.

"Nor can any carelessness be excused on the ground that influenza has never been classed with the deadly diseases, such

as yellow fever or the bubonic plague. While such an excuse might be valid for the layman, it can not be allowed in the case of the expert professional men, whose duty it is to enforce the quarantine laws of the country. For they know full well that this was no ordinary epidemic of influenza or grip. The medical records of Europe were available; and the most cursory reading of the data that have appeared in the medical journals (to go no further than that) should have revealed to these men that here was a disease the exclusion of which from America called for the most exacting and rigid enforcement of the quarantine laws.

"The obvious thing to have done, when the first ship with influenza patients on board cast anchor at a quarantine station, was to isolate that ship, with every soul on board, until the slightest possibility of carrying infection ashore had been removed. The rigid precautions that would be taken, if an arriving ship had yellow-fever patients aboard, should surely have been taken in the case of this deadly scourge.

"But what are the facts? Incredible as it may seem, influenza cases by the score and, for all we know, by the hundred, were taken ashore and placed in the general wards of the hospitals. Fellow passengers of the patients, who must inevitably have been exposed to infection, and must many of them have been carrying the disease, were allowed to go their several ways throughout the land.

"Was ever official fatuity stretched to greater lengths than this!

"When once the ship's company had scattered, whether to spread the infection among fellow patients in a general hospital, or among the unsuspecting and unwarned citizens in home, office, passenger-car, or theater, the mischief was done. But even when the plague burst forth in all its wide-spread malignity, both New York and the country at large seemed slow to awaken to the enormity of the peril. Only here and there did the authorities act with swift and effective measures, closing schools, theaters, and public meeting-places.

"It is certainly a disconcerting fact that, at the very time when the country had organized itself, through the Red Cross and other famous organizations, to fight disease and prevent suffering, we should be smitten with a visitation which caused more casualties and deaths in the homeland than occurred among our troops in the great world-war."

CURING MADNESS BY TOOTH-PULLING

INFECTED TEETH are a cause of insanity, if we are to credit a recent official report of Dr. H. A. Cotton, medical director of the New Jersey State Hospital for the Insane at Trenton. He asserts that as a result of eleven years' experimentation he has effected permanent cures by extracting teeth after examination with x-rays, removing infected tonsils, and clearing up the digestive tract. Early cases, he says, were cured very quickly, and even chronic ones have been relieved. Naturally, Dr. Cotton's report has caused considerable interest and a good deal of comment, not all of it favorable. Some authorities point out that mental disease arises from a variety of causes, of which infection from the teeth must be only one, and relatively insignificant. This, however, is apparently not in conflict with Dr. Cotton's contentions, as he does not appear to assign infection as a general or universal cause of mental disease. He says, as quoted in the *New York Times*:

"We are able to cure early cases in a very short time, prevent the disease from becoming chronic in a large number of cases, and restore a certain number who have been in the hospital for as long as nine years. This we are doing daily. We have found that infection of the chronic type and the resulting toxemia are the basis of many mental disturbances. These chronic infections are known as focal infections and may be present for years without their existence becoming known to the patient, and until quite recently the physicians and the dentists have been ignorant of their existence.

"We are practically prepared to state that this infection originates in the teeth, as we find the same organism in the abscessed teeth, tonsils, stomach, and duodenum, and in no case have we been able to eliminate the teeth as the origin of the infection. We have had five acute maniacal cases who died within a short time after coming to the hospital. Formerly the cause of death was considered due to exhaustion from excitement, but a bacteriological study in these cases showed all the organs practically infected. We feel that we have established a very important fact as applicable to general medicine as to nervous and mental diseases, that is, that the infection originates in the teeth, and after some years infects the organs through the lymphatic system.

In making routine examinations of the blood we found a great number of our patients who gave a positive reaction, showing that they were suffering from a chronic infection. At first the teeth and tonsils were thoroughly investigated. In many cases the infected teeth were extracted, producing gratifying results in some cases, but in the majority no improvement was noted. Some twenty-two of these cases had their infected tonsils removed, and again we noted a marked improvement and even recovery in one-half of these cases. The next point of attack was the gastro-intestinal tract, for many of the patients showed evidence of a chronic gastro-intestinal infection. Finally, in April of the present year we were able to utilize a method of accurately determining the infection of the stomach and duodenum by making direct cultures from these organisms."

Dr. Cotton describes several causes of infected teeth, such as bad dental work, neglect, and in some cases infection inherited from parents. He recommends a campaign of education so that physicians, dentists, and the public at large would realize the danger of infected teeth, not only in producing nervous and mental diseases, but in undermining the general health. According to a report in the *Newark Evening News*, he also expresses the belief that infection as the result of kissing and using the same eating utensils is not only possible, but is extremely probable, in a great many cases of this type. Alienists interviewed by the *New York Evening Post* were inclined to believe that Dr.

Cotton's methods were not new, and also that the practise of extracting infected teeth, or removing infected tonsils, would not prove a cure for all mental disorders. Says this paper:

"Dr. Carlos F. MacDonald, who is well known as an alienist, cited other 'discoveries' that had come to light in the last forty years. He mentioned particularly the 'blue-glass craze,' which led to the glazing of the windows of hospitals with blue-colored panes. The patients were allowed to sit under the influence of the bluish light, which, it was contended, brought about remarkable cures.

"He also referred to the idea that music worked wonderful cures among insane people, and also to the alienist in California who announced six or eight years ago that he had discovered a cure for all cases of dementia praecox.

"We all know," Dr. MacDonald said, "that a certain number of cases result from infection, from toxic poisoning, from the teeth, the tonsils, or intestinal or septic conditions in other bodily organs. Those conditions can be cured, and a certain number of these cases may recover. The general profession and the alienists, however, will desire, before accepting the new method, that it should stand the test of time.

"I do not anticipate any large increase in the percentage of recoveries of those suffering from mind-disorders as a result of this method, which is not new. It is simply the cardinal principle that is invariably followed in treating mental, as well as bodily, ailments—that of locating the source or cause of the trouble, and removing it."

"Dr. Smith Ely Jelliffe said that the reported cure was a minute and comparatively insignificant phase of treating persons suffering from mental disorders. The physician added that the method was not new and had been known some time.

"Dr. Jelliffe, however, was careful to point out that if it were assumed that every mental disorder was due to infected teeth, infected tonsils, or infected intestines, and the teeth were extracted promiscuously or the tonsils removed, it would prove a dangerous treatment, because many cases of mental illness and disorders were the direct results of decidedly different causes, such,

for instance, as alcoholism or cancer of the brain.

"On the other hand, said Dr. Jelliffe, if it were suspected that mental disorder did result from infected teeth or infected tonsils, it would be well for the physician to ascertain this carefully before removing the suspected causes."

The writer of an editorial in the *New York Tribune* is of opinion that Dr. Cotton's work is of larger significance than his critics have seemed to realize. We read:

"He endeavors to show that most mental disturbances have a physical or pathological base; the influence of bad teeth is only one. Infected tonsils and throats, intestinal disturbances, and, in point of fact, almost any of the chronic infections may be the direct cause of a great number of psychic disorders. What is new in the work at the New Jersey hospital is that careful clinical and laboratory examinations are of great value in revealing the cause and indicating the treatment in a large number of cases, even some acute cases. The teeth and the tonsils have an especial importance because they seem especially prone to these chronic infections; and where such infection was evident it has been found that removal of the one or the other has had striking results.

"This appears to be equally true following treatment of the chronic gastro-intestinal disturbances. It is very well known, for example, that there are 'carriers' of typhoid and other diseases who maintain a fair degree of health, tho the infection may subsist for years. It is also well known that in the treatment of chronic rheumatism removal of the teeth or the tonsils often has excellent effect. If these mild focal infections, as they are known, can poison the whole body, even to the tips of the fingers, they can likewise poison the cells of the brain and set up equal disturbances there. And from these certain types of insanity may result."

DR. H. A. COTTON.

Who claims he has cured insanity in the early stages by extracting the teeth of patients.

NEW YORK ACTORS HONORING THE MEMORY OF THEIR GREATEST HAMLET.

Professor Brander Matthews speaking after the unveiling of the statue of Edwin Booth as *Hamlet* wrought in bronze by Mr. Edmund T. Quinn and set in Gramercy Park, New York, upon a pedestal designed by Mr. Edwin W. Dodge.

NEW YORK'S FIRST STATUE TO AN ACTOR

NOT UNTIL the statue of Edwin Booth was unveiled in Gramercy Park, on November 13, had an actor been so honored in New York. The same thing was said a few years ago of London when a statue of Henry Irving was erected near the National Gallery. This statement overlooks the fact that Shakespeare was an actor, but the monumental honors bestowed upon him were of course for reasons aside from his actual appearance upon the stage. That alone would have left him still unhonored, and the *New York Evening Post* thinks it ought not to be taken as a discredit to New York that she has waited so long before finding the one man worthy of this honor. "Who among American actors could be nominated?" it ventures to ask. "Many might be lightly named," it adds, "but the erection of a statue is an act to the seriousness of which the public is just beginning to awaken." Therefore:

"Simple oversight, or Puritan prejudice, or some other cause—ought really to be thanked by Melpomene and Thalia that our municipalities have not a litter of statues of little-known actors. Booth's title to a statue is unquestioned. But those who paid him honor yesterday should have been the last to fail to be glad that the honor had not been cheapened."

The statue commemorates "the greatest *Hamlet* the American stage has produced," and was erected by a committee of the Players Club, which Edwin Booth founded and endowed for the benefit of his fellow actors. In the dedication address by Prof. Brander Matthews, of Columbia, reported by the *New York Evening Sun*, such tribute as this was paid:

"We who take pride in our membership in the Players have recognized from the hour when the founder handed us the deed of gift and lighted the fire which still burns brightly on our hearth that we owed him a debt we could never pay, a debt not merely for what he then gave us, the house with its furnishings,

its books, and its paintings, not merely for the kindly feelings which have prompted his liberality, but also and especially for the wisdom with which he established our prosperity upon a solid foundation. He was an actor; he loved his profession, and he wanted to testify to this love. He meant the Players to be a home for the actor first of all, for the dramatist and for the manager, that the men of his own calling might mingle at ease. But he knew that it was not good for the members of any one profession to fellowship exclusively with one another. He wanted the men of the theater to associate with men of letters and with artists, painters, sculptors, and architects. He held that—

All arts are one, all branches of one tree,
All fingers, as it were, of one hand.

And he designed this house of ours to be a haven for the practitioner of all the allied arts.

"Now at last, more than a score of years since he was taken from us, we have been enabled to erect this statue as an outward and visible sign of our gratitude and our affection. It is placed here in the little open space he loved to look down on from the room where he lived the last years of his life and where he died. It has been modeled by one of our own members with a fidelity which all who knew Edwin Booth can appreciate and with a beauty to be recognized by those who never had the privilege of beholding him.

"Edwin Booth was a born actor, inheriting the divine gift from the father whose memory he ever revered. He was an untiring student of his art, knowing how and why he got his effects. By his skill and his sincerity he was able to disguise the artificiality of '*Richelieu*' and '*The Fool's Revenge*.' I can recall the thrill with which—not so far from threescore years ago—I first heard *Richelieu* threaten to launch 'the curse of Rome'; and I have never forgotten the shiver that shook me when I later beheld the demoniac dance of *Bertuccio* when he believes that at last he is revenged on his enemy.

"But like his great predecessors, with whose achievements he has admirably familiarized himself, Edwin Booth found most pleasure in acting the greatest parts, those that Shakespeare

had filled with fire—Iago and Othello, Brutus and Macbeth, Shylock and Hamlet. Here in New York more than half a century ago he acted *Hamlet* for one hundred consecutive performances, a longer run than any Shakespearian play had ever had in any city in the world.

"We may apply to Edwin Booth the praise given to Shakespeare as an actor by a contemporary—he was excellent in the quality he professed. In founding the Players he built himself a monument more enduring than bronze; and now we have set up this enduring bronze, to stand here through the years and to bear witness that he saw the Players well bestowed."

PRAISE FOR AMERICAN POETS

THE POETIC IMPULSE in America has not grown like the humble violet. So many voices have trumpeted it from the housetops that even friendly souls might be

pardoned the fear that it was only American buncombe. But the noise has waked up the *London Saturday Review*, and one rubs one's eyes to see the organ so full of historic scorn of American literature printing the words of a writer signed "W. Bryher" to the effect that "America is producing book after book of fresh and exultant vision, young as any Elizabethan, just as definitely original." We needn't quote the accompanying disparaging sentences referring to England's present product, of which a high opinion prevails here, but pass on to words that will help our insurgent school to bear the whips and scorns of time. "Vividness, vitality, and concentration, beauty and originality of expression, if these are the essentials of modern poetry, look for them in the work of Amy Lowell, 'H. D.', John Gould Fletcher, Sandburg, Frost, and many another writer." He puts a crucial question:

"What have we to put beside their strength, the audacity of their richness, but an apathy born of outworn tradition, some expression of a past we so imperfectly explore? It is not an hour for laughter, for indifference; the books are there, there is no barrier of language. Truly the time is ripe for a rediscovery of America."

Leaving the question unanswered, he turns to inquire into "the tendencies which have startled American poetry into so sudden and virile a realization of loveliness, so true and individual an expression of life":

"Partly it is due to the varied roots from which these new impulses are derived. Miss Lowell owes much to her French reading. 'H. D.' is unmistakably Greek in form and thought, the literature of many countries unites in Fletcher; with Sandburg Swedish ancestry mingles with American experience. But the essentials are, as Miss Lowell has stated in her book, 'Tendencies in Modern American Poetry,' 'a rediscovery of beauty in our modern world, and the originality and the honesty to affirm that beauty in whatever manner is native to the poet.'

"Pursuit of absolute loveliness, to concentrate the heart of it into a sharp and polished arrowhead, to renew modernity yet be untainted by it, these are the characteristics of 'Sea Garden,' by 'H. D.,' the salt wind, a handful of honey, drift-shells, and broken petals—a world built of these, so vibrant with beauty that wonder must tremble on fear, as in this verse from 'Orchard':

I saw the first pear
as it fell

the honey-seeking, golden-banded,
the yellow swarm
was not more fleet than I
(spare us from loveliness).
And I fell prostrate
crying:
'You have flayed us
with your blossoms,
spare us the beauty
of fruit trees.'

Yet her poetry, visible essence of beauty as it is, is never thin with it, never quiescent, but forceful with life; so poignant with suggestion only with long association may its meaning grow into the mind.

"It is a different world, indeed, we come to in 'Irradiations' or in any book by John Gould Fletcher. He touches all modernity, loves it, and pours it into his pages, tumultuous as the cloud shadows over uneven mountains he delights to describe. It is true his poems suffer a little from exuberance, are sometimes confused, yet how he has captured not only the sea but the whole rough atmosphere of a dying period and compressed it into the four pages of 'Clipper Ships'! Perhaps his most definite contribution to the new movement in poetry lies in his expression of a personal mood seen with the imaginative eyes of a changing day, as in the following lines:

The trees, like great jade elephants,
Chained, stamp, and shake 'neath the gaddies
of the breeze,
The trees lunge and plunge, unruly elephants:
The clouds are their crimson howdah canopies.
The sunlight glints like the golden robe of a Shah.
Would I were tossed on the wrinkled backs of
these trees.

"It has been truly said that 'Chicago Poems,' by Carl Sandburg, is 'one of the most original books the age has produced.' Certainly the poet has stamped his individuality on every page of the volume. Yet the essentials of his poetry are tenderness, the freedom of youth; he is passionate with humanity. Has he not put himself into his poem, 'Young Sea'?"

The sea is never still,
It pounds on the shore:
Restless as a young heart
Bunting.

Youth, torn with desire to pour exultant joy into the world, careless if it waste, and blind to the knowledge there are some hearts beauty will never nest in. That his vision is often limited, his perspective faulty, can not obscure the true and virile loveliness of these poems."

Miss Lowell gets the palm from this writer as "the most original poet of the new movement." He finds:

"In her poetry is reborn that rich freshness, that exultant vitality robbed from literature too many centuries ago. Poetry, and prose as well, for her 'Tendencies in Modern American Poetry' is

full, even for Miss Lowell, of true and unexpected phrases. is a vivid appreciation of the differing work and personality of several poets; the history of a movement that may well become a dominating influence in future expression. In her books achievement is breaking into flower. To read a sentence, a fragment of a poem, is to surrender to its vividness, is to feel beauty blown into life, rare with enthusiasm, original with expression. But here is a verse from one of the loveliest of her poems, 'Venus Transiens':

Tell me
Was Venus more beautiful
Than you are,
When she topped
The crinkled waves,
Drifting shorewards
On her plaited shell?

THE ACTOR IN LIFE.

Edwin Booth, posing as Hamlet, enables us to see how the sculptor, years afterward, has reproduced his bodily presence.

Was Botticelli's vision
Fairer than mine;
And were the painted rosebuds
He tossed his lady.
Of better worth
Than the words I blow about you
To cover your too great loveliness
As with a gauze
Of misted silver?

"The work of Robert Frost is already known in England, two volumes of his work being first published here. He draws near painting in his actual transcription of incidents, seldom abandoned to imaginative vision, but, sure, vital, a poet of realism. He breathes of the soil he has described so lovingly, gets the feel of things into his verses, apples, the bend of birches, the blueberries tarnished with wind."

One paragraph, the final one, places what the writer imagines as the contrast between the poetic impulses of the mother country of the tongue and the younger one of the West:

"I want vividness, I want life; is this too much to require of a poem? Original use of traditional meter, unexpected loveliness of cadence, what matters it so on the verse he stamped the definite personality of the poet in an idiom peculiar to himself? I will tolerate any experiment; I can not tolerate mediocrity. I am no partizan of arid learning, but is not wideness a necessity; that the Elizabethans be studied side by side with the Greeks, that Walt Whitman and the French development of the past fifty years be read together. It is because this knowledge is sought so naturally by American writers, because they explore the past, yet put their strength into the future, their books are full of that freshness, even in maturity, the Elizabethans made their own. True, there are signs in England transition is near to ending, yet poetical impulse is indolent as a young bee that will not break the wax of fettering thought. The apathy will be rent; we, also, shall share the future, but, meantime, it would not hurt us to rediscover enthusiasm, experiment, and America."

England, the writer avers, never more vividly desired beauty, and he wonders "why mediocrity is the usual answer to its needs." He thinks, perhaps, that "the neglect of wide reading is a partial reason for this failure, particularly among the younger writers":

"To read a dozen poets is to be hampered by tradition, to echo their idiom, their thought; to read a hundred is to find individuality, the power to fashion this to words. Experience and study as well as largeness of vision are essential to expression, rather than this modern tendency to acclaim boys who, perceiving for the first time a sunset is beautiful, take pen in hand and rime anew impressions which have reached them through the pages of Keats or Swinburne. An age which encourages this can not expect vitality of inspiration, for, unwelcome as this truth may be, a poet must learn his trade."

TOLSTOY STILL DREAMING

THE TOLSTOYAN SPIRIT is still alive in his son "with all its uncompromising idealism and disregard of practical realities," says a Stockholm correspondent of the *London Times*. He has lately seen the present Count Tolstoy, who, until the Russian revolution began to develop into its Bolshevist forms, was one of its enthusiastic supporters. He is now pictured as a disillusioned refugee as he arrived

in Sweden, having left his country in despair of being able to aid her at present. The correspondent gives this account of him:

"Count Leo Tolstoy, who is married to a Swedish lady, has been living in Petrograd since his return from a lecturing tour in America, Canada, and the Far East, where he spoke of Russia, proclaiming his father's doctrines of peace and good will, the unity of nations, and mutual help. On his return to Russia he founded a newspaper, the *Vestotchka*, for propagating some theories which he believed would be congenial to the Bolsheviks. He very soon discovered his mistake; then Bolshevist exclusiveness put an end to his enterprise. His paper was suppressed, his friends and employees were arrested or driven to flight, and he himself was branded as an antirevolutionary, and obliged to take refuge in concealment till he was able to obtain a passage on a Swedish steamer and to join his family in Sweden."

His *résumé* of the situation was that "the Socialist experiment is ruining Russia." For—

"The country is being reduced to a wilderness, thanks to Bolshevist terrorism. It has become the theater of the greatest amount of suffering the world has ever known. There are doubtless some good things in Bolshevist theories of equality, self-reliance, and the rest, but in practice they have reduced them to the most egoistic, revolting brutality. Life is no longer possible under their tyranny and oppression. It is still only possible in the country, far from the towns and great centers."

"My mother is living at Yasnaya Polyana, and able to lead a comparatively quiet life. All her relatives have taken refuge on the estate. They are closely watched and guarded, sharing all they have with the soldiery, but they are not molested. Russia must and will emerge from this nightmare. What the Russia of the future will be no one can tell, probably something quite different from the Russia of the past. All we can do toward shaping that future must be to inculcate the love of unity and freedom among the people and fraternity among all nations."

The correspondent here is apparently mistaken as to the identity of the particular son of Count Tolstoy who gave this account. A recent letter to the *New York Times* from Count Ilya Tolstoy makes it evident that the one now in Sweden is the eldest son, Sergius. Count Ilya's letter completes the picture

WINTER GARDEN THEATRE,

1854-55. *Uninstructed Monday, September 18, 1864* 1864-65.
No. 54, BROADWAY, OPPOSITE BOND STREET.

14TH SEASON. 30th WEEK.
MANAGER, ————— MR. WILLIAM STUART.

WEDNESDAY EVENING, MARCH 22, 1865.

BENEFIT OF MR. EDWIN BOOTH.

SOUVENIR PROGRAMME.

One Hundredth Night of "Hamlet."

This Evening, for the Final and One Hundredth Consecutive Night Performance,

"HAMLET,"

A TRAGEDY IN FIVE ACTS BY WILLIAM SHAKESPEARE.

CAST OF CHARACTERS.

HAMLET MR. EDWIN BOOTH	CLAUDIUS, King of Denmark S. K. CHESTER
GHRIFFIN OF HAMLET'S FATHER CHARLES KENDLE MASON	PILOTEUS, Lord Chamberlain G. H. ANDREWS
LAERTES, Son of Polonius J. G. HARTLEY	HORATIO, Friend to Hamlet CHARLES WALCOTT
OSRIC OWEN FANCAIT	ROSENCRANTZ DUFFELL
GUILDENSTERN W. F. BURROUGHS	MARCELLUS MR. DILLON
BERNARDO NELSON DECKER	FRANCISCO MR. CLINE
FIRST ACTOR MR. EVANS	SECOND ACTOR MR. EDELL
FIRST GRAVEDIGGER MR. FITZGERALD	SECOND GRAVEDIGGER MR. EVERETT
PRIEST MR. J. W. WALLACK	GERTRUDE, Queen of Denmark, and Mother to Hamlet MRS. FRANK S. CHANFRAU
OPHELIA, Daughter of Polonius MRS. S. K. CHESTER	

Costs, Lights, Props, Effects.

ORCHESTRAL SELECTIONS.

1. OVERTURE —"Hamlet."	<i>By the Danish National Hymn</i>	<i>Drum</i>
2. INTRODUCING AND FUGUE —"Hamlet."	<i>By the Danish Hymn</i>	<i>Drum</i>
3. CLARION —"Danish Hymn."		<i>Drum</i>
4. GRAND MARCH —"Lohengrin."		<i>Drum</i>
5. FANTASIE —"Ophelia's Song and other Tunes of Shakespeare's Time."		<i>Drum</i>

The Tragedy has been played upon the stage, under the management of Mr. Booth, by J. G. Hartley, Stage Manager.

The House all especially composed, selected and arranged by ROBERT BROWN.

THE PRODUCTION AND MEMORABLE RUN OF "HAMLET."

Final Performance, Saturday Evening, November 18, 1864.

1st Night	Saturday, December 10, 1864.
2nd Night	Monday, January 22, 1865.
3rd Night	Tuesday, February 14, 1865.
4th Night	Wednesday, March 22, 1865.

Thursday, March 23, Shakespeare's Play of "Othello."

IAGO.....**MR. EDWIN BOOTH**
OTHELLO.....**CHARLES KENDLE MASON**

A DOCUMENT IN HISTORY.

Professor Matthews speaks on a preceding page of the hundred nights of "Hamlet"—"a longer run than any Shakespearian play had ever had in any city in the world." This bill was issued for the last night of that memorable run.

Digitized by Google

with news he lately received from this brother of conditions in Russia:

"Discontent with the Bolsheviks increases every day, but those who oppose them are not organized, and therefore have not the power to sweep them away. Among those who form the opposition are people of all classes and parties, beginning with the revolutionaries and finishing with monarchists. I think that many of the Bolsheviks themselves are, at the bottom of their souls, monarchists also. . . .

"As all the people of Russia are unarmed, the result is that the Allies and the Germans, in the areas where they are in power, do everything they wish. But in such regions which neither the Allies nor Germans can reach the power is in the hands of small bands of Bolsheviks, who rule there as they choose. I think that such a state of affairs will continue till the end of the war.

"If you ask me on whose side are the sympathies of the Russian people I will say that they are on the side of the Allies, but first of all Russia longs for peace.

"My brother writes me that the home of my mother is guarded by the Bolsheviks and that she is in safety. The home of my brother has been completely destroyed by the peasants, who burned everything they could, beginning with his rich and rare library."

COLD WATER FOR FRENCH GOOD WILL

FRANCE IS NOT STINTING in offering us of her best. College professors, art-critics, musical composers, and men eminent in French literature and science are members of the mission "delegated by their Government to strengthen the ties existing between French and American universities by means of lectures here." The New York *World* feels confident in offering these emissaries "a warm welcome," and seems assured that the "goal must be easy of attainment under present conditions of relationship between the two countries." These confidences are easily felt and easily expressed when a new project is set before us. It was so when the Théâtre du Vieux Colombier first came to us. This pioneer institution, now in the second year of its work in New York, is meeting with only moderate support now that the novelty of its coming is passed. Even our press treat it in a more or less cavalier spirit, and the suspicion is apparently well founded that many of the men sent to review the productions there are but imperfectly acquainted with the language. One of our best known and most quoted critics had recently to explain that his complaint that "there seemed a long time between the *jamais*" did not necessarily imply that this was the only French word he knew. Something of course should be allowed for the *mot*! But it ought not to be overlooked that Mr. Denys Amiel, editor of *The New France* (New York), speaks with excusable exasperation of this continued flippant tone. Mr. Amiel is himself a dramatist and occupied a place among the younger men of French letters in the prewar Paris. His journal here is devoted to the furtherance of "Franco-American relations." He writes:

"I assisted last evening at a very remarkable presentation of 'Le Mariage de Figaro.' I do not believe that it would be possible to give a more perfect production of the play. I was very much astonished at the absolute lack of understanding shown by the American press in speaking of this masterpiece, one of the finest in the French language. Surely to misunderstand or falsely interpret 'Le Mariage de Figaro' is to misunderstand and falsely interpret the French spirit. If the American public turns its back on 'Le Mariage de Figaro,' it is exactly the same as if it said, 'There is no place for the French theater in America.'"

"Unfortunately lack of time makes it impossible to say more of the play itself. It suffices to say that it is a faithful reflection of the state of mind at the outbreak of the French Revolution. With its 'badinages,' its very apparent humor, its delightful wit, it has in a sense been rightly called the cause of the French Revolution. I would like personally to ask each reader of *The New France* in New York to go each week and enjoy in its fullest measure the delightful French atmosphere of Le Théâtre du Vieux Colombier. Therein lies an absolute duty for each reader,

a duty not only toward himself, but toward France and toward American culture, which ought to profit greatly by contact with a program of French culture, conceived with an eclecticism which satisfies individual tastes.

"Just as we make a very strong and urgent appeal for the success of war-drives and *œuvres de guerre*, so also do we make the same strong appeal that Le Théâtre du Vieux Colombier be faithfully supported in order that the French art which it so admirably represents may be conserved during these moments of wanton destruction of some of its oldest monuments."

The barrier of the language is probably accountable for small houses at the French theater, but this is the very thing that we are assuming to be no impediment when we welcome, as does *The World*, other members of France's High Commission. *The World* is overconfident perhaps of the French of our returning Army. But it thus surveys the subject:

"Four years of common sympathies in war and a year and a half of comradeship in arms have prepared the soil. And along with Kaiserism has gone a good part of that educational autocracy under which for half a century and more American college learning has been made to swear in the words of a German master.

"But the real missionaries of French culture will be the 2,000,000 American soldiers returning with a knowledge of French speech and of French manners. They have learned that not all France is comprised in Montmartre and the Moulin Rouge, and they have now an acquaintance with French character that dispels old illusions about decadence. During the time of demobilization they will receive further instruction in French, and when they come home their opinion should profoundly influence the American attitude toward France and French ideals.

"No doubt the Alliance Française will help in the *rapprochement*. This organization did a commendable work before the war in familiarizing Americans with French culture, and it has new opportunities now. But the war itself has done most to bring the two countries together in a fraternity of spirit, and this may be reckoned one of its beneficial results."

AN "ART INDEMNITY" DEMANDED—"Not in revenge, but in justice," is the phrase by which the demands on German art-possession is recommended to the Allies. A petition has been forwarded President Wilson by the Subcommittee on Arts and Decorations of the Mayor's Committee on National Defense asking that the Versailles Council appoint an Inter-Allied Commission of Artists to select works of art from German palaces and galleries to be carried to the Allied countries as reparation for the German destruction of Reims Cathedral and other notable structures and works in France and Belgium. This is to form part of the indemnity, and the demand is couched in these words:

"The wanton destruction in Belgium, Italy, and France of works of art embodying men's loftiest dreams and aspirations can never be paid in money, since the loss is fundamentally spiritual. We believe that at least part reparation might be made by Germany's and Austria's surrender of such works of art now held in German and Austrian territory as the vandals by their own acts must be judged incapable of appreciating and unworthy of continuing to have and to hold."

Such payment may seem to the guilty a full reparation and a reason to expect smiles and welcome, but the New York *World* sternly repels such possibilities:

"The Allies have the power as conquerors and the right as a matter of exact justice to compel this reparation, but if the action is taken no inroad will be made on the Sieges Allée. Berlin at least is safe; it will not be forced to part with its Teutonic masterpieces. But galleries like that at Dresden are sufficiently rich in old masters to make up for many losses.

"Even so, can substitution repair the wrong? The Sistine 'Madonna' would compensate for many things, but if Cologne Cathedral itself could be transported bodily to Reims would it wholly atone for the ruthless desecration of Joan of Arc's cathedral? Can the wrecked châteaux and Town Halls of France and Flanders be replaced by something just as good? Filling looted museums from enemy art-collections will afford material reparation, but it can never heal the deep hurt of the original vandalism."

RELIGION-AND-SOCIAL-SERVICE

"THE GRAY MAN OF CHRIST"

THE RELIGION OF WILLIAM HOHENZOLLERN has been one of the active topics of the whole war. It has only been in his very latest utterances that the former German monarch has not coupled Gott with himself as an equal, an abettor, or perchance a servant. One picture of the Kaiser sent out by the watchful Boswell, Karl Rosner, showed William in the act of communion, and we are distinctly told that in that Belgian church with a waiting audience of German officers the worshiper never bent the knee. There is a strong contrast between him and the figure the *Los Angeles Times* draws of his conqueror, Gen. Ferdinand Foch—"the Gray Man of Christ." "This has been Christ's war," says *The Times*. "Christ on one side, and all that stood opposed to Christ on the other side. And the Generalissimo, in supreme command of all the armies that fought on the side of Christ, is Christ's man."

Lest readers think this a "strange statement for a secular newspaper to make," *The Times* brings forward the reminder that "it is the business of a newspaper to get at facts," and "if the facts are of a supernatural nature, it is still the business of the newspaper to get at them and to record them." When this was written the full span of General Foch's achievement had not been covered, but the end was then clearly in sight. We read:

"The deeper we question as to who Foch is, the clearer is the answer that in every act of his life and in every thought of his brain he is Christ's man."

"If you were to ask him, 'Are you Christ's man?' he would answer 'Yes.'"

"It seems to be beyond all shadow of doubt that when the hour came in which all Christ stood for was to either stand or fall, Christ raised up a man to lead the hosts that battled for him."

"When the hour came in which truth and right, charity, brotherly love, justice, and liberty were either to triumph or to be blotted out of the world, Christ came again upon the road to Damascus."

"Whoever does not realize this and see it clearly as a fact, he does but blunder stupidly."

"There will be a crowding company of critics when the war is ended and they will all be filled with the *ego* of their own conclusions. They will attempt to explain the genius of Foch with maps and diagrams. But, while they are doing so, if you will look for Foch in some quiet church, it is there that he will be found humbly giving God the glory, and absolutely declining to attribute it to himself."

"Can that kind of a man win a war? Can a man who is a practical soldier be also a practical Christian? And is Foch that kind of a man? Let us see."

The secret of where Foch used to go for "strength and magical power to bring home the marvelous victories" was surprised by a California boy. It was not published by any organ of France, to show the world how "religious" its leader was:

"A California boy, serving as a soldier in the American Expeditionary Forces in France, has recently written a letter to his parents in San Bernardino in which he gives, as well as any one else could give, the answer to the question we ask."

"This American boy—Evans by name—tells of meeting General Foch at close range in France."

"Evans had gone into an old church to have a look at it, and as he stood there with bared head satisfying his respectful curiosity, a gray man with the eagles of a general on the collar of his shabby uniform also entered the church. Only one

orderly accompanied the quiet, gray man. No glittering staff of officers, no entourage of gold-laced aids, were with him; nobody but just the orderly."

"Evans paid small attention at first to the gray man, but was curious to see him kneel in the church, praying. The minutes passed until full three-quarters of an hour had gone by before the gray man arose from his knees."

"Then Evans followed him down the street and was surprised to see soldiers salute this man in great excitement, and women and children stopping in their tracks with awe-struck faces as he passed."

"It was Foch. And now Evans, of San Bernardino, counts the experience as the greatest in his life. During that three-quarters

From the painting by Sir William Trepper. Presented to British Museum of Information. U.S.A. and Canada.

THE MAN WHO "FOUGHT ON THE SIDE OF CHRIST."

The painting from which this is reproduced, together with nearly one hundred other Organ originals, forms part of the official collection which has been sent over by the British Government to be exhibited in the leading museums and art-galleries throughout the United States. The exhibition will open at the Corcoran Gallery in Washington in January, will be shown in New York in February, and thereafter appear in other places, as arranged by the Worcester Art Museum.

of an hour that the Generalissimo of all the Allied armies was on his knees in humble supplication in that quiet church, 10,000 guns were roaring at his word on a hundred hills that rocked with death.

"Millions of armed men crouched in trenches or rushed across blood-drenched terraces at his command, generals, artillery, cavalry, engineers, tanks, fought and wrought across the map of Europe absolutely as he commanded them to do, and in no other manner, as he went into that little church to pray.

"Nor was it an unusual thing for General Foch to do. There is no day that he does not do the same thing if there be a church that he can reach. He never fails to spend an hour on his knees every morning that he awakes from sleep; and every night it is the same.

"Moreover, it is not a new thing with him. He has done it his whole life long.

"If young Evans could have followed the General on to headquarters, where reports were waiting him and news of victory upon victory was piled high before him, he would doubtless have seen a great gladness on the General's face, but he would have seen no look of surprise there.

"Men who do that which Foch does have no doubts. When Premier Clemenceau, the old Tiger of France, stood on the battle-front with anxious heart, one look at the face of Foch stilled all his fears. He returned to Paris with the vision of sure and certain victory.

"The great agnostic statesman doubted, but the Gray Man of Christ did not doubt.

"The facts, then, in the case are that when the freedom of the world hung in the balance the world turned to Foch as the one great genius who could save it against the Hun; and that Foch, who is perhaps the greatest soldier the world has produced, is, first of all, a Christian. . . .

"Young Evans, of San Bernardino, just an every-day American boy from under the shadow of old San Geronimo, spent nearly an hour with Foch in an old French church, and not even one bayonet was there to keep them apart.

"They represented the two great democracies of the world, but there in that old church they represented, jointly, a far greater thing—the democracy of Christ."

A CALL TO REPENTANCE

ARE WE WORTHY TO WIN THE WAR? A question so startling has perhaps not entered into the consciousness of many. But it comes to Herbert L. Willett, associate editor of Chicago's undenominational paper, *The Christian Century*. His article is in the temper of Kipling's "Recessional," who interjected his word of caution while the notes of national jubilation were still sounding. To Mr. Willett there is "a more momentous aspect of the world-crisis" than even the successes won in the field or those in store at the council table; and it is one, he says, to which fitting adjustment can be made only after careful searching of heart. He writes:

"Great causes demand great champions. A battalion of policemen may quiet a riot or a regiment of rough-riders disperse an army of Mexican irregulars. A battle may be won by superior numbers or heavier artillery. But can a war in which great moral issues are involved be really won by brigades and divisions? And above all, can a war as holy as this be brought to a victorious result save by a people that has set itself the high task of moral preparation?"

"In the great days to which all the Christian centuries look back there was heard in the deep valley of the Jordan a strange and commanding voice, crying, 'Repent, for the Kingdom of Heaven is at hand.' In some manner whose disclosure is yet inscrutable to our half-opened eyes, and in a sense far beyond the ability of any crude apocalyptic speculations to define, the Kingdom of Heaven is at hand. He who believes that the tragic events of the time have no revelation of the divine purpose latent in their portentous volume is insensitive indeed to the signs of the times. We have no need to draw diagrams of what is now to take place in the world of religion—'after the war.' Much more to the purpose is the recognition of what is transpiring under our eyes. Facts are being recorded, and forces released day by day, that are nothing less than revolutionary. If social customs and economic habits that were supposed to be a part of the established order of the world have crumbled at the advent of the new time, of governmental decisions that

would have shocked an earlier generation, are now accepted as commonplaces, if the effort to galvanize political parties into a semblance of their old animosity seems trivial and futile, not less are the religious factors of our common life reshaping themselves with a rapidity and certainty which are the despair of the apologists for denominationalism and the defenders of tradition. Over the forlornly defended, or wholly forsaken redoubts of medievalism, ignorance, and reaction, the forces of progress are sweeping as the lines of the Allies crossed the German trenches.

"Objectives that at best could be hoped for only after many years are taken and passed almost in a day. If these facts do not signify the coming of the Kingdom in a new and unprecedented way, it would be difficult to give them adequate interpretation. And if this be so, then, as of old, there is urgent need of the thrilling cry, 'Repent, for the Kingdom of Heaven is at hand.'"

"HE HATH PUT DOWN THE MIGHTY FROM THEIR SEATS"

VICTORY REJOICINGS were translated into victory thanksgivings in the churches of this land on the Sunday following the cessation of the conflict. "This is the greatest moment of all history," said Dr. Manning, of Trinity Church, "except the one in which Christ was born." The *New York Tribune* estimates that "nearly 2,000,000 attended religious meetings in greater New York during the day," and among them were sailors and soldiers garbed in the uniforms of every nation that fought on the side of the Allies during the war. "Think for a moment what German victory would have meant to us and to all the world," Dr. Manning urges, "then offer your thanks to Almighty God for the great deliverance that he has given us." Dr. William Pierson Merrill, preaching in the Brick Presbyterian Church, dwelt on the "unswerving patriotism of all the peoples that contributed to the victory of the Allies, and added a special thanksgiving for our part:

"Thank God that America has played her part effectively and with honor. God keep us humble, as we should be in the presence of nations that have fought and endured and sacrificed as we have scarcely dreamed of doing. Let us be content with the honor of having given it in a good spirit. For the courage and steadfastness and gayety and cleanness of our men, for the unity of our national soul and effort, for the high ideals kept dominant in the nation's life, for the care given the men in service, and for the good repute won by them in foreign lands—for these and many other mercies we give thanks to God, praying that we may in our joy and satisfaction be wholly free from the peril and shame of self-satisfaction."

The chaplain of Columbia College pleads against "softness" in dealing out justice to Germany:

"We are not treating with an honorable tho defeated foe. We are dealing with a criminal brought to book and as yet unrepentant. We are dealing with a nation that has shown itself morally defective. How to treat Germany is a problem of penology."

The religious tone of secular editorials dealing with Germany's defeat is almost as strong as the words of the pulpit. Notable among these is one from the *Newark Evening News*. With the apocalyptic warning that "God is not mocked. And in the day of our triumph let us be humble before him," *The Evening News* solemnly reviews the plight of the nation that planned the world's woe:

"It is not enough that the German armies confess defeat.

"It is not enough that revolution takes command of the erstwhile German Empire.

"It is only enough that the doctrine and theory of autocracy are disproved and put to shame.

"Autocracy, militarism, can only maintain themselves by professing infallibility. Autocracy can not take counsel of democracy without dynamiting its own foundations. If it is not superior, it is naught.

"Kaiser Wilhelm may go down in history as the world's

greatest villain. He will certainly go down forever as the world's vastest fool.

"There is his downfall, the downfall of the laboriously created machine that mechanized and brutalized Germany, heart and soul. He and his clique set at naught two thousand years of man's development. They defied the finer instincts of man, debauched the holy mission of education, worshiped at the temple of a crass materialism. For the Nazarene they substituted a tribal Gott.

"Defeat and physical death do not kill. The Nazarene lives. In the suffering of the men who bore the Cross in France he triumphs. Their rest is perfect in his peace. Their glory is imperishable, for they wrought a New World.

"Betrayed by materialism, that against which they contended is hurled to the depths of contempt. It is just scorn that kills.

"Where, to-day, is the arch-apostle of materialism, militarism, he of the 'flaming sword,' senior partner of Me-and-Gott? Fled across the border to neutral Holland, shameful in defeat and daring not to face the people he betrayed!

"Where are the clerics who swore that they alone knew the real god?

"Where are the diplomats who made faithlessness their creed and tore apart the 'scrap of paper'?

"Where are the thousand professors who profest that might was right?

"Where are the ten thousand savants who declared that their materialism bought them invincibility?

"Where are the hundred thousand officers of the kingly caste to whom the citizen was dirt, and who wrote their creed in flame and sword on Belgium?

"Theirs is shame, the shame that kills. Of all history they are the world's supreme fools. Their sword struck through the superficiality, the carelessness of a seemingly spiritually inert world. That world flamed back against them, and from east to west, from pole to pole, from Christian to freethinker, Mohammedan to heathen, it declared their creed a hateful vanity.

"All things seemed in their hands. The world was drifting under their spell. Their espionage, their materialistic skill, their materialistic philosophy seemed to be overcoming the nations. Hardy in confidence, they struck, struck with the weight of forty years' preparedness.

"But not in Belgium, nor in France, nor in Serbia, nor on the shamed seas could they defeat the Power that rose to meet them. Neither the stricken fields nor the reddened oceans gave back victory. Ever new forces rose to hurl them back and the solid line of the struggling democracies bent and swayed but would not break. Then came the turn, and four months were enough.

"Autoeracy and militarism are dead. They are dead because they had no inner life. Revealed, they are utterly put to shame, made the subject of the scorn and ridicule of the world. It is that fact—the shame—that has killed them in the day and hour of their failure. Their arch-priest dares not face the ruin he wrought and runs away. That is their end."

The fall of the figure-head of this folly is compared by the New York *Tribune* to the fall of Lucifer, and the words of Isaiah concerning him are quoted as adequate to Wilhelm's case without added comment:

Isaiah xiv: 9-21

9. Hell from beneath is moved for thee to meet thee at thy coming; it stirreth up the dead for thee, even all the chief ones of the earth; it had raised up from their thrones all the kings of the nations.

10. All they shall speak and say unto thee, art thou also become weak as we? art thou become like unto us?

11. Thy pomp is brought down to the grave, and the noise of thy viols; the worm is spread under thee, and the worms cover thee.

12. How art thou fallen from heaven, O Lucifer, son of the morning! How art thou cut down to the ground, which didst weaken the nations!

13. For thou hast said in thine heart, I will ascend into heaven, I will exalt my throne above the stars of God: I will sit also upon the mount of the congregation, in the sides of the north:

14. I will ascend above the heights of the clouds; I will be like the most High.

15. Yet thou shalt be brought down to hell, to the sides of the pit.

16. They that see thee shall narrowly look upon thee, and consider thee, saying, is this the man that made the earth to tremble, that did shake kingdoms:

17. That made the world as a wilderness, and destroyed the cities thereof; that opened not the house of his prisoners?

18. All the kings of the nations, even all of them, lie in glory, every one in his own house.

19. But thou art cast out of thy grave like an abominable branch, and as the raiment of those that are slain, thrust through with a sword, that go down to the stones of the pit; as a carcass trodden under feet.

20. Thou shalt not be joined with them in burial, because thou hast destroyed thy land and slain thy people; the seed of evil-doers shall never be renowned.

21. Prepare slaughter for his children for the iniquity of their fathers; that they do not rise nor possess the land, nor all the face of the world with cities.

"THE GREAT ARMY THAT DIED"

PREMIER CLEMENCEAU stirred the great heart of France to its depths when he added a few simple words to his communication of the armistice terms in the Chamber of Deputies. "Let us honor the great army that died. France in older times had soldiers of God; to-day it has soldiers of humanity and always soldiers of ideals." They were noble words, says the New York *World*. "In that moving phrase he spoke the inmost feelings not only of millions of French men and women, but of the peoples of all the Allied nations that shared in the winning of the war." It continues:

"It is a time for universal rejoicing that the shedding of blood on the battle-fields of Europe has ceased. It is also a time for reverent tribute to the men who gave their lives that the right should prevail. They have made the supreme sacrifice. To them has been denied the reward of joining in the final triumph and exultation over victory. They have passed beyond reach of the clamor of shouting multitudes, of pealing peace bells, of the voices of loving friends and kindred, and the touch of hands they held dear.

"But they, too, wear the victor's crown, tho they failed to see the hour of ultimate victory. They have bequeathed to those left behind the glory and the honors.

"In the men who return from the wars we shall show our pride, but with Premier Clemenceau, may we never forget to honor 'the great army that died.'"

From another angle the Newark *News* speaks of that unreturning army and the pity that would "shield the mothers of the sons who brought precious victory with their death"—

"In the grand silence of the peace so dearly won they sleep the warrior's sleep. They will not again sit about the hearth. Those of us who are to clasp beloved hands once more shrink at the thought of the loneliness of the mothers whose sons return not.

"It is a kind and tender impulse, but we are wrong. If in those mother hearts there yearns the sorrow of loss, there triumphs the glory of sacrifice. The sons whose lives were spent for the highest that they knew are the sons of mothers whose ideals they carried forward with the banners of a just and holy cause. They drew from the blood that bore them the strength of will, the firmness of purpose, the fearlessness of death which we celebrate in this tremendous hour. They fought and fell as the protagonists of American motherhood, which their signal devotion now has vindicated and enshrined. Their souls were steeped in patriot cradles and nurtured in homes where virtue and honor and faith were more than all.

"Forever living, incapable of death, are the noble boys who lie where freedom for the world was won. And joyful with a sacred joy are the mothers whose offering was beyond earthly measure, the mothers of sons who return not. The God of battles is also the God of compassion. They need not the pity of men and women. He has raised them up to greater heights by sacrifice made perfect."

The American Army assumes it as a duty to bring back to their native soil the bodies of those who have fallen. But Colonel Roosevelt and his wife feel differently, and the former has written to General March, of the War Department, this letter, which the press reproduces:

"Mrs. Roosevelt and I wish to enter a most respectful but most emphatic protest against the proposed course, so far as our son Quentin is concerned. We have always believed that 'Where the tree falls, there let it lie.' We know that many good persons feel entirely different, but to us it is painful and harrowing, long after death, to move the poor body from which the soul has fled. We greatly prefer that Quentin shall continue to lie on the spot where he fell in battle and where the foemen buried him.

"After the war is over, Mrs. Roosevelt and I intend to visit the grave and then to have a small stone put up saying it is put up by us, but not disturbing what has already been erected to his memory by his friends and American comrades in arms.

"With apologies for troubling you,

"Very faithfully yours,

"THEODORE ROOSEVELT."

The request, to which assent has been given may, be pondered and approved by many others who have precious dead over there.

WAR-TIME-FOOD-PROBLEMS

Prepared for THE LITERARY DIGEST by the UNITED STATES FOOD ADMINISTRATION
and especially designed for High School Use

MEETING THE TEST

IT CANT BE DONE—In some such phrase, Germany has more than once mentally summed up her verdict—based on her logic—upon many of America's purposes and programs in the war.

Germany said to herself:

Can the United States assemble, equip, and train an army in time to be of any use to the Allies?—*It can't be done.*

Can the United States transport troops in large enough numbers across the ocean?—*It can't be done.*

Can the United States escape or nullify the submarine menace?—*It can't be done.*

Can the United States—with its vast area, population, and diversity of thought and opinion—focus itself upon a single aim, and as a unit sacrifice and achieve?—*It can't be done.*

Can the United States provide a large surplus of food, get it across the ocean (with all the other demands on shipping), and do it amply and regularly enough to save the Allied nations from a state verging on famine?—*It can't be done.*

Such was the way Germany answered to herself these questions.

AMERICA'S ANSWER—Meanwhile the United States was asking itself the same questions. And the answer it made, impelled by a force mightier than mere logic, was something like Germany's. Like and yet very different. For America's answer was this:

It can't be done—we'll do it.

This has been called the rallying motto of many of our soldiers in France, confronted by some task seemingly impossible of accomplishment, but which has been forthwith accomplished. And, in spirit at least, it has also been the rallying-cry here among our own home armies of eager patriots.

CHANGING OLD HABITS—Practically every food-problem—no matter how difficult—which has been solved has been overcome by the spirit implied in those three small words, "We'll do it."

If any one, back in the days of 1917, when we were just entering the war, had hazarded the assertion that in almost no time at all the American people could modify their habits of what to eat or what not to eat or when not to eat it, he would have been greeted with incredulity. That incredulity would have increased if the further assertion had been made that America could almost immediately modify trade methods of food-distribution—from producer to consumer—in which illegitimate practices had become obscured by long habit.

And finally, if it had been definitely stated that America—in the midst of all the activities and cross-currents produced by war—could achieve a food-export program overtopping anything of the sort heretofore attempted, there might have arisen a feeling of actual derision.

But—"We'll do it."

That mental and spiritual attitude was the magic wand which helped America to make good.

The province and privilege of the United States Food Administration have been to be a sharer and coworker in that great popular decision to help win the war by delivering the right food, at the right time, at the right place.

COOPERATION—In surveying the work of the United States Food Administration since its beginning, one fact stands out conspicuously. That is the fact that the Food Administration's work has been possible only because of the people's cooperation, and the cooperation of those engaged in the food-

trades in this country. Without such cooperation—popular and commercial; in homes and in the business world—the task of food-administration would have been like trying to build a house out of plans and specifications instead of bricks and mortar.

WHEAT—One of the best examples of how the public cooperated with the Food Administration to produce beneficial results in many directions is shown in the case of wheat.

The Allies, at the beginning of 1918, were in dire need of wheat. They sent word of this in plain terms to the United States Food Administration. The Food Administration passed the message along to the people. And the people gave their wheat, not the wheat previously intended for export, but the

wheat which in ordinary times would go on to dining-tables all across the country. Our 1917 wheat crop was not large; but, nevertheless, out of it 85,000,000 bushels were shipped to Allied destinations after the regular surplus scheduled for export was gone. Logically—we were able to ship only 20,000,000 bushels; actually—we shipped the 85,000,000! And this was achieved without the restrictions of a compulsory rationing system.

Another side of the wheat situation is the way wheat prices have gone down since the Food Administration was created. In May, 1917, before there was any food-control, flour sold at wholesale for \$17; but in February, 1918—six months after the creation of the Food Administration—the wholesale price had fallen to \$10.50. Had there been no food-control in this country (a condition existing at the time of the Civil War), it is no exaggeration to say that flour might before now have risen to \$50 a barrel. For food-prices during, and after, the

Civil War went up in that proportion. And then there was not even any such excuse as the world food-shortage which exists to-day.

Such is one example of how food-control in this country has worked out. And our wheat exports, poured out from a short crop in such profusion as to seem almost unbelievable, testify to the spirit of team play between the public and the Food Administration.

THE FUTURE—After all, it is only by such a wide-spread popular response that the United States can help solve the world's food-problems. And such problems and burdens we shall have to continue to shoulder regardless of the turn of future happenings.

To-day world events are flashing by in so bewildering a succession that no one can say in advance just what form of food-service the American people will be called upon to perform. But it is certain that they will have to go on living up to food obligations—obligations to their own self-respect and to humanity.

Now that the war is over, it is probable that America will have to ship to the hungry peoples of the world all the food that there is available shipping to carry. Our pledge to the Allies was to ship seventeen and one-half million tons of foodstuffs overseas next year. That amount will doubtless have to be increased now to some twenty million tons.

In no way can this be achieved save by the ideals of democracy, the voluntary determination to sacrifice for a common aim. In no way can it be accomplished save by faithful and continuous food-service and cooperation on the part of the American people.

Does the task seem almost impossible? Are you tempted to say to yourself: "*It can't be done*"?

If so, pause before saying it—consider the record of the past—and add: "*We'll do it.*"

CAN YOU BEAT IT?

—Hungerford in the Pittsburgh Sun.

The Styleplus Plan

Why you will come to it

Concentration is the wizard's wand that transformed America into a mighty engine of war.

Concentration is efficiency. It is the key to the best result at the least cost.

Styleplus Clothes are manufactured on this plan—and always have been.

The few Styleplus grades are made in large quantities. Costs are reduced to the minimum.

The economy of this method tells in the superior style and wearing qualities of the clothes.

You will come to it because Styleplus

—give the smart appearance of the well dressed man.

—retain their shape and good appearance exceptionally well.

—are priced strictly in keeping with the thrift spirit of the hour.

Two grades in Styleplus suits: \$25 and \$30.

Three grades in Styleplus overcoats: \$25, \$30 and \$35.

Make your pick today at the local Styleplus Store!

Sold by one leading clothing merchant in most cities and towns. Write us (Dept. 5) for Styleplus booklet and name of local dealer.

Styleplus Clothes

\$25-\$30-\$35

TRADE MARK REGISTERED

"Each grade one price the nation over"

Note—This is the Styleplus Great Coat—a long storm coat—and unusually stylish for a coat of this type.

Styleplus overcoats are made in all popular models and fabrics. Let a Styleplus merchant show you one before you decide on an overcoat.

The Motors That Run Under Water

This Lincoln Motor has operated under water at exhibitions and conventions for many years—a practical demonstration of motor reliability.

Every day in thousands of plants Lincoln Motors are driving machines under trying conditions. In acids and fumes of chemical works, in the slop and steam of the packing house, in the dust and dirt of the foundry, in every place where motors are severely tried, Lincoln Motors have made good.

Many a skeptic has been converted to the use of electric motor drive in his factory by this simple, striking exhibition of what a really good motor will stand.

It is true that few plants require a motor to operate under such difficulties. Any wise plant manager gives a motor the best care circumstances will allow, but there is a feeling of added security in a motor which such abuse cannot harm.

The Lincoln Electric Co.
Cleveland, Ohio

MOTORS

Reliable Power for Your Machine

The satisfactory performance of any machine depends on the electric motor just as much as on the construction of the machine itself.

For many years large manufacturers of pumps, hoists, blowers, mixers, and similar machines have equipped them with Lincoln Motors — motors that will stand the handicap of the dust and moisture in which such equipment always operates

Today Lincoln Motors are an accepted standard for this hard, gruelling work as well as for the many easier tasks where motors receive the right kind of protection and care.

A machine equipped with a Lincoln Motor is a guarantee of reliable and continuous production. It is a double assurance both from the machinery maker and from Lincoln that you have enough power and the right kind of power to get the results.

Lincoln Motors are Used by Many Manufacturers of the Following Machines:

Pumps and Compressors	Fans and Blowers
Elevators and Hoists	Conveyors
Woodworking Machinery	Ice Machinery
Crushers and Pulverizers	Bakers' Machinery
Punches and Shears	Paper Machinery
Presses	Foundry Machinery
Cranes	Textile Machinery
Brick & Clay Machinery	Machine Tools

CURRENT POETRY

"PARADISE is a pleasant land," said the mystic Juliana, of Norwich, away back in the Middle Ages, and now another poet—for all mystics are poets, whether they write in verse or not—comes to tell us that this "pleasant land" is full of a new chivalry. In Frank Foxcroft's anthology of "War-Verse" (Thomas Y. Crowell Company, New York) we find these quite medieval verses from one of Ireland's most loved poets, the first of a number of poets of the fair sex who shall sing for us this week.

THE NEW HEAVEN

By KATHARINE TYNAN

Paradise now has many a Knight,
Many a lordkin, many lords,
Glimmer of armor, dinted and bright,
The young Knights have put on new swords.

Some have barely the down on the lip,
Smiling yet from the new-won spurs,
Their wounds are rubies, glowing and deep,
Their scars amethyst—glorious scars.

Michael's army hath many new men,
Gravest Knights that may sit in stall,
Kings and Captains, a shining train,
But the little young Knights are dearest of all.

Paradise now is the soldiers' land,
Their own country its shining soil,
Comrades all in a merry band,
And the young Knights' laughter pleaseth God.

Even more medieval is Ruth Pitter's delicate picture of the Delectable Land, in the *London New Age*.

THE WATERS OF PARADISE

By RUTH PITTER

In Paradise there is a sea
Blue as a turkis stone,
And many royal wonders be
Hid in his depths alone;
But seen of all the folk of neighbor land,
Whose quiet feet do pass the yellow strand.

And since that shore is void of man
No sail about it flies,
But hundred-headed leviathan
Like a prone rainbow lies
And looketh on the weaving waters wan
With stilly emerald eyes.

And tho no sail move on the deep
Waveless as any mere,
A radiant folk who may not weep
Without a sail do steer,
And very pleasant ways and winding keep
Above the solemn clear.

Par miracle I once did go
And stood upon the shore:
A gemmy archipelago
The gemmy waters bore,
And all those sprites that are unchained of wo
Do dwell there evermore.

Like gentle summer leaves, that make
A little whispering,
These folk that dwell in the lake
Full fairly say and sing:
Even as streams at night, that wake
With a sweet murmuring.

After contemplating the heavenly places we can turn without effort to this little gem of childhood and prayer, which we take from the pages of the *New York America*:

CANDLES THAT BURN

By ALINE KILMER

Candles that burn for a November birthday,
Wreathed round with asters and with goldenrod,
As you go upward in your radiant dying
Carry my prayer to God.

Tell Him she is so small and so rebellious,
Tell Him her words are music on her lips,
Tell Him I love her in her wayward beauty
Down to her finger-tips.

Ask Him to keep her brave and true and lovely,
Vivid and happy, gay as she is now;
Ask Him to let no shadow touch her beauty,
No sorrow mar her brow.

All the sweet Saints that came for her baptizing,
Tell them I pray them to be always near;
Ask them to keep her little feet from stumbling,
Her gallant heart from fear.

Candles that burn for a November birthday,
Set round with asters and with goldenrod,
As you go upward in your radiant dying
Carry my prayer to God.

From the happy child that is we pass to the child who never came, and from "Songs of an Empty House" in *Contemporary Verse* we cull these pathetic lines.

FOR THE CHILD THAT NEVER WAS

By MARGUERITE WILKINSON

O little hands that never were
With apple petaled beauty made,
You might have held me close to joy
Whence I have strayed:

O little feet that never were
Fashioned for tripping melody,
Your gladness might have kept me brave
On Calvary:

O little lips that would have drawn
White love to feed you from my breast,
You might have been my love itself
Made manifest.

O Child of mine, you never were—
No throes have thrilled me to rejoice—
You would have been my conquering soul,
My singing voice!

The same magazine gives us a happy example of dialect verse in a lulling little lullaby which runs:

DES' A-NAPPIN'

By EMMA KENTON PARRISH

Des' a-nappin', Honey,
List'nin' at de rain;
Des' a-reamin', kin' o',
To'ds de Good-by Lane;
"Tippy, tappy," droppin',
Lonesome soun', dat's so.
Des' a-bonin', Honey,
Per de night to go.

Mebbe, sometime, Honey,
Patter-roller cry,
"Lights out in de cabin!"
Den my night gone by.
Des' a-nappin', Honey,
List'nin' at de rain,
Honin' fer de sunup,
Pas' de Good-by Lane!

From a charming book of recollections, by E. OE. Somerville, entitled "Irish Memories," (Longmans, Green & Co., New York), we take two sets of verse that are used as head-pieces to chapters.

IN A SWISS VALLEY

By E. OE. SOMERVILLE

Silver and blue the hills, and blue the infinite sky,
And silver sweet the straying sound of bells
Among the pines; their tangled music tells
Where the brown cattle wander. From on high
A glacier stream leaps earthward, passionately,
A white soul flying from a wizard's spells.
And still above the pines one snow-drift dwells,
Winter's last sentinel, left there to die.
From the deep valley, while the waterfall
Charms memory to sleep, I see the snow
Sink, conquered, on the pine-trees' steady spars.
A waft of flowers comes to me. Dearest, all
Our happy days throng back, and with the flow
Of that wild stream, there mingle alien tears.

DODGE BROTHERS

CONVERTIBLE CAR

That protection against discomfort which we Americans like to provide for the very old, and the very young, is one strong reason for its popularity

There is no member of the family group, from grandmother to the little tots going to kindergarten, who does not benefit by its quick convertibility.

The gasoline consumption is unusually low
The tire mileage is unusually high

DODGE BROTHERS, DETROIT

The following lines eloquently convey an understanding of her friend that Miss Somerville shows so sympathetically throughout the pages which record the collaboration of these two women in their amusing stories of Irish life, especially among the hunting set.

SONNET

BY E. E. SOMERVILLE

She hid it always, close against her breast,
A golden vase, close sealed and strangely wrought,
And set with gems, whose dim eyes, mystery
fraught,
Shut broken gleams, like secrets half-confest.
"One day," she said, "Love's perfumed kisses
prest
Against its lip their perfectness, unsought,
And subtly the dizzy fragrance caught
My senses in its mesh, and gave them rest,
And life's disquietude no more I feel.
For now," she said, "my heart sleeps still and
light,
Love's Anodyne outlasts the lingering years!"
But in the darkness of an autumn night
Her heart woke, weeping, and she broke the seal.
The scent was dead: the vase was full of tears.

Louise Ayer Garnett tells us, in the *New York Independent*, that happiness often lies in staying close beside the tea-table:

FENCES

BY LOUISE AYER GARNETT

I have torn down all my fences:
The challenging air blows free;
I can look across the spaces
Where new life is hailing me;
My horizon is unrolling
Like the vistas of the sea.

I have torn down all my fences—
But I never can recall
The seclusion of my garden
With the world beyond the wall;
My old way of looking upward
Where the sky was all in all.

Scribner's Magazine gives us this excellent little bit of atmospheric verse:

TRISTRAM IN THE WOOD

BY KATHARINE TAYLOR

I dreamed of a still gray pool
Within the wood,
Into its depths the dusk
Was falling, falling over.

And waking slowly in the night
I felt thy hair,
Thy dim, cool hair,
Like falling dusk about me,
And through it, from the spacious night,

Glimmered one lucid star.
Ah, like a wood anemone
Thy face, thy curving throat
Shone faintly through the enfolding gloom
That hung about me—

I dream of a still gray pool
In the lonely wood,
Into its depths the dusk
Is falling, falling over.

A pregnant impression from the *New York Forum*:

IN MY SOUL'S HOUSE

BY LEONIE DAVIS COLLISTER

In my soul's house, I stored for you
Each treasure that the gods
Had given me,
And many dreams I stored
Against your coming.
Your hand on mine was fire on fire,
But in my soul's house that I
Had made so beautiful,
You did not enter.

And now . . . the gods
Have seized my treasures,
As is their way
With things unused.

PERSONAL GLIMPSES

TEUTONISM TRIMMED TO A "T"

YOU may say what you like about what won the war, and maybe the debate will go on a hundred years, but the fact remains that the following caustic arraignment of Teutonism appeared on November 9 and the Germans signed the armistice on the 11th. Facts are facts, and anybody can draw his own conclusions. This remarkable document is the work of Mr. Charles Dutton, of Montclair, N. J., and it appeared in the *Montclair Times*. Mr. Dutton is eighty-one years old, yet is ranked as among the best active corporation auditors in New York City. In the following essay he achieved the task of writing a complete essay on "Teutonism," using no word that did not begin with a letter "t." The essay is as follows:

Truthful thinkers turning their thought to these troublous times trace the tributary terrors to Teutonism.

To test this theorem the tale-teller tersely tells this tragic tho truthful tale.

The Teutons turn their thought to trenchery, to trickery, to tyranny.

They transmit these three thought types to transactions that testify to the truth that these triplicate Teutonic traits transcend the Turk's topmost tyrannous thought.

Technically, the Teutons themselves think, tho truthfully told 'tis the Teutonic throne that thinks.

The tenantry, the throne's tools, truckle to the throne thought.

Tenantry talk takes the throne talk trajectory; the throne threateningly talks; the tenantry timidly talk; these twin talks tally.

The Teutonic throve, through their typographical text, through their *Tagelhatt*, tells the tenantry that their Teutonic traditions, their technical training, their tremendous trade, their theocratic theories, their trained troops thoroughly testify to their tenable Teutonic transcendency.

This tirade, toothsome to themselves, they trumpet to those territories that the Teutons tabu, tho to the transatlantic territory they temper their threatening tone.

The transmarine territory's transactions tantalized the Teutonic throne; therefore, to tame these taunting Tommies, the Teutons traversed the thrifty tract 'twixt the two territories.

There their troops thronged the terraced towns; they trampled the tillage; they tore to tatters the tenements, throwing the tenants to the tempest; they torpedoed the temples, turning tablaturs to tinder; they terrified the toddling tots; they trailed the traditional Tophot through the thoroughfares.

The Teutons' tyrannical treatment terminated the tattered territory's tolerance; that the Teutons termed timidity.

They tackled the tramping troops; their terrific tursts thwarted the Teutons' trespassing till the territories, tolerant till then, took to themselves the task to turn the tyrannous tide.

Together toiled the transmarine, the transcontinental, the transmontane, the transatlantic territories; together they took their turn trumping the Teutonic trick.

The tricky treaties tempted the Tzar's

territories to turn their thought to themselves, the ties tightened that tied the trustworthy territories together.

They taxed their treasuries; they tested their thrift; they trained troops to trigger tactics; they toughened them to trench terrors; they taught them to trail their titanic tanks through the tangled terrane.

Those thoroughly tested they tutored to tower the thunder-clouds; to trace the terra topography; to tackle the Taubes; to torpedo their targets through the tree-tops.

Thousands tendered their time, their talents, themselves, to tend tattered troops, to treat torn tissues.

Then transports, ripling the tonnage, took these thousand times thousand to the trenches to test the Teuton's trumpeted transcendency.

There they'll tarry till the Teutonic throne tumbles.

Trust these tireless thoroughbreds; trust their traditional tenor, their true trend, their typical tact, their tested tenacity.

Trust them to transform Teutonic thought; to turn turmoil to tranquillity; to trammel treaty trickery; to thwart the treacherous threatenings to Teutonize this terrestrial.

Thoroughly trust them to terminate Teutonism's tiniest trace.

They'll taintlessly, totally triumph.

WHOLESALE BULGARIAN BUTCHERY OF SERVIANS

A TERRIBLE story of cold-blooded butchery by Bulgarians is told by Mr. Ward Price in a cable to the *New York Times*. For three months a deliberate, systematic effort was made to exterminate the national spirit of Serbia by killing every one thought capable of maintaining it. During these massacres, says Mr. Price, "the Germans, by contrast with the Bulgars, appeared to the inhabitants of Serbia as protectors and agents of mercy." The facts relating to the crimes, "which will earn for Bulgaria the odium of civilization," were gathered in a region lying around Vranja, between Kumanova and Lesjovtz. The brutality began as soon as the Bulgars had established themselves. We quote:

After forbidding the use of the Serbian language, closing Serbian schools, compelling every one to change the ending of his name from the Serbian "itch" to the Bulgarian "off," and after installing Bulgarian mayors, bishops, tax collectors, and military police, they arrested in every town and village all men who belonged to what may be called the intellectual class. They chose parliamentary deputies, judges, teachers, lawyers, priests, and employers of labor, forming them into gangs, and marched them away. From that time until the defeated Bulgarians evacuated Serbia the other day the friends of these people had heard nothing of their fate, but now the ghastly story is known in detail.

Men numbering at least three thousand from the towns and villages of the Vranja region alone were taken in detachments of about fifty at a time to a place which the Bulgarians chose as their slaughter-house, and there every night one party after another from December, 1915, to March, 1916, had their throats cut or were stabbed to death.

The village whose name the Bulgarians

The World's best-known Farm Tractor

THE "Caterpillar" Tractor was invented by Benjamin Holt for the American farmer. In the farmer's hands it made good. Then industrial users all over the world proved it the most economical solution of their difficult power problems—hauling ore over rocky mountain roads; bringing log trains through rough, winding forest trails; moving necessities across sandy deserts; building aqueduct or reservoir, highway or drainage canal; clearing land and making farms of it.

A decade of commercial success in conquering the "impossible" put such stamina into this Tractor as to make it the unanimous choice of Allied army engineers for military transportation. But the "Caterpillar" is still a farm tractor—extraordinary. As a farm investment it is like a concrete building, returning all its costs in added service and satisfaction.

The "CATERPILLAR" Tractor is built only by The Holt Manufacturing Company, Stockton, Calif., and Peoria, Ill.

The word "CATERPILLAR" is the exclusive Holt trade-mark, registered in the United States and nearly every other country. It can properly be applied only to products of Holt manufacture.

Write for detailed information.

have made terrible is a small place called Surdulitza, twenty miles northeast of Vranja, near the Bulgarian frontier. I went there yesterday and saw the bones, the graves, and surviving relatives of 2,500 victims of Bulgarian savagery who there met their end.

Doomed men, against whom the Bulgarians had no other charge whatever except that they were patriotic Servians and likely to keep up the national spirit among their fellow countrymen, would arrive almost every day at Surdulitza under strong Bulgarian guard. They were locked up in houses which I saw, and then at night marched down to a gully which I visited, where, tied four or five together with ropes, they were stabbed or bayoneted to death and buried where they lay by local gypsies collected for the work by the Bulgarians.

But not all the killing was done in this gully. Every night the peasants of Surdulitza, who were forbidden to leave their houses after sunset, heard men's screams coming from a little wood on the other side of the village; and 2,500 is the local estimate of the number of Servians who thus forfeited their lives to their nationality. As to crimes at other points, Mr. Price says:

Not more than forty persons were actually killed at Vranja itself, but once a fortnight all surviving men were ordered out of the town while the Bulgars ransacked and robbed their houses under the pretext of searching for arms, and sometimes also outraged their women.

At Ushevtso, a hamlet to the north of Vranja, 120 men, women, and children, the entire population, were killed in one day.

At Vladiehi all the women were collected and some of them violated. The rest were tied up and left until two days later when the Bulgars came back and completed their work of outrage.

Last year at Yelashnitsa and Krivafaja innocent peasants were stripped naked, tied down to braziers, and roasted over slow fires to make them confess that they possessed hidden arms.

Lebane and Leskovatz were probably the worst martyred towns of all. At the former place twenty persons were beaten literally to death. The information about these last townships comes from the Servian municipal officials and the principal inhabitants of Vranja, several of whom were there all through the Bulgarian occupation. Personally, I am entirely convinced of the sincerity of these men and of the truth of the terrible charges they bring. I spoke with them myself in French or German, and there was too much spontaneity in their answers and too much resemblance between the accounts which different individuals gave at different times for the idea of a faked-up tale to be admissible.

What is to be done to punish this cynically planned and brutally executed policy of murder? The names of the Bulgarian officers directly responsible for these butcheries are known. The peasants of Vranja and Surdulitza utter them with the same dread as that with which men of the English West Country must have spoken of Judge Jeffreys after the Bloody Assizes.

As the only British witness who yet has had an opportunity to investigate these crimes, I would suggest that England owes it to her Servian allies who suffered so terribly in the common cause that England should immediately demand the appear-

ance before an inter-Allied court martial of the Bulgarian officers thus accused by common report.

A VICTIM OF OVERZEALOUS SLEUTHING

DESPITE the vast amount of information the Department of Justice possess from the very beginning of the war, it is questionable whether it ever dreamed of the high percentage of amateur detectives in the population of this country. Most of these aspirants to the hall of fame, dominated in their imaginations by the figure of *Sherlock Holmes*, were what is known generally as intelligent people, and in many cases they were possessors of a thorough education. Invariably, it seems, they felt themselves particularly gifted for what is colloquially known as "snooping," and in a great many cases, especially of the men, their ambition was inspired rather by a disinclination to risk the rigors of camp-life or the firing-line. Among women hopefuls, it is said, the hereditary instinct of Mother Eve to "find out something" was the main impulse toward seeking a career in this branch of the Government's service. It is not surprising, therefore, that many absurd and unjust accusations were made against various persons by these well-intentioned and seemingly well-balanced sleuths. Among the amusing instances of mistaken charge of disloyalty is that of a millionaire's son who reported a conversation overheard in a hotel restaurant. The chief participant in this conversation was examined by the authorities and easily won complete exoneration. Then the victim took his turn at the game by suing the millionaire's son for about \$150,000, whereupon the would-be detective's father had his son enlist as a seaman in the Navy at the very earliest moment. It goes without saying that we shall have to watch spies, pacifists, and disloyalists just as sharply as ever in these days of armistice, but it is to be hoped that fewer errors, especially of rankly unjust consequence, will be made. A striking example of this sort of error is the case of a man who served in France and Belgium during the first year of the war, Mr. Jean H. Fulgeras, of Paris. He figures in an article contributed by a French journalist to *The Atlantic Monthly*, and quoted in these pages several months ago, as being connected with an advertising agency known as the Société Européenne de Publicité, which was sequestered on the ground of being enemy-owned. The New York representatives of Mr. Fulgeras—Collin Armstrong Inc.—called the attention of *The Atlantic Monthly* to the inaccuracy and injustice of the statements concerning him and the Boston publication issued a retraction in the September number, from which we quote the following:

"As we have no desire or purpose to do Mr. Fulgeras an injustice, we make public

Barrington Hall
The Baker-ized Coffee

here our New York correspondent's further statements that Mr. Fulgeras was in the employ of Mr. John F. Jones when his business was taken over by the Société Européenne, that he severed his connection with the latter as soon as it was declared under sequestration, and that 'he served France and Belgium for the first year of the war.'

Printer's Ink (New York, November 7) points out that altho Mr. Fulgeras was incidentally mentioned in the articles attacking the sequestered advertising agency in Paris, no charges were brought against him personally. Any rumors or insinuations against him are unfair and false, this journal for advertisers assures us, and it makes the assertion after careful investigation. From this source we learn also that—

"The French courts have formally released Mr. Fulgeras from all contracts and obligations to his former employers. *Printer's Ink* has examined the original of a document under the seals of the Ministry of Foreign Affairs for the French Republic, and visé by the Vice-Consul of the United States at Paris, which certifies that a list of the stockholders of Mr. Fulgeras's new agency has been filed with a formal statement that all are French with French parents and grandparents or citizens of the United States of America."

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

LISTENING to the old songs by Y. M. C. A. singers is one of the cheering experiences of the boys at the front, but even music did not charm away the bitter feeling against the Hun. This fact comes out strongly in a letter from Lieut. Robert J. Shields, of San Diego, Cal., which is published in *The Sun* of that city. The Lieutenant says:

I have just come from a concert at the Y. M. C. A. given by an American trio. Oh, how wonderful it seemed to see and hear two real American girls, and to hear the baritone of the Y. M. C. A. man with them. They sang all of the old, old songs everybody knows and loves, and then we all joined in popular song after song. Even tho it made us all homesick, yet I think it raised the morale 1000 per cent., for it made us all feel nearer home and feel rested after the terrible rush, rush of our intensive training.

Never, never, did I realize what it is to jump every single minute of the day. It is just go from daylight till supper-time and then censor mail till late at night. This censorship is the bane of an officer's existence. But I never felt better in my life and I thank God for one thing—that I am kept so busy I don't have time to become homesick. At night I am so dead tired I just fall into bed and don't know a thing until reveille, when the grind begins again.

I have seen and know first-hand what worst dreams never pictured in the terrible disaster that threatened us as well as these countries here. The most vivid imagination can not possibly picture the terrible, terrible plight France was in before we came, and the stoicism with which she has stood it. She could not possibly have lasted another winter through and then

THE POST-WAR CAR

GIVING loyalty of their technical skill, creating and perfecting the Liberty Motor, designing army transports and directing their manufacture, America's automotive engineers have played a great part in the winning of the war.

Out of this experience they have drawn lessons that are to have a powerful influence on the Post-War Car.

Due to the existing shortage, manufacturers of motor cars are required on the briefest notice to meet what promises to be an unexampled demand.

Not only will this demand be met, but assurance is given that many improvements of greatest significance are reserved for the Post-War Car.

Lighter construction and elimination of great bulk.

Additional endurance and serviceability; longer life.

Extreme simplicity in mechanical construction, together with more automatic operation.

Greater economy in upkeep and operating costs.

More extensive use of anti-friction bearings, with consequent longer life.

Lighter construction, without sacrifice in strength or durability, is an important Post-War feature. Less weight means less upkeep, including gasoline consumption, wear and tear, and tire costs.

The trend in automotive construction has been from the beginning toward more automatic, more carefree performance. Even closer application of this principle is seen in the Post-War Car—self-acting and self-regulating, more independent than ever of adjustment and attention.

The possibilities of trouble are reduced by reducing the number of parts that can give trouble.

Lighter and more economical—simpler and more automatic—stronger and more serviceable—the Post-War Car strikes a balance of maximum performance with minimum care and cost.

The trend is toward more automatic performance, and therefore toward more carefree bearings—Hyatt Roller Bearings. Hyatt Bearings automatically distribute the load; absorb shocks and strains, and prolong the life of the car. Self-oiling—self-cleaning—never needing adjustment, these bearings take care of themselves.

Hyatt—the bearing for the Post-War Car!

When you can't get your Smith Brothers S-B Cough Drops don't blame the merchant

He has done his best to get them for you.

So have we.

But war conditions have created a shortage. We hope that now, with the end of the war, it will soon be relieved, although it may be continued for some time.

First of all, we are handling the tremendous order placed with us by the Y. M. C. A. for S-B Cough Drops to be shipped to the soldiers in France, Belgium and Germany.

Second, the influenza epidemic that has been sweeping the country has greatly increased the demand for S-B Cough Drops as a preventive protection.

Third, like candy, Smith Brothers S-B Cough Drops are made of sugar and we are cheerfully acceding with the Government requirement to reduce our consumption of sugar. We prefer to do less business this year rather than lower the quality of Smith Brothers S-B Cough Drops by using a substitute for sugar in them.

Therefore, when you ask for your customary box and the dealer cannot sell it to you, please remember that he is just as sorry as you are that he cannot get more, and so are we.

The time will come soon, we hope, when there will be enough Smith Brothers Cough Drops to go around.

Meanwhile your best protection is to keep away from coughers. If anyone near you coughs, move away from him.

Drop that Cough

SMITH BROTHERS of Poughkeepsie

Germany would have ravaged her as she has Belgium, and later the other countries at her leisure. I can not picture the true state of affairs, but before God, I have come to believe that every able-bodied man in every Christian country should be under arms now, for I know the principle we are all fighting for and, having seen these countries, can appreciate that I am fighting for my country as well as for that principle. France is a wreck. Her young men are gone. Her grain-fields are going to ruin for lack of help in harvesting; her industries are ruined to a great extent; her people are starving or nearly so; her women are toiling, toiling to do their bit and the work of their men besides to save their beautiful land from destruction and ravages no tongue can describe. But Attila, the scourge of God, had nothing on the Hun of to-day.

Private W. H. Bastedo, who was formerly a newspaper reporter, was not fond of war as a steady occupation, but, like other brave boys from the Middle West, he managed to get a certain kind of enjoyment out of it. At any rate, he says in a letter to the *Minneapolis Tribune*, he has no kick to register, and adds:

I would not trade places with the most successful loafer in America to-day. But after the war—oh, boy—I'm going to crawl into a hole in some mountain somewhere and never, never work again.

I had some fun with a cootie I caught yesterday. It was the first one I had and I know it was a German one, because he sneaked up behind me and bit me in the back. You can bet I strafed him good and plenty. They tell a good one about a colored company that was suspected of carrying around live stock, contrary to General Orders No. 606. The captain lined them up one morning and explained his suspicions and yelled, "If there am a nigger heah that done got fleas, step out—company halt."

My French is improving with age. I can make the natives "comprize" now without resorting to the sign and profane languages. . . . (Deleted by censor).

The rainy season is on. It rains one day, drizzles the next, and then rains for a week, repeating the formula *ad lib*, indefinitely. Trenches are nice for mud-turtles these days. There is only one good feature of the weather. That is that it prevents the Hun airplanes from snooping around, dropping their baby-killing bombs and taking snap shots of things they have no business to know. The *Boche* planes hardly cause me a feeble ripple of excitement any more. It is sport to watch the artillery get into action on those boys way up in the clouds. It's a combination of duck-hunting and the Fourth of July.

Since arriving in France I have traveled a good bit, mostly by box car and the rest by French and American motor-trucks. Box cars are by far the best. I found them more homelike, because I could sprawl out on the floor and not miss any of the scenery. And there was lots of that.

I have slept in every kind of a place from the bosom of mother earth herself to a cow stable. In the last village I had a box stall next to a bunch of interned Russians. That was paradise. If you want real comfort sometime, try a box stall. Just now I have an iron cot in a French military billet and it is the

THERE is only one thought in people's minds about the Cadillac today.

Over here, and over there, in civil and in army life, it ranks as a *truly great* motor car.

But the war has given us a still loftier conception of what the Cadillac *must* be.

The very name American stands, now, for a high and rigid code of honor.

As that standard attaches to our manhood, so, too, it must attach to our manufactured products when the war is over.

Just because we are Americans, the world will expect from us an exalted superiority.

It will be our duty to see that the world is not disappointed.

We could safely rest on Cadillac standards of the past; but it is our purpose to lift them higher and higher.

We pledge to our own people, and to the Allied nations, a Cadillac always worthy of the new dignity that attends the name American and worthy also of its own unsullied good name.

best bed I ever had—that is, since I can remember.

The chow (army for food) is good. To prove it, I'll say right here that I gained twelve pounds on corned-willy, salmon (embalmed), and the other staples we get tri-daily. I weigh 172 now in my nighty and feel strong enough to take on a couple of German platoons with one hand tied behind my back.

No disposition to exult or rejoice was evident when the news that Germany was seeking an armistice reached the First Army Corps in France. In fact, we are told that the general wish seems to have been in favor of rejecting the plea. "I hope it is not granted," wrote Lieutenant Warden McKee Wilson in a letter to his parents which appeared in the *Indianapolis Star*: "the Army is not for it, for those on the fighting-line realize that if we quit with the task half completed, the next generation will have to come over here and fight the same battle again for civilization and free institutions. What Germany really needs is the great object-lesson of occupation by the forces of the free and peace-loving world. Then the process of rehabilitation will begin and a new Germany will arise from the ashes of autocracy."

This was written some weeks before the armistice was signed, and Lieutenant Wilson naturally had no idea that Germany's submission would be so abject and humble as it turned out. He had been thinking a lot of "the tremendous effect on conditions and perhaps on politics when the Army comes home," and observes:

Our men are receiving a broadening view and an education. I censor their letters, and while it is not a pleasant job, it is most assuredly an enlightening one. It is interesting, by the way, to discover that those men who take the most pride in being "hard boiled" on the surface are the rankest sentimentalists in their letters home.

Almost all of them are conscious of the power the Army will wield when it gets home. I don't suppose the thing will be carried out to the extent that it was after the Civil War, but nothing in the world will prevent former army men from taking an active and personal interest in politics in a concerted way, and perhaps also from controlling the policy of the nation. One thing is interesting: drunkenness is very unpopular in the Army, but so is prohibition, because our men are learning from the French how to use mild drinks in moderation, and it is no unusual sight to see two or three of the boys chatting for an hour or so over a bottle of mild, red wine or beer. They drink it with their meals both in the towns and behind the lines. I have heard scores of men and officers say and have read it in the men's letters that while they are opposed to and will vote against the saloon, they are also opposed to and will vote against extreme prohibition. They believe in the justice of General Pershing's order which permits them to drink light wines and beer, and realize that what has brought so much unhappiness at home is the unrestrained evil of the saloon.

They all seem to feel sure that they

will never go back to the city to live, but will have a farm where there is "plenty of air." It is certain that a man who has been under shell-fire knows that there is something more important in life than making money, and ideals are replacing ideas to a great extent. In England and in France they have seen that even in war-times we can be taught many a lesson in enjoying life, and they all insist that they will have a rose garden surrounded with a high hedge or wall as they are over here, and that every afternoon they are going to sit in this same garden and imbibe great quantities of tea with "friend wife." I believe that, almost to a man, the Army will be for universal compulsory training, if not service, and expressions on this subject are frequent and strong. Last, but not least, they realize what a blessing it is to be an American and to live in that land of opportunity, where a man doesn't have to "stay put," and where, even if it does give you indigestion eventually, there are hot biscuits and ice water to be had.

Life on the front had its whimsicalities at times in spite of rolling barrages, the hail of bullets, the jangle of caissons, and the whining of truck-motors. Lieut. Harry B. Henderson tells of a beautiful red rose on his camp-table, in a letter to the *Wyoming State Tribune*, beside an Austrian shell with a bit of scenery painted on it, which served as a paper-weight. Then there are incidents that excite the "risibles" and afford needed diversion to the mind. For instance:

The other day they were keeping us a bit busy and I had my ear on top of my head all the time deciding on each "whiz" as it approached. Just in the hottest part of it, one of my gunners came tearing down a rutty road, clad in a Prince Isaac coat he'd found in a raid and wearing a Boche cap. He was pushing a baby-buggy full of potatoes and dynamite which he thought I could use. We had the canteens for lunch and then blasted a new dugout with the explosive. You can't imagine how you laugh when you've been a bit under a strain for several days of firing, and then see something funny. But for my sense of proprieties I'd describe the giddy lingerie the young man was using for underwear. He explained to me that cooties get so tired of wandering through lace!

It's funny what we think of in times of stress, and just the other night different men were deciding what they'd like to have most, and even the loudest burst of shrapnel failed to draw our attention from this absorbing topic. It was a treat to watch the faces of the five men with me in the dugout as they sat around our lone candle.

The general choice seemed to be five minutes' talk with their folk and best girl, next a chocolate malted milk, then a train-load of Hershey nut-bars, and after that a turkey dinner. Then I thought of the wilted lettuce salad I used to see at church picnics, with its sliced hard-boiled eggs on the top, and guessed that would be my choice. The next day two men crawled into a very-much-shelled town and got some lettuce and brought it back with great pride. It was pretty much wilted then, they had dropt on it so often getting back. We dropt it in boiling bacon fat and it sure wilted. From the rather "wee-wah" looking results, I guess I'd better look up another picnic.

Synchronous G.E. Motor Drive
Warren, N.J. Mill Warren Mfg. Co.

Copyright 1918, by The Goodyear Tire & Rubber Co.

Making One Belt—and the G.T.M.—Do the Work of Three

Three belts had been devoured in twelve months by a certain motor drive in the Warren Manufacturing Company's Warren, N. J., plant. All were large belts. Some were expensive belts. Together the three loaded that drive with a pretty figure of operating costs. While the third belt was petering out, a G. T. M.—Goodyear Technical Man—called. It was our Mr. Ford.

They looked at his card, asked him in, listened a while, and asked the price of a belt for that motor drive. The G. T. M. didn't even take time to ask the width of the belt—he just said he didn't know the price. Before they could ask him what kind of salesman he was, he told them about the Goodyear plan of selling belts—of thoroughly studying conditions and then prescribing the belt that would meet those conditions most efficiently and economically. They thought of three belts of the past twelve months and reasoned that they had nothing to lose by trying the plan.

He studied that drive. It was a hard one. The speed was close to a mile a minute—and when the motor was not used as an auxiliary for driving seven beaters, it was reversed and used as a generator. The centers were short. There were a number of other peculiar conditions—but after the G. T. M. got through studying them he knew just what to do—he had seen some drives very like it and had tried out his prescription.

After allowing for special circumstances he prescribed a belt of only six plies—although many a power engineer would have said that more were necessary. But he knew the proved strength of every Blue Streak ply—a brute strength as remarkable as its pulley hugging grip. So he prescribed a twenty-eight inch six-ply Blue Streak—made endless. Although he had had great success with special fasteners of various types to fit certain conditions, he knew that the best of fasteners were hopeless here—so it was a Blue Streak made endless.

That belt was applied in November, 1916. Its cost was less than that of one of the three belts that had been so disappointing, and yet that Blue Streak lasted longer than the three together. That synchronous drive doesn't pile up any more undue costs for the seven beaters it serves, doesn't cause interruptions nor lowered efficiency any more.

If you have a belt-devouring drive that is eating too many dollars, ask a G. T. M. to call. He'll do it without charge when he is in your vicinity. There are many of them—all trained in the Goodyear Technical School—all with experience in plants similar to yours—all selling belts to meet conditions and not as a mail-order house sells ready-made clothes. The G. T. M.'s services are free simply because the savings they effect for purchasers are so considerable that a gratifying volume of business from the plants served is certain to come to us within a few years.

THE SPICE OF LIFE

Disappointing Papa.—MISS PRITTIKID—"But, father, he is a man you can trust."
HER PA—"Gracious, girl; what I want is one I can borrow from."—*Indianapolis Star*.

Mother Knew.—"Ma, what does the 'home-stretch' mean?"

"Making a fifteen-dollar-a-week allowance go around, my son."—*Boston Transcript*.

To Measure the Peace Confab.—BACON—"I see the Allies gained 1,200 meters yesterday."

EGBERT—"Must have attacked a gas-works, I suppose."—*Tit-Bits*.

Why They Lasted.—"I am surprised to see you have such a quantity of preserves left over from last year."

"Nobody could get the lids off," explained the housewife briefly.—*Louisville Courier-Journal*.

Didn't Tell the Truth.—JONES—"I know now that my wife lied to me before we were engaged."

BROWN—"What do you mean?"

JONES—"When I asked her to marry me she said she was agreeable."—*Tit-Bits*.

Right in His Element.—"I think my boy will do well in the Army."

"Why?"

"I see the scheme is to carry on."

"Yes?"

"And he always was great at carrying on."—*Louisville Courier-Journal*.

A Complete Rout.—"Our forces have been routed, your Excellency, and are retreating in great disorder."

"Have you lost control over them?"

"Absolutely, All-Highest. We can't even get them to stop long enough to poison the wells as they beat it for home."—*Detroit Free Press*.

From Sad Experience.—"You say you have a fire-escape at each floor?" said the applicant for a room.

"Yes, we have," replied the boarding-house lady.

"Must give you a feeling of security."

"It does if the boarders are all paid up."—*Yonkers Statesman*.

Of Course She Got It.—MAID (about to leave)—"Might I ask for a recommendation, ma'am?"

MISTRESS—"But, Mary, what could I truthfully say that would help you get another place?"

MAID—"Just say that I know many of your family secrets, ma'am."—*Boston Transcript*.

Old Mystery Solved.—A commercial traveler, on leaving a certain hotel, said to the proprietor: "Pardon me, but with what material do you stuff the beds in your establishment?"

"Why," said the landlord, proudly, "with the best straw to be found in the whole country!"

"That," returned the traveler, "is very interesting. I now know whence the straw came that broke the camel's back."—*Tit-Bits*.

1760 Packard Trucks Complete National Truck Efficiency Test

Winning Truck Establishes 3 Months' Record of 952 Points out of 1000—\$5025 Awarded in Prizes

THE National Truck Efficiency Test was organized and conducted by the Packard Motor Car Company in co-operation with the efforts of the National Council of Defense and the War Industries Board to put motor trucking on a basis of higher efficiency, and to save railroad facilities for urgent Government uses.

The test consisted of three months' running, all phases of the truck performance and truck costs

being recorded daily on the National Standard Truck Cost System, as perfected by the Truck Owners' Conference.

The trucks were divided in three classes, according to capacity.

Prizes were awarded in each class—\$1000 to the owner of the winning truck; and to the drivers, \$500 for first, \$100 for second, and \$75 for third best records.

The Prize Winners in the National Truck Efficiency Test

Class A—1½ and 2 ton trucks

FIRST: What Cheer Chemical Co., Pawtucket, R. I., James L. Drury, Driver.

SECOND: Edson Moore & Co., Detroit, Mich., Edward Dallas, Driver.

THIRD: Edson Moore & Co., Detroit, Mich., L. Moore, Driver.

Class B—3 and 4 ton trucks

FIRST: H. F. Cherigo & Sons, Baltimore, Md., Lew Bacighipi, Driver.

SECOND: Salt Lake City Pressed Brick Co., Salt Lake City, Oloff Hanson, Driver.

THIRD: Harper & Wils, Baltimore, Md., C. Wils, Driver.

Class C—5 and 6 ton trucks

FIRST: W. M. Hoyt Co., Chicago, Ill., Joseph Brookbank, Driver.

SECOND: Gottfried Krueger Brewing Co., Newark, N. J., Charles Langbein and Joseph Birchler, Drivers.

THIRD: H. F. Cherigo & Sons, Baltimore, Md., J. Butts, Driver.

HIS three months' test of 1760 Packard Trucks in all parts of the United States is the first all-'round and nation-wide test of truck hauling ever conducted.

It is the first to consider and record the *transportation factors* that enter into truck efficiency:—

Traffic Conditions	Return Load
Type of Country	Percentage of Capacity
State of Roads	Economy in Gasoline
Type of Tires	Economy in Tires
Running Time	Economy in Oil
Loading and Unloading Time	Economy in Upkeep
Outgoing Load	Wage Cost
	Condition of Truck

Many a truck owner, discovering that his fleet is costing more than it should, finds all his efforts at economy baffled—because he thinks of efficiency only as a matter of trucks.

Truck efficiency depends on transportation principles.

There is not a truck owner in the United

States but can benefit by the results of the Packard National Truck Efficiency Test.

They are *transportation results*.

They are just as applicable to the single truck as to the fleet—to the little delivery car as to the Packard.

Whether you are a Packard Truck user or not—the Transportation Department of your local Packard Branch or Packard Dealer will be glad to see you. They will talk the thing over with you—show you what transportation results to look for and how to record them day by day on the National Standard Truck Cost System.

One of the most vital things for the Nation today is that every transportation agency shall come as near 100% efficiency as possible.

It is an extension of the Packard program of 100% War Work to give the results of this test to every truck owner or driver who will make use of it—*freely, and without thought of imposing obligation.*

PACKARD MOTOR CAR COMPANY

Detroit, Michigan

The Bridge that Supports and the Gear that Drives

In a Timken-Detroit Worm-Drive Rear Axle one of the big vital problems of efficient commercial haulage finds a practical and simple solution.

The axle has just three jobs, to *carry the load*, to *drive the load*, and to *stop the load*. Timken-Detroit Worm-Drive Axles do these three things with *everything that is superfluous left out*.

The axle housing is a steel bridge in which the greatest amount of load-supporting and strain-resisting strength is obtained with the least weight of metal through a scientifically correct combination of the hollow tube with the rectangular, or box-like, one-piece housing.

The problem of load-driving and gear reduction is by the use of worm and worm wheel reduced to its simplest form—*direct drive through two strong, simple units, with only one reduction*.

Brakes are of ample size, and correctly designed to bring the truck to a dead stop in the shortest distance without jolt or jar.

The one greatest cause of wear to truck

axle parts is eliminated by enclosing the driving members within the housing, making positive lubrication possible with no entrance of dust, grit, sand, mud or other foreign substance to grind away gears, shafts and bearings.

This type of axle construction has now had over six years of continuous and successful demonstration under the best built motor trucks in America and many years of service in Europe.

In all that time not one of these gear units has worn out in legitimate service. The only cases of worn gear trouble reported to us have been caused by deliberate use of a lubricant containing material which would wear out any part in rolling contact. Scores of worm-drive trucks have traveled over a hundred thousand miles (many over two hundred thousand), and are still going, with the worm-drive unit in as good working order as when the truck was new.

A prospective buyer needs no argument other than the actual facts of service, which can be obtained from any user of trucks equipped with Timken-Detroit Worm-Drive Axles.

THE TIMKEN-DETROIT AXLE CO.
Detroit, Michigan

Oldest and largest builders of front and rear axles for both motor cars and trucks.

TIMKEN-DETROIT

FRONT and WORM-DRIVE REAR AXLES

For Efficient COMMERCIAL Haulage

Why He Got It.—YOUNG MINISTER—(receiving gift of fountain pen)—“Thank you. I hope I shall now be able to write better sermons.”

THE LADY—“I hope so.”—*Boston Transcript.*

Easily Solved.—TEACHER—“Now, Johnny, suppose you wanted to build a \$1,000 house and had only \$700, what would you do?”

JOHNNY—“Marry a girl with \$300.”—*Boston Transcript.*

Great Color Scheme.—MARY—“Why do you always buy two kinds of note-paper?”

JANE—“Well, when I write to Jack I use red paper—that means love; and when I write to George I use blue paper—which means faithful and true.”—*Tit-Bits.*

The Ruling Passion.—“I’ve just had some good news,” said Bearstean, upon meeting his friend Mr. Abrahams. “My son Solly has got a commission in the Army.”

“Go on,” replied Abrahams, rubbing his hands; “how much?”—*Tit-Bits.*

Might Be Improved.—“What do you think of the Army as far as you have gone?” inquired a sergeant of a newly arrived recruit at camp.

“I may like it after a while, but just now I think there is too much drilling and fussing around between meals,” was the reply.—*Tit-Bits.*

Musical Mysticism.—“What is that tune you were playing on the piano?”

“That isn’t a tune. That is a sonata.”

“What’s the difference?”

“Well, with a sonata it’s hard for the average listener to detect mistakes. With a tune you’ve got to know pretty well what you are about.”—*Boston Transcript.*

The Last Horse-Story.—Two men thrown together at a horse-show were discussing their adventures with the equine tribe.

“A horse ran away with me once, and I wasn’t out for two months,” remarked the man with the Trilby hat.

“That’s nothing!” replied the man with the bowler. “I ran away with a horse once, and I wasn’t out for two years!”—*Tit-Bits.*

Flash from the Footlights.—“There were two actresses in an early play of mine,” said an author, “both very beautiful; but the leading actress was thin. She quarreled one day at rehearsal with the other lady, and she ended the quarrel by saying, haughtily: ‘Remember, please, that I am the star.’”

“‘Yes, I know you’re the star,’ the other retorted, eyeing with an amused smile the leading actress’s long, slim figure, ‘but you’d look better, my dear, if you were a little meteor!’”—*Tit-Bits.*

Theological Shindies

There were three young ladies of Birmingham—
We know a sad story concerning ‘em,
They stuck several pins
In the Right Reverend shins
Of the Bishop engaged in confirming ‘em.

There was a curate of Kidderminster,
Who gently but firmly chid a spinster,
Because, on the ice,
She used words not nice

When he accidentally slid against ‘er.

—*Tit-Bits.*

CURRENT EVENTS

THE PEACE SITUATION

November 13.—Answering Germany’s appeal for food, Secretary Lansing informs Chancellor Ebert through the Swiss Minister at Washington that President Wilson will take up with the Allies the question of supplies if order be maintained and an equitable distribution guaranteed.

In an address to his supporters, Premier Lloyd George says the nature of the peace settlement will be one of the principal issues in the forthcoming general elections in Great Britain. He expects vigorous attempts to hector and bully the Government to make them depart from the strict principles of right and to satisfy “some base, sordid, squalid idea of vengeance and of avarice.” But “we must relentlessly set our faces against that; we must not allow any sense of revenge, any spirit of greed, any grasping desire to override the fundamental principles of righteousness.”

A resolution is offered in the French Chamber of Deputies favoring the trial of all former rulers responsible for the war.

Amsterdam reports the Independent Socialists in the new German Government demanding the arrest of Admiral von Tirpitz, who has gone to Switzerland, and other leaders of the war-party and the establishment of a tribunal to try all persons primarily responsible for the continuation of the war and hindering peace.

The French High Command receives a request from the German High Command to prevent an expected outbreak of the population of Alsace-Lorraine against German troops on the march.

The Allied High Command sends a message to the German High Command that there can be no modification of the conditions of the armistice, including the annexes, at this time.

A Washington dispatch says it is understood that Premiers Lloyd George and Clemenceau have pressingly suggested that President Wilson should at least attend the opening sessions of the peace conference.

London reports King George and President Wilson exchanging congratulatory messages about the association of the two countries in the high purposes of the war which may be realized by the establishment of a reign of equitable justice and lasting peace.

The New York State Federation of Women’s Clubs passes a resolution urging the President to appoint a woman delegate on the United States Peace Commission.

November 14.—Appeals to Mrs. Woodrow Wilson and Miss Jane Addams, of Chicago, from the National Council of Women of Germany, imploring them to intercede with the United States and Allied governments for a modification of the armistice terms to prevent “unspeakable disaster,” are made public.

The Allied High Command warns the German High Command to stop the violence and pillaging by German soldiers in France and Belgium.

More than 2,532 American prisoners in German camps were released immediately the armistice was signed.

November 15.—The new German Government appeals to President Wilson, “in order to save the German people from perishing by starvation and anarchy,” to hurry peace negotiations.

Secretary Lansing advises the Berlin Government to communicate its requests to all the Allied governments, and not to the United States alone.

BUY DIAMONDS DIRECT

FROM JASON WEILER & SONS,
of Boston, Mass., one of America’s
leading diamond importers

For over 42 years the house of Jason Weiler & Sons of Boston has been one of the leading diamond importing concerns in America selling to jewelers. However, a large business is done direct by mail with customers at importing prices! Here are several diamond offers—direct to you by mail—which clearly demonstrate our position to name prices on diamonds that should surely interest any present or prospective diamond purchaser:

1 carat, \$95.00

The Biggest Value for Your Quarter—W. S. N.

To friends of boys!

You have only to look back to your own boy-days to realize the temptations that confront the boy you love. The one very greatest thing you can do to head him right, to prepare his mind for clear, constructive thinking and to take up that ever-dangerous "slack" time is to furnish the right kind of reading.

Any boy will have the treat of his life in The American Boy magazine. Give him a year's subscription for a Christmas gift! It will delight him every month; and Prof. Brander Matthews, of Columbia, who read critically twelve numbers of The American Boy, has written to the editors saying that the fiction in this magazine "tends to inculcate independence and self-reliance; it shows the value of CHARACTER as well as cleverness; it would help a healthy boy to

become a healthy man." The magazine is a powerful influence for positive good.

THE AMERICAN BOY

"The Biggest, Brightest, Best Magazine for Boys in all the World"

Written and edited by men who know boys—not only what they should read, but what they will read! That's why 500,000 boys read The American Boy! Clean, wholesome stories that carry a moral, but do not preach; that stir a boy to think; that instruct but do not ostensibly teach. Try any one of The American Boy stories on yourself!

The American Boy will tell your boy the achievements of other boys. Departments instruct in electricity, manual training, science, photography, hunting, trapping, fishing, woodcraft, zoology, bird study. Illustrated with hundreds of photographs and drawings.

Your boy follows the greatest Outdoor Man in the world in Dan Beard—a page each month. A. Neely Hall's page "For Boys to Make" wins with boys as well as their fathers.

The American Boy is Endorsed
by Y. M. C. A. Men Everywhere.

For 1919 the program is the richest and broadest in all its nearly twenty years of publication. Start with the big, sparkling, joyously good 1918 Christmas number. Send that subscription today. Fill in the coupon.

Characterizing the appeal of the German women as "another piece of German trickery," the Women's National Committee of the American Defense Society urges Mrs. Woodrow Wilson and Miss Jane Addams to disregard the plea.

The British Labor Conference adopts a resolution demanding that labor be represented at the official peace conference and that an international labor congress sit concurrently.

Paris reports that the French Ministry of Justice has ordered criminal proceedings against German officers guilty of having ordered or committed shocking crimes.

November 16.—Before sailing on the *Olympic* to make a survey of the European food situation, Mr. Hoover said there has been a great deal of "unnecessary furor in this country about feeding the Germans," and declared that the Food Administration is not calling upon the American people to make sacrifices to fulfil German and Austrian needs. Lifting or relaxing the Allied blockade soon would permit Germany to feed herself satisfactorily, and what is most desired now is for that country to "get on some sort of stable basis so that she can pay the money she owes to France and Belgium."

In the frequent appeals of the German Government Washington officials see a purpose to excite American sympathy and influence the approaching peace conference toward leniency.

General March announces that the movement of American troops across the Atlantic has stopped and demobilization of troops in cantonments and camps at home is under way. Orders already issued will send 200,000 men back to civil life within two weeks.

London reports arrangements made with German naval delegates for the surrender of the enemy's fleet. All the submarines are to be prepared to sail to the port of surrender on receipt of a wireless order and the surface warships, which include ten battle-ships, six battle-cruisers, eight light cruisers, and fifty modern destroyers, are to be ready to leave German ports to-morrow.

November 17.—The Australian Senate passes a resolution declaring it essential that the captured German possessions in the Pacific should not be restored to Germany.

November 18.—An official statement from the White House says the President expects to sail for France immediately after the opening of the regular session of Congress to take part in the discussion and settlement of the main features of the treaty of peace.

Basel receives a Berlin dispatch stating that the German authorities have notified the Russian Bolshevik Government that representatives must not be sent to Germany.

The cost of war for all belligerents to May 1 is estimated by the Federal Reserve Bulletin as \$175,000,000,000. It will amount to nearly \$200,000,000,000 before the end of the year.

THE CENTRAL POWERS

November 13.—An Amsterdam dispatch states that Holland will permit the ex-Kaiser to remain on Dutch soil on the same terms of internment as other high officers of the German Army. He has taken the name of Count William Hollenzollern.

Bern hears through the Wolff Bureau that Prince Leopold of Lippe-Detmold has renounced his throne.

Emperor Charles of Austria issues a proclamation declaring that, "with an unalterable love of my peoples," he will not be a hindrance to their free development, and he acknowledges

How Scientists Clean Their Teeth

All Statements Approved by High Dental Authorities

The facts stated here have been widely known for some years among dentists and scientific men. But they were not presented to the public until proved beyond dispute.

People who know—by the hundreds of thousands—are changing their teeth-cleaning methods. And these are the reasons:

The old methods proved inadequate. The best-brushed teeth too often discolored and decayed. Despite the wide use of the tooth brush, statistics show that tooth troubles have constantly increased.

Science found the reason in a slimy film. You can feel it with your tongue. It is constantly forming, and it clings. It gets into crevices, hardens and stays.

That film is the cause of most tooth troubles, and the old methods could not end it.

That film-coat absorbs stains, and the teeth seem discolored. It hardens into tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Also of many other serious diseases.

It is therefore best to brush teeth in ways which can end the film.

Four years ago a way was found to combat that film efficiently. It has now been proved by thousands of tests. Today it is embodied in a dentifrice called Pepsodent, and we ask you to test it yourself.

Make This Home Test

Pepsodent is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly prevent its accumulation.

This is not as simple as it seems. Pepsin must be activated, and the usual method is an acid, harmful to the teeth. So pepsin long seemed barred.

It is now made possible, because science found a harmless, activating method. Five governments have already granted patents. That method is employed in Pepsodent.

Many teeth-cleaning methods, widely proclaimed, have later been found inefficient. So Pepsodent was submitted to repeated clinical tests, under able authorities, before this announcement.

Today it is proved beyond question. And the object now is to bring it quickly into universal use.

The method is to offer all a special tube for test. Send the coupon for it, with

10 cents. Use it like any tooth paste, and watch results.

Note how clean the teeth feel after using. Mark the absence of the film. See how teeth whiten—how they glisten—as the fixed film disappears.

Let Pepsodent thus prove itself. See its unique results, know the reason for them. After that, you will not be content to return to old methods of teeth-cleaning.

Cut out the coupon now.

The New-Day Dentifrice

A Scientific Product—Sold by Druggists Everywhere

the decision taken by German-Austria to form a separate state.

Other dispatches note the appearance of revolt in Sweden, Holland, and Switzerland. Dutch revolutionary Socialists are advocating Russian methods to obtain demobilization and food, and a new republican party is aiming at abolition of the court, army, navy, and diplomacy. The Socialists have called a general strike in Switzerland, and Independent Socialists in Sweden have issued a manifesto urging the establishment of local *Soviets* and a national republic. Spanish and Norwegian newspapers are apprehensive over the spread of the revolutionary movement, and the British press are urging the disarmament of all Germany to prevent internal war.

A Bern telegram received in Washington says the Bolshevik diplomatic mission was expelled forcibly from Switzerland on November 12.

Five German submarines arrived at Landskrona, southern Sweden, November 12, states a Copenhagen dispatch, and requested the naval authorities to intern them.

Paris reports the evacuation of Brussels begun by the Germans, and London hears that the German garrison revolted and several officers were killed.

November 14.—Bern learns that the new German Government's social program includes full liberty of association, speech, and writing, amnesty for political offenders, eight-hour work-day, and universal, direct, secret suffrage. The Cabinet consists of three Majority and three Minority Socialists.

Washington is informed that the former Crown Prince is interned in Holland.

Vienna newspapers report that the request of Emperor Charles to be permitted to reside there as a private citizen has been refused.

Berlin messages to Copenhagen state that the Red Guard in Brunswick is arresting and imprisoning high officials and representatives of the military authorities. The revolutionary movement is spreading in East Prussia and serious efforts are put forth in Berlin to prevent it degenerating into anarchy.

In assuming all imperial power in German Austria until a constitution has been established, states a Basel dispatch, the State Council at Vienna passed a resolution describing German Austria as a democratic republic and an integral part of the German Republic.

November 15.—London receives news that a mass-meeting of the crews of German U-boats at Brunshüttel resolved to oppose the revolution and reinstate their officers.

A dispatch from The Hague states that the Dutch Government has issued an earnest appeal for the cooperation of the citizens in a "grave crisis." The extremists in the country have been demanding the abdication of Queen Wilhelmina.

Semiofficial visitors to Emperor Charles at Eckartsau Castle declare in Vienna that he has decided to renounce all participation in Austrian and Hungarian affairs.

An Amsterdam dispatch reports that more than 100 men, mostly German officers, have been killed in disorders in Brussels, and Soldiers' Councils have been formed there and at Antwerp.

A Riga telegram to Copenhagen says the State Councils of Esthonia, Livonia, Courland, and Oesel Island have decided to form a joint Baltic state.

November 16.—Amsterdam learns that Brigadier-General Joseph Pilsudski has been entrusted by the Polish Regency Council with the formation of a National Government and control of all troops. Polish officers from Warsaw are in possession of the Government at Posen.

Westinghouse

ELECTRIC UTILITIES FOR THE HOUSEHOLD

Doing her own washing. A hard task that falls today on the housewife who is already too busy. The Electric Washing Machine and Electric Iron minimize the labor which otherwise she could hardly shoulder unaided.

Save Material

It is well known that the production of steel, coal and iron during the war was insufficient to take care of war needs and to provide for ordinary peacetime requirements as well.

We have all had to use less of things we wanted so that there might be more material for ships, guns, shells, trucks, airplanes—and more labor with which to shape them for their uses.

Even such useful articles as electrical appliances have had to be restricted in production and may not for some time be available in such large quantities as formerly.

If you have been unable to get just the appliances you want—if you have had to wait or perhaps do without, you'll understand the reason.

Be assured that your dealer will co-operate with you in getting appliances which are essential to economy in housekeeping and will explain in detail why it is of such great importance that material now in use should be kept in service.

Westinghouse

ELECTRIC UTILITIES FOR THE HOUSEHOLD

Fuel and Labor

Many are the steps that electrical appliances save, and many the tasks they lighten.

More important, however, under present day conditions are the saving of fuel and the releasing of labor which electricity is everywhere making possible.

It helps the housewife to do her own washing and ironing—and saves coal that would wastefully blaze away in the kitchen range.

It turns coal into heat for cooking with higher efficiency than is possible by any other method.

It helps the business girl and the woman factory worker, to get a quick easy breakfast, and start on time to work.

It provides a satisfactory answer to the perplexing question of how to keep house with less help, or perhaps none at all.

So you see that there is every reason to keep electrical appliances now in use in good condition, and to be sure that such new ones as are sold, go to those who have the greatest need of them.

WESTINGHOUSE
ELECTRIC & MANUFACTURING COMPANY
East Pittsburgh, Pa.

Helping the business woman and factory worker. Hosts of busy women have to hurry mornings to reach their work on time. The Electrical Appliances they use aid greatly by cooking their breakfasts while they get ready for work.

Back from the Trenches!

Our entire output of Faust Coffee, in the Instant form, has been going to the boys "over there." They wanted, deserved and got the best of everything that was within the power of the United States to give them. We served "our boys" first—we are now ready to again serve the public.

Faust Coffee and Tea

In the INSTANT FORM

No Pot—No Grounds—No Leaves—No Boiling or Cooking—
No Straining—Simply put Soluble Powder in
Cup and add Hot Water.

That's all you have to do for the most delicious coffee or tea. You can't make it wrong. It will be the same everytime—wonderful in flavor, healthful instead of harmful—economical, convenient, instant.

Purchase Faust Instant Coffee or Tea from your grocer. If he does not carry it, send dealer's name and 30c. (foreign 40c.) for Coffee or Tea. Dealers supplied direct or by any jobber. Jobbers—write us.

The celebrated, World Famous Faust Coffee and Tea, and the new and delicious combination seasoning—Faust Chili Powder—are also manufactured by us.

November 17.—Amsterdam advises note that trade unions in the principal cities of Holland have refused to join the revolutionary movement, which, it is believed, has collapsed.

Copenhagen learns that Duke Charles Edward of Saxe-Coburg and Gotha and Grand Duke Friedrich IV. of Mecklenburg-Schwerin have abdicated.

November 18.—A Luxemburg dispatch states that the Chamber has adopted a resolution demanding a referendum to decide the future form of government.

Copenhagen wires that the Potsdam Soldiers' and Workmen's Committee learns that William Hohenzollern intends to return to Germany because of disturbances in Holland.

Basel gets a dispatch from Rudolstadt reporting that Prince Gunther of Schwarzburg-Rudolstadt has declared his readiness to abdicate.

November 19.—London is stirred by rumors that William Hohenzollern may return to Germany. Some newspapers foresee a plot to create a stronger autocracy than before.

Basel reports banks of Germany and Austria secretly exporting large amounts of securities to Switzerland.

GENERAL WAR-ITEMS

November 13.—Stockholm reports Russian Bolshevik forces marching on Finland and threatening the port of Viborg.

The British Admiralty announces the passage of the Allied Fleet through the Dardanelles.

Cetinje, the capital of Montenegro, has been liberated, says a Servian official statement received in London.

November 14.—A dispatch from Zurich states that Roumania's ultimatum to Count Karolyi's Government to evacuate Transylvania was preceded by a general mobilization of the Roumanian Army and the arrival of an Allied army in Roumania.

Advices received at Basel say Count Karolyi asserts that Roumania made war on Germany in order to force General Mackensen to disarm his men. Bern has information of Polish soldiers being in full control of Warsaw, and Copenhagen gets a dispatch from Berlin stating that Polish troops have entered upper Silesia.

November 15.—Reports from Berlin to Copenhagen assert that the German Army has begun a general evacuation of Poland and that German troops in Warsaw have been disarmed and arrested.

London cables that during the war British submarines destroyed two enemy war-ships, two armed cruisers, two light cruisers, seven destroyers, five gun-boats, twenty submarines, and five armed auxiliary vessels, fourteen transports, six ammunition- and supply-ships, fifty-three steamships, and 197 sailing-ships.

A dispatch from Paris states that the American Third Army has been designated the "Army of Occupation," and is marching to occupy Rhine positions.

Copenhagen reports that German troops are being withdrawn from Finland to avoid conflict with British forces expected there.

November 18.—An Associated Press dispatch reports the entrance of American troops into Briey, the heart of the Lorraine iron-fields. French troops also made their first entry into the province.

During the war, states a London dispatch, the British Admiralty transported 22,000,000 soldiers with the loss at sea of only 4,391.

The British mine-sweeper *Ascol* was torpedoed and sunk by a German submarine November 10 off the northeast coast of England. Forty-three members of the crew were lost.

Archangel advices report that Bolshevik attacks against American and British positions at Dulgas on the Dyina River have been repulsed with severe losses.

The House of Commons is informed that British casualties during the war, including all the theaters of activities, aggregated 3,049,991. The total killed were 658,665. The losses in missing, including prisoners, totaled 359,145.

FOREIGN

November 13.—Paris reports French Socialists demanding that the administration of affairs under military law be abandoned immediately, and a general election called, so that action may be taken on problems arising out of the economic and political reorganization of the country.

A dispatch from Rome states that heavy earthquake shocks, accompanied by property damage and loss of life, occurred in the provinces of Florence and Forli November 10.

November 14.—At a conference in London the British Labor party decides by a large majority to withdraw its members from the Cabinet at the close of the present Parliament.

A dispatch from Stockholm reports that anti-Semitic riots have broken out in several towns in western Galicia and Poland.

During a discussion in the House of Commons the Parliamentary Secretary to the Food Ministry said the "American Meat Trust" constituted a "serious menace" by its control of over fifty per cent. of the available and importable meat supplies. He intimated that the Inter-Allied Food Council, which would buy in the world's markets, is to be stronger than the trust.

During the war Norway lost 831 ships, aggregating about 1,250,000 tons. The fatalities resulting from these disasters totaled 1,125 men.

November 15.—During the twelve months ended October 31, reports the Ministry of Shipping, the output of British shipyards totaled 1,600,000 tons. The output in the twelve months ending October 31, 1913, was 1,600,000 tons of merchant shipping and about 1,300,000 tons of war-vessels.

November 16.—Stockholm reports that the Swedish Government has decided to carry out a liberal program of reforms, giving the franchise to both sexes and placing the control of foreign and military policy in the Riksdag.

November 18.—A flood in Quebec causes damage estimated at \$1,000,000.

Foreign Secretary Balfour tells the House of Commons that the British Government has information that the deliberate policy of the Bolshevik Government in Russia is one of extermination by starvation, murder, and the wholesale execution of persons who do not support their régime.

Toronto reports that the Dominion's second Victory Loan was oversubscribed by \$176,000,000.

DOMESTIC

November 13.—The Federal Food Board rescinds the regulation requiring substitutes with baked products, but it urges the public not to relax economies practised in the use of wheat flour.

Filing of her will in the Surrogate's Court, New York, shows that Mrs. Russell Sage left \$40,000,000 to charitable, educational, and religious institutions.

Hundreds of persons applying for passage to Europe are informed at New York shipping offices that the signing of the armistice did not remove the restrictions applying to general ocean travel. The Government does not intend to

Capitols of many states use Art Metal

EVEN as ART METAL steel equipment has been the choice of scores of government buildings at Washington—so you will find ART METAL equipment in many state buildings throughout America. Following are a few taken at random:

State Capitol at Albany, N. Y.
State Capitol at Topeka, Kan.
State Capitol at Oklahoma City, Okla.
State Capitol at Atlanta, Ga.
State Capitol at Austin, Texas
State Capitol at St. Paul, Minn.
State Capitol at Pierre, S. D.
State Board of Control, Charleston, W. Va.
State Capitol at Helena, Mont.
State Capitol at Boston, Mass.
State Capitol at Columbus, Ohio
State Building at Tacoma, Wash.
State Capitol at Little Rock, Ark.
State Capitol at Columbia, S. C.
Office of the Governor, Raleigh, N. C.
Office of the State Treasurer, Boise, Idaho

Flexible Flyer

—the famous steering sled with non-skid runners Ask for one as a Christmas gift. It means lots of fun and robust health. Saves shoes and prevents wet feet because you don't drag your feet in steering. Has grooved steel runners that prevent skidding, and increase speed.

Outlasts 3 ordinary sleds

New all-steel bent axle as a shock absorber, greatly strengthens the sled and makes steering easy and safe. Seven sizes—3 to 5 feet. Sold by Hardware and Dept. Stores.

S. L. Allen & Co., Inc. Box 1100N Philadelphia

FREE illustrated booklet showing how Flexible Flyers steer. None genuine without this trade-mark.

The Coward Shoe

"As the Foot, So the Shoe"

"Nature Tread" is a shoe for feet as they are.

It is as supple, willing and considerate as gentle leather can make it. In designing it we took for our text, "As the foot, so the shoe," and persevered in it to the last stitch.

"Nature Tread" has the straight inner line of the natural foot. The sole and shank are flexible, affording free exercise to the arch muscles. You will gain correct balance and improved carriage in "Nature Tread." Address: Dept. F.

"FOR HUSKY THROATS"

permit any invasion of European battle-fields by American sightseers.

A summary of the provisions for demobilization of war-agencies, prepared by United States Senator Martin, shows that the control of railroads will last twenty-one months after the proclamation of peace and the government operation of ships five years afterward. Control of telegraph- and telephone-lines ends with the war. The Aircraft Board goes out of existence six months after the war. The Alien Property Custodian's work ends with the war, but has an extension of time for certain duties.

Continuation of government supervision of the steel industry during the period of readjustment to peace conditions is recommended by the Steel Committee of the American Iron and Steel Institute at a meeting with the War Industries Board in Washington.

A Washington dispatch says it is certain that each of the 4,250,000 men in the military or naval service now holding voluntary government insurance will be permitted within five years after peace is declared to convert it, without further medical examination, into ordinary life, twenty-payment life, endowment maturing at the age of sixty-two, or other prescribed forms. The cost is expected to be at least one-fourth less than similar forms offered by private agencies.

Officials of the Zionist Organization of America and the American Jewish Committee appeal to the United States and Allied governments for aid in preventing the anti-Semitic riots which are reported imminent in eastern Europe.

November 14.—The War Industries Board lifts the ban on trade exhibition. Among other things this means the resumption of the national automobile shows which were prohibited during the war.

The Federal Treasury announces a credit of \$100,000,000 for Italy, making the total amount loaned by the United States to that country \$1,160,000,000.

Secretary McAdoo recommends revision of the pending revenue bill so as to yield \$6,000,000,000, payable during the calendar year 1919, and not less than \$4,000,000,000 the following year.

Washington announces the withdrawal of all volunteer censorship requests under which American publishers have been working since the United States went to war.

The War Department prohibits the discharge of any officers or enlisted men unless such action is required by financial distress of soldiers' dependents.

November 15.—It is announced that E. N. Hurley, chairman of the United States Shipping Board, will sail tomorrow for France to take up the question of acquiring German and Austrian ships immediately for the

MAPLEINE Syrup To the Rescue

Hot cakes are a war time food yet they need syrup.

Try 2 cups of corn syrup diluted with 1 cup of hot water and flavor with 1 teaspoonful of

The Gift Your Aviator Wants

Non-Shatterable
RESISTAL EYEGLASSES

Have you thought of a gift for those brave aviators who are fighting for our freedom? The gift that will protect their eyes and vision is the most important. We have the only goggles in the world that are made of a material that is non-shatterable. They are made of a material that is as strong as steel and will not break under any conditions. They are the only goggles that will protect the eyes of aviators from the dangers of the air.

ROUGH ON RATS
DON'T DIE IN THE HOUSE

The Government Needs Our Warehouse

The U. S. Government has taken over our auxiliary warehouse for war purposes. Among other sets of books which we had there, are 100 of the great HEXAGLOT BIBLE. These books would occupy more space in our already-overcrowded stock room than we can spare. To dispose of these few sets quickly, *we reduce the price nearly 38%!*

The Great Hexaglot Bible for Only \$25.00 Instead of \$40.00

The complete six-volume work sent for examination for only \$1.00

When We Issued this Work, Bishop Vincent Wrote:

I congratulate you on this immense step forward in Biblical study. Stir up the preachers of tomorrow to undertake the critical study of the Hexaglot Bible.

John H. Vincent,

How valuable the Hexaglot Bible can be made to You in *YOUR WORK* of expounding, interpreting, and elucidating Holy Writ, you can say *only* after using the books in your own study—*this can be done without risk.*

You can spend many hours in fruitful, resultful, satisfying companionship with this *Comprehensive Bible*—without obligating yourself to buy. Through it you will obtain added *clearness*, and *new* interpretations out of the Bible.

We here open **THE HEXAGLOT BIBLE** before you
These Type Samples Three-quarters actual size

[illegible]

The Old Testament appears in Hebrew, Greek, Latin, English, German, and French.

Unique Advantage for Language Study

The Hexaglot Bible is uniquely available for the rapid acquirement of French, German, Latin, or the older Greek, Hebrew, and Syriac—for *here* man's most beautiful thoughts, expressed in the accepted purest, most elegant diction of these various tongues, appear. Having learned the *elements* of a language, you can read the *language itself* with close, continued interest, in the HEXAGLOT, referring instantly when in doubt to the English directly opposite. The Foreign Language Will Grow On You Unawares—and very quickly you will gain proficiency and begin to THINK IN THE NEW LANGUAGE.

The Hexaglot Bible

comprises 6 handsome quarto volumes—each volume 12¼ x 10 x 2¼ inches. *It is printed throughout in two colors, on a substantial, good-quality book paper, and firmly bound in black cloth, with titles embossed in gold-leaf.*

Opinions that show the USEFULNESS of the Hexaglot

BISHOP MURST

"The presentation of the six leading versions of the Scriptures to the eye at one view has long been and always will be an advantage to the Bible student secured in no other way."

DR. LYMAN ABBOTT

"Such a comparison gives in some places new light on the original, because it indicates as nothing else can how that original has impressed minds *racially* different from one another."

BISHOP FOWLER

"The different versions, standard in their own language, are subtle and suggestive comments out of all these races."

GEORGE H. BURROUGHS, D.D.

"Funk & Wagnalls Company is rendering a positive service. The typography is not only pleasing, but *peculiarly adapted to use.*"

Save \$15 on the Hexaglot

This enduringly valuable work was first published in England at £10 Sterling, equal to \$47.60 now in U. S. currency. We obtained the exclusive American publishing rights for the HEXAGLOT BIBLE and *reduced* the price for America to \$40—at which it stands to-day.

A Superb Gift for a Preacher, Sunday-school Superintendent, or Bible Student

There is scarcely a printed work with which we are familiar that can compare with the great **HEXAGLOT BIBLE** as a holiday gift for the Preacher, Sunday-school Superintendent, Bible Student, or Layman interested in religious work. At the present price of only \$25.00 instead of \$40.00, it is a bargain. As there are but 100 sets, immediate application is advisable.

SEND ONLY \$1.00 and the complete work in six volumes will be sent to you, carriage prepaid, for ten days' examination. If you find it all that we represent it to be, you make twelve monthly payments of \$2.00 each—a total of only \$24.00. If it is not satisfactory, return it to us at our expense, and we shall refund the dollar you have paid.

FUNK & WAGNALLS COMPANY

354-360 Fourth Avenue, New York

Dir. 11-30-18

Gentlemen:—Send me the **HEXAGLOT BIBLE**, six large volumes, bound in cloth, for 10 days' examination. I enclose \$1.00. If the work is satisfactory, I will pay you \$2.00 a month for twelve months thereafter. If it is not satisfactory, I will return it to you at your expense and you are to refund the \$1.00 I have paid.

MORE DEADLY THAN THE HUN

At the Front Over There

INFLUENZA ALONE SLEW More Americans in a Month Than All the German Guns

In the Hospitals Over Here

Death has been far busier here in the homeland of late than ever it was among our soldiers in action.

And in the ranks of the battling armies disease has hitherto been as a rule a far more potent enemy than the bullets of the foe. In the Spanish-American war for every man shot in battle, more than *thirteen* died of disease. In the Mexican war six died of disease to one from wounds. In the Crimean war France lost ten men by sickness for every one killed. In our own civil war two died from disease for each one shot. During the Franco-Prussian war twelve Germans died of sickness to every one killed in battle. But modern hygiene was so far advanced at the time of the Russo-Japanese war that the world was startled by the fact that for the first time in the history of armies there was only one death from disease for every two men who died fighting. In the recent great war sanitation worked on a super-scale and modern hygienic methods kept down the excessive death-rate. In the great battle of Civil, Social, Professional, and Business life, in which the mortality is greater than that of any war, you should fortify yourself against illness and inefficiency.

**Everyone in Every Business and Profession Should Know
How to Keep Well and Fit**

HOW TO LIVE

Is The Nation's Foremost Book of Health

This book was prepared by Professor Irving Fisher of Yale and Eugene Lyman Fisk, M.D., under the auspices of the Hygiene Reference Board of The Life Extension Institute, which numbers among its members such eminent men as ex-President William H. Taft, Major-General W. C. Gorgas, Surgeon-General Rupert Blue, Wm. J. Mayo, M.D., Alexander Graham Bell, Harvey W. Wiley, M.D., etc.

NEARLY 100,000 COPIES ALREADY SOLD

It is bringing renewed vigor, poise and power into the lives of College Professors, Business Executives, Lawyers, Clerks, Soldiers, Mothers, Farmers, Householders, Physicians, Salesmen, Stenographers, Students—everybody, in every walk of life. State Boards of Health Recommend It

The State Boards of Health of Indiana, Kentucky, Louisiana, Pennsylvania and New York endorse and recommend it.

A copy was purchased for every official of the Pennsylvania State Board of Health.

Dr. A. T. McCormack, Secretary of the Board of Health of the State of Kentucky, read it and then immediately ordered 12 more copies for some friends. When a member of such a responsible body as the State Board of Health does such a thing you can really appreciate how valuable the book must be.

One Man Ordered A Thousand Copies

Prof. Robert T. Legge, Department of Hygiene, University of California, Berkeley, Cal.: "I wish to compliment the publishers as well as the authors for producing this timely live book. I have adopted it as a text-book for my freshman classes next semester, and have placed an order with our cooperative store to have on hand at least one thousand copies for the coming semester."

THE NEW YORK TIMES

Your Money Will Be Refunded

says: "A volume, the scientific accuracy of which is vouched for by William J. Mayo, M.D., ex-President of the American Medical Association; Alexander Graham Bell, M.D., Board of Scientific Directors, Eugenics Record Office; Major-General William C. Gorgas, and about ninety other men renowned in the fields of medicine, surgery, bacteriology, industrial hygiene, etc., may well be accepted as the most authoritative epitome thus far available in the great but hitherto neglected realm of individual hygiene."

We shall return your money immediately—and no questions asked—if you do not wish to keep the book after inspection. This book is endorsed by the Journal of the American Medical Association and by medical and sanitary authorities throughout the country. Sign and send the coupon herewith. \$1.12 is the price in full, including delivery.

FUNK & WAGNALLS COMPANY

354-360 Fourth Avenue, New York City

double purpose of rationing the Central Powers and bringing home the nation's fighting men.

Secretary Baker cables General Pershing that the War Department appreciates the "zeal, strength, and courage, both of purpose and achievement, displayed by the American Army," and adds: "The entire country is filled with pride in your fine leadership and in the soldierly qualities shown by your Army."

Prior to the adjournment of the newly formed Pan-American Federation of Labor at Laredo, Tex., President Gompers made a declaration of Labor's purposes in regard to post-war conditions. He said the time has arrived when the working people of the world "are coming into their own," and any effort of employers to abolish the eight-hour day or destroy labor's gains would be resisted to the uttermost.

Between April 6, 1917, and November 11 last, Washington reports, 2,987 ships of 3,091,695 gross tons were built in the shipyards of the United States.

A Washington telegram states that up to the end of last June activities of the American Red Cross in behalf of American soldiers in France entailed an expenditure of \$15,453,050, and \$13,829,418 was appropriated to make them comfortable during the last six months of the year.

The chief cable censor announces the removal of restrictions on merchant shipping cables as to the mention of movements, locations, names, etc.

President Wilson issues a proclamation taking over the consolidated express business carried on by the American Railway Express Company, and assigning its operation to Director-General McAdoo.

While at a dinner in New York, Dr. Thomas G. Masaryk received a cablegram informing him that the National Assembly at Prague had ratified his election as President of the Czechoslovak Republic.

Director-General McAdoo announces an advance in the wages of 70,000 railroad telegraphers, aggregating about \$30,000,000 a year.

November 17.—A total of 82,306 deaths were attributed to the Spanish influenza epidemic from September 8 to November 9, according to reports received by the Census Bureau of the Department of Commerce from forty-six large cities having a combined population of 23,000,000. In a similar period of time the normal number of deaths due to influenza and pneumonia would be about 4,000.

The Boycott Committee of the American Defense Society announces that committees are being formed in every part of the country to help in the national fight against all German-made goods.

November 18.—The national war-time prohibition bill, effective July 1 next and continuing during demobilization, is passed by the Senate.

The Federal Official Bulletin publishes a proclamation by President Wilson, dated November 2, ordering government control and operation of all ocean cable lines owned in America.

Washington announces that all cadet aviators in training in the United States will be given the option of immediate discharge without commissions or of completing their training.

November 19.—At a conference of Republican Senators in Washington, it was "Resolved, That the Congress should assert and exercise its normal and constitutional functions, including legislation necessary for reconstruction."

The Treasury Department announces that the total subscriptions to the Fourth Liberty Loan were \$6,989,047,000, the oversubscription amounting to 16.4 per cent.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"E. G. M., Wilmington, Vt., writes:

"I note your reply to 'A. P. K.' Tecumseh, Nebraska, and desire to call your attention to the following facts: 'Rev.' the abbreviation for reverend, is a title of distinction and not one conferred by a degree. It is not used properly without the article 'the'; e.g., the Rev. Mr. Blank, or the Rev. Chas. E. Blank. It is improper to address a clergyman in conversation as Reverend, or as I have heard it, 'Rev.' A clergyman is properly introduced as the Rev. Mr. Blank, but the introduction should be acknowledged as follows, 'I am pleased,' or whatever terms are used, 'to meet you Mr. Blank.'

"There are those who invariably call the clergy 'Dr.' If a man has had the degree conferred, this is proper, but otherwise the clergy have no 'handle' to their name, save the common 'Mr.' Some of the clergy sign themselves 'Rev.' or say over the phone, 'This is Rev. B. speaking.' They are to blame for this common error and it would be well to get them to use this title of distinction properly and teach people its correct usage.

"I hope you will not say that because the usage is so general it has been accepted as good form. It can't be, unless it is conferred as a degree. It is wrong. Please use your influence to get this error corrected."

"A. W. C., Jr., New York, N. Y.—The correct forms respectively are "G. W. MacDonald, Inc.," "Gentlemen"; "Messrs. G. W. MacDonald & Co., Inc."

"J. G. H., Whitney, Neb.—"What is the derivation and meaning of the word *Gotham*, and why is the term applied to New York City?"

Gotham is defined as "nickname of New York City: from alleged pretensions to wisdom of its people: first used by Irving in 'Salmagundi' (1807). It is said that the inhabitants of the original Gotham, in England, played the fool in order to dissuade King John from passing through their town and thus save themselves the expense of entertaining him."

"E. R. C., Liberty, N. Y.—"What religious belief did Robert Emmet profess and practice?" Robert Emmet was a Protestant.

"W. G. L., Tulsa, Okla.—The authorship of "Vingt Ans Après," "Les Trois Mousquetaires," and "Monte Cristo" has been credited to Auguste Maquet, born in Paris in 1813, died at Saint-Mesme in 1888, who collaborated with Alexander Dumas.

"E. J. H., Minooka, Ill.—"In a recent number of one of the magazines the word *morgue* is repeatedly used to describe the expression on a man's face. For example, 'His *morgue* or air of mournful pride.' 'His *morgue* caused strangers to say,' etc. This use of the word is quite new to me, and I can find no sanction for it in my dictionaries. Please tell me if it is correct."

The word *morgue* has been used for "a proud and disdainful demeanor; haughty superiority," for many years. It has been traced as far back as 1599 and was used by Bishop Forbes (1614), Sir Walter Scott (1829), Matthew Arnold (1863), and others.

"C. H. C., Suttons Bay, Mich.—"To attain to the dignity of the name 'martyr' is it or is it not necessary that the person sacrificing his life, or his very valuable possession, be conscious that his action will ultimately result as above indicated? What would constitute a 'valuable possession' of sufficient importance to entitle the loser to be called 'martyr'?"

The word "martyr" has various meanings. Specifically, it is still confined to those who give their lives for their religious convictions. The "Holy Innocents" are a notable example of involuntary martyrdom. The word "martyr" should not be applied to a person who loses mere property, but is used of persons who have died while striving to attain their object. The dictionary gives as the primary definition of "martyr"—"One who submits to death rather than forswear his religion; specif., one of the early Christians who suffered death for their religion." In general, the word is used also to denote one who sacrifices himself for a cause, as a martyr to the pursuit of wealth.

HELP CONSERVE The Nation's Rations

Win the War in the Kitchen

UNIVERSAL Home Needs are the American housewife's weapons in the great nation-wide campaign for the conservation of our food supply. War-time necessities now—peace-time necessities always. Save food, time and labor by doing your housework the UNIVERSAL way.

UNIVERSAL

Bread Maker

Conserve the Nation's wheat supply by making all your breads in the UNIVERSAL. There is no guess-work, no waste of materials, time or labor. Just put in the ingredients, turn the crank for three minutes and the dough is (dough) ready to bake.

Price \$2.75 to \$4.50

Food Chopper

Turn the leftover pieces of meat, vegetables, fruits, etc., into delicious, nutritious dishes. Eliminates waste, cuts down your food bill and saves you time and work. Soon gives its cost in the food it saves.

\$1.85 to \$3.00

Percolator

The UNIVERSAL uses about one third less coffee than is ordinarily used, thus conserving the supply—saving you money and providing a more delicious and healthful beverage every day.

\$4.00 and upward

PRINCE ALBERT

the national joy smoke

Copyright 1918
by R. J. Reynolds
Tobacco Co.

A pound of P. A.!

That's the happy
holiday hunch,
all-right!

PRINCE ALBERT tobacco in the pound crystal glass humidor—all dolled up like old Mr. Santa Claus on the tick-of-twelve—is certainly a barrel of joy bells, a handout of holly, a tip-top-turkey, *all in one!* As the gift-of-gladness there just isn't anything in its class all day Christmas!

For, Prince Albert is the smoke-that-wins-the-smiles; the little old happy thought that picks the spikes out of the atmosphere around the tribute-table early in the A. M. and keeps the sunshine flowing into jimmy pipes ever after!

You can't buy anything he'll appreciate so much. Because, Prince Albert's quality, fragrance and flavor will meet every taste and satisfaction desire he ever expressed. And, make-a-memorandum here—*Prince Albert can't bite or parch!* That's because P. A. is

made by our exclusive patented process that *cuts out* bite and parch!

Take this tip: You can send this Prince Albert happy-holiday-handout to the boys in training at *home camps!* Say, what would punch in greater Christmas happiness! *Only*, get busy early and keep clear of the last minute rush on P. A. *and on the mails!*

Prince Albert in pound crystal glass humidors (with sponge moistener tops that keep the tobacco in perfect condition) is the *distinctive Christmas package*, all fussed-in-festal-finery, and equipped with a ready-to-send tag! Then, there are the handsome pound and half pound tin humidors, the tidy red tins, and, the toppy red bags—a size to fit every need. You put P. A. on his list and let him in on regular jimmy pipe joy!

the ruins accumulated by the German hordes. Your army will help us in this work while our population will restore her cities and villages.

"In reference, not to all purchases—as a large part of our needs will be supplied outside of the United States—but in reference to those purchases which will be made in America, we are in need of credits in dollars covering about fifty per cent. of our total purchases for reconstruction. The assurance of that financial help will bring to every one in France, government and private enterprise, the courage and faith necessary to apply to peace reconstruction the energy and the spirit of enterprise she has so prominently shown during the war.

"We will exact from Germany the restitution of such part of the material taken away from us as can be recovered. But besides that restitution we must bear in mind that speed is a primary condition in the reconstruction of France, and that America, on account of her immense capacities for production, ought to give us the first help. We need ships, chartered ships as well as ships transferred to our flag; the speedy reconstruction of the country is strictly depending on the revival of our mercantile fleet."

DROPS IN COMMODITY PRICES

With the readjustments that set in at once when the war ended, commodity prices began to change—in general, to decline slightly. But in the opinion of *Bradstreet's* the question how far the downward swing will go is "a moot point, about which it is unsafe to prophesy, seeing that the reconstruction of Europe must eventually be taken up, while unfortunate peoples overseas must be fed, and evidently by the United States, the country best able to take up the task." The writer believes, however, that "in view of the varying circumstances, one may look for easier quotations for certain raw materials that enter into manufactures, which also foreshadow lower levels for manufactured products." At the same time, he finds it "difficult to accept the idea that foodstuffs will recede in a marked degree, for, as already intimated, the stricken peoples of Europe, including the Germans, must be provided with food. But it is to be remembered that with the avenues of commerce again freed of obstacles, distribution of essentials "will no longer suffer from dislocation, and as countries with surplus supplies, let us say of wheat, will be drawn upon, some ease even in foodstuffs is probable." With all these new conditions, however, he believes that "the backlog to be furnished by pent-up demand will be sufficiently strong to prevent sweeping recessions." Whatever the future developments may be, it can be said, that for the present and the immediate past, there is something to encourage consumers. The "apparent zenith point" in prices was reached last July. Since then "prices, viewed in a collective sense, have been gradually receding, and on November 1, for the fourth time within as many months, our index-number reflects a decline." The index-number as of November 1 stood at \$18.9110, disclosing a decrease of one-half of 1 per cent. from October 1 and of 1.4 per cent. from the record level touched on July 1 last. Retrogression has gone on "by easy stages." The writer says further:

"Comparison with November 1, 1917, shows an increase of 10.6 per cent. in favor of the most recent number, while contrast with the like date in 1916 exhibits an advance of 47 per cent. Even with the lower trends of last month, provisions, comprising meats and dairy products, soared to a new high-water mark, striking strength

After the War?

Labor Conditions—Declining Inventories—Foreign Trade—problems you must now face.

Babson's Reports will safeguard your business after the war when you will have most need of disinterested counsel.

Avoid worry. Cease depending on rumors or luck. Recognize that all action is followed by equal reaction. Help the Babson campaign to have all business data collected and compiled by a central organization. This saves labor and increases efficiency.

AS TO SHIPPING RESOURCES AFTER THE "U"-BOAT DESTRUCTION

Now that the world-war is over, a writer in *The Financial World* has found it is interesting "to cast up accounts of losses as the result of the U-boat sinkings and the prospects in the peace era." U-boats destroyed, he finds, nearly 15,000,000 tons of shipping, or, to quote the British Admiralty's trustworthy figures, 14,825,635 tons gross down to September 30, 1918. This loss was almost exactly one-third of the steam tonnage in existence when the war broke out in 1914. The toll of destruction was greater than the combined fleets in the merchant-marine service of the United States, Norway, France, Japan, Italy, Sweden, and Austria in 1914. The world, however, "did not stand gaping at this destruction and do nothing to offset it." Since the war began the shipyards of the world have been the busiest kinds of places, night and day, and hence shipbuilders "can now contemplate their work with something like pride as they have by herculean efforts reduced the net loss to something like 6,000,000 tons, and for the five months just past have delivered more tonnage than has been destroyed in that time." The writer adds:

"There will in that period be a greater supply of available labor to do the work than during the war, as the fighting armies will be able to furnish hundreds of thousands of men as ship-workers. That year and a half will be a precious period, however, and it ought to be a boom period in the trade, with high ocean rates, because the governments at war will not be able to return to peace routes of trade all the ships they have commandeered for war as there are armies to send home from distant points, such as France to India, the Holy Land to England, France to England, France to Australia and Canada, and France to the United States.

"It is this great scarcity of shipping which has made the astute English shipping interests long to get back their vessels which are controlled now by the International Mercantile Marine Corporation, and for which the English have made a very tempting offer which is now before the American company. Our shipyards are turning out perhaps as great, if not greater, tonnage than England, and many considerations may make it wise to accept the English offer. We will benefit by the deal to the extent that the ships will still ply between American ports and English ports and the proceeds of the sale can be used to great advantage and develop our South-American and Far-East trade. We possess the largest single share of German ships that have been seized in enemy ports, and it looks now as tho England and America were in a pretty close alliance, altho unwritten, in the shipping trade, and it will be practically impossible to wrest that supremacy from them."

TOPICS - OF - THE - DAY

REMOBILIZING FOR PEACE

OUR WAR-MACHINE is now operating backward, so that even if it had no brakes, as a paragrapher once remarked, it seems at least to have a reverse lever. The people who complained that we were "not getting into the war fast enough" are now beginning to say that we are too slow in getting out. But they are reminded by various editors that the task of putting four million soldiers back into civil life and replacing the nation's business on a peace instead of a war basis is not simple. The fact that our men were just beginning to fight makes our problem easier in one way than that of our Allies. Mr. Charles H. Grasty writes from Paris to the *New York Times*. Four years of war, he observes, have transformed Frenchmen, Italians, and Englishmen into soldiers; "our adaptable men have taken hold of war enthusiastically and efficiently, but nine out of ten of them are still essentially unchanged and will go back as eagerly to work as before the war."

"How soon will the boys come back?" is a question which is being eagerly and anxiously put by parents and friends of the men who have gone overseas. Our military authorities have answered that the men will be returned as soon as possible. But that, it is explained, does not mean at once. The *Grand Rapids Herald* recalls that between the last battle or armistice and final demobilization of troops there elapsed in the Russo-Japanese War thirteen months; in the Boer War, ten months; in the Spanish-American War, sixteen months; in the Turco-Russian War, eighteen months; in the Franco-Prussian War, twenty-eight months; in our own Civil War, seventeen months. The Michigan editor comments:

"In none of these other struggles were there any such post-war policing problems as confront us to-day; and in none of these wars was there any such tremendous bulk of men involved at so great a distance from the homeland. Offsetting these contemplations is the fact that our Government has learned the art of working human miracles since a year ago last April. Our Government is constantly accomplishing the seemingly impossible. Nevertheless, sanity compels us to look probabilities in the face; and these probabilities warn us that if our whole Army is demobilized in twelve months it will be a comparative record surpassing anything in the story of mankind."

Of the 2,200,000 American soldiers in Europe, it is generally estimated that half will be needed for occupation duty in Germany and elsewhere. The homeward movement of the others has already begun. Construction in France has been stopt and contracts for army supplies canceled. The actual homeward shipment of the men will be delayed by the necessity for using both the French railroads and the available merchant marine for the shipment of food and other supplies to those who need it, while Great Britain will want her own ships for sending home her colonial armies. The first men to come home will be the sick and the convalescent wounded, then will come troops in various auxiliary services, such as aviators, gas and tank troops, and replacement units. The combat troops will

follow either in order of certainty of employment at home or on a geographical basis. In any event, says General March, they will not "sneak into the country." By spring, some press writers think, the whole United States Army except the troops needed for police duty in Europe will be on the way home.

The army of occupation, many of our editors believe, will be in Europe for months, perhaps for a year. The *Charleston (W. Va.) Mail* reminds us that "the war is not yet over" and Germany must be forced to accept the peace terms. This paper thinks that the work of occupation in Germany should be done mainly by the United States, which has had "fewer losses than any other nation." The *New York Evening Sun* similarly demands that we should do our full share of the police duty. "We left most of the work of saving the world's civilization to others," it says; "let us not drop our smaller part of the burden before the job is done." The *Chattanooga News* reminds us that the German Army is still intact and has not surrendered its small arms, and warns us that the Army may renew the war or the German people may themselves call us in to restore order. Then, says the *Topeka Capital*, there is Russia to be saved, and it expects a large American army to be maintained in Europe and Asia "for a matter rather of years than of months." The *Washington Post* does not believe the American troops now on German soil will leave "for many years, if ever." American occupation of German territory may sound "preposterous" at this moment, but "how will it sound at the end of the twenty-year period when Germany has repaid only one-fifth or one-tenth of the enormous debt that she owes to the world?" The *Charleston News and Courier*, on the other hand, wants a minimum of police work, and does not consider it "our business or that of our allies to use armies in order to establish in Central Europe any particular government or form of government." It will be remembered that after our entrance into the war Mr. Hearst's papers declaimed against sending any of our boys to take part in a European quarrel, and our readers may be interested in knowing their attitude now. They demand that the Government should at once "bring the boys home." The *New York American* declares that America's object in the war is accomplished; it observes that our associates, great and small, will get territorial or other compensations, and argues that—

"If the United States is too foreign to Europe to have any part of its war-costs reimbursed out of Europe's assets, it very reasonably follows that the United States is also foreign enough to Europe to be under no earthly obligation to increase Europe's assets by carrying on the expensive work of policing European states which are in disorder."

"Let the European governments which are pocketing the gains of the war we won for them pay the cost of their own police forces."

The problems to be faced in demobilizing the 1,750,000 men in the camps in this country are of a similar nature; at least in

the great difficulty in reabsorbing them into industry. This difficulty is being met by their gradual demobilization and by the cooperation of the Government and private employers in furnishing employment. On November 16, General March issued orders for the demobilization of the first 200,000. His plan to release them by military units has been modified, according to the Washington correspondents, after conferences between the Secretary of War, the Secretary of Labor, and some of the Government's special labor authorities. It has now been decided, according to the New York *Tribune's* correspondent, to discharge the men according to territorial and occupational classifications. First of all, the soldiers from the great agricultural States will be

Copyrighted by the George Matthew Adams Service.

WHY NOT GO DOWN SIMULTANEOUSLY?

—Morris for the George Matthew Adams Service.

released as soon as possible to help meet the farm-labor shortage. Industrial groups will then be demobilized in the following order:

"First—Immediate release of all men who were employed in food-production.

"Secondly—Early release of skilled men in ship-building trades or adaptable to them.

"Thirdly—Discharge of men who were on railroads or who were engaged in the manufacture of railroad supplies.

"Fourthly—Miners, especially the anthracite coal-miners.

"Fifthly—All keymen in industry, such as managers of business, executives, technical experts, proprietors of business, etc.

"Sixthly—Men who are self-supporting, professional men and all others who are likely to be able to look out for themselves, and all men who are promised or are certain of jobs."

In order that there may be work for every man as he leaves, the War Industries Board is sending out questionnaires to employers asking about their needs for men. At the same time the draft boards which inducted the men into military service are being made use of to see that the men are helped into the right jobs when they go home. The United States Employment Service is making a survey of the labor situation in industrial centers. The president of the National Association of Manufacturers expects every discharged soldier to find a warm welcome when he seeks employment at his former work, and says:

"The one outstanding obligation of every manufacturer now is to be ready to take back into his plant the men who drop their work to place their lives at the disposal of the nation. It is their plain duty to have an 'open door' for a return to opportunity and prosperity of every American soldier and sailor who seeks to return to his former employment and occupation."

The draft boards and employers of Illinois will see to it that "the 175,000 soldiers and sailors from Chicago will get their

jobs back or be promoted to better ones," according to a dispatch to the New York *World*. This paper has telegraphed to a number of the large employers of the country and finds that, practically without exception or qualification, they will have room for every employee who has been absent on war-service. Some of the concerns making such statements are: the Standard Oil Company of New Jersey, Armour & Company, Marshall Field & Company, the National Cloak and Suit Company, the International Pulp Company, the Goodyear Tire and Rubber Company, the American Woolen Company, and the Maxwell Motor Car Company.

But all this willingness to provide jobs would be of no avail if there was not work to be done. Prospects, says the Indianapolis *News*—and scores of its contemporaries agree—are for "a period of unusual prosperity with plenty of work for all." For one thing, "the withdrawal of war-orders ought to be almost completely offset by the increased demands for peace goods which have been shoved aside for four years." The New York *Times* points out that—

"Construction enterprises of both public and private nature, which have been in abeyance for a couple of years or more, will call for the employment of hundreds of thousands of men. The great ship-building plants, an entirely new industry, will continue in full blast. Work for foreign reconstruction will also require the services of all kinds of handicraftsmen, and the need of clothing in different foreign countries will help keep busy the textile-mills, shoe-factories, and other establishments.

"Then, too, there is another aspect of the labor situation. In normal times it was necessary to keep getting new human working material from abroad in order to meet the growing needs of the country. This immigration has virtually ceased. In the year 1914 more than 1,200,000 foreigners came here, and there was no difficulty in absorbing them. Why should there be any great commotion in absorbing a few million returning Americans coming back gradually, especially as there is now an efficient organization for securing employment for them, which was not the case with regard to the immigrants?"

We are reminded by the financial editor of the New York *Tribune* that there is an estimated shortage of three millions of farm-laborers, and that all farm-workers who went into the Army or the munitions-factories are sure of reemployment on the farms. Young Americans who have joined the Navy and wish to continue a sailor's life will find an opportunity awaiting them in our new merchant marine, the Dallas *News* points out.

The United States Government is preparing through its War Labor Policies Board a program of after-war readjustment intended to prevent unemployment, lowering of labor standards and wages, and possible business depression. The first step, we read in the New York *Tribune's* Washington correspondence, is to be the inauguration of public works on a large scale, including irrigation and reclamation projects, highways, waterways, and railway construction. An appeal is to be issued to States and municipalities to resume at once all public work which had been curtailed or abandoned because of the war. In the third place, the War Finance Board, the Capital Issues Committee, the Federal Reserve Board, and Congress will be asked to cooperate in the conversion of war-plants to peace plants. The curtailed and suppressed "non-essential" industries will be helped to get back to normal as soon as possible. Soldier labor and war-work labor are to be diverted to the farms as far as possible. Finally, it is planned to utilize our soldiers abroad as long as possible in the labor of reconstruction in Europe.

Besides the soldiers, there is the great army of workers in war-industry. For their sake and for the sake of their employers there is to be, according to Assistant Secretary of War Crowell, "a tapering off of war-work, giving time for industrial readjustment and for the industry to take up civilian work." Brig-Gen. Guy E. Tripp, who has just returned to his duties with the Westinghouse Company, declares that the transition to a peace basis will be "largely accomplished within six months."

WHY MR. MCADOO RESIGNS

TO CREATE A MYSTERY, the simplest procedure for a public man is to make a plain statement of fact, remarks some editorial observers as they note the incredulity, not to say suspicion, that greets the resignation of Mr. William Gibbs McAdoo, Secretary of the Treasury and Director-General of Railroads. He is to retire as Railroad Director on January 1, and leaves the Treasury Department upon the appointment of his successor by the President. In his letter of resignation, Mr. McAdoo tells the President that while he does not wish to convey the impression that there is any actual impairment of his health, yet "as a result of long overwork I need a reasonable period of genuine rest to replenish my energy." But more than this, Mr. McAdoo writes, "I must, for the sake of my family, get back to private life, to retrieve my personal fortune." The *New York Tribune* (Rep.) believes the country will "unanimously regret" the retirement of Mr. McAdoo, whose going is "a catastrophe for the Wilson Administration." This daily reminds us that before people had crystallized emotionally on the war and while yet "many wavered in a twilight zone between physical force and moral suasion, his was the voice that never faltered, his the vision that could not be deflected." If there be reasons for his retirement other than those that appear on the surface, they will develop later, says the *Buffalo Evening News* (Rep.), which at the moment confesses gratitude to a man who "whatever his mistakes may have been—and frankly we believe he made as few mistakes as any man who could have been called to the post—served his country well in the hour of its need." The *Hartford Courant* (Rep.) acknowledges that Mr. McAdoo has been "a hard and energetic worker, and that his duties have been exacting," and adds:

"His term has covered a period of transition in the banking laws of the country and of unusual stress on account of the war-financing. The country has financed the war without serious difficulty, and whatever credit is due Mr. McAdoo for this he is welcome to. It must be remembered, however, that the country was in a highly prosperous condition when we went into the war and able to have borne even a heavier burden. So far as the Treasury Department has been responsible for the character of the war-revenue bills, it is not free from criticism."

"In lifting the railroads to a higher degree of efficiency, Mr. McAdoo has had two powerful levers that the managers of the roads under the old condition were unable to use. He has boosted freight- and passenger-rates to unheard-of figures and he has consolidated them in a way that would have horrified the Interstate Commerce Commission and the trust 'busters' in the days before the war. Even with these powerful and most useful instruments in his hands, it is doubtful if Mr. McAdoo has increased the country's railroad efficiency except in respect to the government business, and he has failed to make them pay. There is some fear when he and his successor are through with them, if they do get through, the roads will be in worse physical condition than when he took hold."

Among Democratic journals we find the *Raleigh News and Observer* ranking Mr. McAdoo "among the greatest of the nation's Secretaries of the Treasury," under whose administration it has been "taken out from under the control of Wall Street and its powers devoted to the service of the public." The *Pittsburg Sun* (Dem.) also warmly praises Mr. McAdoo, who has been "an able and a faithful servant of the public, and his work has been beneficial to the nation." The *Richmond Virginian* (Dem.) and the *Charleston News and Courier* (Dem.) believe it will not be easy for President Wilson to fill Mr. McAdoo's place either as Secretary of the Treasury or as administrator of the railways, and the *Brooklyn Eagle* (Ind. Dem.) assures us that few men have ever left the Cabinet with a finer record, and "no Secretary of the Treasury since the days of Hamilton supported heavier responsibilities."

But the *New York Sun* (Ind.) is one of the papers that believes "no explanation of the unexpected withdrawal which deprives

President Wilson's Cabinet of its strongest and most conspicuous member seems to fit exactly the known facts of the case," and the *Philadelphia Press* (Rep.) says there will be "a widespread opinion that it would have been better ordered if Mr. McAdoo's period of three months' rest and the President's trip to Europe had not been made coincident." Says the *Springfield Republican* (Ind.):

"It is apparent that Mr. McAdoo retires at a fortunate time for his own fame. He is now at the very peak of his success in achievement. By retiring he escapes what may prove to be the luckless embarrassments of the reconstruction period—difficulties in dealing with railroad labor and taxation measures

Copyrighted by the New York Tribune Association

THAT WAGE PROBLEM AGAIN.

—Darling in the *New York Tribune*.

and huge bond issues offered to a people no longer fired by the military struggle at the front.

"If one is looking ahead to political developments, he would say that circumstances conspire to make this the opportune time for Mr. McAdoo to withdraw from public life and restore his strength in anticipation of a Presidential candidacy in 1920. This will surely be said by Mr. McAdoo's political adversaries and to leave it unrecorded would leave the story unfinished at this date."

As for the "Presidential bee," we may refer to a speech of Secretary McAdoo made at Houston, Texas, on April 16 last, when an enthusiastic chairman introduced him as the coming President. His disclaimer was quoted in *THE LITERARY DIGEST* for May 25, which we reproduce in part as follows:

"But, ladies and gentlemen, this war can not be won unless there is at this time developed in America more than it has already been developed that unity of purpose that comes from the subordination of every personal and private interest, the squaring of every individual action with the noble standard of a perfectly selfless Americanism. It is no time for politics, it is no time for personal ambitions—and that impels me to refer to the suggestion your chairman made in introducing me. . . .

"I speak feelingly about this, my fellow countrymen, because I can not serve you as I want to serve you if my motives are ever suspected or if it ever should be supposed that I had a personal end in view. I must have your confidence and I must have the confidence of the American people if I am to do this job thoroughly; and if I have it, I want to keep it. I can not keep it and I would not deserve to if I have any selfish purpose to serve.

"In my humble judgment, as things stand to-day and as they may stand in 1920, there is only one man in America who deserves the great and exalted office of the Presidency, and he is holding that office now."

THE WAR'S COST IN HUMAN LIVES

“LET US VISUALIZE a march of the British dead down Fifth Avenue,” suggests a writer in the *New York Tribune*, in an endeavor to make the staggering casualty lists of the war more real than mere figures can make them. “At daybreak they start, twenty abreast. Until sundown they march . . . and the next day, and the next, and the next. For ten days the British dead pass in review. For eleven days more the French dead file down ‘the Avenue of the Allies.’ For the Russians it would require the daylight of five weeks more. Two months and a half would be required for the Allied dead to pass a given point. The enemy dead would require more than six weeks.”

For four months men actually killed in the war, passing steadily twenty abreast—the writer suggests, as a fitting punishment for the late German Kaiser, that he be forced to stand at attention and review this stupendous, ghastly procession, from the first rank to the last.

Our own casualty lists, continuing to arrive after the signing of the armistice, “have struck the only somber note” in our general thankfulness. The official figures, giving 53,169 dead and 179,025 wounded in a total casualty list of 236,117, are more than double those which semi-official advices from Washington had led the country to expect, and many editors protest against the War Department’s policy of suppression. “An explanation seems to be due,” declares the *New York Evening Post* and the *St. Louis Globe-Democrat*, and the *New York Globe* offers a detailed indictment of this “cruel policy”:

“Six months ago the War Department gave solemn assurances that it would be frank with the American people. It has not been. No one will contend for an instant that it has not known, and long known, the truth.

“Having been guilty of deliberate suppression, it does not lessen its offense by suddenly plumping out the gross figures of a tripled list. Giving no names and only stating totals, it has brought cruel anxiety to approximately 2,000,000 American households. Each is wondering whether its loved one is included in the unpublished list. Having deceived the country for several months, it would seem as if there might have been persistence in the deceit until the names were available and could be communicated to the bereft. Every family which has not heard from its absent members since the close of hostilities now sits in fear because the War Department, recognizing that the truth must soon come out, suddenly resolved to confess and was so desirous of escaping from its embarrassment that it did not care about anything else.

“Not an hour should be lost in collecting and transmitting casualty information. If the cables are clogged the lists should be put aboard the fastest ship of the Navy. It is nearly two weeks since the last shot was fired, and even tho there were no cables the War Department by this time should know who have been lost. Leaving out of view the insult to the American people, the War Department’s policy has most reprehensibly assailed the peace of mind of countless homes.”

Nevertheless, publicists almost without exception are agreed, “in proportion to the forces engaged and the results obtained, our final casualty list is not greater than might have been expected.” “Coming upon a field where dogged courage fairly

matched long preparation and iron discipline, it was the part of the Americans to turn the scale,” the *New York World* points out. “It was a costly service, . . . Song and story will never cease to immortalize the price these fifty thousand Americans, with heads held high and hearts undaunted, paid for the freedom of the nations.” The *Chicago Evening Post* comments:

“America was prepared in spirit to spend greatly for the cause of humanity. Her sons would have died in numbers equal to those of Britain or of France had occasion demanded. From such sacrifices we were spared. Let this thought make hearts tender and sympathy generous when we think of those who paid, without murmuring, the greater price.”

“Our men were purposely placed at one of the most vital and difficult points of the line and told to hack their way through,” the *New York Evening Sun* observes, and finds much consolation in its conviction that the “long, bitter, murderous struggle” which resulted was merciful in the end:

“It was a wise policy, this policy of forcing the fighting, and in the end it saved lives. For it crushed the enemy’s line, crushed his resisting power, crushed his purpose and will to fight on. It detracts nothing from the glory of our brave allies to say that it was the desperate onslaughts in the Argonne more than any other one thing which broke the heart of the German Army.”

Our total sacrifice of human life was practically the same as that of Canada, which has one-thirteenth of our population, and only slightly greater than that credited to the little Belgian Army of 350,000, of whom 300,000, according to one authority, were listed as casualties. The

British official casualty list of 3,049,991, including 658,665 killed and 2,391,326 wounded, is generally considered surprisingly large, in view of Great Britain’s “contemptible little army” at the beginning of the war. The *Pittsburg Dispatch* comments on this “record that compels the admiration of the world”:

“It has been too often forgotten that in addition to her part on the Western Front Great Britain has had to maintain armies and fight battles on more and widely separated fronts than any other belligerent of the Allies. British casualty figures will be worth remembering on December 7, the day set apart for America to do honor to her British Allies in the war for human freedom.”

The French, in conformity with their policy of “proud silence” throughout the war, have thus far issued no casualty list, but most authorities are agreed that the total can not be less than 4,000,000. One authority, attempting “an estimate of France’s sacrifice in a roundabout way,” reaches the conclusion that the French actually killed on the West Front number one and a quarter millions. Germany’s official list, giving 1,580,000 killed, 260,000 whose fate, according to the *Vorwärts* of Berlin, is unknown, and 4,000,000 wounded, is considered conservative by several commentators.

Italy’s official report shows a total of 5,000,000 men called to arms out of a total population of 36,000,000. “This figure,” according to a dispatch from Rome, “showing that Italy’s total mobilization reached 14½ per cent. of her entire population, it is believed, will surpass that of any other Allied nation.” Italian casualties amounted to about 2,000,000, of whom 400,000 were killed in battle, and 100,000 died of disease or other causes.

WAR-CASUALTIES OF THE NATIONS

In this table, showing the men in arms, the lives lost, and the total casualties of the leading nations involved in the war, the list of killed follows, in general, figures gathered by the *New York Evening Post*. The other lists follow the compilation of a writer in the *New York Tribune*, and both lists have been corrected by official reports issued since the original estimates were made. All of the totals, except those of the United States, Great Britain, Italy, and Germany, are unofficial.

	Men in Arms	Lives Lost	Total Casualties
United States	3,764,700	53,169	236,117
Great Britain	7,500,000	658,665	3,049,991
France	6,000,000	1,100,000	4,000,000
Italy	5,000,000	500,000	2,000,000
Russia	14,000,000	3,500,000	5,000,000
Belgium	350,000	50,000	300,000
Servia	300,000	150,000	200,000
Roumania	600,000	200,000	300,000
Germany	11,000,000	1,580,000	4,000,000
Austria-Hungary . .	7,500,000	2,000,000	4,500,000
Turkey	1,500,000	250,000	750,000
Bulgaria	1,000,000	50,000	200,000
Totals	58,514,700	10,091,834	24,536,108

From the New York Times.

GERMANY'S SURRENDERED NAVY.

Thirteen ships of the line, six light cruisers, and fifty destroyers were turned over to British, American, and French naval forces. Germany also surrendered the battle-ship *König* and the cruiser *Mackensen* at a German port to a British naval officer sent to Germany to take over these ships, one of which was unseaworthy and the other unfinished. In addition, Germany is surrendering her entire submarine fleet to the Allies.

END OF THE GERMAN NAVY

I ALWAYS THOUGHT they would come out, but not like this, on a piece of string," said Admiral Sir David Beatty, Commander-in-Chief of the British Grand Fleet, after the German High Seas Fleet had cringingly surrendered. No nation of such proud rank has ever suffered so great a humiliation, we are told generally, as this defeat at a "bloodless Trafalgar" when the British Fleet, accompanied by units of the American and French navies, occupying a stretch of water forty miles long and six wide, received the submission of thirteen German battle-ships and battle-cruisers, six light cruisers, and fifty destroyers, manned by 14,000 officers and men under Admiral Meurer. Nor was German treachery forgotten in the moment of the Allied triumph, for we are told that five hundred Allied guns were ready to open broadside from either side as the Germans, on November 21, "crept meekly into custody" out of the mist at nine-thirty o'clock thirty miles east of May Island, whence they were convoyed to the Firth of Forth. Meanwhile another humiliation for Germany was the surrender of eighty-seven U-boats. The policy of the British Navy has been gloriously justified in the surrender of the German Fleet, says the *Baltimore News*, and the "heritage of Nelson and Drake remains supreme." It was a wonderful day for England, the "greatest since Trafalgar," as many writers remark, while the *New York Globe* goes further back and says "it brings to mind the handing over of the naval power of Athens at the close of the Peloponnesian War." This daily adds:

"Germany was the second naval Power of the world and did not conceal her ambition to become the first. She had the most powerful army, but this was not enough. She sought to add to land supremacy water supremacy—to concentrate with one Power for the first time since Rome's day complete mastery. 'World-dominion or downfall,' wrote Bernhardt, and the answer is 'downfall.' As a peaceable folk there is not and never has been a desire to annihilate Germany. But there has been determination to end her career as an intriguing trouble-maker, who acted on the principle that might conferred right, and so far as the sea is concerned this end has been achieved for at least a generation. . . .

"By a victory over the Spanish Armada Great Britain prevented a preponderant land Power becoming a preponderant naval Power. At Trafalgar Nelson did the same thing. Once again history repeats itself. As it has been our fixt and immovable national policy to permit no transatlantic interference in cisatlantic affairs, so it is the fixt and immovable policy of Great Britain to permit no condition which puts her vital lines of communication at the mercy of a possible enemy. The

policy in a sense is one of colossal impudence, as Bismarck said our Monroe Doctrine was, but we of all people should be able to understand it and to realize, unless a system under which effective internationalization of the seas is established, why Great Britain will not abandon it."

Germany will not recover any of her surrendered ships, the *New York Times* points out, her colonies in all parts of the world are gone, her foreign trade is only a memory, and her merchant marine is no more than a nucleus. The great naval and commercial fabric, raised with vast expenditure of gold and toil, "lies prostrate and dismantled," adds this daily, which thinks that "regarded merely as a spectacle of arrogant ambition brought low, the fall of the German Navy from its great eminence is a national tragedy for which no parallel can be found in history." "*Der Tag*" is here, notes the *Chicago Evening Post*, and mentions the fact that on this day there lie in the Firth of Forth, rendezvous of the Anglo-American Grand Fleet, 224,151 tons of German battle-ships, 121,800 tons of German battle-cruisers, and 18,800 tons of German light cruisers—in all, 364,751 tons of the finest ships of what was once the German Navy, the pride of the Kaiser. Contempt and ridicule are showered upon Germany by various editorial observers following the confession of Captain Persius, naval critic of the *Berliner Tageblatt*, that the fight off Jutland "did the business" for the German Navy, and this explains the failure of Germany's fleet to come out, remarks the *New Orleans Times-Picayune*, which proceeds:

"On May 31, 1916, the day of that battle, German confidence in its fleet and hopes for its success were at high level. Twenty-four hours later 'it was clear to every thinking man,' he writes, 'that the Skagerrack battle must be the only general naval engagement of the war.' The German losses were 'enormous' and the boasted fleet nar-

rowly escaped destruction, being saved 'partly by good leadership and partly by weather conditions.'

"German propagandists and German press agents, including the Kaiser, hailed the Jutland battle as a 'glorious' German victory and hoaxed the world for a time. We learn now from the German expert that the fight resulted in a disaster from which the German Navy never recovered. Secretly acknowledging its failure in surface sea warfare—tho it never dared make open confession—the German Admiralty sought to turn the scale by submarine warfare, and scored another and still more costly failure."

The German "yellow streak" is what impresses most of our editors, and the *Brooklyn Citizen* recalls that—

"In the Napoleonic wars the French fleets, altho inferior to

OUT AT LAST.

—Kirby in the New York World.

THAT WOLF AGAIN.

—Brown in the Chicago Daily News.

the British and commanded by admirals without the genius of Nelson, died fighting. France maintained her commerce on the high seas and French privateers captured many British vessels. Trafalgar, which saved Great Britain from invasion, cost Nelson his life.

"The young American Navy performed prodigies in the War of 1812. Admiral Cervera steamed directly into the jaws of death when he engaged the American Fleet off Santiago. The Russian Admiral Rojestvensky died fighting in the Russian-Japanese War. Only the German Navy has refused to fight and has ignominiously surrendered. The stigma of cowardice will rest upon the German Navy for generations. The work of thirty years destroyed in a moment of panic, for only fear was at the bottom of the surrender."

But the Washington *Star* and other journals believe there was nothing else to do, for "evidence is accumulating that the German High Command had practically lost control of the Navy," and it is known that the seamen were insubordinate and had, in fact, "mutinied and had prevented a final sacrificial sea fight."

Parallel with the comment on Germany's downfall as a naval Power is the high praise for the part the British Navy played in winning the war. The war could not have been won at all without the British Navy, which was the "one indispensable element of victory," says the New York *Evening Post*, which adds:

"Mahan, thou shouldst be living at this hour! The great naval theoretician, steeped in history and in fact, the American who first taught the English fully to know what their sea-power had wrought, would surely have thrilled with satisfaction if he could have lived to see the amazing spectacle of to-day. A 'fleet in being' has done its perfect work. With little actual fighting, its heavier ships having scarcely been engaged during the four years of war, there it has ridden at anchor on the north coast of Scotland. Apparently it was doing nothing. It looked as idle as painted ships upon a painted ocean. But in reality it was exerting irresistible and decisive power. . . . The Grand Fleet in harbor has exerted the invisible compulsion across the North Sea which finally dragged the enemy vessels to the most impressive and astounding naval capitulation ever seen."

In this consummate hour of triumph the Entente nations offer their heartfelt gratitude to the British Navy, remarks the Providence *Journal*, which thinks its "four-year record of gallant watchfulness against a hideous menace is one of the finest chapters in the annals of the race." The New York *Evening Sun* bids us always remember that but for the British sailors and the French Army "Germany to-day would rule the world and we should be slaves," while the Cleveland *Press* reminds us that the United States shares the triumph of Germany's naval surrender, and Americans "may give thanks for the power of their Navy no less than for the success of the United States Army, under General Pershing and Marshal Foch." It is noted in various quarters that by the elimination of the German Navy automatically the United States becomes the second naval Power of the world, and our participation in the patrol of the seas

strengthens in some minds the conviction that we must keep the American Navy in fettle. The Chicago *Tribune* observes:

"Secretary Daniels, with a comprehension of what national defense means, a comprehension growing out of war-time experience with an instrument of national defense, is advising the continuance of American naval construction, the upbuilding and maintenance of the fleet, and Daniels, saturated as he is with much error, is wholly right in this insistence. We hope it prevails."

The Indianapolis *News* supports Secretary Daniels in his wish to have the program of naval construction continued, because the war has "abundantly demonstrated the value of sea-power," and the Grand Rapids *News* urges that naval construction be continued for two reasons: "One is that we must maintain the greatest possible dominance of the seas, the other is that a cessation of construction would tend to upset both the metal and the labor markets."

On the other hand, there are dailies which question whether we need a great navy, and the Syracuse *Post-Standard* points out that "inasmuch as the President is going abroad in the hope that he may achieve a league of nations, which would call for the retention of only a fraction of the ships of war as a police force, Secretary Daniels should give his chief the benefit of the doubt." In the judgment of the New York *Journal of Commerce*—

"What is to be aimed at as the result of the infernal war from which we are just escaping with the necessity of building up our interests anew is a league of nations for securing friendly relations and enduring peace. No one is to dominate trade or rule the world. These nations are to acknowledge common rights and mutual interests in an advanced civilization. In the partnership for peace and safety each should contribute its share according to capacity and its interests at stake, and there should be no such use for armaments on land or sea as there has been. Great Britain should be in agreement with other nations as a strong naval partner, because its interests are so largely at sea. It can not claim to be dominant there as an overruling authority, but should become a strong member of the partnership that is to be dominant as a whole for peace and safety."

Washington dispatches inform us that owing to the signing of the armistice the naval estimates for the fiscal year beginning July 1 are to be reduced by \$1,180,315,573. The original estimate was \$2,644,307,046, and we read:

"The biggest reduction is in the Department of Ordnance, where \$313,421,716 is to be lopped off. The pay of the Navy is to be cut \$275,324,285, due to the smaller personnel. Naval aviation will be reduced \$133,770,700. Supplies and accounts in the Navy also are to be substantially modified.

"No reduction was suggested, however, in the second three-year shipbuilding program of 156 ships, calling for \$6,000,000,000 to build ten super-dreadnoughts, six battle-ships, and 140 war-ships and smaller auxiliary craft."

BOLSHEVIK MUTTERINGS HERE

IN A SMALL WAY that may mean little—or a great deal—Bolshevism, in no essential different from the doctrine behind the "Red Terror" in Petrograd and Moscow, has appeared almost simultaneously throughout the length and breadth of the United States. In New York and in San Francisco, in Chicago and Milwaukee, in Hartford, Conn., and Laredo, Texas, "the red flag has been raised," a writer in the *Hartford Courant* points out, "as the symbol of a political system

not merely in contrast with our own, but in definite antagonism to it." Great meetings in the Chicago Coliseum and in Madison Square Garden, New York, each with an attendance of more than ten thousand, became "glorifications" of that system of "economic and political tyranny, compared to which," in the words of the *Omaha Bee*, "the utmost despotism of the Czar was mild and beneficent." "Too wide publicity can not be given to these proceedings," declares *The Christian Science Monitor*, of Boston, in an editorial under the heading of "Bolshevism in America." Since the outbreak of the war, this daily cites evidence to prove Socialism in the United States has been "monopolized" by an "element of the population entirely out of sympathy, and generally at enmity, with American ideals."

Quoting Victor Berger, the Austrian-born Socialist Congressman-elect, of Milwaukee, and other leading "party" Socialists, the *Minneapolis Tribune* observes: "Socialism as exploited in the United States is admitted by its leaders to be off the same cloth as Russian Bolshevism," and calls for the exclusion of Berger, who has boasted of his indictment under the espionage laws, from Congress. To the *Philadelphia Public Ledger*,

"The amazing thing about this American-Bolshevik braggadoocio is that it assumes that a country that has revealed political, social, industrial, and personal control for several hundred years is to learn wisdom at this late day from those who have reduced their own country to a welter of suspicion with every man's hand against every other's and where the stomach is indeed in rebellion since the things produced and the men who are capable of producing them have been wantonly destroyed in farm and factory."

For the very reason that it has made such a record in Russia, several editors believe that Bolshevism will not spread widely in America, and the *New York Tribune*, reasoning that "proletariat" and "bourgeoisie," the "reddest words in the red's vocabulary," mean "two things that are practically non-existent here," reaches the conclusion that "fear of Bolshevism in America is an unsound political emotion." To all such reassurances the *Peoria Transcript* offers the grim reminder that "Lenine and Trotzky were lightly dismissed as cranks without a following, but they toppled over the Kerensky Government and threw Russia into chaos." Beginning with *The Wall Street Journal* and ending with the *San Diego Union*, a considerable proportion of the American press is convinced that "the rocks of Bolshevism loom menacingly ahead."

The present prominence of the case of Thomas J. Mooney, of San Francisco, a labor leader whose sentence to be hanged on December 13 was only recently commuted by Governor

Stephens to life imprisonment, is credited with playing a large part in the wide-spread activity of American Bolsheviki. Mooney was convicted of responsibility for a bomb explosion which killed ten persons during a preparedness parade in San Francisco on July 22, 1916. For labor men generally, Mooney's case has been "the center of a struggle between capital and labor, with Mooney's life as the prize." The evidence on which Mooney was convicted was all circumstantial, perjury was proved in the case of one of the State's witnesses, and the trial judge, T. J. Griffin, declaring that "credibility of some of the witnesses

testifying against Mooney" was questionable, asked for a new trial. The Bolsheviki in Russia used this case to indict American "capitalism." American radical and labor papers were bitter in their denunciation, and even conservative organs admitted doubt "whether Mooney was granted justice in the California courts." The commutation of his death sentence to life imprisonment, which the California governor explained he did at the instance of President Wilson, is acceptable neither to Mooney nor to his champions. Attention is called to the fact that the President asked not life imprisonment, but "the postponement of Mooney's execution until he could be tried on one of the other indictments against him," and the condemned labor leader issued the

THE NEXT CANDIDATE FOR ELIMINATION.

—Darling in the *New York Tribune*.

following unequivocal statement from his cell:

"Governor Stephens, it is my life you are dealing with. I demand that you revoke your commutation of my death sentence to a living death. I prefer a glorious death at the hands of my traducers to a living grave. I am innocent. I demand a new and fair trial or my unconditional liberty through a pardon. If I were guilty of the crime for which I have been unjustly convicted, hanging would be too good for me."

Mooney's case, however, it is noted by the *New York Times*, seems chiefly important to the Bolshevist element in various meetings called to protest against his execution; as well as by radical papers throughout the country, as an excuse for waving the red flag and hailing the advance of the Bolshevist movement in America. *The New Solidarity*, an I. W. W. organ published in Chicago, is inspired to proclaim:

"The jackal press can not longer suppress the news of the revolution here at home. The day is not far off when this country will step beside the European fellow workers in the fight for freedom. Let the news from the other side strengthen our hopes. We American workers are not alone. The day is not far distant when the workers of all countries will not be satisfied with that ancient and fossilized idea, 'a fair day's work for a fair day's pay.' The idea that is taking hold throughout the world (the Bolshevist idea), is 'The World for the Workers.'"

The Butte (Mont.) *Bulletin*, published in the region where the I. W. W. won its first victories, heads a story of the Bolshevik uprising in Germany. "Will Same Thing Happen in United States?" and, according to the *Helena Independent*, openly waves the red flag and "champions the Bolsheviki."

The suppression of the red flag in New York City, after a small riot had been precipitated by its display in Socialist-Bolshevik demonstrations, has aroused editors throughout the East. "Under whatever name it may fly," declares *The Wall Street Journal*, "the red flag to-day represents Bolshevism pure and simple. Mayor Hylan deserves commendation for forbidding any public exhibition of a red flag in New York." The

Detroit *News* satirically observes, "this will, of course, immediately kill all social unrest and dangerous agitation." The New York *Evening World* comments:

"This is the moment of moments when labor in the United States ought to stand so far above the reach of prowling instigators of anarchy and violence as to be a constant example and guide to labor in all the revolution-racked nations of Europe."

The Los Angeles *Times*, whose struggle with organized labor has been long and bitter, is of the opinion that "there should be no temporizing with those who carry their opposition to our established form of government to the extent of flaunting a rival flag," particularly "the blood red flag of anarchy." "The red flag means lawlessness," declares the Des Moines *Capital*, commenting on the decision of the school board of the city of Chicago not to allow "citizens bearing the red flag" to conduct meetings in public school-houses. "It is a new symbol for an archaic thing," says the New York *Tribune*, "namely, for unrestraint." "Not to be tolerated," is the verdict of the New York *Morning Telegraph*, the Providence *Journal*, the Pittsburg *Gazette-Times*, and of our two large patriotic organizations, the American Defense Society and the National Security League.

On the other hand, the New York *Call* (Socialist) protests that the "red banner" stands for human brotherhood, and raises practical objections to a federal law suppressing it:

"A federal law of this kind would strike at thousands of local labor-unions all over the country. Red has been a color that they have instinctively chosen as a symbol of their aspirations, and, probably, a majority of such banners in this country are of this color."

But the heart of the problem is only to be reached, in the opinion of the Pittsburg *Leader*, through the adjustment of capital and labor. Says the editor of this daily, which circulates in one of the greatest labor centers of the world:

"Labor is not only to get more, but is to say just how much more and in what it shall consist. It is not, according to the labor program, a matter of respectfully standing while capital leisurely makes up its mind that it will grant this, that, or the other. It is that labor is to sit at the conference table while the terms are arranged—that labor is to have an actual voice in assisting the management of industry, commerce, and government."

"In other words, labor expects in future to 'sit in' at all gatherings which discuss the welfare of the nation, whether they relate to industrial prosperity or governmental policies. Labor, in fact, expects to have delegates at every point with a voice in determining every decision. That is the point which seems to have escaped most of those who have discuss the reconstruction period and its practical duties. There is to be an actual cooperation between capital and labor not merely theoretical as heretofore. Labor is to be an active partner, not silent."

THE SILENT TRAPALGAR.

The world's greatest naval victory took place on Thursday, November 21, when ninety ships, the flower of the German Navy, surrendered—without a shot being fired—to the Admiral of the Grand Fleet, off the coast of Scotland. "The real secret of victory in this war," says the *London Observer*, "has been hidden from the eyes of the multitude, but will be revealed in after years, spelled out in eight letters—D-E-A F-O-W-E-N." Here is part of the great German Navy that made the ignominious surrender.

GERMANY'S LAST HOPE

GERMANY'S WELL-KNOWN CLEVERNESS has worked out a grand plan that causes her to look forward to the future with confidence. She hopes to achieve at the Peace Conference what four years of the sword has not been able to get for her. Secrecy being essential, the whole scheme, with typical Teuton *finesse*, is loudly trumpeted through the press and proclaimed from the rostrum, so that if we are not warned, at least it is not their fault. It seems that, as usual, Germany is staking her all on one throw of the dice, and this time the little game is to cause dissension among the Allies, and particularly between America and Britain. The *Kölnische Zeitung* indorses the opinion of Dr. Paul Rohrbach, who in a lecture at Cologne predicted that Germany's chance will come when America and the Entente "start to squabble among themselves." He said:

"The victorious maintenance of our existence as a state will be achieved at the moment when, as is always the case in coalition wars, the various interests of the individual states that are engaged against us break out in all their brutality and turn upon one another. The fall in England's tonnage and the constant rise in America's tonnage will produce this critical moment and these conflicts of interest."

The *Berlin Vorwärts* thinks that the Peace Conference will be the moment to set the Allies by the ears:

"Everything that can still be saved and won can now only be won and saved in the negotiations of the Peace Conference. Even without weapons, the German people will be an important factor at the peace table. A people of seventy millions which can not be exterminated and which holds firmly together, remains valuable as a friend and dangerous as an enemy for the future which is now to be decided. We have promised of our own free will and our own conviction to join a league of nations in accordance with Wilson's principles. By this voluntary adhesion to the league of nations, we have much to give to the world, for which a forced adhesion can never supply a substitute. Even without arms we shall not be defenseless at the peace table."

Theodore Wolff, in his *Berliner Tageblatt*, sees the makings of a

number of pretty little squabbles in all of the Allied countries, and exultantly writes:

"In almost every country there is a movement which presses for moderation and a movement which presses for the sharpest measures. In France the Socialists are turning against Clemenceau. In England Henderson and his comrades are trying to put on the brake, tho there is little real difference between the Conservatives and the Liberals except that the former want to throttle us while the latter want to thrash us. The real division only begins at the point where the talk is of the foundations of peace—of the map of Europe and of the future shaping of the world. A wide difference is seen between the Northcliffe men and the English Liberals who have been won over to Wilson's principles, as in France between the Nationalists and the politicians of the Left, and, to cap it all, it is seen that there is no firm program as yet agreed upon by the Entente governments."

All shades of German opinion unite in predicting trouble between ourselves and the British, tho the wish is perhaps father to the thought. The *Kölnische Zeitung* writes:

"The thick fog of rhetoric which floats backward and forward over the Atlantic will not deceive anybody who knows. The English and the Americans feel themselves to be the greatest competitors in trade and they spy suspiciously on one another—still more as regards the future than as regards the present."

Dr. Paul Lensch, the famous "Socialist Imperialist," in his paper *Die Glocke*, chortles with joy over the prospect of a family row at the Peace Conference:

"In England people hulk themselves in the hope that the alliance with the 'Anglo-Saxon cousin' possesses eternal value, but from this expectation there will be one day an unpleasant awakening. The more independent the Union has become in this war as a world-Power, the more vigorously will she be able to support her special interests against England. There are plenty of conflicts of interest with the old sea queen. The part which New York will play in the future in the money market is primarily directed against the position of London, and the construction of an American mercantile marine hits at the decisive point the former position of England as the world's carrier."

"One must always remember that the true consequences of

war will appear only with the conclusion of peace. Until then the common hatred of Germany keeps the opponents together and bridges their antagonism. At the Congress of Vienna it was only by a miracle that war by Austria, France, and England against Prussia and Russia was prevented, and the coming Peace Conference may provide similar scenes."

In his organ, the Berlin *Deutsche Politik*, Paul Rohrbach argues that the future will inevitably give Germany her diplo-

THE GERMAN ATTEMPT TO SOW DISCORD.

THE AMERICAN FRIEND OF MAN—"Perhaps I can rescue some of my lost millions from the pockets of the Fallen." —Ulk (Berlin).

This infamous cartoon is typical of the German attempt to stir up trouble between America and the Allies, particularly Great Britain.

matic opportunity at the expense of the Allies if she only plays her cards rightly. What that "rightly" means, we can see when he comes to discuss Anglo-American relations, which he does thus:

"What was England before the world-war, and what is she to-day? Before the war she was the first world-Power, proud and unassailable, more independent in her policy than any other state in the world, politically and economically based upon her own dominating world-position. To-day she is dependent upon the United States, once her colony; what England achieves and what she is not to achieve at the conclusion of peace depends upon America's leadership . . . and even after the war English policy will feel permanently its dependence upon America.

"It does not need much wisdom to predict that whereas there are already strong conflicts of interest between England and America, the United States after the war will not hesitate to employ her power even against England. While England before the war stood politically independent and free on every side, she is henceforward tied in her decisions by America and, in part, even by Japan. At the moment German consciousness subordinates these things to Germany's own direct fate, but the altered world-situation will sooner or later make itself felt for us as well as for the rest of the world, and if we pursue the right policy the developments will be by no means to our disadvantage."

The latest German "menace" is recognized by the London *Times*, which writes:

"The important work of defining precisely the conditions of a just peace must devolve upon the Allied and American statesmen. President Wilson, who was among the first to forecast the main lines of such a peace, and who has, from time to time, added to them principles and precepts which experience of actual warfare has led him to regard as essential, has undoubtedly worked out in some detail a plan on which he believes the general postulates of peace should be translated into practise. If the Allied Governments have not yet progressed as far as he in this direction, they should hasten to make good their omissions and to draw up their terms of peace in accordance with the high

ideals they have always professed. Much—perhaps everything—will depend upon the spirit in which this is done. Provided that they preserve the moral unity and the firm acquiescence in joint sacrifice that have marked the armed struggle and keep before their eyes the goal of the greatest common good, they will be able to attain a joint program for peace, the justice of which will defy all the efforts of the beaten enemy to divide them. The Allied peoples would regard as intolerable any meeting of Allied representatives with cunning and unprincipled enemy diplomatists to haggle and dispute over the main terms of peace. They desire no 'peace conference' of the sort which disgraced diplomacy at Vienna a century ago, or which sowed at Berlin in 1878 the seeds of the present catastrophe."

But most British editors believe that the war has so firmly cemented the Anglo-American Entente that all the problems of the peace table can be adjusted without friction. On the British side this cordiality is undoubtedly strong, we are told, and the London papers point for proof to the extraordinary popular outburst last July 4, when Britain for the first time in her history spontaneously celebrated the Declaration of Independence. Space forbids adequate quotations from the pamphlet of the Independence-day speeches, put out by the Library of War-Literature, 511 Fifth Avenue, New York, but the remarks of Viscount Bryce and Mr. Winston Churchill, the Minister of Munitions, show that England is determined to let no German intrigue disturb the good feeling now existing between the two nations.

AMERICAN COLONIES IN AFRICA?—The future of the former German colonies is now much under discussion in Europe, and many think that America should bear her share of "the white man's burden." The *Manchester Guardian* says:

"Some of those who are interested in colonial questions are asking whether the time is not coming when America will reconsider her attitude with regard to undertaking territorial obligations in the backward regions of the earth.

"If the administration of the German colonies is to be added to the already enormous burden resting upon the British Empire, this burden—if it is to be carried alone by us or even shared in some manner between Great Britain and France—may become altogether too unwieldy. There is the greatest need in colonial administration of the efficient and liberal-minded help which America could supply.

"An obvious suggestion is that America might undertake the responsibility for the administration of Liberia. The miserably

disturbed and backward state of this black republic is sufficiently well known, and America has a peculiar interest in it because there is in the country a population of some 10,000 half-castes and negroes who are American citizens."

BREAKERS AHEAD FOR THE LEAGUE OF NATIONS

THE INK WAS HARDLY DRY on the armistice before a rejuvenated Poland, true to her former history, was engaged in two wars of her own, one with the Ukraine and the other with Prussia. Poland, at least, has made up her mind not to wait for the Peace Conference to decide her boundaries, and she shows an inclination to assert the doctrine of "self-determination" in no uncertain form. This doctrine that brilliant Roman weekly, *L'Unita*, tells us is a heresy and may prove one of the reefs upon which the whole League of Nations may be wrecked. Its view is enunciated in expressing some dissatisfaction with the Allied statesmen who were responsible for the terms of the armistice offered to Austria. The Italian weekly bitterly regrets that we did not insist upon intervening then and there on behalf of the Slavic nationalities instead of leaving them to work out their own salvation. *L'Unita* writes:

"The policy of the Entente Allies toward the Slav nationalities of Austria-Hungary is neither less nor more than a case of the right and duty of intervention which ought to be resolutely affirmed by the democratic parties of the Entente.

"This idea in many minds is cloudy and confused. The only one of the Allied statesmen who seems to have a clear grasp of all its constituent elements and all the consequences which it implies is President Wilson. Even Lloyd George does not make it clear whether he regards intervention in the internal affairs of Austria as a right and a duty of democratic justice, or simply as a useful war-expedient."

True democrats are urged to accept the dogma that the right of intervention is one which belongs inherently to the family of nations and can be exercised by that family whenever conditions seem to require it:

"Many backward democrats have not understood that if they really desire to work effectively for the League of Nations they must abandon without hesitation or regret the phantom of self-determination and affirm clearly and resolutely that this war must end the day of the old 'sovereign states' which recognized no authority superior to their own and regarded as a diminution of liberty and as a *casus belli* any attempt on the part of one state to intervene in the internal affairs of another."

L'Unita lays it down as an axiom that the right of intervention is indispensable to a league of nations, and that self-determination and intervention can not mutually exist in the same political area:

"A league of nations whose central authority had not the right to intervene continually in the affairs of each of the associated nations in order to control armaments, to guarantee the rights of national minorities, to eliminate disputes about customs and frontiers, to secure at least comparative homogeneity of political institutions between the associates—a league of nations which did not limit the right of self-determination as affirmed by Lenin and Count Burian, would be a mere mystification.

"As real individual liberty is inconceivable unless each individual sacrifices part of his own liberty to the requirements of civilized society, so real national liberty for all nations great and small can not be achieved without some effective limitations in the liberty of each nation. The absolute right of self-determination leads to the absolute right of peace and war. Would a league of nations be worth having which left to its component states this absolute right of peace and war?"

Passing from theoretical to practical questions, *L'Unita* tells us that not alone in Italy but throughout Europe the more old-fashioned politicians are offering a distinct if passive resistance to President Wilson's pet child, the League of Nations:

"Around this idea of the League of Nations, a silent but very bitter struggle is at present being carried on. The old diplomats and the Conservative Nationalist groups dare not oppose it openly—first, because this idea is resolutely and forcibly affirmed by President Wilson and the democracy of the United States,

and the United States have the whip-hand, and the whip is the only argument capable of making an impression on certain Conservative and Nationalist diplomats of Prussian mentality. Secondly, because it would be imprudent to defy the feeling of the soldiers, the majority of whom are fighting above all in the belief that they are helping to bring about a new international régime, under which a repetition of such an infamy as the

declaration of war by Austria and Germany in 1914 will be impossible.

"Not venturing openly to refute the idea of Wilson and the soldiers, these 'Prussians of the Entente' are trying to boycott it quietly. They smile over it sardonically. They talk of it as little as possible. They are preparing, when the time comes for final decisions, to bring against it all sorts of quibbles and obstacles, being here at one with the German and Austrian diplomats and militarists. For there existed a military 'International' considerably more solid than the Socialist one, whose program was to stir up and keep open as many causes of quarrel as possible, and the heart of this 'War-International' is in all countries, German or anti-German, the armament industry.

"The Bolshevik theory of self-determination and the pseudo-democratic prejudice about non-intervention, by giving a wrong slant to the democratic International and rendering it incapable of clear and coherent work on behalf of an effective league of nations, is playing into the hands of the military International. For this reason, it is necessary that these mental specters in the ranks of democracy should be faced without further delay and finally laid."

While influential circles in Italy see dangers and difficulties ahead, before the League of Nations can become a practical reality, equally influential circles in Germany are being rapidly converted. For example, Friedrich Naumann in his paper, *Die Hilfe*, writes:

"Our thoughts continue to busy themselves with the League of Nations, which is now, we are told, to be extended over the whole human world. We have got to find our adjustment to it somehow or other, for it is unquestionably on the march and will come either with our cooperation or in spite of our resistance.

"If the majority of the German people and their intellectual

leaders are once convinced that the League of Nations is inevitable, historically necessary, and practicable in itself, Wilson will find no better collaborators in the whole world than the Germans. We know by experience what it means to be conquered. We have a more lively sense than any other people of what a blessing it might be if mankind were demilitarized. For us it would mean a wider and freer zest in life."

None the less Dr. Naumann does not hesitate to confess that German opinion is somewhat suspicious of trusting itself to the mercies of an international council which they seem to think might possibly take a toll of vengeance for the past:

"It would not do for us to be slaughtered in the name of justice to the accompaniment of cosmopolitan psalms. Against such a hypocritical cruelty all sections and parties of our nation are at one. We do not mean that this is what Wilson has in mind, but as a proof that he has not, we hope he will soon find the right word to stigmatize the will for our destruction which sounds in the voices that come across to us from England and France."

A TRIBUTE FROM DENMARK—America's part in the war has moved Denmark to astonished admiration. Here is a meed of generous praise from the Copenhagen *Politiken*:

"What America has achieved is a world record which no European country can match. An army has been created which it has been possible to move to France and which has changed the fortunes of the war. A commercial fleet is now being constructed which in a few years will make America the greatest sea-power in the world; and, politically, America has gained a leading position within the circle of the Allies which will make it indisputably *primus inter pares*."

The *Politiken* is at some pains to explain our sudden and successful appearance in the lime-light of the world's stage and it finds the secret of our material and political success lies in the "melting-pot":

"If one asks what has been the reason for this almost explosive development of strength, the answer must be that the American nation is an extract of European youth, which, melted together for some generations, has produced a race of incomparable health. This young nation has the finest natural setting to develop its abilities, and has, by acquiring what it found most useful of European technique and culture in addition to its own improvements, given a new impetus which will be decisive for the future direction of its development."

"The British world outlook, the German power of organization, the Gallic logic, the Slavic imagination, Scandinavian broad-mindedness—all this has been transplanted in the American fertile soil, where it blossomed into a growth of exotic abundance."

"Problems which we in Europe in a tarrying way try to conjure away, the destruction threatening the war-devastated countries, America seems to solve with playful ease. The community is organized for war according to one will, capital is rationed, factories placed under state control, prices regulated, and tax systems worked out as if they were matters of course. The result achieved very likely surprised the Americans themselves."

BELGIUM'S TROUBLES NOT YET OVER

IN THE HOUR OF VICTORY we are apt to forget that much has to be done before the world is back to normal, and we are reminded of this by the Belgian Minister at Washington, who tells us that Belgium is going to be in a sad plight this winter and is still in need of all our aid and sympathy. He writes:

"Under the terms of the President's basis of peace, Germany must pay for the reconstruction of Belgium. There will, however, be an interregnum before collections can be made from Germany, wherein not only must the Belgian people be fed, but their industries must be started, their railways and canals constructed, destroyed houses must be rebuilt, raw material must be found to start factories, seed and agricultural implements must be furnished, in order that the people of Belgium may be put to employment and self-support at the earliest possible moment. Moreover, the whole population is undernourished and must have enlarged food-supplies instantly in order to enable them to go to work."

"The President's direction to Mr. Hoover that he should enlarge the activities of the Commission for Relief in Belgium to embrace the relation of the United States to this reconstruction program, and that he should handle all matters in connection with this American relationship is a matter of the most intense satisfaction to every Belgian."

"The enlarged shipments of food already started to Belgium to meet the present emergency, the large orders just being given for cloth, the great response of the American people to Mr. Hoover's appeal through the Red Cross for second-hand clothing, and the measures under consideration for prompt amelioration in other directions are all in line with the marvelous activity of the Commission

throughout the whole of the last four years."

"That Mr. Hoover and his associates in the Commission for Relief in Belgium and in the Food Administration are to have charge of this enlarged interest of the American people in Belgium will give a feeling of absolute confidence to the whole of our people and this evidence of America's continued solicitude will be an encouragement and stimulation to my people second only to their actual liberation from German oppression."

"The English and French Governments have already evidenced their solicitude in this matter and their willingness to cooperate and give support to Belgium in her task of rehabilitation. It must always be borne in mind that over four million of our seven million people are destitute and are to-day subsisting in soup lines; that except for the garments provided through the Relief Commission they have had no textiles for over four years; that the whole clock of industry has been stopt, and that the Germans have carted away to Germany all the machinery which they did not destroy in Belgium."

"They destroyed our railways, our mines, and our canals. Never before has a country been reduced to such a plight as ours to-day and never has a country had such friends. We have won the war. We must now bend every effort to restore our country and prepare it for its glorious future."

CHANGING FIGHTING MEN INTO TECHNICAL GRADUATES.

Disabled Canadians at preliminary instruction in house-wiring in the electrical laboratory of McGill University. They complete their training by doing practical work with contractors. Canada's industrial reeducation system is based on cooperation by the Government and the employer.

HOW CANADA HANDLES HER DISABLED SOLDIERS

WITH THE APPROACH OF PEACE the problems of reconstruction are looming large, and especially those connected with the returning soldier who can not work at his old occupation. Our neighbor, Canada, has been dealing successfully with this problem for three years and more, and her experience will be valuable to us, all the more because conditions in her case approximate our own much more nearly than any of those met in European countries. An account of Canada's industrial reeducation system is contributed by C. Norman Senior to *Industrial Canada* (September). Mr. Senior tells particularly of the cooperation of manufacturers and of the survey of industrial plants made to find wider opportunities to train disabled men with the least inconvenience to employers. Says Mr. Senior:

"About 45,000 casualties have been returned to Canada. A special staff of interviewers is maintained by the Reestablishment Department for the purpose of interviewing every one of these to ascertain whether or not his injuries or condition of health are such as to prevent him from returning to the occupa-

tion at which he earned his living prior to enlistment. The proportion of such cases has maintained a fairly constant average of about 10 per cent. An order in Council provides that all who are so disabled by their war-injuries as to be unable to resume their prewar vocations are entitled to be trained for new occupations. The training is given at public expense, while the man and his family are maintained through an established scale of pay and allowances, based approximately on military pay and allowances and the Patriotic Fund allowance.

"At the latest compilation of statistics (August 1) 5,045 disabled men had been approved for specific courses of industrial reeducation. . . . When the original interviewer reports on the probable necessity of training, a medical officer sees the man in question and confirms the report from the strictly physical standpoint. This being done, the veteran is brought before what is known as a Disabled Soldiers' Training Board for the purpose of recommending a suitable new occupation for which he should be trained. . . .

"The members of the Board act as advisers to the soldier. It is the business of the Vocational Officer to bring to the conference information as to the possibilities for training. The medical officer states whether or not the man's injuries are such as to interfere with the movements necessary to do given work. The

business man is asked to advise as to whether or not there is likely to be permanency of employment at decent wages in any occupations that come under discussion. If further information is desired the Board sometimes adjourns until that information is obtained. Every effort is made to establish confidential, friendly relations with the disabled man and to show him that the Board has his interest at heart. Owing to the cost of a course of reeducation, great emphasis is laid on the making of a wise selection in the first instance; a little extra cost at the

outset being more than compensated for by reduction of the number of false starts which might be made if men were carelessly trained for occupations at which they could not make good. A false start is also very discouraging to the man himself."

It was taken as axiomatic from the outset, we are told, that men should be trained fairly near their homes, a policy necessary in any country of wide extent. Existing technical schools, engineering departments of universities, and other centers of training were utilized and their facilities made available for the Department's needs. It was found, however, that only about twenty or twenty-five occupations could be taught in schools, and to do this efficiently large centers had to be established in half a dozen different places at great cost. To quote further:

"The psychology of the disabled man, very often well advanced in years, did not respond readily to school methods of instruction. Some variation was found necessary. It was finally decided that employers should be approached with a view to having men trained under actual shop conditions. A policy along these lines has been adopted and put into execution with great success. Manufacturers and employers generally have shown splendid willingness to cooperate in assisting the Department to conserve the country's labor resources.

"Systematic methods have been followed in the Department in order to give every man as wide a choice as possible and in order to occasion employers the least possible inconvenience. An industrial survey service was organized for the purpose of finding out and listing the occupations which could be performed by men having specific partial disabilities. . . . In a given shop it might be found that six men stand up and five men remain seated while operating machines, seven men walk about, eight men work at benches either standing or seated. The surveyor will note whether the shop is noisy, whether the air is good, in respect of each kind of work whether good eyesight is required, whether the tools or materials which have to be used are heavy or otherwise. These and numerous other details when tabulated opposite the name of the occupation under the heading of the firm name give the vocational officer the oppor-

tunity of judging whether or not certain men having specific disabilities could be trained for each individual occupation. . . .

"It is especially in the industrial reeducation that manufacturers are interested and their cooperation is urgently required. The value of this important work of conservation has become at once apparent to employers who have had the case properly laid before them. Some few instances of exploiting the labor of men who are supposed to be receiving training have occurred, but such men have instantly been withdrawn from the factory in question and no further assistance in that direction has been sought. On the other hand, the Department takes great pains to recommend the right man for the right job in its training work, and there have been very few instances of malingering. Inasmuch as the man is on pay and allowances from the Department he can easily be penalized for such conduct, and the Vocational Officers have power to do so.

"As mentioned before, courses have been approved for 5,045 men, and of these 1,990 are at present receiving their training. On August 1 the number of men who had received their training and gone into employment was 1,081.

"Fewer than 5 per cent. of the men in Canada who have been offered courses of training have refused them, and in some cases this was because they were able to go into a line of work for which they did not require training. A few over two hundred have begun courses of training and left them before the course was completed. Of these there were also some who found they were able to take employment in other lines without the training to which they were entitled."

SAVING COAL WITH PEAT

PEAT HAS LONG BEEN A FAMILIAR FUEL in certain parts of the world; but little has been done toward preparing it for use on a commercial scale, altho machinery for grinding it, drying it, and molding it into briquettes was on the market and in use in the United States half a century ago. When coal is plentiful and cheap, peat is forgotten, but in emergencies like the present it is worth while thinking about. The Canadian Government, which owns large peat lands, has been experimenting on its preparation for use as a fuel on the same scale as coal, and the results are described by a writer in *Railway and Locomotive Engineering* (New York, November). The writer reminds us that peat, in its natural state, contains about 10 per cent. combustible matter and 90 per cent. water. The removal of this water constitutes the problem that must be solved by the peat engineer; and we read:

"The Dominion Government owns a large peat bog at Alfred, Ont., where exhaustive experiments were conducted some years ago and about 3,000 tons of standard peat fuel were manufactured and sold to householders in Ottawa and neighboring municipalities. The bog was then turned over to a private company for further development, but the company spent all of its money in getting ready to operate and had no capital left to carry on the enterprise; its plant was junked.

"The results of the manufacturing operations conducted at Alfred indicate that with strict business management, peat could be manufactured for \$1.70 per ton in the field. . . .

"Not more than 120 sun-drying days per annum can be depended upon in Ontario in the manufacture of peat, and as solar energy is the only known form of energy that is cheap enough to be economical in the manufacture of peat, therefore the material has to be laid out in the sun to dry after it has been excavated from the bog, and the minimum period under the most favorable drying conditions is about thirty days.

"When the committee was appointed last spring, its first task was to design a modern machine. Mr. Ernest V. Moore, of Montreal, was engaged as consulting engineer to design two plants; one of these will be similar to the one he already built at Alfred, but redesigned in the light of the experience obtained there. The other is an entirely new design, which, if successful, will no doubt prove a distinct step forward in the manufacture of machine-made fuel. It includes bucket excavators, a very efficient macerator, conveyors for laying the material in the field, spreaders, markers, and mechanical harvesters. An industrial railroad system will gridiron the bog and little cars will carry the material to the railroad, and, when the peat is dried, harvest it into a pile, and altogether it will be more simple and less costly per ton of output than any peat plant known. . . .

"As the fuel value of peat, compared with the average available anthracite, is as one to 1.8, 20,000 tons of peat will replace less than 12,000 tons of anthracite coal during the winter of 1919-20. The Government's present idea is to see whether this 20,000 tons of peat, manufactured at Alfred under commercial conditions, can be sold through ordinary dealer channels, or by some other entirely commercial means, so as to compete satisfactorily with other fuels.

"Peat appears to be a most desirable fuel from every standpoint excepting its bulk, and with the present fuel scarcity no one is likely to complain about that. . . . There is no clinker from peat, it ignites very readily, and its ash is very fine."

A BRIDGE THAT WORKS LIKE A KITE

AN ORDINARY PONTOON BRIDGE, after its component boats, planks, and other material have been assembled on the bank, can be thrown across a river three hundred feet wide in about half an hour, the work requiring a large number of men. How one man can throw a bridge over such a stream in five minutes is told in *Engineering and Contracting* (Chicago), by Halbert P. Gillette. Mr. Gillette's bridge works on the principle of a kite, the current of the river taking the place of the wind and the floating bridge swinging out across the stream just as the kite, attached to its string, swings upward into the air. What are called "rudder booms," built on this principle, have long been used in the Far West to deflect floating logs into a "pocket" in a river bank. These booms are so designed that one man can swing the boom across the river in a few minutes or withdraw it even more quickly. Writes Mr. Gillette:

"The force of the river current is made to do all the work of swinging the boom across the river, making the operation appear at first sight like lifting one's self over a fence by one's bootstraps. However, the principle involved is exactly the same as is applied in flying a kite in the air. The current of the river takes the place of the current of the air—the wind. The air-kite moves up and down in a vertical plane, whereas the river-kite moves in a horizontal plane, floating on the river.

"My application of this kite principle to a pontoon bridge is shown in the accompanying sketch. Upon a series of pontoons is laid a bridge floor, each pontoon being pivoted at its center to the floor-beam above. I have not attempted to show the floor-beams and stringers in the sketch, nor the details of the pivoting. A wire cable connects the bows of the pontoons, passes around a sheave on the rear pontoon and on to the drum of a winch. A similar wire cable should be used to connect the sterns of the boats, to provide against breakage of the other cable, and to speed up the swinging of the drawbridge where speed is an object. The rear end of the bridge is anchored to a tree or 'deadman' on the bank.

"First let us assume the bridge to be in the position shown in the sketch; then, to swing it back to the shore, all that needs be done is to throw off the dogs on the winches. Thereupon all the pontoons swing on their pivots until they point directly down-stream, and the entire bridge swings about the center of the rear boat as an axis, until the forward end of the bridge, A, reaches the position B. A converse movement occurs upon winding up the cables on the winches, so as to throw the A pontoons at an angle with the river current. Then the forward, or down-stream, end of the bridge at B moves in arc across the river to A.

"If the length of the pontoon is great compared with its beam width, the bridge can be made to swing out to an angle with the current that will considerably exceed 45 degrees; whereas rudder booms are seldom designed to swing even to a forty-five degree angle.

"It often happens that a temporary bridge is needed. In such cases the pontoon drawbridge is worth consideration. It is superior to a fixed pontoon bridge wherever floating logs or ice are apt to lodge against the bridge. A pontoon drawbridge can be swung back to allow a log jam or an ice jam to release itself, or it can be kept swung back except at the times that it is needed. It does not interfere with navigation.

"A cheap pontoon swing-bridge can be made of air-tight barrels, held together to form rafts that serve instead of boats. A still cheaper design for pioneer purposes is one in which cedar or pine logs are used to make the rafts that serve as pontoons."

THE CHEAPNESS OF LIGHT

THAT THE AVERAGE AMERICAN FAMILY pays no more to-day for its light than it did in the day of the tallow candle is the assertion of an editorial writer in *Engineering and Contracting* (Chicago). That it has about twenty times as much light for its money is an incidental fact that seems to the writer worth notice. Even if his esti-

PONTOON BRIDGE ON THE KITE PLAN.

River-currents take the place of air-currents. The air-kite moves up and down, but the river-kite moves horizontally, and one man can throw a bridge across a stream 300 feet wide in five minutes.

mate of \$2 a month for electric light should appear a little low, there is enough margin to make his comparisons remarkable. Here is at least one necessity, he says, whose cost to the average family can be compared with what it was a century ago, tho we use it in twentyfold quantity. Whose labor brought about this result? And has he been paid what it is worth to the world? The writer hurls these questions at the thinkers who would credit the coal-miner, the fireman, the engineer, and the wireman with it all. He writes:

"Of all the necessities of life there is probably but one that annually costs each household no more to-day than it did a century ago. That necessity is light. According to Dr. Walton Clark, president of the Franklin Institute, the average American family in 1815 used sperm-oil and tallow candles that cost \$22 a year. This \$22 purchased 25 candle-power-hours per night, or 9,000 candle-power-hours per annum, from 1815 to 1855. Then came kerosene, which at that time was two-thirds as expensive per candle-power as tallow candles. However, instead of reducing the annual outlay for light, the average family continued to expend about \$22 a year, for which were secured some 13,500 candle-power-hours.

"During the decade of 1865 to 1875 the tallow candle was completely displaced by the improved kerosene-lamp and illuminating gas; and the average annual cost for lighting each house was about \$24. Gas then sold at \$2.50 per 1,000 cubic feet, and the family that used gas entirely spent about \$34 a year.

"From 1875 to 1885 kerosene was reduced to 22 cents per gallon and gas to \$2 per 1,000 cubic feet. The average family spent \$30 a year and secured 76,000 candle-power-hours. During the next decade the price of kerosene dropt to 13 cents per gallon and gas went down to \$1.50; but with this reduction of 40 per cent. in prices came a reduction of only 17 per cent. in the annual expenditure for lighting, the average yearly cost then being \$25 per household.

"Between 1895 and 1905 kerosene had practically disappeared in city houses, for gas had not only fallen to \$1 per 1,000 cubic feet in the larger cities, but electric current had fallen to 10 cents per kilowatt-hour. Using electricity at this price, and

with 'carbon-filament lamps,' the average family secured 50,000 candle-power-hours yearly, for which was paid \$25.

"During the next decade (1905-1915) an astonishing advance occurred in the science of economic illumination, both with gas and electricity. The Welsbach incandescent gas-burner, which had been invented in 1887, was enormously improved, and coincidentally the mazda or 'tungsten-filament' incandescent electric lamp was developed.

"To-day, with gas at \$1, a thrifty family can secure 200,000 candle-power of gas light for \$15 a year; and a similar family, using electricity at 10 cents, can secure 125,000 candle-power-hours of electric light for \$18 a year.

"Supplementing the foregoing figures of Dr. Clark, the editor is able to say that his appraisals of electric plants and studies of electric rates in many cities have shown that the average family using electricity spends about \$2 a month or \$24 a year for light. The \$24 ordinarily buys 240 kilowatt-hours; and, using mazda lamps, each kilowatt produces about 1,000 candle-power, so that the 240 kilowatt-hours generate 240,000 candle-power-hours. The average useful life of a mazda lamp is 1,000 hours of steady burning, or about a year at three hours a day, and adding the cost of the lamps (four yearly) to the cost of the electric current (\$20 yearly) enables a family annually to buy 200,000 candle-power-hours for \$24.

"We thus come to two astonishing facts: First, that during the last one hundred years the average American family has not departed widely from an expenditure of \$24 a year for light. Secondly, that the family of to-day, altho spending almost the same sum annually for illumination as was spent by the family of a century ago, secures more than twenty times as much light! This astonishing result is due entirely to American inventors, engineers, and business men."

OLD RAILS FOR TIES—How a street-railway in Montana laid its rails on cross-sections of old track instead of on wooden ties, and gained certain advantages thereby, is told in *The Electric Railway Journal* (New York, November 9). The construction, we are told, permitted the use of a lighter running rail and afforded a successful means of anchoring the whole in concrete. The writer, who gives credit for his facts to *The Concrete Highway Magazine*, says:

"The Helena Light & Railway Company made use of this construction, due to inability to procure a rail six inches high. The use of a four one-quarter-inch rail which the company was able to obtain would not permit more than two and three-quarter inches of concrete over the ties under the flangeway, and it was not considered that this thickness of concrete was sufficient. The company had on hand a considerable quantity of worn-out forty-five pound T rails, and these were cut in lengths of six feet and seven feet, and electrically welded to the track rails. . . .

"It was found that the track built as above described could not be lined nor could superelevation be given after the ties were welded. The specifications for concrete pavements required a thickness of six inches at gutter and eight inches at the center of the street. The depth of the track as built was eight and one-quarter inches. A depth of five and three-quarter inches of concrete was obtained under the steel ties, which was considered sufficient.

"The results of this construction were so successful that when Helena Avenue was paved, a year later, the same type of construction was adopted with but two exceptions. The first of these was the omission of reinforcements which were previously specified, and, secondly, the introduction of a longitudinal joint three inches beyond the end of the ties, the idea being to make the track construction independent of the street pavement. . . .

"Joints should be staggered, as the ties act as cross-hands and staggering tends to prevent cracks in the pavement. The heaviest cars operated over this line weigh eighteen tons."

IS THE INFLUENZA A CHINESE PLAGUE?

FACTS TENDING TO IDENTIFY the recent epidemic of influenza with a form of pneumonic plague that has raged in parts of China for several years past are adduced in *The Medical Record* (New York, October 12), by Capt. James Joseph King, of the United States Army Medical Corps. Dr. King believes that the plague was taken to France by Chinese coolies imported as laborers, whence it spread over Europe in modified form. The symptoms of the two diseases are similar, he says, and some of them have differed from those observed in previous epidemics. Both diseases seem to be due to groups of different germs, and some of these have been definitely found

in both. Dr. King thinks the coolies had among them "carriers" of the plague bacillus, and that this assumed new virulence and different form when transplanted into virgin soil. We read in *The Record*:

"We desire to present in this preliminary note a consideration of the similarity of the present epidemic to the epidemic of pneumonic plague which broke out in Harbin, China, in October, 1910, and spread rapidly and continuously throughout northern China at that time; and to suggest that this epidemic may be the same disease modified by racial and topographical differences. The origin of this epidemic was

suggested to the writer soon after its outbreak in our camps by Mr. Guy M. Walker, an eminent American authority on Chinese affairs. This suggestion led to an investigation of the reports of the pneumonic plague in China, and there is sufficient likeness of that epidemic to the present one prevailing in our cities and army camps to warrant a consideration of it.

"In the latter part of 1910 the pneumonic plague first appeared in Harbin, a town in Manchuria under Chinese control. Harbin is on the Trans-Siberian Railroad, and was the original hotbed of the disease. . . . From Harbin the plague rapidly spread in all directions, usually following the lines of traffic along the railroads. . . .

"This plague has been very serious. The mortality has been fearfully high. It has spread throughout China. Wherever the Chinese coolies from the North have traveled they have carried this disease. . . . In the early part of 1917, about 200,000 Chinese coolies, collected from the northern part of China, where the pneumonic plague has raged at intervals since 1910, were sent to France as laborers. . . . They made splendid laborers in France, and were in back of the lines during the German drive of March, 1918. No doubt many of them were captured by the Germans at that time. Hence the outbreak of it in the German Army and its rapid spread in Spain.

"So far as we know, this disease first broke out last spring, in the German Army, where it is said to have been very serious. We next heard of it in Spain, hence the name Spanish influenza. The name is really a misnomer, but it has stuck, probably because it is the first epidemic of influenza that Spain has ever had. Since our soldiers and sailors have been returning from the battle-fields of France it has become very prevalent and serious in our camps and cities all over this country.

"It is not necessary here to go into detail concerning the clinical data, except in a very general way. In the China epidemic there were few definite symptoms at the outset of the disease except the general malaise, prostration, loss of appetite, etc., soon to be followed by the pneumonic process and death. So it is in the present epidemic. There have been indefinite symptoms, great prostration rapidly followed by pneumonia and death in the most virulent forms. The outstanding features of the Chinese pneumonic plague were the high infectivity of it and the high mortality. So in this so-called influenza epidemic it is more contagious, is followed more frequently by pneumonia, and attended with a much higher mortality than in any previous influenza epidemic."

A VERITABLE RAILROAD.

Having a quantity of worn-out forty-five-pound T rails on hand, a Montana traction company cut them in lengths of six and seven feet as ties and welded them electrically to the track-rails. Two benefits were the use of a lighter running rail and the successful anchoring of the whole in concrete.

In the pneumonic plague epidemic of China, Dr. King goes on to say, the typical plague bacillus was found associated with the germs of pneumonia and similar diseases. Different strains of these organisms were found in different localities, and the virulence of the disease varied accordingly. In our influenza epidemic the influenza bacillus has also been associated with groups of these same germs, varying in character as the virulence and mortality of the disease have varied. He goes on:

"Thus we have shown a striking similarity between the pneumonic plague of North China and the present so-called Spanish influenza epidemic. It is not unreasonable to believe that the two diseases may be the same. The influenza bacillus and the *Bacillus pestis* (plague bacillus), in atypical forms, may simulate each other. We know that organisms may assume different forms and have different cultural characteristics in different conditions. The ordinary influenza bacillus is a short, slender bacillus. The plague bacillus is about the same length, but is generally fatter and broader. . . . It seems possible that the *Bacillus pestis* may have been present in a non-virulent state in the Chinese coolies, and assumed new virulence, vigor, and a somewhat different form, when transplanted into virgin soil. The high mortality and infectivity of this epidemic strongly suggest it.

"On this basis the epidemics which have followed all great wars may be explained. If a nation or tribe can survive any disease long enough it will acquire immunity to that disease. When, however, foreign people commingle freely and intimately, as in war, epidemics will break out. The inactive, non-virulent organisms in one race will become virulent in some other race which has not acquired immunity to that specific organism."

NATURE'S PRIMAL WAR

NATURE'S INSTABILITY—her lack of fixity—her state of constant flux and change—was long ago noted by the Greek philosophers. To call attention to it is simply to bid the reader note the course of life as he has experienced it, or, on a broader scale, the course of history—man's, or the earth's, or the universe's. Change is primary and universal. And it all reduces, according to Col. John Millis, of Savannah, Ga., to a simple geometrical fact, overlooked by most persons, but easily proved. Altho the sphere is the most symmetrical of figures and the largest possible with a given area of enclosing surface, spheres can not be grouped so that the resulting assemblage will have both these qualities. If they are in perfectly symmetrical form, they will not have maximum density; if they are compact, they will not be symmetrical. Lacking either symmetry or compactness, a gravitating system like that of ordinary matter can not be stable. Thus, matter is not and can not be at rest, but is forever oscillating between one form and another. Nature's flux is merely a struggle between forms of symmetry and those of maximum density. Colonel Millis's fundamental statement is easily shown to be true, he avers, without mathematics of any kind. He says, in substance, in *Science* (New York, October 11):

"This principle can be demonstrated experimentally and in a simple and practical way by means of a number of balls of equal diameter, like the hollow celluloid 'ping-pong' balls, or the rubber balls sold as children's playthings. Thick mucilage, varnish, collodion, sealing-wax, or any other available adhesive substance may be used for sticking the balls together."

"Place one of the balls on the table and arrange four others around and touching it with equal intervals between them in the form of a right-angled cross. Then place one ball directly on top of the central one, and finally one directly beneath it. The group has a perfectly symmetrical arrangement which admits of indefinite extension on the same system in all directions by the addition of balls. It will be clear that exactly the same arrangement results from placing on the table a number of balls in contact and in a single layer in 'square' order, or with the balls in rows both ways at right angles like the squares on a checker-board, and then placing another layer in the same formation with each ball directly over a ball of the first layer, and so on. The balls will have to be stuck together or very carefully placed or they will not retain this formation, but they

will fall down or spread and the pile will collapse under the influence of the gravitation of the earth.

"It soon becomes apparent that this cubical arrangement is not the most compact possible or not the one which permits placing the greatest number of the balls in a given volume. For example, after placing the first layer in square formation greater concentration is attained by placing each ball of the second layer over an interval or space among the balls of each group of four in the first layer rather than directly over another ball, and so continuing the succeeding layers.

"Now, undertake to effect the most compact arrangement possible, beginning with one ball, and place about a central ball on the table as many others of the same size as there is room for in one layer with all touching the central ball. There will of course be six side balls, all tangent to each other throughout as well as to the central ball, in hexagonal order. Then three more balls can be placed above touching the central one—and only three, tho there are six intervals among the balls of the foundation layer—and likewise three others can be placed below, making twelve surrounding balls, or a group of thirteen, all in mutual contact throughout, so that the position of each ball in the group is definitely fixed relative to its neighbors. This arrangement may be extended without limit, and it is the most compact, but it is not perfectly symmetrical throughout.

"It should be noted that the formation resulting from starting with a layer in square order and placing the balls of the next layer over the intervals in the first one and so on, is also this same rhombic dodecahedral arrangement, only differently disposed with respect to the table or the horizontal plane. It is what we so often see in a pile of oranges in the groceries and on the fruit-stands. In all horizontal layers of such a pile the balls are in square order, but there are other systems or series of layers in the pile, inclined to each other and to the horizontal, in which the balls are all in the hexagonal order, which is the closest assemblage possible in any one layer or plane.

"We have thus developed one arrangement—the cubical—that gives universal symmetry with the balls in contact throughout, but not maximum concentration; and another one that gives maximum concentration and density, but not universal symmetry. Now try for a formation that will give both."

Space forbids our following Colonel Millis through his investigation, but of all the other possible arrangements that he tries, not one is as symmetrical as the cubic or as compact as the other. Now for some of his conclusions:

"Now, regard the spheres as endowed with the property of gravity. They will tend to collect together in a group. The cubical arrangement would be entirely consistent with complete equilibrium of the attracting forces, but this can not be permanent, since it is not a formation of maximum density. The group will collapse on the slightest disturbance, and the members will seek another arrangement permitting greater concentration. The other grouping affords maximum concentration, but it too fails to give complete stability, for it is not perfectly symmetrical and the forces of attraction can not be permanently balanced.

"We can now in imagination expand the diameter of the balls to any extent limited only by infinity, and likewise their size may be reduced to any dimensions short of zero, while their number may be multiplied also without restriction. The above relations are true for the smallest units of matter that can exist as well as for the most gigantic. Furthermore, the truth of these principles is not dependent on the complete occupation by matter of each of the individual spherical spaces or volumes considered. These spherical spaces may be only the respective 'fields' of one or more portions of matter in a state of motion.

"The reason for the conviction and belief that these principles have an intimate and fundamental relation to the universal and eternal unrest of matter and to all physical phenomena of whatever nature will now be apparent. All material substances whatever, whether affected by influence of life or whether only dead matter, are alike governed by the physical and mathematical laws here outlined. Is there not therefore a remarkable and intimate relation between the 'simple geometrical principle' above explained and all organic existence and processes—all life, growth, repair, decay, and dissolution; even all mind, intelligence, emotion, and all reasoning and thought. The speculative philosopher might indeed go so far as to add all health, satisfaction, and pleasure; all sickness, distress, and pain; all relations and struggles among humans, all endeavors of man, all events of history, everything; and the psychologist may here note an analogy to the unending strife between good and evil which figures in so many of man's superstitions and religious beliefs, primitive and otherwise."

LETTERS - AND - ART

TYTYL CONFRONTED BY HIS ANCESTORS

Escorted by the *Fairy Berylune*, *Tytyl* comes to the abode of his ancestors and finds out how much they have to say in the matter of his choosing a wife. The Caveman first ancestor voices the accumulated family wisdom. *Light*, with the young first loves of *Tytyl*, who are all, by the way, ruled out, sit by at the right in the picture. *Grandma* and *Grandpa Tyl* receive the wondering adolescent.

MAETERLINCK'S NEW PLAN FOR PICKING A WIFE

THE MODERN YOUNG MAN, and the modern young woman too, are inclined to resent interference in the choice of the other partner to life's adventure. Time was when parents arranged things, and individualism was then in veyance, but each one who has essayed the married state likely upposes he or she had the whole say. Such a thing as ancestors 'butting in' would be an idea most preposterous, and much less could Destiny be allowed to have had any hand. How far modern thought has traveled away from the Greeks is brought out in Maeterlinck's new play, "The Betrothal." Destiny to-day starts out with a fine idea of itself and an imposing physical embodiment, but, contrary to the fixt idea of the Greeks, it shrinks to infantile proportions, tho it still thinks itself powerful. This is the philosophical key-note of the play that represents the sequel to "The Bluebird," that mixture of poetry and fancy that, a few years ago, delighted old and young in both continents. Whether the sequel will find enough philosophically bent to take delight in it remains to be seen. We got "The Bluebird" with the imprimatur of Europe, but the war has cast into our hands the whole responsibility of passing for the present on the theatric merits of "The Betrothal." Our critics, of course, display the usual variance. Mr. Corbin, of *The Times*, seems to have a mind impressed by abstractions, and reports himself "face to face with the theory of life and of love which is at once profoundly beautiful and not a little startling in its modernity." He finds "humor, too, and the lure of the land of faerie; but they are intermittent and evanescent as was the philosophic element in "The Bluebird." Mr. Broun, of *The Tribune*, is evidently more of an antique Greek and refuses to see any "very profound philosophic foundation" in the play. Maeterlinck's bantering with *Destiny* makes him quake a bit and say that "we rather think that when people make snoots at *Destiny* he has a rare chuckle behind the palm of his hand." The present play deals with *Tytyl*, come eventeen and feeling the promiscuous impulses of adolescent love. Mr. Corbin tells the story with some particularity:

he has seen, and exchanged glances with, in the neighboring countryside—the daughters of Miller, Beggar, Butcher, Mayor, and the rest. At the bidding of the *Fairy Berylune*, they come to the Woodcutler's Cottage and make love to *Tytyl*, one and all, with the frankness of dream-maidens. Their conduct is also accounted for by the fact that the jewel in *Tytyl's* magic cap divests all creatures of such trivial, surface traits as sex modesty and jealousy. But *Tytyl* is not able to choose from among them his future wife. This is not because they are all so charming and so willing—nothing as trivial as that, or as deservedly complimentary to these maidens—but because there is one test in the choosing of a mate which they somehow fail to meet.

"To solve the difficulty, the *Fairy Berylune* takes *Tytyl* and the bevy of his First Loves upon a journey. They go to the *Miser's* house, and *Tytyl*, by turning the sapphire in his cap, softens the old man's heart and opens his purse. The character of the *Miser* is very brilliantly portrayed by Cecil Yapp and the scene is most effective; but its inner meaning is certainly not self-evident.

"Much the same is true of the next scene, in which, owing to the fact that *Tytyl* has mislaid his cap, the bevy of maidens are seen in their workaday guise as cats and hoydens. But the philosophy of the fairy story becomes more palpable in the latter part of the play, in which *Tytyl* and his train reach the abode of all his ancestors, and then the abode of his children and children's children.

"The chief tenet in Maeterlinck's philosophy of love is that mating is no mere personal affair, but a sacrament, so to speak, of the family—in fact, of the race. He has said in one of his essays that the first kiss of true lovers is decreed and partaken of by all the multitudes of children that are to come.

"It now appears that ancestors take an equally intrusive part in this supposedly private transaction. Modern biology is discovering much the same truth, tho in different terms; and the eugenists are fumbling on the verge of it. But if there is science in this philosophy there is also humor. *Tytyl*, at least, is quite aghast at so multitudinous an intrusion!

"The ancestors are certainly a motley crew: rich man, poor man, beggar man, and thief are there, and also a sick man, a drunkard, and a murderer. These last bid fair to make our hero forever unhappy, and all his children, by urging a marriage of base or mistaken motive. But the Great Ancestors assert their sway. Their spokesman is a caveman of redoubtable aspect, but ripe wisdom. As played by Augustin Duncan he makes

"His morning dreams are haunted by the figures of the maidens

perhaps the most vigorous impression of the evening. The result of this ancestral scrutiny of *Tytl's* First Loves is that they are all rejected, or at least put on probation.

"And so they all troop along to the Abode of the Children. It is a spacious and dazzling region of azure and gold, a pictorialization of imaginative, splendid effect—the highwater mark, in fact, of a production which, in every detail of scene, lighting, and costume, is of the very first order. But it is difficult to escape an impression that the writing of the scene is not up to its investiture.

"Coming after the richly human transactions of the Ancestors, it seems diaphanous to the point of evanishment. Compared to it the scene in 'The Bluebird' of the Land of Children Not Yet Born is a masterpiece of fantasy all compounded of impulsive human nature and lambent humor. Those pale wraiths of varying stature who float about so aimlessly are all too feeble to sway the motions of any heart, to say nothing of the quick impulses of adolescence.

"It is, however, *Tytl's* six children, all in their prenatal lightness, who choose his last and true love for him. The wanderings of the bevy of First Loves has been accompanied by a paled figure who mutely pleads for recognition. The Ancestors have sensed in her an interesting possibility. But it remains for her six children to pounce upon her with instant recognition of their mother.

"*Tytl* is still at a loss to place the maiden. But in the morning, after he has awakened from his dream, a neighbor and her daughter come in for Christmas breakfast. The daughter is the mute follower of his dreams—the little girl *Joy*, grown up, whom, in the previous play, *Tytl* gave the bluebird. Their love scene, played by Sylvia Field in a flood of exquisite, virtual passion, is a fitting climax for a play which, with many inequalities and much baffling symbolism, is an undoubted work of originality and genius."

To Mr. Brown "the lad seems no very free person, with all his ancestors and descendants crowding in upon his choice," a thing which makes the critic puzzle why *Destiny* should shrink. Mr. Towse, in the *New York Evening Post*, posits this sentiment of *Destiny* as "entirely in accordance with the Master-nekian spirit," but he, too, finds it "not easy to reconcile this cynical contempt for predestination with the notion of a prenatal and postnatal influence." Mr. Brown finally ships his doubts and agrees to find "The Betrothal" if "not a work of profound philosophy," at least "a play of extraordinary beauty and charm," saying also:

"At this moment we can recall no stage pictures as beautiful, and all the effects are gained from comparatively simple combinations of curtains, even tho these are marvelous fabrics. Herbert Paus is the artist. The performance has an admirable orchestral accompaniment by Eric Delamater. And, best of all, the play has many moments of fine dramatic intensity. Perhaps the best of these was in the Abode of the Ancestors, where the various candidates for the hand of *Tytl* passed before the assembled council. Part of the credit for the thrilling and enthralling nature of this scene should go to Augustin Duncan as the *Great Ancestor*. Not many performances we have seen this year have so completely dominated a scene. Reginald Sheffield does well as *Tytl*, and there are vivid performances by June Walker, as *Roselle*, the innkeeper's daughter; Boots Wooster, as *Milelle*, the woodcutter's daughter; Cecil App, as a miser; Edith Wynne Matthison, as *Light*, and Sylvia Field, as the *Veiled Figure*.

"All the girls in the little group of *Tytl's* sweethearts play casantly, and they also dance attractively in some numbers set on by the Isadora Duncan dancers. All in all, 'The Betrothal' is one of the most successful combinations of many different forms which the theater has seen.

"Of course, it is a play which should please all ancestors, since it flatters them so. Few parents probably have the hardihood to think that anybody has deliberately chosen them as fathers and mothers. Sometimes the theory seems little short of incredible, but perhaps there are not quite enough first-class parents to go round."

Mr. Towse, again, finds here cause for much thanks in the relief furnished from contemporary theatrical fare:

"It contains every promise of being a great popular success. It is, most assuredly, an exceedingly notable artistic achievement. In providing such an entertainment, so rich in various charm, beauty, and fancy, Mr. Winthrop Ames has

once more proved himself a public benefactor. In these days an occasional demonstration in the theater that even the lightest of amusement is not entirely incompatible with exercise of the intelligence becomes of especial significance and value. There will, of course, be very general curiosity to know how this latest fantasy compares with its predecessor, and

THE GREEK BUGABOO

Destiny here, with *Tytl*, starts out manfully in his old rôle, played in the Greek drama, but before Masterluck's play finishes with him he has shrunk to a whimpering infant.

whether it is likely to enjoy an equal measure of public favor. But that is a question which it will be safer to leave to time to decide. That it is destined to delight many thousands of spectators, young and old, may be asserted with confidence."

FRANCE TO COMMEMORATE OUR AID—France is never behindhand in acts of graceful courtesy. As we have an imposing reminder of this in the Statue of Liberty in New York Harbor, so France has already taken steps to commemorate American aid in the Great War. A press dispatch from Paris gives the preliminary steps:

"The Councils of the Gironde and Bordeaux have given the initial subscription of 300,000 francs (\$60,000) toward the monument which will be erected at the entrance to the Gironde River to commemorate American aid to France and of which President Wilson has been invited to lay the corner-stone.

"The committee in charge of the erection of the monument is composed of many of the most eminent men in France. Former President Loubet is chairman of the committee, and among the other members are Premier Clemenceau, former Premiers Briand, Viviani, Ribot, Bourgeois, Barthou, and Painlevé, President Dubost, of the Senate; President Deschanel, of the Chamber of Deputies; Foreign Minister Pichon, Minister of Marine Leygues, and Minister of Instruction Laferrière.

"Others on the committee are Jules Cambon, Senator Monis, Henri Bergson, Ernest Lavisse, Pierre Loti, Emile Boutroux, and Gabriel Hanotaux, of the French Academy; Senator Dupuy, Senator Doumer, Senator d'Estournelles de Constant, and the Marquis de Chambrun, descendant of Lafayette."

GERMANY'S AERIAL PROPHET

THE FIRST REAL RECONSTRUCTOR of Germany may perhaps be the one who took the air route to a spot in Denmark, where he could see his country from the outside. Prof. G. F. Nicolai is the man who flew out of Germany to Copenhagen and left the German military authorities, who had vainly tried to muzzle him, reduced to the impotent expedient of demanding his extradition on the ground that he had stolen an aeroplane! Now, in the columns of the *London Times* he addresses an open letter "to him who to-day controls the destiny of Germany—one whom as yet, unfortunately, none of us recognize as the real power." He explains that he does not mean the Chancellor, nor the Kaiser, nor the Minister of War; "for all these have failed to see me righted." He is a "Great Unknown," whom Professor Nicolai invokes to "inquire into the facts here set forth." These are the recitals filling seven instalments in the *London papers* telling of the struggles of this obdurate professor with the authorities because he dared to criticize the Government for making war. Being a "civilian doctor," he claimed immunity from military dictation, and, after long making himself a thorn in the flesh, began to deliver in Berlin a series of lectures on "War as a Factor of Development in the History of Mankind." But these were promptly cut short and the lecturer was packed off to Dantzig, where the military oath was administered to him and he was degraded to the ranks. Of this final humiliation he writes:

"The War Minister, it is true, makes a point of asserting that I was not degraded; he has said so repeatedly and with emphasis not only to me personally, but also in the Reichstag. I do not know whether he means that I was never subjected to what I understand to be the orthodox ceremony of a regular degradation on parade—i.e., that my epaulets were never torn off my uniform—a ceremony which was in any case hardly possible in this instance, since we civilian doctors wear no epaulets. At all events, I had, in fact, fallen from the position of an officer to that of a private; from a position esteemed in Germany beyond all measure to one which is in Germany beyond all measure despised. . . .

"My degradation was another flagrant breach of law; for in the Constitution of the German Empire it is expressly declared that any one who refuses the military oath is to receive exactly the same treatment as those who have taken it. Thus the Constitution had been violated by the treatment I personally had received; but since I had to play only a passive part in the violation, I could submit to my degradation without further ado. The only demand I felt obliged to make was that I should be employed on duties connected with the medical service. . . . I spent my time as a clerk in all kinds of medical offices, where I performed inane tasks of every sort. Thus, for instance, at the beginning I was set to rule empty note-books, while at the end of my time I was allowed to fill in with a pen what others had written with a pencil; between these two extremes there were periods when I was given rather less idiotic work in the laboratory. It was all rather more or less the same to me. For the subordinate members of the hospital staff, to whose authority I was committed, always took my part; and so I was told in every office that, instead of ruling lines, I had better go on quietly with my own private work—which accordingly I did."

The doctor was still resolute and faced the alternative of going—"like the one and only Liebknecht," as he says—to jail, or taking flight to Denmark. He flew. His aerial exploits will furnish an interesting foot-note to the war; but at present his reflections on the subject of the rebuilding of Europe are of immediate interest:

"Independently of what may result from this my personal fight for justice, all those of us who claim the right to call ourselves good Europeans have certain duties which can not be evaded. It remains for me to say what I mean by that and whence I derive the audacity to believe that my flight from Germany may have a significance apart from my personal fate."

"When I left Germany I did so because much is rotten in the German Empire; because I could no longer breathe freely in a land which, for me as for so many others, was now merely a great prison; because, above all, I believed that here, outside

the confines of Germany, I could do something that would assist that unfortunate country as much as it would help humanity at large.

"Was this presumption on my part? Perhaps it was. That may be left to the decision of the generations to come. It will be manifest to their clear-seeing eyes, whether the way to Germany's greatness is to be won by the sword or with the weapons of the spirit. I can await the decision with equanimity, for I am convinced that all nations of the past who believe that they could rely on the sword have come to grief, and that to-day more than ever spiritual strivings are of greater import than physical force.

"But, since differences of opinion will not cease as long as men exist, it is necessary, if we wish to avoid catastrophes like those of 1914, that there should be a supreme Court of Appeal to settle disputes automatically and finally. There must be a central authority and an international control, whose duty it will be to see that no criminal groups of men produce those terrible means of destruction which modern science has placed in our hands, and use them for the selfish destruction of the peaceful work of mankind.

"Our world has been shrunken in size by the arts and sciences and easy intercourse, and contains immeasurable possibilities of harm; for instance, a small group of men with the robber-baron instinct could paralyze the whole trade of the world with armed submarines. A deliberate and complete organization of the world as a whole has therefore become a pressing and imperative necessity.

"To-day even men who a few years ago arrogantly rattled their weapons and looked to them to decide the welfare of the world are talking of the new unified Europe as a fact.

"The unification of Europe is now coming about and has been assisted by the war which rends Europe. For no member of the overwhelming majority of people who to-day detest the war can doubt that war will disappear only if either the states of the world combine into a single greater state, or if they bring into being a supernational organization and control armed with adequate powers. To-day the question no longer is whether the realization of so beautiful a dream is desirable, but merely what steps must be taken to achieve a goal so obviously necessary; and who is to do the work—the nations or their governments? This is a fact which all governments should ponder.

"It was to this simple and self-evident idea that I wished to devote myself. I know that I can so best serve the interests not only of Europe, but of Germany as well, 'my country' in the narrower sense. For Germany can develop into freedom and greatness only if it succeeds in finding its place as a useful member in this great whole.

"Organizing the world. That the world is ripe for being politically organized has been demonstrated by its ability to organize the massacre of millions with such marvelous and horrible completeness. It lacks only determined love to be able to organize itself for objects other than mere annihilation. The awakening of this love is the part of the work that I have chosen for myself. I am now a man without a country. I am free in the world, thanks to chance and by my own free will, just a German citizen of the world. Like old *Cleomenes* in the comedy of Aristophanes, I should like to conclude a private peace of my own with all those people who are still hostile to my country—not, like that old Athenian, merely to have plenty to eat and drink, but because I feel that some one must get up and make a beginning.

"I do not advocate to-day that weapons be laid aside. The fight is for principles; and until the new principle of the Brotherhood of Nations has been made secure, there must be no talk of peace. Otherwise all this slaughter will have been in vain. The fight must continue until the principles of justice are recognized by all nations of the world.

"I—a German—use no weapons in this fight. The only contribution that I can make to the attainment of this end is to cry out to the Germans: 'Remember your *Kultur*, and reflect that it would be even more important to protect German *Kultur* than portions of German territory, and that it is surely more important to defend German *Kultur* and freedom than, after all, to fail to hold French and Russian territory. Remember that the idea of world-organization originated among you, and that there is no reason for you to be surprised if this idea now turns against you, since you throw it aside and snatched at the alluring wreath of a German peace imposed by force.

"*Yes! Remind yourselves of what you really are, remind yourselves that once upon a time the greatest and finest representatives of humanitarianism were Germans. Then you will have peace; then will the world have peace."

LORE OF THE CHANTEYS

CHANTEYS SEEM EVEN MORE POPULAR in England than with us. Some time ago we recorded the impression that they had come back in our ship-building plants as a means of speeding up labor, and the best-known exponent of these traditional songs of the sea was secured to teach his store of songs to others. (See LITERARY DIGEST, July 6, page 38.) Now a man pops up in the *London Times* who has the most indisputable claim to authority, since his "ancestors have followed the sea as far back as can be traced." To understand his further claims, we shall have to notice that he calls his songs "Shanties," and a little later makes an elaborate defense of the form. Before that, however, he tells us he has "grown up" with sailor shanties, that his "contact and familiar intimacy with all the recognized shanties go back as far as he can remember," that he has "in later years compared, coordinated, and collected his boyish memories of the shanties with those of his very numerous sailor relatives and their respective circles of sailor acquaintances." All these credentials are enforced by the interesting information that he—Mr. R. R. Terry—has lived for some years in the West Indies—"probably the only spot where the shanty is still alive"; and that he has "lost no opportunity of collecting shanties from old sailors who worked in sailing-ships before the days of screw-steamers." By way of preliminary to his warnings, then, Mr. Terry, writing in the *London Times*, apprises us of this fact:

"The shanty is dead on the sea. If it is to be revived on shore (as seems probable) it is imperative that, when the old melodies find their way into print, the sailor atmosphere and sailor traditions shall be faithfully reproduced. With the exception of Capt. R. H. Whall's 'Sea-Songs, Ships, and Shanties' (the only authoritative collection in print), there is no indication of this. Other collections than that of Captain Whall (unfortunately for us it deals only incidentally with shanties) are the compilation either of a sailor who is no musician or of a musician who is no sailor. The ideal combination of sailor and musician has yet to come."

First, then, Mr. Terry settles the "shanty" versus "chanty" business, and passes on to a secondly, thirdly, and lastly:

"May I utter a protest against the pedantry which—because of a fancied derivation from (*un*) *chanté*—would spell it 'chanty' or 'chantey'? The result of such spelling is that out of every thousand landmen 999.9 pronounce it 'tehalnty,' rhyming with 'auntie,' instead of 'shanty,' rhyming with 'seanty,' as every sailor always pronounced it. The arguments in favor of 'chanty' are plausible, but conjectural. Were it worth while, I could prove by arguments more plausible, less conjectural, and equally unconvincing that the word is derived from a negro shanty, or hut. According to the Oxford Dictionary (which, by the way, spells it *shanty*) the word did not find its way into literature until 1869. That being so, surely it is more scholarly to spell it as the sailor always pronounced it."

"Secondly, I scent a public danger in the multiplication of editions by mere 'collectors.' Lacking nautical knowledge and experience, the 'collector' is too ready to accept bogus titles

and bogus tunes, picked up from any stray sailor—often quite uneducated, and not seldom afflicted with the bemused memory of the octogenarian. The last factor is not, I think, sufficiently recognized. Most of the sailormen now surviving from the old windjammers are necessarily in their seventies or eighties. I have lately taken down shanties from a number of them, and in the matter of accuracy I noticed a great difference between their versions of well-known shanties and the versions of the same shanties sung to me when I was a youth, and when these old men's recollections were thirty years fresher. Indeed, one old fellow's memory played him such tricks that when he sang his version of 'A hundred years ago' I immediately recognized

TYLTAL IN A QUANDARY.

Deserted by six sweethearts, all of whom he thinks he loves equally well, he does not see why he shouldn't have them all, but the jury of his ancestors finds that none of them will do.

it as a pastiche of three separate shanties, all well known to me. Even in the case of a sailor relative (seventy years old, but intellectually a young man) I notice differences between his present-day versions and those I noted down from his singing thirty years ago. The mere collector—'knowing naught of these things'—first catches his sailorman; takes down his comic mispronunciations and muddled melodies, and straightway puts them into print. Once in print an uncritical public accepts them as authentic and authoritative. And so one feels no surprise at eventually finding your correspondent alluding to 'shanadar' and 'whip jamboree' as if they were classics, tho the real fact is that the first is an ignorant mispronunciation of the world-famous 'Shenandoah' (surely too well beloved to deserve so grotesque a disguise), and the other a garbled mixture of 'Santy Anna,' and Heaven only knows how many more tunes, with a title unknown to any sailor I ever met.

"Thirdly, I am constrained to warn a trustful public against the habit of a certain type of folk-song hunter of attributing nearly every old tune to some 'mode' or other. There are no end of shanties which (melodically) fulfil certain 'modal' conditions, but are, nevertheless, in a key. 'Homeward bound,' some of the 'Stormalong' shanties, and many others are unequivocally in a major key, but because they end on the modern dominant (which is the final of the eighth mode) the folk-songer labels them eighth (I beg pardon, I mean *hypomixoludian*) mode.

"Lastly, as one whose chief business in life is concerned with the old modes, let me beg of future 'collectors' to drop these Mesopotamian terms, no matter what peace and comfort they bring to the soul. I grant that they sound dreadfully learned as compared with mere numerals; but the latter have the advantage of being accurate designations, which the pseudo-Greek labels are not."

CHANGING HEADS OF THE MORMON CHURCH

THE DEATH of the head of the Mormon Church, Joseph F. Smith, serves to remind people living afar from the seat of that social-religious body that America "still has solidly established within its borders a powerful hierarchical organization cast on Biblical and oriental lines." Thus the *Boston Transcript* characterizes the church which in

taken more than one wife recently and kept the marriage secret.

"He had been married six times and is survived by five wives, forty-three children, and ninety-one grandchildren.

"After the rioting at Carthage his mother fled with her little son and the other Mormons to Nauvoo, Ill., where she remained until Joseph was eight years old, when they were driven forth again, and the young boy drove an ox-team across the plains to Utah, where he became a herd boy, and then a missionary in 1852, when the late Brigham Young established his headquarters at Salt Lake City. Joseph Fielding Smith was only fifteen years old when he was sent to Hawaii as a missionary for the Mormon Church. Later he entered the army raised by President Young to intercept United States troops which were about to invade Utah and did active service as a scout until the so-called 'Mormon war' was ended.

"In 1890, when the Supreme Court of the United States had upheld the Edmunds-Tucker act making polygamy unlawful, he upheld the decision in public, but said that in his own case, altho contrary to law, he preferred the consequences rather than abandon his children and their mothers.

Like many other Mormons, he was subjected to prosecutions and fines. In July, 1915, the Federal officials at Denver, Col., were warned that there was a

plot concocted by bandits to seize the head of the Latter Day Saints Church and hold him in Wyoming for a ransom of \$100,000.

"Under his leadership the Mormon Church made many converts in Europe through its missionaries, and in May, 1911, the English people protested to Home Secretary Churchill against the Mormon propaganda being preached throughout Great Britain.

"As head of the church President Smith was trustee in trust of all the Mormon Church property, and, according to the creed of the church, was prophet, seer, and relator. He directed many big business enterprises and had a large private fortune.

"He was president of Brigham Young University at Provo, Utah, and of other educational institutions. He was a director of the Union Pacific Railroad and head of three other big industrial corporations. Before he was elected president of the Mormon Church in 1901 in succession to President Snow he made a tour through Europe to inspect the work being done there by the missionaries of his church. He served as a member of the Utah State legislature and of the City Council of Salt Lake City."

Compared with Brigham Young, *The Transcript* finds that he had "none of the massive ability of that really great lawgiver and statesman," nor any of the "spiritual audacity" of his uncle, the founder of the church, but—

"He was a prudent and sagacious religious leader and a good business man, and his people firmly believe that he possessed the key to eternal mysteries, as the authorized recipient of that 'continuing revelation' which is a part of every true Mormon's faith. It is needless to say that he was a polygamist and a patriarch."

SURROUNDED BY PART OF HIS FAMILY.

The late prophet of the Mormon Church is reported to have been married six times, and to be survived by five wives, forty-three children, and ninety-one grandchildren.

the past has come into conflict with legal authorities on account of some fundamental tenets of its creed. The late head of the church was an early advocate of polygamy, and after 1890 preferred to suffer prosecution rather, as he said, than abandon his children and their mothers. The group here shown gives an idea of how large were the responsibilities he had taken on himself. He is spoken of by *The Transcript* as "the last of the men in power in the Mormon Church who outdated the Exodus to Utah." Nephew of the original Joseph Smith, revered by the Mormons as a prophet, "he drove an ox-team on the long trek from the banks of the Mississippi to the Salt Lake Valley in 1846-47." He was brought up on the principles and beliefs of the Saints, and was, like his uncle, revered as "of the blood of the Prophet"; but, says *The Transcript*, "like every other Mormon, he had to make good his claim to advancement in the church or the community by humble and patient service through a long process of slow promotion." A sketch of his life printed in the *New York Times* gives details of a not uneventful career:

"Joseph Fielding Smith was born in 1838 in Carthage, Ill., where his father, Hyrum Smith, and his uncle, the original Prophet Joseph, were shot to death by a mob which stormed the jail where the two were confined shortly after they began to preach plurality of wives. Altho he was an avowed polygamist for many years, the late president of the Mormon Church changed his views latterly, and left a sick bed last October to attend the semiannual conference held in the Temple at Salt Lake City and denounced the members of the church who had

The Deseret Evening News (Salt Lake), organ of the Mormon Church, dwells upon a "unique advantage" that he possess:

"He did not have to 'come out of the world' and unlearn any of its traditions and errors; from the hour of his birth he was privileged to bask in the rays of the revealed and restored gospel, of which during the ensuing fourscore years he was to be so valiant a champion, so excellent an expounder. And the results have justified in every way the hopes that were cherished and the predictions that were made concerning his presidency. The Church has prospered amazingly, both in spiritual and temporal things. Missionary work abroad has gone forward with great vigor, and Zion at home has been strengthened. Evil has not been looked upon with the least degree of allowance, yet charity for the repentant erring has not been withheld. The spirit of union and harmony has been promoted and the body of the Church has been made a compact, potent force for righteousness and strong to resist the onslaughts of the adversary."

The successor to the dead prophet is Heber J. Grant, mentioned by *The Transcript* as the first head of the Mormon Church, who was born in Salt Lake City after the exodus:

"He represents the modern thought in Mormonism, which is to conform to the requirements of the law but to stand up in 'the meeting' for all the original tenets of the church, and at the same time to keep the whole Mormon community abreast of modern social and material progress. Mr. Grant illustrates in his own person the clever political 'split' that the Mormons always manage. The new president of the Mormon Church is a

extension than it has ever been before. But it is hard to see how it now offers that menace to the safety of American institutions of which it was at one time undoubtedly guilty."

WILHELM'S SACRILEGE AVENGED

THE KAISER'S TENDENCY to decorate churches with likenesses of himself has laid him or his effigies open to some rude treatment of late. When the British freed Jerusalem from the Turks one of the things brought to light was the fresco in the German church showing the Kaiser and his consort seated upon thrones with their laps the supporting bases of a church. In Metz, William sought a place in the sunlight of sacred history and, robed in the mantle of the Prophet Daniel, stood guard in a niche in the west front of the cathedral. An impression seems to possess some of our correspondents that William had the prophet beheaded in order to substitute his own *life* on the stone trunk, not omitting or adapting to Biblical fashions the upturned mustaches. If so the sacrilege has been avenged as Mr. Thomas M. Johnson's correspondence to the *New York Evening Sun* shows:

"The Metz Cathedral struck the key-note of the meaning of to-day's events when the French formally reclaimed the capital of the lost province of Lorraine.

"One of the stone figures on the façade is that of a monk, but the face beneath the cowl is unmistakable, with its pointed mustache, pointed nose, and sloping chin, which are those of the Kaiser himself, who ordered the head of Daniel removed and his own substituted.

"The devil a monk would be!"

"But to-day sacrilegious pride has its fall, for the Kaiser's head has been broken off, his hands are bound with chains, and upon his breast hangs a placard proclaiming: '*Sic transit gloria mundi.*'"

"The Kaiser has fled to Holland, and the rise and fall of unbounded ambition are typified by that statue."

George Wharton Edwards, in his recently published book on "Alsace-Lorraine," reports:

"One could hardly believe this to be true, but true it is—the name of banality. . . . That lovely piece of Gothic work which was sculptured in the eighteenth century by Blondel was demolished by the German administration, who gravely reported

WILLIAM AS A CRUSADER.

Decorating the German building on the Mount of Olives. Dr. John H. Finley, head of the American Red Cross Palestine Commission, furnishes this snap shot.

From "Alsace-Lorraine," Copyrighted by George Wharton Edwards.

BEHEADED BY THE METZ POPULACE.

William fancied himself as the Prophet Daniel, and so posed for many years in the porch of the Metz Cathedral, but the handwriting on the wall was veiled to him.

Democrat in politics, while the two Senators from Utah, both very able men, are influential Republicans. Whether ebbing or flowing, the political tide always turns the Mormon mill. At this moment the Church of Jesus Christ of Latter Day Saints is stronger in point of membership, wealth, and geographical

that Blondel's style did not agree with or carry out the original plans of the architects of the Cathedral. The removal of this master work of Blondel was nothing short of a crime. And one is led to believe and accept the explanation of the French architects who protested against the substitution, "That it was really because Blondel was a Frenchman."

There was a whole carnival of slaughter of Hohenzollern statues the night before General Pétain entered Metz. "William I. had toppled over from the horse of his equestrian monument, while Frederick III., who for many long years had pointed a menacing finger at France from the pedestal upon which he stood, had come down with a rope around his neck." Had William consulted the Scriptures first he might not have chosen Daniel as the prophet for himself to impersonate, seeing that thus he suggests putting Daniel's words into his own mouth as the reader of his own doom:

"And this is the writing that was inscribed: *Meuc, meuc, tekul, upharsin.*

"This is the interpretation of the thing:

"*Meuc:* God hath numbered thy kingdom and brought it to an end.

"*Tekel:* Thou art weighed in the balance and art found wanting.

"*Peres:* Thy kingdom is divided and given to the Medes and Persians."—Daniel v, 25-28.

SEEING THE "MOTE" AND FORGETTING THE "BEAM"

PHILADELPHIA AND LONDON have just been having a little tilt over their respective moral fitness for entertaining the soldier in his hours of leave. The net result, if we are to believe the accusations of both sides, would seem to indicate that the military man would better take his vacations in more innocuous thoroughfares—say, of New York or Chicago? The row was apparently started by Mr. Bok, of *The Ladies' Home Journal*, who went to England with other American editors as the guest of the British nation to inspect at close hand the conduct of the war, and he is reported to have said some harsh things about the dangers confronting the American soldier when off duty in London. The *London Saturday Review* feels that the charges might come with better grace if America herself, and particularly Mr. Bok's own home town, were above suspicion on the score of public morals. First, however, we all have to take a cut of the lash from this well-known critic of everything American:

"We can not stay to explain the paradox of materialism and idealism, side by side in the forty-eight sociopolitical laboratories which make up the United States. There is scant respect for law, as the lynching records show, and as President Wilson has lately bewailed with characteristic forthrightness. Divorce is notoriously common—witness the 'windmills' of Reno, Nev., and Sioux Falls, S. D.

"Dynamite and 'guns' continue to figure in labor strikes. The white-slave traffic still thrives under the rose; and the boss in politics and business has an ethical code peculiar to himself, as the mere mention of Tammany Hall and the Standard Oil concern will recall to any American.

"For all that, the United States is the most aggressively moral nation upon earth; and now that her sons are swarming over to Europe in millions, she is gravely concerned for the welfare of their souls and bodies. Liquor and women—*salutis enimis!* President Wilson has issued paternal admonitions, Mrs. Wilson and Dr. Anna Shaw published a letter to their Allied sisters, respecting 'the protection of our sons at a time of unequalled temptation and danger.' General Pershing was bombarded with warnings, and he sent home reassurance through shoals of correspondents. The Quartermaster-General in Washington (General Sharp) told the nation that the Commander-in-Chief in France 'is exercising every possible precaution to protect the officers and men of his command.'

"Now, there is nothing to laugh at in all this, however strange it may seem to our cynical adolescence. America is very young. . . .

"Here butts in Mr. Edward Bok, of *The Ladies' Home Journal*.

Mr. Bok is aghast at 'the apparently uncontrolled solicitation of our boys by women on the London streets, and in hotel lobbies, lounges, and restaurants.' It was the most disgraceful sight Mr. Bok had ever seen; and 'scores of amateur girls' lent a heinous touch to young America's impending damnation. Such a thing was inconceivable, Mr. Bok maintained, in the home cities, where all the 'red-light districts' were wiped out, and the women arrested or put to honest work.

"Protective zones were fixt around the American camps. 'But all this is of small avail if we send our soldiers, clean-blooded and strong-limbed, over here only to be poisoned and wrecked in the London streets . . . (and) morally crucified. It is unfair to them; it is unfair to the great cause for which we are fighting—it is certainly unfair to the American soldier.' Mr. Bok was grieved to say all this (and much more) 'while I am here as a guest of the British Government—it seems, in a way, discourteous.'

"There was on our part no 'official' reply, because we are a silent and polite people, with no gust for acrimonious dispute with our invited guests. As a matter of fact, London is by far the most decent of all great cities, as every traveler and man of the world is aware."

If this mere recital does not carry its own refutation of the charges, *The Saturday Review* turns to American sources as Mr. Bok's best answerers:

"A colleague of his own, Mr. W. C. Edgar, of the *Minneapolis Bellman*, dismissed the Bok sermon as 'hogwash,' *tout court*. 'I have been visiting London at intervals,' the Westerner pursues, 'for nearly thirty years, and in all my experience I have never found its street life so free of objectionable features of the kind described by Mr. Bok.' No American soldier needed a guardian after dark in London. And with that Mr. Edgar carried the war into the City of Brotherly Love: 'I was in Philadelphia, Mr. Bok's own delightful city, in May last.' It was then under martial law. 'Candor compels me to say that . . . the streets were more filled with courtezans, covertly, if not openly, plying their trade, than any of the streets of London I have seen.'

"It would be unkind to tell the whole truth about the City of Brotherly Love, which Mr. Bok contrasts so favorably with the British metropolis. But he can not be unaware of its 'government by murder,' and the recent revelations which rivaled the most lurid of Tammany régimes in New York, and shocked the whole nation besides. We prefer to let a great American newspaper, like *The Sun*, tell the story in brief:

"Philadelphia, long a seething caldron of factional politics, is now facing one of the most scandalous and astounding upheavals in her history as the result of the murder of a police detective in the 'Bloody Ward' on primary-election day.

"The Mayor, Thomas B. Smith, Police-Lieut. D. Bennett, and Isaac Deutsch, a political leader, are awaiting a hearing before the Criminal Division of the Municipal Court. Six gunmen, imported from New York, as tools in a gigantic plot to spread bloodshed and riot, to intimidate voters to vote illegally, and thereby swing the election for Deutsch, have thus far been arrested. The net is out for twenty-five other gunmen who were imported from New York and Newark; also for the thug leaders who marshaled them, and finally for the politicians and police officials who, it is said, connived to protect them, and even aided them in escaping from the city after the crime.'

"Now as to vice. Here Philadelphia's accuser is Mr. Raymond B. Fosdick, the guardian of America's camp morals. Mr. Fosdick's report upon conditions in the City of Brotherly Love was so appalling that Secretary Daniels took drastic action owing to the flagrancy of 'the social evil and illegal liquor traffic.' But listen to the sweeping *peccari* of the Philadelphia *Inquirer*, and you will agree that there is no more to be said: 'Philadelphia has multiplied its den of iniquity. Its streets are crowded with women of the underworld; liquor is being freely supplied behind the red lights, and by the 'bootleg' process on the highways.

"Philadelphia is wide open. Gambling is prevalent, viciousness is running wild. Thieves and highwaymen stalk abroad . . . robberies are so frequent that they no longer provoke comment. Philadelphia has arrived at the stage where protection is afforded, not to the public—not to the troopers, the marines, and the jacks—but to the owners and managers of the vice-resorts. . . . Lawless police officials may pad their pockets by extracting greenbacks from criminals; that is only a feature. The system looks higher; it demands the support of the underworld for its candidates at the polls—and gets it!

"Mark you, this is not our voice, but Philadelphia's own!"

"At study, at work or at fun
I go like a Yank at a Hun.
On Campbell's Soup diet I never stay quiet
But keep every job on the run."

Second Robert Hughes of Springfield, Mass., and members of Company K, 104th U. S. Infantry, known as the first American regiment to be decorated for bravery in any foreign campaign. This photograph was taken directly back of the front in France.

On a fighting basis

Look at these boys of yours. Yes yours and ours—all-America's boys. Don't they look like healthy, sturdy, high-grade Americans fit to meet all comers? Don't they look well fed? They are. They belong to the best-fed army in the world.

"Only the best for our heroes!" is America's motto. There is nothing better for them than

Campbell's Tomato Soup

And there are mighty few things they like better. You'd guess that from the picture.

And it is just as good, just as invigorating and helpful for all active Americans at home.

It combines the natural tonic and appetizing qualities of the fresh ripe tomato with other choice materials both nourishing and tempting.

It is especially valuable to strengthen digestion and aid the body processes which create energy and maintain a vigorous con-

dition. Served as a Cream of Tomato it is even more inviting and nutritious.

It comes to you perfectly cooked, seasoned, hermetically sealed. It is condensed by the scientific Campbell method so that all the freshness and flavor of nature are retained. There is no waste about it, no cooking cost for you, no labor. And the contents of every can gives you two cans of rich soup—a sustaining, body-building food.

Order it from your grocer by the dozen or more. This is the handy and economical way.

EDUCATION - IN - AMERICANISM

*Lessons in Patriotism prepared especially for THE LITERARY DIGEST by
the UNITED STATES BUREAU OF EDUCATION*

THE GREEKS IN AMERICA

THE FOUR HUNDRED THOUSAND GREEKS that constitute the Greek population of the United States, coming from Greece and Turkey, for the most part settled here within the last twenty years. In the eighties began the tide of immigration, tho there had been a few Greek merchants in this country as early as 1822. The Greeks who came here in the eighties were almost exclusively from the provinces and mountain districts, and until 1900 most Greek immigrants were laborers. But since that year immigration has included almost all classes of the Greek nation, who have been drawn hither by the success of their fellows in the United States, by the inducements of steamship-lines and their agents, and by the spirit of the colonizer. The tide of immigration rose steadily until 1912, before the outbreak of the first Balkan war, when about forty thousand returned to their country. From the end of that war until 1915, however, thousands of Greeks sailed back to the United States, but the Great War effectually decreased all immigration. Greeks can be found all over the country, but the largest centers of our Greek population are Chicago, New York, Lowell, Pittsburg, San Francisco, and Boston.

THEIR AMERICANISM—After the United States entered the war those Greeks who had not been able to get back to their country were advised by Premier Venizelos to serve with our Army. Before the treaty between this country and Greece concerning military service was signed thousands of Greeks were in actual service under the Stars and Stripes and many had already given their lives for their new country. Furthermore, the Greeks in the United States have also subscribed liberally to our Liberty Loans.

OCCUPATIONS PREFERRED BY THE GREEKS—Altho the Greeks are naturally merchants and traders, they are also engaged in agricultural and professional pursuits. The commercial lines in which they are most numerous are the hotel and restaurant business, as waiters, managers, and proprietors; the wholesale and the retail candy business and grocery and fruit business, and, notably, in the florist business as well as the shoe-shining parlors. As born traders they keep watchful eyes on the mechanism of any business in which they may be employed so as to master it completely, with the result that in a comparatively short while a dish-washer in a restaurant frequently becomes proprietor or manager of a little independent eating-place, which eventually he develops into a large restaurant or hotel. Not a few Greeks have ventured into the moving-picture business and own large producing companies. In almost every city will be found cafés owned or conducted by Greeks and chiefly patronized by their countrymen. As farmers they are mostly to be found in Florida and in the State of Washington. There are several large Greek importing and exporting firms in New York and in Chicago, which latter city contains the highest number of Greeks. Of the laboring classes several thousand are employed as workmen on the railroads and in factories.

GREEK SOCIETIES—That the Greeks very rarely become public charges may be stated on the authority of a police official in one of the largest cities of the country. The reason is that they have many fraternal and benevolent organizations in whatever section of the country they may be settled whose purpose is social, benevolent, and cultural. Usually these societies are formed by a group of Greeks coming from a particular locality in the homeland, such as men from Athens, Sparta, Samos, etc. New York City alone has over eighty Greek societies, and membership in about fifty of them is open only to those coming from the same home town or district. One of the large organizations that includes members from all parts of Greece is the

Panhellenic Union in America, the constitution of which states its objects to be as follows:

(a) To cultivate among its members and through them among all Greeks residing in America the spirit of mutual aid.

(b) To instil veneration and affection for the laws and institutions of their adopted country, to cultivate friendly relations between Greeks and American citizens, and to assist the former in obtaining American citizenship.

(c) To encourage the study of the English and Greek language, and to develop and propagate educational and moral doctrines.

(d) To give pecuniary and moral aid to members and those dependent upon them and to care for the sick and disabled members from the voluntary contributions of members and from other sources, and, as far as its means will permit, to extend its protection to Greek immigrants and laborers.

Another society whose purpose is to link Greeks in this country closer to their American fellows is the American-Hellenic Society, the president of which is Dr. Nicholas Murray Butler, and the vice-presidents Dr. Charles W. Eliot and Dr. Jacob G. Schurman. Both Greeks and Americans are on the General Council and on the Executive Committee of the American-Hellenic Society, and many Americans are becoming members of it.

GREEK CHURCHES AND SCHOOLS—In almost every city where there are a few hundred Greeks there is an organization founded to establish and support a church and a little parochial school for the purpose of religious instruction. Many Greeks send their children to the American public school, for which they have a profound admiration, but also send their children to privately supported schools in order to have them taught Greek. The Greek Orthodox Church is a state-recognized institution that resembles somewhat the Anglican Church in its constitution. Recently the highest authority in the Church, the Metropolitan of Athens, visited the United States and made a study of his countrymen for the purpose of solidifying the organization of the approximately one hundred Greek Orthodox churches here.

ANCIENT AND MODERN GREEK—Modern Greek is derived directly from ancient Greek, and the difference that lies between them consists in a greater flexibility, in novelty of expression, and, as is the case with other European languages, a variety in the use of modern words invented for present-day use.

NATURALIZATION—The Greeks of better education are naturally more prompt to seek naturalization because they understand more readily the ideals of American government. Nevertheless, through the medium of the various fraternal societies a campaign of education in civic life is going on continually. Moreover, the Greeks have some twenty local newspapers, weeklies and monthlies, in various sections of the country while from New York two large daily newspapers are published that have a circulation wherever there are Greeks.

THE ANCIENT GREEKS—As we consider the share taken by modern Greeks in our national life and institutions it is inspiring to recall the fame and works of their ancestors, whose influence has permeated through the centuries the thought and achievement of the world in all branches of intellectual effort. The mere suggestion brings to mind Socrates, Plato, and Aristotle, and Pythagoras in philosophy; Solon, the lawgiver; Alexander, the general, and Alcibiades, the politician; Herodotus, the "father of history," and Thucydides, the "founder of philosophic history"; Demosthenes, held to be the greatest orator not only of Greece but of all history; Archimedes, mathematician and discoverer of the equilibrium of the lever; Zeuxis and Apelles, the painters; Praxiteles and Phidias, the sculptors; Aristophanes, supreme writer of comedies; the key-stone of tragedy ancient and modern, formed by Aeschylus, Euripides, and Sophocles, and Homer, the epic poet of the world, whose song rings with magic unrivaled through the ages.

INSTEAD

Instead of brass for a stencil—Zinc. Instead of tin for the tip of a shoe lace—Zinc. Instead of copper, or brass, or steel, or tin, or aluminum—Zinc, for drinking cups, camera cases, alarm clocks, meters, buttons, containers for toilet preparations, pencil tops, bottle caps and hundreds of other articles.

The New Jersey Zinc Company, anticipating the necessity of conserving metals needed for war purposes, has developed many new uses for metallic zinc in its own laboratories. These laboratories, completely equipped and operated under the direction of highly-skilled chemists, are at the service of all manufacturers of metal products who have been deprived of other metals by the demands of war.

CURRENT POETRY

ONE day of all the days of our lives we shall never forget—November 11, 1918—the day when the mad horror of war was lifted from the shoulders of an aching world. Not a few of us looked back that day to the German Navy's toast to "Der Tag" and felt the happy contrast. So did many a poet, and here are the thoughts of Richard Le Gallienne from the *New York Evening Sun*:

"THE DAY!"

New York, November 11, 1918

BY RICHARD LE GALLIENNE

"The Day!"

O fatal and fantastic toast
Your idle princes of the sea
Drank to each other, making silent boast,
With lifted glass, toward that immortal coast
Whose names are one—England and Liberty
The dream that Spain,
And even Napoleon had dreamed in vain.

"The Day!"

When France should die in very deed,
France whose grave soul is ever the world's
need—
Strange flower that we call France!
Flower that in a sword so swiftly turns,
Changing disaster into a dance,
And to dim lands that gropingly ascend
Brings wisdom like a friend,
Whose altar burns
With such clear flame of courage to the skies
That even her foes
Marvel that men so gay can be so wise,
And go to battle as lovers to a rose.

"The Day!"

When this Republic, born to make men free,
With all its golden youth but in its veins,
Of antique Force an easy vassal should be,
And wear the chains
Of kings once more that for three hundred years
She mocked across the sea.

"The Day!"

O Kaiser, can this be "the day"
You dreamed of? Did you mean
This day? November the eleventh day
Of the year nineteen hundred and eighteen?

In *The Venango Daily Herald*, of Franklin, Pa., Mr. W. P. F. Ferguson gives us another picture:

THE TRUE MEMORIAL

By W. P. F. FERGUSON

The trumpets peal their clangor and the drum
Rolls a mad prairie through the city's street;
The Flag streams bravely and the countless feet
Rear like a sea, as thronging thousands come
Triumphant. Far they lie, forever dumb,
Those brave young lives for noble years—
Lost to the Future, never more to greet.
The morns with gladness, seek ye now if some
Star-high memorial our hands may rear
To those who won but never saw this day,
To those whose blood cements proud
Triumph's arch
But pass not through? Go, rid the land of fear,
Base pride, foul dealing; every despot slay!
Thus make the years, for them, one glory
march!

The *New York Evening Sun* gives us a vivid war-picture, direct from the front, that does not incline us to any overtender thoughts of the defeated Germans.

ON THE ROAD TO THIEPVAL

By E. J. WHEELER

On the road to Thiepval there is much to see:
Shell-holes and dugouts and many a tortured tree
Furrows driven deep and long by the shrapnel of war
And hamlets ground to dust beneath the hammer-
strokes of Thor.

On the road to Thiepval there is much to learn
Of Kultur that has passed this way, never to
return;

Of *Deutschum* and "*Wesen Deutsch*," Goll and
Schrecklichkeit—

The cursed fruitage of them all lies plainly here
in sight.

On the road to Thiepval there is naught to hear
(Of song-birds or house-dogs or merry village
cheer,

For all the homes the Hun has left in this once
radiant land

Are narrow little plots of ground where wooden
crosses stand.

On the road to Thiepval the stars are shining
down,

The steadfast planets keep their course above
each ruined town.

And God's on high and Justice reigns, and Thiepval
road shall be

A hallowed road where France hurled back the
hordes of tyranny.

Out of the welter of war comes one un-
doubted blessing, the welding of three great
nations into a firm and lasting friendship,
more binding than any alliance. In *The
Outlook* we have the tribute of an Ameri-
can soldier to France and England, who
bore the "burden and heat of the day."

AMERICA TO FRANCE AND GREAT BRITAIN

By HAROLD TROWBRIDGE PULSFER
Master Signal Electrician, Signal Corps, U. S. N. A.

France! Britain! to your stalwart sons
We owe our hearthstones undented,
Our living cities—to your guns
The laughter of each little child.

France! Britain! in the deadly pall
That hangs athwart your eastern skies,
We see the measure of our call,
The need of holy sacrifice.

France! Britain! in your field we stand
As never nation stood before—
Henceforth the honor of our land
Speaks only where our cannons roar.

In gilded word and burnished phrase
There is no balm for blood that flows
From those who through infernal days
Fight liberty's eternal foes.

Before the judgment-seat of God
Ten thousand hopes will not outweigh
One single square of bloody sod
Held from the Hun in red array.

Late to the battle-field we come
Unready, tortured with the shame
Of seeing brothers grim and dumb
Dying—where we should feel the flame.

France! Britain! when the stars look down
Upon the last great battle-place,
Pray God we may have won our crown—
The right to meet you face to face!

What will the boys do when they come
home? How many will be content to go
back to the desk? Here's a woman's view
of it from England's great humorous
weekly, *Punch*:

THE CALL

By C. FOX SMITH

There's an office back in London, and the dusty
sunlight falls

With its swarms of dancing motes across the
floor.

On the piles of books and papers and the drab
distempered walls

And the bowlers on their pegs behind the door.

There's an office stool in London where a fellow
used to sit.

(But the chap that used to sit there's overseas.)

There's a job they're keeping open till that fellow's
done his bit.

And the one that job is waiting for is—Me!

BUILT BY ABERTHAW

4 Passenger Coupe

This Reo Is a Joy to the Owner-Driver And Withal a Most Luxurious Equipage

R

HAVE YOU EVER RIDDEN in that four-passenger Reo Roadster—the model we have been making the past three years?

IF YOU HAVE you will agree that the seating arrangement was just about ideal for that type of car.

THAT MODEL was the result of many months of study—and many costly experiments in body building.

THE PROBLEM WAS to seat all four passengers well within the wheel-base.

THE IDEAL PLAN would be to seat the passengers directly over the center line between the two axles. That is impossible.

THE REO PLAN of advancing the driver's seat several inches in front of the main passenger seat; then making the emergency seat—the fourth—so it folds out of the way to permit entrance and exit of passengers, proved very nearly ideal.

WELL, THIS NEW REO COUPE is built on that same plan—we could find no way to improve on that arrangement.

JUDGING BY THE TREMENDOUS popularity of that model we felt we could not do better than to follow that general design in building this enclosed model.

IT IS ROOMIER even than was that popular roadster—two 200-pound adults find liberal room in the main seat.

ONE NOTICEABLE CHANGE in this model is facing the emergency seat the other way.

THE DRIVER'S SEAT is a joy—with its arm freedom and ample leg room. The form of the seat braces you for any emergency and makes driving not a task, but a recreation.

PERHAPS WE DID devote special attention to this feature—for the driver of such a car is generally also the owner.

ASK YOUR REO DEALER to show you this new Coupe—and to explain its many fine points. No expense has been spared to make this a finished and a well-nigh perfect four-passenger equipage.

FOR EXAMPLE: one detail small in itself but worth its weight in gold to you any night when driving in rain or sleet is that window wiper.

IT TAKES THE PLACE of the extra glass shield—always noisy—always smudged—that failed to do just what it was intended to do.

DRIVE THIS REO yourself, then you will know.

BY THE WAY, this is the ideal coupe for milady—Reo simplicity of control and Reo dependability make it that.

U. S. ROYAL cord tires on all wheels.

PRICE—SAME as the Sedan, \$2175.00.

The Gold Star

Passenger Sedan

In Factory Parlance This New Sedan Is The Finest "Job" Reo Ever Turned Out

TO SAY that this latest Reo is built and finished regardless of cost is to use a hackneyed phrase, but the only one that adequately expresses the fact.

REO BODY WORK has long been famous for its stability and hence for its durability.

IN THIS LATEST REO we have gone just a little bit farther than ever before in perfection of finish and refinements of details.

THE TIME HAS COME when the buyer of a moderate priced car need not deny himself any luxury of finish—need not apologize, even mentally, for any slightest detail.

FOR EXAMPLE: automatic window lifters, which until recently were found only in the most expensive cars, are now a standard in Reo enclosed models.

THE "FRAMELESS GLASS" with the felt covered rubber "anti-rattlers" adds that great luxury of a noiseless body—appreciated by the fastidious buyer.

FRENCH VELOUR upholstery in the rear compartment. Leather in front seats—in keeping with the fashion of the day for Sedans.

SILK CURTAINS harmonize in design and in texture with the rest.

TO MENTION the solid silver handles on window lifters; the same quality and design of lamp sockets; door handles, etc., is only to say that every last detail is in keeping with the whole.

WE ARE PROUD of this piece of Reo bodycraft. It is, as it should be—being our latest—our best.

MOUNTED ON springs of right design and Reo quality and equipped with Royal cord tires, this Reo is the last word in luxurious riding.

WE OFFER THIS SEDAN to the critical Reo clientele without a single reservation mental or otherwise.

WE CAUTION YOU however on one point—the number obtainable is most limited.

ONLY 25 PER CENT of the number our dealers asked for and we had planned to build—reduced as you know by government order to make way for war needs.

IT IS TOO LATE NOW to attempt to make any more—for this type of body cannot be hurried through, even were that the Reo way, which it isn't.

OF COURSE WE WILL make more—many times more—just as soon as we can get back to normal conditions.

BUT THAT WON'T HELP the family that needs a luxurious enclosed Sedan for the coming winter.

THERE WILL NOT BE ENOUGH to supply even a reasonable fraction of that demand—those who desire a cozy Sedan and who also insist on Reo quality and low upkeep.

YOU WILL APPRECIATE this when you hear the price—\$2175.00 plus freight and special Federal Tax.

SO DON'T DELAY. Place your order at once.

TODAY won't be a minute too soon.

Card of Values

"I'm for the useful and practical gift this year. I do not know of anything I'd rather have than some of the beautiful silverware like yours."

1847 Rogers Bros. Silverplate has the appeal of beauty that makes it dear to the woman's heart, and is a sensible purchase now when the expenditure of every dollar is considered.

It is a practical economy because it will give both pleasure and service for a lifetime.

1847 Rogers Bros. Silverplate is made in but one quality—the best. Your dealer will show a variety of patterns in which Tea and Coffee Sets, etc., can be had to match the spoons and forks.

*Teaspoons, \$3.00 a set of six.
Other pieces in proportion.
Send for catalogue No. Y-51.*

1847 ROGERS BROS.
SILVERWARE

1847 — Seventy Year Plate — 1917

And it may be black ingratitude, but oh, good Lord, I know
I could never stick the office life again,
With the coats and cuffs and collars and the long hours crawling slow
And the quick lunch and the same old morning train:
I have looked on Life and Death and seen the naked soul of man,
And the heart of things is other than it seemed,
And the world is somehow larger than the good old office plan,
And the ways of earth are wider than I dreamed.

There's a chap in the Canadians—a clinking good chap, too—
And he hails from back o' nowhere in B. C.,
And he says it's sure some country, and I wonder if it's true,
And I rather fancy that's the place for me,
There's a trail I mean to follow and a camp I mean to share
Out beyond the survey, up in Cassiar,
For there's something awakened in me that I never knew was there,
And they'll have to find some other chap to fill that vacant chair
When the boys come marching homeward from the war.

Sir Owen Seaman the editor of *Punch*, while he is a master of humorous verse, often has a serious message for us. Here is one:

FOR THE APOSTLES OF "NO HUMILIATION"

(Certain people have proclaimed their opinion that the German nation ought not to be humiliated.)

BY SIR OWEN SEAMAN

Rumors arrive as thick as swarming bees;
Our evening rags announce with raucous clamor
The latest wire, the semifinal wheeze
Transmitted by the fertile Rotterdammer,
Giving a local version
Of William Two's spontaneous dispersion.

They leave me cold. I care not how he pays
The heavy debt his deeds of wanton fury owe—
Whether he puts his orb to bed, or stays
On exhibition like an antique curio;
The reckoning we charge
Has to be settled by the Hun at large.

Here and elsewhere his advocates impute
Innocence to the *Boche*—a gentle creature,
Too prime perhaps to lick the tyrant's boot,
But otherwise without a vicious feature;
They'd have our wrath abated;
Poor child, "he must not be humiliated."

Why not? Against his army's bestial crimes
He never lifted one protesting finger;
The wrongs of Belgium drew his jocund rimes;
Over the Hymn of Hate he loved to linger,
Pressing the *forte* pedal,
And wore—for luck—the *Lusitania* medal.

He took a holiday for children slain,
And butchered women set his flags afutter;
Our drowning anguish served for light refrain
To berry patriots homing down the gutter;
On prisoners he spat,
The helpless ones, and thanked his *Gott* for that.

Had he but fought as decent nations fight,
Clean-handed, then we must have spared his honor;
But now, if Germany goes down in night,
Tis he, not we, that puts that shame upon her,
Shame not of mere defeat,
But such that never our hands again can meet.

Why should his pride of race be spared a fall?
Let him go humble all his days for sentence,
Why pity him as just a Kaiser's thrall,
This beast at heart!—the fear may fake repentance?
For me, when all is said,
I save my pity for our murdered dead.

Don't Cheat Your Boy on Christmas Morning

I wonder if you fathers and mothers wouldn't be surprised if you knew what your boy really thinks when you give him toys that are make-shifts—that aren't genuine—that soon have to be cast aside?

I've never got over being a boy myself. I know the importance to a boy of having things *genuine*. I know how disappointed he feels when he realizes that his toy isn't true; that the steel work in his toy skyscraper isn't like the real building he saw; that his toy motor won't work. He's hurt; he feels that he's been cheated.

I have studied and worked as hard to make Erector mechanically true as other men do to make a bridge strong or a building architecturally correct.

Your boy will build steel bridges, skyscrapers, battleships, machinery with Erector and never lose interest in them, because they're true! They're exactly like the real thing. Erector girders have lapped, interlocking edges (a patented, exclusive feature all my own) so your boy can build with square, four-sided columns—just like those in actual skyscrapers.

If you were to talk to your boy's playmates, you would find that most of them have Erector—and all of them know about it. They will tell you that Erector is the construction toy with every piece stamped accurately out of steel, scientifically made and correct in design and proportion; that it builds the most, biggest, and best models; that it has big reinforced steel wheels, grooved and hubbed for every engineering purpose; that most sets have the power-

GILBERT ERECTOR

"THE TOY LIKE STRUCTURAL STEEL"

Erector isn't just a plaything for a day or a week. It will keep him happy, busy and contented for many months.

Every toy store—and every department or hardware store which handles toys—sells Erector. It's the best-known American toy. Ask your dealer to show you the famous Set No. 4, the favorite of all the boys. It sells for \$5. Other Erector sets, \$1 to \$25. Write for Catalog illustrating and describing the complete line of Gilbert toys.

If your Boy already has a set of Erector, give him one of these other

GILBERT TOYS

GILBERT Electrical Sets

The most fascinating playthings for teaching, demonstrating and applying secrets of electricity. Your boy learns and plays at the same time. He can make a motor that will lift his own weight. Wire in electric door bells, operate toys and models with electricity—in short, do a hundred "stunts" that are being done by grown-up electrical engineers.

GILBERT Mysto Magic

With one of these Mysto Magic Sets, any boy can do wonderful tricks, just like real magicians; give shows at parties, churches, halls, and make money. These Sets contain apparatus for some of the most famous tricks of great magicians. Any boy can do them with a little practice and the aid of our fine manual of Magic Knowledge.

GILBERT Nurse's Outfit

Includes cap, apron, arm-band, scissors, absorbent cotton, adhesive tape, splints—everything for acting the real Red Cross Angel of Mercy. "First Aid" Primer in child language shows just how to do everything.

GILBERT Machine Gun

Has all the features of the real machine guns—detachable magazine, clip for 12 cartridges, air-cooled chamber, firing crank, automatic traverse, elevation, elevating crank, full circle swivel, etc. Works fast as lightning—10 shots per second. Gun is mounted on heavy tripod. Manual, free with every Gun, contains full instructions for organizing Machine Gun Company.

GILBERT Chemistry Outfit

Contains laboratory equipment and everything necessary for making interesting chemical experiments—electroplating, tests for metals, making soap, ammonia, ink, etc. With every outfit is a big illustrated manual which tells clearly how to conduct all experiments.

The Gift for Everybody

FOR 20 years the Conklin Pen has been the gift for sensible people. Make it *your* gift this year.

The Conklin's little *Crescent-Filler*, the pioneer of self-filling devices, is still the standard of them all. Cleanly, quick and positive in action, it fills the Conklin in 4 seconds. And just pilot a Conklin across the paper. Note the superb smoothness of the point. That's the "acid test."

Sold in handsome gift boxes, by leading stationers, jewelers, druggists and department stores everywhere. Exchangeable after Christmas if point is not perfectly suited to the handwriting.

REVIEWS OF NEW BOOKS

THE YEAR'S BEST HOLIDAY BOOKS

TWENTY-FIVE EACH FOR ADULTS AND CHILDREN

I

THE TWENTY-FIVE FOR ADULTS

Adams, Henry. The Education of. An Autobiography. With introduction by Henry Cabot Lodge. Boston: Houghton Mifflin Company. \$5 net.

A rare book is this, but one bound to invigorate the thoughtful and to irritate the smug. It analyzes our whole national life and embraces a consideration of the cultural forces of the western world. Henry Adams, great-grandson of the second President and inheritor of the Adams traditions, struggled, in his education, against forces of the past which tended to keep him of the eighteenth or seventeenth century rather than of the nineteenth. His observations are, therefore, torn between opposing calls inside of him and outside. In the course of this analysis, which is governed by the exceptional opportunities Henry Adams had to witness American and European history in the making, we are given incisive, ironical criticism, in compact, yet crisp, utterances. They illustrate the workings of a comprehensive mind, self-centered that it may be wide in its decisions. Adams was a profound thinker, and his autobiography will make slow, careful reading profitable.

Croy, Homer. How Motion-Pictures Are Made. New York: Harper & Brothers. \$4 net.

Interest in moving pictures is so widespread that this descriptive manual, viewing the fast-developing science from every angle—old and new—will be eagerly read. For there is a fascination in following the development of film-work, especially film drama, with all its expensive and intricate detail. Mr. Croy leaves no aspect of the subject untouched. He delves into the history of its beginning; he traces its evolution and gradual introduction to the public, and then minutely explains the manner of conducting rehearsals, of preparing scenarios, of "faking" hair-raising scenes. He points to the usefulness of the movie in science, on the battle-field, and at the bottom of the ocean. His chapter on the future of the motion-picture emphasizes its educational value. The book is copiously illustrated with pictures showing the method and care manifest in celluloid art.

Davis, Arthur N. The Kaiser as I Know Him. New York: Harper & Brothers. \$2 net.

All personalia which can throw light on William Hohenzollern must be interesting. Dr. Davis was the Kaiser's dentist until late in the war. Papers have facetiously blamed the doctor for not hitting hard on the nerves of every one of the Kaiser's teeth, especially as he remained the Court dentist for some months after America's entrance into the war. He does not fully satisfy us that it was necessary for him to hold his job so long and to listen to the Kaiser's diatribes against the world in general and America in particular. He gives us plenty of Court gossip and reinforces the popular idea of the ex-Crown Prince. There is much that casts light on Germany's internal condition and supports our conviction as to the psychology of the imperial bully.

PYRENE FIGHTS ON to make America Safe from the Great Enemy—FIRE!

FROM the beginning of the War, we have supplied our Allies with Pyrene Extinguishers for motor trucks, ambulances, war vessels, airplanes, cantonments, munition plants and all military property subject to fire.

After America entered the War, the military need for fire protection increased until our entire output was required.

Over 1,000,000 Pyrene Extinguishers are in the Service—and by fighting fires at the front have done their share to achieve the great result.

With the ending of the War, we take up with renewed energy the fight at home. Fire protection is absolutely essential to safeguard the great industrial establishments of this country, on which our future prosperity depends.

Your home and priceless treasures—your automobile, your motor boat, your garage should be made safe against the great enemy of destruction. The very lives of your children may depend on a Pyrene Fire Extinguisher.

Pyrene Extinguishers require no attention except to refill with Pyrene Liquid after having been used.

Buy at any garage, hardware or electrical store.

Miller "Fix-All"

Mends Rubber Goods Quickly

Every motorist should carry the Miller "Fix-All" in his tool kit and every home should have it, too.

Tires, tubes, boots, shoes, hose, water bottles, rubber gloves, etc., can all be easily and quickly mended with this outfit. The variety of uses is amazing. This wizard will stop the leak in anything that's rubber.

Home Repair Guide Free

Send your address for our valuable new 36-page book "Guide to More Tire Mileage," containing many illustrations that show you how to avoid tire troubles and get more miles from your tires and tubes without extra help. No obligation. Send while these books last.

Miller Uniform Cord Tire

Miller Accessories are produced by the makers of the Miller Uniform Tires—the talk of the tire world because of their Uniform Mileage and their cog-like tread that is *Geared-to-the-Road*. Uniform Mileage is solely a Miller achievement accomplished by Uniform hand-work that makes all Millers wear alike under like

conditions. The result is a breed of long-distance cord tires—not occasionally some that give great mileage—but 99 in 100.

Miller Cords are the big buoyant tires whose elastic action absorbs the road shocks; they wear longer and ride easier than any other type of tire built, including our own Uniform Fabric Tires. If you can't get them now, be sure to when you can.

The Miller Rubber Company
Dept. A-80 Akron, Ohio

When having Tires and Tubes repaired by others request the use of Miller Repair Materials and you are sure of a longer-lasting job. (208)

Davis, William Stearns, Ph.D., in collaboration with Anderson, William, Ph.D., and Tyler, Mason W., Ph.D. *The Roots of the War. A Non-technical History of Europe, 1870-1914.* New York: The Century Company. Pp. 357. \$1.50 net. Postage, 12 cents.

The three professors in the University of Minnesota who wrote this book quote President Wilson as saying the roots of this war "run deep into all the obscure soils of history." It was to discover some of these roots and their fateful growths that they wrote the book. They found "three dominant factors in the international relations of the last forty years that enabled the Pan-German conspirators to bring on the great calamity in the precise form in which it finally inflicted itself upon the world": Alsace-Lorraine, commercial rivalry, and the overweening jealousy by the Pan-Germans of the British colonial empire, and the eternal Balkan question. How the three factors played simultaneously into the hands of influential German classes; how Bismarck focused them to carry out his designs; how the Kaiser used them to work his will are set forth with fine lucidity in chapters comprehensive in scope and clear in their analyses. Dr. Davis holds Treitschke mainly responsible for the German idea of outreaching domination, and quotes freely from his own writing in condemnation of him.

Edwards, George Wharton. *Alsace-Lorraine.* Described and pictured. Philadelphia: Penn Publishing Company. \$6 net.

This handsome volume, rich in letterpress, abundant in illustration, and graceful in narrative, should prove a welcome gift just at the moment when France is vindicated and Alsace-Lorraine is freed from the German yoke. Mr. Edwards mingles history, anecdote, and travel in an agreeable fashion; he is a splendidly observant tourist. His infusion of personal contact with the people lends warmth to his descriptions. In addition, Mr. Edwards's crayon and brush are as colorful as his pen. He begins his book thus: "The one dominating purpose of the people . . . is their reunion with the mother-country, France. A temporary or final autonomy for the Lost Provinces . . . is out of the question. The people do not want it." Then follow detailed accounts of places, manners, and customs.

Faris, John T. *The Romance of Old Philadelphia.* Philadelphia: J. B. Lippincott Company. \$1.50 net.

Granting the wide range of Mr. Faris's sources—which represent extended reading—his complete reliance on sources imposes limitations on the book as to concentrated charm. We get the elements out of which Philadelphia was evolved; we do not always get Philadelphia. There is a deal of romance in home-building, the beginnings of city government, rudimentary business, and social life. Through manners and customs a city gets its features. Fascinating are the illustrations in a rich-looking volume. If Mr. Faris has not done justice to the social side of Philadelphia, to the lighter phase of President Washington's residence in the city, to the theatrical activity of the time—for it might almost be claimed for Philadelphia that it was the cradle of the American theater—he has given us in one way a source-book. The book's format is compelling.

Franck, Lena M. *Working My Way Around the World.* Rewritten from Harry A. Franck's "Vagabond Journeys Around the World." New York: The Century Company. \$1.35.

From the time when Harry A. Franck left college, and without money struck

Science has taken the guesswork out of repairing leaky radiators

WHY doesn't it occur to some car owners that "guesswork" is ancient history around a motor car?

They ought to know that soldering a leak is a risky job. The high heat of the soldering torch weakens the radiator. If the leaks are hard to get at they are never repaired right. And after laying up the car for three or four days—and paying a bill anywhere up to \$25—what guarantee is there that the radiator won't leak again—soon?

In addition to the economy of it—an "X" Liquid repair is quicker, and more scientific than soldering. It gets to the places that solder can't reach. Whether there is one leak or a thousand—whether these leaks are in the radiator, pump, connections, gaskets, water jacket, etc.—"X" Liquid makes a permanent repair in 10 minutes.

And if "X" Liquid is left in the water it positively prevents future leaks everywhere in the cooling system.

Improves Engine Performance—Reduces Upkeep Costs

The same "X" Liquid left in the water after the leaks are repaired—will loosen the Rust and Scale already formed. "X" absorbs all the free oxygen in the water and prevents rust from forming. It also prevents the lime and magnesia in the water from depositing scale on the metal walls.

In this way, "X" keeps the narrow water spaces free and clean. It eliminates considerable over-heating. It helps the motor work much better. It reduces the consumption of oil. And helps get more mileage from gasoline.

Use "X" Liquid before using an anti-freeze. The "X" seals all the small holes that are present in your cooling system—and prevents the anti-freeze from leaking away. This saves money and protects your engine. "X" Liquid is the only repair product that works in alcohol or other reliable anti-freeze solutions.

Not a Radiator Cement

Don't confuse "X" Liquid with radiator cements, flaxseed meals and other "dopes"—many of which clog the cooling system and ruin it. "X" is a scientific process for improving the cooling system.

Large Size, \$1.50

LEAKPROOF·RUSTPROOF·SCALEPROOF

A Response Nation-Wide Greet This Fountain Shaving Brush

*Brush and Cream in One—
The Essential Gift for Men*

YES, multitudes of men have responded to our first announcement of this wonderful shaving brush that supplies its own lather from a fountain of cream in the handle! Not only thousands of men who shave at home, but sailors, soldiers and travelers, too.

Every day now a growing host are shaving the Warner way with only this Fountain Brush and a razor.

Half the Time—Half the Work

This means no everlasting bother with separate tubes of shaving cream—no fussing with shaving sticks and soap and mugs. The Warner Brush takes the place of all those. It does their work better—and in half the time!

It is sponsored by Mr. A. P. Warner, whose products have always met high favor. The Warner Speedometer and Warner-Lenz are famous today throughout the world. Yet this new Fountain Brush serves even greater numbers. *It serves every man who shaves!*

Saves Cream and Effort

Simply turn the Warner control and the cream in the handle is released to the heart of the bristles. Each time comes precisely the right amount for one shave. The lather generates instantly inside the brush. So it's ready-prepared when it reaches the beard.

The Warner Brush is doubly prized as a gift because it is convenient and sanitary, and saves cream and effort.

Mennen's Cream—Rubberset Bristles

The bristles are genuine Rubberset—soft and thick. In the handle a cartridge of Mennen's Shaving Cream—plenty for 60 to 80 shaves.

This prized combination in the Warner Brush gives men the best that's known for shaving. And not only that, but convenience unheard of.

Brings Sanitary Shaving

Dealers will supply new cartridges of Mennen's Shaving Cream for 35c. Fed as it is by the Warner control, the cream lasts longer because there is no waste. Moreover, the Warner feed seals itself, so the cream cannot dry out between shaves.

The brush is cleansed merely by rinsing in the usual way. Or it can be sterilized by unscrewing the brush-end and dropping into boiling water. Up to this time, no brush has been so sanitary. And none so handy, of course.

The brush dries quickly—on the shelf, in the traveling bag or soldier's or sailor's kit. And it can't dampen other articles because of the telescope guard that encloses the bristles.

Every man who shaves will want this Fountain Brush. Read our free approval offer at the left.

- A—Removable Ventilated Cap for Guard.
- B—Genuine Rubberset Brush.
- C—Between shaves, the Telescope Handle forms a wet-proof guard.
- D—The soft flexible rubber tube delivers the shaving cream to the head of the bristles.
- E—Warner Shaving Cream Cartridge filled with Mennen's Shaving Cream.
- F—Feed Cap Control. A turn brings instant lather.

Send No Money for This Brush

Decide right now to use the Warner Brush yourself. And also send one to a soldier or a sailor. For this brush serves all men alike. And wherever it goes, back comes the call for more!

Go see this brush today at your dealer's. If his supply has not yet arrived mail us his name on the coupon printed here and we will send him a brush post-haste for your free inspection and approval.

If entirely satisfied, pay the dealer \$4 (the regular price) and the brush is yours.

But if for any reason you don't want it after examination, you are not obliged to pay any money whatever. Go try your dealer today. If you don't find this brush then mail us the free approval coupon without fail.

out for a tramp around the world, to the time, when, having accomplished his feat, he entered his home portal, there elapsed exactly four hundred and sixty-six days. His account of his adventures, detailed in a large book, is here condensed by his sister, and a fascinating record it is, chatty, full of resourceful experiments, ample with description, and sufficiently exciting in its varied encounters in the Far East to set atingle the imagination of many a wanderer. The experiment, executed successfully by the will to succeed and the willingness to work at any or everything, ably abetted by the gracious cooperation of the United States consular service, is one to tempt many youthful soldiers of fortune. But the Mr. Franek's enthusiasm is uppermost in what he describes, he does not fail to record the obstacles he encountered at every turn. The abridgment of the larger book is well done.

Harris, Julia Collier. *The Life and Letters of Joel Chandler Harris.* Boston: Houghton Mifflin Company. \$3.50 net.

When Joel Chandler Harris was a young man the introspective habit he acquired made him tiresome to some people, provided his biographer is correct in her delineation. It was only after the first Uncle Remus stories brought him out of his provincialism that the Harris we know began to evolve, events in his career to take on a broader value, his comments a broader sympathy; and tho his reticence and shyness never deserted him, his attitude toward himself changed. What changed him more than anything else was his love for children. Mrs. Julia Collier Harris, Uncle Remus's daughter-in-law, has made a modest, excellent biography. Her depiction of Harris's family life, and of his association with the literary lights of his time, is full and satisfactory. Lovers of Uncle Remus will find here a wealth of personal anecdote and correspondence. It is a thick book of big enjoyment.

Jones, John Price, and Hollister, Paul Merrick. *The German Secret Service in America, 1914-1918.* Boston: Small, Maynard & Co. \$2 net.

We all are familiar with what constituted the villainy of German propaganda in this country. We have firmly fixt in our minds who were the arch-villains. In this book there is successfully attempted a survey of the whole menace, and, by way of illustration, there is a veritable rogues' gallery of portrait evidence. One of the authors was engaged in abetting the American Secret Service; this text, therefore, constitutes the findings of government agents. Organized villainy has never been so fully exposed. The reader is held enthralled by the story as retold, astounded by the network of deception, and elated by the way in which America brought, one by one, the Prussianized Germans from their lair. From this account we can reckon the work ahead of us in order to make the world safe for democracy. Such men as are here shown up can not change their spots in the twinkling of an eye.

Leupp, Francis E. George Westinghouse: His Life and Achievements. Boston: Little, Brown & Co. \$3 net.

Here is a direct narrative of the life of a very direct man. Mr. Leupp has painted the portrait of a self-confident inventor, whose mind was ever alert and who never acknowledged defeat, even under the most discouraging circumstances. The indefatigable labors of Westinghouse—which, probably, find fit comparison with the labors of Edison—surmounted all difficulties. From the very first experiments with his air-brakes to the last days of his

life he knew what he wanted and he went after it without hesitation. Westinghouse's life was an excellent example of self-reliance, encouraged by the stern indifference of his father, from whom he inherited his mechanical tastes. Mr. Leapp has shown wisdom in avoiding as much as possible the technical vocabulary of the scientific writer; and that is not an easy task to accomplish where one has automatic railway-signals and the alternating current machinery to explain.

Longstreth, T. Morris. *The Catskills.* New York: The Century Company. \$2.50.

To write a book which is at once an appreciation and a guide is an accomplishment. The present author has tramped the Catskills to some purpose; he has not fallen into conventional tracks, but, by use of the unusual phrase and exercise of humor, sketches people and places with vividness. To be a native means often to be blind to the beauty of one's environment. The Catskillers do not even know their legends. "Do you happen to have a Rip Van Winkle handy?" asked Mr. Longstreth of one of them. To which the answer came, "The bar's closed." But this enthusiastic nature-lover, atramp on an unexpected vacation, knows everything about the Catskills. And, what is more, he understands life and character. There is a chapter on John Burroughs, who is now the vital, wide-awake Rip of the mountains; it is an appreciation of wide sympathy and understanding. We cheerfully recommend the reading of this guide, which leads us, not in the way of guides, by rote, but in the way of appreciators, by grace of manner and expression. The copious illustrations add much to the text.

Mahan on Naval Warfare. Selections from the Writings of Alfred T. Mahan. Edited by Allan Westcott. Boston: Little, Brown & Co. \$2 net.

Admiral Mahan's reputation is rather as a bookman than as a seaman. He was the only officer of our service who had shown not only this country, but others, that there was a philosophy of sea-power which had done much, if not everything, to shape history. He was the one man who had had the vision of statesmanship to associate the movement of naval vessels with the development of political ideals. The editor of the present selections appears to have realized this. He has divided his book into three parts, "Naval Principles," "Sea Power in History," "Naval and National Policies," and each division is a realization of Mahan's far-seeing. Such sections as "Application of the Monroe Doctrine," "The German State and Its Menace," "The Moral Aspect of War," show its timeliness. Historically, Mahan was constructive in his thinking on the Navy. But he was something more than a navy man. The selections are not condensed; they are complete in themselves. And herein the editor has shown excellent reticence. The book is to be warmly recommended as a furtherance of wider reading of Mahan.

Maurice, Arthur Bartlett. *Fifth Avenue.* New York: Dodd, Mead & Co. \$2.50.

Mr. Maurice has improved an excellent opportunity to depict something of one of the greatest avenues in the world through successive generations. He may have missed some of its atmosphere, both when New York was young and now when New York is cosmopolitan. His sight-seeing is literal, not creative. The Brevoort days of Fifth Avenue, the life of old New York below Fourteenth Street, the caravanserai fame of the old Fifth Avenue Hotel, the

The Elliott-Fisher Way

A GIRL and Elliott-Fisher The Bookkeeping Machine will do in one writing all the work that usually requires three or four writings and several computations to accomplish.

With The Bookkeeping Machine one operation writes the items on the customer's statement, posts them to the ledger and makes the *proof sheet*—an itemized journal of all entries.

This one operation also does all the adding, subtracting and balancing of figures.

Elliott-Fisher The Bookkeeping Machine does the work neatly, swiftly and furnishes written proof of the accuracy of the work as it proceeds.

Your bookkeeping requirements have no angles or tangles which cannot be straightened out for good by Elliott-Fisher The Bookkeeping Machine.

The use of Elliott-Fisher The Bookkeeping Machine saves time and labor, keeps the books balanced and the expense down.

For particulars of Elliott-Fisher service write or telephone our nearest office.

Every line of the Dayton Steel Wheel suggests strength

—rugged strength that conforms with the truck itself. And this suggestion, so apparent to the eye, is proven in actual service.

There is strength for any emergency. Terrific side thrusts—cruel pounding of bad roads—*every* demand of fast, heavy-load motor hauling is met with brute strength that defies wear.

There is resilience that dissipates the extreme shocks of the road—that protects axles, bearings and power plant from the brunt of such blows.

There is lightness too, that adds to carrying capacity—always true roundness, which avoids the

wheel drag that consumes extra fuel, and pounding that shreds tires.

The Dayton Steel Wheel is the final motor truck wheel. It adds to truck appearance—it better truck performance, and outlives the truck itself.

Peace has restored the Dayton Steel Wheel for commercial uses. Progressive manufacturers are making it standard equipment. Look for the name Dayton on the spoke.

The story of Dayton Steel Wheels will interest you. May we send it?

saga of wo-begone stage horses, the Reservoir days—everything of this kind about Fifth Avenue seems to be recorded. Personality, even in streets, means flavor. If you don't believe this, read Huneke's "New Cosmopolis," which, tho it grumbles at what New York has lost in recent times, at least recreates what is past, and recreates it in all its old-time atmosphere. A large part of the success of Mr. Maurice's book should come from the agreeableness of its manufacture.

McMaster, John Bach. The United States to the World War. New York: D. Appleton & Co. \$3 net. Postage, 18 cents.

It has been the object of Dr. McMaster to present judicially and in logical order the facts leading up to America's entrance into the war. He has succeeded admirably, drawing upon diplomatic data and newspaper expression, and tracing step by step causes and methods. His fairness in every consideration is striking, and his analyses of conflicting opinion well balanced. Our problems began with the opening of the world-war. The United States became the hotbed of plots and plotters; as a neutral, our commercial and maritime rights aggravated many points in international law, openly disregarded by Germany, but debated and determined by other nations. These intricacies are dealt with one by one, with the result that Dr. McMaster has written a volume invaluable in its comprehensiveness and searching out of the facts. Every student will find it necessary for reference; every reader will find it interesting because of the orderly arrangement of the mass of data presented.

Morgenthau, Henry. Ambassador Morgenthau's Story. Garden City: Doubleday, Page & Co. \$2 net.

There has been no better analysis of the way in which Turkey became a tool of Germany than what is contained in Ambassador Morgenthau's story. Here the German Wangenheim becomes the hero of a monstrous plot and the Young Turk party dangles to strings of his own placing. As a writer, the Ambassador has a dramatic sense, and his drawing of character is excellent. There is no uncertainty in his mind as to the conditions which he had to face; he knew fully the men with whom he had to deal, and under no circumstances would he brook duplicity or evasion. Shortly after the armistice went into effect, and some time after the defection and surrender of Turkey, the papers contained a cable from Paris announcing that Talaat Pasha, former Grand Vizier and Minister of Finance; Enver Pasha, former Minister of War; and Djemal Pasha, former Minister of Marine, had fled from Constantinople, accused of embezzlement and other crimes. With these crafty gentlemen, Mr. Morgenthau had almost daily maneuvers. His delineation of them is masterly. But above them all looms the brutal figure of Wangenheim, the German Ambassador. Add to the sheer romantic color of this story the fact that what Ambassador Morgenthau writes is authentic and comes from his full knowledge of the historical, social, and economic conditions of the Near East, and his book becomes one of the significant, first-hand accounts of the Turkish situation.

Mühlön, Wilhelm. The Vandal of Europe. Translated by W. L. McPherson. New York: G. P. Putnam's Sons. \$1.50 net. Postage 16 cents.

An unexpectedly marvelous revelation is this of the state of German mind at the outbreak of the war, written by a former director of the Krupps. This, with

Lichnowsky's confession of German aggressiveness, should be overwhelming proof, by their very exceptional tone, of the utter inability of the mass of Germans to realize their true moral position before the world. Mühlön repudiated his country because his sense of true moral values made him do so. He reached conclusions by watching closely the unfolding of events; he realized the mania of the Germans and of the German press, and revolted; he acknowledged German treachery in the instance of Belgium. Germany, in fact, disgusted him. These impressions were kept in diary form. The present book is the diary. It pictures crisply the lie by which the Germans have lived. It cries out humanely in sympathy for humanity. It is a book deserving of wide and thoughtful reading; in the final reckoning it must be placed on the reference shelf as an invaluable document from a rare specimen—a German who repudiates his country to become a citizen of the world. As he himself says: It is a disgrace to be a German!

Near-East from Within, The. Anonymous. Only authorized American edition. 12mo. New York: Funk & Wagnalls Company. \$1.50. Postage, 11 cents.

Published originally some two years ago and then out of print but still in demand, the English publishers, unable from war-conditions to send to America further copies, this is a reprint with new preface by the author now issued as timely because of the transformation that is to take place in the Balkan country in consequence of the results of the war. When first published, the book created a sensation, revealing as it did the inside history of the dealings between Germany, Turkey, and the Balkan States. Two editions were imported in response to public request, sent to the press for review, and extended notices were printed in papers of wide repute and standing with the book-reading public. One of these notices appeared in the *New York Times* and filled two pages; another in the *New York Sun* was written by Miss Jeannette L. Gilder and filled nearly a page, both articles illustrated with portraits from the book. Knowledge of the Balkan question can nowhere be better obtained than in these pages. In many places they supplement Mr. Morgenthau's later book giving his observations in Constantinople while serving there as the American Ambassador.

Nicholson, Meredith. The Valley of Democracy. New York: Charles Scribner's Sons. \$2 net.

George Ade, writing on Lafayette, describes a statue in his home town of the famous French general as a thing of foundry product, with a pedestal of riveted plate steel. And he adds: "There you have one difference between our native land and the Republic of France. We are long on foundries but short on studios." In "The Valley of Democracy," however, we find a passion for justice which probably is one way of showing our national genius, outside our utilitarian activity. Mr. Nicholson has traveled extensively for the materials of his book. To the Near West and the Far West, even to the Pacific coast, he has gone in search of those identifying marks which show Western inheritances, civilization, and reaction to war-conditions. He speaks wisely, sometimes ironically, of the "folks at home"; he separates the conflicting elements in a city like Chicago, and lauds the position of the Western farmer. One can see that Mr. Nicholson's chief interest centers in politics. The West produced Lincoln. It has not lost its love for oratory.

Adopt A Soldier and Supply Him With Candy

A SOLDIER appreciates a box of good candy more than anything else. His body craves sugar and when it comes to him in the form of good candy it is a great delicacy. Furthermore, it is easy to get to him and is a very practical gift.

Elmer's
NEW ORLEANS
Chocolates

A great favorite with the soldiers. If you have none of your own relatives in the camps to send a box to, get the name of a soldier and send him a box of candy now and then.

*retouched photograph of 36x6 Goodyear S-V Solid Truck Tire
which has traveled 30,710 miles in hard freight transfer service
6-ton truck owned by Western Electric Company, Chicago*

Copyright 1918, by The Goodyear Tire & Rubber Co.

GOODYEAR
AKRON

Uniformly High Mileage

EVEN more telling than the record-breaking individual mileages made by Goodyear S-V Solid Tires are the very sizable general averages they maintain.

Indeed their most sensational scores are simply the peaks of a long list of other S-V marks set uniformly high.

In the case of the Western Electric Company of Chicago, twelve of these tires, though subjected frequently to gruelling punishment, have delivered a total of 313,200 miles of service.

All of them have been used on a 6-ton truck which transfers freight over a 65-mile circuit daily.

Under full cargoes of machinery and apparatus, they have been driven regularly across bumpy rail crossings and along bad stretches of block pavement that administers rapid-fire beatings.

And they have had to contend with the various sharp metallic objects that litter freight yards and work havoc with tire treads unless these are exceedingly tough.

Consequently the work done by these twelve Goodyear S-V Solid Tires may be

classed conservatively as hard service that tests to the utmost every bit of the stamina of a solid tire.

In this duty, their average mileage of 26,100 per tire stands out as a characteristic score quite in keeping with Goodyear Solid Tire performances under similarly trying conditions.

It is typical of the way in which these tires prove to truck owners the remarkable toughness of their treads and the firm bonding of the rubber with the steel base.

It should be added in important record that the lowest mileage delivered by any of the twelve tires was in excess of 22,000 and that the particular tire giving this mileage was severely injured by being driven for long distances in car tracks.

"The very high average mileages given by our Goodyear S-V Solid Truck Tires is decidedly gratifying to this company. No other tires that we have used approach their endurance in our freight transfer service."—J. W. Bancker, Asst. Gen. Superintendent, Western Electric Company, Chicago.

The consistent economy of Goodyear S-V Solid Tires, as shown on the cost sheets of users, is the plain result of that vast amount of research, experiment and development which Goodyear has conducted in the solid tire field.

Any one of more than 800 Goodyear Truck Tire Service Station Dealers can supply Goodyear Solid Tires and advise correct size and proper care.

Helps Small Trucks Haul Big Tonnage

The Motorless
Motor Truck

Thousands in Use

SIZES

1,250 lbs.	3,000 lbs.
1,500 lbs.	7,000 lbs.
2,000 lbs.	10,000 lbs.

Also semi-trailers

Bodies for every
business.

Orders filled subject
to Government require-
ments and restrictions.

LIGHT trucks used with Trailmobiles provide large hauling capacity at an exceptionally low cost for the equipment, and for operation and maintenance.

For example: Two Trailmobiles pulled by a one-ton truck have hauled 1,100 bricks weighing 8,250 pounds at a load in the service of M. R. Ammerman, a contractor of Salina, Kas. As many as 46 round trips of a mile each way have been made in a day, moving in all 190 tons. Two trailmobiles are always loading, two unloading, and two in transit with the truck.

The owner has found the truck and Trailmobiles the least expensive of any equipment that would do the work—and the most profitable investment he ever made.

Trucks work profitably with Trailmobiles where trucks alone could not succeed. The Trailmobile doubles or triples truck capacity.

Trailmobiles track perfectly behind truck or passenger car. They are built like a truck to stand full loads at high speeds.

Write for booklet "Economy in Hauling"

O'Brien, Pat. Outwitting the Hun. New York: Harper & Brothers. \$1.50. Postage, 14 cents.

Lieut. Pat O'Brien, of the Royal Flying Corps, in this volume sums up the elements that entered into his remarkable escape, in 1917, from Germans who had captured him. Dogged determination contributed much to his success in overcoming obstacles that might easily have discouraged one who had depended entirely on luck or miracles. The book is already famous among war-books of the personal experience sort, ranking in the same class as Empey's "Over the Top." Just seventy-two days elapsed between his escape from imprisonment and his arrival on safe soil. It is a thrilling and unique narrative.

Raemaekers, Louis. America in the War. New York: The Century Company. \$5.

In going through this volume at one sitting one will rise with a feeling that he has touched every point of meaning in the war. Raemaekers fulfils the requirements of the cartoonist; but fulfils more than that. The scorching irony of his drawings comes from a fundamental, all-inclusive grasp of the weaknesses and strength of the nations and of the men involved. He is an expert on William Hohenzollern and the ex-Crown Prince; he knows the underground alleys of German duplicity; and his pencil and brush make them glare forth in all their brutal significance. He is equally as successful in denoting nobility of purpose. Raemaekers wastes no line; he strikes at the heart of the matter. His cartoons here relate to American problems and actions. Facing each picture is some comment by a writer well known in a particular walk of life. These comments are not always as apt in their meaning as the pictures they describe. Yet the book is every bit worth while.

Schapiro, J. Salwyn. Modern and Contemporary European History. Boston: Houghton Mifflin Company. \$1.50 net.

Professor Schapiro, as a teacher of history, must have felt in the classroom the need for just such a thorough survey as he has produced here—with emphasis laid on the social, economic, and political forces that have developed since 1815, through diplomatic maneuvers on one hand and force of ideas on the other. The unification of Central Europe is shown, the onward march of social democracies traces the injection of ideas of universal freedom, and the rise of community unrest is noted. The book will undoubtedly find its place in the colleges, but deserves wider circulation. It is a concise survey of those living forces some of which have brought on the present European chaos, others of which are the hope and salvation of the future. The reader may not be wholly satisfied with the estimate of German thought; that we may question and the analysis of Russia must necessarily be incomplete, for Russia is incomplete. But, as a whole, the book is up to the minute, with stress laid on the revolutionary ideas which are to be either our Nemesis or our salvation. One does not doubt his conclusions.

Schreiner, George Abel. From Berlin to Bagdad. Behind the Scenes in the Near East. Illustrated. Pp. xiv-371. New York: Harper & Brothers.

Mr. Schreiner during the Gallipoli campaign and the Saloniki occupation was for nine months Associated Press correspondent in Turkey. In that time he had audience with the Sultan, been in correspondence with leaders of the Young Turks, including Enver Pasha and Talaat Bey, knew von Sanders and von Usedom.

and was thrown in with Halideh Edib Haunym Effendi, Turkish "writer, poet, and feminist." Then he saw many things from the inside. His volume is descriptive and impressionistic. He witnessed the attack on the Dardanelles and some of the Gallipoli fighting, went through Asia Minor, into Armenia (where he saw the results of Kurdish and Turkish massacres), Syria, and back to Constantinople. The narrative is intimate and interesting and reveals Ottoman incompetency in management and government as well as the Turk's capacity for stark brutality.

Smith, Munroe. Militarism and Statecraft. 12mo, pp. 286. New York: G. P. Putnam's Sons. \$1.50. Postage, 12 cents.

That Bismarck's diplomacy after 1871 had for its main purpose to avoid wars when possible, that it was essentially non-aggressive, and that in contrast with it German diplomacy in later years tended consciously toward war under militaristic pressure, is Professor Smith's principal thesis. The "Iron Chancellor," he says, distinguished between "a policy that aimed to realize or defend national interests" and one which "aimed at power." He constantly took account of "the imponderables," that is, of national or world-wide sentiment, conscience, and resentment at aggressiveness. His efforts made for control of militarists by diplomatic-political staffs. Professor Smith's volume contains four essays that have had most careful reading among thoughtful men and women. The man in the street would not understand them readily, but the man higher up has found them among the best of the war's literature. His book is in a class with the works of Chéradame, James M. Beck, and James Brown Scott as among the essential and convincing books we have had on the origin of the war.

Wood, A. C. Old Days on the Farm. New York: George H. Dorn & Co. \$1.50 net.

Mr. Wood gives us thumb-nail sketches of days on the farm that used to be. He glories in his rustic inheritance, and tho he does not set out to further a "back-to-the-farm" movement, does succeed in a rather scrappy manner in sending our thoughts back to the time when the "snake" rail fence was as famous as a city subway. He meanders through his subject and through a generously thick book, discussing the old-time association of cows and courtships, and lauding the old manner of dairying. His object is not to give advice to farmers, but to recall the farm life he knew, and the joys which city dwellers can never know. The result is a queer assortment of disconnected recollections and sincere love for his theme. The dominant note is sentimentality.

Wood, Edwin O. Historic Mackinac. Two volumes. New York: The Macmillan Company. \$12.50 net.

Indefatigable enthusiasm for a locality has gone into the making of these sumptuous volumes. Archives have been raked of all that bears on the Mackinac country, and the result is an anthology of copious quotation, embracing history, poetry, drama, and travel. Mackinac has been the haven of rest for many celebrities; their enthusiasms are here recorded. The survey begins with the French explorations and with the figure of Father Marquette. It goes through Indian massacres and fights between the French and English—all the text leaning heavily on sources. The second volume is chiefly concerned with extensive reproductions of comment from books long out of print. A compre-

KOHLER

Also MEANS A BATHTUB

Kohler achievement finds its highest expression in the Viceroy Bathtub, the inviting built-in tub you see in the great hotels and better homes.

As you revel in its luxury you are keenly alive to the sharp contrast between Kohler comfort and the wooden tub of childhood days.

And, could you but witness the making of this bathtub in a great community factory, your respect for Kohler quality would be still greater than ever.

You would readily become imbued with the spirit by which Kohler signifies not only a bathtub and a host of kindred products, but also an idea, an ideal, a town, an institution, a spirit of achievement.

The famous enamel which graces the Viceroy Bathtub apparels every Kohler product, whether for the home or commercial building.

A really interesting book pictures and describes the Kohler method and the Kohler line—the outcome of forty-five years' unceasing endeavor. May we send it to you with our compliments?

hensive bibliography measures to some extent the arduous labors of Dr. Wood. Such a work as this gives little scope for original style. But what the two volumes indicate is the richness of Mackinac, both historically and physically. Lovers of this part of the Lake district will find here many hours of profit and enjoyment.

II

THE TWENTY-FIVE FOR CHILDREN

Abbott, Willis J. *Soldiers of the Sea. The Story of the United States Marine Corps.* New York: Dodd, Mead & Co. \$1.50 net. Postage, 14 cents.

This is not a book for children, but the modern boy is not a child any longer; what more fascinating task for him than to follow the part played by the marine from earliest days in United States history. One morning during the Great War, while fighting at Château-Thierry, checked by a German onrush. As marines in large numbers did it, suddenly every one wanted to know everything about marines. Little was to be found in libraries. So Mr. Abbott set himself to the timely task of filling the deficiency. This book is the result—a spirited narrative and a real contribution to military history.

Austin, Mary. *The Trail Book.* Illustrated by Miss Winter. Boston: Houghton Mifflin Company. \$2 net. Postage, 14 cents.

Mrs. Austin attempts to create an American Jungle Book. Whether she has done this or not lovers of Kipling might dispute; but she has ingeniously and cleverly strung together a series of stories which, told by animals or Indians, follow the trails etched on the surface of primeval America. To this task she has brought the authority of a student of folk-lore, but she has brought more than that—ability to present vividly and picturesquely the traditions of America's former inhabitants. These stories are narrated to a girl and boy (who are the children of one of the bold men in a great museum) by exhibits in glass cases which quite naturally become animate.

Barbour, Ralph Henry. *For the Freedom of the Seas.* New York: D. Appleton & Co. \$1. Postage, 12 cents.

Mr. Barbour is equally at home, whether on the gridiron, the diamond, or "fort fathoms" deep in submarine "Q-4." It was a foregone conclusion that he would grasp a current event and describe the adventures of a hero in patrol service, as he would have his bravery roused through the ruthlessness of the German at sea. According to the demands of a certain type of boy fiction, it was to be guessed that his hero would be able to grasp intuitively the secret of good gunnery, and would win his laurels and outwit the Hun. All the characteristics mark the present story, and the one could not claim any lasting quality for it. Mr. Barbour shows unusual ability—to put his readers in possession of the essential spirit, and to describe, with gusto, the noteworthy features of service at sea during the strenuous days of U-boat menace. The book is action in it from cover to cover.

Bond, A. Russell. *The American Boys' Engineering Book.* Philadelphia: J. B. Lippincott Company. \$2 net. Postage, 14 cents.

What shall men do when boys know everything? Experience will have to go with fifteen! Here we have an engineering manual for youngsters in whose hands the theodolite is as familiar as the proverbial tin pail and spade. Mr. Bond, author and compiler of many practical books, has the

USE YOUR BRAINS

OR YOU'LL LOSE YOUR GRIP

IN thunderous tones the world calls for men and women who can do big things—men and women who can think straight and constructively! Average men there are on all sides whose future will surely run in narrow grooves. But what glorious rewards await those earnest souls who are lifting themselves above the dead level of "averageness" by developing now the mental qualities that are sternly demanded, and which will be even more sorely needed when the war is won!

Here are ten great books that will fill a gap in innumerable lives. These volumes reveal the priceless secrets the possession of which makes life worth living and wins leadership in every occupation for those who put them into practise.

The Mental Efficiency Library tells, in simple language, for the average reader the great principles of personal efficiency and mental growth, and shows you how to grasp and incorporate them in your everyday life.

Nearly 200,000 men and women own these unusual volumes, and it is safe to say that for a vast number of them the gleaming truths and wisdom in these books have inspired new hope, rekindled the fires of ambition, and lifted the fortunate purchasers joyously to a higher and more influential place in the world.

POISE: How To Attain It

Here the immense value of poise is explained, with instructions for acquiring the ability to be thoroughly at ease and self-controlled in all situations, even under the most trying circumstances. A clear explanation is given of how one man can dominate a situation without appearing to do so; how to rid yourself of uncertainty; how to hold an individual or an audience; how to create the favorable first impression that counts for so much in business and social life, etc., etc.

TIMIDITY: How To Overcome It

This volume shows you how to get rid of doubt of yourself which is the cause of all timidity. It describes the way to attain thorough self-confidence; how to develop moral courage, courage of your convictions; how to develop physical courage; how to gain the power that will give you mastery of yourself and mastery of others. It explains the handicap in business and society that timidity places on you, and how to overcome it.

PERSEVERANCE: How To Develop It

Of all the modern "keys to fortune" none more easily turns the tumblers of the lock than Perseverance. This volume analyzes this quality, points out all the factors which contribute to great perseverance, and then shows you how you may develop it in yourself. How to exercise self-control; how to throw off worry and fatigue; how to keep fresh, keen, and enthusiastic for your job; how to train your mind to concentrate, create, apply itself to any task you will—these and many other phases of the subject are explained for you.

OPPORTUNITIES:

How To Make the Most of Them

This is an inspiring and suggestive branch of mental efficiency which shows how fortune and good luck are nothing more than seizing opportunities that present themselves, or going ahead and making the opportunities yourself. How to know a good opportunity and take the fullest advantage of it; how to acquire resourcefulness; how to handle every situation so that you may make of it an opportunity to gain some advantage; how to develop the winning combination of audacity and good judgment, etc.

PERSONALITY: How To Build It

The important part that personality plays in all the activities of life is described. You are shown the characteristics that make up the man or woman of personal magnetism and power, and how you may develop them in yourself. Habits to cultivate, mistakes to avoid, qualities needed and how to acquire them—every phase of personality building and exercising is explained. Remarkable suggestions as to how to "arrive" in society or business are offered.

FREE—This \$1.50 Book

HOW TO CHOOSE THE RIGHT VOCATION

From it you learn in detail what ability is needed for each of 1,000 distinct vocations; how to discover whether or not your present work is your right work; how to examine yourself to ascertain just what work you are best fitted for; how to bring into play your greatest powers; how to make your work yield the most satisfaction and profit, etc., etc. This book is vitally necessary to every man or woman who wants the right job—to every employer who wants the right man—to every parent who wants his son or daughter to find the right place in his or her life work. Free to all who buy The Mental Efficiency Library within next 30 days.

INFLUENCE: How To Exert It

It is your personal influence on your associates that determines your place in life, and to be successful you must exert it intelligently. This volume explains how to concentrate all the laws of mental efficiency in the building and exercising of your personal influence. How to assume and hold authority; how to develop personal magnetism and self-confidence; how to command your associates, sway an audience, persuade those you meet to your way of thinking; how to exercise your influence wisely and to your greatest advantage in every situation.

COMMON SENSE: How To Exercise It

This volume shows why simple common sense is such a rare quality—and such a valuable one. And it gives thorough instructions for developing it. How to see all sides of everything and then take the wisest course; how to weigh advice and judge its value; how to dispel illusions and overcome unwise impulses; how to analyze evidence and make intelligent deductions; how to train yourself to be governed in all your actions by common sense—these and many other phases of the subject are explained fully.

PRACTICALITY: How To Acquire It

This volume explains how you may control all your thoughts and actions so that they may be of practical advantage to you. How to acquire the knack of easy application to any task. How to break up bad habits without difficulty; how to get the substance of a book from one reading; how to use your full strength and overcome your weaknesses; how to know false practicality, and avoid errors in foresight; the stock in trade of the practical man and how he uses it, etc.

SPEECH: How To Use It Effectively

The expression of many of the powers of the mind depends largely upon your ability to use speech effectively. This volume shows you how to talk to win in every phase of life—whether in a dinner speech, in a social conversation, on a platform, in a business interview, or anywhere else. It gives you the secrets of appealing to the fundamental instincts of human nature; it shows how to present your facts and opinions to the best advantage; it explains how and when to arouse the different emotions, etc.

CHARACTER: How To Develop It

Only by intelligent development can the full force of your character be put into play. This volume explains the best methods of development. How to make the most of your strong points and strengthen your weak ones; how to conquer fear and foolish sentiments; how to see things clearly and make wise decisions; how to concentrate; how to develop the reasoning powers, the analytical powers, the creative powers, and coordinate them all to work to your greatest advantage.

Take the Word Of These Owners

"To the man or woman taking life seriously, to those determined that life shall count for something definite, and to those who would attain success, The Mental Efficiency Library will prove of extreme value. The subjects treated in these books are of vital importance to all intelligent people."

Charles H. Beebe,

Brooklyn, N. Y.

"The volume on 'Practicality' alone is worth many times the price paid for the ten books."

Joseph I. Edwards, Ph.D.,

Hartford, Conn.

"They are really indispensable. A real student of The Mental Efficiency Library is bound to take his place in the first rank of constructive, efficient, and consequently successful business men."

Edward H. Dewell,

President, Manufacturers and Traders Company, Inc.,

Lawrence, Minn.

"You have not done them full justice in your advertisements. They not only treat the subjects more copiously than I had anticipated but the logical and thorough development of each topic renders them valuable to all—freshmen in high school to experienced business men."

David D. Stiles, Chicago, Ill.

\$95 an Hour!

"Every hour I spent on my I. C. S. Course has been worth \$95 to me! My position, my \$5,000 a year income, my home, my family's happiness—I owe it all to my spare time training with the International Correspondence Schools!"

Every mail brings letters from some of the two million I. C. S. students telling of promotions or increases in salary as the rewards of spare time study.

What are you doing with the hours after supper? Can you afford to let them slip by unimproved when you can easily make them mean so much? One hour a day spent with the I. C. S. will prepare you for the position you want in the work you like best. Yes, it will! Put it up to us to prove it. Mark and mail this coupon now!

Falk Tobacco Co. 1790 Broadway, New York

year attempted to train rudimentary engineers by discussing the A B C of surveying, sounding, and signaling. Show a boy, after he has read the book, a railroad-track, and he'll give you the recipe for building one. Such books are home-courses, preparatory to specialized courses. Diagrams show how easily made things are; texts outline the knack of doing them. The boy with mechanical bent will hail Mr. Bond's explicit directions.

Bryant, Sarah Cone. I Am An American. Boston: Houghton Mifflin Company. \$1.25. Postage, 12 cents.

What does it mean to say "I am an American"? Sara Cone Bryant tells children in no uncertain terms, and she analyzes, simply and directly, the organization of government and the upholding of justice, which, as a people, we have always believed in. The book is an easily comprehended guide to patriotism, specifically intended for young people and aimed at foreigners, who, either through ignorance or evil influence, have not grasped fully the meaning of loyalty. It discusses our past history and outlines events which brought us into the Great War. All is written in the simplest of language, with a propaganda spirit which does not forget to put in a strong word for woman suffrage.

Colum, Padraic. The Boy Who Knew What the Birds Said. Illustrated by Dugald Stewart Walker. New York: The Macmillan Company.

An artistic little volume is this, both in design and content. Mr. Colum writes well and mingles poetic feeling with entertaining narrative. It all began with the startling information that the world would come to an end when the Bird that follows the Cuckoo flies into the Cuckoo's mouth. But when that was about to happen, the Boy threw his cap at the Cuckoo's head, and covered it. For that the birds gave the boy lessons in bird language of all variety. The stories that follow, Irish in color, are the result. Rich in interest is this attractive book.

Dugmore, A. Radclyffe. Adventures in Beaver Stream Camp. Lost in the Northern Wilds. Garden City: Doubleday, Page & Co. \$1.35 net. Postage, 12 cents.

Boy scouts—in fact, any healthy boy seeking for that stimulation in reading which consists in one adventure after another, falling thick and fast—will read this story at one sitting. Written by one famed for photographs of wild life, it presents authoritative accounts of Newfoundland habits of animals and fish; in addition narrating a Labrador saga of two boys who, through knowledge of woodcraft, and during a long winter when they were given up as dead by their parents, from whom they were separated while tuna fishing, were able to keep themselves alive, well, and active. One must not judge such a book from the standpoint of style. It is not literature, but a species of propaganda for the outdoor life. Captain Dugmore has utilized his knowledge to the full, and told simply for young people, with narrative as the vehicle, what he has previously told to older folk, about the caribou, beaver, and other inhabitants of the wild.

Dyer, Walter A. The Dogs of Boytown. New York: Henry Holt & Co. \$1.50 net. Postage, 12 cents.

Mr. Dyer has written a very sympathetic story about dogs. He shows ample understanding of boy nature. In the course of adventures befalling two boys and two dogs there is introduced generous information regarding the "points" which go to dis-

SAVE COAL

without foregoing heat

Baltimore Residence of John W. Brick is Chamberlin equipped.

"WEATHERSTRIP YOUR WINDOWS"

Seal those 1-8 in. to 1-16 in. heat escapes around the sashes. Chamberlin Strips, the standard for 25 years, save 1 or 2 tons of coal out of every 5, exclude cold drafts, coal soot and wet, insure warmth near windows, prevent "sticking" or rattling.

Newly twice as many Chamberlin equipped buildings as all other combined prove it's BEST, simplest, most weather-tight and trouble-free. Outlasts the building. Replaces its cost in 4 years or less. Guaranteed 10 years by the largest, oldest, most experienced weatherstrip makers with a half-million dollar gold-up capital and a quarter-century reputation for success.

The Chamberlin's Window

Keeps in heat, bars out cold drafts, dust, rain, snow, keeps windows from sticking and rattling—saves the life of the building. There's nothing in your way.

You Are the Judge

We have never resorted to extravagant claims in advertising AC Spark Plugs.

The need for such tactics has never seemed apparent to us.

We believe that AC Spark Plugs are the best spark plugs made and our advertising is simply a recital of the facts upon which we base that belief.

Perhaps that is good advertising and perhaps it isn't. But it is the sort that we believe in.

Were we to draw upon our imagination to invent new and extravagant arguments, perhaps we could sell more spark plugs—who can say?

But we are content to rest our case with you on the foundation of true merit.

We simply call your attention to the list of AC users below. Here you will recognize the names of the builders of the world's finest motor cars.

This list represents an overwhelming preference for AC's among the makers of passenger cars, trucks and tractors.

Upon this fact we rest our claim to your preference. Look for the letters AC. They are glazed in the porcelain of the genuine.

tinguish breeds and types of dogs. Romu-
lus and Remus are not the only canine
heroes in the village; there are other
equally interesting. From first page to
last the book is all about dogs, and you
can't put the book down till finished. As
well as Mr. Dyer accomplished his task
as narrator.

**Eastman, Charles A. Indian Heroes and Great
Chieftains.** Boston: Little, Brown & Co. \$1.25 net.
Postage, 12 cents.

No modern events can still a boy's long-
ing to read books about Indians. Dr.
Eastman is a Sioux himself, and therefore
he speaks with authority when he describes
the characters and characteristics of Indian
heroes. The pictures alone would be a
measure of the close view one is given in the
text of the ways of Indian chiefs. Red-
Cloud, Spotted Tail, Rain-in-the-Face,
Chief Joseph—these are some of the men
whose lives are authoritatively given
in a style at once holding and colorful.
Vigorous incident marks every page.

Fabre, Jean Henri. Our Humble Helpers.
New York: The Century Company. \$2. Postage,
15 cents.

The first we heard of Fabre was when
Maeterlinck mentioned him in his "Life of
the Bee"; this Frenchman was called the
insects' Homer. Then we read what he had
to say of the spider—a marvelous expo-
sition of scientific fact, as delicate and firm
in its description as any fantasy. The
other volumes, including his "Story-Book of
Science," which, though intended for children
was fascinating for grown people. Now
comes "Our Humble Helpers," putting to
shame the early books of science which by
means of conversation opened doors to the
phenomena of the world. Fabre tells us of
the domestic animals, and does so in fasci-
nating simplicity, until the familiar ex-
takes on the glory of necromancy, even the
its mystery is partly explained away.
Dogs, cats, turkeys, fowls of all kinds
animals of all breeds are discussed. Young
farmers should feel elated, after reading
these inspired and accurate talks, that in
the common, every-day world there are so
many things which are marvelously new
yet happening hourly before our eyes.
Fabre's translator is Florence C. Bicknell.

**Hunt, Clara W. The Little House in the
Woods.** Boston: Houghton Mifflin Company. \$1.50
Postage, 12 cents.

An attractive title and an attractive
cover design call for an attractive story.
Miss Hunt has leaned heavily on common-
place happenings in childhood, in a sum-
mer spent by a five-year-old on the
Maine coast. Miss Hunt has intimate
grasp of a child's heart and mind. In her
work as a librarian she has advocated
type of book removed from the kinder-
garten uninspired volume. The pub-
lishers have reproduced Mabel B. Hill
drawings in tint, which make attractive
the pages on which they occur.

**Kay, Gertrude Alice. The Fairy Who Believes
in Human Beliefs.** Written and Illustrated. New
York: Moffat, Yard & Co. \$1.50 net. Postage, 1
cent.

"Do you believe in humans?" is her
the question, instead of Peter Pan's
appeal. Little Gundy is a fairy born
in an ash-heap. His career is charmingly
told, both in text and pictures. Ironies
in places—following Mrs. Burnett's style
in "The Cozy Lion" and "Racketty
Packetty House"—the story is full of
fun and fairy quality. It is just the kind
of story to be read aloud during the
children's hour in every household—if there
is such a thing as the children's hour
these up-to-date times.

THE ELECTRIC STORAGE BATTERY CO.

Manufactures the

"Exide"

Starting & Lighting Battery for Automobiles

Sectional view showing famous unit-cell assembly, patented non-flooding filling plugs and sturdy plate and case construction.

—That has *real meaning* for every motorist in America. It signifies that when a man buys an "Exide" Battery for his car he is buying the best designing and manufacturing knowledge of the oldest and largest maker of storage batteries in the world. That he is reaping the benefit of thirty years' experience in the building of storage batteries for every purpose. That his judgment is backed up by an *earned* prestige that is nation-wide.

Is your battery worn out?

There is an "Exide" Battery for *every car*—a battery embodying the nine points of "Exide" excellence—each point a reason why *your car* should be "Exide" equipped.

Do you need an oversize battery?

"Exide" compact construction makes it possible to install in most cars, without alterations of the battery compartment, a battery having 15 to 20 per cent more plate surface than the battery of other make with which the car is regularly equipped. An *oversize* "Exide" battery gives the extra "pep" in engine cranking and the reserve lighting capacity so desired by many car owners.

Does your battery need repair?

The timely and well executed renewal of the parts most subject to wear will prolong the useful life of a well-made battery. It is like half-soling and heeling a well-made pair of shoes.

"Exide" batteries are so made as to be easy to repair and *worth repairing*.

Who is caring for your battery?

Your battery cranks your engine, operates your lights and horn and energizes your ignition system. Care will prolong and neglect will shorten its life. Most "battery trouble" is due to abuse. Who is caring for *your* battery?

"Exide" Service Stations

In principal cities and towns throughout the country you will find "Exide" Service Stations conducted under the direct supervision of the makers of "Exide" batteries. Whether your need is a new battery, the repair of an old one, or some detail of operating care you may depend upon "Exide" Service.

Lanier, Henry W. The Book of Bravery. New York: Charles Scribner's Sons. \$2 net. Postage, 16 cents.

There are different planes of bravery, says Mr. Lanier. "First, the rising planes of physical bravery; then that intrepidity of the mind which lifts still higher; and, finally, the courage of the spirit, which includes these others and so much else besides." His book is one of exciting adventures, graphically illustrated by impelling pictures, with heroes like Horatius, Richard the Lion-Hearted, and a long line down to the present. Thermopylae figures, and so do Zeppelins. There is no end of variety to the narratives offered, selected and arranged not in sequence, but to satisfy the five divisions of the book: "Facing Death to Avoid It," "The Treasure-Seekers," "Soldiers Who Knew No Fear," "Some Exploits on the Sea," and "Famous Deeds of Discipline." All readers fond of historical adventure will find in Mr. Lanier's narrative ample thrills.

Latham, Harold S. Under Orders. The Story of Tim and "The Club." New York: The Macmillan Company. \$1.35. Postage, 12 cents.

Boys' Clubs have done much in our recent strenuous months to sustain the nation. Events have awakened in young and old alike a passion for service, which has changed and strengthened character everywhere. Mr. Latham has taken this theme for his story, and he narrates it directly and by means of a series of small-town episodes, showing how temptation overthrew a young hero and in turn was conquered by the boy's awakened moral sense of right. The events are up to date. Tim, beginning with a War-Savings Stamp campaign, finally reaches the crest of his service by enlisting in the Navy.

Macmillan, Cyrus. Canadian Wonder Tales. With illustrations in color by George Sheringham. New York: John Lane Company. \$4 net. Postage, 18 cents.

Full of poetic feeling is this interesting book, which, tho not intended primarily for children, is none the less rich in the mystery and magic loved by them. A foreword gives the folk value of these tales, their academic and scientific significance. But one has only to read such of the stories as "The Baker's Magic Wand," "Jack and His Magic Aids," "The Boy and His Three Helpers," and "The Sad Tale of Woodpecker and Bluejay" to reach the rare, delightful flavor of the narratives. Not in a long while have we had such enjoyment from fairy-love as in this collection, which is further made distinctive by being handsomely printed and illustrated in attractive style. Tell a boy or girl that these tales are still recounted around the campfires of Canadian Indians, and the interest will be manifold.

Nicolay, Helen. The Book of American Wars. New York: The Century Company. \$2. Postage, 16 cents.

The Germans were right—America is not primarily a fighting nation, but then, if we must fight? We have had our wars, and the record of them shows that we could learn how to fight when occasion demanded. Once more it has become natural to recall our acquired accomplishments. Miss Nicolay exploits all of them, touching finally and lightly on our recent fight for humanity. She has approached her work seriously and done it carefully, with the result that young folk will find none of the staleness of the conventional history book, but a treatment based on wide grasp of facts. The note of national responsibility is sounded. Maps in an appendix are an excellent feature.

Gentlemen, can't we do something about this?

CAN'T we all get together and devise some means of "slipping the word" to our wives, daughters, sisters and sweethearts that *what we really want* for Christmas is a box of good cigars?

And when the ladies do give us cigars isn't there some way they can be tipped off to give us the kind we can smoke instead of the kind we have to give away? We think it can be done, and here's the way to do it—

Just show this to your wife, daughter, sister or sweetheart

When she sees it she will know that without a box of good cigars Christmas isn't Christmas for you. And when she reads down to here she will have no excuse for forgetting the name of the kind of cigars you want, because here it is written out for her—

Girards for Christmas

Then when we follow up by telling her a little about Girards, she will understand why you want them.

The Girard is the most famous cigar in America today—famous as a Havana smoke rich and delicious to the palate—and famous as the cigar that never gets on the nerves, never affects the heart, never leaves a harmful after-effect of any kind.

It's a cigar that doctors recommend—and smoke themselves; a cigar that men from coast to coast love well.

A box of Girards means an amiable and merry man in the house on Christmas and as long thereafter as the cigars last.

Any cigar dealer in America can sell you Girards. If he hasn't them in stock he can get them for you from us.

Anything You Want To Know

About Any Subject Under the Sun Is Almost Sure to Be Explained in This One Amazing Book

The Funk & Wagnalls **New Standard Dictionary**

A Superb Gift For Christmas

Here is the holiday gift *par excellence*—the one gift sure to be appreciated—the gift that is a compliment to both giver and recipient. This work will last a lifetime, and the "dictionary habit," once acquired, will always be a source of immeasurable benefit. By all means give THE NEW STANDARD DICTIONARY as your gift this year, and you may be sure that your taste and discrimination will be appreciated.

Instant, Correct Information

In these days of intense specialization in one particular branch of a subject or art, it is often impracticable for a man to master much more than his own profession or business. But no man wants to be in ignorance regarding any of the other great branches of human knowledge, and here, in this modern compendium, you may have the world's knowledge concentrated in a single volume. You may know in an instant—and know authoritatively—the exact "what, when and why" of any query which may arise in your business, professional or social life. You need it, your home needs it—your family, especially the children, will always benefit by its use.

Leaders In American Life Praise It Highly

The STANDARD DICTIONARY has received the unqualified endorsement of hundreds of leaders of thought and action all over the globe. Thousands of the nation's leading men have already expressed their highest respect and admiration for this wonderful book. Among hundreds who praise it and recommend its use are: Andrew Carnegie, Cardinal Gibbons, Hudson Maxim, Brander Matthews, U. S. Commissioner of Education P. P. Claxton, W. H. P. Faunce, S. Parkes Cadman, George Barr McCutcheon, George Ade, John Wanamaker, Elbert H. Gary, Jack London, Samuel Gompers, Archbishop Ireland, and many others.

Unrivalled In Its Excellence

John Wanamaker, Famous Merchant—"Artistic, complete, and of unrivalled excellence."

United States Commissioner of Education Philander P. Claxton—"This great work can not fail to be a distinct contribution to English scholarship."

Prof. George W. Kirchwey, Kent Professor of Law at Columbia University—"It is a miracle of book making. It makes all other dictionaries look pale and ineffectual beside it."

Over 3,000 Large Quarto Pages—
Over 60 Full-Page Illustrations—More
Than 7,000 Text Illustrations—450,000
Vocabulary Terms, thousands more than any
other dictionary—380 Editors and Specialists—
533 Readers for Quotations—32,000 Illustrative
Quotations—28,500 Synonyms and Antonyms—
31,000 Historic Events Chronologically Arranged—
65,000 Proper Names—One Vocabulary Order—
Latest Census Statistics.

The World's Greatest Reference Book

It is the world's greatest reference work. No book on earth contains so much knowledge compressed and ready for instant use—all in one plain alphabetical order, ready to answer your little child's simple question or your own perplexing and intricate one. One man can hardly even conceive the vastness of its contents, no ten men could ever master its sum total of knowledge. No subject of human interest is excluded from its scope—Literature, Art, Music, Electricity, Medicine, Law, Manufacturing, Grammar, Advertising, Shipbuilding, War, Peace, Politics, Religion, Statesmanship, Baseball, Automobiling, Engineering, Architecture, Science, Mathematics, Speech, Philosophy—anything—everything you can think of is included in its range. No one can ever know it all, but one can have it all at his elbow for instant use in this remarkable book. It has cost over \$1,450,000 to produce it—you may have it now for only a few dollars.

It Will Make Children Bright and Homes Happy

Besides its exact scientific record of fundamental truths in various branches of knowledge, this surprising volume will elicit the wonder and admiration of your children and family for its pictures and explanations of the marvels of the land, the sea, the sky, and of man's handiwork as witnessed in the world's progress. If your children could get the habit of referring to this volume, they would reach maturity liberally grounded in the world's knowledge. It is the world's greatest book of reference for the home, the office, the school.

It Is Highly Commended By All

Hon. Champ Clark, Speaker, House of Representatives—"It is in daily use. It certainly is a wonderful book."

Samuel Gompers, President American Federation of Labor—"It is certainly a most complete, valuable and indispensable piece of work. It will be of great value to me in my office."

Sir Arthur Conan Doyle, Creator of "Sherlock Holmes"—"I once amused myself by trying to find words that were not in it, but I did not succeed."

Olcott, Frances Jenkins. The Book of Elves and Fairies. Boston: Houghton Mifflin Company. \$2 net. Postage, 14 cents.

Miss Olcott's foreword announces the fairy godmother, pixies, spriggans, and fays who, whether from Ireland, Bohemia, Sweden, or elsewhere, sport through the pages of a fascinating collection of tales. For many months Miss Olcott has contributed weekly stories to the *New York Evening Post*, and the majority of selections here used were garnered from these. They are told simply, merrily, with literary tact. Here and there one meets with appropriate verses that fit in with elfin spell. There is no doubting Miss Olcott's sympathy with childhood, or her understanding of the appropriate materials for story-telling and reading aloud. The volume is agreeably printed, with illustrations in color, and cover design by Milo Winter.

Perkins, Lucy Fitch. The French Twins. Boston: Houghton Mifflin Company. \$1.25 net. Postage, 12 cents.

This is a nice, wholesome little story, told in text and in crayon. Miss Perkins's "Twins" books have won a deservedly familiar place in the nursery. They are written with feeling for atmosphere and considerable inventiveness as regards plot. Here we have a "war" story for young readers. The Twins live in Reims, and experience the excitement of the bombardment. They become refugees, and in a small French village meet with the Foreign Legion, particularly with two Americans in it, who are the innocent and valued means of discovering the plot of two German spies to signal to a German aviator the location of French ammunition-dumps. It is a brisk little book for readers living in brisk times.

Steel, Flora Annie. English Fairy Tales. Illustrated by Arthur Rackham. New York: The Macmillan Company.

The style adopted by this author is breezy, with a suggestion of good-natured irony. Some may be staid enough in love of original English fairy-tales to prefer the old versions, even when they sacrifice some of the up-to-dateness here shown. The spirit or event, however, is not changed. The vein is popular. As usual, Mr. Rackham is delightful. Who could want a better picturing of *The Three Bears* or of *Catskin*? It is a beautiful volume and will bring delight to many a nursery. Miss Steel gives pleasure in her manner of telling, and shows alertness of imagination.

Grimm, The Brothers. Little Brother and Little Sister, and Other Tales. Illustrated by Arthur Rackham. New York: Dodd, Mead & Co. \$1.50 net. Postage, 18 cents.

As an illustrator, Arthur Rackham has given infinite pleasure to young and old alike. His imagination is quaint and flexible; his line and color decorative yet simple; his fancy delicate. The Brothers Grimm have never had a more agreeable depicter, not only in this rich volume, but in a previous volume of Grimm issued by the same publishers. There appears to have been made an intelligent choice of material. Even tho we can imagine the shudder of parents over the savage in so many of the tales, we are glad the texts have not been shorn of their strength. Educators point to the Grimms as responsible for German ruthlessness because of the blood and thunder of their folk-lore. The opening story gives title to the book. The texts are unshorn.

Meet the Requirements Of National Economy

With America facing her second war-time Christmas the necessity of care in the spending of money is evidenced as never before.

Especially in the selection of holiday gifts must discretion be used. These are practical times and only the most thoroughly practical gifts should be considered.

UNIVERSAL

XMAS GIFTS

UNIVERSAL Home Needs offer a variety of articles all of which are designed to render service in the saving of food, the saving of time in the conservation of fuel and to a considerable degree make unnecessary the customary household help.

Inequality of material, in construction and in workmanship, UNIVERSAL Home Needs are of the highest grade and back of the UNIVERSAL Trade Mark which appears on each article is a manufacturing experience of over half a century.

GROTON, NEW YORK

To Readers
of
The Literary Digest:

Re: Shortage of Coronas

For some twenty months Corona has been in the war in earnest. From home training camps clear to the lines of battle; from field and staff officers down to top sergeant; from aviation to signal corps; in units of the Y. M. C. A. and N. of C., and with units of the Red Cross—in every branch the demand for Corona has grown, taxing even the output of our big new factory.

So, although Corona is in every way the "useful" gift to which Christmas giving should be limited in war-time, there will be few Coronas for Christmas this year—and even these, until further notice, may be purchased only for military or other "essential" uses. But perhaps as users, or as prospective purchasers after the war, you can share in some extent our pride in Corona's war record. Certainly this record is satisfying evidence of that wide utility and sturdiness of construction which, vital in the service of war, are no less valuable in the arts of peace.

The Corona Typewriter is a practical portable writing machine. It weighs but six pounds, and folds compactly for travel, yet is exceptionally strong, as its record proves. Especially desirable for home use because of its small size, convenience, and simplicity. Nearly 200,000 now in use. Fifty dollars, complete with carrying case.

**Easy to Play
Easy to Pay**

Street, New York: The Century Company. 22 Postage, 10 cents.

This is a story bound to appeal to ten-year-old readers, simple in its plot, yet with just enough mystery and adventure about it to excite one. It is told mostly by means of sentences written in large letters on two blackboards, and passed between a sympathetic little girl who is poor and a sick little boy who is rich. What happens because of this long-distance conversation from the windows of two houses changes the whole outlook on life of several people in the story, and helps to make the boy well and strong again. It is a clean, wholesome little book with good feeling about it, such as one got in "Sara Crewe." It is as attractive as its title.

Tomlinson, Everett T. Fighters Young Americans Want to Know. New York: D. Appleton & Co. \$1.50. Postage, 14 cents.

There is often accuracy, but lack of inspiration, in the recounting of specific deeds of heroism in our country's wars. Mr. Tomlinson, whose previous historical adventures for boys have made him ransack military sources for materials, has here gathered together some unusual episodes. As a writer his intentions are always good. His motives behind this new book are excellent. It is a timely venture on his part, to which he has brought experience.

Verne, Jules. The Mysterious Island. Pictures by N. C. Wyeth. New York: Charles Scribner's Sons. \$2.50 net. Postage, 16 cents.

If readers were ignorant of Jules Verne, and did not know of the hair-raising events with which his stories abound, the color plates for this holiday edition of "The Mysterious Island," done by N. C. Wyeth, who will be remembered for his work in the Scribner issues of Stevenson's "Kidnaped" and "Black Arrow," would prove sufficient incentive for reading. Once a boy gets launched with the party which in the opening chapter flies off in a balloon gone wild, he will find it difficult to put down the volume. Here is such a Christmas gift as will delight the adventurous—a long, long story for long winter evenings.

Walker, Donald Stewart. Dream Boats. Portraits and Histories of Fauna, Fairies, Fishes (and other pleasant creatures). Garden City: Doubleday, Page & Co. \$1.50. Postage, 14 cents.

The overdecorative, detailed, and symbolized drawings in line and color made us doubt whether this book would make the right appeal. The text explains things half philosophical and half dreams. Mr. Walker strives after effect. While his fairy explanations are sometimes forced, yet the book has charm in its color work and agreeableness in its print.

Woods, Margaret L. Come Unto These Yellow Sands. Illustrated by John Hancock. New York: John Lane Company.

The author of this story has read deeply in "The Water Babies." Parents who believe implicitly in fact, and want their children to give up fairies as part of their lives, should read what befell Sir Gorts and his wife, who were so scientific as to explain away much of the "make-believe" in their son's life. This boy, Darwin by name, knew the pixies. Robin Goodfellow in particular played annoying tricks on his father. In the end Sir Gorts was reformed, and Darwin was free to believe in fairies all he wanted to. The story is richly but crudely illustrated in color, reminiscent of Goble's illustrations for "The Water Babies."

Envions.—"What do you think of a man who will constantly deceive his wife?" "I think he's a wonder!"—*Cassell's Saturday Journal.*

THE SPICE OF LIFE

An Eye on the Future.—"Better be polite to every boy you meet. He might be your colonel some day."—*Jewell (Kan.) Republican.*

Hits the Mark.—**HUSBAND**—"It is a strange thing, but true, that the biggest fools have the most beautiful wives."

WIFE—"Oh, you flatterer!"—*Judge.*

His Notes Are Good.—"Is the living he makes on a sound basis?"

"You bet it is. He beats the bass drum in a band."—*Baltimore American.*

How to Do It.—"We have been married ten years without an argument."

"That's right. Let her have her own way. Don't argue."—*Boston Transcript.*

One Truthful One.—**FRANK**—"When you proposed to her I suppose she said: 'This is so sudden?'"

ERNEST—"No, she was honest and said: 'This suspense has been terrible.'"—*Medley.*

Secondary Consideration.—**WIDOWER**—"I suppose that when you recall what a handsome man your first husband was, you wouldn't consider me for a minute?"

WIDOW—"Oh, yes, I would. But I wouldn't consider you for a second."—*Orange Peel.*

A Bad Beginning, etc.—**SHE**—"When we go anywhere now we have to take the street-car. Before our marriage you always called a taxi."

HE—"Exactly. And that's the reason we have to go in the street-car now."—*Boston Transcript.*

Kings Still Ahead.—"There is a big difference between the kings of old times and kings now."

"In what way?"

"In former times the kings used to keep fools. Now, they let the fools keep them."—*Baltimore American.*

Kept His Word.—**HAROLD**—"I thought you made a resolution not to drink any more."

PERCY—"I did."

HAROLD—"But you are drinking as much as ever."

PERCY—"Well, that isn't any more, is it?"—*Pearson's Weekly.*

This Is Made in Boston.—"So this is your famous Beacon Street?" said Major X, as he strolled with his friend along past the State House. "Frankly, I'm surprised. I had always heard that it was a very exclusive street, you know."

"Well, so it is," said the other man.

"Eh! old chap, how can you say so? Why, it positively verges on the Common."—*Boston Transcript.*

About Time, Too.—An officer inspecting entries guarding the line in Flanders came across a raw-looking yeoman.

"What are you here for?" he asked.

"To report anything unusual, sir."

"What would you call unusual?"

"I dunno exactly, sir."

"What would you do if you saw five battle-ships steaming across that field under?"

"Sign the pledge, sir."—*Tit-Bits.*

HALT!

Filling Waste-Baskets is a War-Time Crime

YOUR message, on poor paper, is like a diamond in the rough. People do not recognize its true worth. It joins the criminal procession from the mail-bag to the waste-basket, which takes such precious toll of American materials, time and effort.

Give your printed matter an appropriate setting. Make it say hardware, if it advertises hardware. Give it the feminine touch, if it sells something to women. It must look its message to get its message across.

The right kind of booklet accomplishes your purpose. That effects conservation all along the line—paper, transportation, mails and man power.

Ask your printer or advertising agency about Strathmore Papers. Write us for our booklet "Selective Mailings." It will tell you how Strathmore Papers conserve.

When Johnny has the Croup!

That's a cough with a croupy rattle, so hurry for the Musterole and rub it in right over the chest and neck. How it will tingle at first and then grow ever so cool. And how it will reach in and penetrate right to the spot! It will dissipate all the stuffy congestion which causes that hacking cough.

Why shouldn't grandmother swear by Musterole for colds and coughs? It is better than a mustard plaster—good as *that* was in the old days. And the explanation is this:

Musterole is made of oil of mustard and other home simples. It penetrates under the skin, down to the part. Here it generates its own heat, and this heat disperses the congestion. Yet Musterole will not blister. Musterole, on the contrary, feels delightfully cool a few seconds after you apply it.

Try Musterole for Bobby and Helen and Dorothy's croup—and for your own cough, too. Try it for rheumatism—it's a regular router out of all congestions. Always keep a jar handy.

Many doctors and nurses recommend Musterole.

30c and 60c jars—\$2.50 hospital size.

What Next?

CURRENT EVENTS

THE PEACE SITUATION

November 20.—Paris reports the Chamber of Deputies unanimously agreeing to a proclamation declaring that "President Wilson and the American nation and the Allied nations and the chiefs of state at their head have well deserved of humanity." This resolution is to be permanently inscribed upon all public buildings in France.

King Albert makes his entry into Antwerp amid great popular rejoicing. The French Government announces that the Grand Cross of the Legion of Honor will be conferred on Queen Elizabeth.

A London message records twenty German submarines surrendering to Rear-Admiral Tyrwhitt thirty miles off Harwich. Over eighty more submarines are to be surrendered within the next four days.

November 21.—President Wilson's peace theories are criticized during a debate in the United States Senate.

Tokyo advises note Japanese newspapers suggesting that Japan and China raise the race question at the Peace Conference, to bring about an agreement to end racial discrimination throughout the world.

Premier Lloyd George authorizes the statement that the whole support of the British Government will be given to claims of the British dominions in regard to the future of the German colonies.

London reports the surrender of nine battle-ships, five battle-cruisers, seven light cruisers, and fifty destroyers of the German High Seas Fleet. Nineteen more submarines were also surrendered to a British squadron.

A dispatch from Amsterdam states that Prince Lieknowsky, former German Ambassador to London, has made the latest German appeal for clemency. The Prince says a cruel exploitation of their present situation would endanger the ideal league of nations. Therefore, "I do not appeal to pity, but to perspicacity."

The *Echo de Paris* states that the Allied governments have decided to send an official protest to the Dutch Government against the violation of Holland's neutrality by permitting German troops to cross Limburg in their retreat from Belgium.

The British War Office announces that the military situation does not admit of the commencement of demobilization.

November 22.—London reports that twenty more German submarines have surrendered, making the total thus far handed over fifty-nine.

King Albert makes a triumphant entry into Brussels accompanied by Queen Elizabeth and their children.

November 23.—Liverpool reports a great public demonstration as several thousand American soldiers sail for home.

Telegrams are reported pouring into the White House urging the appointment of Samuel Gompers as one of the American peace commissioners.

Declaring that its conditions are "only too justified by the manner in which Germany has waged war," the National Council of French Women, states a Paris dispatch, has declined to intercede with the Government to mitigate the terms of the German armistice.

President Wilson promises to pay heed to a petition from spokesmen of Schleswig asking for the right of self-determination for their oppressed kinsmen in the province wrested by Germany from Denmark.

Gum decay causes tooth decay

Forhan's
FOR THE GUMS

HEALTHY teeth need healthy gums to hug them. Else they will loosen in Pyorrhea. Tiny openings will come in the gums to act as the gateways of disease germs, which infect the joints, tonsils, or cause other ailments.

Forhan's prevents Pyorrhea, if used in time and used consistently. No mere toothpaste does. Are your gums tender, swollen, are they bleeding, gums? If so, you are certain to have Pyorrhea (Rigg's Disease). Four out of five people who are over forty have it.

To you we earnestly recommend Forhan's. It preserves the gums which hold the teeth secure. Brush your teeth with it. Forhan's cleans the teeth scientifically—keeps them white and free from tartar.

If gum-shrinkage has already set in, start using Forhan's and correct a dental malady immediately for special treatment.

GEORGE FROST COMPANY, Makers, BOSTON

November 24.—The League to Enforce Peace announces a "Victory Program," calling for the formation at the Peace Congress of a League of Free Nations, with judicial, administrative, and executive powers and functions.

At a meeting in Cairo, states a Paris dispatch, representatives of the Armenian settlement in Egypt and the Sudan adopted a resolution address to the Allied Powers and President Wilson claiming the right of the Armenian nation to independence and sovereignty.

The Wolff Agency states that Marshal von Hindenburg has telegraphed to the Berlin Government asserting that the German Army, because of the hard terms of the armistice and of the internal situation, is in no position to renew fighting.

The Associated Press reports the frontier of Germany crossed at several places by American Signal Corps units and ambulance workers.

A cable from Harwich announces the surrender of twenty-eight more German submarines. Included in this under-seas flotilla was the *Deutschland*, which came to Baltimore with merchandise and mail in July, 1916.

The National Security League appeals to the 500,000 American women who are cooperating in its propaganda to "be on the alert against sympathetic sentimentality for the defeated enemy and to stand firm for a peace of justice."

November 25.—Since a division of the enemy's surrendered fleet might arouse controversies among the Allies, says a dispatch from London, it is probable all the German war-ships will be sunk.

Documents published by the new Bavarian Government, Washington is informed, support all the evidence heretofore brought to light fixing the responsibility for the war upon Germany.

Basel learns that the Hungarian Government has requested the Allies to hold an immediate discussion of peace terms.

London reports a flotilla of mine-sweepers leaving the Firth of Forth to clear a passage for the British squadron to Kiel so that the remnants of the German Navy may be disarmed and interned.

THE CENTRAL POWERS

November 20.—An Exchange Telegraph dispatch from Copenhagen reports the Berlin Soldiers' and Workmen's Council passing a resolution against summoning a Constituent Assembly and demanding the summoning of a general Soldiers' and Workmen's Congress to "take decision as to the future of Germany."

Copenhagen also hears that several hundred persons have been arrested in Vienna on charge of conspiring with the Red Guards to proclaim a Bolshevik Government.

Dr. Thomas G. Masaryk sails from New York to take up his duties as President of the Czecho-Slovak Republic.

November 21.—Premier Clemenceau submits to the law faculty of the University of Paris the question of whether the extradition of William Hohenzollern can be demanded.

Geneva reports the retreat of the German armies continuing in the greatest disorder and adds that anarchy in Germany is worse than during the Austrian retreat from Italy.

November 22.—The Dutch Legation at Paris publishes a note stating that the kind of refuge granted to William Hohenzollern by Holland is similar to that given to all foreign refugees and that the Government could not make any exception on account of his former

PAUL RIEGER, 265 First St., San Francisco

position when he asked admission to Dutch territory.

An Amsterdam dispatch says it is now denied that the ex-Kaiser is about to return to Berlin.

Copenhagen is informed that a great panic occurred on the Berlin Bourse when it was reported that the extremists in several German coast towns had usurped the power of the local authorities.

November 23.—Dispatches received in London state that the Soldiers' and Workers' Councils in the Lower Rhish provinces have accepted the program of the Spartacus (Bolshevik) group by a big majority. Resistance to proletarian dictatorship is growing in South Germany. The Council at Bremen resolves to call on the Bolsheviks in Russia to help introduce communism, and a proletarian dictatorship has been proclaimed at Düsseldorf.

The Hague reports an extensive clandestine trading in arms in Berlin, and that the Supreme Soldiers' Council at Kiel protests against the usurpation of power by the insurgent Berlin Soviet. Many local Soviets are demanding the abolition of military discipline.

Amsterdam has a Warsaw dispatch stating that the new Polish cabinet set up by General Pilsudski consists principally of Social Democrats and members of the Peasants' League.

A Berlin newspaper avers that 278 persons have been affected by the downfall of ruling houses in Germany. Of this number thirty-three were of the Royal Prussian house and thirty-nine of the Bavarian reigning family.

Washington is informed that the Jugoslav National Council has withdrawn from the Democratic Mid-European Union.

November 24.—Stockholm learns that adherents of the Spartacus group at Berlin attempted on November 22 to seize the Berlin Police Presidency. German newspapers received at Copenhagen report that the United Workers' and Soldiers' Council have proclaimed Oldenburg, Oestrieskland, Bremen, Hamburg, and Schleswig-Holstein a republic, with the capital at Hamburg.

Basel reports that Grand Duke Friedrich of Baden issued a proclamation November 22 renouncing the throne for himself and descendants.

November 25.—It is officially announced in Berlin that the Soldiers' and Workmen's Council and the Government have agreed upon an equal division of power. The aim is "to defend and develop what has been achieved by the revolution and to suppress all counter-revolutionary activity."

London hears that, despite this agreement, opposition to such a government is growing outside Berlin. A greater part of South Germany, including Wurttemberg, Baden, and Bavaria, has declared it will not submit "to the terrorism of the dictators in Berlin who have replaced the Kaiser and militarism."

RUSSIAN AFFAIRS

November 20.—Cables received in Washington state that an army of 100,000 men under General Alexeieff, former commander-in-chief of all Russian armies, is advancing on Moscow from the south.

Kief dispatches to Swedish newspapers report the Ukrainian Government overthrown and Kief captured by troops from Astrakhan. The Exchange Telegraph Company learns from Copenhagen that the situation in the East is causing anxiety in Germany and a great German army is marching eastward.

The Inter-Party League for the Restora-

tion of Free Russia presents a memorandum at the State Department in Washington asking the Government to recognize the coalition Omsk Government and declaring it imperative that Russia shall have full representation at the Peace Conference as "a free and independent country."

November 21.—An Associated Press dispatch from Vladivostok states that through a *coup* on the part of the Council of Ministers of the new "all-Russian" Government at Omsk, Siberia, Admiral Alexander Kolchak has become virtual dictator and commander of the "all-Russian" Army and Fleet.

November 22.—A dispatch from Vasal reports that General Skoropadskai, Ukrainian dictator, has surrendered, and General Denikine, leader of anti-Bolshevik forces, has been named as successor with the consent of the Entente nations.

November 23.—Washington learns from Stockholm of a Helsingfors newspaper printing an account of a terrible massacre in Petrograd. Five hundred former Russian army officers are reported murdered.

November 24.—A Paris dispatch states that 350 workmen in Jaroslav have been murdered by the Red Guards for rebelling against the orders of Bolshevik officials.

November 25.—A delayed message from Vladivostok says General Semenov, anti-Bolshevik leader in the Trans-Baikal region, has broken with Omsk leaders and is asserting jurisdiction over the Amur, Ussuri, and Trans-Baikal district.

GENERAL WAR-ITEMS

November 20.—The *Vorwärts* of Berlin learns on reliable authority that up to October 31, 1,580,000 German soldiers were killed and the fate of 260,000 was not known. Four millions were wounded and 490,000 are held as prisoners in hostile countries.

The Paris War Office reports French troops reaching the left bank of the Rhine and American troops, cooperating with Pétain's men, pushing forward into Luxemburg and Germany. Eight thousand Allied prisoners were liberated at Givet.

The entrance of Marshal Pétain into Metz at two o'clock yesterday afternoon is described in Associated Press dispatches.

London reports the British Government protesting to Berlin by wireless against the brutal treatment released prisoners are receiving in Germany. Unless this cruelty is stopt, it will be taken "into account in any question of revictualizing Germany or satisfying the requirements of the German population."

The British Admiralty states that Allied and neutral shipping losses in October totaled 93,000 tons, of which 84,000 tons were British.

November 21.—The New York *Tribune's* London correspondent cables that Great Britain is horrified and staggered by stories of ill-treatment of released prisoners by Germany, public opinion being inflamed to an extent only equaled by the worst submarine outrages. The London *Times* calls upon the Allied governments to compel the Germans to treat the prisoners in their hands without abuse.

London reports British cavalymen riding across the field of Waterloo on their way to the German frontier.

Copenhagen receives news of a bombardment of Vitikalu, by three Russian warships flying the red flag of Cronstadt.

When hostilities were suspended, American aviators had destroyed 661 more

To busy fathers facing forty

PERHAPS you recognize the symptoms: Expanding waistline—rising family—growing responsibilities. Oh, dear, yes! And also (sotto voce) hair conspicuous by its absence around the temples, perhaps!

Well—you want to keep what you *have* got, anyway. Of course! But *how*? Here's one way to do it.

Listen!—

PACKER'S TAR SOAP and the will to use it—according to directions—regularly! You can't begin too early deriving benefit from the scalp-cleansing, hair-helping qualities of its pure pine-tar, ably assisted and abetted by other ingredients.

Adopt this program wholeheartedly. Appoint a definite day and time for your PACKER shampoo. *Be* on time. Keep your appointment with PACKER's as religiously as you would keep the most important business engagement you can think of. Make a date with PACKER'S TAR SOAP *now* for Saturday night. You won't regret it. Send 10c for sample half-cake.

Our Manual, "The Hair and Scalp—Modern Care and Treatment," contains 36 pages of practical information. A postcard request brings you a copy.

PACKER'S TAR SOAP

"Pure as the Pines"

Packer's Liquid Tar Soap, delicately perfumed, cleanses delightfully and refreshes the scalp—keeping the hair soft and attractive. Liberal sample bottle 10 cents.

THE PACKER MANUFACTURING CO.
Dept. 84A, 81 Fulton Street, New York City

Do You Know?

Do you know that your intestinal tract is some 28 or 30 feet long, and full of bends, and twists and turns?

That the waste from the food you eat must pass through this crooked tube and out of the body regularly and thoroughly?

That if this waste matter isn't kept soft and continuously moving along its winding tube, it stagnates, ferments, breeds germs and generates poisonous substances?

That these poisonous substances are absorbed by the blood and carried by it to every cell in the body, and that such self-poisoning causes over 90% of human illness?

These facts are all explained in a most interesting and instructive way in five little booklets, which are based on the latest and best medical knowledge.

If you read any or all of them you will learn a lot of things that you never knew before, and they may save you from serious illnesses.

FOWNES

In leather, fur, silk or fabric, the name Fownes is a guarantee of quality, since 1777. Fownes sets the standard in style, fit and service; for Military and Civilian requirements.

At the Principal Shops

The name is always in the glove.

American art has produced FILOSETTE surpassing any imported fabric glove.

German planes and 35 more German balloons than the Americans had lost. The total number of planes downed by our men was 926 and the total number of balloons 73.

November 23.—General March announces the total casualties in the American Expeditionary Forces up to the signing of the armistice as 236,117, divided as follows: Killed and died of wounds, 36,154; died of disease, 14,811; died of other causes, 2,204; wounded, 179,625; prisoners, 2,163; missing, 1,160.

The Bosphorus having been cleared of mines, says a Paris cable, Allied warships have entered the Black Sea and visited various ports.

Saloniki reports that during their occupation of eastern Macedonia the Bulgarians deported 82,000 Greek residents, a large number of whom succumbed to famine, torture, and enforced labor.

FOREIGN

November 21.—Paris is officially informed that within five years France will have merchant ships with a total capacity of 6,000,000 tons, or double the present war-tonnage.

A cable from London reports active steps being taken by the International Socialist movement to establish a private system of wireless throughout the world. Stations are to be set up at once in England, France, Belgium, and ultimately in other countries, including America.

The Parliamentary Commerce Committee adopts a resolution against including most-favored-nations' tariff clauses in future commercial conventions, states a dispatch from Paris.

November 22.—The Peking correspondent of the Associated Press cables that China's contribution to the United States War Work Fund will be \$1,200,000.

The Japanese Ambassador at Washington informs Secretary Lansing that Japan has conferred decorations on General Pershing and several other American officers.

November 25.—It is officially announced in Lima that Peru has withdrawn her consuls from Chile on account of the renewal of anti-Peruvian rioting in Iquique and Antofagasta.

Santiago reports that the Chilean Government has decided to withdraw its consuls from Peru to avoid probable "unfavorable incidents" in case of outbreaks in Peru against Chile.

A circular distributed in Montevideo tells of the organization of the "Soviet of Uruguay."

A Basel dispatch states that the Bosnian national Government has asked Crown Prince Alexander of Serbia for an immediate reunion of Bosnia and Herzegovina with the Serbian Kingdom.

Washington learns that preliminary surveys of the coal-fields of Lens, France, indicate that it will take from eight months to three years to put all the mines in operation.

DOMESTIC

November 20.—The Postmaster-General announces consolidation of the services of the Western Union and Postal Telegraph companies, becoming effective December 1.

The Seattle Metal Trades Council, representing about 35,000 workers, votes to strike to bring about the release of Thomas J. Mooney and his co-defendants convicted in the San Francisco Preparedness-day bombing case. The Council also asks British labor organizations to adopt similar measures.

It is officially announced in New York that no passports will be viséed by the

customs passport bureau unless applicants can show beyond the slightest doubt that they have urgent need to cross the Atlantic.

General increases in express-rates are announced by Director-General McAdoo of the Railroad Administration.

Continued naval expansion by the United States is recommended by Secretary Daniels at a conference with the House Naval Committee.

November 21.—Senator Lewis, of Illinois, introduces a resolution in the Senate proposing permanent government ownership of telegraph, telephones, ships, railroads, and other public utilities.

President Mackay of the Postal Telegraph protests against government control of the company's operations and declares that the Postmaster-General is taking money from the Postal to pay to the Western Union.

A Washington dispatch states that Assistant Secretary of War Ryan is moving for the complete exoneration of the four officers of the Aircraft Production Service who were found censurable by Charles E. Hughes and Attorney-General Gregory.

Representative Sinnott, of Oregon, introduces a resolution in the House appropriating \$100,000 for the erection of a statue to Marshal Foch in Washington.

The Bureau of Investigation of the Department of Justice issues instructions to its field agents to continue their watchfulness and report all activities of German sympathizers in their communities.

The Alien Property Custodian sells the entire capital stock of the International Insurance Company to the Chase Securities Company for \$576,500. This sale marks the beginning of the end of German-owned or controlled insurance companies in the United States.

A dispatch from Stamford, Conn., reports the denial of a club-license to a Mannerehor, which announced part of its purposes to be the "perpetuation of German songs, the German language, customs, and sociability."

Chicago records the organization of the International Woman's Association of Commerce, which is to advance the interests of women in professional, industrial, and commercial work throughout the world.

The War Trade Bureau announces the removal of restrictions on the exportation of raw cotton to Great Britain, France, Italy, Belgium, and Japan. The order is effective December 2.

President Wilson signs the Emergency Agricultural Appropriation Bill, whose rider provides for national prohibition from July 1 next until the American Army is demobilized.

November 22.—William Gibbs McAdoo resigns as Secretary of the Treasury and Director General of the Railroads, to return to private business.

The American Red Cross sends out orders to all its chapters in this country to discontinue enrolments and to notify all persons enrolled that they will not be sent abroad.

According to the plan presented to the House Naval Committee, the United States naval strength will be about twice as great in 1920 as in 1917.

The Railroad Administration announces a program of expenditures amounting to \$909,000,000 for additions and betterments during the remainder of this year.

By a vote of nine to two the Senate Elections Committee abandons the investigation of the alleged disloyal speech of Senator La Follette.

The Texas Federation of Women's Clubs passes a resolution recommending

How Old Are You?

If you are over $\left\{ \begin{array}{l} 60\text{—have you lost all of your teeth?} \\ 50\text{—have you lost some of your teeth?} \\ 40\text{—are some of your teeth loose?} \\ 30\text{—have you sore, bleeding, receding gums?} \end{array} \right.$

NOW take a mental glance at the condition of your mouth, teeth and gums.

THEN think of your age.

AT YOUR AGE, if your teeth and gums are in a state of health, you are in luck.

We say "luck" because you are an exception to the rule.

You are in luck because you are not a victim of

PYORRHEA

(RIGGS' DISEASE)

The rule is that 75% of all the men and women in the world, over 30 years of age, are victims of pyorrhea; and it is pyorrhea that is responsible for painful, bleeding, spongy, receding gums—loose teeth and loss of teeth.

Unsound teeth and the bacteria developed in gums afflicted with pyorrhea often are the cause of serious constitutional ailments. Bacteria originating in the mouth is easily distributed through the system.

What are you doing to prevent pyorrhea or to correct a pyorrhetic condition of your gums?

Our free educational booklet on the causes, effects, treatment and prevention of pyorrhea may interest you. It may center your thoughts on oral hygiene. It may induce you to act.

Write for the booklet today and at the same time ask for a free trial package of PYORRHOCIDE POWDER (antiseptic), a medicated powder, designed expressly as a co-operative home treatment for pyorrhea and for pyorrhea prevention. PYORRHOCIDE POWDER (antiseptic) aids in repairing broken-down diseased gums. It cleans and polishes the teeth.

THE DENTINOL & PYORRHOCIDE CO., Inc.
1476 Broadway, New York City

Sold for years exclusively upon the recommendation of the dental profession. Effective not only in the treatment of pyorrhea, but also in its prevention, when used regularly as a dentifrice.

Pyorrhocide Powder removes the mucoid plaques and the daily accretions which harden and form tartar—the principal cause of pyorrhea—and increases the vitality of the gums so as to aid them in resisting the attacks of pyorrhea germs. It is economical because a dollar package contains a full half year's supply. For sale by all good drug stores and dental supply houses.

Used in over 4,000 plants

Use the OIL paint with a glossy, tile-like, white finish. Made by a special process over which we have exclusive control. Contains no varnish. Its firm, yet elastic surface will not crack or scale, for it expands and contracts with temperature changes, and withstands vibrations.

RICE'S MILL WHITE (Barreled Sunlight)

The original "Mill White." It increases your daylight 19% to 36% by actual tests. Reflects every ray of natural and artificial light. Reduces your lighting bills. Resists dirt. Is sanitary and can be washed clean when other paints need re-coating. Remains white long after other paints have turned yellow under the same conditions. This we guarantee.

For all interior use in shops, factories, stores, restaurants, etc.

Sold in barrels, also in cans. Made in Gloss, Egg Shell and Flat.

Write for free booklet, "More Light."

U. S. GUTTA PERCHA PAINT CO.
29 Dudley Street, Providence, R. I.

that all places in which German goods are sold be publicly posted, and that American women pledge themselves to buy only goods manufactured by the United States and Allied and neutral countries.

November 23.—The Treasury extends another credit of \$5,600,000 to Belgium, making total loans to that country \$198,120,000, and a total for all Allies of \$8,184,576,666.

It is announced that during the week of December 8-15 a campaign for \$5,000,000 will be conducted in New York City to meet immediate needs of the Jewish populations of Europe and Palestine.

Admission of Germans and Austrians to citizenship, which was stopt during the war, will be resumed in New York County to-morrow.

November 24.—Washington reports that permanent government control of all radio communications is planned by the Administration under a bill now before Congress.

The Federal Government lifts the restrictions placed on the sale of Christmas goods in order that a more rapid establishment of normal after-the-war conditions may result.

The United States Employment Service reports that during the ten months' period, from January 1st to the end of October, approximately 2,500,000 workers were directed to employment, largely in war-industries.

November 25.—The nation-wide United War Work Fund campaign ends with an estimated total of \$203,179,038 in cash and pledges.

The Senate Finance Committee votes on strict party lines to accept the Treasury proposal for a \$4,000,000,000 tax provision to succeed in 1919-20 the \$6,000,000,000 measure being drafted for 1918-19.

Secretary Daniels informs the Treasury Department that naval estimates for 1920 have been reduced by \$1,180,315,000 as a result of the armistice. The original estimate on a war-basis was \$2,644,307,000.

Working with raw materials valued at \$40,000,000, the American Red Cross reports its patriotic women members produced 291,004,000 necessary articles, valued at \$59,000,000, during the last seventeen months.

Mr. Self Speaking

We bombed your Red-Cross hospitals, we strafed your open towns,
But war, you know, has many just such little ups and downs.
We starved your men in prison-camps, but should that make you mad?
Er—by the way—too harsh a peace would really be too bad.

We murdered kids and women and deported all your men,
But when you get severe with us, that's something else again.
Shall peace be just and durable? Then you had best beware.
Because if you're too strict with us, we'll weep, we will! So there!

—Chicago Evening Post.

BECOME AN EXPERT ACCOUNTANT

Executive Accountants command big salaries. Thousands of firms need them. Only 2,500 Certified Public Accountants in U. S. Many are earning \$8,000 to \$10,000 a year. We train you thoroughly by mail in 3 months. (For C. P. A. examinations or executive accounting positions). Knowledge of bookkeeping indispensable to begin—we prepare you from the ground up. Our course and service are under the supervision of William B. Gatterbury, A. C. P. A., former Controller and Inspector, University of Illinois, assisted by a staff of C. P. A.'s, including members of the American Institute of Accountants. Low tuition fee—easy terms. Write now for information and free book of Accountancy Facts.

"That Advertisement Ought to Sell Paper for Us"

"For us," they say in every department of our mill. We don't talk in terms of "us" and "we" merely in our directors' room and with our salesforce. It's "we" and "us" and "our paper" with the paper machine tenders and the beater men—in the shipping room, and out where the big trainloads of raw material are shunted back and forth.

That is the result of the Hammermill Profit Sharing Plan—a plan by which every employee prospers with the company's prosperity—a plan which makes quality production, prompt sales, and dependable service as worth while to the newest employee as it is to the largest stockholder.

The effect of our profit sharing plan has been to create throughout our mill an intolerance of poor work, a quick conception in the mind of every employee that Service and Quality beget Confidence and Sales.

Instead of criticism we get suggestion; instead of lukewarmness we get enthusiasm.

Is it any wonder that Hammermill Bond is what it is—the first bond paper to be thought

of whenever a big order for printing is under consideration.

Even our method of showing samples is constructive. Instead of mere specimens of printing, we have prepared specialized portfolios applying to almost every general classification of business. The samples shown in these portfolios do more than show how well your own printing will look on Hammermill Bond. Not infrequently they present ideas that simplify a whole system, check losses and save many dollars in time and cash. Send for the portfolio that applies to your own line of business.

If you are a printer you may have the whole set.

As a matter of war economy and in co-operation with the Government, we have cut six colors from our line, and Hammermill Bond is now made in Pink, Blue, Green, Canary, Goldenrod, Buff and White, and in three finishes, producing a bond, a ripple, and a linen effect.

INVESTMENTS - AND - FINANCE

THRIFT AS A HABIT ESTABLISHED BY THE WAR—WILL IT LAST?

PREDICTIONS have been freely made that one beneficial outcome of the war will be the establishment in this country of a thrift habit lasting for a considerable period. Financiers, including savings-bank managers, have sought with much zeal to bring that result about. When the Government decided to issue Liberty Bonds at 4½ per cent., some apprehension existed in savings-bank circles as to the effect these offerings would have on savings-bank deposits, in that the interest return was greater than was paid by savings-banks. Losses occurred in their deposits, but they were not great enough to give real concern. Managers of these banks knew that in consequence of higher wages paid to labor and a return of peace, they would make large gains in deposits eventually. Since the war came practically to an end, a prominent official of one of the larger savings-banks when questioned as to the future voiced confidence in the outlook:

"An immediate response to peace is not expected by us. People are still paying on their partial payment subscriptions to Liberty bonds. Later, however, the savings-banks look for increased deposits due principally to the saving habit that has become fixt with the people, as a result of participation in government bond offerings, and the urgent appeals to practise economy and thrift during the war. True, we must face the reduced wages that are bound to occur, but the living cost must also decline commensurately with any wage depreciation. Peace has already brought into the savings-banks money that has been hoarded during the war by persons mostly of foreign birth who foolishly labored under the impression that were their funds on deposit in a bank they might be confiscated by the Government."

That the savings habit has been much promoted by the Liberty Loan campaigns is a general belief in financial centers. Now that a fifth loan is practically assured in the early spring this influence will be further increased, and at the same time, as remarked by *The Wall Street Journal*, it "gives another turn to the situation for savings-banks." In banking circles there has been discussion as to whether another very large loan could be successfully floated if the interest rate were 4½ per cent. Opinion has become quite general that the next bonds will bear interest at a higher rate, probably 4½ per cent. Now that the war is ended and patriotism can not be the leading selling slogan, more attractive features will have to be presented to enlist support. Should the Government float a bond issue bearing interest at 4½ or even 5 per cent., savings-banks may again be subject to further withdrawals, especially if resort is had to short-term borrowing. The writer notes, however, that "little anxiety is visible on this score."

Perhaps no better illustration of the thrift habit people have acquired could be presented than returns made by the savings-banks of Boston on October 31, last. At that date these banks had \$321,078,609 of deposits as against \$317,834,000 four months before and \$319,894,000 on the same date in 1917, the previous banner total for the end of a banking year. Therefore, since last spring deposits and the

interest added thereto "have more than held their own, a phenomenon in itself, considering the immense loans to the Government made by the people of the Boston district and record gifts to war-charities." Characteristic as this showing is of the traditional New England thrift, it is also accepted as a "sure sign that lessened Government need for funds will be quickly followed by a sharp rise in savings that will surpass the record reached early in April, 1917, before the Government began to sell war-bonds."

The subject of the thrift habit was recently discussed in a more general way by Ingalls Kimball, in the *New York Times Annalist*. Mr. Kimball pointed out that some danger exists that a relapse from the habit may occur as soon as the demands of the Government for money shall cease. Following are points from his article:

"It is reported that more than 25,000,000 people subscribed to the last Liberty Loan. Leaving out duplications, it is fair to infer that 20,000,000 separate individuals are saving by this method. No estimate of the number of individual purchasers of War Savings Stamps has been attempted, but as more than \$800,000,000 worth have been sold, it is probable that nearly half the population has this year saved money in one of these new ways. And it is not unreasonable to think that fully \$5,000,000,000 will have been gathered, before the end of Government financing, from people who are not usually investors—wage-earners, mainly, who do not save at all, or whose savings go into the savings-banks. The total savings-bank deposits of the United States in 1917 were \$5,418,000,000. In other words, the war-savings of the nation, gathered in less than two years, amount, roughly, to the sum total of savings-bank deposits, including interest accretions, accumulated in more than a hundred years of quiet, earnest effort!

"To what extent is it possible to continue, for the permanent benefit of the people, the plan which has been so successful in the flotation of government loans? In considering this question it is worth while to examine the system and see which, if any, of its elements can be continued in effect, now that the war is over. The thrift machine set up by the Treasury was as follows: 1. small-unit government bonds; 2. non-interest-bearing Thrift Stamps; 3. War Savings Stamps—a short-term obligation paying interest at maturity.

"This was the mechanism. What was the power that actuated the machine to such wonderful effect? 1. salesmanship, including every modern device of advertising; 2. distribution: (a) through retail stores; (b) through employers, by partial payments (usually pay-roll deduction).

"From these simple elements was built up a campaign that induced the people to save in a new and unaccustomed way at least twenty times as much as they had ever before saved in the same time. None of the elements was unimportant, but salesmanship, probably, contributed most. The selling campaigns of the Liberty Loans and War Savings Stamps were carried on by the largest and most effective selling organization ever put together, under the direction of the ablest men in the United States, and with an energy and devotion that were unimaginable. This selling force was irresistible. Everybody bought because everybody was asked, or begged, or told, to buy. Under the same stimulus almost anything would have sold.

"Next in importance to the direct sell-

We can make deliveries now

WE are ready for peace, going full speed ahead, with the factory never busier. We will keep it going. Pierce-Arrow trucks are available to meet the peace emergency as they were available in the war emergency.

If you have transportation difficulties, come to us. We have served successfully 148 different lines of business, in which we met every condi-

tion of service successfully. This includes your business—and your difficulties.

This is no time for experiments. Everyone wants means and methods which have been tested and tried and have proven equal to the need.

Pierce-Arrow trucks met every demand of the war and will meet every demand of peace.

ing effort came distribution. For the first time in the history of finance it has been made easy to save; for the first time the great retail channels of distribution have been thrown open to saving; for the first time millions of wage-earners have learned the value and ease of "Saving at the Source" by pay-envelope deduction of a dollar or so a week toward a Liberty Bond."

Mr. Kimball questions whether or not we are to lose the benefit of the great lesson of thrift and whether some plan can be devised to make us keep on saving. No problem of reconstruction seems to him more important than this, "yet in no one of the announced conferences on reconstruction do I find mention of it." He then goes on to say:

"The greatest thrift lesson in the world is thrift, no matter what its motive. A great many hundred thousand persons in this country have found themselves this year possess of \$100 or more in one piece for the first time in their lives, often without realization of how they got it. Will that lesson last? Will the wage-earner, now that loan drives are over, keep on saving, going weekly to the bank to put in his dollar. The answer to these questions is, unfortunately, 'no.'"

"It would be perfectly possible to continue the issue of War Savings Stamps, and there are many advocates of this plan, but it is doubtful if distribution could be permanently maintained on anything like its present scale. Merchants and banks, with rare exceptions, would scarcely continue to handle them, for the cost is not inconsiderable, and there is no compensating commercial gain. In the Post-offices alone their continued sale would set up competition with the present postal-savings system, which would serve no good purpose and would be highly confusing.

"Can the savings-banks successfully undertake this great task? I believe they could. I believe a national savings-bank, operating through commercial banks, stores, and employers all over the United States, making its investments through a small, compact, very highly paid and very efficient and very stringently supervised board of executives in one city, supporting a vigorous, numerous, and far-flung selling organization, similar in many respects to the industrial life-insurance organizations, could undertake this work and, were it possible to act quickly enough, could keep the thrift movement going without losing the amazing momentum which it has now acquired."

Put a Belt as Good as this on *Your* Pay-roll

This Graton & Knight 40" 3-ply Heart Brand Belt is five years old. It is running every day on heavy duty for the Milford Light and Power Co., Milford, N. H. The cost of this belt in cash has been \$1.81 a week, or .004 per delivered horsepower per week.

Put a belt as good as this on your pay-roll. Its low cost of upkeep is the result of Graton & Knight Standardization. That means the proper belt for any given requirement. It means the right quality of leather and the right kind of tanning for a given purpose. It means true economy—full delivery of power, without waste.

Leather is the ideal belting material. It has a characteristic pulley-gripping quality. It has pliability with light weight. It has the stretch and the come-back that gives and takes. It stands mauling by shifters and the gruelling strain of main drives. It is firm and strong. It is tough, but tractable. These are the characteristics that good belting must possess.

Every year nearly 300,000 hides are tanned in the G. & K. factory. That gives uniformity. The more stock handled, the more latitude there is for picking equal-quality material for a given specification. And G. & K. Tan-

ning is of a fixed standard of quality for specific requirements. We make all kinds of leather belting, for every use—large and small.

Load carried and conditions of operation must figure largely in the length of service of any belt. Some drives limit belting to a few months or even a few weeks. Graton & Knight Standardized Series Belts are made to give the longest possible delivery of efficient power at the lowest possible cost. And they do it. It may be that belts all look alike to you—and it may be that you are spending more than is necessary for some belting requirements. We can and will help you find out.

Many of the best-belted plants ask us to specify the belting for every drive. Try the plan yourself. Then, when buying, call for "Graton & Knight—Brand or equal." This won't commit you to buying our belts. It will put your buying on the one basic consideration—the work to be done.

TOPICS - OF - THE - DAY

MAKING WAR ON OUR CHIEF PEACEMAKER

RIGHTLY OR WRONG, he goes to Versailles to represent America, and the time has come, say some of his keenest critics, to see that our President is not placed at a disadvantage at the peace table by a fire of fault-finding in the rear. The fact of Mr. Wilson's going being accepted, says such an avowed political opponent as the *New York Tribune* (Rep.), "we can not afford to seem petty about it." The *St. Louis Globe-Democrat* (Rep.) knows of nothing "to be gained for our cause or for the dignity of the nation by a national controversy" over it. The choice having once been made, the *Philadelphia Public Ledger* (Ind.) likewise can not see how "matters would be helped by a barrage of political criticism following the President from Washington and discounting his prestige in Paris." This daily, widely read by Republicans and counting a Republican ex-President among its contributing editors, goes on to point out that Mr. Wilson "has made himself — and surely it was not an un-American action — the foremost spokesman of the forward-looking liberals of Europe," and asserts that "if Woodrow Wilson had not gone to the Peace Conference there are long-submerged millions on the plains of Czecho-Slovakia, in Jugo-Slavia, in Poland, and even in Russia, who would feel that a powerful friend on whom they had confidently counted would be absent." So consistent a critic of administration policies and performances as the *New York Globe* (Ind. Rep.) declares that the people of this country "do not doubt the sincerity of their President's devotion to great ideals," and "recognize he deems himself embarked on a high and noble enterprise"; it further admits that the honor paid America's chief in Europe is a tribute to this country, which should make us proud and will also "knit us closer to our neighbors and partners." The politically

independent *Boston Christian Science Monitor* is fully convinced that President Wilson "goes to the Peace Conference with the full faith and confidence of the great mass of his fellow citizens." The American people, the *Boston Herald* (Ind. Rep.) is inclined to believe, are disposed to trust President Wilson "to perform

his duty in his own way." Influential Republican leaders in Congress advise party associates, still foaming against Wilson and hoping to hamper him, that the people will not "tolerate any meddling" in so important a matter. All sensible people, according to the *New York Evening Post* (Ind.) now hope for "a calm and dignified attitude on the part of Republicans and everybody else, so that the President of the United States, when abroad, will not appear to have left a squabbling people behind." And the *Brooklyn Eagle* (Ind. Dem.), declaring that if the President succeeds in his "most difficult task" at Versailles, "he will be welcomed home with an enthusiasm from which even his most confirmed critics

LEAVING CONFLICT HERE TO MAKE PEACE IN EUROPE.

will be able to detract but little," adds these words of advice to readers of all parties:

"Nothing is to be gained in behalf of the United States by keeping alive for the wonderment of Europe the spectacle of a sullen and resentful volume of public opinion, revealing a divided nation and a consequently weakened power at the peace table. Having rightly or wrongly determined to make himself a central figure at Versailles, the President is entitled to the reinforcement of the American people in his efforts to bring about a peace acceptable to them. We need not fear that any of our immortal privileges are to be bartered away, nor any of our fundamental doctrines and laws set at naught. The President is too good a constitutional lawyer to send to the Senate of the United States a treaty which public opinion would not permit that body to ratify. While the President is abroad let us, therefore, temporarily forget partizanship and regard

his errand as one justifying our hopes and demanding our prayers."

Yet the murmuring and dissatisfaction can not be blinked in any study of the realities of the situation. The *Washington Post* (Ind.), calmly surveying the field from the seat of government, concludes that "for good or ill, President Wilson leaves for Europe without the united support of the American people." The consequences of which it plainly sees:

"When the President goes into conference with the executive heads of the larger Allied governments he will find that each of them is supported like a stone wall by the people of his country. Mr. Lloyd George has shrewdly called an election for December 15 in order to receive fresh from the British people a mandate to stand firmly for the interests of the British Empire in the peace negotiations. Premier Clemenceau is the living voice of France, and France's aims are thoroughly understood by every Frenchman. Premier Orlando is backed by the people of Italy in a clear-cut program. Thus each of these leaders enjoys what Mr. Wilson now lacks—that is, the united and sympathetic support of all the people in putting forth a clear-cut national program.

"Mr. Wilson unquestionably looms far above any other statesman in expressing the aspirations of the free and freed peoples of the world. His opinions will have immense weight in the preliminary conferences, notwithstanding the fact that the Allied premiers are not under any illusions concerning American politics. They are as well aware as anybody that Mr. Wilson was unfortunate at the November election, and that his spokesmanship for America is therefore impaired. But they are quite ready to yield him the first place as spokesman of the enlightened sentiment of the world. It is only when specific peace arrangements begin to be considered that the Allied statesmen will be slow to yield in matters directly affecting their national interests."

Moreover, the *Washington daily* explains that "if Mr. Wilson's power in the conferences should be lacking because of the lack of consolidated national support, it will not be entirely because of political differences in this country, but partly because the

people do not know Mr. Wilson's intentions." It is this feeling, that Mr. Wilson has refrained from taking the people of the United States into his confidence on a matter in which they are vitally interested, that explains the disappointment which greeted his address of December 2 and which was manifested both in Congress and in the press. In Congress the lack of cordiality shown to the President was marked, say all the Washington correspondents. Mr. Wilson, it will be remembered, told the Congress that he was going to Europe because of the desire of the Allied governments for his "personal counsel" in the "interpretation and application" of his fourteen principles of peace. The President further asserted that he had sought to express the ideals of our soldiers and sailors, who have accepted his "statements of them as the substance of their own thought and purpose." It is now, he said, his duty to see to it "that no false or mistaken interpretation is put upon them and no possible effort omitted to realize them," to play his "full part

in making good" what our fighters "offered their life's blood to obtain." The *Spokane Spokesman Review* (Rep.) calls this "disappointingly unrevealing." The *Indianapolis Star* (Rep.) calls this defense of the trip to Europe "lame and almost insulting in its inadequacy." Specifically, says the *New York Times* (Ind. Dem.), the American people have practically no knowledge of what the President "intends to say in respect to the freedom of the seas and the league of nations; we are quite ignorant of the measures he will recommend for deliverance and safety of the Russian people, where the need of immediate action is imperative; and we are quite as much in the dark as to his purposes concerning certain questions of territorial apportionment in Europe which are becoming acute." The *Kansas City Star* (Ind.) can find in his address "only the slightest possible reference to the position to which he intends to commit the United States." No one, remarks the *New York Globe*, "can honestly say whether he is with the President in his policies, for

MR. HENRY WHITE

THE FIRST DELEGATION TO INTRODUCE AMERICAN IDEAS INTO A EUROPEAN PEACE SETTLEMENT.

the President does not reveal them." The *St. Paul Pioneer Press* (Rep.) puts it this way: "one hundred and ten million people of the world's mightiest democracy occupy, in the present situation, a position similar in all respects to the President's class in political economy at Princeton." Mr. Wilson, the *New York Sun* (Ind. Rep.) observes, says he is the servant of the people, then "the servant goes out slamming the door in the face of the acknowledged master, standing in dumb surprise and awaiting an explanation of the errand." The *Sun* insists that the famous fourteen points are Wilson's, but not America's. "The rearrangement of boundaries is Wilson's," it says; "the tribal nations are Wilson; the freedom of the seas is Wilson. The President's utterances have rushed across the continents, like an engine running wild but drawing no load; no load, as yet, of authoritative American acceptance." The *Evening Sun*, in spite of Mr. Wilson's declaration that he is going to Europe as a duty to those who fought to obtain the ideals which he has stated, remains "convinced that some of our noble youth fought and died for something plainer than Wilsonism—for their country." The same daily is of the opinion that 95 per cent. of the people of this country view President Wilson's expedition "with misgiving and dislike." Aside from the matter of precedent and constitutionality, we are told,

"They are doubtful as to whether the propositions which the President is going to urge really express their aims and purposes in the war or in peace-making. They doubt whether these propositions—some or all of them—represent the aims and purposes, the ideals or the practical needs of the European Allies. They, therefore, fear that opposition, and possibly misunderstanding, may result from the President's urgency of formulas which accord with the thought neither of Europe nor America. . . .

"The people feel that the President is running the risk of humiliating contradiction and even defeat, and they feel that in his person they too may suffer a blow to their just pride."

The *Sacramento Bee* (Ind.) declares that there is "a constantly growing undercurrent of feeling all through this nation that President Wilson is leaning toward leniency to the defeated Hohenzollerns." Some correspondents witness to a similar idea in Allied lands. Carolyn Wilson writes from Paris of a suspicion among strong nationalists in France that Mr. Wilson's idealism may lead him toward undue generosity to the common foe. A Washington correspondent of the *New York Evening Sun* hears that Allied statesmen "are not entirely sure of the President," and quotes from the *Milan Corriere della Sera*:

"Wilson's points contain generic affirmations; they have got to be rendered more precise." Mr. Isaac Marcossou, in a newspaper statement made after his return from Europe, says:

"There is a feeling of apprehension and uncertainty in Europe over the departure of Mr. Wilson for the Peace Conference. The feeling among the politicians I can best express this way—they don't want a peace of phrases; they want a peace of results."

But in all fairness it must be said that the reports of an eager desire for President Wilson's presence at the peace table on the part of nearly every nation and class in Europe vastly outnumber the hints of uneasiness about his coming. The London press express a general satisfaction at his decision and see the old aloofness of the United States at an end. The *London Daily Chronicle*, for instance, says that the first preliminary to peace is President Wilson's own interpretation of the principles now accepted by all parties. The London correspondent to the *New York Evening Post's* financial page reports "universal satisfaction in the city at President Wilson's projected visit." British rejoicing over the President's visit has also been testified to by British visitors in America, representatives of the nobility and clergy vying with soldiers and labor leaders. Mr. Arthur Gleason, both a soldier and a worker, contends, as quoted in the *New York Globe*, that "the meaning of the British labor program is precisely the same as the meaning of President Wilson's fourteen points." A correspondent of the *New York Globe* and *Chicago Daily News* declares that all through France the people are looking to the coming of our President to hasten the dawn of final peace. It is noteworthy that but one ruler is named in the resolution passed by the French Chamber of Deputies:

"President Wilson and the American nation and the Allied nations and the chiefs of state at their head have deserved well of humanity."

Romain Rolland, the French author, appeals to President Wilson as the world's greatest "moral authority," and the one man who can ward off an era of "bloody anarchy" and "class warfare." "You," he says, in an open letter to Mr. Wilson, "are still at this hour the only one who can speak alike to both the proletariat and the middle classes of all nations and be listened to by them—the only one who can to-day (can you still to-morrow?) act as an intermediary between them."

Every troubled European country, writes a Washington correspondent of the *New York World*, "is making a dead set to

get the President to sponsor its cause at the peace table." New nations and old, the Czecho-Slovaks, Poles, and Jugo-Slavs, Turkey, Austria, and Luxemburg, all have problems which they think the head of the one disinterested nation can settle to their satisfaction. Even "Germany is inviting the President to visit Berlin," but the *World* writer is confident that the President is not going to enemy lands except perhaps to visit our army of occupation, and "the hope of having this country cham-

"GOSH!"

—Chaplin in the *St. Louis Republic*.

pion the cause of the defeated nations before the Peace Conference is doomed to disappointment likewise."

The President's visit to Europe is justified by the *San Francisco Chronicle* (Rep.) "as an act of courtesy to associated and enemy nations." They are entitled, it thinks, to the presence of the only living man who can interpret those peace propositions which they have accepted but do not understand. The *Springfield Republican* (Ind.), which has been supporting the President strongly during recent controversies, can not understand the outcry against his going to the Peace Conference. For one thing, it points out, his fourteen points may be as "vague" as his critics assert, but "the more 'indefinite' the more need there may be for the President himself to interpret them in person," and—

"It may also be said that those who esteem very lightly the President's knowledge and judgment in the tangled and obscure affairs of Europe should desire that he meet face to face the foremost Entente statesmen for a direct exchange of views and for the correction of immature, unpractical, or prejudiced opinions."

That Mr. Wilson will be a "tower of strength" for righteousness and justice at the peace table is the prediction of President Gompers of the American Federation of Labor. And Mr. Gompers adds that "all delegates from countries sitting at the peace table and devising the terms of the treaty are not prompted by the highest spirit of freedom, justice, and democracy." The *Newark News* declares that democracy having won the war must now win the peace treaty, or "the way is open to socialism," as the only preventive of future wars. The *News* denounces those who are attacking President Wilson's attempt to realize ideals which have been accepted by "the forward-looking people in all the Entente countries who demand the peace of righteousness, justice, and liberty."

Victor Murdock's *Wichita Eagle* (Ind.) similarly turns upon the foes of the President's program, saying:

"The splendid platform which the President outlined when America entered the war, and against which no protest whatever was then raised, save by German militarism, has now been accepted by all the nations concerned as the basis of the peace soon to be negotiated. But all those interests in America and elsewhere whose privileges are menaced by such a peace, all those anti-Christian individuals who seek a peace of vengeance, all those men who turn to the past rather than the future, are working assiduously behind the scenes against the President's plans. Those in Europe who want such a peace as he has outlined, and as has been promised, urge him to come to them and lend the weight of his great personal influence to their efforts. The American under these circumstances who would not bid him go and who would not in every possible way uphold his hands while he is there, is but a poor American indeed. Such a man discloses himself, indeed, as an enemy of that great cause for which so many Americans have died and for which so many more have gallantly risked death."

It seems to the *Seattle Times* (Ind.) that Mr. Wilson is performing "a great service to this country and to the world." Governor Capper's *Topeka Capital* (Rep.) declares that "if Mr. Wilson failed to feel that he has such an opportunity to bring peace to a confused world as will not be offered to another statesman for centuries to come, he would be without vision."

WE TURN TO THE PURSUITS OF PEACE

WITH THAT "QUICK INDIVIDUAL INITIATIVE" which President Wilson imputed to the American people at large in his recent "Farewell Address," we are beating our swords into plowshares so universally, so unostentatiously, that, as one commentator prophesies, "we may be reconstructed before we know it." In two large particulars, it is true, we may not fulfil our historian-President's surmise that reconstruction "promises to outrun any inquiry that may be instituted and any aid it may be offered." The final disposition of the railroads and allied problems of government ownership, and the present unstable relation between prices and wages, both of which questions are discussed in separate articles in the following pages, have set plenty of publicists, authorities, and interested persons by the ears. While "leading railroad men of the country," as reported by the *New York Times*, met in New York City "to consider the return of the roads to private ownership," plans were being laid at a huge "reconstruction conference" of the United States Chamber of Commerce at Atlantic City "for a final fight against paternalism in government," and Mr. Charles E. Hughes, chief counsel for the Commercial Cable Company, was starting suit to annul the Government's seizure of the company's cables.

The President's recommendation that the work of reconstruction, in so far as it may not be performed by private initiative, be left to the "existing agencies" has singled them out as small storm-centers during the "dissolution of the great American war-machine." These arms of the government service, together with their time-limits, are as follows:

- Control of Railroads—Twenty-one months after the war.
- Control of Telegraph and Telephone Lines—During the war.
- Food and Fuel Control—When state of war is ended.
- Espionage Act—End of the war.
- War Trade Board and Export Control—End of the war.
- War Finance Corporation—Six months after the war, with further time for liquidation.
- Capital Issues Committee—Six months after the war.
- Reorganization of Government Bureaus under the Overman Law—Six months after the war.
- Alien Property Custodian—End of the war, with extension of time for certain duties.
- Government Operation of Ships—Five years after the war.
- Aircraft Board—Six months after the war.
- Agricultural Stimulation—End of the present emergency.

Housing Construction—End of the war, except for ship-builders.

Labor Employment—During the emergency.

Minerals Stimulation—As soon as possible after proclamation of peace.

The War Industries Board—During the emergency. (This board will be dissolved, and "its agencies placed at the disposal of other governmental departments," on January 1.)

Some commentators, mostly of Republican political tendencies, view the use of these agencies in reconstruction with extreme alarm. The *Chicago Tribune* declares flatly that—

"The proposal of the President to allow present agencies to preside over the critical and complicated conditions in which we already are involved is neither reassuring nor safe."

Such extreme sentiments are unusual, altho the *New York Sun* protests vigorously against the slowness of our demobilizing activities, and the *Seattle Post-Intelligencer* enters a sweeping protest against our "Reconstruction Chaos." The burden of *The Post-Intelligencer's* complaint is that "we are still groping around in the dark, talking about reconstruction as if it would take care of itself. It looks like a *Topay* reconstruction that is just going to grow up." The *Washington Post* offsets this Pacific coast uneasiness by an equally sweeping assertion that reconstruction is going all too fast, and the *Spokane Spokesman Review*, striking an average between these extremes of alarm, expresses an opinion to the effect that "the President has sound views on reconstruction." The agencies in charge, it avers, "have acquired a grasp of national and international affairs that should be turned to account in the solution of the country's manifold problems. . . . They have built up the organization. . . . The experienced workman who assembles an automobile is the logical person to disassemble it."

In the disassembling of the war-automobile, the *Houston Post* believes, the question of agricultural labor ought to receive some of the attention that union labor, as represented by Mr. Gompers, has attracted to itself in large measure. A score of agricultural papers are in more than hearty agreement. *The American Agriculturist* says:

"The victory for liberty is due largely to American farmers. Uncomplainingly they accepted prices below cost of production, that war-workers at high wages might be satisfied to maintain maximum production. The billions of war-profits which farmers sacrificed through government control of prices during the war-years, entitle them to fair treatment in the transition back to peace. Farmers were last to benefit from war-inflation—if, indeed, they profited at all. They must not be first to suffer from peace deflation."

"The favoritism shown by the Government to labor in recent years is in marked contrast to the restrictive policy toward farmers," declares *Farm and Home*, and argues that "farmers must either enjoy profits that will enable them to pay high wages or the price of labor must come down." Through the medium of the Federal Agricultural Extension Service, and possibly through great reclamation projects on which returned soldiers will be offered employment, agriculture may be helped to a fair division of the blessings of peace.

No less important than the agriculturist's reconstruction worries are those confronting working women, a writer in the *New York Tribune* insists to the extent of several columns. "Sex equality in wages" is demanded, as an important part of the readjustment by Mary Van Kleeck, director of the Women in Industry Service of the Department of Labor; nor must the women who have taken men's places be dismissed now that the soldiers are returning, say half a dozen authorities. Reassurance along these lines is offered by a New York bank official, who "has just completed a tour of the principal industrial and jobbing centers east of the Mississippi, covering a wide range of industries" and reports that "ninety-five per cent. of the industries we got in touch with stated that female help employed at manual labor had proved so satisfactory that it would be continued."

A VANISHED RAILROAD GHOST

THE SPECTER OF GOVERNMENT OWNERSHIP of railroads, which some critics believed the Administration held in a dark closet for disclosure after the war, is found to be non-existent in President Wilson's statement on the railway problem before Congress on December 2. And this unexpected climax now brings the opposite fear to some railroad

NERVE!

—Murphy in the *Chicago Herald and Examiner*.

executives and owners of stocks and bonds, large and small, that there is danger of calamity should the control of the lines be shifted suddenly back to private management. Frankly, Mr. Wilson avowed to Congress that he has "no confident judgment" of his own on the policy to be adopted toward the railroads, "a question which causes me the greatest concern." He expressed the belief that we may hope for the formal conclusion of the war by a treaty by the time spring has come, and went on to say that the twenty-one months to which the present control of the railways is limited, after formal proclamation of peace shall have been made, will run at the farthest only to January of 1921. Now, the full equipment of the railways, which the Federal Administration had planned, could not be completed within any such period, said the President, who pointed out, moreover, that the present law does not permit the use of the revenues of the several roads for the execution of such plans "except by formal contract with their directors, some of whom will consent, while some will not, and therefore does not afford sufficient authority to undertake improvements upon the scale upon which it would be necessary to undertake them." What is it right that we should do with the railroads in the interests of the public and in fairness to their owners? the President asked, and at the same time he confessed he had no answer ready, tho he did believe it serviceable "to set forth as explicitly as possible the alternative courses that lie open to our choice."

"We can simply release the roads and go back to the old conditions of private management, unrestricted competition, and multifarious regulation by both State and Federal authorities; or we can go to the opposite extreme and establish complete control, accompanied, if necessary, by actual government ownership; or we can adopt an intermediate course of modified private control, under a more unified and affirmative public regulation and under such alterations of the law as will permit wasteful competition to be avoided and a considerable degree of unification of administration to be effected, as, for example, by

regional corporations, under which the railways of definable areas would be in effect combined in single systems.

"The one conclusion that I am ready to state with confidence is that it would be a disservice alike to the country and to the owners of the railroads to return to the old conditions unmodified. Those are conditions of restraint without development. There is nothing affirmative or helpful about them. What the country chiefly needs is that all its means of transportation should be developed; its railways, its waterways, its highways, and its countryside roads.

"Some new element of policy, therefore, is absolutely necessary — necessary for the service of the public, necessary for the release of credit to those who are administering the railways, necessary for the protection of their security-holders. The old policy may be changed much or little, but surely it can not always be left as it was. I hope that the Congress will have a complete and impartial study of the whole problem instituted at once and prosecuted as rapidly as possible. I stand ready and anxious to release the roads from the present control, and I must do so at a very early date if by waiting until the statutory limit of time is reached I shall be merely prolonging the period of doubt and uncertainty which is hurtful to every interest concerned."

Judging from the present outlook, nothing definite will be done toward carrying out the President's suggestions on the railroads at this session of Congress, thinks the Washington correspondent of the *New York World*. The Democrats are busy preparing the large supply bills that must be passed before adjournment in March, and the Revenue Bill is far from final passage. Senator Underwood (Dem.) and other leaders claim it is out of the question to enact important railroad measures during this short session, and they think "it would be absurd to undertake it." In the *New York Tribune*, Mr. Carl Snyder asks us to consider the situation if the President should decide to return the roads to their owners:

"It is well known that opinion as to the desirability of immediate return, even among the railway managers, is extremely divided. It is evident that if the unfavorable results of September and October should continue, the desirability of this return would be immensely lessened. It would place the roads in a genuine predicament. It is well known the roads are in none too good condition. Expenses for maintenance have risen very heavily, and in spite of this the last accounts show an increase in the number of locomotives and cars under repair. It is likewise well known that expenditures for renewals and improvements have been this year at the lowest ebb. The budget made out by Mr. McAdoo at the beginning of the year called for an outlay of something like \$1,300,000,000. The actual expenditure for ten months was under \$450,000,000.

"In the face of the present cost of living and the prevailing high prices, and especially with the urgent demands for still higher wages, it would be very difficult for the roads now to make a drastic reduction in wages. And whatever may happen in the next six months or so, there is no present indication of a heavy decline in the cost of supplies."

The financial editor of the *Chicago Tribune* quotes Mr. John J. Mitchell, president of the Illinois Trust and Savings Bank and director on four railroad boards, among them the Pennsylvania, as saying in substance:

"Events which have transpired since the period of the war have led me to completely change my views toward government control or ownership of railroads and transportation utilities. I was opposed to such a proposition in the beginning, but now believe that the salvation of the railroads lies in government control.

"A reversion of the properties to the original owners would mean a kind of chaos and inability to meet conditions of labor, railroad credit, and rates, and the people as a whole will stand more from the Government or municipality than they will from private owners of transportation properties.

"Under present conditions it would mean almost bankruptcy for a number of lines to be given back to their original owners. Their credit has been destroyed. Under the heavy expenses under which they are now operating they would not be able to borrow money and they would not be able to maintain rates or cause a readjustment of wages without serious difficulties. These things the Government can do."

WAR-PRICES AND PEACE WAGES

HIGH PRICES HAVE NOT HEARD that the war is over, even though the Versailles Conference is officially distributing peace to the nations. "The fact is becoming a national wonderment," complains the *New York Tribune*, expressing a feeling that has gone beyond the stage of "wonderment" in many editorial columns. Still more disconcerting is the threat that wages may return rapidly to a peace basis. In fact, prices and wages, which represent to the average American such fundamental considerations as what he must pay for a living and how much he can get to pay with, are threatened, in the opinion of most authorities, with a period of fluctuation likely "to try our national stamina and judgment to the utmost." When prices and wages do not keep "at least within hailing distance of each other," it is pointed out, financial crises and "hard times" may be expected. Just now "the whole world wants the goods which are on Uncle Sam's shelves," as the *New Orleans Item* observes in an editorial consideration of "Why Prices Will Stay Up," while wages are threatened with depression by "the demobilization of millions of troops and the release of thousands of employees from war-industries, all of whom must now be absorbed by general business." "In other words," announces an official of the Council of National Defense in a widely circulated bulletin of warning, "we face a continued high cost of living and a possible reduction of wages." President Samuel Gompers of the American Federation of Labor, addressing a New York mass-meeting in celebration of the part that American labor played in the war, in agreement with this judgment, declared to his audience of working people that "we are in greater danger now than at any time during the war," and called upon American labor to "resist to the uttermost" any attempt to reduce wages or lengthen hours.

"By all means let us strive to hold wages at their present level," agrees the *Spokane Spokesman Review*. "But the American people must not unwisely shut their eyes to the fact that the high cost of living is the prop that supports high wages. Knock out the prop, and the wages will fall." This belief in the necessity of continued high prices if we would hope to have continued high wages is very general among our editorial political economists. If prices fall, "business will be disorganized all along the line, and there would be a sudden and dangerous amount of unemployment," declares the *Duluth Herald*. At the same time, numerous journals express the opinion that high wages are not the only factor tending to make prices "abnormally high." "Profiteering" is given as a main contributing cause, especially by editors with radical tendencies. The *Chicago Tribune*, one of several large dailies which are employing skilled investigators to look into the present high cost of living, considers this factor important. In any investigation of prices, says this journal, "we shall find there are elements which ought not be there":

"We shall find 'profiteering,' that is, inordinate charges, protected by artificial conditions which ought to be and can be corrected or removed. The price of a commodity to the consumer is made up of a chain of profits, from those of the producer to those of the distributor. If the processes of production are wasteful, the charge for production will be unduly high. If the processes of distribution are wasteful, the charge for getting commodities to the consumer will be unduly high. The more complicated the latter system, the more the consumer must pay for it."

The *New York Evening Sun*, in a brief comment on "Meat," gives a concrete illustration of another factor that has forced prices upward:

"One does not need to be a patriarch to remember the happy days when he could buy the choicest porterhouse steak for twenty cents a pound, and other meats in proportion. But those who think the war is responsible for all of the increase would do

well to realize that had there been no war at all we might be as badly off. In the last fifteen years the estimated rise in population is about 20 per cent., but in the same period there has been a decrease of 2 per cent. in the total of beef cattle here. The result is obvious in the increased cost of meat, of shoes, and leather.

"Nor is beef the only meat-supply that has not increased in proportion to the population. It is only a part of the whole agricultural problem. 'Back to the land,' or import labor, sums up the possible alternative solution. And how many are really going back to the land?"

A third factor in "this tremendously complicated matter of prices" is pointed out by the *New York Tribune*. A decline in the cost of living and of prices generally is "not usually one of the close sequels of a great war," this authority remarks, and offers an explanation:

"In the last generation an economic writer, after a broad survey, declared that, as a rule, prices were higher after than during wars. This apparently was true for some time after our Civil War. According to the figures compiled by the Aldrich commission, the gold price for a large variety of products (over two hundred) was higher in January, 1866, than in January, 1865, and that was apparently top-notch for the days of the rebellion.

"The fact seems to be that almost every war is accompanied by a large issue of some kind of paper money. In the Civil War it was our greenbacks. In the present war, in this country it was the less obvious, but none the less powerful, expansion of bank credits. With this 'easy money' and with general employment at high prices, there always remains a huge purchasing power that is not quickly exhausted. There is usually much more extravagance after a war than while the war is on. And that may be the case now, not merely in America but in all the warring countries of Europe."

Even taking into consideration all that can be done to stop profiteering, the editors who agree with the *Jacksonville (Fla.) Times-Union* that "Prices Will Come Down" to any noticeable extent in the near future are few and far between. "If wages can be kept up, why should prices fall?" ask several papers, and the *Chicago Tribune* comments:

"High prices in themselves are not an evil. What we are interested in is the relation of the cost of living to our earnings. Periods of high prices have been periods of prosperity. We need to look coolly and thoroughly into the facts of high prices and find out why prices are higher than they used to be.

"Our point, in short, is that uninformed complaint against the fact of high prices is likely to get us nothing but trouble. We ought first of all to ascertain the factors of cost in each step with the understanding that service must be paid a fair profit. When this is done we shall be able to weed out the factors that are not worth the cost or reduce their profits, and we shall avoid attacks upon the factors of profit which it is our selfish interest to protect."

On the other side of the balance, the wages side, extremists of the persuasion that labor editors call "capitalistic" are sure that a reduction is on the way. "The returning soldiers will tend to force a liquidation of wages," prophesied a financial authority, in a statement that received nation-wide publicity, and inspired rather warm denials from labor leaders and labor papers. "Business leaders intoxicated with commercial power must not be permitted to batter down wages," declared *The*

American Coal-Miner, an organ of the United Mine Workers of America, in a typical retort:

"Labor must accept no reductions. Having patriotically mined the coal, manufactured the munitions, built the ships, and offered their sons, that made possible the defeat of autocracy, labor will not accept as its reward a reduction in wages."

Sweeping governmental regulations to produce the gradual return of war-workers and soldiers to peace-time industries are under way, and the *Chicago Daily News* sees reason to hope that, if wages must fall, the process will be gradual, and will take place only after prices have reached a lower level. A very gradual decline in the present high level of both prices and wages is expected by the *New York Journal of Commerce*, the *New York Evening Post*, and several business authorities quoted by the *New York American*. "This would not in the least impair the purchasing power of the workman," *The Post* thinks,

"since wages are relative; and relatively to prices, four dollars a day may mean the same absolute wage as five or six." The *St. Louis Globe-Democrat* also emphasizes this difference between nominal wages and "real wages," as measured by purchasing power, and argues for a "readjustment," which should not be made "arbitrarily, either by employers or employed." Many workers not in the class of those whose wages have been raised by the war would be benefited by a reduction both of prices and of war-inflated wages, the *Houston Daily Post* believes. "There is necessarily a relation between one branch of work and any other branch of useful labor," this daily points out, and this relation will have to be considered in making adjustments:

"Take the case of 750,000 American school-teachers, for instance. Outrageously underpaid and almost living from hand to mouth when the war commenced, they saw their wages shrink in purchasing power until they had scarcely sufficient food.

"Millions of others were in the same boat, and that is the situation now upon the threshold of the task of reconstruction.

"We state it as an economic fact that with the purchasing power of money so unstable, so fluctuating, no one can say now what a just and honest money-wage will be six months hence.

"Indeed, it is not entirely beyond possibility that prices may rise so much higher that the unions for which Mr. Gompers speaks will have to have higher wages or starve."

Price regulation in most industries, following the plan of the Federal Food Board requiring all food-stores to display "fair-price" schedules, is recommended by a writer in the *New York Evening Post* as a means of overcoming the "unstable purchasing power of money," and a minimum-wage law to prevent wage-cutting is advocated by the *New York World*. But the whole situation is so new, so delicately balanced, and so "fraught with unpleasant consequences if carelessly handled" that most commentators confine themselves to attempts to clear up the problem by a statement of it rather than by the offer of specific remedies. As seen by the *St. Louis Star*, the situation takes on these general outlines:

"How to give labor a larger and deserved share of its product without upsetting our industrial system, and especially ruling us out of foreign markets, save for raw products and foodstuffs, to reach which we have built, and are building, a large merchant

Copyrighted by the New York Tribune. (See page 10.)

AND STILL THE BLAMED THING DOESN'T FALL.

—Darling in the *New York Tribune*.

marine, is a problem which will call for all the wisdom, all the patience, all the forbearance, and all the patriotism possess by those who lead labor and those who control capital and the great mass of our population who do not definitely class themselves with either. Democracy is entering a new and brighter day, with more of the brightness of the world for the toilers. It is the task of the people of the United States to see that the entry be one of peaceful progress and not explosion."

MR. KITCHIN'S PLAN OF TAXATION

OBJECTION IS MADE by Mr. Claude Kitchin, Chairman of the House Ways and Means Committee, to a sentence in an editorial quoted in these columns a few weeks ago from the *New York Times*. This Independent Democratic daily was attributing the Democratic defeat of November 5 to popular dissatisfaction with the taxes framed by Mr. Kitchin's committee and, more particularly, to the discontent with his way of doing it. "He openly express his purpose," said *The Times*, "to put his taxes chiefly upon the North, because the North had wanted us to go into the war." This statement, Mr. Kitchin writes us, was "a deliberate falsehood." "I never made such utterance nor entertained such a sentiment . . . or anything akin to it," he avers, and the charge is "without a shadow of foundation."

It was on January 26, 1917, that Mr. Kitchin was supposed to have made the above remark about taxing the North. Turning back through our office file of *The Times*, we find that its

Washington correspondent reported Mr. Kitchin as using these words at that time to a group of Southern Democrats in the Democratic caucus:

"You can tell your people that practically all of this tax will go north of Mason and Dixon's line. The preparedness agitation has its hotbed in such cities as New York. This bill levies a tax on those who have been clamoring for preparedness and are benefiting because of preparedness appropriations."

The next day Mr. Kitchin declared on the floor of the House that this statement of his language was inaccurate and he gave his own version. When the extract just quoted above was read, this colloquy followed, as reported in *The Congressional Record* for January 27, 1917, page 2130:

MR. KITCHIN—"I notice the gentleman from Massachusetts (Mr. Rogers) read a statement from a New York paper—the *New York Times*—in which it is said that I said in the caucus last night that most of this tax—practically all of this tax—will come from north of Mason and Dixon's line. I did not say that, nor anything of the kind. I never mentioned the Mason and Dixon line, nor did I mention New York City; but I will say now that this tax will go to pay appropriations practically all, or most all, of which will go north of the Mason and Dixon line. The appropriation for preparedness will go for the most part to shipyards, munition-makers, and so forth. These happen to be north of the Mason and Dixon line."

MR. NORTON—"Will the gentleman yield? Where does the gentleman think the tax will fall—south of Mason and Dixon's line?"

MR. KITCHIN—"I think most, or the greater part, will be levied north of Mason and Dixon's line."

THE MOMENT OF VICTORY.

French soldiers swarming over No Man's Land after the last shot was fired at eleven o'clock on November 11.

THE FREEDOM OF THE SEAS

GREAT SIGNIFICANCE is attached in Britain to the fact that the Allies have amended the President's famous Fourteen Points so as to enter the Peace Conference without being committed to any definition of the four words "freedom of the seas." The London papers exhibit a lively interest in this question, the most of them indorse the opinion of Lieutenant-Colonel Repington, the military critic of *The Morning Post*, who remarked: "I have not the slightest idea what freedom of the seas means, nor have I met any one who can tell me." If the British papers are a little vague as to the exact definition of the term there is no want of unanimity in their opposition to it. All classes of opinion are agreed that this is a subject that had better be left alone. For example, the *London Times* reports Mr. Macpherson, the Under-Secretary for War, as saying:

"We are an island. Our one security is our Navy. We can never submit to anything that can weaken this one security."

Archibald Hurd, the naval critic of the *London Daily Telegraph*, thinks that freedom of the seas is another way of saying "abolish the right of blockade," and he argues that—

"In war, as recent events have shown, effective freedom of the seas, as of the world, demands maintenance of ancient sea rights which have repeatedly proved to be the salvation of civilization. Philip II. of Spain, Napoleon, and the Kaiser were defeated, and the American Union was saved thereby in the Civil War. Abolition of the blockade and of contraband would reduce the value of sea-power seventy-five per cent., because it would enable great continental armies to be sustained almost indefinitely. The sea controls the land, and so-called freedom of the seas means military autocracy by land."

Another prominent naval expert, Mr. A. H. Pollen, of the *London Pall Mall Gazette*, agrees, and remarks:

"Germany was defeated largely because, at last, she was effectively besieged by sea. Had neutrals been free to supply her, the war might have continued another year. Had all supplies, especially from America, been stopped from the first, it would have been over long ago. Non-combatant trading with Germany has cost Europe and America millions of lives and fifty billion dollars. If this is freedom of the seas, it has been a costly luxury."

The *Manchester Guardian* is the only English paper that professes to know the President's mind on this subject, and it tells us:

"By freedom of the seas he did not mean that naval fortresses such as Gibraltar or fleets should be interfered with, but that in peace or war there should be freedom of neutral navigation except when action was taken by the League of Nations. Submarine action, it was argued, had changed the whole question of blockade, and the two island kingdoms had more to gain by this freedom of the seas than countries with land borders."

In the course of an exhaustive article the *London Spectator* makes this flat statement:

"When the time arrives for presenting to Germany the final terms of peace for her acceptance or rejection, it will be of the utmost importance that all the associated Powers should speak with one voice. To this end it is essential that each Power should frankly state its own point of view wherever that, either in substance or in fact, differs from views expressed by other members of the great partnership. In the affairs of nations, as of individuals, frankness combined with courtesy is an essential element of good fellowship. For this reason it is most desirable that the newspaper press and the public men of Great Britain should make clear without delay that in no circumstances can an island Power, which is also the center of a sea-linked Empire, consent to what is called 'the freedom of the seas' if that term carries the meaning which has usually been attached to it in this country."

The reason for this definite rejection is then given:

"Let us see, then, what would be the consequences of the 'freedom of the seas' that we have always repudiated. President Wilson demands 'absolute freedom of navigation upon the seas outside territorial waters alike in peace and in war.' Now, in peace there already is absolute freedom of navigation. Therefore what President Wilson must mean is 'in war as well as in peace.' That is the real issue. The President of the United States apparently proposes that when two nations are at war they shall only fight on land, or within their own territorial waters. No reason is advanced for this limitation of the area of warfare. War at sea is in no respect more cruel than war on land; in some respects it is less cruel."

"The idea underlying this proposal is that the seas outside territorial waters are the common possession of the whole world,

and what is common to all should not be used as a battle-field by some. That is certainly an attractive idea, but will it bear examination? The sea is not merely a vacant space; it is also a highway. The effect of President Wilson's proposal, strictly interpreted, would be that a belligerent could use the sea as a safe highway for his troops up to the three-mile line, which is the boundary of territorial waters. The Germans, for example,

A GERMAN IDEA OF THE FREE SEAS.

—Kladderadatsch (Berlin).

would be at liberty to organize a gigantic fleet of transports loaded with men and munitions, and these transports might move up and down the coasts of England and Scotland seeking a safe landing-place, and as long as they kept outside the three-mile limit they would be immune from attack.

"Merely to set forth such a proposition is sufficient to condemn it in the minds of islanders who know, whether from history or from island instinct, that their long freedom from invasion is due to the fact that their fleets have ever been ready in war to hunt down the enemy upon the high seas and beat him back to his own coast-line. To expect Great Britain to look on with her arms folded while enemy transports were bearing down upon her coasts is to ask a great nation to commit suicide."

French opinion on this subject runs very much along the same line as the British. Most of the comment in the Paris papers emphasizes the fact that President Wilson has not yet defined what he means by freedom of the seas, but most of the French journals agree with the *Matin* when it says: "If this doctrine means any diminution of the power of the British Navy, France will reject it." The *Écho de Paris*, in its comment upon the unanimity which exists among the Allies, remarks that there is only one possibility of disagreement between the Allies and their American associates—namely, in the interpretation of this phrase. It proceeds:

"Saved as we have been by the naval power of our British allies, and by the blockade which it enabled us to establish, we can not give up the supremely efficacious weapon against any continental imperialism. In order to prevent any danger in the future, and in order to get the most profitable results from victory, may Great Britain and France, closely bound by common sacrifice and identity of interest, finally agree with the great American democracy as to the point provisionally outlined by President Wilson."

Both the *Temps* and the *Journal des Débats* point out how anxious Germany would be to disarm the Western nations, especially England, on the sea, if she could only do so.

SHALL WE TAKE GERMAN AFRICA?

AFRICA FOR THE AFRICANS does not appear on any of the peace programs thus far published. "Self-determination" doesn't seem to go south of Suez. The Africans are still considered a "white man's burden," and as Germany steps out it is now suggested by some of the London papers that America step in and relieve Great Britain, which is already overburdened with colonies. The London *Daily Mail* tells us that some one has to assume responsibility, and it certainly can never again be the Germans:

"In his speech at the Australian and New Zealand Club Mr. Balfour made the welcome announcement that in no circumstances does he think it consistent with the safety of the British Empire to return the Hun colonies to Germany. . . .

"There is not only the question of the safety of the Empire and its communications against piratical attack by U-boats from these colonies. There is also the treatment of the native peoples. Nothing could be worse than the record of Germany in this respect. No other nation would have erected two statues to such a person as Captain Dominik, the tyrant of the Kamerun, who on one occasion, after raiding a village and capturing fifty-two children, placed them in baskets and 'threw them into the Nachtigal Rapids to provide sport for his men.'"

The idea of passing the German colonies over to an international board is disesteemed and rejected by the London *Spectator*:

"If Germany is not to have her colonies restored to her, to whom are they to be entrusted, for they can not be left derelict? Let us say, to begin with, that we have *per se* no land hunger—no aggressive desire to lay hands upon them and to include them in the British Empire. We have plenty of territorial burdens already in Africa and in the Pacific, and we do not believe that even the most acquisitive of Imperial expansionists here would ever think of demanding fresh colonies as compensation, or as substitutes for an indemnity, or as ours by right of conquest. They are possessions which are far more likely to draw money out of the pockets of the British taxpayer than to put money in. If, then, any other solution which is sound and reasonable,

LOVE HIM? WELL, WOULDN'T YOU?

—Evening News (London).

and which will not prove injurious to the native inhabitants, can be found, it will amply satisfy the British people, and, we believe, the people of the Dominions concerned—i.e., Australia, New Zealand, and the South African Union. Against one solution, however, a word of protest must be said, and the sooner the better. We sincerely trust that no attempt will be made to place the ex-German colonies under some sort of International Board or other mixed organization. Colonies are like

children, and a child will never develop or be happily and successfully brought up by a committee instead of by a parent or an adopted parent. Internationalism was tried in the case of the Kongo, with results which no one desires to see repeated. Tropical colonies placed like East Africa and New Guinea can never become independent, self-governing states. Colonies require sacrifices, and very considerable sacrifices, and these will never be made by an International Board."

The ideal solution of the problem would be, says *The Spectator*, to turn over to America the German colonies as they stand, but the London weekly fears that we could not be induced to accept them:

"If we rule out Internationalism, as clearly we must, who else could undertake the job? We are confident that the French, even tho they may, and indeed almost certainly will, find it necessary to take over Togoland and the Kamerun, would regard further African colonial possessions as a burden and an obligation rather than a benefit. The only other possible Power besides ourselves is, therefore, America. And here we may say with complete frankness and truth that the majority of the British people, and we believe of the people of the Dominions, would be delighted to see the Americans take over and protect and develop as large a part of the ex-colonies of Germany as they could be induced to accept. They are good, not bad, neighbors, and neither Australia, nor New Zealand, nor South Africa, nor the Colonial Office as representing British East Africa, would do anything but welcome them as successors to Germany. We are not, however, going to pretend that we are unaware of the dislike of the people of the United States to extending their overseas possessions. In spite of great provocation, and not only disturbance but actual outrage on their borders, the American people, as we know, absolutely refused to accept any territorial responsibility in Mexico or in any part of South America. We feel certain that they would tell us that the burdens which they have taken up in the Philippine Islands and in the Isthmus of Panama afford them not only as much external responsibility as they desire, but a good deal more."

The Spectator shakes its head over the fact that Samoa is likely to be the only territorial acquisition that we shall take over as a result of the war, and says it is up to Britain:

"But if we are right in our surmise that the Americans will never plunge their hands into 'the seething pot' of Africa, and would not even desire to extend their Philippine rule into New Guinea, tho possibly they might take Samoa, the force of circumstances will render it necessary for us, who are already in possession, and whose long-established colonies surround the late German colonies, to incorporate the latter in the British Empire."

America has another duty to Africa, the London correspondent of the *Manchester Guardian* tells us, and that lies in the direction of prohibition:

"Why should not America assist civilization in extending prohibition to the entire African continent? There is at the present moment a bill before Congress which proposes to prohibit the export of drink from America. Soon after the outbreak of war, when the sale of German spirits was cut off from Africa, a trade was started from America to take its place, and assumed considerable proportions. This trade has recently been stopt for the period of the war, and the bill now before Congress is intended to stop it altogether. What is hoped is that at the Peace Conference America will take the lead in bringing about, with the cooperation of the Great Powers, the total prohibition of the unrestricted sale of alcohol both to natives and to white men."

"The chief difficulty, of course, would be with regard to South Africa, where there has been prohibition to the natives for a long time. It is well known that the South-African Government are very impatient of outside interference, but they are susceptible to advice and might follow a lead given in other territories. The experience in South Africa has been that it is impossible, so long as drink is obtainable by the whites, to prevent its finding its way by illicit trading to the natives, and with deplorable results. A large number of responsible white men who have given evidence before a recent commission in South Africa were of opinion that the only proper solution was total prohibition to white men and to black alike."

HOW CANADA VIEWS THE PRESIDENT'S TRIP

CANADA WELCOMES the President's trip to Europe and thinks that nothing but good can come of the President's personal association with the Allied leaders. *The Manitoba Free Press* says that "no one outside the United States regrets the President's decision"; while the *Montreal Herald* hints that when the President sees the results of war at close quarters, there will be less idealism and more practical assistance at the peace table. *The Toronto Mail and Empire* writes:

"It will be a good thing for President Wilson to attend the Peace Conference in France, and the benefit ought to react upon his party and upon the United States. He will come

AS YOU LIKE IT.

PRESIDENT WILSON:—"Either agree with me or I will trot the youngster home again."

—Nebelspatter (Zurich).

into close touch with men like Poincaré, Clemenceau, Lloyd George, Balfour, and others, and he will be dealing with them as equals. President Wilson seldom meets men on that footing. The tradition which has so long held the Chief Magistrate in the United States has kept him from personal contact with the chiefs of state in other countries. This tends to fix his mind too much on the things that are desirable and too little on the things that are practicable. President Wilson's advisers have been his personal appointees, most of them apparently attached to him by strong personal ties, and some by a sense of admiration that rendered them useless as candid critics. The one man by whom it is generally believed the President is influenced is Colonel House, and nobody but the President has any data on which to form an opinion of the practical value of Colonel House's advice.

"In going to Europe and talking with the statesmen and military leaders who have borne the burden of four years of war, who have been grappling with the most momentous problems that ever arose, and in seeing some of the effects of the war, President Wilson will come to close quarters with realities. He is not more likely to instruct and inform those men than they are to instruct and inform him. They are his peers. Their experience of the matters in hand is greater than his. Their good will is as little likely to be questioned. Sensible of the great debt they owe to the United States, there will be every disposition on the part of the representatives of the Allies to defer to the President, and on his part an appreciation of what the United States owes to the Allies will forbid any suggestion of dictation. The conference can not fail to be highly instructive to all who take part in it and to no one more than to the President of the United States."

RUSSIA'S CHAOS LAID TO THE ALLIES

THE LONGER the Bolshevik rule goes on in Russia, the worse the situation seems to grow, until now we read in the dispatches that the Bolsheviks are shooting the Revolutionary Socialists because they are too conservative, and the workers, who were to be made happy under the benign blessings of Bolshevism are unfortunately starving to death and may have to be fed by plain, stodgy, bourgeois America. But the Bolsheviks, who seem to think the art of government is a contest of wits, now argue that the chaotic condition in Russia has been caused by the Allies and the Allies alone. This they make clear in their official organ, the Moscow *Pravda*, in a manifesto "to the workers of the Entente." If the Entente workers can only establish Bolshevism everywhere, we shall all be as happy as Russia. First of all, the Allied intervention in Russia, whose aim is to let the Russian people have an election free from the terrorism of the Bolshevik minority and choose their own government, is represented as a "capitalist" maneuver. We read:

"Like a cruel dog let loose from its chains, the whole capitalist press of your countries howl for the intervention of your governments in Russian affairs. . . . But even now at the very moment when intervention has actually begun, they are lying.

"They are already carrying on military action in favor of the Russian capitalists against the workers and peasants of Russia. The English, French, and American bandits are already shooting the Soviet workers on the Murmansk railroad. In the Urals they are destroying the workers' Soviets, and the Czechoslovak bands, supported by French money and led by French officers, are shooting their representatives.

"The present attack of Allied capital on the workers of Russia is only the culmination of an underground warfare carried on during eight months against the Soviets. From the first day of the October Revolution, from the moment that the workers made it plain that they did not wish to shed their own or others' blood for their own or others' capital, from the moment when they turned out their exploiters and invited you to do the same, from that moment the Allied capitalists took an oath to finish the country whose workers had dared for the first time in human history to throw off the yoke of capitalism and free themselves from the chains of war."

After this pathetic appeal to stop our interference with their bloody work, the *Pravda* goes on to tell us how the wicked capitalists stirred up their equally wicked capitalistic governments, and how the machinations of the Allied statesmen brought poor Russia to such a pass that she had to accept from the Germans the Brest-Litovsk peace. What we ought to have done, it seems, was to accept their appeal at that time to join in a general peace-meeting that would have caught the whole Entente in the same kind of a peace-trap and left Germany holding all her gains in the war. We are thus indicted:

"We were forced to agree to a division of Russia because, altho your governments well knew that Russia was not in condition to continue fighting, they refused to hold an international conference to discuss terms which would have saved Russia and have given you an honorable peace. It was not Russia which had shed its blood for three and one-half years that be-

trayed you, but it was your own governments, which cast Russia under the heel of German Imperialism."

Then when Russia was in German hands, we ought to have continued to send them railway supplies and war-munitions! Here is their argument:

"When we were forced to conclude the Brest-Litovsk peace we declared that 'if the Allies wish to aid us in our sacred work of defense, let them help us to reorganize our railroads and our economic life.' But the Allies replied never a word to this.

"The Allies not only did not purpose to make ourselves capable of defense; they tried by all possible means to weaken us still further, encouraging internal ruin and cutting us off from our broad reserves.

"The Allies warned us that the Germans would seize the Siberian and Murmansk railroads. Actually they were not seized by the Germans, who were never in a position to do so, but they have now been seized by our gracious Allies."

The Bolsheviks refuse to recognize that the Allies have only intervened in the interests of the Russian majority and to stop the saturnalia of massacre, and they make the following attempt to pose as injured innocents:

"The Allies are carrying on war in Murmansk and Siberia, not against the Germans, because there are none of them there, but against the Russian workers, whose Soviets they are everywhere destroying. The Allies have three aims: the annexation of as large a part of Russia with its wealth as possible, the destruction of the workers' revolution, and the creation of a new Eastern Front.

"In agreeing to be used by your governments in this criminal attempt upon Russia, you, workers of France and England, America and Italy, are becoming the hangmen of the workers' revolution. Working Russia is stretching out her hands to you, the proletariat of the Allied countries."

Prof. M. Rostovtzev, a Fellow of the Russian Academy, solemnly warns the Western peoples, in the

London *New Europe*, against the Bolshevik virus and begs for some strong Power—he is not particular which—to step into Russia and clean up. He writes:

"The supporters of the Bolsheviks in Western Europe do not fear the bloody apparition of terror and tyranny. They use the same argument as Lord Northcliffe in his recent speech to American officers; they say that this is a specifically Russian form impossible in Europe. But they forget or conceal the fact that men everywhere are men, and that the wild beast in man is stronger than we thought. What is taking place in Russia can and perhaps must be repeated everywhere. Revolution—this is the synonym for destruction. The war has accustomed people to blood and cruelty, has taught them the use of arms. Is Lenin right and has he a chance of success? Events, it appears, tell us that he is more right than we thought. Bulgaria may follow the same road; in Austria the national question has only temporarily concealed the social; Germany is beaten and embittered—the soil for revolution there is prepared. Europe must remember that every day of the rule of the Bolsheviks in Russia is a trump-card in the hands of the supporters, not of socialism, but of a bloody social revolution. Russia alone is not strong enough to destroy the Bolsheviks. But for any organized force this would be no great matter. The strength of the Bolsheviks would be nothing in a struggle with a strong state."

"DEUTSCHLAND ÜBER ALLES."

—*Esquella de la Tortolera* (Barcelona).

SCIENCE - AND - INVENTION

SURGICAL MOSS WANTED FOR RED-CROSS WORK

A VARIETY OF MOSS that grows freely in bogs and wet places throughout the United States has been found to be much better fitted for surgical dressings than the finest grade of absorbent cotton. The Red Cross is now calling for information regarding supplies of this moss.

NEEDED NOW FOR THE WOUNDED.

Peat-moss, found in bogs and wet places throughout the country, is better for surgical dressings than absorbent cotton. You can report any traces of it in your vicinity and judge the usable kind from the worthless from the forms numbered above. Moss like Nos. 7 and 9 is the best surgical material. Nos. 1, 2, 3, and 5 are useless.

Altho it has been used abroad for thirty years, its surgical value has only recently been recognized here, and altho it is certainly so abundant that no less than twenty-five varieties grow in the little State of Connecticut alone, good sources have only been located here and there. In a recent bulletin sent out by Prof. George E. Nichols, of the Sheffield Scientific School of Yale University, botanical adviser to the Red Cross, interested persons throughout the country are urged to locate supplies of sphagnum, or peat-moss, and report to him. At present it is not the moss itself that is wanted, but reliable information regarding its occurrence. Professor Nichols gives directions in detail regarding how to recognize sphagnum and how to tell its surgical varieties from the non-surgical—for there are both. He writes in *The Journal of the New York Botanical Garden*:

"Along in the late seventies of the last century a workman at one of the great peat moors in northern Germany accidentally sustained a severe wound of the forearm. In the absence of anything better to use, his fellow workmen wrapt up the wound with fragments of the peat which happened to be lying near, and it was not until ten days later that the man was able to secure surgical attention. Imagine the surprise of the surgeon when, on removing the improvised dressing, it was found that the wound had almost completely healed.

"With this incident the use of sphagnum in present-day surgery may be said to have originated. As a matter of fact, however, its use in this connection is not a new thing at all; it is merely a modern and scientific revival of a very ancient practise. In parts of Great Britain, according to Professor Porter, from time immemorial bog-moss has been used by country people in the treatment of boils and discharging wounds. In Scotland and Ireland it was employed many centuries ago for

exactly the same purpose that it is being used to-day; and moss was 'at least recommended for use by army surgeons, both in the Napoleonic and the Franco-Prussian wars.'

"Following the incident which I have related above, investigations were set on foot as to the nature and the properties both of the sphagnum and of the peat to which it gives rise, and a number of papers were published in German medical journals, in which the sphagnum, as related to surgical practise, was discussed from various points of view. And within a very few years this moss came to be accepted in Germany as a standard material for surgical dressings, being widely used not only in private practise but in some of the largest hospitals.

"During the Russian-Japanese War the Japanese used sphagnum quite extensively as a first-aid dressing. 'Many of the wounds thus drest with sphagnum were not inspected again until the patient reached Japan, which often took ten days, but almost invariably the wound was in good condition—much better, it is said, than when cotton was used.' In general, however, the value of sphagnum for use in surgical dressings has not been appreciated until quite recently.

"Shortly after the beginning of the war it began to be feared in England that there might be a shortage of cotton, and experiments were made with various materials—oakum, wood-pulp, and even sawdust—in the hope of finding some satisfactory substitute. It was at this time that attention was directed to the neglected possibilities of the sphagnum. In 1914 sphagnum dressings were given a thorough try-out at one of the large war-hospitals in Scotland, and the results proved so satisfactory that sphagnum was at once recommended for general use. In September, 1915, sphagnum dressings were formally accepted by the British War Office. At that time the total British output of sphagnum surgical dressings was barely 250 a month. A year later it had reached 150,000, and at the present time it is nearly a million. The Canadian Red Cross alone is now putting out between two and three hundred thousand sphagnum dressings each month."

Professor Nichols goes on to say that in this country the sphagnum enterprise, so far as the National Red Cross is concerned, is still in its infancy. But we have long since passed the period of experimentation and have reached the stage where

A WOUND-DRESSING "FROM TIME IMMEMORIAL."

Red-Cross workers at McGill University, Montreal, picking over bog-moss for surgical dressings. In Scotland and Ireland it was employed many centuries ago for the same purpose as it is used to-day.

sphagnum dressings are being produced in considerable quantities. The American Red Cross recently turned out half a million sphagnum dressings for the Italian Army and something over 20,000 a month are now being made for American

war hospitals. Nevertheless we are reminded that the sphagnum work of the American Red Cross is not yet being conducted on the large scale which it is expected that it will be in the near future, and by way of explanation we read the following.

"For one thing, our American Army surgeons, accustomed to the use of absorbent cotton and still having plenty of this on hand, hesitate about adopting a substitute. It is inevitable, however, that sooner or later the value of sphagnum in war-hospital work will be more fully appreciated in this country; for the quality of the cotton is constantly becoming poorer while the price is soaring higher. Moreover, wherever the sphagnum dressings have been tried out in our hospitals they have given complete satisfaction. . . .

"For use in absorbent surgical dressings sphagnum moss is not merely a satisfactory substitute. In many respects, without question, it is superior to absorbent cotton.

DOWNFALL OF THE COOK'S DESPOTISM

England's national community kitchens, a war-time expedient, have made good, and some want them as permanent institutions.

"First of all, sphagnum will absorb liquids much more rapidly than absorbent cotton—about three times as fast.

"In the second place, the sphagnum will take up liquids in much greater amount than absorbent cotton. A pad made of absorbent cotton will absorb only five or six times its weight of water. An average pad made of sphagnum will take up sixteen to eighteen times its weight of water, more than three times as much as cotton, and exceptionally good moss will absorb as much as twenty-two times its weight of water.

"In the third place, the sphagnum will retain liquids much better than cotton. This means, of course, that a sphagnum dressing need not be changed as often as a cotton dressing.

"In the fourth place, 'the better qualities of sphagnum have the valuable property of distributing whatever liquid they absorb throughout their whole mass.' An absorbent pad of sphagnum will continue to suck up fluid discharges until it is pretty uniformly saturated throughout. This is a very important feature. A cotton pad ordinarily ceases to function long before its theoretical capacity has been reached. . . .

"Now, to a certain extent, the cells of any moss-leaf are able to absorb liquids. But the ability of the ordinary green cells in this respect is insignificant when compared with that of the large, colorless cells of the sphagnum leaf. These, because of their capacity for absorption, may well be referred to as the absorbing cells. There are two features in these cells which especially adapt them to the function of absorption. First, the wall of each and every one of the absorbing cells is punctured toward the outside by several minute holes or pores. It is through these pores that liquids are sucked into the cells. Each cell, acting independently, sucks in whatever liquid it comes in contact with until it is full. . . .

"It now becomes perfectly clear why it is that sphagnum is so much superior to cotton as an absorbent. In cotton, liquids, for the most part, are merely held within a tangle of threads. In the sphagnum we find a highly specialized absorbing system, made up primarily of a vast series of absorbing cells, but supplemented by other structural peculiarities of the sphagnum plant."

ABOLISHING THE PRIVATE KITCHEN

THE KITCHEN and its adjuncts may be omitted from the model house of the future and its space utilized for better living conditions. In England, the so-called national kitchens established to do community cooking during the Great War have proved such a success that many urge that they be continued as a permanent contribution to national health and efficiency in time of peace. Dr. C. W. Saleeby, who takes this view, describes the working of the kitchens in *The Graphic* (London). They have, he asserts, cut down waste and inefficiency, promoted health and ease of household administration, and are actually helping to increase the birth-rate. Public kitchens have been frequently operated as charities; but this kind of kitchen, Dr. Saleeby points out, is no more a charity than a public water-supply or a post-office. In the face of their success, it would be as much of a mistake to discontinue them now as it would to resume the private transportation of mail matter, or to substitute wells for the city water-works. Writes Dr. Saleeby in substance:

"The establishment of national kitchens in this country, on principles which have been assumed and followed nowhere else, has been so successful, except where those unique principles were departed from, that I submit them to thoughtful students of social and domestic problems throughout the world, in the belief that they will be no less valuable, *mutatis mutandis*, elsewhere, and without reference at all to the war which has here furnished their occasion.

"In no other sphere of present-day civilized life can be found such waste and inefficiency as are connected with the daily supply and preparation of food. Cooking, further, is not only one of the lower arts, but is a department of applied chemistry. Such being the facts, we usually assume that every properly constituted woman is a 'born cook,' or could be made into all that is needed by a brief course of training. In no other sphere of technique do we make this assumption; in no other do we relegate practically the whole of the problem to small-scale production by amateurs or the half-trained. Yet upon the proper use of food every other activity, personal, social, industrial, national, international, depends.

"Everything that public kitchens have everywhere been in the past ours are not and are not to be. Every one of these kitchens is, and must be, on a sound economic basis. Only on the absolute understanding that the public kitchen is no more a charity than the public water-supply, or drainage-supply, or post-office, can we eliminate the sentiment that only the poor will go to the kitchen, which the self-respecting accordingly boycott. So long as this sentiment exists the kitchen will be found to fail.

"Seeing that there is nothing to apologize for, and that the enthusiastic support of all classes is essential, the kitchen must not be in a side-street, but as well and conveniently and handsomely housed as possible. The mechanical side of the kitchen must be thoroughly equipped. In many instances it will serve the local needs to have a restaurant attached to the kitchen. The greatest success has been attained in large cities by these national restaurants, which also have the advantage of simplifying the financial problems of the kitchens.

"Seeing that the community consists of many kinds of person, with differing dietetic needs, each kitchen should have—and, I am hoping, ere long will have—special departments concerned with the preparation and distribution of the appropriate dietaries for such special classes of the community, as, for instance, expectant and nursing mothers, infants not naturally fed, school children, heavy manual workers. The infant welfare center, the day nursery, the school, public institutions of all kinds whose work includes feeding, will draw from the kitchens as the nutritive centers of the nation."

Kitchens of this kind, Dr. Saleeby points out, are also agents of food conservation, both because the waste of the private kitchen is cut down and also, through the superior digestibility of well-cooked food, by eliminating the less obvious waste in the

alimentary canal. The question of fuel is scarcely less important. He goes on:

"For the past eight months, including the coldest and hottest of 1918, I have profited every day by the Kensington National Kitchen, and it has not been the least boon that the expenditure of fuel in the hot months has been minimized, so that one's little flat is cooler and more bearable in sultry weather. But the consideration that transcends all others is the economy which permanent national kitchens are beginning to effect in the vital energies of our working women. As a life-long student of the birth-rate, which is now everywhere indicating to all but the glass-eyed that, as civilization is now going, it is doomed, I submit that to eliminate the perpetual demands of purchasing, preparing, and cooking food, and washing the cooking implements, is our only chance of preventing the birth-rate from falling to a level which means, in a few generations, racial extinction.

"For decades we have demanded too much of the working-class wife and mother. Her achievements under cruel handicaps are a miracle. To-day she finds herself free in two particulars. She need have no more children than she pleases; she can leave her home and earn a good wage at any of half a hundred occupations. What is to become of motherhood and the racial future under such conditions, totally unprecedented in human history? The vital statistics of all civilized countries furnish the answer. At the least, let us ameliorate the home life and increase the prospects of survival and health for children by abolishing the endless and unnecessary demands of the private kitchen."

THE BANKER'S FAILURE AS A RAIL-ROADER

THE TROUBLE WITH AMERICAN RAILROADS is that they have been run by bankers, and no industry can be operated successfully by men "of the banking type of mind." This diagnosis is an editorial one contributed by *The Engineering News Record* (New York). To a friendly critic who protests that our railroad system has led the world in extent, in development of country, in efficiency, and in low freight-rates, the editor replies that if he had been referring to technical engineering excellence his opinion would have been different. But discussing the railroads as a whole, as part of the industrial scheme, and as such having an economic and a social bearing, he does not hesitate, he says, to repeat the original statement. He goes on:

"Here was, and is, an agency with daily influence on the life of every member of the community, performing a service essential to the nation's life. Yet it has few friends among the people at large; more now than formerly, however, due to the number of those whose pity has been excited at the railroads' plight. The first of the railroads' plagues was the type of management—manipulation, it would better be called—which regarded the properties not as carriers but as media for stock-jobbing operations. Consolidations, with the addition of water, and reconsolidations, with still more water, were the order of the day; while those operating the properties danced riotously over their territories waving insolently the flag of 'The Public Be Damned.' Rebates, car-withholding tyrannies, all manner of schemes were worked to aid the favored few, while the purchasing methods honeycombed the organization with rottenness. Then came the day for the people to have their say, and one national and forty-eight State commissions began to bedevil the carriers. What the stock-jobbers and the grafters had failed to do the people in their vengeance helped to complete. The public at large, which under intelligent management of the properties would have been the railroads' best friend, had been alienated. As a result we have had the drift into bankruptcy which has been railroad history during the past decade. Instances need not be cited. Each one can supply them from his own neighborhood. Probably the mention of the New Haven will furnish sufficient nausea to carry the right impression.

"And that *débâcle* we attribute to the banking type of mind, that type of mind that places personal profit ahead of all other considerations. The engineering type of mind, we hold, would have analyzed the purpose of the railroads—would have seen that service to the public at large, and not to any private interest, was the prime object, would have erected that as the railroads' ideal and builded a machine for its attainment."

A PLEA TO IMPROVE A FATAL WATER-ROUTE

OWING TO ANTIQUATED SALVAGE LAWS and lack of proper guides to navigation, the coastwise waters between Seattle and Skagway, over 1,000 miles in extent, are taking annual toll in wreckage and human lives that should be startling to the public and is discreditable to the two great nations concerned. Such, at least, is the editorial opinion of *The Railway and Marine News* (Seattle, November 1), which calls upon the governments of the United States and Canada to establish a chain of international salvage stations and to appoint a joint commission to report on coastwise laws, lights and aids to navigation, rules of salvage, dangerous reefs, the continuance of surveys, and the charting of unknown waters.

THE NORTHWEST'S GRAVEYARD OF THE OCEAN.

The waters between Seattle and Skagway take this latest toll in the loss on Vanderbilt Reef, off Alaska, of the steamship *Princess Sophia*, with 343 lives and a million dollars' worth of gold-dust.

In only a few years past dozens of vessels, with millions of dollars of property and hundreds of lives, have been lost in these waters, but the immediate cause of the *News's* appeal is the wreck of the *Princess Sophia* with 343 lives lost and a million dollars' worth of gold-dust on board. We read:

"The route from Seattle to Skagway is, roundly, 1,150 miles. The vessels travel through waters of the State of Washington, then across the open Strait of Juan de Fuca, then for some 500 miles or more through British Columbia, and then for the balance of some 500 miles or more in the United States waters of Alaska.

"For years Congress has been petitioned to build more and more lighthouses in Alaska. British Columbia is much better lighted, but there is room for vast improvement.

"Then the rules governing salvage operations are positively awful. Under existing laws, both of Canada and the United States, an American vessel can not save a wreck in British Columbia waters, nor can a Canadian vessel do salvage work in American waters. Oftentimes it is extremely difficult to draw the line between what would be considered by either government as work of humanity and what would infringe on salvage laws. The masters of foreign ships now place their

owners in jeopardy every time they extend aid to a ship in distress on Canadian or American coasts. Laws should be changed and at once, or another and even more horrible disaster will be recorded. . . .

"Without prejudice to either government, let all coastwise laws in so far as they pertain to navigation and safety at sea be so readjusted and made uniform as to meet the peculiar needs exclusively existing in the Inside Passage.

"No such condition or territorial boundary-lines exist in other sections, so the law should be made to cover this international route exclusively.

"If the salvage rules are such that they are a menace rather than a help, and promote money-making on either side of the boundary, then let a commission recommend a permanent International Salvage Bureau, with salvage or life-saving stations, six in number, between San Juan Islands and Admiralty Island, each station to have a powerful salvage craft to be operated by and for both governments without unjust charges.

"Let the world know why, in the past month, an American vessel, with nearly 300 on board, when in dire trouble in British Columbia waters, was compelled to receive permission of officials of that province before her passengers could be transferred to another vessel of the same fleet.

"Let it ascertain if it is not a fact that in the more recent and heartrending case, the wreck being in United States waters, the Canadian owners would have to have permission of the United States before one of its own vessels could attach a line to the wreck or a Canadian salvage vessel could have performed its proper duties.

"Admit that the conditions of this route are unique and demand an exclusive law regulating the navigation of ships and their safety at sea and call for an international navigation or salvage bureau. . . . Do not allow politics to delay the move. Do not permit traffic, immigration, customs, or other important matters to be interjected into the argument, but hold it down absolutely to the protection of those who must travel between the States and the Canadian territory of Yukon and the United States territory of Alaska, the ill-treated stepchildren of those great governments."

AUTOMATIC MUSICAL COMPOSITION—Some time ago a plot-building machine for short-story, scenario, and novel writers was described in these columns. Now there comes to the fore a somewhat similarly arranged contrivance for the musician. Probably the music of which this device is the source will at least bear comparison with the literature that springs from the earlier one. Says a writer in *Popular Mechanics* (Chicago, December):

"Unlike its predecessor, it produces complete compositions, instead of merely skeleton outlines. The possible combinations that may be effected range into the millions. In brief, the apparatus is a rack that is divided into six rows of four squares each. Each square displays two bars. Extending through the rack from side to side are spindles that carry long strips of paper wide enough for two measures, each comprising a treble and bass capable of harmonically uniting with the section immediately joining. By turning the several spindles, the music is arranged in various combinations, just as are the geometric figures rearranged by turning a kaleidoscope. The device is of such size that it may be placed on the music-rack of a piano and manipulated readily."

WHY ARC-LIGHT GLOBES TURN PURPLE

DID YOU EVER NOTICE an arc-light globe that had turned purple? And did it ever occur to you that these purplish globes are more frequently to be seen than formerly? The reason is that the use of magnetite instead of carbon for the electrodes favors this coloration, we are told by *The Electrical World* (New York, November 16). Magnetite

pencils are now common in arc-lights and the color is due to manganese in the glass, used to counteract the green tint caused by the presence of iron. Ultra-violet rays, in which the magnetite arc is rich, either lessens the green or intensifies the violet; at any rate, the net result is the noticeable purplish coloration referred to above. It has recently been discovered by Mr. Alfred Herz that the purple may be removed by heating. Says the electrical authority named above:

"A very curious result of ultra-violet radiation . . . happens to be of considerable importance in practise. This effect is the familiar discoloration of arc-lamp globes, especially those used on magnetite arcs, during service, resulting in a dull-purplish tinge which is both objectionable in appearance and injurious to the light-transmitting power of the glass. Mr. Herz points out quite correctly the general conditions and their causes. All common glass is likely to be greenish owing to the presence of iron in the sand from which it is made. This iron has no useful function whatever and is tolerated in the glass simply

because it is extremely difficult to find sand not discolored with iron, or white silica in any other form at any reasonable expense. It has, therefore, been the practise to disguise this green coloration by the addition of manganese. . . .

"What actually happens is that the iron results in absorption in the green, to balance which more absorption is effected in the red and blue by the addition of the manganese. The glass appears perfectly clear, but slightly dull as compared with, for instance, a brilliantly clear piece of optical crown made in the first place from uncontaminated silica. Just how ultra-violet radiation acts upon the constituents of the glass is not fully understood, but it does bring out a perceptible discoloration such as that which might be produced by the manganese alone; in other words, it far overcompensates the green of the iron. This phenomenon is probably due to wave-lengths less than about 310μ . The magnetite arc lamp, the commonest source of this discoloration, is very rich in such rays; the carbon arc, from which these effects were rarely obtained, is much less strong in this region, while sunlight is extremely weak here and produces the characteristic purplish color only after exposure under favorable conditions for many years. The discovery noted by Mr. Herz—heat treatment at 900° to $1,000^{\circ}$ C.—which removes this discoloration and restores the manganese compound to its original balance, is from a practical standpoint extremely important, for it saves otherwise perfectly good globes for a long-continued useful life. It seems likely that the discoloration is the more marked as the percentage of manganese added in compensation increases, and that some globes of recent manufacture are probably more susceptible to this sort of action than globes made when white sand was more easily obtainable. The whole story is a beautiful example of occult photochemical action and its reversal by a very simple and inexpensive heat treatment."

HOUSES OF A RUBBER-PLANTATION THAT MAKE THE DESERT BLOSSOM AS THE ROSE.

MACHINE-MADE RUBBER

NOT ARTIFICIAL RUBBER, made by machinery, but natural rubber, planted, gathered, and extracted by machinery as the sugar-beet or any other similar crop is handled. A systemized and domesticated rubber-crop was predicted long ago; and now the success of the experiments with the guayule shrub, already noted in these columns, insures this very thing, we are told editorially by *The India Rubber World* (New York). Great areas of this rubber-bearing plant, hitherto known only in the wild state, are now being planted, cultivated, and harvested by motor-driven machines. Thus, not only are desert lands utilized in American territory and in a climate ideal for white men, but the vexed questions of land costs, revolutions, and tropical diseases are wholly absent. The labor problem is almost eliminated. The writer goes on:

"An American-grown rubber, with no overseas handicaps, exposed to no submarine dangers, free from import or export taxes, unaffected by price-fixing by rubber-planters' associations, unafraid of valorization, is almost too good to be true. Were it not war-time there would be a likelihood of another rubber craze, once the prospective profits of guayule cultivation were known. For example, a comparison of *Hevea* and guayule profits at the time of the historic rubber craze would be about as follows, and is starting: *Hevea* then brought \$2 a pound and the profit was about \$400 an acre. Guayule then sold for \$1 a pound and, cultivated, would show a profit of more than \$16,000 per acre.

Or, basing the comparison upon to-day's costs and prices, *Hevea* profits would stand at, say, \$136 an acre and cultivated guayule at over \$6,000 an acre.

"These figures, to be sure, do not include the cost of installing the plantation plant, extraction plant, patent royalties, etc. But cutting them in half to cover these items, there remains a profit of \$1,000 an acre, which is astounding indeed, and almost unbelievable.

"They are also only generally illustrative, as the two problems differ in many details. For example, a four-year-old *Hevea* tree produces, say, two pounds of rubber, and when matured it produces much more. A four-year-old guayule shrub gives at its best two pounds of rubber, and that is its maximum. There is, however, the important fact to be kept before those who plan to start in this line. It is a far more intricate business than *Hevea* growing, and lack of knowledge in a dozen different essentials will spell disaster. There is also the high cost of installation of the plantation and extraction factory. To prepare, irrigate, and plant enough land to keep a ten-ton mill going would cost, roughly, \$500,000, and the mill at least \$200,000. In other words, it is a million-dollar undertaking, and the small operator has no great chance. With the expansion of the business, however, it is possible that central factories will be installed for extraction and that guayule-growers will ship their product in as the beet-root growers do theirs to the sugar centrals.

"As to the grade of rubber produced, plant analysis has found certain types of shrub that carry a high grade of rubber, and these have been hybridized with plants that contain percentages of 20 per cent. or more of rubber. A better grade of gum than the Mexican product is therefore in prospect in the cultivated guayule rubber, some day to figure largely in our markets."

A FIELD OF CULTIVATED GUAYULE RUBBER.

"Almost unbelievable" profits are said to be reaped from such crops, but not by the small operator or the amateur.

A SUGGESTION FOR NEW YORK'S WELCOME.

This sketch for the arch under which the returning boys will march is tentative and may undergo modifications before realized. It is seen standing at Fifth Avenue and Twenty-fifth Street with the Madison Square Garden lower toward the reader's right, and the new Altar of Liberty also showing. For pictorial purposes the marching regiments are indicated moving in a direction opposite to the one they will actually take.

AN ARCH OF THANKSGIVING AND WELCOME

IN SPITE OF THE SUGGESTION that triumphal arches savor too much of the effete tyrannies whose triumphs they used to symbolize, it is an arch that will express New York's thanks for victory and her welcome to her home-coming boys. It will be built by the voluntary contributions of her people, the pennies and dimes of the poor as well as the dollars of the rich, and the police force have been chosen to make the collections. A committee appointed by Mayor Hylan to undertake the erection of a memorial arch in honor of the soldiers of the city who died in the war have reported on the expediency of a temporary arch as a symbol of welcome, leaving to the future the mature consideration of a more lasting memorial. A design by Mr. Thomas Hastings, the architect, has been accepted by the Committee on Art, of which Mr. Rodman Wanamaker is chairman and Paul W. Bartlett is president, with the proposal that it be erected on Fifth Avenue at the northwest corner of Madison Square. In the *New York Times* Mr. Hastings's project is presented, partly in his own words:

"Mr. Hastings said that the Madison Square site, which will be the entrance-way to Fifth Avenue, seemed to be the only place where it would be practical to build an arch on so large a scale and where there would be room for two abutments, one slightly encroaching upon the park itself to the east and the other standing on the small island caused by the intersection of Broadway and Fifth Avenue, now occupied by the Worth monument. The arch is to be fifty feet high and will bridge the entire width of Fifth Avenue at that point, which is a little over fifty feet. The temporary arch will be designed in stucco, and, according to Mr. Hastings, will be very classic, almost Roman in character, with a considerable amount of sculpture, illustrating the events

of the war. A great quadriga will crown the entire scheme, representing the Triumph of Justice or Democracy.

"In a general way, said Mr. Hastings, it was proposed that the arch should be simple and so large in scale as to give great dignity to its design. Such triumphal arches, he pointed out, had been built in many cities: London, for instance, had three or four, and Paris had four, the principal one being the Arc de Triomphe on the Place de l'Étoile.

"It is interesting to note," he said, "that this arch will be about the same width as the Arc de Triomphe, but much lower, because the Arc de Triomphe is surrounded with so much open space that it would of necessity need to be larger than this one."

"Chairman Wanamaker said that the construction of the temporary arch would be hastened as much as possible, so that in some form it would be ready to welcome the returning troops within the next few months.

"This arch," he said, "is to be a free-will offering of the people, and, beginning Thanksgiving week, the 20,000 members of the police and the police reserves will receive offerings of the people through pennies, dimes, and dollars, so that every one may have a part in its erection."

In another place Mr. Wanamaker is quoted on the subject of the people's contribution to the enterprise which will convey its message to the returning heroes:

"Let this be a real Arch of Freedom, built by the people. Let each one in his measure be a part of it, not by gifts, but by offerings from the heart of a liberated nation in gratefulness to the Almighty for his preservation of our principles and in memory of those beloved men and their mothers who have given their all to give us freedom. Let us record in history that the five millions and more from this great city—every one—did his best in this memorial for humanity.

"I am trying to carry out the deep undercurrent of public

opinion that this arch shall be built from the free outpourings of the people, their pennies, dimes, and dollars, and to accomplish this quickly we have decided, with the consent of the Mayor, to take advantage of the generous offer of the police and police reserves of the city, made through Commissioner Enright, that the people's offerings, beginning Thanksgiving eve, be received by the 20,000 members of this force."

When the arch was first projected a purely tentative design was published, mainly, it is said, as a means of visualizing the idea of an arch for the people. The design, unfortunately, struck a wrong note and drew forth much despairing comment. In the *New York Evening Post* was considered the question of the fitness of any arch for the purpose designed, seeing that the history of arches is bound up with deeds not in harmony with the present-day ideals of free democracies. We read:

"Whether the arch, that has for ages been erected to celebrate the triumphant return of emperors and to glorify their tyrannous victories, is the appropriate expression of the feeling of a great democracy on the return of her soldiers and sailors from a war like the one just ended is a question put by some of those interested in the city's proposed memorial.

"Even such arches as have been erected in England and France were primarily erected as city gates and have since become known as arches. Few arches have, in modern times, been erected in a democracy. The one in Washington Square is an exception, and that arch does not embody any inscription of the purpose for which it was erected. Were it not for the groups on the pylons one would not know its meaning as an entrance gate to Fifth Avenue. The arch, as designed by most architects of modern times, is but an adaptation of these arches that have gone before."

Mr. Hastings, in giving out his sketch, took pains to point out that "it was only a sketch to be studied and restudied, and that he counted upon the collaboration of the architects and sculptors, not only on the committee, but others, with the idea of producing the very best arch for the city." What is dependent upon the success of New York's effort is indicated by *The Evening Post*:

"Artists are particularly concerned over the New York monument, feeling that whatever is done here will be the example for the whole country. If made the greatest artistic achievement the occasion warrants, it may arrest the frightful piles of stones now in our town squares as a result of misdirected enthusiasm to commemorate the Civil War, they say. As a result they urge time for consideration of the matter.

"The spot where the Dewey memorial arch stood on Madison Square has been suggested as the logical place for a monument. As a reviewing stand it would not impede traffic and would be removed from the railroad terminals which have been inconvenienced by the war-celebrations before the Public Library.

"A public exhibition of drawings of all known arches is proposed by some artists. Such an exhibit, it is said, should include the designs submitted for the present monument and be held in the Public Library or at the Metropolitan Museum, where every citizen could view it. The idea that the masses are not art-critics is scoffed at by some artists who cite the general appreciation of the Metropolitan Museum as backing for their statements."

THE SCENE OF THE PEACE DRAMA

THE STAGE of the great meeting for settling the peace of the world must be set on a scale commensurate with the act, for nothing matching it has been furnished by history. Timid recorders have stopt short with saying that "there has been nothing to equal it since the Congress of Vienna"; but the *New York Times* protests that "the Congress of Vienna, more than a hundred years ago, did not equal it or resemble it except in the fact that it was a peace conference at which

WHERE THE GERMANS MUST SIGN THE PEACE TREATY.

For Germany this scene will become a bitter memory, though the painter who thus depicts the crowning of William I. German Emperor, in the Hall of Mirrors at Versailles, on January 18, 1871, pictured what he supposed was the apotheosis of Germany's might.

emperors and a king or two were present." This paper further boldly declares that "the meeting has no parallel either in the Congress of Vienna or anything else in history." Nemesis would prefer to abandon the thought of parallels and think of contrasts furnished by this gathering and the one that the same Hall of Mirrors at Versailles sheltered something less than fifty years ago. "In the same room in which William I. was crowned Emperor of the Germans, representatives of the free nations will participate in the greatest peace conference ever held on earth." By a curious paradox, as a writer in the *New York Evening World* interprets these two gatherings, they symbolize in both cases rebirth for the nations that at the moment see only defeat. "Free France was born of the triumph of the first Kaiser over the corrupt and incompetent armies of Napoleon the Little. And free Germany will be born from the ignominy and defeat brought upon her by William the Mountebank." The stage, then, is worth a careful survey before it becomes crowded by the actors in the scene.

"Already the tap, tap, tap of speeter canes and the delicate flutter of phantom fans may be heard in the great room where the courtiers of the Sun King, Louis XIV., gathered to help Mme. de Maintenon and the more interesting women who preceded her in the task she once described as 'trying to amuse an unamusable king.'

"To be sure, the ghosts of Versailles must be rather accustomed to the invasions of democracy by this time. For the

elections of the French Presidents are held in the great château which housed once upon a time the glories of the world's greatest court. And for a number of years several departments of the French Government had offices there. It was only when it was discovered that, because of a lack of telephone communication between the buildings in the historic park, the Big Trianon might burn down without the Little Trianon knowing anything about it, and the château itself go up in smoke without being able to summon a single fire-engine, that certain fire-prevention rules were put in force. And rather than obey them the Government officials gathered up their forces and moved back to Paris.

"The Hall of Mirrors, where the Peace Conference will hold

"When the palace was finally finished, Louis the Magnificent pronounced it too small, and the great southern wing was added. Toward the close of this Louis' reign Versailles was practically a great gambling-hall. The old King was always at his devotions, and the courtiers sought to palliate their utter boredom by high play. Sometimes hundreds of thousands of dollars changed hands in a single evening, and outside the magnificent palace the people were starving.

"Here and there through the fields," wrote La Bruyère in 1689, "one sees certain ferocious animals, male and female, black, livid, and sunburnt, attached to the soil in which they dig and toil with invincible obstinacy. They have a kind of articulate speech, and when they rise up from their work they show human faces, and they belong, in fact, to mankind. At night they crawl away into hovels, where they live on black bread, water, and roots. They relieve other men of the toil of plowing, sowing, and harvesting, and thus seem to merit a little of the bread which they have produced."

"These words were little short of treason in the days of the Great King. Reading them now, one can not help wondering if among the ghosts of gallant gentlemen in high red heels and powdered ladies simpering behind painted fans who will gather during the Peace Conference the speeters of these black, livid, sunburnt creatures may not stalk triumphant. At any rate, we know that they are not triumphant."

Referring to the peculiar

character of this room at Versailles, an *Evening Sun* writer quotes certain "eynies who set little faith to the permanence of treaties" to the effect that "statesmen who sit in a glass house should not be surprized if the nations throw stones." Yet the world, he thinks, is "perennially hopeful," and goes on to fill up the picture begun by his confrère of *The Evening World*:

"Just opposite the center of this Gallery of Mirrors, toward the inner court, is the historic bedchamber of Louis XIV., in which his richly adorned bedstead is still preserved. Flanking the bedchamber to the right and left are two antechambers, the bull's-eye (so called from one of its windows, an oval), and the Council Hall, in which the king's courtiers used to await him. The Hall of Mirrors, the king's various apartments, and indeed all of the one hundred and fifty rooms and halls of the palace are filled with priceless tapestries. To them cling the whispers of countless days and nights of royal folly that came to an end with Louis XVIII. The value of the art treasures in the palace may be estimated at \$5,000,000, but the millions that have been squandered in those rooms can never be added up. . . .

"The section of the Gardens of Versailles known as 'The Trianons' is occupied by two small but exquisitely designed and furnished villas, known respectively as the 'Grand Trianon' and the 'Petit Trianon.' The former, of only one story, was built 230 years ago by Louis XIV. for the famous Mme. de Maintenon. . . .

"The park of Versailles is perhaps a mile square, an enormous basin in the shape of a cross quartering it at its center. On its eastern edge, nearest Paris, stands the Palace of Versailles, the houses of the town huddled around it and the palace chapel rising above it. . . .

"The Palace of Versailles was used not only by Louis XIV., but also as a permanent residence for his court. It consists of two wings, each 400 feet long, separated by a central court, which is about 200 feet square. The two wings are linked by a square building, which juts out into the green gardens and overlooks the fountains in the center of the park.

"The corridor along the western face of this central building, 240 feet in length, 35 feet in width, and 42 feet in height from its tessellated floor to its arched ceiling, is known as the Hall of Mirrors. It is in this stately room that the peace conference probably will be held."

NOW AVENGED.

A famous German picture depicting Napoleon III, at Sedan, escorted by Bismarck, who rides by his side.

its sessions, is 242 feet long and 33 feet wide and measures 43 feet from floor to ceiling. On one side of it seventeen large mirrors look out upon the stilted artificial gardens which were designed by Lenôtre under the personal supervision of Louis XIV. On the other side of the gallery seventeen large mirrors reflect the splendors of the stately room. Paintings representing scenes in the life of Louis the Magnificent ornament the ceiling sides and every available vacancy not filled by a mirror. . . .

"Voltaire estimated that Versailles cost Louis XIV. \$100,000,000, Mirabeau said it cost \$240,000,000, Volney put the figure at \$280,000,000. You can take your choice or believe the more popular tale that the Great Monarch was himself frightened when he saw the bills and tore them up, so that no one would ever know what it cost.

"During the reign of the Magnificent's predecessor, a simple gentleman, whose greatest extravagance was falconry and who put rings on the claws of his favorite falcons instead of reserving them for human birds of prey, Versailles was just a hunting preserve through which ran a road communicating with the Chemin des Bœufs, really just a cow-path along which cattle were brought to Paris to be butchered. Once, while hunting, Louis XIII. was caught in a rain-storm and took refuge in a windmill, so he decided to build himself a modest hunting-lodge. His advisers protested at the project and the mild King was about to give it up when one of the friendlier notables exclaimed: 'Shall we prevent the King from building as simply as the most modest gentleman of his court?'

"And so Versailles began."

Not till 1651, when Louis the Magnificent visited Versailles on a hunting-trip, did the real splendors of the place begin:

"The King had ideas that would have made him talked about on Broadway as a regular fellow. Twenty thousand workmen and 6,000 horses were put to work creating the great park and building the château where the delegates of democracy are to assemble. The task took a long time. In 1685 a courtier wrote in his diary: 'There are more than 36,000 peasants now at work for the King in or about Versailles. These half-clad and half-starved wretches die by the dozens under the strain of the cruel tasks imposed upon them.'

"And when one of these workmen died in the King's service his family received \$2.50!

A WAY OPEN FOR SHAKESPEARE

SHAKESPEARE WITH US has become almost a faded memory, but London has had a playhouse that, all through the war, has seen his plays continuously presented. Nor is it a "West End house," but a section where the so-called "uneducated" classes live. There is a cloud, "like a man's hand," arising that may bode such a revival for us. While New York actors were recently putting in commemorative form their treasured recollections of the greatest *Hamlet* of the American stage, another *Hamlet* in the flesh appeared before them. It is like the cry of "Long live the King!" closely following the one of "The King is dead." Walter Hampden is the new *Hamlet*, and tho his performances are given only at matinees under the auspices of "the Shakespeare Playhouse," he has aroused a whole chorus of critical approval from New York newspaper writers jaded with the plethora of the commercial houses. His performance is called by Mr. Brown, of *The Tribune*, the best which New York has seen since Forbes Robertson. Others who confine their comparisons to Mr. Hampden's American predecessors find no one his equal since Edwin Booth, whose statue we pictured two weeks ago. The critic of *The Globe* is more enthusiastic still:

"In Walter Hampden the stage has found a youthful prince whose physical endowments of voice and presence are little short of ideal. His unconscious grace, his mastery of restraint, and perfectly splendid freedom from the marring touches of pose and mannerism are filled with promise for the future as they are now satisfying to the surfeited theatergoer whose enthusiasm for Shakespeare would be far more keen and ardent were the great master less handicapped by the temperamental excesses of egoism so frequently put on exhibition in the classic drama.

"Hampden's modesty suggests a violent clash with affectation. It is no less surprising than delightful, hearing here and there the unquestionable marks of lack of confidence in his own superb powers. Assuredly those who hold that Shakespeare was never intended for the playhouse will find it necessary to reconstruct their arguments under the influence of this 'Hamlet.' Not that it is flawless by any means, but that it promises to be flawless, and a flawless 'Hamlet' has in it more thrills, more emotional luxury, more naked beauty, and more power to grip an audience than any other play, ancient or modern, can boast of."

Mr. Towse, of the *New York Evening Post*, takes a wider sweep and sees in Mr. Hampden's efforts an earnest of the Shakespearian stage to come again among us. His faith is buoyed up by the notable case of a London theater which, all through the war, has been able to play Shakespeare to the poorer classes and now celebrates its centenary as the oldest London playhouse, barring Drury Lane:

"Mention has been made in these columns from time to time of the performances in the 'Old Vic,' hitherto a most unfashionable Temple of the Muses in London. Now it is attracting a good deal of respectful attention. It has celebrated a centenary and received a formal visit of the Queen. All this would be of little interest on this side of the Atlantic if the old house did not happen to be the only one in the British metropolis which has kept the flag of Shakespeare flying all through the war. In the success of what must have appeared to many persons an almost hopeless experiment may be found a significant lesson and a good measure of encouragement. Here at least is an indication of an instinctive and enduring affection for the best poetic drama among the masses of the people. To all outward appearances the cause of Shakespeare—so far as public performances of him were concerned—appeared to be almost equally desperate in England and America. The death of Henry Irving—who brought brains and artistic conscience to the support of it—was a terrible blow, the effects of which were not much mitigated by the spectacular efforts of Beerbohm Tree, a clever manager, but second-rate actor, except in eccentric comedy or melodrama. When he died Sir Frank Benson was about the only remaining representative of Shakespearian interests in the British theater, and his invaluable labors were confined chiefly to Stratford and the provinces. Promising men like Oscar Asche, Henry Ainley, and Matheson Lang, seem to have drifted away from the literary drama altogether.

In New York, indeed, of late years, thanks to E. H. Sothern, Julia Marlowe, R. B. Mantell, and one or two more, there have been more opportunities of hearing Shakespeare than in London.

"In both cities the tide of serious drama has long been at very low ebb, but there is no particular reason for supposing that the war has had much to do with the phenomenon, which can be readily accounted for by other, and long antecedent, causes."

The important point to dwell on now is that "for four years, under the management of Lillian Baylis, Ben Greet, and others, competent, but in no way brilliant, representations of Shake-

WALTER HAMPDEN AS HAMLET.

Assuredly those who hold that Shakespeare was never intended for the playhouse, says a critic, will find it necessary to reconstruct their arguments under the influence of this *Hamlet*.

peare at low prices have been attracting large and deeply interested crowds of spectators" to the "Old Vic."

"In all this there is a lesson for local application. Why should not what has been done more than once in London be done here? Representations of Shakespeare, even when of only moderate competence, have always met with hearty public response in this city. Some of them have made fortunes for their promoters. But in many cases the mistake has been made of lavishing money and care upon the scenery and costumes and letting the acting take care of itself. What we need more than anything else is a school—such as that provided by Sadler's Wells, the 'Old Vic,' and the Benson Stock Company—for the formation, training, and development of a body of capable Shakespearian actors. Something of this sort exists in the Shakespeare Playhouse of Mr. McEntee, which did such excellent work last season. . . . Undoubtedly it will help to create a new generation of Shakespeare worshipers, but the influence of it is restricted by the fact that, for various reasons, its performances must be given under conditions almost exclusive of the ordinary work-a-day public. Two vital conditions of a popular artistic theater—intelligent representations at reasonable rates—it fulfils. If equally good and cheap performances could be given at night some aspirations which now appear Utopian might be realized. It is tolerably certain that any successful movement in the direction of theatrical reform must start from humble beginnings and make its first appeal to the masses of plain folk, who alone can furnish a long succession of big audiences."

RELIGION-AND-SOCIAL-SERVICE

A CHRISTMAS CALL

THE NEW CALL OF COMRADESHIP is under the Red Cross. President Wilson has voiced it and the hope of the organization is that 75 per cent. of the population will be enrolled. This is a large stride to take from the present status of membership, which was thought phenomenal

every chapter and auxiliary in the entire country." "A large membership means more 'over there' than money," said the chairman of the War Council of the Red Cross, Mr. Henry P. Davison, because it enrolls all America on the side of mercy to heal the wounds of war.

"Our soldiers and sailors are enlisted until the Commander-in-Chief tells them there is no more work for them to do in the war," reads a Red-Cross statement issued from Washington to every chapter; "let every Red-Cross member and worker show our returning soldiers and sailors that to care for their health, welfare, and happiness we are enlisted for no less a period than they are."

"The cessation of war will reveal a picture of misery such as the world has never before seen. The American people expect the Red Cross to continue to act as their agent in repairing broken spirits and broken bodies. The Red Cross can not abate one instant in effort or spirit. Our spirits must now call us to show that not the roar of cannon or the blood of our own alone directs our activities, but that a great people will continue to respond greatly and freely to its obligations and opportunity to serve."

"The President's call to the comradeship is the call of humanity to the people of America. With peace becoming more certain almost every hour, the Red Cross has prepared to continue its work. And the roll-call has been planned to bring to the standard of the 'Greatest Mother' all of the vast resources of America's gigantic sympathy."

"A universal membership is asked by the Red Cross. By that is meant a membership as nearly 100 per cent. perfect as can be obtained. The mark has been set at 75 per cent. as a possibility, for the Red Cross has set itself to win at least 62,000,000 members of a population of 100,000,000."

"It is not to be a campaign or a drive. The chief aim of the week's work is to become dollar memberships. No stress is to be laid upon securing memberships in other classes."

"Each division and chapter, however, has been allotted a certain number of two-dollar or magazine memberships. These are based upon the population of the country; not less than 1 per cent. of its total. When these allotments are gone, no additional ones may be had."

"Another new feature of the roll-call is that children are not to be solicited directly. Children will join through the regular auxiliaries, paying twenty-five cents for membership in the Junior Red Cross. Most of the children will, therefore, be enrolled through the schools."

"Men in service are also taken care of through the plan. From National Headquarters of the Red Cross has come word that team-workers and committees in the coming drive are not to solicit these men for membership."

"These two classes, however, are the only ones barred from general membership and are the only ones which do not have the privilege of joining the Red Cross during roll-call. Every one else will be asked to join."

"Workers will go into office buildings, factories, stores, hotels, industrial houses of all kinds, and everywhere else that they find prospective members of the Red Cross may be had. Plans have been made to give 100 per cent. service flags for institutions of all kinds registering 100 per cent. membership. Buttons are to be given to every new member and to every old one who renews his subscription."

"It does not matter who a person may be. The richest and the poorest in town may join and help the Red Cross. It does not mean merely a membership in an organization, it means participation in the greatest merciful undertaking of all ages. . . ."

"The people realize what the Red Cross has done to aid sufferers in the recent epidemic and in disasters which have occurred at home during the past year. The Red Cross has also saved thousands of children in France, Italy, Serbia and other countries. All these things and a great many more the people realize, and we feel the answer to the roll-call will be correspondingly large. We are after a big increase, but this community will certainly do its share."

RED CROSS CHRISTMAS ROLL CALL

Copyrighted by the American Red Cross.

FOR UNIVERSAL MEMBERSHIP.

Mr. Edwin H. Blashfield thus pictures the Red-Cross Christmas call: "Where Columbia sets her name let every one of you follow her."

a year ago. Events and the necessity to match them make any stride a possibility to-day. According to *The News Service* of the Red Cross the present membership is 19,787,900; but this is in a population of 103,739,000. The percentage then is but 19.1; what the roll for 1919 must jump to in order to meet the expectation of the society is 62,243,400. The answers to President Wilson's summons must be made between December 16 and 23, when "the Christmas roll-call of the Red Cross is held in

CANNON FOR PEACE BELLS

THE UNBIBLICAL SUBSTITUTE for turning swords into plowshares is to recast cannon into bells. History furnishes the precedent, even such recent history as the Prussian conquest of France in 1870, when French guns were turned into bells and hung in the tower of the Cathedral of Cologne. With the tables turned and the earth cumbered with useless metal, what more fitting than that the guns which roared and racked men's nerves should now be used to call them to spiritual peace? Mr. J. Marion Shull, a Washington artist, makes a proposal through the *Boston Transcript* as to the use of captured German guns:

"Silent are the church towers of Flanders and Artois, the belfries of Douai and Bruges. They have been robbed of their treasures, those bells that for hundreds of years have pealed forth the hopes and aspirations of the surrounding countryside. These bells have suffered desecration, their noble metal recast for purposes of war and their erstwhile melodious tongues constrained to speak the raucous tones of battle in behalf of barbarian hosts. But now that it is within our power, let us give them back to civilization. From the metal of captured enemy cannon let there be cast the most wonderful *carillon* of bells of which the world's best makers are capable, and let these be duplicated in sufficient numbers that the capital city of each of the great Allied nations may be provided with a set of these 'Peace Bells.' The architects of all the world would vie with one another to see that in each of these cities should arise a magnificent bell tower to house this *carillon*, a splendid example of fitting architecture, worthy of the theme commemorated."

Two bells in the Cathedral of Cologne, the "Emperor" and the "Gloriosa," were made of the metal of reduced French guns. The former is named after the Emperor who ordered its manufacture from twenty French cannon. An inscription in Latin winds about it in three encircling lines which in translation read thus:

"William, the Most Illustrious Emperor of Germany and King of Prussia, in pious remembrance of the heavenly aid granted him in the fortunate course and conclusion of the last French war, has ordered, after the restoration of the German Empire, a bell to be cast from captured cannon, of the weight of 50,000 pounds, which is to be suspended in the house of God, now nearly completed. In accordance with this pious desire of the victorious prince, the society formed for the completion of the cathedral has caused it to be cast, under Roman Pontiff Pius IX., and the Archbishop of Cologne, Paul Melchers, in the year of our Lord 1874."

And underneath the German imperial coat of arms occurs this verse, here freely translated:

"Emperor" Bell I am named,
The Emperor's name make famed.
On holy ward I stand
For German Fatherland.
I pray, God grant it hence
Peace, welfare, and defense.

Some impulse often leads men and nations to paint themselves in their true colors, so in this case:

"Was it with something of intuitive appreciation of Prussian character on the part of the designer of this bell that the six arms that form the crown are decorated with angels' heads above, and end where they join the bell in lions' feet? Why, a whole sermon could be preached on this alone! The saintly, sacred, outward seeming, but, underlying all, the Beast! And did those lions' claws but typify the grasping spirit of the Prussian war-lord? And the bell, France, that he would grasp entire and sway or strike at will? Perhaps even then some Fate foresaw the jangling discord of the last few years and as a symbol and a prophecy caused the great bell to come from the founder's hand C-sharp instead of C, and, therefore, not in tune with the other bells of the cathedral!

"Again, in 1887, no less than twenty-two French guns were used to cast the 'Gloriosa,' another great bell that was raised with much ceremony to its place in Cologne Cathedral, there to join the 'Emperor' bell in a clangorous derision of defeated and humiliated France.

"We hold Cologne, at least until the acceptance of our terms of peace by the now defeated Germany. Why should we not

exact the restitution of these bells to now triumphant France? War-lust created them, and thus far they have known no other theme than praise of their creator. Let's melt them down and give them back to France, recast for nobler use and given tongues of peace; or break them into bits and let a portion go to each and every one of our Peace *carillons*, there to proclaim throughout the world the triumph of a great and glorious cause.

"Imagine, then, these *carillons* complete and carried high

THE CHRISTMAS WINDOW IN EVERY HOME.
Miss Jessie Wilcox Smith has drawn a picture that the Red Cross
aim to see reproduced in life in every home in the country.

aloft within their towers, there to speak forth from year to year the nation's joys and sorrows; a psalm of thanksgiving now; again a vesper service soft and sweet, or, when we pay our loving tribute to the nation's dead, a solemn dirge shall waft across the river and like a benediction fall upon the hushed and reverent throng. On every state occasion they would serve at our inaugurals, give farewell thanks to the departing president and loyal greetings to the newly chosen chief; do homage to the great of foreign lands and ring glad welcome when they come to us from overseas; would celebrate the nation's birth with jubilant peal on peal; and on the anniversary of that November day that marked the final triumph of Humanity, let there be rung from all the capitals a grand *Te Deum* of World Brotherhood.

"And so in fancy let us dedicate these *carillons* to Peace, and say with Tennyson:

Ring out, wild bells, to the wild sky,
The flying cloud, the frosty light;
The year is dying in the night;
Ring out, wild bells, and let him die.

Ring out a slowly dying cause,
And ancient forms of party strife;
Ring in the nobler modes of life,
With sweeter manners, purer laws.

Ring out false pride in place and blood,
The civic slander and the spite;
Ring in the love of truth and right,
Ring in the common love of good.

Ring out old shapes of foul disease;
Ring out the narrowing lust of gold;
Ring out the thousand wars of old,
Ring in the thousand years of peace.

ARE BOLSHEVIKI MAINLY JEWISH?

FEARS THAT THE JEWS OF RUSSIA may be in line for a series of blood-accusations and pogrom outrages under the free and easy Bolshevik régime lead *The American Hebrew* (New York) to canvas the question how far the Jews may be held responsible for Russian Bolshevism. The writer begins by quoting a recent dispatch to the *New York Times* to the effect that "an extraordinarily great number of children" are being lost in Russia, and that this fact "has given rise to a rumor among the people that the Jews, who are the real rulers of Russia, are using children for ritual purposes." A thing disturbing to Jews in America, says this writer, is the "persistent harping, on the part of many writers, on the generally accepted opinion that Jews and Bolsheviks are synonymous, and that, therefore, as the *Times* correspondent mistakenly repeats, the Jews 'are the real rulers of Russia.'" The writer cites an American and an English authority in his effort to set the Jews right in the eyes of other American citizens:

"A New York business man, whose name the editors of *The World's Work* withhold for obvious reasons, writes a most striking and interesting story on the Bolsheviks in the October issue of that magazine. This man writes apparently from intimate knowledge and personal experience. He brands the Bolsheviks as 'fanatics, dreamers, desperadoes, and theorists born of Russian oppression and international propaganda.' They lack totally any practical ability, and that 'explains why it is that the control of the Bolsheviks and all their high offices are in the hands of the Jews.'

"The author pays his compliments to the Bolshevik high officials, most of those he mentions, from Trotzky down, bearing Jewish names. He describes 'the majority' of them as 'half-crazy exiles that swarmed back to Russia' from the United States. Some he was acquainted with in this country. How half-crazy and how Jewish they are, however, he exemplifies in his comment on Vritzky, the Minister of the Interior. Of him the writer says: 'Altho a Jew himself, he takes the greatest possible pleasure in persecuting the Jews. He denied them the right to celebrate the Passover last year—a thing the Czar never did.'

"This New York business man evidently knows the Jews, both of Russia and America. Knowing them, and understanding the principles and aims of the Bolsheviks, he clearly differentiates between the Bolshevik type and the others. He says:

"Russia, like every other country, has its honorable and able bankers, lawyers, jurists, philanthropists, socialists, students, and business men. There is not a single man of character that I met during my stay that had anything in common with the Bolsheviks. This includes most emphatically the Jews. For this régime this outcast organization enlisted not a single one of the great numbers of educated and talented Jews in the Empire."

"And, unlike most writers on the subject, he makes certain not to leave a false impression regarding the Russian Jews on the minds of his readers. He concludes his article with this emphatic paragraph:

"From what I have said above, the reader may perhaps gather the idea that the Bolshevik movement represents the opinion of the Jewish race in Russia. Nothing would be further from the truth. Ninety-five per cent. of the Jews are bitterly opposed to the Bolsheviks and all their works. It so happens that the Jews are, on the average, the best educated and politically the most conscious group in Russia. Naturally a large percentage of the leaders of any political movement—in a Russia free to express itself—would be Jews. But the Jews of Bolshevism are a small group, and wholly misrepresentative of the great body of their racial brothers."

From England a statement on the authority of Kerensky, interviewed by *The Jewish Chronicle* (London), is regarded by the present writer as "even more authoritative and unquestionable." Jews are claimed as no worse, even if no better, than Letts, Poles, or others who direct Russian affairs from the Smolny Institute. "A Bolshevik is a Bolshevik, no matter what his origin," Kerensky's reply is:

"Yes, I am sorry to say that many Bolshevik chiefs are Jews; unfortunately so for the Jewish people. But, on the other hand, 99 per cent. of the Russian Jews are against the Bolsheviks,

and during the whole of the revolution the Jewish intellectuals and the Jewish masses of all non-Russian races were the most faithful supporters of the Revolution, with which they were closely linked, as well as with the general interests of the country. And altho numerous Jews are to be found among the Bolshevik leaders, they are renegades, most of whom had emigrated, had lost every contact with Russia, and were no longer representative of Russian Jewry. The same can be said of the Bolshevik Letts, Poles, etc. They all have become cosmopolitans, no longer professing specifically Russian feelings and ideas."

Speaking of the part the Jews played in the revolution, Kerensky is said to have paid a high compliment both to the Jewish intellectuals and the Jewish masses, saying:

"When, in the first days of the revolution, I was Minister of Justice, I decreed the full emancipation of the Jews, thus granting them the same rights as to all the other citizens of the state. The Jewish masses at once realized that their fate was now indissolubly bound up with the revolution, and that they had to help it with all their power. They know, indeed, from experience that anarchy, upheavals, political troubles, etc., invariably had the result of provoking pogroms and persecution of the Jews."

"Besides, the intellectuals and the Jewish working classes were always ardent adherents of the revolutionaries, the Socialists, and the Liberals. During the revolution the Jews everywhere worked together with the parties who had coalesced to organize and support the Provisional Government. The Jewish bankers, firms, 'workers' unions, the Bund—they were all for national defense and for cooperation with the moderate bourgeois elements in the upbuilding of the new state."

"Something more. For the sake of the common cause and in order not to weaken the national unity and the solidarity of the people, they never pressed the specific Jewish questions. They preferred to wait until the return of more normal times. The Jewish leaders never wished of their own will to take a prominent part in the government, as they feared that if they assumed responsible positions at once it might rouse the anger of the masses and supply the anti-Semites with an excuse for recommencing an internal struggle."

"I am glad to express the opinion that throughout the revolution the Jews remained, and still remain, faithful to the revolutionary principles and to the integral safeguarding of Russia's interests."

Kerensky holds an opinion described by *The Chronicle* as one "so often expressed by those who know the Russian people," that "the anti-Semitism which raged in Russia, and the outbreak of which is now once more threatened," comes "from the top," that is, "previous to the revolution from the czaristic crowd, and now from the Bolshevik renegades." He is further quoted:

"I am of opinion that there is no ill-feeling between the Russians and the Jews of Russia. My friends, Jews and Christians, and I, were amazed in the first period of the revolution to find that anti-Semitism had completely disappeared, and that there were no traces of it in the masses of the people or even in the Army. I consider it is a criminal act on the part of the Bolsheviks and the renegade Jews who are responsible for the present state of terror in Russia, to have again fostered, by their attitude, the anti-Semitic movement, especially in the Ukraine and in South Russia, where it is acquiring a tremendous force."

What will happen after the exit of the Bolsheviks is thus predicted:

"If the present crisis in Russia ends with the victory of the liberal and democratic elements, and with the triumph of the healthy ideas of the Republic and the first revolution, we will soon reestablish normal conditions of life by action of all the progressive parties and the measures of the Government. Thus the anti-Semitic movement will lose its strength automatically."

"I trust that then it will not be difficult to reestablish the position which Russian Jewry occupied in the first days of the revolution. But if the crisis concludes with the rebirth of the semi-absolutist régime, which will have to gain the sympathy and the support of the masses by sheer demagoguery, this demagoguery will have to draw its strength from the struggle with, and agitation against, all the non-Russian elements, and, in the first place, the Jews."

WAR-TIME-FOOD-PROBLEMS

Prepared for THE LITERARY DIGEST by the UNITED STATES FOOD ADMINISTRATION
and especially designed for High School Use

CHRISTMAS—A TIME FOR FOOD SERVICE

“**P**EACE ON EARTH, good will toward men.”

Never was there any phrase more full of the true Christmas spirit. And not within the memory of any living person has there been a Christmas when this phrase meant so much. The first three words need no comment; after the last four years of blackness and horror, the mere fact of peace means more than any words can put into it.

But “good will toward men” hints not only the spirit for every Christmas, but in particular for this. This is a time for reconstruction, and reconstruction of every sort must be based upon a foundation of good will.

Have you ever stooped to think that, under almost every sort of condition, food is a foremost expression of good will? From the day of a child's birth till it has reached an independent age the parents' chief solicitude is to see that their child is provided with plenty of the right sort of food. In any charitable attempt to befriend the poor or needy, the first effort of all is to feed them. Food makes for friendliness and the achievement of common aims; whether a man feeds a convention of strangers or the guest in his home, he strengthens existing bonds of mutual interest.

FOOD FIRST OF ALL—It is always so, in every affair and relationship of one member of the human race to another. Hunger—national or individual—leads to suffering, crime, injustice, discord, death. Food brings health, normality, the ability to work and plan—in short, *all the qualities most needed to-day by the stricken peoples of the world.*

Belgians, Servians, Roumanians, Greeks, Czechs, Jugo-Slavs, and others look to America for food. They must have food, more than 75,000,000 of them, if they are to bring back their national life to normal, and later develop in a spirit of harmony and energy.

No one can deny that our feeling toward these peoples is one of intensest good will. In other words, we are filled with the genuine *Christmas spirit* for them. What better way for this spirit of good will to take shape than in the sustained determination to send them food—and then to send it.

SPREADING THE MESSAGE—Nor is the occasion one for mere individual saving and sacrifice. There must be missionary work, a spreading abroad of such thoughts and actions of good will. All who in the course of their every-day lives and work come into contact with masses of other people must teach the lesson that good will toward stricken peoples may be expressed first of all by giving them enough to eat.

“Food for the Needy Nations!”—There is a Christmas motto to help along such a Christmas Crusade—a crusade which must never let up while there are hungry ones to feed and this country has food to send.

There are many people who can, and should, help in making others understand that this year Christmas good will—extended indefinitely—will save millions from starvation.

STORES—The retail merchant, whose work of necessity brings thousands upon thousands to his stores, is able to spread the message. He can reach four classes: his employees, his customers, the mere passer-by, and those who read his advertisements. His employees can be instructed, in regard to the international food situation and the means this country must take to meet it, by personal talks and by actual demonstration of conservation methods. Such demonstrations can also be conducted for the benefit of customers. Moreover, a slip containing some pointed food message may be included in packages and in monthly bills. The passer-by, whether he enters the store or not, may be reached by window displays and by food-conservation signs upon the outside of the building or upon delivery wagons. Finally, in many printed advertisements it will be found feasible to include some bit of information upon the food

needs of the world. All such methods have in the past been used successfully. The problem to-day is not so much one of devising new means to enlighten the people as it is to inform them how food problems have broadened. Any information which the merchant needs he can get from his State Merchant Representative of the Food Administration. Nowadays all this should not be taken by the merchant merely as a passing side-issue, but as a vital responsibility which will in the end favorably effect the economic stability of the entire world.

LIBRARIES—The Public Library is another channel of approach by which people have been and may be successfully reached. Every library should have a bulletin-board especially devoted to notes on food conservation. Maps, charts, and pictures illustrating food-production and food needs ought to be prominently displayed. All material relating to local food-production and local food industries as well as works on commercial geography, economics, and agriculture should be readily accessible to all users of the library. And especial attention should be paid to simplifying the food situation of the world so that it can be easily grasped by children. Throughout past months public libraries have done much to promote food conservation throughout the country, but beginning this Christmas they should press the work with redoubled vigor.

SCHOOLS—And finally, through the schools and teachers of this country, the spirit of this Christmas Crusade which has been mentioned may be developed.

The food needs of the world and the efforts which we as a nation must make to supply them may be fully explained in the class-rooms of every grade, and yet so mingled and interwoven with the regular lesson as in no way to interfere with it. For instance, in history special attention may be paid to food conditions during and after other wars. In mathematics problems may be arranged using and driving home all sorts of food statistics. In geography special attention may be paid to the foods which are raised in various parts of the world and the routes by which these foods may be transported to stricken Europe. And the same principle of teaching holds good for other branches of study. Blackboard work may concern itself not merely with maps, but with exercises which utilize some food slogan. Many schools have already conducted competitions in the drawing of food-posters.

Outside of the regular classroom exercises, when the whole school is assembled compositions may be read or short speeches delivered upon foreign food problems and our duty toward solving them. It may even be found possible to arrange tableaux expressing the same great message.

And in addition to all these indirect methods the teacher may well dwell directly at frequent intervals upon food problems caused by the great war, and upon how it is the duty of this nation to help.

The ingenuity of the individual teacher will suggest methods of linking up our need to feed the world alongside of the undying spirit of Christmas “good will.”

ALL CAN HELP—Many other groups besides those mentioned can, this Christmas, fulfil the high mission of spreading broadcast the knowledge that when people speak glibly of “reconstruction” which this country must undertake, that should mean first of all sending food to those who are hungry. The speed with which Europe can regain her equilibrium after the upset of war depends at bottom upon proper nourishment. Until that nourishment is attained, neither business, government, nor social order has a chance to regain normality.

Everything depends upon how well America responds—upon whether the Christmas spirit of good will becomes the every-day spirit.

This Home Repair Guide Free To Every Tire User

No matter what kind of tires you use, send your address and we will mail you, without cost, one copy of this valuable new repair guide.

Now that tires are costly and hard to get, it is more important than ever that you watch for cuts in your tires and prevent serious and expensive repairs. "Guide to More Tire Mileage" tells just what you've always wanted to know about these minor troubles.

Read About

Inner tubes Valves Street car track wear
Small inside fabric breaks Under-inflation

How to Fix

Tube punctures Rut-worn casings
Rim-cuts Blowouts Plain cuts
Bad alignment Misapplication of chains
Tread patches, etc.

Many Illustrations Shown

These and many other causes of tire wear are illustrated in halftone reproductions of actual worn tires. This valuable book is free to you regardless of what kind of tires you use. Don't wait. Send your address while these books last.

In Tireland the Miller Cords are ranked the phenomenal tires. They gained this prized position by introducing Uniform Mileage and also the tread that is Geared - to - the - Road. These tires wear alike under like conditions because of their uniform handwork. They are oversize and elastic, and give and take as they roll along, thus neutralizing road shocks. No motoring sensation is comparable to riding on Miller Uniform Cord Tires. And no tires cost you less per mile.

The Miller Rubber Company
Dept. A88 Akron, Ohio

When having Tires and Tubes repaired by others request the use of Miller Repair Materials and you are sure of a longer-lasting job. (213)

CURRENT POETRY

THAT industrious anthologist, Mr. William Stanley Braithwaite, has collected in the *Boston Transcript* "the pan of the American poets" on Victory and Peace, and a very representative gathering it is. All the great leaders of the Allies have their praises sung, and from this section we select a tribute to our own leader overseas:

TO GENERAL PERSHING

BY AMELIA JOSEPHINE BURR

You led our sons across the haunted flood
Into the Canaan of their high desire—
No milk and honey there, but tears and blood
Flowed where the hosts of evil tread in fire
And left a worse than desert where they passed.
Your eyes were clear to see the snares that lay
Before those boyish feet that marched so fast—
Your heart and hands were strong to clean the way.
Charged with great cares, your soul did not forget
The anxious women here across the sea.
As might a father for his own, you met
And fought an older foe than Germany.
Now, now at last, back from the silenced guns,
Crowned by our blessings you shall lead our sons!

Corinne Roosevelt Robinson sings of the impossibility of "peace without victory":

TO PEACE, WITH VICTORY

BY CORINNE ROOSEVELT ROBINSON

I could not welcome you, O longed-for Peace,
Unless your coming had been heralded
By victory! The legions who have bled
Had otherwise died in vain for our release.

But now that you come sternly, let me kneel
And pay my tribute to the myriad dead,
Who counted not the blood that they have shed
Against the goal their valor shall reveal.

Ah! what had been the shame, had all the stars
And stripes of our brave flag drooped still unfurled,
When the fair freedom of the weary world
Hung in the balance. Welcome then the scars!

Welcome the sacrifice! With lifted head
Our nation greets dear Peace as honor's right;
And ye the Brave, the Fallen in the fight,
Had ye not perished, then were honor dead!

Here is a fine poem of sober victory:

THE NEW VICTORY

BY MARGARET WIDDEMER

Victory comes:
Not hard and laughing as she came of yore,
Her scarlet arms heaped high with spoils of war;
Her slaves, to beating drums,
Low-bent and bearing gifts. . . .
The black cloud lifts,
And, lifting our long-weary eyes to see,
There dawns upon our sight,
Majestic, crowned with light,
Stern and so quiet—she must keep her strength
To build at weary length,
Over again, our scarred and shattered world—
This, then, ah, this is she,
Our graver Victory.

She follows down the furrows
War-turned across the world,
Where still the spent shell burrows,
Where the black shot was hurled,
And sows the wheat and corn.
The world, from anguish born
Again from its old grief,
Looks up, athirst
And hungering,
Daring to dream again
Of flowers unhurt, and unstained rain
And love and spring:

Knowing that she shall build each place accurst
Into a thing that may some day again
Be our once land of comfort and delight,
Of ease and mockery . . .
Even forgetfulness:
Even the gift to bless.

Victory paces slowly through the lands:
No lash is in her hands.
She builds herself no triumph-arch for cover,

Grape-Nuts

helps many a child along
the road to sturdy health.

This food is made of whole grain, is appetizing and easily digested. It is rich in cereal sugar, and answers childhood's call for something sweet—at any time of day, and with perfect surety of satisfaction.

The Sugar in Grape-Nuts

is not added, but is self-developed in the making by processing of the wheat and barley from which the food is made.

Grape-Nuts has been a favorite food with children, as well as adults, for many years. And its success as a builder of growth and strength is so apparent under trial, that once used it continues as a stand-by food of the family.

Naturally sweet, Grape-Nuts requires no sugar; it is fully cooked, and there is not a particle of waste—very important considerations these days.

Grocers everywhere
sell Grape-Nuts

"There's a Reason"

Peace Forces Aggressive Selling Methods

WAR orders came easily. But peace orders will require intensive selling effort. Competition will be keen. Smaller profits will necessitate quicker turnovers. Speed and economy in selling your goods will be imperative!

To regain the markets you may have lost during the war—to find new customers—to back your salesmen to the limit—you need a complete up-to-date mailing list. And to make the most effective use of your list you need the Addressograph.

The Addressograph makes direct advertising profitable and easy. Without "showing your hand" to your competitor you can shoot straight-to-the-mark—quickly mail letters and circulars that pull results.

The Addressograph addresses circulars while they are timely—before they lose their "punch"—fills in letters exactly like typewriting, but 15 times faster. It saves time and money—insures accuracy in writing names on any or all of the forms listed to the right.

FREE TRIAL

Let us prove the saving on your own work. Our representative will call with a \$60 Ribbon Print Hand Addressograph. He will demonstrate it at your desk. If desired, he will leave it for FREE TRIAL. Just mail the coupon.

IVORY PY-RA-LIN

(A du Pont Product)

In each piece there is a rich, luxurious ivory-like beauty that tempts the eye—there is a usefulness that pleases the sense of thrift—and there is patriotism too—the thought of American made merchandise for Americans.

Ivory Py-ra-lin is on display now in most of the good stores. The Christmas supply is limited. Do your shopping early and look for the name stamp on the genuine.

Brochure upon request.

No common marble toy—
She is too great for joy.
She who upbuilds
Each little shattered home
And brings men back to it: and lover gives to
lover,
And to the shattered soul its faith again,
And to the world continuance of God—
How should our praise for her
In high crowned buildings stand—oh, how be pent
In built or written thing?
The stable world itself is her great monument!

Next a vision of the league of nations:

THE WAR AT HOME

BY PRIVATE WILLARD WATTLES

God of our fathers, with bowed heads we come
In this glad hour when the unscathed rejoices,
Strike Thou each little boaster awed and dumb
Before the flame of Pentecostal voices.
Our youth has stormed the hosts of hell and won;
Yet we who pay the price of their oblation
Know that the greater war is just begun—
Which makes humanity the nations' Nation.

Here is an admirable poem in the newer
style which gives us a vivid picture of the
boys marching home:

AMERICA'S HOMECOMING

BY ARCHIE AUSTIN COATES

Tramp, tramp of men,
Men of the East and West,
Men of the North and South,
From Maine and New Mexico.
(They had said we were dead at heart!)

Tramp, tramp of men
Back from the pits of France,
Back from the shambled towns—
Out of the rain of blood,
Rumble and lunge of guns
Blundering down the ways,
Sounding in avenues,
Guns that had dragged the roads
Of France of the million scars,
Sloughing and slipping—and sucking through the
mud,

Straining on their chains
With the crashing trucks, . . .
Guns triumphant from France,
Sullen and grim—long stilled,
Men pouring back from France,
(They had said we were cravens all!)

Tramp, tramp of men, . . .
Men—and more of them after!
Back to the Western woods,
Back to New Hampshire hills;
Southerners, Georgia-bred,
Soft in their speech and eyes,
Coming—coming—and coming—
Men, and more of them after!
Men that Manhattan gave—
Men from Chicago and Butte,
Men coming back to their desks
But nevermore blind to the stars, . . .
Men of blood and dreams,
Men of purpose and pride.

The march of a million men,
And a million more of them after!
Flooding the Eastern coast
Is American vision and strength,
Tanned from the suns of the steppes,
Ruddy cheeks from Verdun,
Muscles made at Mihiel . . .
(And they'd said we were soft from goit!)

Tramp, tramp of men,
Men and the smell of men,
Swinging shoulders of men,
The sun on their bayonets,
Sun on their flags . . . and scars!
Songs and the laughs of men,
Thoughtful eyes of men
And the crude, broad jests of the male.

Tramp, tramp of men
Fresh from the Flemish hell,
Hot racing blood from the West,
Red with the flame of Youth,
Red with success and joy.

Glory, America men,
America's heart full of song;
America's head in the stars!

America's thundering force
Wreathed and victorious, grand!
And they said we were dead of soul!

Louis Untermeyer has a word to say of
what the boys must face on their return:

RETURN OF THE SOLDIER

BY LOUIS UNTERMAYER

The last flash . . . and the hideous attack
Dies like the wisp of storm-discouraged flame;
And so on these battered heroes will come back
The same, yet not the same.

They who have handled words in No Man's Land
Will never be the old and abject crowd.
They will not grovel and they will not stand
What used to keep them cowed.

They will be dumb no longer, they will speak
In tones they learned beneath a blood-red sun;
A constant menace to the cowardly meek
And to all wars but one.

Strengthened to fight what all the world abhors,
Hypocrisy and squalor and disease,
They will attain, even through war on wars,
What they had lost in peace.

Finally we have one of Vachel Lindsay's
characteristically ecstatic chants:

SEW THE FLAGS TOGETHER

BY VACHEL LINDSAY

Great wave of youth, ere you be spent,
Sweep over every monument
Of caste, smash every high imperial wall
That stands against the new World State,
And overwhelm each ravaging hate,
And heal, and make blood-brothers of us all.
Nor let your clamor cease
Till ballots conquer guns,
Drum on for the world's peace
Till the Tory power is gone,
Envenomed lame old age
Is not our heritage,
But springtime's vast release, and flaming dawn.

Peasants' rise in splendor
And your accounting render,
Ere the lords unnerve your hand!
Sew the flags together,
Do not tear them down,
Hurl the worlds together,
Dethrone the wallowing monster
And the clown.
Resolving only that shall grow
In Balkan furrow, Chinese row,
That blooms, and is perpetually young,
That only be held bright and clear
That brings heart-wisdom year by year,
And puts this thrilling word upon the tongue:
"The United States of Europe, Asia, and the
World."

"Youth will be served," now let us cry,
Hurl the referendum,
Your fathers, five long years ago,
Resolved to strike, too late.
Now
Sun-crowned crowds
Innumerable,
Of boys and girls
Imperial,
With your patchwork flag of brotherhood
On high,
With every silk
In one flower-banner whirled—
Rise,
Citizens of one tremendous state,
The United States of Europe, Asia, and the
World.

The dawn is rose-drest and imperaled,
The guards of privilege are spent,
The blood-fed captains nod,
So Saxon, Slav, French, German,
Rise,
Yankee, Chinese, Japanese
All the lands, all the seas,
With the blazing rainbow flag unfurled,
Rise,
Rise,
Take the sick dragons by surprise,
Highly establish,
In the name of God,
The United States of Europe, Asia, and the
World.

PERSONAL GLIMPSES

THE WORLD'S GREATEST NAVAL SURRENDER

THE annals of naval warfare hold no parallel to the recent surrender of the German Fleet. Germany groveled in the sunny mist of the North Sea, cabled the New York *World* correspondent, when, "cowering like a dog with tail down, she surrendered her future on the water." With amazed contempt the personnel of the British Grand Fleet looked at the men they were compelled to meet, not in the glorious uncertainty of battle, but by appointment.

"You understand we are driven to this," said the German Admiral to Admiral Beatty. "There is no child-life left in Germany. All are dying of hunger. We ask you to accept the full crews instead of only half the personnel. We can not feed them, and we dread more trouble." This amazing request was refused by Admiral Beatty, whereupon the German commander produced a document for the British Admiral to sign, which stipulated that the German crews would not be ill-treated.

"Tell them they are coming to England; that will be enough," Beatty replied as he tore up the document. And then the bloodless Trafalgar began, ending in the German ships "being fast bound in misery and iron in British waters—the tragic semblance of a navy which lost its soul," as the New York *Sun* correspondent observed before giving the following description of the memorable events:

It was generally known that under the terms of the armistice the German ships were unarmed and manned only by navigating crews, but the Navy did not believe in taking chances. Treachery was not expected, but all was ready to blow the German ships out of the water should any trick be attempted.

On the preceding night the Grand Fleet lay at its moorings in the Firth of Forth. Above the bridge were the battle-ships, destroyers, and submarines. Conspicuous among them was the French armored cruiser *Admiral Aube*, flying the flag of Rear-Admiral Grassel, which, with two destroyers, represented the French Navy in the final act of the great drama.

Below the bridge were battle-ships, battle-cruisers, and light cruisers.

Again a prominent place was taken by the ships of a partner nation in the struggle. The *New York*, flag-ship of Admiral Rodman, with Admiral Sims and his staff aboard, and the *Florida*, *Wyoming*, and *Arkansas*.

Canada was above the bridge with the first battle squadron and *Australia*. *New Zealand* was below with the second battle-cruiser squadron. Throughout the night the flag-ship was in touch by wireless with the German Fleet, noting its progress to the place of rendezvous.

At two o'clock in the morning the fleet was reported seventy miles out. The German envoys who came from Königsberg stated their fleet would be unable to steam more than twelve knots an hour, and that that would be speed enough for punctuality. A few minutes before four o'clock the first battle squadron, led by the *Revenge*, the flag-ship of Vice-Admiral

Madden, began to move. The fog had lifted after five days and the lower air was clear. Clouds hid the moon and stars and made the night dark.

Silently in the darkness ship followed ship down to the open sea, an ominous and awe-inspiring procession, the black shapes of each indistinctly silhouetted against a sky canopied by a smudge of smoke. The *Queen Elizabeth* took her place at the rear end of the line. At daybreak the Grand Fleet was at sea, and in the gray morning mist the squadrons took their position in two columns, each a single line. The two lines moved toward the on-coming enemy. Half-past eight came, and with it a report that the German Fleet had been sighted by our destroyers.

An hour passed, and the rising sun began to tinge the sky with gold. Presently, four or five miles away on the starboard bow, there came into view a sausage balloon towed by the *Cardiff*. First there was a mere faint speck of gray mist with a slight smoke-trail stretching out below it. Then behind the *Cardiff* there emerged from the murk the first of the German ships.

At the three miles range they appeared to be little more than slowly moving silhouettes coming abreast. The British Fleet turned by squadrons sixteen points outward, wheeling back on its own track and retaining positions on both sides of the Germans to escort them to the anchorage.

Between the lines came the Germans, led by the *Cardiff* and looking like a school of leviathans led by a minnow. Over them flew a British naval airship. First came the battle-cruisers headed by the *Seydlitz*, a ship which carries the scars of the Dogger Bank battle of January, 1915. The *Moltke* and *Hindenburg* followed and then the *Defflinger*, which also was badly battered in the Dogger Bank engagement, and finally the *Von der Tann*, which, according to report, suffered heavily in the naval air-raid at Cuxhaven.

The other heavy ships of the Grand Fleet had left the flag-ship well behind when the German and British destroyers came out of the mist. In ordered array flotilla after flotilla moved across the sea, the Germans completely encased by the British. So vast was the area they covered that both the head and rear of the column stretched away into the haze and were lost to sight. The eye could not count them. They were themselves a tremendous armada.

All this time the great captive fleet, guarded by the fleet which encircled it, was moving slowly at an almost funeral pace, certainly not the twelve knots stipulated by Admiral Meurer, toward the anchorage appointed for the Germans off May Island, a rocky island which stands in the middle of the Firth of Forth and some miles to the eastward of the bridge. Presently, as the German ships came to rest, it was seen that on every side of them were their British warders. Then the main body of the Grand Fleet made its way back to the stations from which it had started early in the morning.

A description of the surrender will not convey to the mind any conception of the scene, but it must be placed on permanent record, for it indicates the disposition of hostile fleets such as never had been seen before and will in all likelihood never be seen again. Operations were perfect both in organization and execution. From a purely spectacular point of view the pageant was robbed of some of its splendor by the low mist which blurred all outlines and refused to yield to the cold brilliance of the sunshine, but the significance of the

EVERY time your car skids there is a *double waste*—the gasoline consumed in righting it and the developed power of the engine.

It is an engineering fact that the tread of massive Vacuum Cups on every Vacuum Cup Tire, by firmly gripping the pavement, saves gasoline and definitely eliminates wasteful skids by utilizing every ounce of a motor's developed power.

The Vacuum Cup tread is the *only* tread guaranteed not to skid on wet, slippery pavements.

Vacuum Cups grip the surface at any speed. Each Cup, as it is pressed against the pavement by the car's weight, is sealed with vacuum suction. This seal is broken only by the forward rolling of the tire gently lifting the Cup edgewise and releasing the vacuum. As a number of Cups always exert a simultaneous grip, there is not a moment you are not immune from the dangers and waste of skidding.

This same principle of releasing the Cups edgewise also prevents loss of power and speed retardation, the gasoline consumption being no greater than with other tires of equal thickness and weight.

Vacuum Cup Tires are sold at approximately the cost of ordinary 3,500 mile tires and at much less than any other make carrying equal mileage surety.

They are *guaranteed*—per warranty tag—for

HEINZ

Fig Pudding

H EINZ Fig Pudding is a new dessert that will always be remembered with delight once it has been tasted. The fig itself is a delicious fruit, especially well adapted to the making of confections that are rich, yet light and wholesome, and "pudding" is a synonym for all that is toothsome in desserts.

The name "Heinz" insures right preparation and is your full guaranty that all the qualities suggested by the word "pudding" have been realized to the utmost in this supreme delicacy.

HEINZ

Mince Meat and Plum Pudding

Mince pie is, as it should be, the foremost American dessert when it is made with Heinz delicious Mince Meat. Sold only in glass and tins—never in bulk.

Some people have Heinz Plum Pudding only at holiday time, but it should be served oftener, it is so wholesome and so delicious.

All Heinz goods sold in Canada are packed in Canada

meeting and the procession was more important than its appearance.

Men in uniform watching the German ships come into view vied with one another in identifying them one by one, sometimes with the aid of books and silhouettes, but underneath the momentary excitement of determining whether this ship was the *Hindenburg* or the *Derflinger*, there was deep satisfaction that the tedious task of the Navy had been fulfilled.

As the *Queen Elizabeth* steamed along the lines she was cheered again and again by the men who crowded the decks of the ships she led. The day came to a peculiarly fitting close. An hour before noon the Commander-in-Chief issued the following signal to the fleet. It was received beyond doubt by the Germans: "The German flag will be hauled down at sunset to-day. It will not be hoisted again without permission."

The German ships were flying the German naval flag at the main top. At four o'clock all hands on the *Queen Elizabeth* were piped aft. They had assembled and were waiting perhaps for a speech, when suddenly the bugle rang out, "Making sunset!" Instantly all turned to the flag and saluted. The next minute cheers for the Commander-in-Chief were called for and given with deafening heartiness. Admiral Beatty acknowledged the tribute with "Thank you," adding, "I always told you they would have to come out."

Then the ship's company went back to their duties. Meantime the Germans in seventy-one ships which lay out of sight in the mist had undergone the mortification of seeing their flag hauled down, perhaps never to be hoisted again.

HOW THE MEUSE WAS CROSSED BY AMERICANS

THE American crossing of the River Meuse, writes an Associated Press correspondent, will go down in history as a great deed of valor, and the troops who accomplished it will rank as heroes. The work, indeed, was a strategic move of unusual daring. It involved the forcing of a way over the 160-foot river, a half-mile-wide stretch of mud, and a 60-foot canal in the face of a tremendous enemy fire. It also involved swimming by those who knew how and the pulling of others over on ropes. The operation is thus described:

The order to cross the canal came at mid-afternoon Monday. The troops received their grim instructions under a sun which was shining for the first time in days. The men knew almost as well as their commanders the difficulty of the task and realized how well-nigh impossible its accomplishment would be. Yet they never doubted or hesitated.

The orders were to send over one brigade first, and if it failed to send another, and others one after the other if this became necessary. It was with dash that the Americans tackled the problem. Theoretically they had the choice of crossings anywhere for five miles. Actually they were limited to one point, where two-thirds of a mile of mud lay between the river itself and the canal that roughly parallels the river.

The Germans were too firmly entrenched at all other spots. They had not protected themselves with trenches here.

Now For Home Service.

JOHNSON & JOHNSON have a message for druggists. We wish it could be told personally to every druggist. As this is not practical, we are publishing it.

When war was declared, the Government called upon Johnson & Johnson to furnish enormous supplies of surgical dressings for first-aid stations and hospital units.

Since then, hundreds of millions of bandages have been made; thousands of tons of cotton have been used; miles of adhesive plaster have been spread; an army of loyal workers have kept our vast laboratories in operation day and night. It was our great privilege to serve our country to the full extent of our resources.

These war-winning orders necessarily took precedence over the

great public demand, and, consequently, there may have been times when customers could not make their usual purchases of Johnson & Johnson Red Cross products.

We appreciate the patriotic, whole-hearted support given by the druggists during such periods in telling customers that our products were "on active service."

Normal conditions are not yet fully re-established. But adequate Johnson & Johnson supplies are filling the regular channels, to reach the public through the service of the druggist.

The druggist renders, ordinarily, an invaluable service to his community. In these times of readjustment we are confident the public will take advantage of it all the more.

Today, as in the past, Johnson & Johnson quality is the standard, and values are greater than they have ever been.

HOTAKOLD
VACUUM VESSELS

only because they never dreamed that the Americans would be so daring as to try to negotiate the passage. This was a short distance north of Brioules.

All the swimmers of the first brigade were first singled out and put in the van. It was intended to attack in this way on the theory that the swimmers were less likely to be hit by the Germans owing to the fact that they would be nearly submerged. On the other hand, they could carry with them ropes and other paraphernalia for assisting non-swimmers across. The building of pontoon bridges was put off until at least some American elements had crossed the river.

Notwithstanding some losses and the fact that the swimmers could not defend themselves, many of them reached the east bank of the river with lines which were drawn taut across the stream. Others floated on rafts and collapsible canvas boats. These men had less success than the swimmers, because they were better marks for the enemy's rifles and the boats could easily be sunk by bullets even if their occupants were not hit.

Close to where the swimmers crossed the engineers began to throw over pontoon boats and a tiny foot-bridge. The pontoons were destroyed by the enemy, but the bridge remained intact and added materially to the constantly increasing numbers of men arriving on the west bank of the river. Soon after dark the first brigade was across the first barrier, and more men were ready to make the journey.

The second phase of the perilous undertaking was crossing the kilometer of mud between the river and the canal. The Americans stumbled along through a withering fire by the enemy. Their feet sank into the mud, slowing down the pace to a laborious walk, but they got through with some depletion in their numbers. Then came another gallant achievement:

The next phase constituted the crossing of the narrower but deeper canal, with its sheer sides and the Germans almost at the very top of the eastern edge. The swimmers again got into action and plunged through, notwithstanding the enemy fire, and scrambled to the top. Here the men divided their attention in driving off the enemy and helping non-swimmers across by the same method used at the river. Two bridges finally were laid down by the engineers, greatly facilitating crossings.

These two bridges withstood attempts of the enemy to destroy them and contributed largely to the speed in getting the American troops over.

When the swimmers reached the edge of the canal they could not land without the aid of grappling-hooks, which had to be caught onto the top of the wall edging the canal so that the swimmers could pull themselves up by means of ropes. It would have been a hard enough task for men undisturbed by the enemy's guns, but its accomplishment was almost inconceivably difficult under the violent enemy fire.

With two waterways and two-thirds of a mile of mudland successfully passed, the Americans had only the customary fighting, and went to it with no delay and in ever increasing numbers.

The Germans, who apparently had assumed that it was impossible to cross the Meuse, gave way without great resistance before men who could brave their fire, swim two streams, and cross a swamp with almost charmed lives and attack them without pausing for even a moment.

This year your Christmas giving must be influenced by motives of patriotic conservation. Plants and flowers combine magnificence and beauty with appeal to the higher senses. They are more able conveyers of true sentiment than any man-made creations.

Plants and flowers are nature's product. To send them this year as Christmas gifts or New Year's remembrances is practical patriotism. It preserves, even increases, the Christmas spirit—it interferes with no government program—it aids your thrift efforts, since plants and flowers are comparatively modest in cost.

Visit your florist's shop. See for yourself the exquisite gift creations of the floral trade. You'll be amazed at what may be purchased at a trifling cost.

Do you know that the
most elegant
gifts are the ones
that cost least?

SECOND-STORY MAN BECOMES A SUCCESSFUL SPY

GOOD spies are like poets in one respect—they are born and not made, and, more particularly, they are not "made in Germany." Indeed, with all her much-vaunted efficiency, Germany hasn't been successful in her manufacture of secret agents. Large numbers of her "trusties" were turned on the world at the beginning of the war, but their exploits were often ridiculous, even when they were not ignominious failures. Not only did the alert American beat them at the game, but the stolid Britisher showed them tricks that turned their erstwhile ruddy cheeks green with envy.

The New York *Evening World* tells the story of an English spy who from a bad beginning became a master of the art:

He is known at present as "Walter Greenway," which is not his real name. He was afflicted with a habit of climbing into the second stories of English houses. And for this eccentricity he did time more than once. In four years he piled up a record of ten arrests. At last he was shipped to Ceylon, where most of the houses are all on one floor, and where the art of "second-story work" might be expected to languish for want of practise.

But Greenway did not stay in Ceylon. He escaped and fled to Mesopotamia, where he "turned native," and married a local dusky beauty. For years thereafter nothing was heard of him. Then the present war began. And England sent armies to the Near East.

At about this time a deaf and dumb Bedouin appeared among England's Turkish foes, where he had no trouble at all in picking up all sorts of useful military knowledge. This knowledge he promptly sent, in letters, to General Townshend, the local British commander. The Bedouin deaf-mute was Walter Greenway. At news of his country's peril he forgot his old grudge against the land that so often had imprisoned him. Disguised, he set forth to help England as a spy.

For a time everything went smoothly. Greenway was able to find out countless secrets of the Turks and to transmit those secrets to the British. But finally, for some reason, the supposed deaf-mute was suspected. It is said that a camp-follower had seen him enter the British lines. So the Turks decided to find out, first of all, if he were really deaf and dumb. They fired rifles close behind him. Greenway made no sign of hearing the noise. Next they backed him up to a big gun and fired it. The concussion sent the blood oozing from Greenway's ears and nostrils. But he did not turn around nor start. Next the Turks tested his powers of speech by means of hot irons and by tearing out his fingernails. Not one word could the torturers wring from him.

Within a week Greenway made his way again to the British camp and told the positions and numbers of the Turkish guns at the fort where he had been tortured and the exact nature of their various defenses. In a letter to friends in England he explained thus his reasons for turning spy: "I knew no army drill. Besides, I feared they might sniff out my character if I applied for enlistment. It struck me I might work off my deaf and dumb trick on the Turks and perhaps bring in a little

CHRISTMAS This Year

will be different. Gifts will be largely in the nature of essentials—things to wear, for example.

One can best carry out the spirit of the times and of the season by choosing articles that give the most in service.

True Shape HOSIERY

makes a sensible gift, to man or woman. It furnishes the kind of service that justifies the purchase—dependable wear and snug, clean-cut appearance.

Wherever you are you'll be sure of hosiery satisfaction if you insist on this trade-mark on each pair.

Men's pure silk, 75c. up; other grades in silk lisle as low as 40c.

Women's silk lisle, 50c. up; fibre silk, 85c. up; pure silk, \$1.15 to \$1.75. Ask your dealer for True Shape. If he hasn't it, write us and we'll tell you of one who can supply you.

GENCO

RAZORS

See him smile!

YOUR fighting man smiles when the Quartermaster lets him have a GENCO Safege. It's what he's been waiting for. It's an evolution in razor-making.

Built like the GENCO professional razor—a razor such as all barbers use—it has a single, lasting blade. This is ingeniously equipped with a guard, making the razor safe to shave with anywhere—on a swerving train, a lurching ship, or at the front under fire. Simply by flipping back the guard, the GENCO Safege can be cleansed without running water. You can strop it on the palm of your hand.

Both the GENCO professional and the GENCO Safege razors require no new blades and hence save steel and money. Both possess the famous GENCO edge. Both have low first-costs and no upkeep expense. Both have that concave grind and bevelled edge which enable you to shave yourself with the workmanlike speed and satisfaction of a barber.

Your complete satisfaction with our razors is guaranteed. "GENCO Razors must make good or we will."

Whatever your favorite type of razor—standard blade or safety—there is a GENCO for you, good for a lifetime, economical, and ready to shave you so quickly and so smoothly that you will prize it like an heirloom.

Drop in at your dealer's. Learn what has been achieved by Americans at razor-making.

GENEVA CUTLERY CORPORATION, 235 Gates Ave., Geneva, N. Y.

information if I came across any German officers."

Again suspicion fell upon the spy. This time the Turks razed his house to the ground. He fell ill from privations and from his tortures. But he was able to blow up a Turkish arsenal near Bagdad before he succumbed to his illness. Then his faithful native wife carried the dying spy to a mission hospital, where in early September of 1916 he died.

Just before his death Greenway wrote to his English friends: "Well, I have nothing to grumble at. I have had my innings. It is a solemn feeling I have. I have not been what I might. Also, I have been misunderstood, somewhat." All his reports and letters were written on tiny scraps of soiled paper—on anything he had been able to find in the desert that would hold a message.

WHERE LIFE IS ONE LONG VACATION

SEEKERS of "soft snaps" are turning their wistful optics on Mesopotamia, which seems to have maintained Utopian conditions in spite of Turkish oppression. Prince Raphael Emmanuel, son of a Chaldean high priest, who has been lecturing in this country, is largely responsible for their wistful attitude. According to the prince's fascinating account of his native land, the soil is so rich that it is only necessary to work four months in the year. Then there are the additional lures of beautiful climate and comfortable habits and customs which add a potent charm to inherent laziness. The *Kansas City Star* reports him as saying:

There is no money in Mesopotamia. There is need for none. We pay no taxes, neither do we pay tribute. Wheat, fruit, and skins are the only medium of exchange. We have no policemen, no courts, no judges. The people do not know there is a war. They would not understand the meaning of fighting for liberty, as they always have been free.

There is no record of time in Mesopotamia. We never know what day of the week it is and do not care. Clocks or watches are unknown; my people would not know what to do with them. Time is told by the height of the sun and servants arise by the cock's crow as they did in the days of Jesus.

We raise the finest tobacco in Mesopotamia, but we do not chew it or smoke cigars. The men smoke cigarettes or pipes. Our women do not smoke. There are no saloons in Mesopotamia. My people make wine, but it is not the fermented kind that you have here. It is only used on occasions, however, and then it is not considered proper for women to drink it.

The language is the same which Jesus used in speaking to his people nearly two thousand years ago, added Prince Emmanuel, and "my people believe in God and worship him in their every act. America used to send students to Germany to become theologians and then send them to Mesopotamia as missionaries. It would have been more fitting to have sent them to Mesopotamia first and thence to Germany as religious teachers."

The Prince said his people never eat pork, concludes *The Star*, and whenever

he is asked why he replies: "Because Jesus cast the devils into swine and they all went to Germany."

FINE TRAITS SHOWN BY THE DOGS OF WAR

HATRED against the brutal Huns did not destroy the otherwise affectionate disposition of our boys at the front. They accumulated pets of all kinds and when peace is actually here, says Mr. Martin Green, in the *New York Evening World*, there will be the biggest landing of nondescript elements in the animal, bird, and reptile kingdom since Noah made port on Mount Ararat.

Dogs are the favorites, however. Canines of every describable breed were picked up by the soldiers in devastated territory evacuated by the Germans and the civic population. Found under such circumstances, Mr. Green observes, dogs are very grateful and affectionate to the men who rescue and adopt them. And they soon accommodated themselves to the movements and vicissitudes of their new masters. They might lie around and enjoy themselves when the sun shines or cuddle up on blankets and snooze when it was raining. But there was a great difference when the orders came to move, and he thus describes it:

The dogs know as soon as the men that action is coming, and the chorus of yelps and barks that goes up is distracting to persons not familiar with military life in the field. If an infantry unit is moving the dogs of the doughboys tramp along with them as long as they are afoot. When a dog gets tired he is carried or put on a truck or supply-wagon. How the dogs manage to find their masters after hours and sometimes days of separation is one of the wonders of army life, but soldiers say they get their pets back more often than they lose them. A regiment is a large body of men, but the men get to know the dogs in a general way, and besides most of the dogs wear identification tags, just like those worn by the men, suspended around their necks by the regulation tape. But unmarked dogs are lost and found regularly, and it is the more remarkable because in our clean-shaven Army all soldiers look pretty much alike.

Hurried movement, especially at night, rouses the dog pets of the Army to a frenzy of excitement. I was awakened from a sound sleep in a hotel in Soissons one night last spring by the barking of dogs. The chorus was terrifically clamorous. I went to the window and saw, passing along the narrow street French soldiers, in motor-trucks, hurrying up to the Oise, which the Germans were approaching in their March offensive.

The dogs made as much noise as the rumbling of wheels on the rough stone pavement and the sound of the engines of the trucks. Not a light showed in the long caravan—which passed through the city all night, by the way—but out of the indistinct moving mass came the voices of the soldiers' pets raised in unconscious, but none the less sincere, tribute to the charm of the life of a soldier.

The dogs are not allowed to bark, tho, when they are close to the enemy, or

"Orthopedic," For Energetic Feet

This Coward model recognizes the right of good feet to stay good.

"Orthopedic" leaves no obstruction in the way of normal, healthy action of muscle and joint. This shoe is for the foot that needs no correction but that will serve the better because free from bunions, corns, callouses and sagging arches. "Orthopedic" is foot-shaped, pliant and generous where space is most needed.

FACTORIES NEEDED IN WASHINGTON STATE

WASHINGTON, rapidly expanding in domestic and overseas trade, offers unlimited opportunities for varied manufacturing industries. Cheap hydro-electric power, mild winters, cool summers, abundant raw material, water and rail transportation. For special 240-page bulletin with list of suggested locations write I. M. HOWELL, Secretary of State, Dept. 11, Olympia, Washington.

WIRELESS TELEGRAPHY

AND HOW TO MAKE THE APPARATUS, a handy manual for the amateur or the expert. Shows how to make, erect, and control every part of a small working wireless plant. Clock, glass-fronted with helpful diagrams, 49 pages, 25 cents. Funk & Wagnall Company, 354 Fourth Ave., New York.

Ambrosia Chocolate Tixies

Fine, rich, wholesome chocolates. Different from any others you have ever eaten. Delicious almond and filbert nut centres—no cream filling. A most delightful holiday delicacy.

Send Them to Your Soldiers

The boys in the armaments have about Tixies. You can give them no greater treat. If you wish to make a friend out of the ordinary Christmas gift, send Tixies. They always make a hit. Send \$3.00 for special holiday or Soldier Boy box (sold in \$2.00 boxes only), prepaid and insured anywhere in U. S. Money back if not satisfied.

AMBROSIA CHOCOLATE COMPANY
331-S Fifth St., Milwaukee, Wis.

Twenty million soldiers expect this year to like Tixies. Therefore order immediately.

The Saw most Carpenters use

Polished steel gives no hint of its quality—no one can judge the quality of a tool by its appearance.

That is why carpenters buy tools by name. They have learned from experience which tools give the best and longest service.

The Disston Saw is the saw most carpenters use.

"Disston-Saw" is one word to the carpenter. He learned his trade with a Disston. His boss used one before him. "Disston-Saw" means to the carpenter everything that is needed for best work and long life.

To be sure of a good saw, buy the way the carpenter does—buy it by name—"Disston."

The many details of construction resulting from more than three-quarters of a century of experience, are all summed up for the practical man in this one fact—Disston Saws do the work quickly, easily and right.

*Disston Saws and Tools are sold by
hardware dealers the world over*

DISSTON

SAWS AND TOOLS

when a surprise attack is in preparation. They appear to know the necessity for silence when their masters tell them to keep quiet. Often as a measure of precaution they are buried away under a pile of blankets so that even tho they bark the sound shall not be heard.

Of course there are many fights among the pets, and great tales are told of the prowess of certain dogs, and sometimes the owner of one fighting dog will casually take his pet to the vicinity of the camp of another soldier who is reputed to own a fighting dog. When the men go into action the dogs are left behind and many a pet watches with anxiety in his eyes for days and days for his soldier master who patted him on the head and went away and did not return.

A DUEL BETWEEN TWO TANKS

WHEN tank met tank there surely came a tug of war. Such an encounter is described by Arthur Blakesley in *The Illustrated World*. Noise does not frighten one on the battle-field, he says, but intense quiet does. Even a big bombardment of "whies," "whizz-bangs," and "coal-boxes" can not get a soldier's nerve like the ghastly silence that sometimes comes just before dawn. This silence seemed especially real to Mr. Blakesley at Seicheprey, and it was the prelude to an exciting conflict, described as follows:

We had to get four tanks up to the staging—star-shell camouflage—just ninety yards behind the Yankee firing-bays. I heard the *Leviathan* and *Mary Ann*—the two tanks that preceded us into position—start, and tho they lumbered out through the darkness at less than three miles an hour I waited in anxious expectation for the German star-shells that would tell us that their approach had been discovered. It seemed as if their exhausts made more racket than all the brass in Sousa's band. When the *Vampire*—our caterpillar fort—got under way I was certain that the Kaiser, back in Potsdam, must be awakened from his doped dreams of conquest. Of course it all sounds so much worse from the inside of a "Willie."

When we arrived, however, and crawled out to snatch a few minutes' rest before zero hour, you would have thought that the array of ditches and wire that showed faintly in the dim moonlight were furrows on an abandoned farm, for all the signs of human occupancy you could hear or see. It was ominous to me. Shorty Messick named it, tho none of us agreed with him at the time. "I'll bet," said he, "the *Boches* are going to start a push, too!"

That his guess was absolutely correct mattered tremendously, inasmuch as it gave opportunity for one of the strangest duels that ever occurred on the Western Front—a battle of tank against tank, in which horse-power counted as much as the projectiles fired. These steel-clad giants had met before, and doubtless have met since, but never at grips as at Seicheprey, to the best of my knowledge. As I was firing a six-pounder for the *Vampire*, I saw all that occurred. And what a duel it was!

The battle must have been something of a mutual surprise. I know that our officers did not anticipate the *Boche* push, and from results I am certain that they did not expect us. Promptly at 4:45 A.M. their batteries started. Our zero was to

When Your Heart's in Your Mouth-

Then is when Tire Chains prove their Real value—they add so much to your brake power. Without them brakes would be useless.

It's these *unexpected emergencies* that make a driver think quick and act like lightning. When suddenly the children dash out from the pavement and are almost under your wheels before you realize it—you *instinctively* jam down your foot-brake and *frantically* grab the emergency.

What if your brakes slipped and didn't hold? Wouldn't the consequences be awful? It's positively criminal for a driver of a motor car to overlook even the slightest safety precaution. *Unquestionably the most effective supplementary addition to brake power* when the roads and pavements are wet and slippery, is in the use of

WEED TIRE CHAINS

Cars with *chainless tires* on wet-greasy-slippery pavements lack brake power to the same degree as they would if their brake linings were made of wet-greasy-slippery bands of rubber.

Wet rubber slips—never grips. It slides like a cake of soap on moistened hands. It lacks the bite and hang-on ability of chains.

Good brakes and Weed Tire Chains are undoubtedly the *greatest* factor in preventing motor accidents.

It's the height of folly to even attempt to drive without chains on all four tires when the roads are slippery and uncertain.

AMERICAN CHAIN COMPANY, INC.

BRIDGEPORT  CONNECTICUT

In Canada: Dominion Chain Company, Limited, Niagara Falls, Ontario, Canada
Largest Chain Manufacturers in the World

The Complete Chain Line — all types, all sizes, all finishes—from plumbers' safety chain to ships' anchor chain.

At Both Ends

Before the Seller Ships

Invoices take a lot of figuring that doesn't show, except in the totals.

Somebody has to multiply number of items by price per unit, and make all extensions.

Then a total has to be

taken; perhaps single or chain discounts have to be figured, and a new total secured.

All that figuring is thrown in the waste-basket as soon as the wanted figures—the results—are obtained.

The Burroughs Calculator gets those *wanted figures* in a fraction of the time, and at a fraction of the effort, that it takes to get them mentally, with a pencil and scratch-pad.

The Burroughs

of the Line—

Before the Buyer Pays

Incoming invoices have to be checked before they are entered for payment.

Here's the same opportunity for the Burroughs Calculator.

It multiplies, divides, adds and subtracts with unfailing accuracy, and presents results in less time than it would take to *write down the items* of most calculations.

That's how this Calculator fills the need for a

Burroughs that can do more than half of all the bulk of business figuring.

Because it is built by the Burroughs Adding Machine Co. it is backed up by the Burroughs organization and reputation. It is the result of thirty years' experience in designing and building machines for business figuring.

EVERYWHERE

The work of the Calculator is as universal as figuring. A few of its most-used applications are extending and checking invoices; figuring pay-rolls; preparing cost figures; proving freight bills and allowances; preparing estimates; converting foreign currency; figuring selling prices, profits, etc.; totaling sales by classes; checking deposit slips and any figure-compilations; calculating interest, etc., etc.

The 10-column model (capacity up to 99,999,999.99) is \$175—\$220 in Canada.

Calculator \$175

Making Figure Work Fly!

WATCH SUNDSTRAND operators. They do errorless work at lightning speed—add, multiply, subtract and divide by touch! That's why Big Business everywhere is clamoring for more SUNDSTRANDS—the most advanced and simplified idea in figure machines. It wants the SUNDSTRAND new

10-Key Speed

The SUNDSTRAND keyboard is so simple—so easy to operate. Not a single unnecessary key. Anybody from executive to office boy can master it in a few minutes.

The SUNDSTRAND can be used in private or general offices—in stock or shipping rooms—all in the same day. Easily carried from job to job, wherever the figure work may be. Average weight less than 30 pounds.

Ask for a practical demonstration in your office on your own figure work. Address a request to our main office—Rockford, Illinois.

have been five o'clock, but when the German guns began their concert a hurry-up order went around, and we were off.

Up we tilted over the parapet, and banged down with our nose in the mud. Neither side was sending up flares, because of their own attackers, so it was dark as midnight in Africa. The flashes of exploding H. E. in the trenches we had quitted, and in the Hun ditches far ahead, punctuated by the comma-like flicker of rifle and machine-gun fire, were the only lights to guide our driver. As a result we floundered straight into our own wire.

A way had been prepared, and this we had to find. Out we backed, the rusty barbs scratching on our steel sides. Two more futile attempts were made before the gate was located. We had wasted time and were behind schedule. Our driver threw the *Vampire* into high gear, and at risk of an accident that would put us *hors de combat* for the night we reeled along into shell-craters and soft mud, but always floundering out somehow.

Now I could locate the line of German trenches, and filtering through the wire in little groups came the Germans. They were not visible as so many shapes to me, but they fired as they came.

Suddenly there came a terrific shock, throwing me forward against my gun, and the *Vampire* stooped as tho she had encountered a stone wall. "Are we hit?" I yelled in futile question; the din was so terrific from our engine that I scarcely could hear my own words. Twice our driver raced the engine. Twice he let in the clutch suddenly, thinking to surmount the obstacle in our path. Each time we stooped dead.

While I was puzzling over this—there are no cliffs in that particular sector of No Man's Land against which we could have run—a sudden glare shone in my eyes! The obstacle, whatever it was, carried an enormous search-light!

A half-second later our own light went on, and then to my horror I beheld our antagonist, one of the gigantic German tanks, nose on against us!

I think that both of us were completely stunned for several seconds. Then I saw the gun in their top turret depress, and fire. An explosive bullet burst just behind the crew of the secondary gears! I awoke with a start. The big enemy tank carried one, at least, of the antitank rifles, firing high-power exploding bullets made to pierce armor!

I whirled the vertical lever, depressed my gun as far as possible, and let go. The shot caromed off their roof, exploding, but doing not a particle of damage. Again and again I tried, but with no more success. The truth began to dawn upon me; mine was the only gun we carried that could do execution against a German tank. And my gun could not be depressed sufficiently to register a square hit.

The only possibility of success lay in drawing off far enough so that we could get them in the side. I jumped down and ran forward. The driver was slouched in his seat, dead! An explosive bullet had finished him. I jerked him out of the seat, and grabbed Lieutenant M—, our commander. I had no intention of standing on ceremony. I pulled him over into the driver's seat, and yelled the terrible story in his ear.

He understood, and threw the *Vampire* into reverse. As we backed away, however, and I went back to my gun, the Hun tank gave us no chance. They followed us, keeping out of range.

All would have been over for us had

not Lieutenant M— been seized with a real inspiration. As we backed over a shell-crater he stooped. The second the nose of the *Boche* came up from the crater after us he threw the *Vampire* into low gear forward. Our angular nose slid straight under the nose of the Hun tank, forcing her into the air. She was in our range; we were immune from her fire!

Like a madman I gave it to her through her floor. As shell after shell tore into her she tried to back away, but always Lieutenant M— advanced, forcing her up all of the time. Then she switched tactics and tried to slither over us, but we stooped that by reversing. All the time my six-pounder was knocking her to bits.

Suddenly the Hun tank stooped. A tremendous explosion tore her sides out, shaking us as if an earthquake had happened. Then came the tell-tale flare of her petrol. I knew our battle was won.

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

A CANNONEER'S view of a great battle is presented by Private Homer E. Pryor, 140th United States Field Artillery, in a letter to his father at Laurel, Miss. His battery was in a position 2,000 yards back of the front line and behind a little ridge. The great barrage began at midnight and the fight developed rapidly as thus described:

At daybreak the infantry went over the top, followed by the tanks, of which there were a great number. Thirty minutes later our battery moved forward, following in the tracks of the tanks which started from near our position. As we came to the top of the ridge the whole battle-field lay spread out in the valley before us just like a picture. The first wave of the infantry was advancing across No Man's Land, and shells seemed to be falling everywhere, throwing up great columns of smoke and earth. The tanks were darting here and there wherever machine-gun nests or any marked resistance was encountered. Tracer-shells and rockets of every description were flying through the air. The weather was drizzly and the ground very muddy and covered with shell-holes, and the battery moved very slowly at first. Moving the guns mainly by hand we finally got over the crest and down into the valley and to the front-line trenches.

Already the prisoners had begun coming in in groups of from five to hundreds. They were carrying back our wounded boys on stretchers. The tanks had broken down the barbed wire, and we followed in their tracks and finally got across No Man's Land, and here we saw the results of our artillery-fire—machine-gun nests blown up, dugouts and trenches shattered, and general destruction everywhere. After crossing No Man's Land we came to good German roads and progressed much faster then. Going about a kilometer, we came to the first village behind the German lines, but there was not a wall left standing. It had been practically obliterated by four years of shell-fire. A few kilometers farther on we came to a larger village that had been occupied by the Germans ever since the war began.

Here also signs of destruction were evident. Overthrown German caissons, dead horses, and everything littered the

That Bridge of Ships

The Sinews of Construction at once became the Sinews of War when it was decided to build and maintain a 3,000-mile line of communication between America and Europe.

Beginning in mine and forest, every pound of material in our Bridge of Ships was handled again and again by wire ropes—silently, efficiently, expeditiously. And as each ship was finished, wire ropes put aboard the equipment and the cargo. The mechanical stevedores of our great docks on the other side, wire rope equipped, are the marvel of France.

From our entrance into the great struggle, by far the largest part of all Broderick & Bascom Wire Rope produced, has been engaged directly or indirectly in war work.

There is a grade of B. & B. Wire Rope best suited to every purpose, civil and military. Our grades include the celebrated Yellow Strand Wire Rope.

AMERICAN

War Proved the Four-Wheel-Drive Principle as Developed in the F-W-D

War plays no favorites. All distinctions melt away in the heat-of-battle test.

Within a few months after the opening of the Great Conflict in 1914 the orders for F-W-D trucks for the Western Front were limited only by the output of the Clintonville factory.

Addition after addition to factory facilities and twenty-four-hour-a-day output still fell short of the allied demand.

And now the F-W-D, with the construction unchanged by any test of war usage, returns to carry on industrial

battles with the unwavering steadfastness with which it met the crucial tests behind the allied lines.

The universally acknowledged success of the F-W-D four-wheel-drive principle is now an established fact.

F-W-D Trucks will introduce a higher standard of reliability and economy into your truck service.

Proof is in F-W-D past accomplishment and in F-W-D demonstration.

Write for name of the nearest F-W-D representative.

streets. The Germans had left so hurriedly that they didn't take any of their stores with them. In one canteen we found several barrels of real German beer, and they certainly have a brew that would make old Anheuser-Busch himself blush with envy. Of course, we didn't drink any of it!???. Oh, no! we simply "inhaled it," via the funnel route.

Here we found almost anything: stationery, colognes, perfumes, and everything, and when we left we were certainly a sweet-smelling bunch. In the next town we came to there were several families of French people who had been captured by the Germans in 1914. They had tears in their eyes and could scarcely believe that they were really free again. Of course, they had heard but little about America being in the war, and they couldn't believe that we were Americans. They were certainly what you might call a repatriated people.

About two kilometers farther on we caught up with our infantry at about three o'clock in the afternoon, and it was here that I saw the most thrilling sight that I have ever seen. Our infantry was advancing across the crest of a ridge and our battery was moving forward on the road and airplanes were everywhere. It had stopt raining a few minutes before, and there appeared across the sky in front of us one of the most perfect rainbows that I have ever seen. The significance seemed to strike every one simultaneously, for the doughboys and artillerymen of this division threw their helmets into the air and sent up a shout that must surely have been heard in Berlin. It certainly was a wonderful sight, and I will never forget it as long as I live.

Shortly after this, while our battery was halted on the road for a rest, an airplane swooped down low over the column and let fly at us at close range with two machine guns. The bullets were flying everywhere. Everybody made a dive to get under caissons, horses, or anything else handy. You can bet your old boots I had an awful desire to do the same thing, but I had to stay with the machine gun. I operate an anti-aircraft machine gun, you know. The old first law of nature is sure hard to overcome in a case like this, but I managed to do it, and when he came back I gave him a refreshing shower of machine-gun bullets and the fellows all fired their pistols at him and he hastened away and hasn't returned yet. After this we dropt back for the night, and the infantry dug themselves in for the night. This was by far the most eventful day of my life.

Next morning, a gentle old cow browsing peacefully in front of the battery position aroused feelings which are thus described:

Now we had been living for two days on our reserve rations which are composed of hard-tack and "corned willie," a concoction that in a time of famine or great stress may be considered palatable, and now even that was finished. An "E" battery man rushed out with a cup to milk her, but unfortunately he approached her from the wrong side and got only a vicious kick for his pains, and gave it up. Several "F" battery men then approached her, and finally by much heroic persuasion they induced her to yield several cups of the precious *lait*. In the meantime the rest of the boys from the battery were eyeing the cow herself hungrily, picturing in their minds the luscious tenderloins and chops that she might afford. She had a shell fragment through her shoulder which

crippled her slightly, but otherwise she was very lively. So it was finally decreed that she should die. Census was taken of the battery and a butcher was found in the person of one "Wild Bill Sloan," a mountaineer from the wilds of Tennessee, who, when questioned, admitted modestly that he had at one time pursued that sanguinary occupation. A few minutes later Wild Bill approached the cow, armed with a very vicious-looking trench-knife, taken presumably from the equipment of some *Deutschlander Soldaten*, lately deceased, while the old cow eyed him moodily as if aware of her approaching fate, but powerless to defend herself. We didn't have the heart to watch it, so turned away, and when we looked around a little later the old cow had fallen, a martyr to the most sacred cause that we knew—that of Democracy.

The old cow must have been a centenarian, because she was certainly tough, but after several hours of assiduous parboiling the meat became of a texture that was masticable and then our dreams of chops and tenderloin became a reality. That old cow will certainly hold a tender spot in our hearts for some time to come.

One failure of the war is the failure of our language to describe it. Many writers give it up and just fall back on Sherman's definition, but of course even that merely leaves everything to the imagination. The latest attempt comes in a letter from Edgar Spivey to his parents in Canton, Miss., which is published by the *Vicksburg Herald*. He writes in the midst of the ruins of a once beautiful French city as "a lad who has tasted of the bitterness of war and hate, tasted of the glory and grandeur of being privileged to play the part of a man in a real man's game, tasted of the glowing pride and satisfaction in seeing the great American Army take a very important part in winning a victory in the world's greatest battle," and, therefore, he sends a "message straight into the heart and soul of those who mean the most to him." Young Spivey continues:

This message is a real message, a message which can only be conveyed from one heart to another. It is not a story of the war, the battle, but the message from me to each of you, after having lived, day and night for nineteen days, in the very midst of the fiercest struggle the war has yet seen—nineteen days with the booming of the guns, the nerve-racking whine of the projectiles, and the crash of the bombs ever in your ears; nineteen days of breathing and eating the damnable gases which have shocked the civilized world; nineteen days of struggling, toiling, praying, with very little food and very little sleep; nineteen days of hell, a message from out such surroundings, I say, from me just to you.

I shall not attempt to tell you the story of the battle, my own vocabulary is far too limited to even suggest to you just what I saw—just what I lived. For four long years the most noted journalists of the world have been trying to picture the horrors, the glory, the wonder of that very hell on earth and they haven't even awakened your imagination to the realization of even the smallest part of that which, upon our entrance upon the field of battle, was suddenly thrust upon us.

Wonders of the Writing World

This is the symbol of perfect writing—the mark of the world's two greatest writing aids, the Eversharp Pencil and its perfect ink-writing mate, the Tempoint Pen. It is a veritable guarantee of unusual worth, back of which stands a two-and-a-half-million-dollar concern.

THE EVERSHARP PENCIL carries a quarter million words up its sleeve—and a point for every word. Always sharp—never sharpened.

Enough lead to write a library—eighteen inches in all. Magazine is always full. Quick loading. Rapid firing. Every stroke a hit.

And your Eversharp is constructed with jeweler precision throughout.

A built-in clip keeps the Eversharp from slipping away from you. A handy eraser, under cover until needed, adds to the convenience. A quarter replenishes the lead supply. Leads come in various degrees of hardness.

Over a million already in use. All styles, for pocket, chain or milady's handbag.

Prices, \$1 up, at dealers everywhere. If yours is not supplied write us direct for attractive literature to aid in selection.

THE TEMPOINT PEN has the wonderful Wahl point—the ample iridium tip being affixed by having the gold fused about it—not annealed.

After that the gold pen itself is hammered so that it acquires a steel-like hardness and flexibility. Cannot weaken nor become "sprung" through constant use.

Then there is the famous Wahl Comb Feed by which just enough ink—and no more—reaches the paper. No blots—no inky fingers. The pen keeps step, no matter how fast, slow, light, heavy, steadily or intermittently you write.

Air-tight chamber prevents "sweating"; keeps pen point moist for instant writing.

The Tempoint Pen is made in both Self Filling and Screw Joint styles in a wide range of barrel designs. Prices, \$2.50 up, at the better dealers, or write direct for descriptive literature.

They Had to Take Chances

But mark this: The best and most daring pursuit pilots took no foolish *purposeless* chances. They had the most efficient equipment, the best safeguards ingenuity could devise. The ignition—absolutely vital to the engine's performance—had to be better than merely good.

So, too, on trucks, ambulances, tanks—in every branch of service, War's supreme tests established beyond all question the superior rigidity, staunchness and efficiency of

Magneto Ignition

For the Magneto is the self-contained ignition system, independent of batteries and other contraptions. It should be easy enough now to decide upon your ignition system. With its war record behind it, you can be more certain than ever of the economy, the efficiency, and the perfectly timed, life-saving sparks Bosch Magneto Ignition will provide.

Install upon Bosch; on airplane, truck, tractor, passenger-car, boat, stationary engine, it has proved its worth. Its shock-proof construction is what you need for dependable, no-worry service.

None genuine without this trade mark

In fact, when the languages of the world were being coined the words, the phrases, the sentences which would express to you that which I have lived for the past nineteen days were not conceived, and if I could express to you what lives in my mind, my heart, my soul to-day, no human mind has the power to picture it, to realize just what it is.

The papers have been full of the achievements of "my" division, but just where we were, and what we did, I am not allowed to tell. Just remember, I was where the Hun struck the hardest, where he met his greatest surprise, and where he first started to run. I was in the direct path of the pride of the German Army, and even tho it be so very small, yet I, along with all the others, did my little part in causing the great German offensive to be turned into the greatest of Allied victories.

After a brief allusion to the strenuous work in "an inferno of shell and blood and death," this American lad proceeds:

But every one was happy, happy in the thought that they were fighting, and fighting a winning fight for God, country, and home. The spirit of the American soldier is the most wonderful sight of all. To daunt him is an impossibility; you can not work him too hard; and with his faith in God he fears nothing; with death and destruction on all sides of him, and he can laugh at it all. Laugh because he knows he is right, and that whatever the cost, the reward is worth it. He has made his peace with God, and is here to deliver the goods. He is not doing his "bit," but every day, every hour, he is doing his "all."

The bravest battle that was ever fought,
Shall I tell you where and when?
On the maps of the world, you'll find it not;
'Twas fought by the mothers of men.

Nay, not with cannon or battle shot,
With sword or nolder pen,
Nay, not with eloquent word or thought,
From the mouths of wonderful men.

But deep in the walled-up woman's heart,
Of women that would not yield,
But bravely, silently, bore her part,
Lo! there is the battle-field.

The above conveys to you my only trouble, my only worry. I know that each of you is worrying about me, and my prayer to-day is that you cease your worrying. I am taking my chance, 'tis true, but it is so small a chance, and if I should happen to be called, think what a call it would be, think of the victory, the personal victory that would be won.

I know you have fought your silent battles, from babyhood to the grave, and that you hate to see me go out, after all your years of toiling, struggling with me, to take my chance upon the field of battle. But, dear ones, my prayer to-day is, give me a thousand deaths upon the field of France, but God deliver me from the coward's heart which would make me stay at home. You have filled my veins with a blood which will not allow me to do less than my best; you have filled my soul with a spirit which will not allow me to stay behind, and see others play my game. Yes, blood and spirit which cause me to glory in that God-given privilege of helping destroy the greatest menace to God and to man the world has ever known. So, on I go, with God as my guide and home my destination. Some day I will come back to you, but it will only be after my duty has been done. It may be hard on you, but no greater life can be lived, no grander death died.

In France—in a Paris museum is a letter written more than four thousand years ago. It is a business letter—the most ancient one on earth. When old Rameses wanted to talk shop with his distant banker, on thick papyrus a hurried message was sent. With extra speed the scribes were able to finish the task in *four months*. Progress! Is it anywhere more startlingly illustrated than by the Mimeograph? Five thousand letters *an hour* it produces—letters that surpass old Egypt's products in *quality* as they do in speed. The newest developments of the Mimeograph—speed duplicator of splendidly printed forms, blanks, letters, drawings, etc.—make it a more important factor in the world's progress than ever before. Get new booklet "L" from A. B. Dick Company, Chicago—and New York.

TRUCK TIRES

Now is the time to take to heart the warning in the following letter that when a boy in France fails to hear from the folks at home the consequences may be regrettable, for the tendency comes strong upon him to end his loneliness by a plunge into dissipation. Whether from the docks or luxurious homes, from the farm or factory, the same desire animates all our fighters abroad—the earnest hope of receiving a cheery letter from home on mail days. Writing to his sister in Oklahoma City, Corporal Franklin O'Brien, 6th Balloon Corps, describes the scene in camp when the mail-carrier arrives. There is a mad rush in his direction, eager expectation in every face, says the corporal, who proceeds:

Most of them will be content to wait until the mail is ready for delivery; others are frankly anxious and impatient, and there are always the few who are news-seekers to learn what letters came in, who gets them, and how many. So before the mail is ready the whole company will know what to expect. "No mail to-night, fellows," "Only seven letters to-night for the whole company," "Hey, fellows, four thousand sacks of mail to-night," "Mail for every one this time, a whole sackful of letters just came in." These and like expressions can be heard through the barracks at the hour of mail.

And then sounds the voice with all the allurements of the Siren's song, "Mail Call, Mail Call." Like an ants' nest disturbed, the olive-drab forms pile out. They appear from nowhere, and, in less time than it takes to tell it, the company is serouging around the mail orderly, who is lucky even to be able to hang on to his bundle of letters.

That little runt nearest to him thinks it is a crime to have read a book through, and on the other side is a Pole who can scarcely read, and all around the entire company waits to hear whether or not tidings have arrived from that land and home overseas that is carried in mind every waking moment, yes, and through the hours of sleep. Name after name is called, and at each name a hand is eagerly extended, as eagerly as a thirsty man reaches for a drink of water. Those who have received letters wait in the hope of more. The ones who have not yet received a letter wait, wait, disappointed at the name that is not theirs.

The list is finished. The lucky ones have drawn aside to drink in the contents of each message, but the expression of those for whom there was nothing would excite the sympathy of the gods.

When one has received his mail from home how inconsequential are the minor circumstances that a minute ago aroused his wrath. The supper, the weather, those tired muscles, all are forgotten in the ecstasy of memories of home. The sun shining brightly makes the out-of-doors a delightful reading-room, or a rain falling gives one an added reason for lying on his bunk dry and warm, listening as it were to the voice of mother or sweetheart. The world is a happy place after all, soldiering across the seas is not a half bad life. Loving hearts remember him and loving hands pen the heart's message that he, the absent one, may know he is not forgotten.

But what of those who have been forgotten? The world is filled with an indescribable gloom. Even to the ones who receive many letters the day when no mail

comes holds disappointment. The feeling of loneliness is so intense, without experiencing it, it can not be understood. During the day, the work keeps the hands and mind employed, the jests and banter with one's fellows make every one a part of the big family. The food, quarters, clothing are all of the best, contentment is enjoyed universally. But when the mail hour comes the company is split up into individual units, each unit is thinking only of home. This is the hour when the seven devils enter into a man's heart after it has been swept clean of all evil and only the high desire for a loved one's remembrance remains. The disappointed spirit is ready for anything; self-restraint is unleashed and recklessness reigns. One hears "To — with them. I'll write once a month and let it go at that. They never answer my letters," and again, "I'm going to quit writing, my letters are never answered." Another says, "I am going to town and raise —. If I'd got a letter from my girl I wouldn't, but I didn't, and I'm going." The women of America must awaken to the fact that their men love them, they want to keep all the ideals and faith they brought with them from home, and it is for the women to inspire them more and more as the time of absence lengthens; and the loneliest hour, the hour of desperation, is that mail-hour when a man feels he has been forgotten.

It is considered a "holy duty" by the French people to show their affection for our soldiers. Their one thought, as Pierre Corbeau, a village school-teacher, writes to Mrs. R. R. Lambert, of Minden, La., in a letter conveying news of a brother with the A. E. F., is "to make their life in France as homelike as possible, for they are far from home." That personal affection is spreading into national sympathy appears from the following extracts from Mr. Corbeau's communication, which is printed in the Webster Signal:

Dear madam, in this great struggle our heartfelt sympathies are always with the American people more and more. Hitherto we have always been interested in the American people, in the English language, and in American history. Henceforth we shall always maintain this same attitude of mind with increased devotion.

You Americans show us now that you have not forgotten the aid we rendered in obtaining liberty for the Western world. You shall fight now with us till the end to obtain liberty for the whole world and thus advance one step nearer to the brotherhood of men wherein war shall have no place.

Dear madam, I am sure you didn't know France at the beginning of the war. Germans were lying about us to the whole world. We were cowards, said they. No, no, we were not cowards, but only we did not like the war. We should wish to work in peace. Germans have attacked us like veritable savages. Then, French soldiers have shown to the Germans that the French soldiers were not yet cowards. The splendid and terrible battle of the Marne was our reply. If we had had ammunition, the Boches were lost.

Dear madam and friend, do you like France now? The whole world must recognize the sincerity of purpose of the French nation in this great war, and it must recognize, too, the unthinkable deprivations we have undergone to attain

Pencils and eye glasses

You wouldn't want to read all day through another person's glasses. Of course not! And neither should you work all day with a pencil never intended for your kind of work.

DIXON'S ELDORADO

The master drawing pencil

has, among its graduating degrees, a pencil of the precise hardness or softness to suit each kind of work—each individual taste. The strong, smooth, responsive leads are making work easier, quicker, more economical in every industry and profession. Made in 17 degrees—9H (hardest) to 6B (softest); HB (medium) is most popular for general work.

Write us the nature of your pencil work and name of dealer, enclosing 15c in stamps, and we will send you full-length samples of the right degrees for you, worth double the money—also our chart showing the uses of the 17 degrees.

The Goggles that Protect

Westinghouse

POWER AND LINE EQUIPMENT FOR ELECTRIC RAILWAYS

Why Cities Expand

The cities of our western world, in their steady, onward march, move to the beat of the motorman's gong.

Since those days scarcely more than a quarter-century ago, when first in Cleveland, then Kansas City, then St. Joseph, then Richmond, the hum of the railway motor replaced the clatter of horses' hoofs, the electric street car has largely shaped and stimulated America's urban growth.

Thirteen electric railways in 1888—three hundred and ten in the three years that followed—thus the new thought in transportation gathered momentum, until no city worthy of the name is today without its electric street car system.

Congestion of population has given way to expansion. The center of home life has moved farther and farther away from the center of business and factory life. What would other-

wise have been today but vast open spaces surrounding closely-built centers of intermingled shops, stores and dwellings now are cities in themselves—cities of beautiful homes, broad lawns, trees, flowers and fresh air.

The name Westinghouse is associated with the development of almost every phase of the electric railway from the giant turbines in the power house to the motor that finally changes the mysterious current into effective pulling power. Switchboards, meters, line material, rail bonds, motor, controller and even the air compressor that empowers the brakes—are products in the development of which Westinghouse skill, initiative and organization have played an important part.

The Scientific Way to Make Soup

A Prize Recipe

The Van Camp Soup we deal with here started with a famous French recipe. It won the prize in a Parisian culinary contest. A noted chef from the Hotel Ritz in Paris brought it to our kitchens.

The original recipe was considered the finest soup of its kind in existence.

A 24-Hour Process

This particular soup requires 24 hours in the making. It combines 19 ingredients, all of which meet a fixed standard.

Some must be cut to a certain size. Some must be analyzed. Each must be cooked at a certain heat for a specified number of minutes. Thus the soup when done is exactly like the model soup adopted.

Three Years of Tests

In the Van-Camp kitchens, our scientific cooks—all college trained—worked three years to perfect it. They tested hundreds of methods and blends. They fixed a standard for every material. When they reached the pinnacle of flavor, they recorded every step.

Now a six-page formula, minutely specifying every detail, is forever folded in that soup.

Simply Heat It

The soup comes to you at a trifling cost, ready to serve when you heat it. It is matchless in flavor—the finest soup of its kind that was ever created.

So with all the 18 Van Camp Soups. Each was a famous recipe. Each was perfected through countless tests by culinary experts. And each brings you a superlative soup, ready to serve in a minute. Try a can today.

VAN CAMP'S

Soups—18 Kinds

Other Van Camp Products Include

Chili Con Carne	Catsup	Chili Sauce, etc.	

Prepared in the Van Camp Kitchens at Indianapolis

the end at stake. Rather die than to become slaves of Germany. It is our French motto.

Dear madam, I am no more a French soldier. At the beginning of the war I was wounded in a terrible charge with bayonets in the battle of the Marne—three balls in my chest and one in my arm. But I don't think I shall die. I will live to see the victory of right and liberty.

I am a simple public teacher in this little village. I have twenty boys in my class; more than sixty in the parson's school. I am thirty-three years old. My wife is a teacher too, but she has only thirteen girls in her school. We have a son nine years old. He likes American soldiers and he always plays with them. He has given them all our apples and pears and peaches.

It is a holy duty for French families to entertain your loved ones. I have done my bit in this struggle. I have given my fair health for always, but I can work yet for liberty in entertaining American soldiers. Unhappily, I am not a rich man, however, it will be a great pleasure to receive to-morrow at home an American soldier from Reading, Pa., Elwood LeRoy Rish. He will spend his seven days' vacation in our house.

Good-bye, dear madam. Tell your husband, your parents, relatives, friends, and compatriots, tell them the whole French people appreciate very much your stout and very generous help.

HIGH COST OF LIVING HITS THE ESKIMO

AN Eskimo industry as the subject of a magazine article would, not so long ago, have been regarded as somewhat of a joke. The war, however, reached away into Alaska, raised the price of living, created an industry, brought about prosperous times, with the natural consequence that Madam Eskimo, says a writer in *The Sunset Magazine*, is a very different personage from what she used to be.

"Three dollars for a porterhouse!" he protested. "Say! Who do you think I am—Rockefeller?" His attitude was that of one who was not going to let anybody put anything over on him, even if he was in the Far North, a curiosity-seeker in the Land of Curios.

The sour-dough waiter looked bored. "Prices are goin' up in Alaska, same as any place else," he said. "You can have reindeer steak for six bits."

Beefsteak, three dollars; reindeer steak, seventy-five cents! And the price of beef and mutton and pork becoming higher every day—a condition that prevailed even before Wilhelm started out on his excursion in world-domination. Clearly, Uncle Sam's little pastoral experiment, begun more than twenty years ago with the purpose of relieving the condition of semistarvation to which the Eskimos of northwestern Alaska had been reduced by the invasion of the white man, had reached a strategic point from which it could give old H. C. L. a kick in the ribs.

The amount of reindeer to be shipped this year, to be sure, will not be sufficient to make an appreciable dent in the price of other meats, but considering that reindeer double their number every three years, besides leaving ten per cent. of the entire herd for the market, it will be seen that these northern animals soon will become a

factor in the economic affairs of the nation. The range-lands of the North are practically unlimited.

Many Eskimos who became apprenticed herders fifteen or twenty years ago are now quite wealthy, owning a herd of several hundred deer, worth upon the hoof about \$25 each, and it is one of the anomalies of the country that some of them have thousands of dollars' worth of meat walking around on the tundras and yet are short of flour and other food. Reindeer-herders know not the meatless Tuesday, but for many of them every day is wheatless. These conditions, however, prevail only in places where the herds are situated at great distances from the centers of white population. Deer-men living near the mining-camps find a ready sale for their product.

Reindeer meat is juicy and tender; its flavor is somewhat between beef and mutton and not "gamey."

With plenty of meat to sell, the Eskimo has become prosperous, but affluence has brought to him some of the troubles of his white brother. Time was when Mrs. Eskimo was happy if she had a piece of walrus or seal meat to cook over a blubber-burning lamp in an igloo constructed of driftwood and banked with tundra-sod; when the killing of a whale was the assembling signal for the Royal Gorge. Mukluks of walrus-skin were plenty good enough, and chewing this tough leather to make it flexible was a work of contentment. A parka and trousers of hair-seal were considered the hall-marks of class.

But that day of simple contentment is past. If Mrs. Eskimo's husband or son owns a reindeer herd, she must have a down-to-date range to cook upon. The old igloo has been converted into a cold-storage room, or a dog-kennel. The living-house must now be large and commodious, with more than one room, and it must be lined with nice planed lumber brought at great transportation cost from the United States. She must have a sewing-machine of the latest model. She must have skirts and underwear of wool, like her white sister, and her coat must be of the finest fawn-skin, trimmed with ermine, or wolf, or wolverine, or Arctic fox. The tops of her mukluks must be of differently colored reindeer hides and gay with beads and other gewgaws. In a few cases she has been known to insist on white-topped kid shoes with high heels, and there is a case on record where a wily trader did a good stroke of business by showing a line of beautiful pink and blue corsets.

To be sure, Madam Eskimo doesn't yet yearn for grand opera. But she makes frequent trips to the big cities of the North, where there are crowds of people, and stores, and candy, and canned music, and moving pictures. Will Madam Eskimo demean herself by chewing walrus leather these days? Not much! She chews gum, instead.

The time has arrived, continues the writer, when the reindeer men must find a market for their surplus steers beyond the local habitat, and with the price of meat constantly advancing in the United States, the introduction of this choice new article of diet should be more than welcome.

Quite a Coincidence.—"Rawley Jones?" Why, that's my husband's pen name," said the lady of the house.

"Ain't it funny," marveled the cook. "My husband has one, too. Up in the pen they called him 'Glycerin George.'"

—Judge.

By order of
General
Santa Claus

Whitman's Chocolates

have largely been mobilized in camp and over seas. Therefore civilians will be patient and patriotic and wait till "Our Boys" are served.

If you should find at your nearest Whitman's agency a few *Service Chocolates* or *Samplers* send one to some lonesome boy in camp, with "A Merry Christmas."

Our business has been entirely at the disposal of the government for the winning of the war. Such of our packages as are offered for sale have been put up in full accord with the aims of the War Industries Board and the U. S. Food Administration.

THE SAMPLER, assorted chocolates and confections. Ten kinds of sweets selected from ten of our most popular packages.

NUTS, CHOCOLATE COVERED. Contains a great deal of nutritious goodness and a minimum of sugar.

SUPER EXTRA CHOCOLATES AND CONFECTIONS. The standard of quality that first made Whitman's famous back in the days when our war was with Mexico.

FUSSY PACKAGE, assorted chocolates. These are the nut and hard center chocolates that are favorites with many folks. No cream centers.

SERVICE CHOCOLATES, our new soldiers' and sailors' assortment is a favorite gift to, or from, a man in the Service. Each box contains a pound of very special chocolates and a book. Such authors as Kipling, De Maupassant, Conan Doyle, Hugo. Our agents will attend to the mailing for you, or we will do so.

STEPHEN F. WHITMAN & SON, Inc., Philadelphia, U. S. A.

Makers of Whitman's Instantaneous Chocolate, Cocoa and Marshmallow Whip.

The French Government informs the Chamber of Deputies that a vigorous protest against the brutal treatment of war-prisoners will be sent to Berlin. Amsterdam learns that the British armistice commissioners have threat-

ened a renewal of hostilities unless the conditions under which prisoners are arriving in the Allied lines are remedied.

London reports the surrender of Russian war-vessels held by the Germans in the Black Sea to the Allied naval representatives.

December 1.—British naval men, cables the New York *Tribune* correspondent, estimate that the total bill against Germany for sinking merchantmen will amount to \$4,000,000,000.

The Associated Press reports American troops crossing the frontier into Prussia behind the German rear-guards. Headquarters will be established at Treves.

An Amsterdam dispatch states that the German Government is starting an investigation of German crimes in Belgium.

Harwich reports eight more German submarines surrendering, making a total of 122.

Bavaria will open negotiations for a separate peace with the Entente Allies, states an Exchange Telegraph message from Zurich, which adds that the rupture between the governments of Berlin and Munich is now complete.

December 2.—In his message to Congress President Wilson declares that he is going to Europe because the Allies, having accepted his fourteen peace principles, desire his personal counsel in their interpretation and application.

Resolutions are introduced in the House and Senate declaring it to be the sense of Congress that the President has temporarily vacated his office and that Vice-President Marshall should perform his duties until his return to the United States.

Senator Cummins introduces a resolution for the creation of a committee of eight Senators to proceed to Paris, make itself familiar with all the conditions and circumstances surrounding the proposed peace treaties, and report upon all such matters to the Senate.

Prince Lvoff, Premier of the first Provisional Russian Government, who is now in Washington, informs the State Department that the Russian diplomats will be permitted by the Allies to attend the Peace Conference as representatives of their country.

The British Secretary of State for the Colonies tells a meeting at Bristol that the only solution of the problem of the German colonies is to include them in the British Empire.

December 3.—As a practical solution of the problem of maintaining the world's peace, Senator Williams, of Mississippi, tells the Senate that Great Britain and the United States, who are amply equipped by sea power and natural resources, would form an effective league of nations.

Senator Knox, former Secretary of State, introduces a resolution declaring that the Peace Conference should defer to some future time any project for a general league of nations or for any sweeping change in the ancient and international laws of the sea which were violated by the Teutonic Powers.

THE CENTRAL POWERS

November 26.—London reports that the question of the extradition of ex-Kaiser Wilhelm is being considered by British law officers, who are working in close cooperation with the French authorities.

The Berlin *Red Flag*, organ of Dr. Karl Liebknecht, demands "the immediate convention of a revolutionary tribunal" to pass sentence on the Hohenzollerns, father and son, and Bethmann-Hollweg.

An official note is published in Rome charging Austria-Hungary with violating the armistice by releasing Italian

Prof. Anderson's Recipe

*For the Greatest Grain Food
You Will Ever Know*

This is the process for making Puffed Wheat, which Prof. Anderson invented. All these bubble grains, flaky and flimsy, pass through this heroic treatment.

All these thin-walled dainties have been steam-exploded. All have been shot from guns.

The Method Is This:

Seal the grains in guns. Roll the gun barrels for one hour in 550 degrees of heat. Then shoot the guns to explode the steam inside every food cell.

The purpose is to blast every food cell, of which a wheat kernel contains 125 millions. The object of that is easy, quick digestion, and to fit every atom to feed.

These Are Not Tidbits

Puffed Grains seem like tidbits—flavorful, fragile food confections made to fascinate.

But they have a vastly deeper purpose. They are whole grains made wholly digestible. They are all-hour grain foods which do not tax the stomach.

No other process ever made wheat, rice or corn so good. And none ever made a grain food so good for you.

Serve them in every way you can.

Hinds Cream

prisoners poorly clothed and without food.

November 27.—An Amsterdam correspondent wires that Premier Ruijs de Beerenbrouck tells the Second Chamber William Hobenzollern will have to leave Holland if his presence there becomes perilous to the country.

Events of the past few days, state dispatches from Berlin, indicate that, with the exception of the small Spartacus group, there is complete agreement in Germany that a National Assembly must be held.

November 28.—Copenhagen hears that a counter-revolution has begun in Germany. Several generals have issued proclamations and attempted to dissolve various Soldiers' and Workmen's Councils, and the chief army command has been ordered to Berlin.

A Munich dispatch states that Bavaria has broken relations with the Berlin Government.

The London *Daily Express* reports that the Entente Allies have decided to demand that Holland surrender the ex-Kaiser to justice. A Copenhagen dispatch says the Vienna Government intends to bring to trial all persons responsible for the war.

The Associated Press learns that Foreign Secretary Solf has charged the Hamburg Soldiers' and Workmen's Council with being in independent communication with the Russian Soviet Government.

November 29.—Copenhagen learns that the Berlin Government has sent a telegram to the ex-Kaiser demanding the formal abdication of himself and the former Crown Prince.

Other dispatches from this point state that the Liberal party in Baden has demanded a complete breach with Berlin, and that Kurt Eisner, the Bavarian Premier, has caused the arrest of a German courier on his way to Austria.

A Leipzig dispatch reports the Government at Vienna informing former Emperor Charles that he must leave Austria because of the counter-revolutionary movement there.

The Berlin correspondent of the Associated Press sends the text of the former German Emperor's act of renunciation, dated November 28, which is issued by the Government in "reply to certain misunderstandings which have arisen with regard to the abdication."

Another Berlin dispatch states that a group of Independent Social-Democrats has seized all the wireless stations in Germany and is transmitting propaganda. The Government disclaims all responsibility for wireless information sent abroad.

Copenhagen hears that the Bavarian Premier has declared himself ready to take all the consequences of a conflict with the former German Empire. Should Bavaria be obliged to act independently, adds the dispatch, the Rhine provinces and the whole of South Germany will support her.

December 1.—The Hague reports the Netherlands Government appointing a committee to determine the position the former German Emperor occupies in Holland.

Bern reports that the King of Württemberg has formally abdicated.

December 2.—An official French telegram received in Washington states that the "famine" in Germany is a sham and that there are sufficient foodstuffs in the Empire to carry it through the winter.

In a newspaper interview, the British Attorney-General says the War Cabinet

mild Robt. Burns 3 national sizes

Robt. Burns
BOUQUET
(Actual Size)

A brand-new Robert Burns cigar—in a convenient size for the average smoker. Robert Burns quality throughout.

Robt. Burns
INVINCIBLE
(Actual Size)

An unusually popular shape, as the sales sheets clearly testify.

Robt. Burns
LONGFELLOW
(Actual Size)

For men who prefer Robert Burns in a size slightly longer than the Invincible.

ALL cigars, including Robert Burns, now cost more to make—due to the new war tax on cigars—plus the advancing cost of materials, labor, overhead, etc.

But modern smokers will cheerfully pay a trifle more for this mild cigar whose balanced Havana fragrance wins even callous smoke

appetites to *moderation in smoking.*

Efficient Robert Burns may be had, at good cigar stores, in the three attractive shapes and sizes pictured on this page.

You will say, when you smoke your first Robert Burns Cigar, "This is what I have been looking for—true Havana *taste* plus true *mildness!*"

Have you tried one lately?

LITTLE BOBBIE—Remember Little Bobbie, a small cigar but very high in quality.

DEALERS: If your distributor does not carry Robert Burns, write us.

We must do our best to make the change from War Work to Peace Work as easy as possible. Co-operation is the big thing needed now. U. S. Dept. of Labor, W. B. Wilson, Secretary.

has unanimously decided to press Holland to extradite the ex-Kaiser.

Prague reports that King Nicholas of Montenegro and his family have been deposed by the National Assembly.

The workers in Berlin and Cologne wires the Berlin correspondent of the *Rotterdam Courant*, have declared all banks the property of the state and threaten to put all house property in the same class.

December 3.—Frederick William Hohenzollern tells the Associated Press correspondent at Oosterland, Holland, that he has not renounced any of his rights as Crown Prince of Germany, that he favors the formation of a republic like that of France and the United States, and would be content to return to Germany as a simple citizen, and even be happy to work as a factory laborer.

London reports that the representatives of the Allies now in conference in Downing Street are unanimously in favor of demanding that Holland hand over the ex-Kaiser and the former Crown Prince. With regard to Germany's ability to pay reparations, it was suggested that the Allies take control of the German railways and her coal and potash industries.

An Amsterdam dispatch states that the Dutch Government has decided to stop all exports to Germany in reprisal for the stoppage of the export of coal to Holland.

RUSSIAN AFFAIRS

November 26.—A message from Stockholm states that Russian Bolshevik troops have crossed the River Narova on a broad front and have entered Estonia.

Ottawa denies the report that the Canadian-Siberian expeditionary force has been canceled.

November 27.—Cable advices received in Honolulu note a report in Japan that Admiral Kolchak, dictator of Siberia, has been assassinated at Omsk.

November 30.—Russian Socialists in Paris have address a memorandum to French Socialists explaining why they are opposed to Bolshevism and declaring that the military intervention of the Allies is to safeguard Russian democracy.

December 1.—Archangel reports the Russo-American forces capturing Karpagorskoj, one hundred and twenty miles from Pinega, after a fight with the Bolsheviks.

In their retreat from Russian territory, Paris reports, the German Army of 500,000 men is pillaging the villages.

GENERAL WAR-ITEMS

November 26.—The British Admiralty reports the total number of naval casualties from the outbreak of the war to November 11 as 39,766, divided as follows: killed or died of wounds—officers, 2,466; men, 30,895. Wounded, missing, or prisoners: officers, 1,042; men, 5,363. In addition, 14,661 officers of merchant vessels and fishing-boats lost their lives by enemy action and 3,295 were taken prisoners.

Surgeon-General Braisted tells the House Naval Committee that deaths in the United States Navy from war causes totaled 1,233.

November 27.—American Naval Headquarters in London credits American war-ships with sinking or capturing ten German submarines. Forty-six vessels were engaged in fights in which it was known submarines were present.

November 28.—The Berlin *Tageblatt* charges that the Poles after capturing Lemberg, the Galician capital, sacked

the Jewish quarter and slaughtered several thousand persons.

Official announcement is made in London that during the war Great Britain actually lost nearly 1,000,000 men, killed or dead through other causes.

November 29.—London reports that approximately 200 German submarines were destroyed during the war. The total number of all types built by the Germans is estimated at 360.

Austria-Hungary lost 4,000,000 killed and wounded during the war, states a Copenhagen dispatch. The number killed was 800,000.

November 30.—Washington announces that four entire divisions and major units of eight other divisions, totaling 3,451 officers and 79,063 men, have been designated by General Pershing for an early return home. New figures of American Army casualties show a total of 262,693, exclusive of prisoners.

London reports casualties in the Royal Air forces from April, when they were amalgamated, to November 11 were: killed, 2,680; wounded, missing, and prisoners, 4,909.

A diplomatic dispatch from Saloniki to Washington declares that official German and Turkish statistics, which were seen by a former officer in the Ottoman Navy, gave the number of Armenians deported from their homes as 1,394,350, of whom 1,054,550 were later murdered.

December 2.—Official announcement of the surrender of 4,433 German troops who were driven out of German East Africa is made at Laureneo Marquez, Portuguese East Africa.

Copenhagen reports the arrival of a British fleet at Libau, in Courland, on the Baltic.

FOREIGN

November 27.—Cardinal Mercier, Primate of Belgium, declares that forty-nine Belgian priests were tortured and put to death by the Germans during the occupation.

November 28.—Lima reports that the Cabinet and Senate have approved the protest to Chile against the anti-Peruvian riots at Iquique and that an indemnity will be demanded.

Melbourne reports that the Federal House of Representatives has passed through the bill imposing a 30 per cent. additional income tax.

November 29.—Dispatches received at Buenos Aires say hostile manifestations continue in various cities of Chile, Peru, and Bolivia. It is reported that the Peruvian and Bolivian governments have decided to request the Peace Conference to pass upon the Tacna and Arica controversy.

November 30.—Buenos Aires gets news of a Chilean cruiser being sent to suppress new riots at Antofagasta, and that two army divisions are ordered mobilized.

The Parliamentary Secretary to the Treasury reports Great Britain's national debt outstanding on September 30 was \$34,375,000,000.

December 1.—After Enver Pasha, former Turkish Minister of War, left Constantinople, states a Geneva dispatch, the disappearance of \$110,000,000 of public funds in various banks was noticed.

At a meeting of the British Labor party in London resolutions were adopted demanding the immediate release of all political prisoners and calling President Wilson's attention to the "urgent need of justice" in the case of Thomas J. Mooney.

December 2.—Reuter's reports that from the beginning of the war to the end of

1917, the Turks deported 2,140,000 Greeks and Armenians, of whom 900,000 Armenians and 700,000 Greeks were massacred and 200,000 mobilized Greeks were put to death or died of their sufferings. Greek property taken by the Turks is valued at \$600,000,000.

A Santiago dispatch states that Chilean army reserves have been recalled to the colors and that naval commanders have been ordered to Santiago for a conference.

DOMESTIC

November 26.—The Shipping Board announces the refusal of the Government to approve the proposed transfer of the vessels under British registry owned by the International Mercantile Marine Corporation to a British syndicate. The Government offers to take over the ownership of these vessels upon the terms of the British offer.

San Francisco reports that approximately 500,000 workers in the United States have taken action favoring a strike for the release of Thomas J. Mooney.

The Alien Property Custodian seizes fourteen enemy-owned seats on the New York Stock Exchange, the New York and New Orleans cotton exchanges, and other boards.

A so-called curfew ordinance to keep all children under sixteen off the streets after 9 o'clock in the winter and 10 o'clock in the summer is passed by the New York Board of Aldermen.

November 27.—Frank P. Walsh, joint chairman of the National War Labor Board, declares that the only hope for a safe, orderly national development is in the maintenance of present wage levels and continuous improvement of labor conditions.

Recent riotous attacks on Socialist gatherings by soldiers and sailors in New York City impel the Police Commissioner to inform the Mayor that the police will stop rioting, even if they have to use machine guns on the uniformed men.

November 28.—Yielding to "the urgent appeal of the President," Governor Stephens of California commutes the death sentence of Thomas J. Mooney to imprisonment for life.

Washington announces that the Food Administration will conduct an intensive food-conservation campaign next week so that 300,000,000 hungry people in Europe and the Near East may be fed.

Vice-President Marshall announces that he will remain in Washington during the President's absence in Europe.

November 29.—The War Department states that conscientious objectors who were furloughed to farms will not be demobilized with those at army camps unless their civilian employers can dispense with their services. The Students' Army Training Corps is to be demobilized by January 1.

It cost \$5,645,000,000 to run the American Army during the year ended June 30, reports the Federal Treasurer; the Navy cost \$1,368,000,000, and the expenses of the civil government proper amounted to \$1,516,000,000. The Shipping Board spent \$862,000,000, and \$181,000,000 was paid out in pensions, making the grand total \$9,572,000,000.

Labor leaders in New York decide to begin a nation-wide campaign for the liberation of Thomas J. Mooney, and the International Workers' Defense League pushes the agitation for a general strike on December 9 as a demonstration against the California Governor's failure to pardon Mooney.

November 30.—Brewing of beer and other malt beverages stops throughout the

country at midnight. Twelve hundred breweries, employing approximately 81,000 men, are now out of business.

The Treasury Customs Bureau announces the removal of harbor restrictions imposed under the Espionage Act.

December 1.—The *Mauretania* arrives at New York with the first detachment of returning American troops, 4,069 strong, the majority being members of aero squadrons.

The New York Police Department announces the formation of an aviation section, which is the first aerial police organization in the world.

Food-conservation week is ushered in with the reading in churches, colleges, schools, and other institutions of a message from Mr. Hoover calling upon the American people to "demonstrate not only their ability to assist in establishing peace on earth, but also their consecration, by self-denial, to the cause of suffering humanity."

Speaking at a meeting in New York called by the American Alliance of Labor and Democracy, Samuel Gompers announced the following chief planks in labor's reconstruction program: "No industrial autocracy, no reduction of wages, no lengthening of hours."

December 2.—President Wilson gives Congress his views on the part the Government should play in after-the-war domestic problems.

The State Department requests citizens and concerns who suffered losses through German submarine warfare to file accurate accounts of the same with the Department before January 1.

The majority of the Privileges and Elections Committee of the Senate recommends dismissal of the proceedings involving disloyalty charges against Senator La Follette, of Wisconsin.

Departmental estimates presented to Congress give the Government's outlay in the fiscal year 1920, beginning July 1 next, as \$7,443,415,838. Of this amount \$5,212,000,000 will go to the War and Navy departments, \$803,000,000 to pay interest on war debt, and \$79,000,000 for continuing the building of a merchant marine.

The Federal Trade Commission, in a supplemental report to Congress, charges Swift & Co., Armour & Co., Morris & Co., Wilson Company, Inc., and the Cudahy Packing Company with a combination in restraint of trade and controlling the sale of live stock and fresh meats.

December 3.—At a meeting in Bloomington the Illinois Federation of Labor launches a labor party to compete with the Republicans and Democrats at the polls.

The Food Administration removes all restrictions on sugar consumption in public eating establishments.

The Senate Military Committee is informed by General March that General Pershing is selecting units for the occupational force of 1,250,000 men and that all the other soldiers in France will be brought home as rapidly as shipping can be provided.

After Crossing the Bar.—"That's how we do things in the Army," said Tommy, pointing to a news-heading which bore the words, "Five Hundred Germans Drowned in Champagne." "Got nothing to beat that in the Navy, I'll bet."

"Oh, haven't we?" retorted his sailor friend. "My lad, that's nothing to get excited about—nothing at all. In that last little affair along the Belgian coast we sank three German submarines in port!" —*Tit-Bits.*

BETTER DAYS COMING FOR THE RAILROADS

"THE question which causes me the greatest concern," said President Wilson in his address to Congress on December 3, "is the question of the policy to be adopted toward the railroads." He added that he frankly turned to Congress for counsel, and said he had "no confident judgment of his own." Nor did he see how any thoughtful man could have who knew anything of the complexity of the problem, as it was a problem which had still to be studied, and without bias or prejudice.

A few days before the President made his speech Laurence Beech, in *The Financial World*, remarked that "just when it seemed that confidence was being restored to railroad security holders, confusion has been thrown again into their ranks." A few weeks before the consideration which dominated the stock market had been that peace "would bring relief of a very substantial kind to the carriers, through a reduction of their operating costs." But this had since been obscured suddenly by thoughts of the difficulties to be met in the unscrambling process when the roads were returned to their private owners and by the specter of labor troubles, both of which were "greatly complicated by uncertainty as to when the Government would relinquish control, and as to what, in the meantime, would be its program of operation."

More important than the resignation of Secretary McAdoo was a pronouncement by Samuel Gompers to the effect that organized labor "would brook no reduction in wages after the war," and the starting, by owners of railroad securities, of an aggressive agitation "for the immediate return of the properties to their owners." Representatives of the latter movement had opened their campaign with "a volley of ominous statements, purporting to warn railroad security-holders against the dangers of unification and the impairment of the railroads' credit positions if Government operation was prolonged." In these circumstances railroad stockholders "conjured up a vision of themselves between the devil and the deep blue sea." Generally, they failed to perceive that "the final solution of their problems is now more certain, if anything, than ever." Mr. Beech then outlined reasons for his faith that much better days are ahead for the roads:

"It is the spirit of the law that the railroads be maintained by the Government and returned to their owners in substantially as complete equipment as when they were taken over as a war-measure. Nor is it the intent of the law to impair their strategic value to their owners. At the same time the organized campaign for the immediate return of the roads, while characterized somewhat by alarmist methods, now that it is not hampered by patriotic considerations, should have the effect of giving helpful publicity to the weak points of government control, and should act as a buffer against the improper extension or abuse of powers now delegated to the Railroad Administration.

"If the campaign succeeds in bringing about an early return to private control, only to have the roads face worse difficulties than now, the results will indeed be regrettable. But that is hardly probable, because the best efforts of some of the brainiest and ablest railroad men in the nation

are being devoted to the development of plans for a new order of things. Since these men are working in cooperation with the Government, it is not likely that a premature or ill-advised program will be adopted.

"Once back in private hands, the greatest problems remaining to be dealt with will be labor's wages, and rates. These are so interrelated that the solution of one entails the satisfactory solution of the other. It is highly improbable that in future the Interstate Commerce Commission will force a radical reduction in rates unless such reduction is compatible with a reduction in labor's wages, as well as with decreased operating expenses in other directions.

"Enlightened public opinion is the best guaranty of more liberal treatment of both these questions. The public will no longer support a policy of starvation compensation for the services it expects the railroads to render. In this respect the circumstances which demanded that the Government take over the railroads upon our entrance into the war have had a most fortunate reaction. The public now recognizes that the roads were brought to a perilous credit position by the refusal to grant them a living wage, and that they were not only prevented thereby from developing to the fullest extent the efficiency of their service, but that new capital was prevented from going into new railroad enterprises, which would have aided in the further exploitation and development of the country's natural wealth and industrial resources.

"The changed attitude of the public is, in fact, the key to the whole future of the railroads. If competition is not throttled, the fascination of the railroad field will still hold in it men of the highest executive ability and creative genius. Such men are now admittedly at the head of our transportation systems. They are the type of men more interested in the opportunity to create efficiency and develop new territory than in the stock market. The old order of things has passed out, and while the methods by which its evils were suppressed may not have been the best, they have at least proved effective and, happily, have given rise to a new order.

"It is the desire of the many thousands of people, the owners of seventeen billions of railroad securities, to see the rehabilitation of railroad credit which they realize may be best accomplished through private initiative. And it is the desire of the great part of the population of the country to avoid government ownership and to see an intelligent regulation of railroad affairs that will promote the highest efficiency of our transportation systems.

"Out of the war it seems that this changed sentiment has come, and while the solution of the whole problem presents a multitude of complexities and will doubtless be attended with many periods of uncertainty, I believe that the present is auspicious for investment in high-grade railroad stocks. The stock market is reflecting an exaggerated view of the outcome of the more recent developments. Many rail stocks at this writing are down from ten to twelve points from their highest levels of the year, and from the technical market standpoint their position has been greatly improved.

"The recommendation to buy rails for investment, and probable generous enhancement in market value, applies particularly to the stocks of companies which have demonstrated their earning power year in and year out; companies whose managements have, through sheer force of extraordinary operating efficiency, kept their properties in good physical condition, and companies whose territories are capable of further development."

HOME!

To you, Our Beloved Boys, a welcome home!

Our hearts are overflowing, not only with the affection of blood ties, but with respect, gratitude and admiration. You bring back to us—your fathers and mothers—a glorious and enduring Peace, which, fighting with our inspired Allies, you won with your courage, your brains, and your brawn.

Such is your Achievement. And now let us turn from War to the Work and Responsibilities of Peace. We Americans have a gigantic task before us. It is our job to clear away the wreckage of War, to rebuild and reorganize half the World. And with you home again, with your broad shoulders and courage and energy, we can do it. We must do it.

Perhaps we do not need tell you this: while you fought so magnificently with bayonet and machine-gun in the trench, we, American Industry, here at home fought for you beside lathe and drill-press—to hearten, strengthen and arm you for the

Inevitable Victory. How effectively American Industry met the test is for you, our Beloved Boys, to tell us. Yours is the greater glory, brilliantly won, abundantly deserved. But now that we have you home again we need you. We need you at home as sorely as we needed you in France. We need you to carry to fulfillment the plans and destiny and responsibility of American Industry. To help you Win the War we built new factories, increased our manufacturing facilities enormously, developed new visions of engineering, new conceptions of the needs and markets of the Peace-Time World.

We need you now to hold in Peace the Supreme Place which you have won for us in War.

Let us work together. Shoulder to shoulder we will march on to the fulfillment of America's Industrial Destiny. "Let's Go!"

Winning a continuous road battle

THE road is the wheel's worst enemy. From the first turn of a wheel—as it carries its load on the road-way—from the moment of contact—the road begins a constant, grueling attack. Every stone, every rut, every hump or bit of uneven surface means a blow at the life of the wheel.

Man has smoothed out the rough spots—he has brushed away the stones—he has labored with brain and brawn to curb this evil. But smooth roads wear rough—paved streets crumble—and always the pounding and striking continues.

And in recent years, as the motor truck has grown in importance, it has placed new burdens on the already over-worked wheel. Massive trucks with heavy loads must travel at high speed to help carry the world's commerce on schedule time.

The constant jolts and jars of the road have been multiplied over and over again as truck tonnage has grown and as speed has increased. The added pressure of heavy loads, the continuous blows of rough and worn-out roads have demanded a truck wheel that is resilient and light, yet strong and durable.

Look for the name Dayton on the spoke.

And now comes the Dayton Steel Wheel—a wheel that meets all these requirements. An achievement of science—it has mastered the road problems of the motor truck.

Here is a wheel that is never out of round—that can develop no flats to hammer the bearings and tires. A wheel that is impervious to conditions of climate—a wheel that is resilient to dissipate road shocks—one that has strength to bear all burdens—endurance that out-lives the truck—lightness that adds to carrying capacity.

That is the Dayton Steel Wheel. That is the wheel which is winning a continuous motor truck road battle.

Now that the war is won, our out-put will again be at the disposal of all commercial truck makers. Our folder, "The Final Motor Truck Wheel and Why" tells the wheel story in an interesting way. May we send you a copy?

AUTOMOBILE STOCKS IN WAR-TIMES AND AFTER

Just what the effect of an end to the war has been on automobile stocks was recently discussed by *The Financial World*. "These stocks, at least such of them as are listed on the New York Stock Exchange, have been quite active and in strong demand for a considerable period, with most profit-taking enough by professional traders to give the market an uncertain appearance at times." In these circumstances, the writer believes that a record of the price movements in the last two months is especially interesting "in connection with general expressions in the auto trade that a great revival in automobile manufacturing is in prospect." Many of the companies which have been engaged in war-work, and were rapidly getting on a 100 per cent. war-production basis when the armistice was signed, have been "revising their plans for a resumption of production on a bigger scale than ever in order to catch up with the demand, which, it is said, will be very great this winter for next season's business." While some cancellations of government truck orders have been anticipated by the trade and some little disappointment has occurred over the order allowing car-makers to resume on only a 75 per cent. basis, when 90 to 100 per cent. was expected, it is believed that "a further release will be allowed later on." The writer then says:

"The improvement in auto shares began in late September, the following advances in the leading issues having occurred between September 30 and November 12, on which latter date the stock market began to register its opinion of the armistice terms which were signed the day before:

	Sept. 30	Nov. 12	Advance
Chandler Motor	85	104½	19½
General Motors	117	129½	12½
General Motors pfd	78½	85½	7
Goodyear B. F.	46½	58	11½
Kelly-Springfield Tire	46½	55½	9
Lee Rubber & Tire	19	29½	10½
Maxwell Motor	27½	41	13½
Maxwell Motor 1st pfd	58	69½	11½
Maxwell Motor 2d pfd	22½	28½	6
Pierce-Arrow	39½	49	9½
Pierce-Arrow pfd	98	102½	4½
Saxon Motor	6	14	8
Stufbaker	49½	59½	10
White Motors	46½	48	1½
Willis-Overland	720½	284	57½

*\$50 par value. †\$25 par value.

"The further course of the market for these stocks will be governed largely by the reports they make with respect to the profits made on war-business and how much they will have to write off for wear and tear of war-machinery, and also the future of the industry will depend much on the course of the industrial swing from war to peace conditions. Should there be any considerable unsettlement, with labor unrest, and business should hesitate, then the boom in auto manufacturing would probably receive a check. It is too soon yet to express more than a cautious opinion that the outlook is fairly promising."

AS TO A REVIVAL IN BUILDING

With the removal of restrictions on the use of building materials and a promised increase in the supply of labor by discharges from the Army and the ending of outdoor activities, such as farming, *Bradstreet's* reports a good deal of interest in the prospect for activities, long repressed, in the direction of ordinary building. Much speculation has occurred as to the amount of building that will be possible in some sections at once, in others not before spring. Efforts have been made to arrive at an approximation of the amount involved, but they have been met by

DODGE BROTHERS BUSINESS CAR

It is hard to conceive a business requiring delivery at all, which could not make profitable use of this unusually economical car

Dodge Brothers built it soundly and simply with the idea of rendering maximum service at a minimum of operating cost.

The haulage cost is unusually low

difficulties. Architects, builders, and other members of allied trades and industries are still in the Army in great numbers and many are overseas, while high prices and scarcity of materials still "render immediate work on this line hard to forecast, even if money supplies were easily obtainable and this stage of the season were loaned to building activity, which, it is needless to remark, it does not just at present." From the efforts made to approximate something along this line, *Bradstreet's* has collected estimates, highly tentative tho they are. It says of this information:

"Briefly stated, reports from about one hundred cities of the United States show a total contemplated expenditure, some of it this fall, but most of it next spring, of \$473,000,000 of house, office, warehouse, school, and factory building. This does not seem to include any government work at camps, which are, most of them, outside of the towns, nor does it necessarily cover any delayed government building, such as post-offices or other Federal structures. As to the latter, it might be noted that the Government will shortly ask for bids upon some \$12,000,000 of structures, and the supervising architect of the Treasury is reported in the newspapers as saying that his bureau expects to place contracts for 115 Federal buildings through the coming winter, calling for an average expenditure of \$500,000, and which a simple sum in arithmetic will prove to cost \$57,500,000.

"With the above figures as a basis, it does not seem unduly optimistic to say that something like \$540,000,000 expenditure for ordinary building is in sight before or during next spring. If such proves to be the case, the vastly reduced total of 1918 building will be greatly exceeded. The total expenditure at cities reporting regularly to *Bradstreet's* in 1918 was below \$400,000,000 for ten months, which may be regarded as an almost irreducible minimum, representing absolutely necessary building in any year. If to this is added the \$540,000,000 apparently indicated for early next year, a total approaching the record building of 1916, in excess of \$1,000,000,000, is not improbable in 1919. How much this may be exceeded depends upon a number of troublesome questions having to do with financing of the enterprises, the obtaining of materials at reasonable prices, and last, but not least, the securing of adequate supplies of labor at wages satisfactory alike to builders and their employees."

The Faithful Nurse.—The husband arrived home much later than usual "from the office." He took off his boots and stole into the bedroom. His wife began to stir. Quickly the panic-stricken man went to the cradle of his first-born and began to rock it vigorously.

"What are you doing there, Robert?" queried his wife.

"I've been sitting here for nearly two hours trying to get this baby to sleep," he growled.

"Why, Robert, I've got him here in bed with me," replied his wife.

Then there were words.—*Tit-Bits.*

"Say It with Cake."—MRS. GADABOUT—"Are you still bothered with the awful Boresum family coming to dine with you every few evenings?"

MRS. GADABOUT—"Oh, no; they finally took the hint."

MRS. GADABOUT—"What did you say to them?"

MRS. GADABOUT—"Oh, nothing was said. But we served sponge cake every time they came."—*Indianapolis Star.*

Team-Mates

He's always on the job, because his machine is always on the job, because the motor keeps it on the job.

It is a Robbins & Myers Motor.

It increases his pay by increasing his efficiency, by increasing output. He is pleased, the foreman is pleased, the production manager is pleased—everybody happy.

It was a good day all 'round when the house installed Robbins & Myers Motors. Production has been one hundred per cent ever since. No idle machines or costly shut-downs.

He is one of thousands of happy workers in large and small concerns everywhere that are Robbins & Myers equipped.

For over twenty-one years R&M Motors have been maintaining this same efficiency and contentment standard.

For big machine or little—from 1-40 to 30 horsepower—there's a Robbins & Myers Motor that meets every exact and exacting demand.

Makers of the better motor-driven, labor-saving appliances for the factory, office, home and store equip their product with R&M Motors because of this same quality standard.

A Robbins & Myers Motor on any such device is a guarantee of like quality throughout, and also of dependable operation. Look for this motor on whatever electrical labor-saving device you may be considering.

Power users, electrical appliance manufacturers and dealers find motors at their best in the Robbins & Myers line.

Cruel Deception.—"Poor Maud! She got cruelly deceived when she married that old man."

"Didn't he have any money?"

"Oh, yes, plenty of money, but he is ten years younger than he said he was."—*Boston Transcript.*

Some Life.—"The army must be a terrible place," said Aunt Samantha, looking up from the evening paper.

"What makes you think so, Samantha?" asked her dutiful spouse.

"Why, jest think what it must be where beds is bunk and meals is a mess."—*Washington Star.*

Sure Sign.—"And what did you say the patient did," asked the doctor, "when you ripped off the dressing?"

"Swore, doctor!" exclaimed the nurse. "He swore frightfully!"

"Splendid, nurse! I reckon you can let him sit up to-morrow!"—*Richmond Times-Dispatch.*

Just Missed Perfection.—When Mrs. Langtry was at the summit of her beauty and fame, she met at a dinner an African King who was visiting London. She did her best to please the dusky monarch and evidently succeeded, for he said to her as they parted: "Ah, madam, if heaven had only made you black and fat, you would be irresistible."—*Boston Transcript.*

That Flu Stuff

If you have a tummy-ache,
It's the Flu!

If you're weary when you wake,
It's the Flu!

Is your memory off the track?
Is your liver out of whack?
Are there pimples on your back?
It's the Flu!

Are there spots before your eyes?
It's the Flu!

Are you fatter than some guys?
It's the Flu!

Do your teeth hurt when you bite?
Do you ever have a fright?
Do you want to sleep at night?
It's the Flu!

Are you thirsty when you eat?
It's the Flu!

Are you shaky on your feet?
It's the Flu!

If you feel a little ill,
Send right off for Dr. Pill,
He will say, despite his skill:
"It's the Flu!"

He won't wait to diagnose,
It's the Flu!

Hasn't time to change his clothes,
It's the Flu!

For two weeks he's had no rest,
Has no time to make a test,
So he'll class you with the rest—
It's the Flu!

—*Cincinnati Enquirer.*

They Save Teeth Now in a New Way

All Statements Approved by High Dental Authorities

They End the Film

Countless people are now cleaning their teeth in a new way. And modern dentists all over America are urging other people to join them.

The old ways proved inefficient. As millions know, they failed to prevent tooth troubles. Despite the tooth brush, tartar, decay and pyorrhea constantly became more common.

Some years ago the reason was discovered. It lies in a film—a slimy film—which constantly forms on teeth.

That film gets into crevices, hardens and stays. It resists the tooth brush, and most tooth troubles are now known to be due to it.

The film is what discolors, not the teeth. It hardens into tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. And many troubles besides tooth troubles are traced to this germ-breeding film.

After years of research, a way has been found to combat it. Able authorities have proved this fact by adequate clinical tests.

For general use the method is embodied in a dentifrice called Pepsodent. And we supply a One-Week Tube to all who ask, so the millions may quickly know it.

Let It Convince You

The Pepsodent results are quickly apparent. After a few days' use you will never forget them.

The basis is pepsin, the digestant of albumin; for the film is albuminous matter. The object of Pepsodent is to dissolve the film, then to constantly prevent its accumulation.

But pepsin must be activated. The ordinary agent is an acid, harmful to the teeth. For long that fact made pepain seem impossible.

Now modern science has discovered a harmless, activating method. Five governments already have granted patents. It is that method which makes possible this efficient application.

Four years have been spent by dentists in proving the value of this product. Now we urge all people to prove it by a home test.

Send the coupon for a One-Week Tube. Use it like any tooth paste. Note how

clean the teeth feel after using. Mark the absence of the film. See how teeth whiten as the fixed film disappears.

All this means that the film which wrecks teeth can now be effectively combated. And you will never cease to do that when you see what it means to you.

Cut out the Free coupon now.

Style No. 4843

Grinnell's Black Coltskin Auto Gauntlet

FOR winter driving, the Turtle-neck style of Black Coltskin Gauntlet, with heavy strap fastener, is a prime favorite.

Stylish in appearance, warmly lined and extremely serviceable.

Grinnell Gloves are made in many styles—for motoring, driving, work, sport, dress and street wear.

It's a luxury to wear "Grinnell Gloves" yet they cost no more than the ordinary gloves. Let your next pair of gloves be "Grinnells."

Glove Book Free

Shows the most popular styles—each described in detail. If your dealer does not have style No. 4843 in stock, send us his name, state size of glove you wear, and we will send a pair for your inspection.

A man can gain some new knowledge from the Standard Dictionary every day through his whole life—and then turn it over to his children for their benefit.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the correct use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"W. W.," South Salem, N. Y.—"I have been informed that General Washington and General Grant are the only army officers in this country holding the rank of *General* by Act of Congress. I have also been informed that Admiral Farragut and Admiral Dewey are the only naval officers in this country holding the rank of *Admiral* by Act of Congress. Are these two statements correct?"

The officers mentioned held their respective ranks by act of Congress. *Admiral of the Navy* is the highest rank that has been created by Congress. There are no full generals or admirals except such as hold their titles in this way. Washington never bore the full rank of general. He died a lieutenant-general. Grant, Sherman, and Sheridan were created generals as were Tasker H. Bliss and John J. Pershing in 1917.

"W. A. P.," Newark, N. J.—"Will you be good enough to tell me whether or not *unknownst* is being used to-day? My friend contends that the word is obsolete and that it is not being used by present writers, my contention is that it is not obsolete and that it is being used by present writers."

Unknownst is an adjective in general dialectal use in England, Ireland, Scotland, and the United States and is not obsolete. "Present writers" of dialectal stories are likely to use it when needed. For recent usages see Guthrie's "Kitty Fagan," p. 215 (1909); Phillips's "Sons of Morning," p. 277 (1900).

"W. T. C.," Fallon, Nev.—"Are there two ways of pronouncing the word 'mayonnaise'? If so, please give both and tell me which is preferred."

Mayonnaise is pronounced *me'-on-az'*—e's as in prey, o as in not. The French pronounce it *ma'-o-naz'*—a as in art, i as in police, o as in on and e as in there.

"W. J. S.," Peru, Ill.—"Which is correct, 'The goods mentioned in your letter will be shipped the fore part or the fore-part of next week?'"

Fore part should be written as two words and preceded by "during" or "in the."

"P. O. H.," Democrat, Tex.—"Kindly tell me whether or not the following may be classed as dramatists—David Belasco, Sir Arthur Pinero, Eugene Walter, Geo. M. Cohan. Are all four living?"

The four writers whom you mention are all dramatists in the sense, "one who writes plays." They are all living.

"G. M. N.," New York, N. Y.—"Chopin, the composer, spent the mature years of his life in France, and we hear his name pronounced 'show-jan.' How would his name be pronounced by Poles, his compatriots?"

All works of reference give simply the French pronunciation of Chopin's name, presumably because his father was a Frenchman who taught his native tongue in the Lyceum at Warsaw near which city the composer was born.

"W. H. A.," Xenia, O.—"Our little town has been much excited over a discussion as to who originated the phrase, 'United we stand, divided we fall,' and we are unable to get the information from any local sources. Will you be kind enough to send me the information, and also, if possible, where it may be found?"

The "Liberty Song" of 1788 contained these words from the pen of John Dickson:

Then join in hand, brave Americans all!
By uniting we stand, by dividing we fall.
George Pope Morris (1802-1864) wrote ("The Flag of Our Union"):

A song for our banner! The watchword recall
Which gave the Republic her station:
"United we stand, divided we fall!"
It made and preserves us a nation!

Here Morris quoted the words, perhaps because he had parodied Dickson's song, or because he was familiar with Sallust's lines, "*Concordia parva res crescunt, discordia maximae dilabuntur.*" (*Jugurtha* 10:6) By union (uniting) the small things (states) thrive; by division (dividing) the greatest perish (fall).

"B. R.," Thomasville, Ala.—"Please tell me whether the *ed* in *preparedness* is pronounced as a separate syllable."

In the United States it is, but in Great Britain the word is pronounced as a three- or as a four-syllable word.

"DER TAG"—THE SURRENDER OF GERMAN U-BOATS WHICH WERE TO BRING ENGLAND TO HER KNEES.

BRITAIN'S PEACE TERMS

THE ALLIED TRIUMPH would be a phantom victory, and Germany's surrender not wholly a defeat, the *London Times* reminds us, if by any means discord could be sown between the United States and the British Empire. It is this fact that gives peculiar importance to the reactions of public opinion in America to the various frank statements concerning British peace aims that have recently been drawn from British statesmen by an approaching election. German sympathizers and propagandists, we are told by Judson C. Welliver, a Washington correspondent of the *New York Globe*, are blowing assiduously upon every spark of anti-British feeling that is still alive in this country, and are magnifying every suggestion of divergence between President Wilson and the British Government. Especially do those propagandists try to arouse on this side of the Atlantic fear and distrust of Britain's naval supremacy, while in England they circulate rumors that the United States, emerging from the war stronger than her exhausted allies and with a great new merchant marine, aims to dominate the world commercially and to "suck the marrow out of the whole of Europe." But in spite of these sinister suggestions we find the American press discussing in an entirely dispassionate vein the outspoken words of Winston Churchill and Lloyd George concerning Britain's naval policy, while the English papers are calmly confident that nothing can check the growing understanding between the two great English-speaking peoples. For, as the *New York World* remarks, the unifying purpose behind President Wilson's fourteen points is to make this war the end of war, and the same purpose inspires the attitude of Britain's spokesmen.

Foremost among the points counted upon by the mischief-makers to cause dissension between the United States and Great Britain was the freedom of the seas. Here we have the

frank statement of Winston Churchill, head of the British Admiralty when the war began, and now Minister of Munitions, that Britain enters the Peace Conference "with the absolute determination that no limitation shall be imposed on our right to maintain our naval defense." And this was followed by a similar utterance from Mr. Churchill's chief, Premier Lloyd George, who declares that "wherever the request comes from we are not going to give up the protection of the Navy so far as Great Britain is concerned." For, he adds, "our Navy is a defensive weapon and not an offensive one, and that is why we do not intend to give it up." The British Prime Minister also calls for the ending of conscription in Europe, and for the payment by Germany of the cost of the war "to the utmost limit of her capacity." This war-bill of the Allies against Germany he places at \$120,000,000,000.

Mr. Churchill elaborates his defense of British naval supremacy in an article in the *Glasgow Post*, from which we quote the following paragraphs:

"Our safety from invasion, our daily bread, every means whereby we maintain our existence as an independent people; our unity as an empire or federation of commonwealths and dependencies—all these float from hour to hour upon our naval defense. If that defense is neglected, weakened, or fettered, we all shall be in continual danger of subjugation or starvation. We should be forced to live in continued anxiety. If that naval defense were overpowered or outmatched by any other navy, or probably by a combination of navies, we should hold not merely our possessions, but our lives and liberties only on sufferance. . . .

"We are also entitled to point out that this naval strength that we require and which we are determined to preserve has never been used in modern history in a selfish and aggressive manner, and that it has on four separate occasions in four separate centuries, against Philip II. of Spain, Louis XIV., Napoleon, and the Kaiser, successfully defended civilization from military

tyranny, and particularly preserved the independence of the Low Countries.

"In this greatest of all wars the British Navy shielded mighty America from all menace of serious danger, and when she re-

From the New York Sun

"A SHIP FOR A SHIP."

Such boastings as the Germans use will be turned against them when they are made to replace, in ships or money, the tonnage destroyed by their U-boats. The specks on this German poster are supposed to show the ships sunk in one year's submarine warfare in British waters.

solved to act it was the British Navy that transported and escorted the greater proportion of her armies to the rescue and deliverance of France. Our record in a hundred years of unquestioned naval sway since Trafalgar proves the sobriety of our policy and the righteousness of our intentions. Almost the only ports in the world opened freely to the commerce of all nations were those of our islands. Its possessions and our coaling stations were used freely and fully by the ships of all nations. . . .

"We are sincere advocates of a league of nations. Every influence Britain can bring to bear will be used to make such a league a powerful reality. This fine conception of President Wilson has been warmly welcomed by British democracies all over the world. We shall strive faithfully and loyally to carry it into being and keep it in active benefit and existence. But we must state quite frankly that a league of nations can not be for us a substitute for the British Navy in any period that we can foresee."

There is no cause for surprise or apprehension in Mr. Churchill's words, remarks the *New York Evening Sun*, and the *New York Tribune* considers it a simple fact "that the British Navy has been the most formidable weapon on the side of right; that without it we should have lost the world to the Hun, and that English superiority at sea is not an aspiration but a condition." The *Chicago Tribune* concedes the soundness of Britain's attitude toward her Navy, but thinks her rash in her determination to discard her other defensive weapon, the conscript army. The *Baltimore Evening Sun*, on the other hand, thinks the question of British navalism "the most momentous that faces

the American people and the world to-day," and the *Brooklyn Eagle* does not see how we can demand the reduction of armaments on land without also demanding it at sea. Says *The Eagle*:

"If the British delegates are to carry their point against conscription they will do so only because they have helped to establish the international league which Mr. Wilson has urged. Such a league would reduce the liability of war and make great standing armies and the conscription principle unnecessary and obsolete. But if the league reduces the size of armies and knocks out conscription it must also reduce the size of navies. If there is to be disarmament at all there must be disarmament all around, otherwise the league would become a mere fantasy of international politics, an illusion to be laughed away so soon as its incongruity and impotence become manifest."

London correspondents hint that "when President Wilson's proposals on the subject of the freedom of the seas are definitely laid before the Allied peace delegates it will be found that they are in no way so antagonistic to British interests as has been generally supposed." In the *London Daily Express* we read:

"Informal conversations have been in progress some time, with the result that the British Government is in possession of concrete suggestions which are more understandable than the rather hazy wording of the famous Clause 2 of the Fourteen Points. Wilson, on the other hand, is in possession of information showing him definitely that Britain can not give up the right of search at sea, the law of contraband, and the enforcement of blockade. We understand Wilson's proposals do not include abandonment of any of those rights."

"The whole position, of course, is dependent on the success of the President's basic proposition for a league of nations. If that proposal does not succeed, the whole suggestion for any international control of naval and military power falls to the ground. It is only in the event of the league being formed, with definite agreed principles to govern its actions in all conceivable emergencies, that questions on the exercise of sea-power will arise for settlement."

"The President's proposal in that event amounts to a suggestion from the second strongest naval power, which the United States now is, to the strongest, to fix definite rates of naval construction, to which all will loyally adhere; and, further, that in the event of it being necessary to bring naval pressure to bear on any recalcitrant nation, the task should jointly be undertaken by the two leading naval powers."

"Bringing pressure to bear by sea-power can only mean the

HIS GOOD OLD LIFE-PRESERVER.

use of the blockade and the enforcement of contraband regulations, and both those weapons the United States would be prepared to use in an alliance with us in any case where they were necessary in order to preserve peace or to restore it.

"It seems as tho the United States, in fact, were offering to

HOW GERMANY REPENTS.

share with us what the Germans termed the odium of being the world's 'naval bully.'"

Perhaps *The Express* would find confirmation of this view in the statement of John Sharp Williams on the floor of the Senate, that President Wilson is going to Europe to bring into existence a league of nations to be dominated by the United States and Great Britain. As Senator Williams puts it:

"If the two English-speaking nations go into it, we can by our sea-power, by our control over raw materials, by our control over natural resources, force the other nations of the world to do the league's bidding. We can agree that any civilized nation that makes war upon another without first submitting the questions in controversy to an arbitration tribunal shall be outside of the pale of civilization and that the freedom to operate upon the high seas shall be denied to her, that access to the raw materials and markets which the two nations in the league shall control shall be denied to her, and in that way we can keep peace in the world for one hundred years, if we only have the courage to do it."

This feeling on the part of leading Americans that the two great English-speaking nations have a common duty to the world leads them to accept without jealousy the fact of Great Britain's naval supremacy. Ex-President Taft sees "nothing in England's position as to her fleet that should discourage the friends of the league of nations to enforce peace." Similarly Colonel Roosevelt concedes Britain's imperative need of "the greatest navy in the world." "Our own need for a great navy comes next," he says, "and we should have the second navy in the world." In a "Britain day" statement the Colonel has declared that "under no circumstances shall there ever be a resort to war" between the two countries, and that "no question can ever arise between them that can not be settled in judicial fashion."

Britain's peace terms, besides demanding the punishment of the German nation by the exaction of indemnities and the loss of her colonies, call for the trial and punishment of those individuals responsible for the war. "Men guilty of unspeakable atrocities upon our prisoners and upon the civilian inhabitants of the invaded lands must stand trial, and if they are condemned must suffer death," declares Sir Auckland Geddes, Minister of National Service. And the Prime Minister says that the Government's legal advisers "have unanimously come to the conclusion that the Kaiser and his accomplices in the making

of this war ought to be tried by an international court," and he declares that "the British Government will use its whole influence at the Peace Conference to see that justice is executed."

Of the war-bill to be collected from Germany he says:

"All the European Allies have accepted the principle that the Central Powers must pay the cost of the war up to the limit of their capacity. The Allies propose to appoint a committee of experts to examine the best method of exacting the indemnity."

And in a later statement he thus summarizes the Allied position:

"First—As far as justice is concerned, we have an absolute right to demand the whole cost of the war from Germany.

"Secondly—We propose to demand the whole cost of the war from Germany.

"Thirdly—When you come to the exacting of it we must exact in such a way that it does not do more harm to the country that receives it than the country that is paying it.

"Fourthly—The committee appointed by the British Cabinet believes that that can be done.

"Fifthly—The Allies are in exactly the same boat. We shall put in our demands all together, and whatever they are they must come in front of the German war-debt."

"Germany will have no colonies when the Allies are done with this business," declares Sir Auckland Geddes. The most emphatic demands that Germany's colonies in Africa and the Pacific islands shall not be returned to her come from the Union of South Africa and from Australia and New Zealand.

As Frank H. Simonds reminds us in the *New York Tribune*:

"Britain has won this war in no small measure because of the support of her colonies. She can not by sheer force compel a restoration of German colonies to Germany in the face of the opposition of her own colonies without the gravest consequences. In point of fact, the Pacific islands of Germany were taken by Australian and New Zealand troops, who occupy them, and the conquest of German Southwest Africa was mainly a South-African enterprise.

"And to understand the attitude of the British colonies, it is useful for Americans to go back in American history to the time of the victory of Britain, with the very great aid of the American colonies, over France, which culminated in the capture of Quebec. At that time the suggestion of a return of Canada to France would have precipitated a revolution in the Thirteen Colonies, and for the simple reason that it would have meant a perpetuation of the condition of warfare in America."

WAR-TAXES FOR PEACE YEARS

NO PEACE FOR THE TAXPAYER was provided by the armistice which ended the war; indeed, the horrors of war from the view-point of the man who pays the bills would seem to be if anything increasing rather than diminishing. In our very first peace year the financial authorities at Washington call for the raising of the largest tax ever levied by any nation, overtopping the existing "war-tax" by nearly two billion dollars. Four billion dollars was sufficient for the first complete fiscal year after we went into the war; if the war had not ended when it did, we would have doubled that sum for the year 1918-1919; with peace insured, we are asked to furnish six billions for this year and four billions for the next. Before he left the Treasury, Secretary McAdoo warned us that for some years to come the Government's needs will run above \$4,000,000,000 yearly as compared with ordinary prewar expenses of about \$1,000,000,000. The end of the world-war was, naturally enough perhaps, the signal for the revival of partizan warfare over tax-making, so that Washington correspondents predict a deadlock over taxation legislation which will defeat the pending Revenue Bill and compel the Internal Revenue Collector very soon to proceed to collect under the existing complicated tax-rates, with perhaps an emergency war-profits tax added. And the New York *World* observes that if Congress "does not at once sanction the collection of more tax-money on the business of this calendar year," the Government "must put out a new Liberty loan very soon." This Democratic daily sees in the general demobilization of our war-machinery "no excuse whatever for such a state of demoralization in current war-finance as has been reached in Congress." It reminds us that the Revenue Bill which was passed by the House of Representatives on September 20, and reported to the Senate by the Finance Committee on December 6, has actually been under consideration by Congress almost nine months. The taxpayer, declares *The World*, "has a right to know what his taxes are." He is, we are told, "more interested in this than in knowing what he has got to pay a year from now." Yet the provision for raising revenue for two years instead of one, according to the Washington correspondents, is the single thing which is holding up the passage of the bill. A political neutral, suggests one correspondent, might easily conclude "that the whole deadlock is little more than a rivalry as to which yard the game of laying taxes is to be played in." That such an issue should give rise to a partizan struggle seems strange enough to the ordinary citizen who pays the taxes, the *Chicago Daily News* (Ind.) remarks, and it proceeds:

"Why should the Democrats unitedly desire to enact at this time what are practically two revenue bills, one for 1919 and another for 1920, and why should the Republicans in a body object to this idea? Is it true, as some charge, that the Democrats merely seek to prevent a special session of the new Congress? Or is it the fact, as the Democrats affirm, that legitimate business and sound finance would be greatly aided and encouraged during the coming difficult period of readjustment if the revenue program for 1920 were determined without further delay?"

"To the ordinary citizen there suggests itself a simple way of settling this curious controversy. Why should not the Senate leaders ascertain the sentiment of enlightened and competent bankers, manufacturers, merchants, and exporters? Why not

carefully inquire what is best for the country, for industry, trade, and commerce, for capital and labor? Why should a business question be exploited by either party for political purposes? This is not the time to play politics at the expense of business stability and prosperity."

Yet it is for the sake of business stability that Chairman Simmons of the Senate Finance Committee, Mr. McAdoo, and President Wilson advocate the immediate determination of the taxes to be levied for the next two years. The President, it will be remembered, insisted on this point in his address to Congress at the opening of the present session. As he said:

"As much of the burden of taxation must be lifted from business as sound methods of financing the Government will permit, and those who conduct the great essential industries of the country must be told as exactly as possible what obligations to the Government they will be expected to meet in the years immediately ahead of them; it will be of serious consequence to the country to delay removing all uncertainties in this matter a single day longer than the right processes of debate justify. It is idle to talk of successful and confident business reconstruction before those uncertainties are resolved. . . ."

"I entirely concur with the Secretary of the Treasury in recommending that . . . provisions be made now, not subsequently, that the taxes to be paid in 1920 should be reduced from six to four billions. Any arrangements less definite than these would add elements of doubt and confusion to the critical period of industrial readjustment through which the country must now immediately pass, and which no true friend of the nation's essential business interests can afford to be responsible for creating or prolonging."

The Democratic plan for announcing at this time the reduction of taxation by a third for the fiscal year of 1920 is approved by the independent *Washington Post*, as "certain to prove encouraging to industry," and as a stimulant to business activities. By the passage of such a tax law, business men, we are told, will be furnished with a guide most "helpful in the formulation of their plans." *The Post* admits that the Treasury Department may not be able definitely to estimate at this time the require-

ments for 1920, but it thinks that amendments can easily be made at any time, "and if the Republicans see fit, with control of both branches in their hands, they can remodel the entire act."

But Republican editors do not agree that the two-year plan was designed to aid business. The *Minneapolis Journal* (Ind. Rep.) sums up the Democratic plan as one "to fix taxation on the lines of the Kitchin-Simmons bill for the next two years—and to do it while the fixing is good." Once this law were enacted, the Minnesota editor thinks that a Presidential veto would balk any attempt at amendment or repeal. Then the Republican Congress might "be obliged to impose heavy taxation for 1921" with resulting handicap in the coming Presidential campaign. The *New York Evening Sun* (Ind. Rep.) denounces as "mere false pretense" the plea that the Democratic plan is intended to help business. Business, it says, "knows that all unnecessary burdens will be removed just as soon as the new Congress can convene."

One Democratic newspaper, the *Brooklyn Eagle*, is inclined to agree with some of its Republican contemporaries that the taxpayers are not now troubling themselves about any taxes other than those for next year and sees "as much warrant for looking forward to national necessities for several years as there is for anticipating those of one." Moreover, "there is literally no warrant for the 'usurpations' by one Congress of the functions

THE CALL FOR POCKET PEACE.

belonging to another." A representative of business and finance, the *New York Journal of Commerce*, suggests that the whole revenue program may be changed in the next few months because of events at home or abroad and sees only "partizan politics" behind the two-year plan, of which it says:

"Its framers want to furnish to the world unmistakable evidence that they will, if continued in office, reduce the heavy burdens of taxation which they are now planning to place upon the shoulders of the community for the present year. Of this it may be said that a wise and sane policy for the present will be of far more effect than unlimited promises for the future."

An interesting contrast to this attitude is that of the radical *Cincinnati Post*. This Scripps-McRae paper does not agree that the deadlock endangering the passage of the Revenue Bill is all politics. "It isn't," we are told. Instead—

"Big Business is at the wheel. Some Congressmen deliberately and some ignorantly are obeying the directions of Big Business.

"The higher taxes are fixed, the less able Big Business finds itself to escape taxation. . . .

"So Big Business is very, very busy. It does not want a precedent set of raising \$6,000,000,000 in taxes. It does not want even \$4,000,000,000 in taxes raised if it can help it.

"So Big Business is trying to prevent the passage of the \$6,000,000,000 bill."

The Revenue Bill presented to the Senate provides for total taxes amounting to \$5,978,466,000; as compared with this the present law raised \$4,370,117,000, and the House Bill prepared before the signing of the armistice was to raise \$7,405,390,000. This six billion dollars, roughly speaking, was to pay the expenditures of the fiscal year ending next July, and it would levy on incomes and profits of the year 1918, and would be collected in the early months of next year. The tax for the fiscal year 1919-1920 would be reduced by the elimination of the war-profits tax and by reducing the income-tax rate. There would also, according to the majority report of the Finance Committee, "be a net reduction from other miscellaneous sources of about \$500,000, attributable chiefly to shrinkage in the yield of the beverage taxes." In cutting down the Revenue Bill after the signing of the armistice, reductions were made chiefly in the field of excise taxes and in the excess-profits taxes. On the other hand, as we note in a Washington dispatch to the *New York Journal of Commerce*, "individual income-tax payers in all of the lower incomes will have to contribute decidedly

more heavily than has been the case during the past year." As the writer of this dispatch summarizes the bill, the basic income-tax rate is kept at six per cent. up to \$4,000, with exemptions of \$1,000 for single and \$2,000 for married persons. From \$4,000 upward the rate is twelve per cent. Surtaxes begin at \$5,000 and increase until they reach forty-eight per cent. on \$100,000 incomes and sixty-five per cent. on incomes over \$2,000,000. The corporation tax is to be twelve per cent. for the calendar year 1918 and eight per cent. for subsequent years. The excess-profits tax includes a war-profits tax. The amount subject to taxation under this head is the sum of the following items:

"1. Thirty per cent. of the amount of the net income in excess of the credits and deductions as prescribed by the act, if such net income is not over twenty per cent. of the invested capital; (2) sixty per cent. of the amount of the net income over twenty per cent. of invested capital, and (3) the sum by which eighty per centum of the net income exceeds the amount of the tax figured under items (1) and (2).

"2. The year 1919 will carry a reduction in this tax, the thirty per cent. on income not over twenty per cent. of invested capital being cut to twenty per cent., while the sixty per cent. on net income over twenty per cent. is cut to forty per cent. The amount figured on the eighty per cent. basis is cut off entirely."

In the Senate bill taxes on inheritances are levied beginning at \$10,000, with a one per cent. tax up to \$25,000, and the tax-rate increasing until bequests of over \$2,500,000 pay a twenty-five per cent. tax. Some of the luxury taxes in the House bill have been eliminated, but a large number are retained. The writer for *The Journal of Commerce* points out that discussion of these schedules in the Senate centers round the excess-profits and income taxes, which, by the way, furnish \$4,600,000 of the six billions to be raised by the bill. One group will try to secure the adoption of still more drastic taxation of corporations and large incomes, "while another group will contend that the present taxes on excess profits are already so high as to threaten the solvency of those corporations which have not actually realized the profits on which they are taxed, as well as to embarrass the income-tax paying power of individuals at large."

To many editors the most interesting and pleasing clauses of the Senate bill are those restoring the two-cent letter rate and readjusting the second-class postage rate so as to restore the old cent-a-pound rate for periodicals within a 200-mile zone and establish a cent-and-a-half rate for points outside.

OUR SHARE IN WINNING THE WAR

DISCUSSION OF OUR SHARE in winning the war arouses feeling so bitter in some cases and so petty in others in "the man in the street" and in some printed utterances that various judicial editorial observers appear to think it is time to present such authoritative opinion as will show that every nation on the Allied side is entitled to its due share of credit. The proposition that "we won the war for the Allies" rather blatantly set down by sections of the press of anti-British tinge is met head-on by the rather superior air of others who aver that the American effort was not really necessary. The *St. Louis Globe-Democrat*, disclosing a temperate mind, insists that while "all talk about our part in the war being comparatively negligible should end," yet it would be false and ungrateful to belittle the heroic services of the French, of any class of the British, of the Belgians, or of the Italians. Civilization will always be in debt to them as well as to the Russians, to the Balkan Allies, and to Japan, for there were times when the work of each was of vital consequence and "many times the 'war was saved.'" But, in the light of General Pershing's report to Secretary of War Baker, this *St. Louis* daily tells us, it is equally false to deny America's part, for from May 28, when the first American division performed its brilliant exploit at Cantigny, the German cause was "doomed." There is no occasion to ask who won the war, according to the *Philadelphia Public Ledger*, which reminds us that it was won at the first battle of the Marne in the sense that German success depended upon crushing France before any effective aid could come to her. Again, it was won as soon as the British Navy had made the seas safe, "yet at the last great crisis, it was undeniably the American Army which turned the tide," and this journal points out that "not boastfully, but thankfully, the nation praises General Pershing's men for that." The *Public Ledger* calls attention to Secretary Baker's report of what the War Department did during the past twelve months, when it produced an army of 3,665,000 from a nucleus of 190,000, and successfully transported and maintained overseas 2,000,000 men, and the *Indianapolis News* says:

"We have a right to be proud of the record. The number of the killed and wounded alone proves that our men were engaged in desperate fighting. The hardest job of all was given to them in the closing days of the struggle, and it was they who cut the German line of communication at Sedan and made surrender or disaster certain but for the armistice. We had 236,000 men killed and wounded during our brief participation in the struggle. During the four years of the Civil War the number of killed and wounded was 110,000 on the Union side. More than half as many men were killed as were killed in the great struggle for the preservation of the Union. Compared with the losses of our allies ours were small. But they were large enough to prove that we bore our full part during the time we were engaged. The men who suffered and died for us are worthy of

the eternal gratitude of the nation. We are glad that Mr. Baker recognizes the value of the services, and the self-sacrificing devotion of the men in the camps who never got to the battle-front. 'They have been,' the Secretary says, 'none the less soldiers and have contributed in no small way to whatever success has attended our arms.'"

"We were the last reserve of civilization," writes Mr. Frank H. Simonds in the *New York Tribune*, and we arrived terribly late upon a field on which disaster had been avoided only by the supreme heroism and devotion of our associates. But, having arrived, we gave all that we had unhesitatingly, and what we gave was "placed in the hands of one of the greatest captains of all time." This military critic proceeds:

"The winning of this war is not the single achievement of any nation; comparisons of amounts contributed will not be made by those who shared all the tasks loyally and to the limit of their capacities. It is for our allies to appraise the value of our services, but they will be the first to recognize that national sense of deep and lasting pride in our young Army, newly come from farm and factory, which made the campaign of the Meuse of 1918, broke the German lines, closed the Sedan gateway, and was on

the road to Germany itself when the foe surrendered.

"As for General Pershing, his personal achievement is revealed in that of his army, and he wisely and characteristically leaves it at that. But how many foolish tongues will be silenced by the generous and just tribute he pays to our associates—abominable word!—to our allies!"

Nor is appreciation lacking in high quarters among our allies. For one, we read in a Paris dispatch to the *New York Times* that Marshal Joffre is quoted as saying:

"It was the weight of America—her moral and material resources, and, surely not the least, her very considerable army, thrown into the balance at the crucial moment, that turned the scales and won the victory. And the Americans showed themselves true soldiers and a military Power that counted tremendously in the decisive conflict."

Other French generals with whose command American troops had been brigaded are eloquent in their appreciation of our new-made Army, and the press quote a letter from Field-Marshal Haig, the British Commander-in-Chief, to the command of a corps of American troops which served with the British Fourth Army during the closing days of the war, in which he says in part:

"On the 29th of September you participated with distinction in a great and critical attack which shattered the enemy's resistance on the Hindenburg line and which opened the road to final victory."

"The deeds of the Twenty-seventh and Thirtieth American divisions, which took Bellecourt and Naroy and gallantly sustained the desperate struggle for Bony, will rank with the highest achievements of the war. The names of Brancourt, Premont, Busigny, Vaux-Andigny, St. Souplet, and Wassigny will testify to the dash and energy of your attacks. I am proud to have had you in command."

Gen. John J. Pershing's report to Secretary of War Baker, covering operations up to November 20, after the German

"THERE'S NO PLACE LIKE HOME."

The *Mauretania* warping into dock with a ship-load of jubilant Pershing men.

collapse, closes with these words expressing his feeling for those who served under him:

"I pay the supreme tribute to our officers and soldiers of the line. When I think of their heroism, their patience under hardships, their unflinching spirit of offensive action, I am filled with emotion I am unable to express. Their deeds are immortal, and they have earned the eternal gratitude of our country."

Some journals point to General Pershing's confession that "our entry into the war found us with few of the auxiliaries necessary for its conduct in the modern sense." He gives credit to France for much of the equipment without which our success would have been impossible:

"Among our most important deficiencies in material were artillery, aviation, and tanks. In order to meet our requirements as rapidly as possible, we accepted the offer of the French Government to provide us with the necessary artillery equipment of seventy-fives, one fifty-five millimeter howitzers, and one fifty-five G. P. F. guns from their own factories for thirty divisions. The wisdom of this course is fully demonstrated by the fact that, altho we soon began the manufacture of these classes of guns at home, there were no guns of the calibers mentioned manufactured in America on our front at the date the armistice was signed. The only guns of these types produced at home thus far received in France are 109 seventy-five millimeter guns. In aviation we were in the same situation. . . . We obtained from the French the necessary planes for training our personnel, and they have provided us with a total of 2,676 pursuit-, observation-, and bombing-planes. The first airplanes received from home arrived in May, and altogether we have received 1,379. The first American squadron completely equipped by American production, including airplanes, crossed the German lines on August 7, 1918. As to tanks, we were also compelled to rely upon the French. Here, however, we were less fortunate, for the reason that the French production could barely meet the requirements of their own armies.

"It should be fully realized that the French Government has always taken a most liberal attitude, and has been most anxious to give us every possible assistance in meeting our deficiencies in these as well as in other respects. Our dependence upon France for artillery, aviation, and tanks was, of course, due to the fact that our industries had not been exclusively devoted to military production. All credit is due our own manufacturers for their efforts to meet our requirements, as at the time the armistice was signed we were able to look forward to the early supply of practically all our necessities from our own factories."

In a statement of the Navy Department from the New York office of Vice-Admiral Gleaves, Commander of the Cruiser and Transport Force, we read:

"Of the entire army of 2,079,880 men taken over, the statistics show 46¼ per cent. were carried in American ships, 48¼ in British, and the rest in French and Italian vessels.

"Of the total strength of the naval escort guarding all these convoys, the United States furnished 82¼ per cent., Great Britain 14¼, and France 3¼.

"In actual numbers of men transported 912,082 were carried in American naval transports and 40,499 in other American ships; 1,006,987 were carried in British and 68,246 in British-leased Italian ships, and 52,066 by French and Italian ships."

THE PERU-CHILE TIF

WARLIKE RUMBLINGS from Chile and Peru while other nations are waiting anxiously for the outcome of the world's greatest peace conference remind us that South America has its Alsace-Lorraine in Peru's lost provinces of Tacna and Arica. But because the treaty of Ancón,

by which Chile acquired possession of these Peruvian provinces after the war of 1879-83, provides that their ultimate fate shall be decided by a plebiscite, most of our editorial observers find it impossible to believe that this present revival of an old quarrel will not be settled by some method short of war. Thus to the *New York Globe* "it seems inconceivable that Chile and Peru should not submit their dispute to arbitration." As the same paper adds, "the United States Government has offered to intervene conjointly with Argentina, and unless the parties to the controversy accept they will seriously impair their right to be classed among the peace-loving nations of the world." "A South-American struggle over a question of 'self-determination' would be a queer preliminary to a world-peace conference which is to settle many similar controversies in Europe," remarks the *New York Tribune*, which goes on

to recapitulate in a few sentences a difference of thirty-five years' standing:

"Chile got into a dispute with Bolivia over the development of the nitrate deposits in the Bolivian maritime province of Antofagasta. Peru, having similar nitrate holdings further north, became involved in the quarrel. Chile overwhelmed both the Bolivians and the Peruvians, finally occupying Lima.

"In the treaties of peace Bolivia ceded outright all her frontage on the Pacific. Peru ceded in perpetuity the province of Tarapaca, and yielded Tacna and Arica for ten years, the inhabitants having the right thereafter to determine their national allegiance by a plebiscite.

"The ten years of probation expired in 1893. But Chile, on one pretext or another, postponed the vote. It has not yet been taken. Peru has tried repeatedly by diplomatic means to secure an execution of the treaty. Failing in this, she finally withdrew her minister from Santiago.

"The Tacna and Arica districts are more than an Alsace-Lorraine, because Peru never surrendered absolute title to them. Chile holds them by force, and her Government is apparently satisfied to continue holding them on that basis. The situation is one which breeds irritation and warlike passions."

As the *Boston Christian Science Monitor* sees it, the immediate motive of the recent anti-Chilean demonstrations in Peru is to force the justice of Peru's claims upon the attention of the Peace Conference at Versailles.

From the two countries involved come charges and counter-charges. The Peruvian interpretation of the situation is partially reflected in the *New York Tribune's* account of the controversy, which is quoted above. For the Chilean view we turn to a statement made by Mr. Castro-Ruiz, Chilean Consul-General

From the *New York Tribune*.

PERU'S ALSACE-LORRAINE.

Tarapaca was ceded unconditionally to Chile in 1883; the conditional transfer of Tacna is the cause of the present dispute between Peru and Chile.

HURRY UP WITH THE LEAGUE OF NATIONS.

New York, and published in *The Times*. After pointing out Article III of the treaty of Ancon, which provided for a plebiscite in Taena and Arica at the expiration of ten years of Chilean control, also called for a special protocol to prescribe manner in which the plebiscite is to be carried out, Mr. Castro-Ruiz goes on to say:

When the term of ten years set forth in Article III of the treaty was about to expire the special protocol referred to in the treaty had not yet been complied with. This was to decide on the plebiscite and fix the terms. Without this protocol it was impossible to bring the plebiscite to an issue, this being its object. Besides, the period of ten years did not signify the term necessary for the Chilean occupation, but the beginning of the propitious time for the celebration of the plebiscite, as stated by the author.

"On June 22, 1893, Chile initiated the diplomatic negotiations for the consummation of Article III of the treaty of Ancon and gave instructions to this effect to the Plenipotentiary of Chile in Lima, Mr. Vial Solar. From that time began the extensive negotiations, postponed regularly until 1909 and continued after that extra-officially under the administration of the Peruvian President, Billinghurst.

"It having been impossible to come to an understanding for the realization of the plebiscite, because Peru has never offered reasonable terms and because she always wished to depart from the spirit of the letter of the treaty of Ancon, Chile has had to be on her guard and try to arouse the Chilean sentiment in Taena and Arica to obtain a triumph in the plebiscite. . . .

"It is proper to call attention to another fact: the Presidential elections in Peru are close at hand. The present President desires to be reelected, and there is no better way for him to make himself popular than to agitate the question of Taena and Arica."

FOREIGN - COMMENT

From a drawing by Abel Faivre in "L'Illustration," Paris.

OUTCAST.

HOLLAND'S UNWELCOME GUEST

PLUNGED IN DEEP GLOOM, Wilhelm von Hohenzollern is pictured in dispatches from Holland as writing furiously all day and every day. What he is writing is still a mystery, and the field of conjecture is open to all imaginative minds, but meantime the Dutch are doing a little writing too, and on a subject of direct interest to the furious writer of the mysterious manuscript. A number of the Dutch papers, headed by the *Amsterdam Telegraaf*, always a strong pro-Ally organ, call for his immediate expulsion. Others take a more moderate view, but admit that his presence may bring Holland into difficulties. For example, the very moderate *Amsterdam Nieuws van den Dag* publishes an article on the subject which shows the uneasiness prevailing in Dutch circles. It frankly desires to see its Hohenzollern "guests" depart, and says:

"For the present, perhaps, there is no danger of any plot on our soil against Germany's new democracy among the entourage of the ex-Kaiser or the ex-Crown Prince, but who can say when this danger might not be realized if these 'guests' do not depart speedily? History teaches that kings in exile like to seize a favorable opportunity to reenact their former rôles. This would not only involve a menace for Germany, but also a menace for the Allies.

"And now we desire to express our frank opinion that not we, but the Allied governments, have the right to decide whether the residence on Dutch soil of the persons who are considered by them to be the personification of the Dark Powers against which they have been fighting is dangerous for them or not. If the Dutch Government has another opinion on the subject, then it will have to bear the consequences of it, and the Dutch

nation, if things come to a serious pass, will be involved in war or have to starve, forsooth, on behalf of the German ex-Kaiser."

The opinion of the *Amsterdam Telegraaf* is aptly expressed at some length by Mr. John C. Van der Veer, its London correspondent, who writes:

"I do not consider it safe to leave the ex-Kaiser in Holland, whether interned or not. It may be, and I sincerely hope that demand will be made for his extradition. Since the governments of victorious nations have decided that all those Germans of whatever rank who are responsible for the dire atrocities committed during the war on land, at sea, and from the air shall be brought to justice, the ex-Kaiser can not possibly escape that fate. This can only happen after the lapse of many months."

Meanwhile, the *Telegraaf's* correspondent mischievously suggests that pressure should be brought to bear upon the Germans to take back their "once-so-beloved master," tho which of the two would find it the more embarrassing, the nation or the Kaiser, is difficult to conceive:

"William should not be left in Holland as a center of German military intrigue. He can not suddenly have altered his vain-glorious and blasphemous views. . . . The best solution of the problem of the escaped ex-Kaiser would be a demand for his extradition by the new democratic rulers of Germany. That demand will be a test of their sincerity. The Allied nations could wish nothing better than that the once duped but now apparently awakened German people deal with their own deceivers. Their fate might then be much worse than what they could expect from the justice of Allied nations."

The rank and file of the Dutch nation, we are told, is and always

has been in sympathy with our cause, but some of the nobility sympathize with the Hohenzollerns. Mr. Van der Veer writes:

"Much as I regret that it was a Dutch nobleman who offered the fallen Hohenzollern his castle as a refuge, I am not surprised. Part of our nobility has always felt more in common with Prussian Junkers than with our thoroughly democratic people. Early in the war the press published the names of Dutch Junkers who were fighting as officers in the very German Army which would have overrun Holland as it did Belgium if it had suited the purpose of the ex-Kaiser and his accomplices.

"The presence of the ex-Kaiser in Holland is an eyesore to the overwhelming mass of our people, who from the beginning to the end of the war remained wholeheartedly in sympathy with the Allies. Our people will not forget that the very man who fled for safety to our country, and is to-day sharing our scanty food-supplies, not only ordered his hordes to slaughter our Belgian neighbors, but also sent hundreds of our sailors and fishermen to death through the destruction of a large part of our mercantile fleet by the pirates of his Navy."

GERMANY'S DEBT TO BELGIUM—*The Westminster Gazette* has received from an official source some of the items that will figure on Germany's bill in Belgium. They run:

"Local contributions and fines levied by Germany on Belgium in 1914, \$40,000,000.

"War-contributions extorted from November, 1914, to October, 1916, \$192,000,000. From November, 1916, to May, 1917, \$70,000,000. From June, 1917, to June, 1918, \$144,000,000. From June, 1918, to October, 1918, \$75,000,000.

"Raw material and machinery, taken by the Germans up to January, 1915, were estimated by them at \$400,000,000.

"Damage up to December, 1914, estimated by the *Nord-deutsche Allgemeine Zeitung* at \$1,000,000,000.

"This does not include materials, destructions, or requisitions since January, 1915, and this item alone must be reckoned at several hundred millions.

"In addition, during the winter of 1916-1917, 150,000 workmen were deported to Germany, the whole of whose production is totally lost to their country."

GERMANY NOT STARVING

THE PATHETIC WAILS from Germany—that the "good German people" is starving—are merely for stage effect. A chorus of testimony has gone up from every Allied correspondent in the occupied parts of Germany, and all are agreed that in Dr. Solf's "starving Germany" food is far more plentiful than in parts of France and Belgium. The whole thing is, we are told, a stage play to induce the sentimentalists in the Allied countries to press for the lifting of the blockade. Germany herself admits the truth of this. The French Government has collected the evidence on this point, and it runs:

"During 1917 Germany was revictualled from a crop inferior to the average, but the last harvest was abundant. Before the armistice the Germans declared their food-sufficiency, and their effort since the signing of the armistice to make it appear that the nation faces starvation was undertaken 'to move the universe to pity.'

"The Imperial Chancellor declared before the signing of the armistice that Germany was able to overcome food-difficulties and to defeat the attempts of the Entente and America to starve her into submission. On September 20 the *Kölnische Zeitung* declared: 'The situation shows itself more favorable than it was at this time last year.'

"The *Munich Abend Zeitung* said on October 12: 'The crop of barley and oats is estimated to be 12,000,000 tons, at least, which will allow the daily bread ration to be increased to 500 grams, which is more than the average per head consumption.'

"The *Kölnische Zeitung* stated on November 16: 'The sugar output, 1,800,000 tons, greatly exceeds the needs of peace times, 1,200,000 tons. There are plenty of potatoes. At the end of September, Herr von Waldow spoke of raising the weekly ration to nine pounds.'

"The *Chemnitzer Volkszeitung* wrote on September 27: 'Some cities have enough to last them until April 1, 1919.'"

The Westminster Gazette, commenting on Dr. Solf's repeated pleas that Germany starves, remarks:

ONE THING AT A TIME.

THE HUMBLE HUN—"I vos German democrat, *mein Herr*. I come to press my suit for food."

THE UNYIELDING YANKEE—"I'll press your suit later, after I've prest this necktie on your Mister Hohenzollern."

—*Bystander* (London).

THE SOB STUNT.

THE ENTENTE—"It's no good trying that game! There is the line—see it!"

—*Passing Show* (London).

AS LONDON SEES THE GERMAN CRY FOR FOOD.

"Dr. Solf must realize that if the conditions in Germany are as bad as he pictures them the responsibility is on the shoulders of the German rulers, of whom he was one, who carried on the war with this catastrophe clear before their eyes. It was the German policy to take foodstuffs from Russia, not to see that Russia was fed. That is not the intention of the Allies, but they can do nothing to help Germany in its present strait unless they obtain from Germany the means of transport. We should add that Dr. Solf appears to protest too much. Germany, like other countries, has gathered her harvests within the last two or three months, and she can not now be wholly destitute of the means of feeding her population. The real pinch will come later, and if anything is to be then done in the way of relief it is necessary that the Allies should have the means of putting into Germany what supplies they can spare."

That the Allies would be foolish to lift the blockade of Germany all the Paris papers are agreed. For example, *L'Excelsior* says:

"If the Allies continue the blockade, it is not with the object of starving Germany, but in order to defend themselves effectively against Germany's commercial ambitions. In the course of the war Germany has built ships on a large scale, and has on the stocks reserve shipping of nearly a million tons, making altogether a total of 3,000,000 tons, which, when peace conditions are restored, would enable her to establish commercial supremacy over the Allied and neutral countries, whose tonnage has been considerably decreased by torpedoings. The raising of the blockade would have been a very foolish step."

Regarding the actual shortage of food, here is a dispatch from Cologne from Philip Gibbs to his paper, the *London Daily Chronicle*:

"So far I can not find any outward sign of hunger in Germany. There is good food to be had in all the hotels I have seen, and even in the country inns. The bread is coarse, but good butter comes for the asking. Meat seems plentiful. Cheese is served for breakfast instead of eggs or bacon. Coffee is *ersatz*, or substitute, made from corn, and not bad. There is no dearth of sugar. In the hotels potatoes and cabbages come up with the meat."

The Chronicle is a little sarcastic in its comment, and asks:

"Is not the humanity whine of the Hun analogous to the old story of the ruffian on trial, for murdering his father and his mother, who pleaded for pity for the 'Poor orphan!'"

Meanwhile, Germany begs piteously for food, and at the same time, like a mangy dog, snaps at the hand that would feed. A dispatch to *The Chronicle* from its Amsterdam correspondent runs:

"Some journals are spiteful enough to cast doubt on the genuineness of the plans of the Entente and America to afford help, and they rage against the armistice conditions, particularly as they affect the food-supplies. The *Weser Zeitung* shouts that the 'Triumph of force and lies has been achieved. Right and equality, which we inscribed on our banners from the very first day on which the enemy fell upon us, have been defeated. The dictatorship of militarism has been victorious.'

"To-day's *Kölnische Volkszeitung* is angry about the 'inhuman hunger war' and the 'criminal barbarism' of the Entente in continuing to 'starve' Germany."

"In the view of the *Rheinisch-Westfälische Zeitung*, the suggestion to use German ships for bringing food to Germany is merely robbery by England of Germany's ships."

"The Berlin *Kreuzzeitung* rails against the thanksgiving services held in England and terms them blasphemy, 'seeing by what inhuman means England waged war.'"

A CRITICAL MOMENT FOR JUGO-SLAVIA

LITTLE FAVOR has so far been shown by the Great Powers to the Jugo-Slavs. Poland, Finland, Bohemia, and the Lettish provinces have all been recognized as budding nations, but the Southern Slavs have had to be content with somewhat vague expressions indorsing their aims so far

as the great nations are concerned. The *London New Europe*, a staunch and consistent friend of these peoples of *Servia Irredenta*, tells us that their fortunes have reached a critical stage. But before discussing the matter in detail it gives us some very necessary information as to who constitute the Jugo-Slavs. It says:

"The Southern Slavs (Jugo-Slavs) are known under three national denominations—Servians, Croats, and Slovenes. They all demand union with Servia and Montenegro in one national state, and hence there can be no question of an independent Croatian, Bosnian, Dalmatian, or Slovene Kingdom, or Republic, or state in any form whatever. All reports, therefore, regarding the formation of separate independent states are unfounded. They are pure and simple inventions, and tend to compromise the idea of union of all Jugo-Slavs in one independent state."

"The Jugo-Slav National Council is representative of all Jugo-Slav lands—i.e., Croatia-Slavonia-Dalmatia, Bosnia-Herzegovina, Carniola, Carinthia, Styria, Istria, Gorizia-Gradisca, Quarnero Islands and Dalmatian Archipelago, and Southern Hungary—all lands inhabited by the Jugo-Slavs. Some of these lands are disputable between Italy and the Jugo-Slavs, and their fate will be settled at the Peace Conference on the basis of the principle of nationality."

We learn that the aspirations of the Jugo-Slavs are likely to be hampered from two different quarters—first from Italy and then from Servia. Italy, the Jugo-Slavs tell us, aspires to make the Adriatic an Italian lake, and so has laid claim to more of the eastern shore than she is entitled to under the principle of nationality, and to-day by the terms of the armistice with Austria she holds almost all she has ever claimed. While Italy—in common with the other Allied Powers—has recognized as nations the Poles, Finns, Letts, and Czechs, all the Jugo-Slavs have obtained is this somewhat vague declaration which we quote from the *Milan Corriere della Sera*:

"The Council of Ministers resolves to inform the Allied governments that the Italian Government regards the movement of the Jugo-Slav peoples for the conquest of their independence and for their constitution into a free state as corresponding to the principles for which the Entente is fighting and also to the aims of a just and lasting peace."

Commenting on this statement, the *London Times* says:

"This is the first definite declaration of the Italian Government as a whole on the Jugo-Slav question. Altho the Prime Minister, Signor Orlando, associated himself with the resolution of the Rome Congress of Oppressed Austro-Hungarian Races last April, which recognized the 'unity and independence of the Jugo-Slav nation as a vital Italian interest,' the declaration officially issued by the Prime Ministers of Great Britain, France, and Italy on June 3 was restricted to 'an expression of earnest sympathy for the nationalistic aspirations toward freedom of the Czech-Slovak and Jugo-Slav peoples.' On June 28 Mr. Lansing announced the determination of the United States Government to secure the freedom of all Slav races from German

and Austrian domination. The French Foreign Minister, Mr. Pichon, foreshadowed, in a public statement early in July, the constitution of 'a Jugo-Slav state'; and Mr. Balfour declared at the Mansion House on July 25 his 'deep sympathy' with the statement of Servian-Jugo-Slav war-aims officially proclaimed by the Servian Minister."

The New Europe urges that—

"This is the moment for the constructive process to begin. There is not a moment to be lost. The accomplished fact of a general armistice leaves the field free for purely political operations, and detailed plans must at once be concerted for the general reconstruction of a new Europe. It is only too painfully true that the Allies are not ready for this important and critical stage of *la victoire intégrale*. Four years of war unpre-

Hungary (that is to say, that Belgrade and Agram should be partners on equal terms), and (b) a special commission for foreign affairs to sit in the West until the treaty of peace is signed, likewise constituted in equal proportions from the two Jugo-Slav branches, and coordinated by the Foreign Minister. It would be an auspicious act on the part of the Prince Regent if he were to place himself at the head of this movement, for the personal policy of Mr. Pašić is in a fair way to compromising the dynasty, and only prompt action can hope to save the situation.

"Another complication in the already delicate situation of the Jugo-Slavs has been gratuitously added by the terms of the Austrian armistice. Those terms prescribe, almost word for word, the iniquitous frontier-line of the Treaty of London. It is hard to understand this totally uncalled-for provocation toward the Jugo-Slavs. It is not as if it were demanded by any military exigency, for we need, and can obtain, guarantees far further afield—in particular as far as the railways to Vienna and Krakow. It is impossible in the terms of this armistice to avoid seeing again the effect of Baron Sonnino's reactionary policy. If this policy is allowed to prosper unchecked, if its attempt to lay hands on as many pawns as possible is not frustrated, there is a definite danger of permanent armed conflict between the two shores of the Adriatic, and such a conflict would have the immediate effect of weakening the Agram Government, and most likely of opening the flood-gates of Bolshevism."

The Manchester *Guardian* urges that prompt recognition of Jugo-Slavia by the Powers is a matter of elementary justice:

"The actual reason why the Southern Slavs are not yet recognized while even the Letts are is no doubt that Italy objects. If Italy objects, it is not on the ground of any principle—none can be alleged—but because she has certain territorial claims which can be satisfied only at the expense of the Southern Slavs. If the Southern Slavs are denied recognition by the Allies, are excluded from the conferences of the Allies in which the peace settlement is in large measure determined, they will not be able to defend their cause. But how can this be defended? How can it encourage people to believe that the victorious governments are sincere in their professions that they mean to reconstitute the world by the light of justice?"

JUGO-SLAVIA.

This map shows the Southern Slav provinces of the former Austrian Empire that desire to unite with Serbia and Montenegro into one great Southern Slav state. It also shows the territory taken over by Italy under the Austrian armistice, part of which the Jugo-Slavs claim.

cedented in its horror have not been enough for the Allied statesmen to evolve a consistent and adequate policy, and it is not impossible that the Germans, meeting our representatives at the conference-table before we are agreed among ourselves, may be presented with an irresistible opportunity of dividing us during the negotiations. The new states, for instance, which will arise from the ashes of the old autocracies will need every help they can get in their first tentative experiments. No time should be lost in getting into touch with their accredited leaders and concerting with them any measures which may be necessary for helping them on to their legs."

Turning now to the Servian side, *The New Europe* writes:

"The recognition of Jugo-Slavia by the Allies has been hitherto withheld. Such a recognition is a matter of urgent and vital necessity. The only reason why this step has not yet been found practicable is that, most unfortunately for the Jugo-Slavs and for ourselves, there is a state of disunion between the reactionary Servian Premier, Mr. Pašić, on the one hand, and the progressive and democratic Jugo-Slav Committee on the other. Mr. Pašić's leanings toward the rôle of an oriental Sultan are alone responsible for the cloud which at present hangs over the fair future of Jugo-Slavia. The urgent need of the moment is for an instant concentration of purpose on the basis of absolute equality between the two main branches of the Jugo-Slav race. With this end in view there should be immediately constituted (a) a responsible government, formed equally of Servians from Serbia and Jugo-Slavs from what was Austria-

ENGLAND RULED BY FOREIGNERS—A correspondent in the London *New Witness* recently pointed out that "England is suffering from foreign domination."

He wrote: "We are governed by the Welsh, prayed at by the Scots, and preyed upon by the Irish." From a note in the London *Evening Standard* the genuine native-born Englishman does not seem to have much to say nowadays. It writes:

"The Versailles Conference is considering decisions which may affect the fate of Great Britain for generations.

"A correspondent points out that on this conference our country is represented by:

One Welshman (Mr. Lloyd George).

One Scottish Canadian (Mr. Bonar Law).

One Jew (Lord Reading).

Four Scotsmen (Mr. Balfour, Sir Eric Geddes, Marshal Haig, and Admiral Wemyss).

One Englishman (Lord Milner).

"Is this not," he asks, "a humiliating position for the country south of the Tweed—the so-called 'predominant partner'? England proper is said to contribute seventy to eighty per cent. of the men in the British Army, ninety per cent. in the British Navy, and about ninety per cent. of the British war-expenditure. Yet she has only one Englishman to make her voice heard at this crisis in her history."

Oddly enough—the *The Evening Standard* omits to mention it—the one Englishman cited, Lord Milner, was actually born in Germany and his father before him, since his grandfather, a physician, settled there, without losing touch with England or acquiring German citizenship.

SCIENCE - AND - INVENTION

WIRELESS EMANCIPATED BY AN AMERICAN INVENTOR

WIRELESS TELEGRAPHY has been held down and hampered, ever since its invention, by what the operators call "static"—the presence of free electricity in the air, which often interfered with the working of the apparatus so as to make it practically useless. During the last

year of the war, we are now told, the Allied nations have not had to deal with this obstacle. It has been removed for them by an improvement discovered by the chief engineer of the Marconi Company, which, after fifteen years of research, was about to be made public when the United States entered the war. Placed at government disposal, this invention has been a military secret until now, when its existence is announced by Edward J. Nally, general manager of the company. As he does not go so far as to describe and explain the device, its results and their far-reaching importance must be accepted on his word; but the electrical papers treat his announcement as authoritative. Says *The Electrical World* (New York, November 23), quoting Mr. Nally:

"Ever since the genius of Marconi made wireless telegraphy a fact, the only limitations of this method of communication was the deadly phenomena of 'static conditions.' It was 'static'—the presence of a large amount of uncontrolled electricity in the air—that at the beginning of the war often entirely prostrated the wireless service even between the most powerful stations erected in Europe and America. Static conditions were responsible for abnormal delays and for the mutilation of words in wireless messages.

"It was the one great obstacle to continuous communication by means of electromagnetic waves in the air. So baffling was the problem that Marconi issued a personal appeal to every wireless operator in the world to record his observations and to collect data on the subject. Some of the leading scientific minds in the universe struggled to overcome the effects of the static disturbances. World-wide researches were instituted and large sums of money expended, but the end sought was not obtained.

"It remained for an American radio expert, Roy A. Weagant, chief engineer of the Marconi Wireless Telegraph Company of America, to discover the solution of the static problem. Weagant practically had devoted his life to a study of this perplexing phenomenon, and the result of fifteen years of experimental work was about to be published to the world when the United States entered the Great War.

"Altho patent applications had been made and the claims allowed by the United States Patent Office, the Weagant system was immediately placed at the disposal of the American Government, and every precaution was taken to keep the invention secret until the discovery could be safely announced. With the spirit of research that has made the Navy such a magnificent

arm of our military service, officials of the Navy Department assigned naval experts to cooperate with the inventor in installing experimental stations in various parts of the country. These stations are now receiving messages from all the high-power wireless stations of the world.

"With the consent of the Marconi Company, the United States Navy Department disclosed the Weagant invention to our Allies, and special representatives of the French and British Governments were sent here to study the system.

"Among the revolutionary changes that the new system effects in wireless installations will be the immediate disappearance of the huge steel towers heretofore built at great height to catch the incoming wireless waves. Equipped with the Weagant invention, the wireless receiving antennas are stretched merely a few feet above the ground.

"Heretofore, also, the increasing number of high-power stations that were being erected in every part of the world raised the difficult question of 'interference.' Crossing wireless messages that shot through the ether sometimes made the wireless signals so indistinct that they could not be understood or drowned the weaker transmission entirely. The Weagant system, based on a unique selective principle, eliminates interference and permits absolutely clear communication, regardless of the operation of other stations even in the immediate vicinity."

Commenting editorially on this announcement, *The Electrical World* says:

"Clearly, these are highly important and most beneficent improvements that Mr. Weagant has bestowed on radio service. In fact, he has given it such an impetus as to make it a most formidable rival to submarine cable service. Its improved value in communicating with and between vessels at sea and thereby helping to reduce the loss of life from possible shipwrecks is alone a gift of outstanding benefit to humanity.

"The disclosure of Mr. Weagant's invention, which was developed as the result of Edisonian perseverance, is but the first announcement of a series of almost marvelous developments that have resulted from the intensified scientific research undertaken to insure and hasten successful termination of the war."

NINETY-NINE PER CENT. STARVATION

IF A FAT MAN, weighing something like two hundred pounds, could reduce himself by fasting to two pounds, he would perform no greater feat than that of certain jellyfishes described in *The Scientific American Supplement* (New York, November 23). The writer gives credit for his facts to

"To the jellyfish this structureless mass is what its hump is to the camel—a store of food-material laid up against evil days to come. When natural food runs short owing, perhaps, to the coming of colder weather, and the consequent disappearance or migration to deeper waters of the small fry of the ocean, the jellyfish is compelled to fall back upon its own reserves of food. Its vitality is now derived in part from the absorption of its own jelly. A jellyfish from which all food was

kept continued to live for at least forty-two days, but at what cost! It gradually shrank in size till but a ghost of its former self remained, for the jelly disappeared as energy; at the beginning of the experiment it weighed just one hundred times more than it weighed at the end.

"Whether this self-sustenance is a normal phase in the yearly round of jellyfishes, or is an exceptional response to peculiar conditions of starvation, has yet to be discovered."

WHALE-STEAKS

AMERICANS ARE LEARNING to like whale meat. Other nations have always liked it, but we are slow to adopt what we consider foreign foods, altho there is nothing particularly foreign about the whale. The Food Administration is responsible for our early attempts at eating whale, but, according to a writer in *The Scientific American* (New York, November 16), our liking bids fair to grow and spread after the emergency that gave rise to it has passed. During the war the production of whale meat has enabled us to keep the usual supply of domestic animals nearly normal and has released ample meats of other types for the maintenance of our military and naval forces. Plants for preparing whale meat, storage-houses for keeping it, and vessels for its distribution, are now scattered along the North Pacific coast. Seven stations have thus disposed of about one thousand whales this season

—all of which we have eaten. Readers who have never knowingly consumed whale are invited to reflect on the fact that it tastes remarkably like beef. The original owner of that luscious steak you ate last night may possibly have swum the North Pacific instead of galloping about on the grassy plains of Texas. We read:

"The meat of the whale extends in great masses from the base of the skull to the tail fin and downward to the middle line, or completely over the rib section. This meat, all of it of the same quality, amounts to ten tons for each fifty feet of length and each fifty tons gross weight of the whale. Above these dimensions there may be fifteen tons of solid whale flesh of best eating quality. In other words, one-fifth of a whale is meat, without computing the other parts, such as the heart, etc., that are edible. The steer, being also a mammal, with nearly identical skeletonic structure, represents almost precisely the same proportions. That is to say, a steer weighing 1,000 pounds has 200 pounds of beef, but only a proportion of its meat of the first class such as characterizes nearly the whole whale flesh. A 50-foot, 50-ton whale, then, represents in bulk a herd of 100 steers of one-half ton weight each. He represents as much meat also as the herd. He is also equal to 500 sheep of 200 pounds each or to 300 hogs of 350 pounds each.

"Of course, steers range up to a ton of weight, with a corresponding increase of weight of flesh. But a whale also weighs up to 75 tons, representing a herd of 150 steers of a half-ton

The Scotaman. A 99 per cent. reduction in weight is an impossibility to any vertebrate, because his skeleton is unaffected by fasting. A man's bones weigh as much when he is lean as when he is fat. But the jellyfish has no bones and consists largely of structureless tissue that plays the practical part of a storage-reservoir of food-material. Starve the creature and it simply shrinks to almost nothing, while retaining life and identity, a very useful ability in times of food shortage such as we have been having. Says the paper named above:

"Jellyfishes are carnivorous and live upon nothing else than their fellow dwellers in the ocean, and these, as every one knows, they capture by means of poisoned threads shot from many-armed batteries. Many feed almost entirely upon smaller jellyfishes of other sorts, some cannibalistic forms engulf their own kind, other large species catch fishes, but most prefer the lesser organisms, especially small crustacea and fish eggs, which form a rich population in all the seas.

"As this floating population is in quantity, so the jellyfishes wax in size and strength. In our temperate seas and in the colder northern ocean minute floating life is more rich in numbers than it is in the tropic oceans; and in the cold northern oceans the largest jellyfish are found. Recent discoveries have shown that the jellyfish puts its surplus stores of food to good use. As it feeds it increases in size, and a great proportion of its new growth is due to the increase of the solid mass of jelly which lies between the outer surfaces of the bell or 'umbrella.'

weight each. Any way you look at it, the whale has advantages over beef cattle. He requires no herdsmen or cowboys to care for him. He and his wife rear, feed, and guard their own young without any assistance from laborers. There is no cost to any one to feed him or his family; no food, clothes, or fuel to buy, with corresponding labor to produce them. When wanted, the whale is in his given haunts, ready to be taken. No butchering is required for him, the harpoon gun lands the fatal stroke. All you have to do is to haul him out and cut him up. The cost of whatever processes are required to put a whale on the market is so small in comparison with that of breeding and rearing a steer that Americans, like the Japanese, will soon have meat as good as the best parts of beef at probably not over fifteen cents per pound and in as large quantities as any family needs.

"A whale is a mammal, not a fish. It produces its young alive and suckles them the same as a cow. Its flesh looks like that of beef, altho admittedly a little coarser in texture, and it has a slight flavor of venison. Whale steaks and roast whale have been served in several of the leading New York restaurants for some time past, having had a preliminary test at Delmonico's restaurant. New York chefs have developed the best methods of cooking and serving, and have found that it yields to as many forms of preparation as beef. There is little to distinguish it from beef, when served on the table, either in appearance, aroma, or taste. Many would be deceived into thinking it beef if not told what had been served. It is only in America that whale meat is a novelty. In Asia and elsewhere whale meat is the staple food.

"Whale meat has every advantage over beef—mutton—pork. In the first place, the whale is a diseaseless mammal, and its salt-water habitats contribute to its freshness, cleanness, digestibility, and healthfulness as food. On the contrary, cattle are subject to tuberculosis and foot-and-mouth and other diseases more or less communicable to humans. As an example, according to the statistics issued by the University of California, a billion pounds of pork are annually lost to America from hog-cholera. Sheep are subject to foot-and-mouth and other diseases. Disease also is destructive to immense numbers of the poultry and domestic food-bird families. In brief, we have diseased meats of all descriptions, if bred on land, and no diseases to worry about if bred in salt water. The meat of the back of the whale further differs from that of all other edible mammals, in that it is uniform, that is, all roasts and steaks, and also boneless. Its sirloin section, of some ten tons, is entirely lacking in those tough, cheap, and nearly inedible parts

ONE OF THE WHALE'S MANY USES.

Liquid spermaceti being drained from the head of a sperm-whale.

characteristic of beef, which some of us have to consume or go without meat because of the cost."

In conclusion, the writer quotes Dr. Roy C. Andrews's book on "Whale Hunting with the Camera" to the effect that few people realize the great part whale meat plays in the life of the poorer Japanese, who cannot afford to buy beef. For shipping purposes it is cooked in great kettles, canned, and sent to all parts of the Empire.

THE UNITED STATES EQUAL TO EUROPE

THAT THE UNITED STATES is as large as all Europe, not only in geographical extent, but in resources and ability, we are assured by J. R. Finlay, a mining engineer of New York, writing

in *The Engineering and Mining Journal* (New York, November 23). Mr. Finlay's article, which he entitles "Readjustment, Not Reconstruction," is intended to emphasize the importance of mining enterprise in the coming economic readjustment of the world, but it is interesting on account of the evidence he puts forth to show how large our own country looms at the present time. At the outset the writer calls our attention to the simple geographical comparison of areas, familiar to the pupils of every common school. Doctrinaires may remind us, he says, that space is not greatness; that our presumed bigness is a mere aggravation of our littleness—for are we not little in spirit, art, and ideas? But the disclaiming membership in the "spread-eagle class of patriots," Mr. Finlay disagrees with the self-disparaging doctrinaires, and joins forces with the geographers. He writes:

"That the United States is, in sober truth, equal to the whole of Europe in those elements that constitute national strength—industrial, political, military, or naval—is the main fact to consider in all discussions of reconstruction. Moreover, I imagine that well-informed men in Europe may recognize the fact more clearly than we do.

"The war has proved one thing so thoroughly that we may take it for an axiom—namely, that the mass of military power is about equal to the mass of industrial power. The same organizing forces that create one create the other. A weak

A LARGE PORTION OF TONGUE.

Three-thousand-pound edible tongue of a Pacific gray whale.

industrial nation is not a great military nation, and the people who try to make it so will find that they are building up a sophistry. On the other hand, a strong industrial nation is not necessarily a military one, but that is a matter of its own option. It can be, whenever it wants to be; and it will want to be whenever it feels a necessity strong enough.

"Another axiom is that political power—international influence—is in proportion to this interchangeable industrial or military power. I say power, not the assertion of power, or the use of it. . . .

"Another axiom is that the industrial power of a nation is not measured by gold or by foreign trade or by bank statements. It is simply the producing capacity of the people, which will be a function of their numbers multiplied by their efficiency and again by their natural resources. Another axiom, which brings us nearer home, is that industrial power is based on mining, for the fundamentals of manufacture are dug from the ground. . . . Still another axiom is that the cheapest place to manufacture iron is the cheapest place to manufacture machinery and the cheapest place to run that machinery. Therefore, industrial activity centers in the area of iron manufacture.

"I have called these statements axioms, because they seem so to me. They may not be accepted without question; but I think they will stand analysis, and I proffer them as starting-points for political and economic speculations. If these statements are true, what is the arithmetic?

"This country uses as much coal as all Europe put together—600,000,000 tons a year. It produces as much iron as all Europe put together; and twice as much copper as all the rest of the world. It has as much land as all Europe, and that land is just as good as, if not better than, that of Europe. Capital is produced not by a mass of peasants, however industrious those peasants may be. The Chinese are industrious, but they have no capital. The Russians are sturdy workers, but they have none either. Capital is produced by profitable and organized industries. By this measure we shall find that the United States produces as much capital as all Europe combined.

"It strikes me that the amount of coal consumed by a nation may be taken as a fair, tho perhaps a rough, measure of the use of machinery, as well as of the organization of industry. This idea has excited indignation, I believe, among some, but it is not unreasonable. A better measure would be the sum total of mechanical power; but the statistics of that, except for coal, are not so easily obtained. The United States uses its share of water-power, and of gas-power too, probably in full proportion.

"Some critics complain that this mass of crude force is no measure of soul, of intelligence, or of grace. Perhaps it isn't; but our most soulful national competitors would like to have it, just the same. I do not claim that machinery produces our intelligence. I claim that our intelligence produces the machinery. Judged by the amount of machinery produced, the United States may claim considerable intelligence. I am willing to believe that moral, artistic, and other desirable qualities are somewhere tucked away in that intelligence."

What has all this to do with reconstruction? Have not these facts been measurably true any time these last twenty-five years? Yes, answers Mr. Finlay, they have been true; but it took a war to make ourselves and the rest of the world conscious of it. That is the function of wars. A war is not won by forces that were in existence before it began. Thus, in making plans for the future, it is necessary to pay attention to the proportion of things established by the war. To quote further:

"In former times the United States went to foreign countries for money; now they will come here. The lender is the banker. The United States is already a creditor nation to the extent of a good many billions, and I imagine that the part it will play in the reconstruction of Europe will add a good many billions more. In the days before the war who ever heard of an American buying the bonds of foreign governments? Now look at the list published every day in the Stock Exchange reports! Our banks have begun to establish branch offices in foreign countries, and it is probable that they will find increasing reason to do so. I suppose Americans will soon be trading in the bonds and stocks not only of foreign nations and cities but also of foreign business enterprises. . . .

"Recent events have shown that the United States is not detached from the rest of the world, and also that it has a giant's power. There will be a certain temptation to use this power to exploit blatant conceits and emotional fancies, as well as new social and economic theories. There will be more need than ever for sound education and common sense."

SUBSTITUTES FOR WAR

MAN IS A BORN FIGHTER, and if we are to abolish war we shall have to find a substitute. Those who hope to do it by altering human nature are altogether too trusting, thinks Paul Popenoe, who contributes to *The Journal of Heredity* (Washington) an article entitled "Is War Necessary?" The impulse to conflict, he asserts, is a normal one and can not be abolished by appeal to reason or sentiment. The problem, which is one for the biologist to solve, is that of providing some useful outlet for this fighting instinct, instead of allowing it to expend itself solely in bloodshed and destruction. How can the explosive forces that break out now and then in economic catastrophe be penned up so that they may be utilized for the progress of civilization instead of for its destruction? There have been several useful suggestions, and Mr. Popenoe gives them in some detail. He writes:

"The history of the race has left its mark in every man and woman. Through millions of years mankind fought its way upward. Every individual had to fight to avoid becoming the food of some carnivorous beast. He had to fight against the forces of nature. He had, further, to fight with his own fellows, to some extent, for food, shelter, and a mate. Any male who could not and would not fight when necessary had small chance of leaving any offspring. It is natural, then, that every human male should still have an inborn disposition to war, that, once it has been aroused by the appropriate stimuli, 'the impulse to war is stronger than the desire to live.' As an organism, man is probably better organized to fight than to do anything else.

"War being instinctive in its origin, being an expression of man's inherited nature, it can not be reasoned out of existence. 'If men's actions sprang from desires for what would, in fact, bring happiness,' Bertrand Russell points out in his notable book, 'Why Men Fight,' 'the purely rational arguments against war would long ago have put an end to it. What makes war difficult to suppress is that it springs from an impulse, rather than from a calculation of the advantages to be derived from war.'

"Militarists have long recognized this fact and made the most of it. The fighting instinct being the strongest that men possess, militarists think that it is utopian to talk of suppressing it. So far as the immediate future is concerned, this is certainly true. But it is the function of science to take a long look ahead."

The biologist recognizes, Mr. Popenoe goes on to say, that man, as an animal, still possesses the strongly developed impulse to fight. The principal difference is that most animals fight primarily against environment, including all other animals, rather than against their own species. Man long ago got the best of his environment, and his disposition for physical combat has to find expression partly in sports, partly in work, and partly in fighting other members of his own species. To quote and condense further:

"The impulse to war, then, is not only deeply ingrained in man's inherent nature, but it is far more complex and firmly entrenched than is generally suspected. It is not surprising that many persons have considered war not only natural but inevitable.

"Given that man has such inherited impulses, what is he to do with them? Any disposition that is balked, that fails to find expression, sets up a nervous tension and leads to a degenerate condition, if not to a neurotic one. The problem of science is to find a satisfactory substitute for war; to furnish men with the combat which their systems crave, but to make this combat productive instead of destructive.

"William James pointed this out clearly in his famous essay on 'The Moral Equivalent of War.' He suggested a universal conscription of youth, not for military training, but for a fight with the environment in the old, prehistoric way—in reclamation projects, for example. At the same time, the stimuli to war must be reduced by a more rational system of education. Major Crile points out that many of the activities of normal life give vent to the bellicose disposition. Captain Cannon points out that modern warfare no longer satisfies the emotional nature of man as it once did. The exhilaration of a charge across No Man's Land is undeniable; but charges nowadays are few and far between, and most of warfare is of a routine, mechanical

nature. War as a psychological instrument for giving 'tone' to a nation has been developed too far, he says, and something else is now required. From the physical point of view, he thinks greater extension of competitive athletics would be valuable, and he cites the case of the Igorot head-hunters of the Philippines, who were turned from the war-path by the Americans and now find an outlet for their energies in sports. From the moral point of view, he thinks the fighting spirit of men should rather be turned against the environment. The great battle should be against pain, disease, poverty, and sin, and international warfare of the present kind should rather be regarded as dissension in the ranks.

"Professor Russell's discussion of the substitutes for war has been more thoroughgoing than that of any one else. The first thought that naturally occurs, he says, 'is that it would be well if men were more under the dominion of reason.' But it is not by reason alone that wars can be prevented, but by a positive life of impulses and passions antagonistic to those that lead to war. It is the life of impulse that needs to be changed, not only the life of conscious thought.

"The biologist will not, of course, make the mistake of thinking that there is any one panacea which will abolish war. Neither universal democracy nor an omnipotent League to Enforce Peace will suffice by itself, although both these developments would be highly desirable.

"The means for reducing the number of wars in the future may be divided in two classes. First, there must be a reduction in the number and intensity of the stimuli which now stir up the war-impulse; this requires changed methods in teaching history and patriotism, and doubtless numerous changes in the organization of society. Secondly, there must be attempts to guide the impulse to war into productive channels. Universal conscription, as William James suggested, would not only aid largely in this, but would also give the nation an immense army of vigorous young men, to be called upon at any time when the backward state of civilization in other nations made it impossible for this nation to avoid going to war."

HOW THE "FLU" MASK TRAPS THE GERM

A LARGE-MESHED FISH-NET bears about the same sized relation to a swarm of flies as the common gauze mask bears to the influenza germs it is supposed to stop; and for this reason doctors, and other persons who know something about germs, have been moved to comment either pityingly or sarcastically on the common public assumption that such masks afford protection. The openings in an influenza mask, as seen under a microscope, are enormous, while the influenza germ, even under high magnifying power, remains almost invisible. Nevertheless, public opinion is right, and a part, at least, of scientific opinion is wrong, for the influenza mask really does protect, and certain experts offer explanations as to how it does it. A writer in *Engineering and Contracting* (Chicago) deals entertainingly with the beginning, progress, and present state of the controversy. The commonest argument against the "flu" masks, the writer notes, is that the openings in the mask bear the same relation in size to a microbe as a barn door to a mouse. For example, a doctor recently wrote to a daily paper protesting against the use of these masks, saying:

"If the gauze worn over the face is expected to prevent the entrance of microorganisms to the respiratory tract it seems that the absurdity would be apparent to those who know that Pfeiffer's bacillus, pneumococci, or streptococci, must be magnified many hundreds of times to be visible at all, and that if the ordinary gauze mask be magnified to the same extent it would show the meshes to be so large as to apparently offer no obstruction to the house-fly. Such an attempt to mechanically prevent germ invasion might be compared to fencing against fleas in Florida with barbed wire."

This, comments the writer of the article, sounds very plausible, but is fallacious reasoning. The very same sort of argument was used nearly half a century ago against filtering water to remove typhoid germs:

"The argument then took this form: 'The interstices between the grains of sand in a filter are as large compared with the typhoid bacillus as a house door is to a mouse. If all the doors of a house were open, a mouse could pass from garret to cellar without being stopped. How absurd, then, is the belief that a typhoid germ can be caught while wandering through a layer of sand a foot or two thick.'

"It seems very 'absurd,' doesn't it? Yet when an actual count of the germs in a drop of raw water was made, and a similar count was made of the germs in the same water after filtration through a thin bed of sand, it was found that only one germ in a hundred had passed through! 'Incredible,' but true. Of one hundred 'mice' that started in at the garret to go downstairs, only one reached the cellar, altho every door was open. Now this was no speculation or guess. The microscope, after Dr. Robert Koch's discoveries forty years ago, could be used to count the microbes in a measured volume of water even as one might count mice in a trap. And the microscope made it certain that, somehow or other, porous filter sand does stop most of the microbes in water.

"It is eighty years ago this very year since a British civil engineer, James Simpson, finished at Chelsea, London, the first sand-filter plant for a city. It was intended primarily to remove the visible impurities of the Thames water. Little did he or any one else dream that the real danger in using that water was the invisible living things that inhabited it; for Pasteur had not yet shown that many diseases are caused by microbes, and Koch had not perfected the microscopic detection of germs. Yet it began at once to be noticed that typhoid fever was less prevalent than it had ever been.

"Not until about forty years ago was it fully demonstrated that filtration can be so scientifically conducted, by the aid of microscopic counts of bacteria, as to remove almost all danger of contracting typhoid from drinking water.

"Then came another great discovery, namely, that a minute quantity of chlorin is deadly to typhoid germs. One drop of liquid chlorin in two barrels of water is the average dose, but it usually suffices to kill nearly every typhoid germ. When the discovery of chlorination of water was announced, it also was 'argued off the floor.' . . . 'Consider,' they say, 'the absurdity of trying to kill the millions of microbes in a barrel of water by merely adding half a drop of liquid chlorin.' Yes, it was perfectly absurd, but the microbes all died; perhaps by laughing themselves to death over the absurdity of it.

"In drawing an analogy between a flea and a microbe, several elements of difference are usually overlooked. A flea not only is capable of locomotion, but can direct his motions by the sense of smell. A microbe, on the other hand, is helplessly and aimlessly carried along by currents of air or water. In the case of microbes that are inhaled, it seems likely that most of them are either attached to particles of dust or to small globules of moisture. In either case, if the mask stops the grain of dust or globule of water the germ itself is caught also."

EARTHQUAKE WEATHER—A recent article in *The Monthly Weather Review* revives the old question whether a particular type of weather does or does not prevail just before an earthquake. Says this paper:

"The expression 'earthquake weather' is frequently heard in California and in some other regions subject to earthquakes. It is applied to a heavy, oppressive feeling in the air; heat, calm, little cloud, and more or less haze. This is much the same kind of weather as prevails before a summer thunderstorm, and perhaps the popular mind has extended the association from one phenomenon to the other.

"Professor Humphreys, in charge of the seismological work of the United States Weather Bureau, has made the plausible suggestion that the 'earthquake weather' notion is probably of psychological origin; the general state of irritation and sensitiveness produced by the kind of weather above described inclines us to sharper observation of earthquake disturbances and accentuates the impression they make on our senses; thus we retain more vivid memories of the quakes occurring during such weather than of those occurring on more soothing days.

"In some countries particular forms of cloud are alleged to forbode earthquakes, and there is a wide-spread belief that earthquake shocks produce mist, fog, and rain. The idea that barometric fluctuations are connected with earthquakes rests upon a much more substantial foundation."

ROSTAND

THE AMERICAN TEMPER has often been said to be more akin to the French than to that of our blood cousins of England. Perhaps this accounts for the success that the plays of Edmond Rostand, who died in Paris on December 2, had in America. The New York *Sun* declares

French, but Miss Maude Adams has brought him and the hero of "Chantecler" to thousands to whom the French tongue is unknown. Besides the French actor, Coquelin, we had such leaders of the American stage as the late Richard Mansfield and Miss Ada Rehan to show us the love scenes of *Cyrano* and *Roxane*. Then, as *The Sun* also points out, Rostand's works were eagerly read in the original and in translations. "The 'Chantecler,' perhaps, had the greatest popularity in America; but 'Cyrano,' which one of his brother French dramatists pronounced 'the finest dramatic poem of a half century,' was very generally liked and admired on account of its unusual brightness and brilliance." Such considerations support the fact of his popular appeal. The judicious, of course, are not wholly led captive. The New York *Evening Post* quotes Henry James's keen phrase for Rostand's genius—"merciless virtuosity of expression," tho the maker of it admitted freely the "kindlier judgment" of the world of theatergoers. The *Evening Post* writer probes deeper:

"The wearied last years of the nineteenth century suddenly found themselves confronted with this gorgeous and luxuriant blossoming of an almost Elizabethan gift, and rejoiced accordingly. The trick could still be turned, and the public of cheap magazines and Sunday editions could still be captured for true dramatic poetry. Fancy, wit, hyperbole, a fantastic but inexhaustible torrent of epithet, united with a real romantic spirit, gave Rostand his grip on a world-wide audience. 'Cyrano' was not the romance of older days, of Hugo or De Musset. It was more sprightly and sparkling than the one, and more full of popular vigor than the other; it made fewer demands for depth of emotion and spirituality than either. It glittered and dazzled and amused; a meal of dainties, like *Raglan's* pastry, fragrant and tempting, spread before a prose-jaded generation.

"All the elements of success were in this play, as in those that followed. The earlier 'Princesse Lointaine' made a finer appeal, has a more rounded mood, sparkles less, but glows more. Yet 'Cyrano' possesses a universal theme. Its subject, moreover, is one for which Rostand's genius was eminently fitted. He could let his fancy run wild within the spacious enclosure of *Cyrano's* tragic misunderstanding. The plot carries the imagery; and the riot of imagery, like the vine of roses that runs up to *Roxane's* balcony, covers the tragedy of the plot. The flavor of *D'Artagnan* is in 'Cyrano,' of duels and mighty feats of arms, but also a most un-Dumas-like tenderness. The drama, above all, is splendidly playable, full of fine scenes and resonant rhetoric. The verse acts, which is truly a rare quality in dramatic verse. The famous 'nose' speech really would force

gesture out of a scarecrow; and the equally moving speech, with its constant refrain, in the second act, of 'No, I thank you,' in which *Cyrano* refuses to truckle to *Richelieu* for patronage, ending, 'Not to mount high, perchance, but mount alone!' gives a superb opportunity for legitimate bravura."

After a recognition of Rostand's "extraordinary qualities," the "more discerning," thinks *The Evening Post*, "must be inclined to agree with James in his general verdict":

"If that stale old distinction between wit and imagination

ROSTAND AND THE CHARACTERS IN HIS PLAYS.

The central part of the illustration represents a possible dream of the principal characters in his best-known plays. Reading from the left-hand top corner round to the right, the figures are *L'Aiglon* (Bernhardt), *Percinet*, from "Les Romanesques," *Cyrano* (Coquelin), *La Samaritaine* (Bernhardt), *Sylvestre*, *Flambeau* (Coquelin), *Roxane*, and *Melissinde* (Bernhardt), from "La Princesse Lointaine." Round the border are placed portraits of the players who took the chief parts in "Chantecler." 1, Madame Simone le Bargy (*The Pheasant*); 2, M. Coquelin (*The Dog*); 3, M. Galipaux (*The Blackbird*); 4, M. Rosemberg (*The Cock-on tour*); 5, M. Chabert (*The Cat*); 6, Mlle. A. Lerche (*The Guinea-Fowl*); 7, M. Dorival (*The Screech-owl*).

that they were "more widely known and more highly appreciated in America than in any other land except his own native France," and it accounts for the fact on the ground that his plays were given in America "almost simultaneously with their production at Paris." The acclaim echoing through the French press must have helped, but does it account for the demand? Oddly enough, the latest newspapers from London speak of the belated production of "L'Aiglon" there. In this country not only Mme. Bernhardt has shown us the young Napoleon in

were still valid, it would be applicable to the author of 'Cyrano,' 'L'Aiglon,' and 'Chantecler.' He plays with language like a juggler who keeps on adding one more ball to those already in the air. But, when the balls drop, when the actor's voice ceases to resound, Rostand also ceases to echo in the soul. 'Cyrano' remains a fancy. Think of *Cyrano* in Shakespeare's hands! In Rostand's own he never grows beyond the proportion of the original idea; the vast depths and heights that his situation might lead him to plumb stay sealed. Beneath the effervescence of fancy lurks a certain barrenness. The same might be said of 'L'Aiglon.' What theme more vast and noble, opening up more vistas, in the *Hamlet* vein! Yet, with all its rhetoric, and one, theatrically speaking, magnificent scene, the young, disinherited *Napoleon II.* remains an unimpressive figure. His tragedy fails to become that of his audience by the poet's power to generalize.

"Not many may touch the hidden source of 'the tears of things.' Posterity will not reckon Rostand among these. Baudelaire and Verlaine will know him not, walking in the Elysian fields. Others, without his 'merciless virtuosity,' will be there who had not his gifts. Maeterlinck, for instance, far outranks him in true signs of genius. The clothes of Maeterlinck's plays are seemingly humble, but he himself fits them on, so that they beautifully cling about his moods. Rostand is *gaillard*. His qualities are exquisite, like those of Congreve, Congreve's best, in the ravings of *Valentine*, in 'The Way of the World.' Sometimes Rostand rises above himself, notably in the passage of 'Chantecler' that leads up to the duel between the *White Pile Game Cock* and *Chantecler*. The former boasts:

"In America during my grand tour I killed three Claybornes in one day. I have killed two Sherwoods, three Smoks, and one Sumatra; I have killed—let me advise any one fighting me to take something beforehand to keep down his pulse—three Red-Games at Cambridge and ten Brethels at Bruges."

"To which *Chantecler* answers:

"I, my dear sir, have never killed anything. But as I have at different times succored, defended, protected this one and that, I might perhaps be called, in my own fashion, brave."

"This, indeed, is a sort of prophetic vision of France that faced Germany, the real civilization that conquered the brutal, prepared, and experienced gladiatorial bully."

A British verdict on Rostand was delivered just previous to his death when that event was unforeseen. Mr. Walkley, in the *London Times*, speaking of the production made by Miss Marie Lohr, who played the *Duke of Reichstadt*, recalls what *Pip* in "Great Expectations" said of *Biddy's* song, that "the amount of tooral-looral in it was somewhat in excess of the poetry." And—

"One is apt to think much of the same thing of a Rostand play, and particularly of 'L'Aiglon.' There is poetry in it here and there, the fresh and ingenuous expression of sincere feeling, but this is almost lost amid the floods of sheer rhetoric, the torrents of verbiage, the coruscating fountains of *concelli*. Sometimes a single word lures the author into a series of variations as elaborate as a Chopin *étude*. Thus the young Duke is 'not a prisoner—but,' and then you have a tirade studded with 'buts,' like the tirade in 'Cyrano' studded with 'noses.' Surely it should have been said of Rostand rather than of the famous English statesman that he is intoxicated with the exuberance of his own verbosity. . . . If only there were any real drama in 'L'Aiglon'! If only there were some development of character, some *crescendo* of interest! But the young man is always wobbling, declaiming, then wobbling again. To be sure there is the sentiment, the Napoleonic legend."

DEMOCRACY IN THE BERLIN OPERA

A SEVERE ATTACK OF DEMOCRACY seems to have broken out among the denizens of the Berlin Opera-house, and their interpretations of its essence forms a humorous commentary on the reactions of the aristocracy-ridden mind. Talk of the arrogance of the prima donna in the

THE FINAL SCENE OF ROSTAND'S SATIRICAL PLAY.

Chantecler (played by Lucien Gallry) and *The Hen Pheasant* (Mme. Blumens) are on their honeymoon; but jealousy has already entered their lives and they are doomed to return to the farmyard and mundane life. This scene was drawn by Mr. F. Matania.

future; it won't live in the presence of the chorus girl with whom she may have to share her dressing-room. The former Royal Opera-house on Unter den Linden was owned by the Prussian King, who devoted to it 1,500,000 marks annually. But November 9 saw its chief director in flight in imitation of his royal master and the red flag flying from its staff. Two days later when the house was reopened the spendthrift part of the population, probably "munitioners," occupied the royal boxes. The six hundred employees, too, were not to be outdone by the council of high-school pupils, servant girls' council, or garbage carriers' council, the latter of whom were seen going on strike demanding thirty marks per day. If garbage-carriers find their labors so arduous as to be worth over \$7 per day, what becomes of Germany's claims about starvation? The story of the opera-house, accompanying these facts in a Berlin dispatch to the *New York Times*, is most diverting:

"The revolution worked havoc in the minds of the six hundred employees of the Opera-house, most of whom suddenly revealed themselves as staunch democrats and enthusiastic supporters of the principle of equality. Immediately an artists' council, a chorus council, a ballet council, a stage hands' council, a musicians' council, and a supers' council formed themselves, each vying with the other in impossible demands on the Opera-house's treasury or for the casting of parts.

"Each artist, singer, and dancer, male or female, was convinced that now his or her time had come and that the old kings and queens of the stage, orchestra, and ballet must make room for real art and real talent. Vainly Director Richard E. Strauss, who no longer wishes to go to Vienna, sought to prevent the great historical institution from drifting into chaos by gathering all the different councils in one great parliament.

"Talk about Soldiers' and Workers' Councils! The members of the Grand Opera-house Council 'beat them all hollow' in unharmonious noise, for they have voices, and for once they made the best of them, so much so that at the evening performance they were thoroughly incapable of singing.

"The first few meetings of the six hundred employees passed

absolutely without any result, because there was too much liberty, too much equality. When finally it came to a ballot, talent recognized all over the world had to make room for obscure members who, tho perhaps not possessing any talent whatever, considered themselves playing a political part which at the moment seemed more important.

"The new democratic tendency directed itself mainly against those who took art seriously, especially against Director Strauss and Kapellmeister Blech, because they preferred real artists to supers. Neither of them was elected a member of the Execu-

SHIPYARD PAPERS.

The seed-brothers which aim to intensify ship-production in the United States. Incidentally they combat enemy propaganda.

tive Committee. Some chorus girls demanded to share her dressing-room with the great Claire Dux.

"Other members moved that 'all hands must appear at an equal number of performances during the season.' When it was pointed out that Jadowker's contract only called for eight appearances per month, there was a general cry:

"Well, if he insists on that contract, he must go."

"The chaos became worse from day to day, the members being unable to agree on any person for musical director or stage-manager. Strauss got so exasperated that he was on the point of leaving for his home at Garmisch when the Prussian Minister of Finance, Dr. Südekum, who now controls the royal theaters, came to the rescue.

"Südekum appointed Strauss and Stage-Manager Dröcher directors of the institution, and declared that the Government would take over all contracts made with the members. Meantime the Finance Committee appointed by the General Council had voted considerable increases of salary to the minor gods and goddesses, which will prove no light burden to the Opera-house's budget."

SOWING SEEDS IN SHIPYARDS

BEHOLD, A SOWER went forth to sow, and he was quickly followed by others, so that now no less than fifty are engaged in sowing seed among the workers in our ship-building yards. No journalistic enterprise is more fascinating than the special publications that have sprung up to amuse and educate the large numbers gathered in camp and industrial works since the war began. The special interest of the shipyard papers is that they persist, while most of the camp papers may die as the men melt away. Mr. E. T. Hollingsworth, editor of *The Hun Hammer* (U. S. S. B. E. F. C.) writes in *The Manufacturers' Record* (Baltimore) of these papers, preferring to regard them as "disseminators" of the seeds of national loyalty than as "propagandists"—a "word that has acquired a vicious meaning through its association with the German." What is "disseminated," writes Mr. Hollingsworth, "is supposed to be sown in different parts; thus, principles are 'disseminated' among the peoples of a nation. A seed is sown, which, if nourished, will bear good fruit, or, unnourished, will produce weeds." He shows how it is done in a certain field:

"The dissemination of the seeds of truth regarding the atrocities of the Germans and Turks and Austrians; the dissemination of the seeds of knowledge of the financial, or, rather, war-needs of the United States, and the cultivation and nourishment of the seeds of patriotism among that class of Americans to whom the front page of the daily newspaper is the limit of his war-library, have been the avowed purpose of approximately fifty weekly periodicals published throughout the country and distributed solely in the shipyards.

"These papers, published from Maine to California and from Michigan to Florida, are unique in make-up, in that their respective columns are solely confined to the news originating in the various ship-building establishments of the nation, interspersed with 'personals' gathered in the yards in the locality covered by each paper, and maintaining editorials in all issues pertaining to ship-building, the necessity for more ships, the various Liberty Loans, War Savings Stamp, Y. M. C. A., and Red Cross campaigns, and, last but not least, editorials and authentic articles covering the atrocities committed by the Huns and their Allies.

"Never before in the history of the United States have there been such a systematic 'sowing of seeds of endeavor' destined to intensify ship-production; dissemination of more compact knowledge of the acts of the enemy, destined to intensify the Americanism of the workman, and development of the spirit of patriotism, loyalty, and creation of the spirit of friendly rivalry between the men in each plant, as have been conducted through these mediums.

"Beginning with the ship-building program of the United States Shipping Board Emergency Fleet Corporation, Chairman Edward N. Hurley realized the value of these publications, if edited along the right lines, and his ideas were indorsed by Vice-President Charles Piez and General Manager of Wood Ship Division U. S. S. B. E. F. C. James O. Heyworth, resulting in the various shipyards being encouraged to publish yard organs.

"On January 1 of this year there were one or two yard papers being published and maintained through taking a limited amount of advertising from the merchants of the city in which the shipyard was situated, but it remained for W. C. McGowan, District Supervisor of Wood Ship Construction for the Fourth District, comprising the States of North Carolina, Georgia, and Florida, to take the initiative by starting a district publication for distribution among the fifteen ship-building plants in that section.

"*The Fourth District Hun Hammer* began publication in March of this year, and upon receipt of the initial issue General Manager James O. Heyworth of the Wood-Ship Division wired District Supervisor McGowan, congratulating him on the step taken, and requesting additional copies to be sent him for distribution in the other districts.

"*The Fourth District Hun Hammer* is maintained by the Wood-Ship Division, not being an advertising medium, and from the first issue has had represented every week each of the fifteen shipyards. Through its 'personals' columns the paper maintains a hold on its readers, numbering over 22,000 men, and by securing their interest makes it possible for them to read the editorials and other special articles concerning the war and the

nation. Here each week the seeds of knowledge of the nation's needs, the facts concerning German atrocities, and the inspiration to build ships faster and better, are sown, and the harvest has returned a thousandfold.

"Labor troubles have faded away into nothingness as the men more fully realized their duty to their country at this time. Liberty Bond and War Savings Stamp campaigns have been over-subscribed; savings-banks have doubled their deposits; health conditions at home and in the plants have been revolutionized; the contented workman has taken the place of the labor agitator."

The success of the Fourth District publication, we are told, echoed throughout the country, and soon the Third and Sixth districts, respectively, began to issue papers. These three, however, are the only ones having a general distribution that are maintained by the Shipping Board. All others, being yard organs, are maintained through advertising of the local merchants. Two are specials in the sense of restricted distribution:

"*The Emergency Fleet News*, the official organ of the United States Shipping Board Emergency Fleet Corporation, published in Philadelphia, is also maintained by the Shipping Board, but its distribution is confined to certain channels, namely, a limited number of copies being sent to each shipyard and the district offices and big newspapers. *The Merchant Mariner*, published by the United States Recruiting Service, is also limited in its distribution."

Of the others we read:

"The various yard papers serve their respective plants only, but the good they do is inestimable and the men look forward to the day of publication with keen interest. The district papers serve all the yards in the district, and each yard, whether it has a paper of its own or not, fills several columns of news 'personals' in the district paper each week. In this manner one yard may keep in personal contact with another. Happenings in another section of the country will be printed in the district paper. A record will be made a thousand miles away, but it is not very old before every yard will be endeavoring to beat it.

"The daily newspaper does not carry this class of news. It has not the space nor the inclination, so the shipyard publication fills the need.

"As editor of *The Fourth District Hun Hammer* I have had a number of nationally known men refer to the great good accomplished by these various shipyard publications. I have also, and suppose other editors have too, received requests for copies from Y. M. C. A. libraries, city libraries, navy-yards, and army cantonments, which speaks of the interest the layman, soldier, and sailor have in the ship-building program.

"One of the greatest benefits derived from the issuance of these shipyard papers is that it has brought the ship-workers together into a bond of mutual understanding. It has taken them away from the 'general' and placed them into a 'specific' class. The industry is 'theirs,' just as the house organ of a firm causes the employees to think of it as a part of themselves. In other words, it lends prestige to their labors.

"Among the various shipyard papers published throughout the country the following show their unique titles: *Over the Top*, published at Vancouver, Wash.; *Steel Topsides*, published in Portland, Ore.; *Mashieer Log*, published at Mobile, Ala.; *The Pathway to Democracy*, published at Pascagoula, La.; *The Dry-Dock Dial*, published in Brooklyn, N. Y.; *The Hog Island News*, published at Hog Island, Pa.; *Do Your Bit*, published at Portland, Ore.; *Going Some*, published at St. Johns, Ore.; *Pusey & Jones Shipbuilder*, published at Gloucester City, N. J.; *Speed Up*, published at Newark, N. J.; *The Propeller*, published at Aberdeen, Wash.; *Riverside Review*, published at Duluth, Minn.; and *The Blockade Runner*, published by the Third District in Baltimore, Md.

"'As ye sow' seeds of patriotism, 'so shall ye reap' a rich harvest of pure Americanism."

The large and small manufacturer has been taught a new lesson by the plant paper, says Mr. J. H. Lawler, editor of *The American Ship-building Company News* (New York):

"Nothing is said to cement the men to their work (duty) like the little plant mediums which, in reality, speak in every instance the voice of the workingmen among themselves and to their employer and their employer's interests. . . . The employer's voice is also heard, but not above the balance, and all have opportunity to voice momentary sentiments which, perhaps, no other medium heretofore published has presented."

WHERE WOMEN DO NOT LEAD

WHILE THE PRESIDENT pleads again for woman suffrage and women everywhere are taking a foremost place in the world's activities, it sounds ungallant at least to call women wanting in any capacity, altho men have never been willing to grant that they have been or are likely to be great creative artists. The matter came up for a crucial test again when Mr. Walter Damrosch brought forward the work of a new French composer. When he returned from Paris bringing news of his acquisition he reported that the Paris musical world regarded Lilli Boulanger as "the greatest woman composer the world has yet produced." When recently Mr. Damrosch included one of her compositions in a concert of his giving, Mr. Krehbiel, of the *New York Tribune*, observes that were he not "inclined to think lightly of official pronouncements by publicity agents and concert-givers," he would have "gone to the hearing of this new French composition with awe." Instead of that he seems to have gone with a skepticism about Miss Boulanger's chorus called "For Soldiers' Burial," whose confirmation by the hearing of the new work leads him to descant on the "large order" implied in the praise lavished on her as he turns up some forgotten pages of history:

"We do not believe that the musical world of Paris and Mr. Damrosch are in possession of the data necessary to prove their contention. Women have been composing music a long time, longer than the memory of the present generation runs, and much of it which may have been very good indeed has gone into oblivion in company with the works of masterful men. Why, bless us! A woman with the just now singularly appropriate name of De la Guerre composed an opera more than 225 years ago! Since her day women have written into the record at least two hundred works in the large dramatic and epic forms. They produced an average of one opera a year in the last quarter of the nineteenth century, and we can not even imagine how many orchestral and chamber compositions besides. Victor Hugo turned his story of 'Notre Dame de Paris' into an opera-book for Mlle. Louise Bertin, and tho the French historians of opera tell us that the lady's 'Esmeralda' 'tomba immediatamente,' two other operas, one of them on the subject of 'Guy Mannering,' had a measure of success.

"Mme. Schault, who flourished less than seventy-five years ago, produced a dozen or fifteen operas, and a royal dame, Amalia, Princess of Saxe, quite as many. In our day Augusta Holmes wrote an opera, 'Héro et Léandre,' and a symphony, 'Latèce,' and, not content with celebrating Paris in this work, she glorified Ireland and Poland as well in two other symphonic creations.

"There were only a few of the compositions in large forms written by this Irish Gaulish woman, whom César Franck did not hesitate to own as a pupil. Women of all nations have composed serious works. Our own Mrs. Beach's 'Gaelic' symphony has been heard here at a concert of the Boston Orchestra. Ethyl Smyth, an Englishwoman, has written operas almost under our noses, and we heard one of them at the Metropolitan in 1903. Miss Chaminade and Mrs. Liza Lehman produced some of their music in our concert-rooms not long before the war, but perhaps the Frenchwoman's pretty piano-forte pieces and songs and the Englishwoman's setting of 'In a Persian Garden' are not to be considered, since they are not in the class of this composition by Mlle. Boulanger. However, we have heard fine things said of a symphony by Cornelia Van Oosterzee, a Dutchwoman, born in Java, and of operas and songs and things by Ingeborg Starek von Bronsart, whose career was truly cosmopolitan, since she was a Swede, born in Russia, who studied with Liszt, married a German, and composed a march for the official celebration of the return of the victorious troops to Berlin in 1871. In this she was luckier than Wagner, whose 'Kaisermarsch,' designed for such an occasion was turned down.

"But why attempt a roll-call of women composers? It numbers hundreds, and as we do not know their music any better than we do that of hundreds of their male contemporaries who got their names into the books, we can only imagine that some of it may have equaled the compositions of the ill-starred young Frenchwoman who has so dogmatically been proclaimed the superior of them all."

RELIGION-AND-SOCIAL-SERVICE

WHITEFIELD ON THE PENNSYLVANIA CAMPUS

THE JUXTAPOSITION of the names of Ben Franklin and George Whitefield startles inquiry. Popular thought pictures Franklin as a freethinker in matters of religion; but his freedom permitted him to help raise funds in 1740 for the chapel that became the cradle of the University of Pennsylvania. The chapel was built for George Whitefield, the great Methodist preacher, and he frequently preached here and donated the public collections to the Pennsylvania Academy for a library. Later he favored Franklin's negotiations with the trustees for the chapel's transfer to the academy, that merged into the great university that is now Pennsylvania's pride. To keep alive in the consciousness of the university students the early association of this preacher with their *alma mater*, the Methodist alumni have presented to it a statue of Whitefield in which his power as a preacher is eminently exprest. It is the work of Mr. R. Tait McKenzie, and, says Mr. Orville S. Duffield, in *The Christian Advocate* (New York), "he has made Whitefield live and preach anew." The statue will stand in the large dormitory triangle of the University, of which he was a charter trustee. The same writer predicts that—

"Hereafter Whitefield will preach to the successive student generations of the 'loyal sons of Ben.' Who will say that his silent sermons will not be heard even further than were his preached ones? Will not his statue have a greater influence on the educated youth of America than Wilbur Fisk thought might be effected by the statue of Aristides? The great Methodist educator wrote: 'Could I have it, thought I, to exhibit to the youth of America, to the young men of our universities, such a dignified personification of integrity, in the person of Aristides the Just, might greatly aid in elevating their characters and strengthening their principles. . . . I think it would be no disadvantage to see the old philosopher in marble; I should like to look at him two or three times a day as long as I live.' The statue of Whitefield . . . will be a worthy memorial to the greatest field preacher of modern times, the man who prepared the way for American Methodism.

"That the statue will be a notable contribution to American sculpture may be predicted from the comment of one of our foremost writers. I am permitted to quote from a letter written by Dr. McKenzie's friend, Poultney Bigelow:

" . . . Thank you for a new and grand conception of the great preacher as reaching far a Jovellike hand with which to pulverize his theocratic enemies in the episcopal trenches;

thank you for that glorious clutch of his dramatic left encircling the Bible as the soldier does his cartridges. It is a great monument you have reared to a great religious leader who made men think, who left them better than he found them, who died in harness, and who lives to-day *aere perennius*.

"Had I time I would write on and point out the grandeurs of Whitefield by comparison with Luther. . . . Luther stood for autocracy, the divine right of sovereigns, and omnipotence of priesthood as the police agents of the crown. Whitefield was a contemporary of Voltaire and akin to him in waging single-handed a fight against spiritual despotism whatever shape it might assume. Both Voltaire and Whitefield were boycotted, if not persecuted, by the Church and State. Voltaire fought the Jesuits of France; Whitefield shook the episcopal pillars of the Anglican temple. Each would have been roasted alive had they lived a few years earlier. Each swayed great masses, the one by ridicule and the pen, the Englishman by a voice caused strong men to sob and women to collapse hysterically under his wonder-working appeals. Yet Voltaire may have never seen Whitefield—nor the Methodists have ever heard of the sage who made Ferney famous—however, they both foregathered in the Elysian fields and cracked many a toothsome chestnut over Jesuits and my lord bishops and the art of penetrating heavy-hided audiences."

Mr. Duffield is fortunate in getting the sculptor's own expression of his ideal of the statue, and it will be read with interest by those who have not the power to put into literary form the impression they derive from the bronze itself:

PREACHER OF EARLY AMERICAN METHODISM.

Whitefield - reaching far a Jovellike hand with which to pulverize his theocratic enemies in the episcopal trenches.

"Dr. McKenzie insists that all authorities showed Whitefield gesticulating with one hand and holding in the other his Bible, evidently a characteristic pose. He usually preached under the open sky, with no desk, which made this pose necessary. It was doubtless his general custom, especially when mounted on a cart, or a box, or hastily erected platform. He should not be roaring like a bull of Bashan. To represent a great figure, like Whitefield, in violent, explosive action, shouting and stamping, would ruin the dignity and sculptural value of the work. He should be looking from the height of the pedestal into the faces of the spectators, just as he must have gazed upon the faces of his expectant and enthralled hearers. The figure should be dynamic. It should indicate the intense vitality and earnestness of Whitefield, but this earnestness should be shown with artistic restraint. A great statue must have dignity and simplicity. It must not be unstable or contorted. It should not have a wide-open mouth, or convulsed features, or the evidence of transient emotion. It must have a certain equilibrium in its

force. Whitefield should not be shown driving his voice till 'it could be heard a mile,' but rather in his more persuasive tho earnest mood, which must have followed his tempestuous outbursts. This lends itself more surely to universality and to sculptural impressiveness. The gesture and pose should be neither melodramatic nor peculiar, nor should there be the least sign of caricature in expressing the exultation that was so wonderful a part of his character, and which gave him his extraordinary power for good."

How truly he has realized his ideals the finished statue speaks, and Mr. Duffield attempts something more in the way of exposition:

"The figure is designed to stand out-of-doors. . . . Whitefield is preaching to a field congregation. The wind is moving in a great open space. There are the boldness, vigor, and freedom consistent with this outdoor setting. We have the definite expression of the exhorter. He is making one of his striking periods. He is just opening his mouth, and we are breathless to know what unshot arrow of thought will fly from his lips. The majesty of personality is there. Dignity of bearing is not lost in the ardent gesturing. There is the impression of unexhausted vitality."

"The sculptor has studied well his theme. By shoving back the front of the gown he has given the decided posture of the legs and made unmistakable the firm planting of the feet. This makes the form more mannish—less like a skirted priest. The rapidly raised arm has dragged the billowy sleeve with it. The picture is snapt most skilfully at the second when the drapery floats around the arm before falling back. There is a touch of highest art in this, because we are less interested in a movement which has been completed than one which still has possibilities of action in it."

"The gown has been rendered with great success. It has the appearance of cloth, and would not be taken for anything except silk. A wig is a difficult thing to handle in sculpture. It is so purely and artificially formal. Like the frame of a picture, it had to be regarded as a frame for the head. The line has been kept across the forehead so there can be no doubt it is a wig. It has been set with such an eye to the proportions of the statue that it does not seem cumbersome. The bushy brows accentuate the shadows in the eyes and reveal concentration of thought. The squint is in the left eye for the antiquarian who wishes to look for it, but the position of the head and the shadows in the eyes eliminate it as a distracting element in the intelligence and strength of the face. There are other touches which will be appreciated only by the mind trained in the subtleties of art. . . ."

"Dr. McKenzie knew how to put the biggest human interests along with ideal and spiritual elements into a figure. All he needed was once to see this man so imbued with the passion of Christ that he leaves the enchantment of the greatest seat of learning in his country, and scorns the preferments within his easy reach, goes out to proclaim the redemptive evangel of a forgotten and neglected gospel, and, going, stirs mightily both shores of the Atlantic. . . . Dr. McKenzie had exprest so admirably in his statue of the 'Young Franklin' the spirit of scientific inquiry, he could give a similar utterance to religious faith and spiritual power in Whitefield."

"It is a monument worthy of a great and good man. In the language of the motto on Whitefield's seal, it will forever say: '*Astra petamus*' (Let us seek the stars)."

BOLSHEVISM CHALLENGING THE CHURCH

THE HOUR FOR THE CHURCH TO ACT as a "mediator and interpreter" has come. Alarm-signals are sent out in many church organs calling attention to a war that seems to them to be kindling beneath the embers of the war just past, and one that holds a more fatal calamity for the human family than the one whose ravages we are now counting up. But the new war will acknowledge no geographical boundaries: it will be between class and class—the workers and the employers. Russia, Austria, and Germany have furnished their examples; Sweden, Norway, and Holland have not been without portents. Even this country has heard some

mutterings. The Church must know her clear duty, points out Mr. William T. Ellis in the *Boston Transcript*. "She must steady the thinking of the agitated and clarify the vision of the class-conscious at both ends of the social scale." He plainly tells the preachers of our land that the theme for their pulpits now is "the relation of individual regeneration to social reformation." If leadership is alert in the churches, we shall see, so he predicts, that "the dominant theme for many months to come in all religious conventions and conferences and in the church press will be the social message of Christianity to the present time," for the rise of Bolshevism abroad is portentous with challenge to American Christianity:

"Suddenly aware of the gravity of this issue which is dividing entire nations and overturning old systems and dynasties, American churches are beginning to perceive that its importance outranks all questions of reorganization and money-raising for the coming days. If this nation must grapple with the stupendous social challenge that has arrested and engrossed the attention of Europe, then the churches are interested above all other agencies of organized life; for social questions are within their distinctive sphere. We may expect in the pulpits of the country a wide-spread discussion of

Europe's revolutions and of the significance of the wave of radicalism.

"Certainly the churches should be sympathetic with every movement tending toward social progress, the amelioration of the masses, the righting of wrongs, and the emancipation of all men everywhere from bondage of mind or spirit or estate. Often the contrary attitude is charged against the churches. A hackneyed story has it that a group of workingmen hissed the mention of the Church and cheered the name of Jesus. Radicals constantly claim that the Church is the defender and proponent of the privileged classes, the hireling of aristocracy and 'big business.'"

"Whatever occasion there may have been for this indictment, it simply is not true as respects the Church as a whole, and in her spirit and doctrine and membership. While the awakening of the Church to her social mission has been recent, it has been rapid. Hundreds of books upon the social conception of Christianity have been issued within a decade. That whatever affects human life concerns the Church has now become almost axiomatic in religious circles. There are no more ardent or clear-eyed exponents of the new era of brotherhood, democracy, and

THEY LIE IN FRANCE WHERE LILIES BLOOM

They lie in France
Where lilies bloom;
Those flowers pale
That guard each tomb
Are saintly souls
That smiling stand
Close by them in
That martyred land,

And mutely there the long night shadows creep
From quiet hills to mourn for them who sleep,
While o'er them through the dusk go silently
The grieving clouds that slowly drift to sea,
And lately round them moaned the Winter wind
Whose voice, lamenting, sounds so coldly kind,
Yet in their faith those waiting hearts abide
The time when turns forever that false tide.

In France they lie
Where lilies bloom,
Those flowers fair
For them made room.
Not vainly placed
The crosses stand
Within that brave
And stricken land;
Their honor lives,
Their love endures,
Their noble death
The right assures.

For they shall have their hearts' desire
They who, unflinching, braved the fire,
Across the fields their eyes at last shall see
Through clouds and mist the hosts of victory.

PERCIVAL ALLEN, in the *New York Times*.

justice than ministers of the Gospel, who are heralds of the Kingdom of God on earth.

"Nevertheless, the churches will be found opposed to Bolshevism because of the essential nature of the latter. . . . It is more than a revolt against social inequalities and injustices; it is avowedly a class propaganda of hatred. It repudiates all law and authority, human and divine, and frankly seeks the subjugation and extinction, when convenient, of all persons who do not belong to the proletariat. It knows no right except the assured right of the toiler to rule."

Now that Bolshevism is challenging the Western world, the churches must give themselves to self-examination. Mr. Ellis continues:

"For if the sincere and brotherly teachings of Jesus and of the New Testament have been practised, there can be no need for the inauguration of another social order. Has the Church been true to her doctrine? Or has she, as James points out in his Epistle, shown special consideration to the man in goodly raiment and of high estate?"

"No fair-minded observer can claim that the churches of America are subordinated to what the Socialist calls 'the interests' and 'plutocracy.' Equally, tho, no fair-minded observer can deny that many individual churches, especially in cities, and most denominations, show especial consideration to the wealthy and socially prominent. 'Leading laymen' is fairly a synonym for a man of wealth. A man does not need to display piety, brains, or activity in order to be listed as a 'leading layman'; a large bank account which is reasonably accessible to Church causes, and an occasional attendance upon Church services, are enough to enroll a man in this category of eminence. Did anybody ever hear of a poor man, tho a saint, a scholar, and a devoted Christian worker, becoming a 'leading layman'?"

"This condition proves the vulnerability of the Church. To this extent she is a class organization. And in so far as she has neglected to champion the cause of the oppressed, the neglected, the weak, and the suffering, she has opened herself to the shafts of the radical's criticism; and, what is more important, to the condemnation of her Lord."

The organs of the Methodist Church, particularly in the Middle West, show an apprehension of coming struggles. "It is an unfinished war," declares *The Western Christian Advocate* (Cincinnati):

"The cessation of the clash of arms to-day means only the shift of the base of operation. There is no light except as we see it in the soldier of democracy and in the Church becoming a radical force, preaching and insisting upon the application of Christ's principles of justice to all, ministry to the weak, and privileges to none."

An editorial recently published by *The Christian Work* (New York) warns the Church of the changes the future has in store. It is stated to have been the last message written by Dr. Washington Gladden before his death. He said:

"Religion has appeared in all recent history as a divisive element, as an antagonistic force, separating men instead of uniting them; driving them apart instead of calling them together.

"This is certainly all wrong; it is the exact opposite of what religion ought to be. What is the matter with religion that it has become so perverted? It looks as tho it had caught the taint of militaristic nationalism, and had learned in this way to be a divisive force. Certain it is that such religion as we have been familiar with does little to mitigate or restrain the antagonisms of nations, but rather aggravates them.

"Is not the conclusion irresistible that the kind of religion we have been most familiar with—the kind of Christianity, in fact, which we have been expected to believe in—has been a very defective sort, utterly failing to fulfil the functions for which it was designed? For surely, if we know anything about the nature and purpose of true religion it is designed to promote unity among men; to draw them together, to fill them with the spirit of harmony and cooperation. The disintegrating forces are always at work—the forces that divide and antagonize individuals and communities and nations; and it is the office of religion to hold in check these discordant and oppugnant elements, and to bring them into unity. Instead of being a disintegrating force, its function is the very opposite; it is the spirit of coherence, of agreement, of construction."

THE SHIPYARD RELIGION

WORK AS A RELIGION is one of the professions of our shipyards, which may be taken as a counterblast to the Russian substitute of Bolshevism as religion. How this gospel was preached by one of New York's leading clergymen, Dr. Charles A. Eaton, was recently told to English readers by an American correspondent of the *London Times*. The story supplements one told in the department of Letters and Art of the work of our shipyard papers, and it also serves as a practical example of the thing Mr. Ellis is urging on the churches in the article immediately preceding this one. Dr. Eaton was made the head of the National Service Section of the United States Shipping Board, and since then his task has been, and is, "to make of ship-building a religion." This work, we are further told, has been with him "largely a labor of love." The writer gives the story of the dramatic appointment of Dr. Eaton to the post in the Government:

"At a dinner attended by ship-builders from all parts of the country at the end of last year, depression, like a heavy cloud, hung over the proceedings. The Administration, supported by Congress, was ready to spend money; the contractors were prepared to erect the yards, extend existing plants, and build the ships; but Labor, so one speaker after another insisted, was unresponsive. The men were earning good money—so much money that they saw no object in working a full day for a full week. Still they wanted more money and less work. German propaganda found a rich field for its subtle activities among a collection of laborers of various nationalities. The men were not specially interested in the great ship-building program. They were at loggerheads with their employers, sullen and untractable. Altogether, the position was bad, and was steadily getting worse.

"Then Dr. Eaton rose. He urged that the manual workers were really no worse men than the directors of the companies, only they suffered from the fact that their opportunities of education having been less their vision was lower. The directors and officials knew what the reasons were for the present great effort, but no one had taken the trouble to explain them to the humbler workers, many of whom never read the newspapers. To them the war seemed something far off which could not affect their lives much beyond bringing higher wages. Let the facts be brought home to these workers, let it be shown that they were really needed to support their sons and brothers who were going to cross to Europe, that they were a vital part of the fighting army, that they were not merely immigrants but were real American citizens, let the enemy propaganda be fought openly and determinedly, and he had no fear of the result. He had never yet appealed in vain to the good that was in every man.

"This speech, I have heard, was a fine piece of oratory. The builders were carried away by its force and sincerity and, in the enthusiastic American way, rose to their feet and cheered. When this had subsided a little Admiral Capps, then in charge of the ship-building program, remained standing, and, placing his hand on Dr. Eaton's shoulder, declared that he was, from that moment, requisitioned for government service."

Dr. Eaton soon proved that he could organize as well as preach:

"He collected a corps of speakers who tour the shipyards in pairs. One of each couple is a layman—often a parson—and the other is a soldier. There are many British soldiers, including Canadians, speaking in the American shipyards to-day. I met a number of them, including General Swinton, who was asked to tour the yards, and was always given a magnificent reception. There lies before me now a little book containing more than one hundred messages from shipyard managers approving of the meetings and describing the good results. Meetings were arranged for women as well as for men, so that the wives and sweethearts might understand the need for steady and good work on the part of their men. Even the teachers in the schools were approached, so that the children might be taught what it was that their fathers were engaged upon, and how they were helping to beat Prussianism. Pamphlets, booklets, posters, and circulars were sent forth in a steady stream to encourage the soldiers of the second line, as the workers in the American shipyards are termed. All these publications taught that every rivet driven in a ship was a nail driven in the coffin of Kaiserism."

CURRENT - POETRY

CHRISTMAS this year has a significance all its own. Some 627 years ago the Latin Kingdom of Jerusalem was overwhelmed by the Moslems, and since that time the Holy Places dear to Christian hearts have been in alien hands. This year a Christian Power is once more in possession, Bethlehem, Jerusalem, and Nazareth are freed from an oppressive yoke, and, for the first time in centuries, the glad tidings of Peace and Good Will among Men will ring out with a reality that has long been lacking. So, when our thoughts turn to Bethlehem the carols of Yule take on an added charm. Here are a group of them, all in the ancient manner. From "Bohemian Glass" (Longmans, Green & Co., New York) comes:

ON CHRISTMAS DAY

BY ESTHER LILLIAN DUFF

Scented woods and gold,
Costly stuff and vain,
On Christmas day
Were offered there.
But they
Who tendered royal gifts were kings, and very old,
And you, my little son,
Are not yet one.

Love Him very well,
Tenderly and true,
On Christmas day,
And you shall do
Sufficiently as they
Who offered scented wood and plates of gold
To Mary's little Son,
Not one year old.

John McClure in his "Airs and Ballads" (Knopf, New York) gives us this joyous carol, instinct with all the charm of babyhood:

CAROL O' BETHLEHEM

BY JOHN MCCLURE

Mary stood at the mangerside
With her elbows on the rim;
He smiled the whimsical sweet smile
That shamed the cherubim.
Then straightway tossed His little legs—
The hay-prieks tickled Him.

Mary laughed and bent down low—
Mary, blessed of God's grace!—
He curled His little pink toes up
And gurgled in her face;
Then pulled her hair right sturdily
In that calm holy place.

Ay, Jesus was a baby too,
And plucked His mother's hair—
She loved Him much more thus, I ween,
Than as King anywhere.

This carol has an Old-World air that would make it a fitting pendant to some old master's Madonna:

CAROL NAÏVE

BY JOHN MCCLURE

Was never none other
Like our God's Mother.

I sing of the Lady of all most fair,
Of all most dainty and debonaire,
She to whose feet the angels come—
Lady Mary of God's Kingdom!

I sing of the Lady of all most good,
Immaculate Lady of Motherhood,
She that holdeth our hearts in fee—
Lady Mary of God's City!

I sing of the Lady of all most dear,
She that cherished us yesteryear,
She that will cherish when this world dies,—
Lady Mary of Paradise!

Yet was never none so fair,
Yet was never none so good,
On the green earth anywhere
As Our Lady of Motherhood—

Yet never none other
Like our God's Mother.

In her "Sonnets and Poems" (Longmans, Green & Co., New York) Eleanor Farjeon approaches the scene in the stable at Bethlehem from a new angle:

A MANGER SONG

BY ELEANOR FARJEON

Whence gat ye your soft, soft eyes of the mother,
O soft-eyed cow?
We saw the Mother of mothers bring forth, and
that was how.
We sheltered her that was shelterless for a little
while,
We watched the milking Babe at her breast,
and we saw her smile.
Even as we she lay upon straw, and even as we
Took her sleep in the dark of the manger un-
fretfully.
And when the dawn of the strange new Star
discovered her thus,
The ray that was destined for her and for Him
fell also on us;
The light passed into her eyes and ours, and fell
in its flood.
We were first to behold the first mothering look
of the Mother of God.

Next she gives us a carol in the true
medieval spirit:

SIX GREEN SINGERS

BY ELEANOR FARJEON

The frost of the moon fell over my floor
And six green singers stood at my door.

"What do ye here that music make?"
"Let us come in for Christ's sweet Sake."

"Long have ye journeyed in coming here?"
"Our pilgrimage was the length of the year."

"Where do ye make for?" I asked of them.
"Our Shrine is a Stable in Bethlehem."

"What will ye do as ye go along?"
"Sing to the world an evergreen song."

"What will ye sing for the listening earth?"
"One will sing of a brave-souled Mirth."

"One of the Holiest Mystery,
The Glory of glories shall one song be."

"One of the Memory of things,
One of the Child's imaginings."

"One of our songs is the fadeless Faith,
And all are the Life more mighty than death."

"Ere ye be gone that music make,
Give me an alms for Christ's sweet Sake."

"Six green branches we leave with you;
See they be scattered your house-place through."

"The stanch blithe Holly your board shall grace,
Mistletoe bless your chimney-place."

"Laurel to crown your lighted hall,
Over your bed let the Yew-bough fall."

"Close by the cradle the Christmas Fir,
For elfin dreams in its branches stir."

"Last and loveliest, high and low,
From ceil to floor let the Ivy go."

From each glad guest I received my gift
And then the latch of my door did lift—

"Green singers, God prosper the song ye make
As ye sing to the world for Christ's sweet Sake."

Here is a delightful poem on the Ma-
donna, taken from the New York Catholic
weekly *America*, by an Irish poet.

THE CROWN

BY KATHARINE TYNAN

She had twelve stars for diadem,
she had for footstool the full moon,
Her quiet eyes outshining them
Kept memories of the night and noon
And the still morn at Nazareth
When in her arms the Child drew breath.

So safe, so warm, he slept by her
In her enfolding arms at peace.
Her milky babe, little and dear;
And yet the Tree that should be His
Grew in the forest, wide and high,
Whose branches should fill all the sky.

He made twelve stars into her crown
And set the moon beyond her feet;
He was King in Jerusalem Town
With twelve spines for His coronet
To pierce the brain, the blood and bone
That thought of man's redemption.

Oh, when she answered Gabriel
With "Be it done!" could she foresee
The high pangs, that she took as well
With Bethlehem, should be Calvary,
Or was that name of high bliss
Torn with sharp pains, fierce agonies?

Hath she beneath her crown of stars
Remembrance of the thorns wherewith
Her people crowned her son? What scars
Reside than roses in a wreath
Doth she wear in a coronal
Under the lights that rise and fall?

Next a translation from the Spanish
by an American Catholic poet which ap-
peared in the *Boston Transcript*:

THE EMPTY CRADLE

BY JOSÉ SELIGAN

(1824-1882)

Translation of Thomas Walsh

The angels bending
To kiss her brow,
Sang unending,—
"Come with us now."

The child replying,
The angels drew
To her cradle lying:
"I'll go with you."

The angel faces
Mid wings of gold
Took her embraces
Within their hold.

And with the breaking
Of pallid day,
The crib forsaking
They flew away.

Finally a quaint Christmas conceit from
McCall's Magazine:

THE STARS

BY MARY CAROLYN DAVIES

The stars are lighted candles
Upon a Christmas tree;
(The branches that they hang upon
We can not ever see.)
On Christmas eve the angels stand
About it after tea.

And if an angel's very good
He gets a present, as he should.

REVIEWS - OF - NEW - BOOKS

TWO NOTABLE WAR-BOOKS

MR. MORGENTHAU'S EXPERIENCES AT CONSTANTINOPLE

Morgenthau, Henry. *Ambassador Morgenthau's Story*. 8vo, pp. xvi-407. New York: Doubleday, Page & Co. \$2 net.

Former Ambassador Morgenthau's volume furnishes the final proof, if such were needed, of Germany's will to war for *Weltmacht oder Untergang* ("World-power or Ruin"). It also discloses the important part that Turkey was made to play in plans to that end. The story turns about von Wangenheim, the German Ambassador to Turkey; Talaat Pasha, Grand Vizier of Turkey; and Enver Pasha, Turkish Minister of War. These men are introduced in the first chapter, and sufficient is said about their antecedents to forecast the range and kind of incidents in which they figured. The volume comes too late to fire passions in a war that is fortunately ended, but soon enough to demonstrate anew the unfitness of both Turks and Prussians to hold batons of power and government and help parcel out at the peace table pronouncements both of guilt and reparation, if not of punishment. And of the two, Prussian and Turk, even with the smear of civilization wiped from his face, the Turk is preferable, both as man and as ruler, when placed over subject races. Both are alike proved guilty of great atrocities, wantonly and deliberately committed. The difference between the Turk, unprompted by Germans and that same Turk under German stimulus, is shown by Enver's reply to Mr. Morgenthau's exhortation to "be modern" in treatment of alien enemies. "Modern! No; however Turkey shall wage war, at least we shall not be 'modern.' That is the most barbaric system of all. We shall simply try to be decent." That was after Germany had cut loose in Belgium and northern France. Armenia's fate was largely due to German suggestion. Von Wangenheim is thus characterized:

"He was personally selected by the Kaiser to bring Turkey into line with Germany and to transform that country into an ally of Germany in the forthcoming war—a task in which he succeeded. Wangenheim represented German diplomacy in its most ruthless and most shameless aspects. He believed with Bismarck that a patriotic German must stand ready to sacrifice for Kaiser and Fatherland not only his life, but his honor as well. With wonderful skill he manipulated the desperate adventurers who controlled Turkey in 1914 into instruments of Germany."

Wangenheim was the real ruler of Turkey. Talaat rose from letter-carrier to be Grand Vizier. He is described as a "boss," huge, clever, forceful, shrewd, audacious, and cruel. Enver came from equally humble origins, and was a *poseur* in military matters, vain, remorseless, believing himself Napoleonic and a "man of destiny," a thorough devotee of Prussianism. His elevation to the ministry of war "was virtually a German victory," and his "first acts were the beginnings in the Prussification of the Turkish Army." On the other hand, he was ostensibly a "Pan-Turanian," and professed to be using the Germans to put Turkey on her feet, after which, as he said, "we can say good-bye to the Germans within twenty-four hours." The latter

two are portrayed as conscienceless adventurers and knaves, aiming at personal power, swayed by the other as tools of a foreign Power, working out consciously its will, and expecting to play a great part in the world through the unholy alliance they had formed with it. "Some one has got to govern Turkey; why not we?" was a question asked the author by Talaat. Von Wangenheim is the real center of the story. Here is Mr. Morgenthau's picture of the man.

"Physically he was one of the most imposing persons I have ever known. When I was a boy in Germany the Fatherland was usually symbolized as a beautiful and powerful woman, a kind of dazzling Valkyrie; when I think of modern Germany, however, the massive, burly figure of Wangenheim naturally presents itself to my mind. He was six feet two inches tall; his huge, solid frame, his Gibraltar-like shoulders, erect and impregnable, his bold, defiant head, his piercing eyes, his whole physical structure constantly pulsating with life and activity—there stands, I would say, not the Germany which I had known, but the Germany whose limitless ambitions had transformed the world into a new place of horror. And Wangenheim's every act and every word typified this new and dreadful portent among the nations."

None of the Kaiser's selections for occupations of prominent places were so fortunate, from the German standpoint, as this. He was already in the saddle, keenly alive to the developing situation, when Mr. Morgenthau arrived in Constantinople. In January of 1914 he secured the complete Germanization of the Turkish Army, which whipt those forces into form in nine months. He maneuvered the entrance of the *Goeben* and the *Breslau* into the Dardanelles and the sham sale of them to the Turks in August of the same year, which completed the Germanization of the Navy. He prevented the departure of the French and British subjects resident in Turkey when their ambassadors left the capital. He incited the placing of foreign residents on Gallipoli when the British Fleet was bombarding the forts. He urged the preaching of the *jihad*, or holy war, by which three hundred million Mohammedans were commanded to rise against the Christians. He arranged the cession of Turkish territory to Bulgaria, which brought the latter into the war. And he was the inspirer and practical director of the Armenian atrocities. Incidentally, never thinking of the *débâcle* that was decreed, he boasted, partly out of inherent vanity, of his part in the Potsdam conference of July 5, 1914, which determined the war. This alone, with the confirmatory material elsewhere available, fixes Germany's responsibility as the root, stem, and branch of the plot that precipitated the world conflict. As to Turkey itself, our author describes it as twenty millions of "inarticulate, ignorant, and poverty-ridden slaves, with a small, wicked oligarchy at the top, which was prepared to use them in the way that would best promote its private interests." And those interests consisted in concentration of power in the hands of these two men.

The developments of the war up to the time of Mr. Morgenthau's departure are vividly presented. These include the bombardment of the Dardanelles, which stopt only an hour or two short of com-

plete success. No less graphic is the description of the Gallipoli campaign. The barbarous treatment of Greeks in Turkey has been overshadowed by the terrific affair of the Armenians, yet it is only in degree that it is smaller in villainy—in intent the deeds were as vicious, and in effect also, so far as circumstances permitted.

One of the great services rendered by Mr. Morgenthau is his frank revelations as to the persons responsible for the greatest crimes. Outside of the three arch-criminals already named is the Vali of Van, Djevdet Bey, whose crowning feat was that of nailing horseshoes to the feet of Armenians, thereby becoming famous as "the horseshoer of Bashkale." If these Turkish assassins and their German prompters go unpunished and unchanged, justice will not have been done on the earth. The tales told here make the blood run hot in the reader's veins. Mr. Morgenthau has contributed a book indispensable to the history of the war. The materials supplied are vital. One reads on and on with the consciousness that here are no divagations, no excursions into the irrelevant and immaterial. The narrative is orderly, the arrangement lucid, the tale readable, full of instruction, and most significant in its cumulative force. There can be no difference of opinion as to the deserts of the Turks, even when compared with their masters in wickedness—the Teutons. The argument is that of fact, not of syllogism; the conviction wrought is on the conscience and heart, not merely on the intellect.

II

THE KAISER AS HIS DENTIST KNEW HIM

Davis, Arthur N. *The Kaiser as I Know Him*. 8vo, pp. x-301. New York: Harper & Brothers. \$2. Postage, 15 cents.

"No man is a hero to his valet," says the proverb. Certainly the Kaiser is no hero to his dentist. Dr. Davis settled in the practice of his profession in Berlin in 1903, first as assistant to Dr. Sylvester, and after January 10, 1905, independently. From early in 1904 the Kaiser was his patient, and, after proving the doctor's discretion, talked with him freely. So that if the conversations are here reported correctly (and there is no reason to question that), they afford a view of the Kaiser's personality based on fourteen years of intimate intercourse.

The first two chapters deal with the last two years, including Dr. Davis's escape (it almost amounted to that) in January, 1918. The first contains the Kaiser's pronouncement: "Davis, America must be punished for her actions!" Her actions, of course, in furnishing munitions to the Allies! But when reminded that Germany sold arms to Russia, the Kaiser replied: "When we helped Russia against Japan, we were helping a white against the yellow race. Don't ever forget that." America, he said, was "acting from purely mercenary motives" in supplying munitions.

Dr. Davis regards the Kaiser as having a sort of dual personality. He found him trustful in his conversation even beyond the bounds of discretion, decidedly appreciative of humor, and himself often witty, usually courteous and affable, generally quite his own master, brave under adversity; magnetic, a man of talent and charm. On the other hand, Wilhelm

"Here is good cheer every day in the year—
A feast that is all to the merry!
It rivals the kiss of the mistletoe cross
And the hue of the bright holly berry."

"Cheer up!" says Santa Claus

The way to make this world brighter and better is to smile at it. Every American home this Christmas season must put on its cheeriest face. And back of this must be stout hearts and good physical condition.

This is why we say eat a good soup every day. It is why you specially ought to get the regular enjoyment and benefit of

Campbell's Tomato Soup

This is a "good cheer" signal every time it comes to your table.

It means a more inviting and more nourishing meal, better digestion, better health.

The fresh *vine-ripened* tomatoes we use bring the very flavor and sunshine of summer right to your winter table. And the other choice ingredients we blend in this wholesome soup make it even more tempting and nutritious.

Order it by the dozen. Have it always at hand. Keep well and keep smiling.

It is distinctly an energy-producer. Prepared as a Cream of Tomato it is particularly strengthening and delicious. And you can prepare it readily in various pleasing ways to make it as hearty as you choose.

Withal it is decidedly economical—a fuel-saver, labor-saver, money-saver. Every can makes two cans of rich soup—perfectly cooked, and seasoned, ready for your table in three minutes.

Campbell's SOUPS

LOOK FOR THE RED-AND-WHITE LABEL

imperious, grandiose, self-opinionated, and certain of the infallibility of his judgment, by turns generous and niggardly, ever posing until he has become "the world's most finished actor."

A lurid light is cast on the Kaiser's ideas of international ethics in that he "couldn't understand why (when Great Britain was at war) the United States did not seize both Canada and Mexico"—"utilizing," the Kaiser said, "the opportunity to serve and to make their own country great." What an idea of greatness! For reasons like these the Kaiser was "disgusted with the whole Anglo-Saxon race." That inhuman conduct of war is traceable directly to the Kaiser is shown by the latter's statement that he had sent a protest against the use of dumdum bullets by Belgians and French. Almost the same day President Poincaré forwarded a similar protest against the Germans. The German use of gas was justified by a similar precaution. The Kaiser remarked, apropos of submarine warfare: "International law! There is no such thing as international law any more."

The blind side of the Kaiser was revealed in his assertion that English conscription was foolish because the war would be over before the conscripts could be trained. And as to America—"How foolish for America to have come into the war. . . . Now America will have to pay all the costs of the war! . . . America must pay the bills." The Kaiser condemned the American press, but admired Mr. Hearst. "Mr. Hearst is the only one . . . who has revealed the real conditions and told the truth about them." As to others: "Not all your Senators are against us. Senator Stone, for instance, is taking a very strong neutral stand, and it is a pity there are not more like him."

Dr. Davis's reminiscences cover the Kaiser's family and entourage. The Kaiser's "Colonel House" was the Prince of Pless. On the day when England declared war, the Prince declared, "the war will be over by Christmas," and five months later said, "Well, not this Christmas, but next"; at the end of 1915 he concluded, "I don't think the — thing will ever end!" Once more, February 2, 1917, he declared: "Our unrestricted submarine warfare has just started, and we're going to bring England to her knees within three months." And again, "America won't fight . . . in Europe." Yet he spurned the complaints that we furnished munitions: "In the last twenty years we have supplied more munitions to warring nations than any other four countries in the world put together."

Dr. Davis speaks of the Kaiserin; the Crown Prince and Crown Princess; Princes Adalbert, August Wilhelm, and Joachim (of whose flesh "wound" he makes quite a little fun); and of the German people. Of the latter he says, apropos of the *Lusitania* sinking: "I have failed to find a single German who did not enthuse over that dastardly crime." He continues: "The activity of the *Zeppelins* in their raids on open towns evoked similar demonstrations."

Dr. Davis's book is most informing, and contains on the whole a moderately told tale, with only here and there a touch of contempt and scorn and but little bitterness.

STORIES OF THE INSECT WORLD

Brolliar, Floyd. *Knowing Insects Through Stories*. 12 mo. New York: Funk & Wagnalls Company. \$1.50 net. Postage, 12 cents.

The power of intelligently observing natural phenomena and classifying the facts observed, and the power of creative

imagination which puts these facts into all sorts of interesting and illuminating relationships are rarely found in one and the same mind. The first, by itself, gives us the scientist, who, from Aristotle to Darwin and Osborn, has revealed the facts and laws of nature essentially in terms of human reason. The second, by itself, gives us the "nature-faker," whose name is legion. Only an occasional man throughout the centuries, like Gilbert White or Fabre, gives us the facts and laws of nature in terms both of reason and of imagination.

The author of "*Knowing Insects Through Stories*" is this kind of a man, and his book is one of the most unique works on nature study that has appeared in many a day. Note this glimpse of the author's character given us in the Introduction, which at once reveals the spirit of the writer and of his book:

"When I was a boy they used to tell me fairy-stories, and some of them were very interesting. I used to think it would be fine to see a fairy, but in some way they always kept out of sight when I was around. . . . But the idea of the world being everywhere peopled by little folk, whom we did not see, would stick to me. When, as a nine- or ten-year-old boy I learned to turn under tall weeds and grass with a breaking plow, I used to lighten the work by imagining the field was a great forest, and that there were little people in it who could not run fast enough to escape the great earthquake caused by my plow, and so it destroyed them and buried their cities. . . . My imaginary people were so real sometimes that I felt very badly about their troubles."

And so this sympathetic imagination, now ripened into maturity and associated with the reason of a scientific professor, presents the world of its childish fancies in a way to appeal to any one with a mind the least bit in harmony with such things. Butterflies and moths flit before us, as an idle race passing its fleeting hours in a dreamy happiness—traveling near and far in quest of food and mates—queer-looking creatures sometimes, and sometimes criminals of the insect world. Beetles and weevils execute their fairy dance, worship their beetle god, send forth their huntress lady-bug, and steal fruit from men's orchards and gardens. Grasshoppers, crickets, and the like, as "longhorns," "insect hogs," and "Jan the Terrible," rustle and chirp in the grass about us. Bees, wasps, and ants make paper, conduct wars, and establish nations for our instruction. Divers little people, such as Mr. Bladderfoot, the snake-feeder, Madam Doodlebug, the Children of a Day, the Stone Dwellers, and the Fairy Acrobat, swarm in air and water. Bugs and flies of every description, beautiful and ugly, harmless and deadly, are brought to our attention, with words of appreciative comment, or warning, suited to their nature.

Throughout, one never loses contact with facts, for the author constantly preserves an essential scientific accuracy. But the whole reads like a tale of a magic world, as interesting as the Arabian Nights or Hans Anderson's. Such a book ought to be a final answer to any one disposed to question the interest of common things. Child or adult, surrounded by such a world of life, has no excuse for being unable to amuse or instruct himself. With this book to inspire and guide, all eyes can see, and all ears hear, the endless concourse of living creatures that throng about us—spending their days, as ours, in the great complex of things we call the universe.

PERSONAL GLIMPSES

ARMISTICE NEWS BEWILDERED OUR FIGHTERS

NEWS of the armistice was not greeted with unalloyed enthusiasm by many of our fighters in France. Nerved to sweep the Huns back to Berlin, they could scarcely realize that the world's greatest war had ended, and there was a disposition to consider themselves in some measure cheated of a more glorious victory. "Holy Moses!" exclaims Corporal Jack F. Koons, of the 37th Division headquarters in Belgium, in beginning a letter to his mother in Cincinnati, "the unexpected has happened and its sudden announcement leaves my brain numb and bewildered." He refers to the armistice, "which paves the way to a world peace," and proceeds:

I can hardly realize the end has arrived. It was only a few minutes ago that cannon still belched forth their deadly messages of hate and destruction, but now all is quiet, and a spirit of resignation seems to have settled over all the land and the grand silence of peace, so dearly won, envelops us all. Thank God America has played her part effectively, energetically, and well!

I can picture Cincinnati to-day with crowded streets, blaring horns, triumphant parades, screaming newsboys, shrieking whistles proclaiming victory and peace to all within hearing. Telegraph-wires must be hot with the news and the United States must wear the smile that Dickens describes as: "vast and substantial."

The announcement of the armistice was received in a manner quite contrary to my expectations. During the past months I imagined that peace would be greeted by cheers, whoops of joy, and general rejoicing by the American soldiers over here. Now, with Germany struggling to keep her shoulders from touching the ground, and our full realization of our military supremacy, it seems that the sweetness of entering Germany and penetrating into German territory is to be taken from us. If our allies are satisfied and believe they have sufficiently crushed her so that she will never rise again—then all is well.

The sky is misty, dirty gray, and not the sky I would have chosen for a day of rejoicing. It is growing chilly and the mist and rain blanket the earth. I am housed in a stable on the estate of some high dignitary and have hobnobbed with the "Lord High Hostler" of his Majesty's Mounts. Darkness creeps upon us about three o'clock on the afternoon (nine o'clock A.M. in Ohio), then our candles flicker, flutter, sizzle, and fizz until nearly midnight. I never wish to see another candle as long as I live when I get back to God's own country, save on birthday-cakes and Christmas-trees. I have not seen an electric light, a motion-picture show, and but one street-car since I left Camp Sheridan. I have never been able to buy what I wanted and have now but one shirt and one handkerchief; yet, in spite of all these discomforts, I am as healthy and happy as any raccoon should be. Only I do wish that we may be sent to some town where I can stretch my long legs beneath a real white table-cloth and sit awhile after dinner and talk. Now I am squatting on my heels like an Igorot and have started using my fingers like the

HEINE BOILERS

*A Contributing Factor to
the Winning of the War*

During the memorable struggle that has just been brought to a victorious close, it has been our proud privilege as well as our patriotic duty to devote our entire resources, facilities and output to the service of our Government.

Our large plants at St. Louis, Mo., and Phoenixville, Pa. (covering over 16 acres) have labored without stint or limit to supply power boilers for shell plants, ammunition factories, gun shops, arsenals, aircraft factories, Government navy yards, hospitals, textile, uniform and other essential industries—and to furnish 360 high-duty marine boilers with which to speed General Pershing's bridge of ships across the sea.

In the last few years our business has grown to many times its former volume—the capacity of both our plants has been greatly increased—many new departments have been added—and our organization has been brought to a new and even higher standard of efficiency.

Now—as the world turns its thoughts from war to peace—the Heine Safety Boiler Co., with its record of duty faithfully performed, and with all Government restrictions removed—places its increased facilities at the service of its regular patrons and ALL users of power boilers. Correspondence is invited.

"The Comptometer stands the gaff of service"

"And as far as we know," adds The Carter's Ink Company, "it holds the record for durability of mechanical equipment in our office"

"It is not how he starts but how he stands the gaff of service," declares Mr. O. T. Erickson, Office Manager of The Carter's Ink Company, "that gives you the measure of a man."

"The same is true of a machine. Our Comptometers have stood the test of 10 years of hard service. They have made good. Two of them have gone the whole route without repairs."

"As far as I know that's the record for durability in our office."

"We started with one Comptometer. As our work increased we had to have more machines. And again we bought Comptometers. Now we have six."

The rapid fire adding machine

"The title, 'Rapid-Fire Adding Machine,' aptly describes the Comptometer. Before the Comptometers came in, our billing, statistical and stock-record figuring was done on paper. How slow, inaccurate and expensive that was we did not realize until we began using Comptometers."

"By use of the touch method, our girls do very rapid work—and do it right."

Errors eliminated

"At the end of the day they are not brain weary as mental figurers are. Nor is there any slow-down in the afternoon with increasing errors as was formerly the case."

This durability of the Comptometer, its ability to "stand the gaff of service," is an economy—and one decidedly worth while.

A vital economy

But it is by no means the biggest and most vital economy this rapid-fire machine will bring to you. This greater economy rests in the efficiency of Comptometer Speed and Accuracy on your figure work—*resulting in more and better work with less effort and expense.*

And it is an economy that will be of more than ordinary importance during the reconstruction period and one that should not be ignored at any time.

dog-eaters at the World's Fair—see almanac!

I have slept on floors and on the ground and in water-soaked trenches so long I wonder if I shall ever feel at home again in one of your clean, white beds, mother? I wonder? I wash like a cat, and, in our recent drive, did not get a bath for six weeks and never even washed my face for six days! Still I shall never regret that I refused advancement to serve in the Intelligence Section, for I felt that my best work could be done for my country in this line of service; and certainly to be on the very front brings thrills which compensate for any hardships or danger. Now, mother dear, better start boarding flour and cherries for plenty of pie, for I have one wonderful, lasting hunger. Remember always that, tho I have lost time in my professional career, I would not change places with the most successful money-maker in America; so cheer up mother, and dad, and give three cheers for a regular old peaceful world, and say it is all right, even if it has had a bad headache during these past four years. Those of us who are coming back to our own homes dread to think of the loneliness of those mothers whose sons will never return to them, as I shall very shortly to you, mother dear—they fought bravely and died nobly, and, tho we leave them behind us, as we sail homeward, we know they died for a holy cause.

IF THE RED MAN CAN FIGHT, WHY CAN'T HE VOTE?

WHILE praying to the Great Spirit for the protection of "Old Glory," the American Indian also took an active part in the war. Fully nine thousand descendants of the original red men rushed to the colors and were incorporated in the Expeditionary Forces, proving their patriotism and valor on many hard-fought fields. Now they are not looking for material recognition of their services, but are asking for the privileges of citizenship in their native land. The Rev. Red Fox Skiuhushu (Northern Blackfoot) pleads their cause in a letter to the *Seattle Post-Intelligencer*, written from the Yakima reservation. Freedom is planted in every Indian heart, he declares, and he appeals to the American people to "let him have a part with free people in the progress of this world's-change history." Here are the main points of Red Fox Skiuhushu's plea:

There is no greater patriot stands on the American soil than the American Indian. My people, the aborigines, have volunteered and fought for the Stars and Stripes in every war since Columbus landed, and as a nation the aborigines have stood up and fought against all odds for inherited rights. It is going on six hundred years, and we have not stooped to fight for the same cause. Is it like the American people, since the world's war ended, to have a race of people like the red race as wards of the Government, and be deprived of having a voice in the courts of claims, in their own mother country, which has seven thousand government employees looking after the welfare of three hundred thousand Indians in the United States?

I am sure the best thing ever happened to the American Indian of to-day to solve his problem for United States Government

to square up all treaties with all tribes, give them their portion of allotment, square up their money, and make them a full citizenship of the United States of America, and they will soon learn the value of a dollar, etc., when set free upon their own responsibility. The reservation system, now, is un-American, and the reservation Indian will be lazy and dirty, having no respect for themselves and others. And a State law fixt in each state not allowing grafters to take advantages. As things are now, they lease their land and not work. However, the white Americans must respect these first Americans, remember that my forefathers were on the reception committee when the *Mayflower* came in on the *Santa Maria*.

True, we are called savages, because my people did fight for their country and home, yet we hope to be better understood as the peace movement comes on, bringing this war to an end for justice and freedom for all people and races.

Did generations of training in militarism, art, culture, civilize Germany? Where is the true sympathy and brotherly love which should exist between man and man in order to secure the welfare of the individual and the family? In the present-day civilization we are all slaves to one another, from the millionaire to the day-laborer. It is indeed astonishing that man should deliberately perpetuate slavery of his race by failing to recognize the fact that he is born into earth life for the purpose of spiritual development, not that might conform to human schemes and invention of materialistic tendencies; this is what the German Empire was trying to play on the world, and deliberately ignored the basic principle of nature's economy, namely, the right to live.

We, the American Indians of this land, everywhere, welcome those that became Americans. Let all Americans remember this: Hostility did not come until the white man wronged the red man by long strings of broken treaties, and only made it a rubber-stamp treaty. The American flag has given citizenship to every race and nation of the world, whether they could read or write, but not the American Indians.

The Irishman says: "The reason the Indian is not a citizen of the United States is simply he was born here." Our souls were in this war, as every soul of every American Indian. We know not the hyphen—we know not the pro this or pro that; we are 100 per cent. Americans.

It is the love in the Indian hearts that urges him to pull the bow against the invading foe, but we still plead to the American people and the American Government to give us nothing more than our rights. We still are knocking at the door of Congress for freedom and become a share in the American flag.

There are to-day serving the colors nearly nine thousand redskins, who volunteered their blood for the cause of America. Out of three hundred thousand Indians in the United States 85 per cent. volunteered and 15 per cent. were drafted, owing to mixed blood. Our people have taken out a little over \$50,000,000 of Liberty bonds, and donated to the Red Cross over \$2,000,000.

Such grand and noble demonstration ought to cause every patriot to reciprocate such act by urging a bill in Congress to make the Indian free, and bestow upon them full citizenship, like every person.

If our nine thousand boys offer their lives why should not their people become free, as every other nationality on the American soil?

Here's Peace and Good Will

THE very spirit of Christmas is in a pipe. Nothing brings more joy to a fellow's soul than the steady puffs and the taste of clean, dry smoke. With friend pipe in his hand he can look on the world with patience and good humor.

To have all the peace and comfort a pipe can give him, every man should have a

Wellington
THE UNIVERSAL PIPE

The W. D. C. triangle trade-mark has been the sign of supreme pipe value for more than 50 years. It is not only an every Wellington, but also on other pipes that we make of every style, size and grade. Grade for grade, price for price, there is no better pipe made than a W. D. C.

The well catches all moisture and tobacco crumbs, keeps them away from the mouth, and puts a stop to bubbling and wheezing. The pure, cool, dry smoke comes up out of the top opening in the bit—away from the tongue.

The genuine French briar that goes into every Wellington Pipe is seasoned by our own special process so as to break-in sweet and mellow. It is guaranteed against cracking or burning through.

Make a list of the men you like a whole lot—the men "over there" and the men "over here." Give each one of them a Wellington Pipe for Christmas. It will make them downright happy. All good dealers sell Wellington pipes in many shapes and sizes at 75 cents and up.

WHERE THERE ARE PEACE, PLENTY, AND NO WAR-WORRY

IT would seem as if no such land could exist in these days of high prices, constant reminders that we must economize, and war-worries morning, noon, and night. Nevertheless, an Irish journalist, Louis McQuilland, writing in the London *Sunday Pictorial*, claims that such is the condition of his native isle. He writes:

While it would be a marked exaggeration to state that the Emerald Isle is now a duplicate copy of the Garden of Eden, it is certainly enjoying amenities denied to those countries which have been grasped by the iron hand of conscription and those Continental neutrals nearer the war-zone.

As far as rural Ireland is concerned, the Ireland of the farmers and the peasant proprietors, the people have never known such halcyon days.

Farmers' wives are better dressed than they have ever been, and their homes, as regards furniture, at any rate, are equipped like mansions. The farmers themselves are sporting smart motor-cars—not mere toys, but sound cars with reliable engines. There is no dearth of petrol.

Nothing is more remarkable in Ireland than the improvement in food, both as regards quantity and quality. In other days the people used to send the best bacon to England, and subsist at home on cheap American bacon. To-day they consume their own best bacon.

Cattle there are in plenty, and butchers have their shops full of whole carcasses. Mutton is also to be had in abundance. In no town or village in Ireland is horseflesh being sold for human food.

Bread is plentiful, but it is not any more appetizing than it is in England, and is even darker in aspect. When I was at Newry an English correspondent, looking into a storeroom, saw a quantity of peat or dried bog, fashioned into squares. Asking what the mysterious stuff was, he received the unsmiling reply, "Shure, that's Irish war-bread." I regret to say that he promptly made a note of this utterly misleading piece of information.

There are food regulations and restrictions in Ireland, as there are in Great Britain, but they are more honored in the breach than the observance. This refers particularly to the larger towns, tho there is no scarcity in the villages of plain, simple food.

In Belfast I saw a small, stout business man polish off a decent-sized steak such as would have been regarded as something phenomenal in a London restaurant. He then hammered his knife on the table and impatiently demanded another steak, and did not look happy till he got it.

In liquor, as in food, the Irishman is better off than his neighbor across St. George's Channel. Whisky has still got a "tang" with it that requires qualifying with *aqua pura*. "Government beer" is a joke, not an unpleasant reality. With a big glass of good stout, still available, a large chunk of bread, and a noble fragment of cheese, a cheap luncheon can be had any day in any part of Ireland.

In large towns, like Dublin and Belfast, there is an abundance of pastries and fruit-cakes. At a well-known teashop in Belfast I had an afternoon tea better than that provided at the Ritz in the days before the war, and at much below the Ritz price.

Scarcity of matches is not at all preva-

lent, and I could always purchase a couple of boxes at any tobacconist's shop.

Children and women have no reason to complain as to sweets, for all varieties of these are to be had in great profusion in the southern and northern capitals. The sugar supplied for sweetening tea is generally of coarse quality, but there is plenty of it.

Ireland is particularly well off as regards fish, especially that very piquantly flavored fish, the herring, which has only come into popular vogue in England since it has increased 500 per cent. in price.

While food conditions are thus good, the well-lighted streets of Ireland make for that nocturnal gaiety which we experienced in prewar years in London. To walk again at night under the undimmed light of the street-lamps is like capturing the rose-glow of a lost Eden; and that rapture is to be had in Ireland.

An Englishman traversing Ireland to-day and not conversant with the problems of the country would think that from her prosperity Ireland should feed England. It should be remembered, however, that the whole population of all Ireland is not so great as that of Lesser London, and that all her foodstuffs would seem a small store for the teeming millions of Great Britain.

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

NO man will come home from France the same man that he went away. Critical observers of the war are saying that the American boy over there has "found himself." A clearer conception of the purpose for which he came into the world has come to him. "It is difficult to describe or analyze the many influences which have brought about this result," writes Maj. Henry P. DuBois to his father, James T. DuBois, of Hallstead, Pa.; "in part it may have been the excitement of it all, the ever-changing scene, the newness of military life, or the novelty of sight and customs in a foreign land." But the Major notes the following forces standing out predominantly in the rapid formation of the American boy's character:

The man who stands face to face with the ultimate thing in life through days and weeks of bitter struggle, not only with the enemy, but with the elements as well, comes away with something he is not going to let easily slip from his grasp. The man who sees his best friends killed by his side, and talks to them while they are dying, finds a foothold on something more solid than the foundations supplied him in the peace and comfort of ordinary life, or through the teachings of book or pulpit.

During the three weeks of my sojourn in the hospital I have yet to hear a questionable story, and even the profanity which has always been regarded as a necessary accompaniment to army life has been conspicuous by its absence. And yet this is far from a gloomy place; as the men get stronger they enter into the community life of the place, and there is good cheer and fellowship in abundance.

Tell the mothers and wives and sweet-hearts to have no fear. The men are coming home with clear consciences and heads hung high. They are not only coming home as they left you, but with a new and broader outlook on life, fortified

As to the Charms of Tobacco

LARUS & BROTHER CO.,
Richmond, Va.

My dear Sirs:

As a pipe-smoker of some 40 years I feel that I really must write to tell you that after all these years I have at last found a really satisfying tobacco, namely your Plug Slice Edgeworth that comes in slabs. I have now been smoking it for about one year, but have not written before because I wanted to learn whether the charm of this tobacco would, like so many others, wear off. I now find that the more I smoke it, the more necessary it becomes to my bodily comfort.

(Signed)

We value the above letter highly, but we had to argue down grave doubts before dwelling upon the charm of any smoking tobacco. But then women probably never read tobacco advertisements.

For years Woman never openly recognized but one serious rival. Much talk has been made about the bravery of the man who first dared to eat an oyster. What about the bold man who first dared to leave a woman for a smoke?

We often wonder if Sir Walter Raleigh, brave as he was, ever told Queen Elizabeth the truth about his long absences. If she ever caught him quietly enjoying his pipe—well, as we know, she was quite a spirited woman.

Nowadays, ask any young woman if she objects to smoking, and her reply invariably is, "No, I like it." And they choose men who smoke. They know smokers are better natured.

A pipeful of the right tobacco can charm away most of the small frets of daily life.

The difficulty is to come upon a tobacco that brings such a charm into your life. We don't want to prejudice you against Edgeworth by boosting it too much, but we certainly would enjoy learning what you personally think of it.

If you're willing to risk a postcard, we'll risk the tobacco. Send us your address together with that of the dealer ordinarily supplying you, and we will dispatch to you generous samples of Edgeworth in both forms—Plug Slice and Ready-Rubbed.

Edgeworth Plug Slice is pressed into cakes, then cut by sharp knives into very thin moist slices. Rub a slice between the hands and it makes an average pipe-load.

Edgeworth Ready-Rubbed comes prepared to pour straight into your pipe. It packs nicely, and burns freely, evenly to the very bottom, getting better and better.

Edgeworth is sold in sizes convenient for all purchasers. Edgeworth Ready-Rubbed in pocket-size packages sells for 15c; larger sizes, 30c and 70c; tin humidior, \$1.30; in glass jars, \$1.40. Edgeworth Plug Slice costs 15c, 30c, 70c, and \$1.30.

When the samples arrive, scrape out your pipe for a new guest. Fill the bowl with a generous load. Light up, lean back in your friendly old chair, and take a puff or two—the first two for pure enjoyment—then, when you feel quite ready, take a puff or two slowly, estimatingly. Is this the tobacco you have been looking for so long?

For the free samples, address Larus & Brother Co., 5 South 21st St., Richmond, Va.

To Retail Tobacco Merchants—If your jobber cannot supply you with Edgeworth, Larus & Brother Company will gladly send you prepaid by parcel post a one- or two-dozen carton of any size of Plug Slice or Ready-Rubbed for the same price you would pay the jobber.

REE-Lintex

REVERSIBLE

One of these money saving collars for your expense. Photo also wanted on postal.

VERSIBLE COLLAR CO., Dept. C Boston, Mass.

Training for Authorship

How to write, what to write, and where to sell.

Cultivate your mind. Develop your literary gifts. Master the art of self-expression. Make your spare time profitable. Turn your ideas into dollars.

Courses in Short-Story Writing, Verification, Journalism, Play Writing, Photoplay Writing, etc., taught personally by Dr. J. Berg Esenwein.

Dr. Esenwein

many years editor of Lippincott's Magazine, and staff of literary experts. Constructive criticism, candid, honest, helpful advice. *'Real teaching.'*

One pupil has received over \$5,000 for stories and articles written mostly in spare time—"play work," he calls it. Another pupil received over \$1,000 before completing her first course. Another, a busy wife and mother, is averaging over \$75 a week from photoplay writing alone.

There is no other institution or agency doing so much for writers, young or old. The universities recognize us, for over one hundred members of the English classes of higher institutions are studying in our literary Department. The editors recognize it, for they are constantly recommending our courses.

We are at The Writer's Library. We also publish The Writer's Monthly, monthly catalog for its 400 members of literary material. Besides the teaching service, we offer a monthly literary service.

150-page illustrated catalogue free. Please address:

The Home Correspondence School
Dept. 74 Springfield, Mass.

by an ennobling inner force which will support them through life.

But what of the communities to which they are to return? Will the same temptations which, before their departure, made them weaker and wander from the course of manhood still be there to threaten the structure which has been so well built over here? Will the haven of safety to which to ask them to return be found to be more dangerous than the strange land and its strange people from which they return?

As officers, in whose keeping has been placed the welfare of these men while they are away from you, we have given this subject much thought, and, to be frank with you, it is cause for much concern. Things are going fine over here. There is no danger of a let-down or a reversion to former infractions while the campaign is on. It is reasonably sure that the millions of men who are not killed or wounded in battle will descend the gang-plank of the transports in home ports better for their experience. It is then that the supreme test of your helpfulness will come. It is then that the bars to immorality and licentiousness may be let down unconsciously in the name of innocent joy at the reunion of loved ones. The orgies which followed the return of the Army and Navy after the Spanish War come vividly to mind when this possibility is contemplated, and we ask you for the sake of those who will be returned to you in safety, prepare the home city, the town, or village, that it may be worthy of the men for whose safety you now give your prayers.

To keep your humor fresh and sparkling in the midst of a famine of all the luxuries and most of the necessities is surely a feat. Here is proof that a young Westerner did it. At any rate, that is the impression one gets from the perusal of the following epistle of Thomas E. Dehoney, former rate clerk and telegrapher in the Santa Fé general live-stock agent's office at Kansas City, and now first-class electrician in Admiral Sims's London office:

What a marvelous, astonishing, and incredible experience I have had since leaving my live-stock tariffs. Who would suspect that Uncle Sam could reach out into the Middle West and gather up in his broad naval arms a young man in the prime of life and an overworked pair of trousers, born with no inheritance other than a strong desire to advise intending shippers the approximate cost of conveying a cow or her relatives from and to a given point along the line of least resistance, and in the short period of twelve months teach this person to wash clothes and undrape the raiment from potatoes, and eventually enable him to clasp a pair of radio-phones to his shapely and swan-like ears and absorb electrical information from the air for the information of the highest-salaried officer in charge of the naval forces operating in European waters!

You can not appreciate how really interesting this radio game is. Berlin sends German propaganda by the hour—a steady stream; Moscow, Russia, spreads aside his vast growth of shredded whiskers and transmits his little say; Rome chews the rag with various points; stations in Spain, France, England and, last but not least, America are at our finger-tips. 'Tis remarkable how strong the signals reach us from the other side of the Atlantic.

Makes me feel like I am close to home. With such a homelike feeling comes the thought that some day I shall have to return to America and pay my indebtedness.

An interesting thing occurred a few days ago. I was tuning my set at random, just trying to pick up some new stations, when, of a sudden, a human voice sounded in my phones saying, "Hello, hello, everybody." I pinched myself to see that I was really awake and the voice proceeded to whistle the "Roses of Picardy" and the "Onions of Oakland," and wound up by playing several selections from Sousa on the gramophone.

I don't know whence the voice came but think it was close at hand. The speaker was on a radio-telephone.

The weather over here is damp—"dam damp." Even the few matches we see per week are warped. Speaking of matches brings me to the real issues of the war. You folks at home, after picking the remnants of beefsteak from your tusks, pick up your *Evening Blade* and read how the Germans have given up Swamp-root; how the Temple of Oldfolks was destroyed by hostile aircraft; how trench No. 1 was evacuated and how the Americans were unable to prevent the contemplated movements of the Hun, namely: a masterly retreat, but you do not become conversant with the disastrous results of the Great War. I have found them to be located in London. Here they are, briefly:

Meat, ah! How I long for a piece of hamburger steak with garlic! Meat-coupons are so highly cherished that they are included in the estate and descend to the heir upon the death of the holder. Lack of nourishment, superinduced by the scarcity of meat, contributes to the death of the holder, so automatically the coupons are constantly in circulation.

Matches are so infrequent and far apart that when I hesitate on the corner and strike a match to light the inevitable cigaret, twenty grown men rush up madly and exclaim, "Hold the light, please." I have to wear asbestos gloves to keep from scorching my finger-tips.

I saw a man on the street yesterday carrying two eggs. It was daylight, however, and I could not bother him. I followed him home and I may have something interesting to tell you in a few days as I know where he lives. We don't need alarm-clocks over here but this does not alarm one. It is a pleasant sensation to be awakened from a deep, profound slumber by the milk boy as he oscillates up and down the stairs with the break of day. He wears wooden shoes and the stairs are made of concrete. Makes so much noise that the milk sours.

Paper is nix. I may be seen any evening walking from the corner grocery-store carrying a loaf of bread in one hand, absolutely nude, referring to the bread, a double ration of butter in the other, same being neatly wrapped in a cigaret-paper with the understanding that the paper be returned. Some of the butter does not have to be carried, as it appears strong enough to walk.

I noticed in the Topeka papers that you patrons of street railways are to be served by lady conductors. The question is asked if the young ladies will be able to deliver the goods under all conditions, etc. Kindly tell them from me that the young female collectors can fill the bill and their pockets with perfect ease and reckless abandon. They are used almost exclusively over here in London and I find them satisfactory in every respect. The cars here are double-decked affairs, very

WAR SAVINGS STAMPS are a good investment, on which Uncle Sam pays compound interest. **BUY THEM EVERY DAY!**

THE FISK CORD TIRE IS A GOOD INVESTMENT. With it you buy freedom from inconveniences, a resiliency which insures an increased comfort in riding, a saving in gasoline and protection for the mechanism of your car.

You buy an assurance of long and uninterrupted usage and mileage which runs into high figures. These, with safety, are returns which are distributed thru the life of the tire.

The face value of the investment is obviously good. A handsome, stalwart tire with evident stamina to offer resistance to wear and to road obstacles is a worth-while addition to any car.

This is one of the few instances where the essentials of luxury and of endurance combine to make a product pre-eminently desirable.

When you buy Cord Tires — Buy Fisk.

FISK CORD TIRES

Gum tenderness — a serious tooth-menace

It is true that four out of five people over forty suffer from gum-shrinkage, or Pyorrhea (Riggs' Disease). But many people even under thirty have Pyorrhea. Women, particularly after the baby comes, are peculiarly subject to Pyorrhea. At such time they cannot be too careful about their teeth.

Pyorrhea commences with tender gums, or with gum-bleeding, at tooth-brush time. Gradually the gums become spongy. They inflame and then shrink. The teeth become exposed to decay at the base and tiny openings in the gums become the breeding places of disease germs which infect the bones—or towards—or cause other ailments.

Beware of that fee gum tenderness! Try Forhan's for the gums. It positively prevents Pyorrhea, if used as soon and used constantly. No ordinary tooth paste will do this.

And Forhan's cleans teeth thoroughly, as well. Brush your teeth with it. It keeps the mouth white and free from tartar.

If gum-shrinkage has already set in, start using Forhan's and consult a dentist immediately for special treatment.

narrow. So narrow, in fact, that there is not room for a fat passenger to circulate. As we have no "pay-as-you-fall-in" system the conductoress must pursue each new passenger and extract the fare. This necessitates many a hundred trips up the almost perpendicular stairs to the top deck. Fare is collected and a receipt punched and handed to each passenger. The lady conductor performs the two acts with one swift move of her nimble fingers, much quicker than can a man do it with his calloused hands. On the busses, the ladies served equally well. You know the busses are nothing more than converted ice-wagons and they ride just as comfortably; they are also double-decked.

I shall never marry a conductoress—she has the habit of climbing so firmly acquired that she no doubt must spend half of her time on the roof. Then, again, she probably would be relieving my trousers of metal every night just to keep in the practice of making change. You may pass this to the Topeka ladies who contemplate jumping into this branch of industry so that they may understand my feelings in the matter.

I must shove off now as my shipmate protests that it is about my time to fan the fire. You see, we are burning last year's coal and one of us must sit up and agitate the fire or it will fail us at an inopportune time. It's a great war, this.

Of the 112 graduates and members of the faculty of Wellesley College sent over the seas for Association work three have been distinguished with special honors by foreign governments. Mrs. Caroline Rogers Hill was decorated by King Albert for her services to Belgian soldiers, Miss Ethel Putney was specially recommended to the British High Commissioner in Egypt for her work among Armenian refugees, and Miss Edith May, who had raised a special hospital fund among her college associates, was decorated by the French Government for her activity in all kinds of relief-work. Miss May's recent efforts are thus described in a letter to a generous friend at Wellesley:

Do you remember my speaking, when I was in Wellesley, of a certain château transformed into a hospital, where there were over a hundred tubercular men, and where conditions were so crowded and dreary and discouraging? I remember giving a little sketch of the place. When your money came to me I resolved to try to do something for it, and as soon as opportunity offered, I visited it again. The same devoted doctor was still there. He showed me with great pride mended floors and windows and glossy white paint everywhere. I must say that I didn't dream that the poor old place could be so transformed through paint alone! He had found one of his *unlades* who had been an artist before the war, and the man had been delighted to stencil on the walls of the corridors, and in the rooms, a running grape-vine design of red and green leaves. This had made the gayest sort of effect, and had brightened even the dimmest corners. The same artist had painted mottoes—the ten commandments, so-called, of the tubercular—surrounded with colored borders, and had contrived to make even these reminders of their pathetic malady pleasing to their eyes. The money for all of this had come from

the sale of hens and eggs drawn from the hospital chicken-yard. And this chicken-yard was the gift of American friends of mine; a gift I had been able to send the doctor just before I had sailed for America. These French doctors are marvels of ingenuity and thrift and devotion to their men. Think of making 1,250 francs out of a hen-yard that cost barely 400 francs! I will not speak of what remains to be done in that château! Should I do so, you would think that only the outside of the platter had been cleaned! But one thing greatly needed, for four years, is about to be supplied through your splendid gift, and that is a recreation-room for the men. Up to the present, those hundred and twenty men have had no room, not even a hallway, in which to assemble in the evenings and on rainy days. They are far away in the country and there are no distractions of any sort. They have no games, no books, no place where they may write, and yet they are absolutely shut in among themselves. I talked this over again with the doctor. He pointed out to me a small stable that he thought might be used. His idea is to cement the floor, to whiten and stencil the walls, to put panes of glass into the barn-doors (there are no windows), and to supply tables, chairs, lamps, and a stove. The sick men will themselves do all the work, even to the making of the tables, but not the cementing of the floors—for that would be dangerous for them to attempt. And I am to supply the material through your generosity! I am sure you would feel that I had done just what you would have wished, could you have seen the men's faces as they crowded about my little Ford, while the doctor explained what we were planning; and could you have heard the hand-clapping and even cheering (tho that is forbidden the poor fellows because of their state), and the "*Vive l'Amérique*," "*Vive les Étudiants du Collège*," which they raised when I explained that the girl students of a college in America had sent the doctor the gift! It made one want to do a thousandfold more for those fine soldiers—mostly young—who had given all they had to their country, and were so grateful to receive anything in return—as if it were not in any way their due. The doctor, too, was the most grateful man and has since written me a letter as enthusiastic as a schoolboy's about the projected plan. When it is all completed, you shall have a photograph and certainly you shall have a letter from the doctor himself—a man who gives himself without stint, from morning till night, and who is (in what he calls his leisure moments!) now corresponding with American doctors over here, with a view to founding together with them a "*Franeo-American Journal of Medicine*," wherein medical views, etc., shall be exchanged monthly. It is worth very much to come in contact with such a doctor—and with such patients as his. And I am proud of you all for having given me this chance to be your spokesman, and grateful to you beyond words, for having enabled me to help plan for changes in one of the hospitals that has been—because of its poverty—my constant preoccupation for almost a year.

Readers of THE LITERARY DIGEST will doubtless recall a letter accompanied by a poem, "Where Do I Sleep Next?" from Private Frank Proudfoot Jarvis, of the First Battalion, Canadian Mounted Rifles. That Private Jarvis's cruse of humor is still brimful, even in the closing days of

All they're cracked up to be!

Big, full-meated, perfect. The pick of California walnuts — and California never produced a finer crop than this year's.

You will want to serve Diamond Brand California Walnuts buttered and salted as a relish between the courses of the Christmas feast, and with raisins as the final tidbit with the coffee.

But, as suggested below, there are many other ways of serving walnuts. Their distinctive flavor and adaptability make possible an endless variety of food combinations that tickle the palate as well as give substantial nourishment.

Walnuts are a concentrated, highly nutritious food consisting of 96% fat, protein and carbohydrates, the elements that furnish bodily heat and muscular power.

Make your Christmas dinner just a bit better by using plenty of walnuts. Be sure you get the best by asking for Diamond Brand California Walnuts.

CALIFORNIA WALNUT GROWERS
ASSOCIATION

A purely cooperative non-profit organization of over 3,000 growers

DIAMOND BRAND California Walnuts

Christmas Suggestions:

California Walnuts served with raisins add zest to the feast.

California Walnut dressing gives a rich, nutty flavor to the Christmas bird.

California Walnut bread is packed full of nutriment and is as delicious as cake.

California Walnut fruit salad is pleasingly different — will add distinctiveness to the dinner.

California Walnut cookies served with ice cream make an unusual and appetizing dessert.

Look for this trademark in the pack.

NEW and better things, new and better ways of preparing the familiar things, progress—are the result of constant effort. The Heinz Experimental Kitchen, with its adjoining room for the "tasting committee," is a visible indication of the Heinz policy to produce the best always.

HEINZ

OVEN BAKED BEANS

Save Meat, Wheat and Money

Baked Beans, better than any other food, will help you solve the problem of maintaining a good table at the lowest cost. Heinz Baked Beans are a complete food in themselves—they furnish all the nourishment of meat and bread and they do it at no sacrifice of appetite. For Heinz Baked Beans have a flavor that make them a familiar and welcome dish in thousands and thousands of households in days when high food prices were an undreamed of factor in America.

Heinz Baked Beans are actually baked in real dry-heated ovens. For variety and to please all tastes they are prepared in four ways:

- Heinz Baked Beans with Pork and Tomato Sauce
- Heinz Baked Pork and Beans (without Tomato Sauce) Boston style
- Heinz Baked Beans in Tomato Sauce without Meat (Vegetarian)
- Heinz Baked Red Kidney Beans

All Heinz goods sold in Canada are packed in Canada

the fighting, is shown by the following letter written to his brother, Paul Jarvis, of New York, which appears in *Leslie's Weekly*:

ON-THE-SWAT.

Young (?) fellow-my-lad:

If you can not locate the above on the map, no use your wirelesslying von Wonderburg, as he can only reply: "On the swat all over the map." And that will be that *rara avis*, a Hun truth.

As you must know, the Canadians have been nibbling at the Limburger line for quite a while and one morning, about the middle of August, they took such a bite that it looked as if we would go through to the Rhine(d) on t'other side. That night I crawled into a cave, like a bear on all fours, as Fritz's bombing-squadrons were certainly dropping some cruel stuff. It reminded me of a coal-cart—they seemed to pull out the tail-board and dump their load and then go back for more. When I wriggled out of my den in the morning I found myself surrounded by dead Fritzes. I had been sleeping (?) in Hunland or, rather, what in their monumental conceit they believed to be such for all time.

I have had little time to write, being on the hike ever since the big push started. Sometimes I am on the road all night and getting a few hours' sleep during the day, and, again, I am on the road all day and sleeping in the ditch or in a field at night, but everybody happy and no complaints, for we surely have Fritz's number. Tonight, however, I am billeted in a deserted residence in what was a picturesque and quaint old city, till the vandals left their blight upon it. I passed thousands of prisoners, looking like a pack of cowed hyenas, on my way in here.

I think it was the Shilling Prince who said that it took fleets of transports to carry the Canadians across but that one row-boat would be sufficient to ferry back all that would be left of them. I am going to tell him that he was a bum prophet when I meet him in Berlin.

Word has just come down the lines of more great work by the Sammies. The "dis-United States" was another bad guess of the Potsdam fools. There is glory enough for all in the big show and there is no doubt of the peppy and intrepid doughboys taking on their full share. We hurrah for them as brothers in arms.

In one of your letters you ask several questions and among them: What do we do to kill time? I passed the buck along to a Heinie in his cage and he sputtered: "I don't notice dot is vat you have been killing already?"

The raining of such questions as yours caused the muse to rise and I enclose a (verbal) picture of the enraged torrent breaking the dikes. I put it in rime to forestall your denouncing it as blank verse.

"Hey there, Sergeant!

WHAT DO I DO NEXT?"

I've groomed many horses and fed them their hay,
I've cleaned out the stables and ridden all day,
I've done horse-line pickets all night in the rain,
I've led horses down and helped load them on train,
I've been *hors de combat* when the horses stampeded,
I've been Johnny-on-the-spot wherever I'm needed,
I've acted as brakeman for transport limbers,
I've loaded up wagons with dugout timbers,
I've done all sorts of sanitary fatigues,
I've plodded through mud for leagues upon leagues,
I've peeled the potatoes and dished up the hash,
I've swabbed army dishes and hung out the wash,
I've dug in the trenches and strung the barbed wire,
I've chopped and hauled wood for a hot kitchen fire.

I've carved up the bacon and bagged up the squid.
I've carried rations down trenches through water
and mud.
I've put up the tea and the jam for the troops.
I've rustled munitions for dozens of groups.
I've laid down the rails for the narrow-gauge
jigger.
I've hoisted the sand-bags—forefinger on trigger.
I've been guard-of-honor to his Majesty the King.
I've stood to "attention" for good General Byng.

Few civilians know what duties a soldier may have to perform when on active service; in fact, the soldier himself can not guess it out from day to day. When I exchanged mufti for khaki, in February, 1915, I thought all I would have to do would be to fight, eat, and sleep—when I could, with, of course, such side-shows as drills, parades, bombing practice, guard duty, and numerous other antics that make a soldier's life one long round of pleasure and—annoyance. I have had three and one-half years of disillusionment, but no kick coming, and, in trotting parlance, still going strong—tail over the dashboard.

The slogan "Work or fight" is revised in the war-zones and becomes "Fight and work," and when a fellow is up among the bing-bangs the best nerve tonic is to be very busy at one or both. Those who aspire to enact the rôle of a poached egg expecting to be billeted on a comfy piece of toast had better apply for a job at the "Hôtel des Enfants" and not at a recruiting station.

In my dreams I am sometimes a Jerusalem pony with field-kitchens in my saddle-bags and at others I am a hump-backed ship of the desert taking aboard the last straw.

Then I turn over and grunt:

L'Enfer!

I've done every duty no soldier should shun
To put the kibosh on the damnable Hun.
I've done the foregoing with a heart and a will,
To annihilate that demon—old Kaiser Bill.

THE DEADLY YANKEE RIFLE-FIRE

THE famous accuracy of the deadly fire of the Continentals at Bunker Hill was repeated by the Yankee troops of 1918 in France, as we are now learning. Every reader will recall the stories that have been coming over about single American soldiers found lying surrounded by a circle of German dead. The reason is now clear—the American was a dead shot, the German was not. We also heard early in the war that the rifle was obsolete and useless in modern warfare, but our Army has disproved that error. Machine-gun nests were often taken by Americans with this supposedly useless weapon. The rifle is all right; it merely needs the right man behind it. Mr. William Atherton Du Pay, correspondent of the *St. Louis Post-Dispatch*, gives some facts which prove that American skill with small arms is still valuable either in attack or defense. What our riflemen accomplished at Belleau Wood is thus described:

When the Yanks swung into action, the French Army observers witnessed what was to them an astounding sight. In the face of the onrolling columns of Hun shock troops, every American soldier deliberately adjusted about his left arm a loop of leather formed by his rifle-sling to steady

**Suppose It
Cost \$3.20**

**It Would Still Be
Economical**

You pay 30 to 32 cents today for the large package of Quaker Oats. You get 6,335 calories, the energy measure of food value.

In the 13-cent package you get just as much for your money.

Suppose it cost ten times as much. You would call it extravagant food. But see what you pay for other foods to get 6,335 calories.

Below are the figures at the prices of today. You will see that at this writing many foods cost more than ten times Quaker Oats for the same energy units.

Cost of 6,335 Calories

In Quaker Oats	\$6.32
In Round Steak	2.56
In Leg of Lamb	3.00
In Veal Cutlets	3.56
In Halibut	3.31
In Salt Codfish	4.87
In Canned Peas	3.37
In Milk	1.22

So meats and fish average fully as much as Quaker Oats would cost you at \$3.20 per large package.

And more, for the oat is better food. It is better balanced, more complete. It is almost the ideal food.

The best way possible to bring down food cost is to serve more Quaker Oats.

**Quaker
Oats**

A Superlative Grade

Use Quaker Oats to make the dish doubly delightful. It is flaked from queen grains only—just the richest, plumpest oats. We get but ten pounds from a bushel.

Thus we get an exquisite flavor which costs you no extra price. Insist on it.

**Two Sizes: 12c to 13c—30c to 32c
Except in the Far West and South**

En-retouched photograph of 36 x 6 Goodyear Pneumatic Cord Truck Tire on
1-ton truck operated by the Boston Woven Hose & Rubber Co., Chicago

Copyright 1918, by The Goodyear Tire & Rubber Co.

GOODYEAR
AKRON

Where These Tires Save

BUSINESS concerns are determining that the choice between Goodyear Pneumatic Cord Truck Tires and solid tires is a matter of conditions and that, unless enormous dead-weight burdens are to be carried over smooth roads, it frequently happens that the pneumatic equipment proves the more economical.

In Chicago, the Boston Woven Hose & Rubber Company has conducted a test for more than a year and has found that a 1½-ton truck on Goodyear Pneumatics hauls at lower cost than a former 1-ton truck equipped with solid tires.

*"In saving gasoline and oil, in reducing wear and tear on the truck, and in eliminating delays during the winter, Goodyear Pneumatic Cord Truck Tires have won permanent adoption by us."—
Boston Woven Hose & Rubber Company,
Chicago, Ill.*

Their report makes clear that both trucks were used in the same kind of service and that this involved a 50- to 60-mile per day run from freight yards over both good and bad going to various destinations in and around the city.

It first emphasizes that, as shown by the company's fuel bills, the 1½-ton Goodyear pneumatic-shod truck used only 5 gallons of gasoline daily as against the solid-tired truck's consumption of 8½ gallons daily.

Then it points out that the truck on pneumatics, though ½ ton larger, used only 5

quarts of oil weekly while the other required 7 quarts weekly.

And particular stress is laid on the fact that, because it was cushioned by the big Goodyear Pneumatics, the heavier truck required only \$20 worth of mechanical attention between October 1, 1917, and

October 15, 1918, whereas the jarring on solid tires had punished the other truck considerably, causing frequent loss of time and money.

In addition the pneumatic equipment has wiped out the losses previously incurred when winter-time deliveries were delayed because the solid tires stalled

in the snow or on icy pavements.

The truck equipped with the pneumatics, operated during the severe conditions of January and February, 1918, without being stopped on a single occasion by lack of traction.

Similar evidence of the money-saving advantages of Goodyear Pneumatic Cord Truck Tires appears consistently in their pioneering record and plainly recommends them to executives whose hauling conditions really demand this type of tire.

THE GOODYEAR TIRE & RUBBER COMPANY, AKRON, OHIO

CORD TIRES

the hard-kicking weapon, took time to estimate the distance between him and the attacking Germans, and carefully adjusted his sights for the exact range before loosing off the bullets that accurately singled out individual enemies, cutting great gaps in the advancing line, and finally turning the tide of battle—the tide which grew in volume and culminated in the smash of the Hindenburg line.

To the man who has never followed the fascinating sport of military rifle-shooting, the connections between the preparations of the Yanks for battle in Château-Thierry and the great retreat which the future may prove to have been one of the critical stages of the war, may appear vague and difficult to understand; but the fact remains that the shock troops of the Hun, expecting to advance to close quarters where bayonet, butt, and the invincible progress of their unswerving mass formations would win the day for them, were met when more than five hundred yards away from their objectives by a hail of accurately aimed bullets—projectiles which did not depend upon happen-chance or upon the mass of the target for hits, but which were directed against individual marks by cool, deliberate, expert riflemen, who knew how to shoot, and who knew they knew how to shoot.

All this was in direct contrast to the accepted order of things along the Western Front. That a soldier in battle should take time to adjust his sights so that neither the range nor the force of the wind would interfere with the straight flight of the bullet was incomprehensible to the French, by whom the rifle had come to be regarded mainly as a staff for a bayonet, or, at best, a firearm from which a man with little previous training might send projectiles against an attacking mass and feel confident that a certain percentage of the bullets—one in every six hundred fired, statistics tell us—would find a human mark.

Equally a revelation to the Hun was the marksmanship of the Yanks, the German Army never having believed in rifle-practice at distances greater than four hundred meters, relying upon the volume of fire from its mass formation rather than upon the individual precision of the soldiers composing those masses. In the first of the fighting around Château-Thierry, there were in action a few Chauchat machine rifles, weapons which automatically load and fire a score of shots without recharging, but the rank and file of the American forces were armed with nothing more rapid than our own Springfield rifle, the magazine of which holds only five cartridges and which is in no way automatic. Yet so fast, furious, and destructive was the Yankee fire that German prisoners declared that at the time they believed every American in the fight was armed with an automatic weapon.

The greatest factor in the success of the American arms was not the effective mass fire of our Army as much as the accurate aim of the individual American soldier. Indeed, says Mr. Du Pay:

The exploits of the American rifleman in the war of wars are legion. The full story of his skill has never, and probably will never, be told, for it is all part of a day's red work. Yet official dispatches have shown how, with accurate rifle-fire at Château-Thierry, the marines as a unit beat back the advance of the enemy; how a Yankee sergeant, a few weeks before at the Marne, picked off twenty-five Huns as they were crossing the river from a distance of six hundred yards; how an

American private was found dead, ringed about by ten German corpses, each bearing testimony, in his death wounds, of the rapidity and accuracy of fire which marked the last stand of the unnamed Yankee, who, when he was mortally hit, thrust his bayonet in the ground to show he was the last survivor of the unequal conflict; how, in short, individually and collectively the American soldier has given the rifle a new effectiveness and a new importance in modern war.

ASTROLOGY ALSO COMES OUT AGAINST GERMANY—Astrology as a cult is less in vogue with us than with people of foreign countries, but whatever success or failure in foretelling the future astrologists may have, when they turn to the subject uppermost in the greatest number of minds—the war's outcome—they receive interested attention. *The Westminster Gazette* (London) of July 29 made some revelations on the authority of *The Occult Review* (London)—

The general but somewhat vague impression that our enemies are on the verge of "a bad time" is borne out, I am interested to find, by the astrologers. *The Occult Review*, which keeps me informed on matters of this kind, points out that the autumnal equinox threatens to be distinctly awkward for the Central Empires. "Uranus," it remarks, "is close to the cusp of the mid-heaven in close opposition to Saturn and in close square with Mars. At Berlin . . . Uranus is actually within a quarter of a degree of the exact square of the mid-heaven, and Saturn only a little over one degree from the opposition of one and the square of the other." At Vienna things, apparently, are even worse, and, in conjunction with the Austrian Emperor's horoscope, "threaten this monarch with the loss of his throne during the ensuing autumn."

But, altho, according to the stars, "a crisis of the gravest kind threatens Central Europe," the Allies are not to return at once to a life of perfect ease and quiet. "Rome," I read, "can hardly expect to be immune from its effects, either physically or politically. A devastating earthquake may follow in its wake. At Washington, Mars has only just culminated, afflicted by Saturn and Uranus, while Mercury and Venus are in conjunction in the ascendent and in sextile with Jupiter," whatever the effect of that may be. Saturn "affects the horoscope of President Poincaré"; but an eclipse of the sun on December 3 "may prove to be a harbinger of peace, especially as by this date Mars has passed away from the parallel of the sun in King George's nativity." And even with regard to the present battle the astrologers have something to tell us. "The date of entry of Venus into Cancer is July 24, the conjunction of the major and minor benefices being formed on the ascendent of General Foch's horoscope on July 27. One is almost inclined to suggest that the French General must have had some knowledge of astrological lore, in view of the date for which he timed his auspicious counter-offensive."

Gets Back at Mother.—"Bertie," said mother, sorrowfully, "every time you are naughty I get another gray hair."

"My word!" replied Bertie; "you must have been a terror. Look at grandpa!"—*Tid-Bits*.

THE SPICE OF LIFE

Accounts for Their Pallor.—"Why did you use the expression 'as pale as a door-knob'?"

"Door-knobs are in doors so much, you know."—*Boston Transcript*.

A Mean Remark.—"Dead men tell no tales," observed the Sage.

"Maybe that is the reason why so many widows get to marry again," commented the Fool.—*Nashville Tennessean*.

What's the Use?—JUDGE—"The police say that you and your wife had some words."

PRISONER—"I had some, but didn't get a chance to use them."—*Puck*.

May Start Revolution.—"Why do they say, 'Nobody loves a fat man'?"

"There's bound to be a suspicion that anybody overweight just now is getting more than his share of the food."—*Washington Star*.

Beats the Band.—BLONDS—"If you are going in for music, which instrument would you choose?"

SLONDS—"Well, I've always thought I would like to be a soloist on a cash register."—*Philadelphia Record*.

Good and Sufficient.—"She's giving a very elaborate party."

"Gotten up solely on my account."

"I thought you two were on the out."

"We are. And that's the reason she got up the party."—*Kansas City Journal*.

Wasn't He Cute?—WIFEY—"You must not expect me to give up my girlhood ways all at once."

HUSBY—"That's all right. Go on taking an allowance from your father as if nothing had happened."—*Brooklyn Citizen*.

Clumsy Cheating

The Kaiser said, "What shameful fears I'm now compelled to feel:

I stacked the cards for thirty years
And then mused up the deal!"

—*Washington Star*.

Squeezed Dry.—"Si Hubbard told me he got a heap of work out of you when you was workin' fer him," said the farmer.

"Wal, I allow he did," said the hired man.

"Yas. Fact is, I guess he just about got it all."—*Boston Transcript*.

Merrily We Roll Along.—A man entered a drug-store very hurriedly and asked for a dozen two-grain quinin pills.

"Do you want them put in a box, sir?" asked the chemist, as he was counting them out.

"Oh, no, certainly not," replied the customer. "I was thinking of rolling them home!"—*Tid-Bits*.

Sure to Come.—"Oh, mama, I'm frightened!" came from little Tommie, in bed.

"What are you frightened about, my son?"

"I hear somebody on the roof."

"Oh, well, go to sleep, my boy; it's only your father taking off his shoes before he sneaks through the scuttle. He's just got home from the club in his airship."—*Yonkers Statesman*.

— as the MOTOR TRUCK Meets the Demand for Better Transportation

Republic Quality and Republic Service — are important factors

IN 1913 the first Republic Truck was built; yet, within five years, Republic was producing and selling more than twice as many trucks as the next largest manufacturer.

Republic engineers specialize on trucks and truck problems. Republic builds nothing but trucks in a factory scientifically planned and equipped for efficient truck manufacture. That is why Republic has been able to reach this remarkable quantity production and still maintain the highest quality in every part and process.

More than 1300 Republic Service Stations, distributed all over the United States, protect this quality by making dependable service quickly available to every owner of a Republic Truck no matter where he may be located.

Republic Quality combined with Republic Service has enabled Republic Trucks to set up new records of hauling efficiency and economy in every field of motor-truck operation.

There's a Republic Truck adapted to any hauling task. Seven Models— $\frac{1}{4}$ ton to 5 ton. The Republic dealer will help you select the truck that will best fit your requirements.

Descriptive booklet sent on request.

Republic Motor Truck Co., Inc., Alma, Michigan

The Torbenen Internal Gear Drive, used in all Republic Trucks, delivers 92% of the motor power to the wheels. We know of no other type of drive that delivers as much.

CONVERSATION WHAT TO SAY AND HOW TO SAY IT

by Mary Greer Conklin. An attractively written plea for a closer observance of the niceties that make conversation a charm and a delight. Shows how the tactful talk which succeeds in a drawing-room will also give a man a subtle power in business. Enlivened with felicitous quotations and shrewd comment. Indispensable to the socially ambitious. 12mo, cloth, 186 pp., 75 cents net; by mail, 83c.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., N. Y.

BECOME AN EXPERT ACCOUNTANT

Executive Accountants command big salaries. Thousands of firms need them. Only 2,500 Certified Public Accountants in U. S. Many are earning \$1,000 to \$10,000 a year. We train you thoroughly by mail in spare time for C. P. A. examinations or executive accounting positions. Knowledge of bookkeeping unnecessary to begin—we prepare you from the ground up. Our course and service are under the supervision of William B. Costenbush, A. M., C. P. A., Former Controller and Instructor, University of Illinois, assisted by a staff of C. P. A.'s, including members of the American Institute of Accountants. Low tuition fee—only \$100. Write now for information and free book of Accountancy facts. La Salle Extension University, Dept. 1235-H.A.B., Chicago "The World's Greatest Extension University"

What 15¢ will bring You from the Nation's Capital

Washington, the home of the Pathfinder, is the nerve-center of civilization; history is being made at this world capital. The Pathfinder's illustrated weekly review gives you a clear, impartial and correct diagnosis of public affairs during these strenuous, epoch-making days.

ing, wholesome, the Pathfinder is yours. If you would appreciate a paper which puts everything clearly, fairly, briefly—here it is. Send 15c to show that you might like such a paper, and we will send the Pathfinder on probation 13 weeks. The 15c does not repay us, but we are glad to invest in new friends. The Pathfinder, Box 56, Washington, D. C.

No Credit.—"What does she say?"
"Says her face is her fortune."
"Now I understand what they mean by involuntary bankruptcy."—*Louisville Courier-Journal*.

Times Are Different.—"Why is Wombat hustling so strenuously? I thought he retired with enough to live on."
"It looked like enough to live on—ten years ago."—*Judge*.

Topsy-turvy Times.—"A queer thing on the cards in Europe."
"What is that?"
"The deuce is taking all the kings."—*Baltimore American*.

A Roundabout Method.—"Pa, why do you always insist on my singing when Mr. Bimley comes here?"
"Well, I don't like to come right out and tell him to go."—*Boston Transcript*.

Not Any More
Now Wilhelm with a troubled brow
Counts up his various losses.
He can not pay his board bill now
By giving iron crosses.
—*Washington Star*.

Cheap Enough.—MAGISTRATE—"How did you manage to extract the man's watch from his pocket when it was provided with a safety-catch?"
PRISONER—"Excuse me, sir, that is a professional secret. I am willing to teach you, however, for two guineas."—*Tit-Bits*.

Thousands to the Good.—"Had my fortune told to-day, dear."
"What a waste of money," said her husband.
"Not at all. I gave the woman fifty cents and she told me I would inherit \$50,000. Wasn't that a bargain?"—*Boston Transcript*.

Made Greater Speed.—"In some respects you are greater than Napoleon," remarked the faithful attendant.
"But," protested the deposed ruler, "I'm down and out."
"Yes. Your finish is very much like Napoleon's, and it took you a very much shorter time to reach it."—*Washington Star*.

Preparing for Jack.—Mr. Simpson's voice rumbled through the house. "Mary! Here's the baker. How many loaves? Two, as usual?"
"Two loaves, indeed," replied Mrs. Simpson. "Have you forgotten that Jack is coming home on leave to-day?"
"Of course!" said Mr. Simpson, as he suddenly remembered his sailor son was coming home. "Here, Mr. Baker, back your cart up against this door, and tip her up."—*Tit-Bits*.

Drought Broken.—Two Jews were on a journey on a hot summer day. "Have you anything with you, Matthias?" asked one.
"Yes, a bottle of wine. What have you, Moses?"
"Dried tongue."
"Good! We'll divide our provisions." Matthias produced his wine and it was divided. Then he asked his fellow traveler to bring out his provisions.
"I?" said Moses.
"Why, yes, the dry tongue you said you had."
"I haven't got one now," was the reply.—*Boston Transcript*.

HERCULES POWDER CO.

From War to Peace

TO satisfy the demands of war the Hercules Powder Company has cut over 621,000 tons of kelp in the Pacific Ocean during the last two-and-a-half years. This has been converted into chemicals necessary to the manufacture of smokeless powder, black powder, shell lacquers, and coating for aeroplane wings. Over \$5,000,000 have been expended in the great plant at San Diego, Cal., in which the chemicals are extracted from this giant seaweed.

The development of a new source of these chemicals—potash, acetone, and other solvents—was vital to the triumph of democracy. Now that victory is assured, these and others are at the disposal of the industries of peace.

Kelp yields many useful products in addition to those which have been necessary to the prosecution of the war. Many of them are well-known to the drug and chemical trades. Some of them have never been produced in commercial quantities before. Others that are now made only on a laboratory scale can be readily turned out in quantity if a demand is found.

We ask all manufacturers and chemists who believe that success in the new industrial era which is upon us demands new methods and new ideas, to consider these chemicals in the light of possible applications to processes in which they are interested. If you are such a manufacturer, ask your chief chemists if one of these materials does not suggest an improvement in your product, or a saving in its manufacture. If you are a chemist, does not something in the list at the right offer possibilities for new accomplishments in your profession?

In either case, our Research Department is at your disposal in working out methods for applying any of these chemicals to your needs, or in developing new products to suit your requirements. Address

CURRENT EVENTS

THE PEACE SITUATION

December 4.—President Wilson and his party sail for France on the *George Washington*.

Reviewing German ability to pay war-damages, the *London Daily Mail* says the estimated Allied expenditures of \$125,000,000,000 are less than one-seventh of the main German assets in sight.

The executive committee of the National Race Congress of the United States names five delegates to the "international congress of the darker races of the world" to be held in France during the Peace Conference.

December 5.—Sir Auckland Geddes, Minister of National Service, says in a public address that such men as the former German Emperor, Enver Pasha, and the former rulers of Bulgaria and Austria will be placed on trial and their lives forfeited if found guilty.

Lloyd George, in a restatement of his policy, declares that the men responsible for the war can not escape because their heads were crowned, but that they must be tried by an international court.

Winston Churchill, Minister of Munitions, announces that the British peace delegation will demand the abolition of conscription throughout Europe. Great Britain must retain her naval supremacy, he says, and her delegates will determinedly oppose any proposals to deprive her of it.

On his return to Paris from the London conference, Premier Clemenceau declares there is absolute agreement among the Allies on all questions, particularly that concerning the former German Emperor.

The British Admiralty announces that the entire Turkish Fleet is in the hands of the Allies and interned in the Golden Horn at Constantinople.

General Nudant, president of the French armistice commission at Spa, says the *Düsseldorf Nachrichten*, has presented a note to the German commission demanding for the British troops \$10,000,000 and \$13,500,000 for the French troops for the expense of the first month of occupation.

December 6.—The *London Daily Mail* announces that a demand for \$40,000,000,000 will be made for Great Britain and her dominions as reparation for the war.

American troops entered Mainz, capital of Rhenish Hesse, on the left bank of the Rhine, on December 4, states a Wolff Bureau dispatch from Berlin.

December 7.—A London dispatch states that Jewish leaders in Vienna have appealed to Premier Lloyd George, Premier Clemenceau, and President Wilson to check the massacres in Galician cities.

General March announces in Washington the probability that the National Army men now approaching the Rhine will be back on American soil by midsummer. A total of 5,325 officers and 125,515 men has been specifically assigned for early return by General Pershing.

December 9.—A wireless from the *George Washington* says President Wilson will probably not sit at the peace table himself, but will remain in close touch with the heads of other nations and be prepared to decide questions referred to him. It is further stated that the President favors public proceedings of the Peace Conference.

The State Department again advises the German and Austrian governments

MELLIN'S FOOD COMPANY, BOSTON, MASS.

The Cough that Killed Santa Claus

The tree is decked. Candles twinkle. Tinsel sparkles. The holly hangs high. The little tots gather with wide eyes and beating hearts. "Santa Claus is coming!" Sleigh bells jingle somewhere. A door opens. "Here he is!" Laden pack, frosty beard, merry eyes. The children clap and leap, half

afraid, half gleeful. Santa swings down his load and gifts, and then—He coughs—hard and often, just like an ordinary man. He doubles over. Off falls his beard. "It's only daddy," the children cry in bitter disappointment. No more Santa Claus for them.

What's the use of going round coughing? It spoils lots of fun for yourself and other folks. And it's so unnecessary.

Smith Brothers S-B Cough Drops relieve coughing. And they often keep a cough from developing into a sore throat or cold. Keep a box in your pocket, another in your desk, another at home.

Pure. No drugs. Just enough charcoal to sweeten the stomach.

One placed in the mouth at bedtime keeps the breathing passages open.

Drop that Cough

SMITH BROTHERS of Poughkeepsie

FAMOUS SINCE 1847

or West Indian island and guarded by a Dutch Fleet.

Berlin advices received at Zurich state that 180 casualties occurred during fighting in the Prussian capital December 6, and that the Spartacus group is defending three sections of the suburbs with machine guns. Many persons are reported killed in street fighting at Mayence, capital of Rhenish Hesse.

A London dispatch avers that Germany is known to have lost well over 6,000 airplanes, destroyed and surrendered, during the present year.

December 9.—*L'Information*, of Paris, is informed that additional troops were brought to Berlin, December 8, by the Ebert Government to crush the Spartacus movement, which is now causing disorders also in Munich and Pilsen, Bohemia.

An Amsterdam dispatch states that Polish-American divisions have embarked at Havre for Danzig, in west Prussia, with the intention of occupying the provinces of Posen and Silesia.

British troops are hurried to Cologne to maintain order.

Swiss newspapers report the entire fortunes of former King Frederick August of Saxony and his brother, Prince John George, placed under sequestration.

December 10.—The *Leipzig Tageblatt* reports that, following mental depression, the ex-Kaiser has attempted to commit suicide.

Philipp Scheidemann, a member of the new Government, threatens to resign if chaos continues in Berlin, wires the Associated Press correspondent. "If the people do not come to their senses," he added, "they will be brought to their senses by the Americans."

RUSSIAN AFFAIRS

December 4.—London gets a message from Berlin stating that the Russian Government has refused to admit 1,500,000 Russian soldiers who have been prisoners in Germany and turned them back at the frontier.

December 6.—Press reports forwarded to the State Department at Washington describe Petrograd like a deserted city with probably one-half of its population gone through starvation and terrorism. Rumors of approaching Entente intervention, states a dispatch from Stockholm, have increased Bolshevik hatred and resulted in persecution of the middle-class elements. The Polish and Swedish legations have been forcibly entered.

A Geneva dispatch states that General Skoropadski, hetman of the Ukraine, has been killed and that all power is now in the hands of the Unionists.

The Ukrainian bureau at Lausanne learns that Kief was taken by Unionist troops after a severe battle in which 10,000 men were killed or wounded.

December 7.—London gets a message from Amsterdam stating that the Councils of Livonia, Esthonia, and Courland have urged Allied intervention in the Baltic provinces against the invasion of Russian Bolshevik forces.

December 8.—Owing to a charge that the representative of the Soviet Government at Stockholm has been transmitting Bolshevik literature from Russia, states an Associated Press dispatch, Sweden has recalled her diplomatic and consular representatives in Russia.

The Women's Committee of the American Defense Society sends a letter to members of Congress asking immediate Congressional action for restoring order

and alleviating suffering in Russia, where, it is claimed, 15,000,000 persons are threatened with starvation this winter.

December 9.—The Berlin correspondent of the *Cologne Gazette* reports that the German Government has recognized the Republic of Estonia, one of the Russian Baltic provinces.

On arriving in London the Dutch Minister to Petrograd declares that when he left that city the "situation was one of utter starvation and most of the people hardly knew how to exist through the following day."

FOREIGN

December 4.—A dispatch from Buenos Aires states that the American Government has informed Peru that she may count upon the friendly approval of the United States in efforts to obtain the plebiscite in the provinces of Tacna and Arica.

Santiago reports an earthquake in northern Chile, destroying Vallenar and wrecking 10 per cent. of the buildings at Copiapo.

December 5.—The First Lord of the British Admiralty states that during the war 2,475 British ships were sunk with their crews aboard and 3,147 were sunk and their crews left adrift. The total casualties in the merchant marine service exceeded 15,000 men.

Paris reports the Ministers of Justice and the Interior declaring that it is necessary to keep martial law in force in France because of the recrudescence of Bolshevik propaganda in certain districts.

A Washington dispatch states that the United States has informed Chile and Peru that it is of "absolute necessity" that they adjust their differences amicably.

In a speech at Dundee Winston Churchill, Minister of Munitions, announces that the British Government has decided upon the nationalization of the railways.

London reports fourteen women among the candidates for Parliament nominated yesterday.

December 6.—An official statement issued in London gives British merchant tonnage losses from the beginning of the war to October 31 last as 9,031,828. New construction in the United Kingdom during the same period was 4,342,296 tons, 530,000 tons were purchased abroad, and enemy tonnage captured was 716,520, making the net loss 3,443,012 tons.

The Berlin correspondent of the *London Daily Express* wires that the Germans are building an airplane and Zeppelin for a trip across the Atlantic in July next.

A Peking cable states that the American, British, French, and Japanese Ministers have presented President Hsu Shin-chang with a memorandum expressing grave concern over the continued civil strife in China and the wish of the associated governments to encourage the efforts of both sides for reconciliation.

Santiago reports Ambassador Shea handing to President Sanfuentes a message from President Wilson offering mediation in the question of the provinces of Tacna and Arica. President Sanfuentes said neither the Government nor the people of Chile wished for war, and, in his opinion, the controversy could be satisfactorily settled.

December 9.—Manchester reports a strike of 100,000 cotton-spinners for a 40 per cent. increase in current wages.

A London dispatch says a company has

Regular old "HE" Christmas hand-out!

THIS pippin-of-a-pound-package of Prince Albert tobacco—the classy crystal glass humidor all radiant in yuletide finery—looks like a thousand dollar Liberty Bond perched-on-a-pedestal as cymbals sound for the curtain's rise Christmas morning! It's the big-best-bet for the Ace-High-Party on the receiving end of the deal!

¶ Talk about *man*-gifts! Boy how-dy! If *he* gets an inkling of what's up he'll kick off the coverlids at crack-o-day and make a speed dive for first whacks that'll scorch the banister railing! *Sure!*

¶ For, a gift of a pound of Prince Albert gets closer to a smoking man than anything you can figure on! Turns on such scuttles-of-sunshine all day Christmas, and keeps him jimmy-pipe-joy'us many days thereafter! Because, P. A. hits his taste and cuts loose new smoke high spots! Just puts a capital S on Smokesatisfaction seven days out of every week!

¶ Prince Albert is as cool as an iced cucumber. No stung-tongue comebacks with P. A.! It can't bite or parch! Our exclusive patented process cuts out bite and parch! He can smoke to beat the old band—and *then some!*

¶ Get on the trail of this festal P. A. package—all equipped with a Merry Christmas tag ready for your pen—before the "all gone" gloom sign stares you in the face! You'll be disappointed sure as shooting if you don't get busy—*quick!*

¶ Or, maybe, you'll take a fancy to Prince Albert in the handsome pound or half pound tin humidors. Mighty clever, too! And, then there are the tidy red tins and the toppy red bags, so popular, and so handy for smokers. Remember just how close Christmas is—and *don't slip!* Get yours before the day's done! And, that'll be off your mind!

PRINCE the national Christmas joy smoke ALBERT

To Meet Post-war Conditions

NOW is the period of readjustment. Such a time brings into greatest emphasis the broad usefulness of the giant industrial power—Electricity. Its applications are apparent in almost every phase of reconstruction work.

LABOR PROBLEMS: Electricity provides comforts and conveniences which improve working conditions and the general health and morale of workers. It is an aid to the efficiency of the individual—it secures material increase in output and continuity of performance.

EXPANSION: Skillful, scientific application of electrical power is a means of securing maximum flexibility in the modern manufacturing plant. Motor drive permits plant extension unit by unit with minimum initial costs, installation delays, labor demands, and with a fixed control of overhead.

RETRENCHMENT: Immediate and far-reaching economies can be secured by electrifying and modernizing a manufacturing plant. Electricity is measured by a meter and paid for as used—it is never the twenty-four-hour overhead which the steam plant must always be. For power, heat and light and in a multitude of scientific applications, electricity is a force for maximum returns from minimum pay rolls.

Experts To Advise You

YOUR electrical engineer is ready to show you *how* to use electricity. The central station representative can place at your disposal valuable experience and cost data. Your architect will guide you in conforming your building plans to the best use of electrical equipment.

And the electrical dealer and qualified electrical contractor will supply the equipment and make the installation.

The co-operation of these men is yours for the asking. It can cost you little and may prove immensely profitable.

• • •

It is important to keep in mind that quality in electrical equipment and installations is not merely desir-

able, but *vital*. There can be no compromise in things electrical; they must be right.

Insulated wire is the basis of every installation and Habirshaw is the standardized, time-tested insulated wire.

Habirshaw wire is made to meet fully every demand of electric transmission, with an ample factor of safety. The latest advances of scientific and technical knowledge have been applied to the manufacture of Habirshaw wire. It has been a leader since the beginning of the electrical industry in the United States and today marks the high point of insulated wire quality.

Require that all materials of an installation equal Habirshaw in quality, and you will secure continuous electrical service and satisfaction.

For more than 30 years—practically from the beginning of the electrical industry—

been formed to finance the survey of an aerial route from Australia to London by way of Sydney and Port Said.

A message from Lima states that the Peruvian Government accepts the proffered mediation of the United States and Argentina in the settlement of the dispute with Chile.

December 10.—A Christiania dispatch states that the Nobel Committee has resolved not to award a Nobel peace prize this year.

DOMESTIC

December 4.—General Pershing's report on the operations of the American Expeditionary Forces up to November 20 pays supreme tribute to the patience under hardships, heroism, and unflinching spirit of officers and men, whose "deeds are immortal and have earned the eternal gratitude of our country."

Clarence Mackay, president of the Commercial Cable Company, brings suit in the Federal District Court in New York to enjoin the Postmaster-General from carrying out his claim that he has assumed control of the company's ocean cables.

Estimates of the Public Health Service show that between 300,000 and 350,000 deaths from influenza and pneumonia have occurred among the civilian population and 20,000 in the Army camps in the country since September 15.

Secretary Daniels issues an order for the resumption of recruiting for the Marine Corps. Enlistments will be for four years and there is no limit to the number of men to be accepted.

The Labor party platform adopted by the Chicago Federation of Labor is adopted by the National Non-Partisan League at a meeting in St. Paul, Minn.

Amalgamation of the marine cable system of the Western Union and Commercial Cable companies is authorized by the Postmaster-General.

Permanent organization of the Army has been deferred for consideration until after the close of the Peace Conference. Secretary Baker states in his annual report, because "the military needs of the United States can not be prudently assessed until that Conference shall have determined the future international relations of the world."

December 5.—The Reconstruction Conference at Atlantic City, which is attended by several thousand business men representing all important industries in the country, favors a program for the democratization of industry by an internal process of evolution which will promote harmony between capital and labor.

Secretary of War Baker tells the Senate Finance Committee that through contract cancellations the War Department expects to save approximately \$7,250,000,000 of the \$24,281,000,000 voted by Congress for the Army during the war.

The New York Chamber of Commerce adopts a resolution favoring closer association of wage-earners, managers, and capitalists in all large industrial establishments.

Government ownership of all telephone and telegraph lines at the conclusion of peace is recommended in the annual report of the Postmaster-General issued in Washington.

In its annual report the Interstate Commerce Commission opposes the return of railways to the old system of competition and suggests a partial merger

under some sort of government regulation.

December 6.—The nomination of Representative Carter Glass to be Secretary of the Treasury, which was announced December 5, is confirmed by the Senate without objection.

An official statement submitted to the House Naval Committee says the American Navy will number 1,291 vessels, including forty battle-ships and 329 destroyers, on July 1, 1920.

Secretary of Labor Wilson issues an appeal to the workers of the country to refrain from a nation-wide strike as a protest against the case of Thomas J. Mooney.

Mayor Hylan vetoes the curfew ordinance passed by the New York Board of Aldermen to keep boys and girls under sixteen off the streets after 9 p.m.

The Chief of the Bureau of Investigations of the Department of Justice gives sensational lists of persons connected with German propaganda to the Senate Committee which is investigating the brewers and propagandists.

Albert Paul Fricke, an American citizen, and Lieut.-Com. Hermann Wessels, alias Carl Roediger, of the Imperial German Navy, are indicted for treason by the Federal grand jury in New York.

December 7.—Evidence connecting a dozen more men and nine organizations with the paid German propaganda in this country is presented to the Senate Committee by the chief of the Bureau of Investigation of the Department of Justice.

The Deputy State Attorney-General reveals the scheme of German propagandists to purchase an influential newspaper in New York.

Speaking before the Brooklyn Chamber of Commerce, William C. Redfield, Secretary of the Department of Commerce, predicts grave complications should this country plunge into a race for foreign trade.

Britain Day, appointed for the promotion of friendship between the United States and Great Britain, is signalized in New York by cable messages from King George, Minister Balfour, General Pershing, and other prominent men expressing the hope of continued amity between the two nations.

Charles M. Schwab receives word by wireless from President Wilson that his resignation as Director-General of the Emergency Fleet Corporation had been accepted.

December 8.—In his annual report Secretary of the Navy Daniels gives a glowing account of the heroic deeds of the United States marines and the brilliant achievements of the American Navy during the war.

December 9.—The chief of the Bureau of Investigations of the Department of Justice tells the Senate committee that the policies of the Hearst papers, which had been considered pro-German and anti-British before the United States entered the war, continued "very questionable" for some time afterward.

The annual convention of the Investment Bankers' Association at Atlantic City urges the return of the railroads to their private owners, but with a certain amount of Federal supervision, and the enlistment of Congressional aid in fighting the fraudulent securities evil.

Mayor Thompson of Chicago allows the ordinance passed by the City Council prohibiting the display of the red flag to become a law without his signature.

Under the will of Capt. Joseph Raphael

Meets the Approval of Men

Pipes, \$1 to \$25
Cigar and Cigarette Holders,
35c to \$10

IN the tobacconist's shop the very finest pipes, cigar and cigarette holders are stamped with that word of approval—Redmanol. Because it is used for mouthpieces on the best stock Redmanol has come to stand for quality. It is man-made amber, strong, beautiful, flawless, resembling Nature's product in all its beauty of coloring, excelling it in durability. Odorless, tasteless, non-inflammable and unbreakable, Redmanol is truly the ideal mouthpiece. The touch of individuality which surrounds the hand-cut Redmanol mouthpiece is appreciated by persons of discernment. When selecting gifts for the smoker let Redmanol be your choice. Leading tobacconists everywhere sell Redmanol.

De Lamar, who died December 1, the medical departments of Harvard, Columbia, and Johns Hopkins universities are to get about \$7,000,000 for the study and teaching of the origin, cause, and prevention of disease.

December 10.—Following a wireless request from the President, Vice-President Marshall presides over a Cabinet meeting, the first incident of the kind on record. In assuming the chair, he said: "I am here informally and personally; I am not undertaking to exercise any official duty or function."

More evidence on the attitude of the Hearst papers is presented to the Senate committee which is investigating the brewers and German propaganda.

The House of Representatives orders an investigation of the National Security League of New York and similar organizations and their alleged charges affecting the loyalty of members of Congress.

Richard M. Hurd, of the American Defense Society, issues a warning to civilians and uniformed men to beware of concerted attempts to break up Allied unity "in this period of diplomatic stress."

A bill providing for government regulation of the meat-packing industry is introduced in the House by Chairman Sims of the Interstate Commerce Committee.

The annual report of the Secretary of Commerce shows the balance of trade in favor of the United States for the fiscal year 1918 was \$2,982,226,238. The total of the merchandise export trade was \$5,928,285,641 and of the import trade \$2,946,059,403.

Vice-Admiral Gleaves gives out figures showing that of the entire army of 2,079,880 taken over the seas 46¼ per cent. were carried in American ships, 48½ per cent. in British, and the rest in French and Italian vessels.

The convention of the Investment Bankers' Association goes on record squarely opposed to public ownership of railroads and in favor of an early return to private ownership under improved methods of regulation.

The Winning Side.—Maj. Earlwood Dawson, of his Majesty's Forces, in a letter to his sister, an American Red-Cross worker in England, tells an incident illustrative of England's faith in the Americans.

An English private had captured a German captain. Tommy marched his prisoner into headquarters with the air of a major-general on parade and stood waiting for his turn to deliver over his captive.

The German captain smirked disdainfully, glanced about the tent, and hissed at Tommy, "You stupid English, you dink dat you vill vin dis var. Vell, I tell you dot you von't, for ve haf the German Gott on our side."

"That's all right, old boy," replied Tommy promptly, "we've got the Yanks on ours."—*Red Cross Press Service.*

The Pikers Suffer.—"Who is that poor fellow with the guards watching him?" asked the visitor to the penitentiary.

"Ob, he's a desperate criminal," replied the warden. "He is doing twenty years. He wrecked a train."

"And who is that trusty who seems to have so many privileges?" asked the visitor.

"Oh, he's a financier," replied the warden. "He is doing two years. He wrecked a railroad."—*Cincinnati Enquirer.*

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall's New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"G. A. S., Conway, Ark.—"Kindly give us the author of the quotation, 'The hand that rocks the cradle rules the world.'"

The entire quotation reads—

"They say that man is mighty,
He governs land and sea,
He wields a mighty scepter
O'er lesser powers that be;
But a mightier power and stronger
Man from his throne has hurled,
For the hand that rocks the cradle
Is the hand that rules the world."

—WM. ROSS WALLACE—*What Rules the World.*

"H. J. P., Columbia, Tenn.—"What is the rule for the use of the terminations *-able* and *-ible*?"

The rule is: *-able* is used after verb-stems ending in *a*; *-ible* is a suffix of Latin adjectives from Latin stems not *a* stems. It (*-ible*) is the equivalent of *-able* of other English adjectives, as, *edible*, from Latin *edere*, = eat-able.

"S. R. O., Jr., Hope, Ark.—"Why does the Secretary of State sign his name 'Lansing' to official communications sent to other nations without attaching his title or initials?"

The Secretary of State merely follows the custom established by his predecessors.

"H. M. S., Chicago, Ill.—"Is it correct, if the last letter of a word is 't' and the first of the next word is 'y,' to unite these two letters to sound like 'ch' in 'chop,' as, 'Can't you,' 'Don't you,' etc.?"

Glides occur in colloquial English speech according to the rapidity with which words are spoken. Careful enunciation eliminates them and they are seldom or never heard in formal utterance. Hence, they should be avoided as tending to break down letter values.

"R. H. T., Hillsboro, Ohio.—"Kindly tell me what is meant by 'Italia Irredenta.'"

The definition of *irredentist* is "One of a party formed in Italy about 1878 to secure the incorporation with that country of regions Italian in speech and race, notably the people of the district around Trieste and Trent in Austria, Nice in France, Corsica, and Malta, but subject to other governments. Such regions are called *Italia irredenta*, or 'Unredeemed Italy.'"

"H. E. K., Corydon, Iowa.—"Could you give me information as to the religion Robespierre caused to be adopted in France in 1794?"

The religion which Robespierre set up was simply the worship of the Supreme Being, as opposed to Catholicism on the one hand and to the atheism of Herbert on the other.

"M. E. S., Baltimore, Md.—"Is the correct pronunciation of *lieutenant* *lee-tenant* or *lu-tenant*?"

In American usage generally *lieutenant* is pronounced *lu-ten'ant* (*lu* as in *feud*, *e* as in *get*, *a* as in *final*). In British usage, *lef-ten'ant* (*e* as in *get*, *a* as in *final*) predominates.

"F. D. S., Sanford, Fla.—"Please inform me if there is such a body of water as the 'Sargasso Sea,' or is it only a mythical spot existing only in the sailor's imagination?"

Sargasso sea is defined as "a region of the North Atlantic ocean, between latitude 16° and 38° N. and longitude 30° and 50° W., where some of the surface is covered with floating gulf-weed."

"A. C. B., Pontiac, Ill.—"I notice two spellings of a very common word, i.e., *pajamas* and *pyjamas*. What authority is there for two spellings in English if the word is derived from one Hindu word or root? If, in your judgment both spellings have become authorized, are they both philological and why? Which is, or should be, preferred?"

Pajamas is the preferred form in this country, and *pyjamas* in England. In transliterating Oriental words, there is often little choice among several forms having practically the same sound. Down to the middle of the nineteenth century there were half a dozen variant forms of "pajamas."

"E. L., Spring Valley, Minn.—"Please tell me the difference between *Entente* and *Triple Alliance*."

The *Triple Entente* included France, Great Britain, and Russia; the *Triple Alliance* comprised Austria-Hungary, Germany, and Italy.

Yankee Ways Win Out

GEM DAMASKEENE RAZOR

Khaki Service Outfit

There's a "get-there" quality in American ways—a punch, an "edge," like the edge of the famous **GEM Blade** that gets there when a soldier or sailor wants a quick, comfortable, smooth shave. The little **GEM Khaki Service Outfit** is the constant companion of our boys both here and abroad—compact, light-weight, dependable, durable—wins out everywhere on its merits.

INVESTMENTS - AND - FINANCE

AS TO THE POSSIBILITIES OF A RETURN OF PROSPERITY IN EUROPE

IN one of the monthly bulletins issued by the National City Bank of New York has just been discussed the pressing problem of reconstruction in Europe. The main trend of the discussion was optimistic—that is, the writer looked forward with some confidence to a speedy recovery in most Entente countries and to future prosperity. At the same time he did not overlook certain pessimistic views, more or less current, as to these countries being in a state of exhaustion, because so much capital has been wasted, and so great a mortgage has been placed upon national incomes in the form of indebtedness, that they are necessarily "reduced to a condition of poverty from which they will be long in recovering." Under these conditions, it has been sometimes held that "nobody will be able to buy anything and industry will be prostrate."

The writer of the bulletin believes this theory to be "essentially the same as the one very commonly held at the outbreak of the war, that the conflict must of necessity be short because the expenditures were so great that they could not be long continued." Money, it was then held, could not possibly be "raised to keep the treasuries going more than a few months." Something, however, was wrong about that theory, "for after four years of war all of the governments were spending money at a higher rate than at any previous time, and the war did not come to an end for want of money." Why this could be he then explains:

"The error in that theory was in supposing that the expenditures would come from a reservoir of previously stored-up wealth, which would soon be exhausted, but we see now that the expenditures upon the war, for the most part, consisted of things produced from day to day while the war was going on. All wealth at last is in the form of property or goods of some kind. The only wealth-destruction that takes place is of property, and it gives a clearer idea of the losses to think of them in terms of property than to think of them in terms of money. If a country is producing as much as it is consuming or destroying it is not getting worse off. It may be consuming what it ought to be accumulating, but this occurs even in time of peace, and is another proposition.

"The truth is that during the war the energies of the belligerent countries were concentrated upon producing a stream of supplies and equipment for the war, all of which were swallowed up and disappeared. That was economic waste truly, of something that might have become capital, but it never was capital. It was a waste of energy which from the economic standpoint might have been better employed. It was a real waste, and we hope the world will have wisdom enough to avoid its repetition in the future, but except as a country's ability to produce a flow of economic goods is reduced it is not worse off economically than it was before. Much of this war-waste was offset by the increased energy, economies, and more complete employment of the people, including the entrance of women into industry. Moreover, this expansion of industry and the practise of economy extended all over the world. The neutral countries, by increasing their production,

by consuming less, and by putting a check upon their development work, have helped the warring countries to bear their burdens. The effect is spread over the world.

"The test, therefore, of a country's ability to recover from the war and to regain a state of prosperity is in its capacity to produce a flow of goods for trade and to supply the wants of the population. It is not a question of how much money has been expended on the war or the size of the national debt. It is a question of production. How much grain, meat, fruits, cotton, wool, coal, oil, and factory products are coming to the markets? What is the available amount of machine power? What is the state of the industrial organization and what is the banking power? If the facilities of production and distribution are as great as ever, there is no real obstacle in the way of prosperity.

"Under the pressure of war-needs there has been a development of knowledge and of methods in industry which will permanently increase production. These gains must be taken into the reckoning, and when all factors are considered it probably will be found that none of these countries is going to be a very long time in reaching its prewar production, provided there is no disturbance of industry. If social disorder prevails, of course, the flow of products will be cut off, as in Russia."

Such doubts as we may have as to the future relate to the transition period. For "there are inevitable difficulties about the transfer of millions of men from the armies and war-industries, where their services produce nothing for the public market, back to the peace industries, where everything they produce must be absorbed and taken off the market by the public demand." Hence there must be a general readjustment of trading relations, or, in other words, of wages and prices, and that is a process that takes time, and one that must work itself out. The writer notes that in so far as concerns us in America, our Government "might contribute effectively to stabilize the situation by providing a program of constructive expenditures upon public works to take the place of war-expenditures." In this way the shift of labor from public employment to private employment would take place gradually, instead of suddenly. Confusion and disturbance would be minimized and no longer feared. The French have already made appropriations aggregating \$680,000,000 for peace work, of which \$360,000,000 will be for the railways, \$200,000,000 for ports, bridges, and road construction, and \$100,000,000 for communes and provinces in their local undertakings. In Italy appropriations have been made of approximately \$350,000,000 for railways, \$200,000,000 for public works, \$100,000,000 for public utilities, \$20,000,000 for adjustment of unemployed labor. Appropriations made by the United States on that scale if made in proportion to our resources would provide employment for vast numbers. As the situation before us is an extraordinary one he believes it "justifies unusual precautions." Turning then to European countries, he says of Germany, Russia, England, France, and Italy:

"Germany is a highly developed industrial country, but it is practically bare at this time of raw materials necessary to the resumption of production for the

Williams'

PATENTED Holder Top Shaving Stick

*The Holder Top
is a convenience
at the start—
a necessity at the finish*

THE last bit of Williams' Holder Top Shaving Stick is just as efficient and just as easy to apply as the first. Solid comfort all the way—comfort in the creamy, softening lather; comfort in the wide, firm finger grip into which the Stick is so firmly fastened that it never loosens or falls out.

Ask for Williams' Holder Top Shaving Stick—use the full name—then you are sure of getting full satisfaction.

The soldier leaves many comforts behind,
but Williams' Shaving Soap carries its comfort with it
to the camp or to the front.

Send 20c. in stamps for trial sizes of the four forms shown here. Then decide which you prefer. Or send 6c. in stamps for any one.

THE J. B. WILLIAMS CO.
Dept. A, Glastonbury, Conn.

After the shave or the bath, you will enjoy the comforting touch of Williams' Talc Powder. Send 4c. for a trial size of the perfume you prefer—Violet, Carnation, English Lilac or Rose.

Garford
MOTOR
TRUCKS

Long Run Economy

IF there is any one thing which makes one motor truck more profitable than another it is long, constant, economical service.

When many motor trucks falter under rapid fire-strain, Garfords begin to demonstrate their staunchness.

Only the very highest standards of workmanship, of materials and the most exacting inspection and test will serve to satisfy us.

To attain this position Garfords pioneered the way years ago.

This places years of experience, of careful planning of matured and proved designing in the service of every Garford purchaser.

Only time-tried and tested units will answer for Garford *extra service* construction.

The Garford complete line of motor trucks permits us to "fit the truck to the need"—another economy.

Garford dealers will gladly study your needs and advise the proper equipment.

—Or write us and let our experts help you.

ADDRESS DEPT. 203

The Garford Motor Truck Co.
LIMA, OHIO

Manufacturers of Motor Trucks of 1, 1½, 2, 3½, 5 and 8 ton capacity. 4½, 7 and 10 ton tractors

Distributors and Service Stations in all principal cities

market; moreover, the supply of food is scanty and the industries require much work upon them to put them in shape for peace-production. The country needs organization, leadership, credit abroad, and the services of its ablest men of affairs. A reign of Bolshevism would be a repetition of the reign of the Commune in Paris after the war of 1870. The situation in Russia is greatly improved by the elimination of German influences and by the opening of the Black Sea, the latter enabling the Allied countries to communicate with the Ukraine region and southeastern Russia, which are not under the domination of the Bolsheviks. All of Siberia is friendly to the Allies. Under the government now established at Omsk, the Bolsheviks have recovered Samara and other points on the Volga River. The government at Omsk is said to have in its possession approximately \$400,000,000 in gold, or one-half of the reserve which was held by the Russian State Bank at the beginning of the war. This is a good start toward a financial system, and a considerable portion of the remainder of the gold stock will probably be recovered from Germany. It is not thought that the Bolsheviks have much of the gold in their possession. More good news has been received from authentic sources to the effect that in some portions of Russia the yield of wheat last summer was phenomenally large, something like the freak crop of Canada in 1915. As a result, it is now estimated that altho in some sections production was low on account of the social disorder, on the whole there is grain enough in Russia to feed the population if order is restored so that it can be distributed. The worst situation is that in northern Russia, where the populous cities are located in an unproductive region, controlled by the Bolsheviks, who boldly announce their intention to feed none but their own partisans, and are rapidly exterminating all others.

"There is no intention in England of allowing things to simply drift, with industry disorganized and the business community confused by uncertainty and divided opinions. There is a bold avowal that the industrial situation will be supported, if need be, by a program of public expenditures, and that unemployment will be prevented. This does not mean that the Government is proposing to enter general industry on its own account, but simply that it recognizes the dangers of the transition period and the advisability of helping to establish confidence at this juncture. England is still a creditor country on a large scale, notwithstanding her borrowings in the United States and sales of American securities. Her loans made to her Allies and colonies during the war exceed what she has borrowed here, altho some of these items are far from being available assets at present.

"Americans returning from France say that the country presents the aspect of a general state of activity and prosperity, outside of the war-devastated districts. The expenditures of the American and English governments and of the American and English soldiers have put a great amount of money into circulation, with the result that the incomes of wage-workers and shopkeepers are beyond anything that they have ever known before. In the devastated districts the losses are very great. Government credit will have to be used to rehabilitate this region, and presumably reimbursement will be exacted of Germany. Reimbursement, however, is an after-chapter; France will not wait on Germany's ability to provide the means of reconstruction. The task presents itself as a huge contract for its own industries.

"To sum up, France just now is in a strained situation as regards ready capital, and she has suffered severely by the loss of man-power, but she is greater in national spirit—and probably in the productive capacity of her people—than ever before. If the latter is not so at the moment, it soon will be so. She needs

aid in getting her people back into homes, and in putting tools into their hands, and in supplying them with the materials needed in the industries. While the French people are engaged in this work for reconstruction they will be able to do less for exportation than formerly, and for that reason they will require to have credit for their purchases, and they will be less of a competitor in world markets. It is needless to say that French credit is good in the United States. France is a creditor nation to-day, and while her national indebtedness is large, it is to her own people, so that as to affecting her credit in other countries it does not count at all.

"The Italian nation comes out of the war stronger than ever. It will recover the long-lost territory inhabited by Italian people, and altho it has made sacrifices of life and money, it is stronger in productive capacity than before the war. Its industries have been enlarged to provide war-equipment and are now available for peace business. It has borrowed some money of Great Britain, France, and the United States, but it has won a new place in international affairs and has entered upon a new and greater career. The people have been revived and modernized by their efforts. A new and greater Italy is born. The industries of the country will be expanded in the future, her people will be more effectively employed and live better."

WOMEN SUCCESSFUL IN RAILWAY WORK

That women have entered railway work as a permanent employment—that, in fact, 100,000 women are successfully meeting the requirements of railway work—is the contention of at least one railway official. While in some departments women have been found unsuitable for the work, they have usually been transferred to other lines of work, and there proved satisfactory. The official whose conclusions are here referred to is Miss Pauline Goldmark, who presented them recently to a labor reconstruction conference at the Academy of Political Science in New York. Miss Goldmark was the manager of the women's service section of the Railroad Administration. Some of the points in her address were these:

"The number of women employed on the railroads of the United States had been 60,000 at the beginning of the year, and reached approximately 100,000 by October 1. The greatest number are in the clerical and semiclerical occupations. Of the 81,000 employed July 1, 61,000 were working as clerks of all kinds, stenographers, accountants, comptometer operators, etc. In this class appear women ticket-sellers and bureau of information clerks, who served the public for the first time; they were found well fitted for this type of work, and special instruction agencies were opened by the Government in various States to train them in the intricacies of tariffs and routes.

"The next largest group of 4,000, it is not surprising to learn, appears in women's time-honored occupation of cleaning. Women have long been cleaning stations, offices, etc., but now they are employed in the yards to clean coaches and Pullmans, both inside and outside; and in the round-houses, doing the heavier work of wiping locomotives; 800 were so employed. In personal service, including work in dining-rooms and kitchens, as matrons and janitresses, 2,000 were found. In the railroad shops, women entered the greatest variety of new occupations. Three thousand were employed, ranging at one end of the scale from common laborers, at the other end of the scale of skilled mechanics earning the machinists' or carmen's rate of pay.

"Women were first engaged about a

This name American Bankers Association

This name makes "A.B.A." Cheques recognized the world over as the safest form of travel money.

They are everywhere known to be as good as gold, because they bear the approval of an Association composed of 19,000 of the strongest American banks. Hotels, railroad and steamship companies and the best merchants accept "A.B.A." Cheques readily, and 50,000 banks cash them without exchange.

The only identification needed is the countersignature of the owner in the presence of the person accepting an "A.B.A." Cheque.

Get them at your bank. If your own bank is not yet supplied with "A.B.A." Cheques, write Bankers Trust Company, New York, for booklet and information as to where they may be obtained in your vicinity.

"A.B.A." American Bankers Association Cheques

year and a half ago, before the railroads were put under Federal control, because they could be obtained for less pay than men. They were, for instance, engaged as common laborers at 20c. to 22c. an hour, at a time when men were receiving 28c. to 30c. for the same class of labor. With rare exceptions where adjustments are still necessary, the wage orders have absolutely stopped this undercutting of men's wages by women.

"Soon after women began to be largely employed it became apparent that some of their work was neither profitable nor appropriate. The use of women as section laborers, for instance, in a gang of men working along the tracks at a distance from any house or station was judged to be unsuitable. This was also found to be the case where women were employed as truckers in depots and warehouses on account of the extraordinary physical exertion required of them. In view of the wages now paid it was believed possible to secure men and to transfer the women to some class of work suitable to their strength and with proper regard to their health. The railroads were accordingly asked to discontinue their employment in both these positions.

"Comparisons with other industries can probably best be made in respect to the women employed in the shops. They are operating a number of machines such as bolt-threaders, nut-tappers, drill-presses, for which no great skill or experience is needed, and which is classed as 'helpers' work, and rated at the specified pay of 45c. an hour. They are also employed for highly skilled work. A number have succeeded as electric welders and oxy-acetylene-burners. They have been found well adapted for work on the air-brake equipment and are cleaning, testing, and making minor repairs on triple valves. In some places they are now working in a separate group on the lighter-weight valves, weighing not more than forty pounds. After a period of training they are giving satisfaction without the help of any man operator.

"A remarkably fine type of woman is now to be seen in many of the shops, who enjoys the greater freedom of her work as compared with factory routine, altho in many cases the discomfort, the dirt, and exposure are far greater. It remains to be seen whether the women will remain in these jobs to any great extent. The railroads will, of course, recognize the seniority rights of all their employees returning from military service, but as far as the new employees are concerned, women will have the same privileges as other new employees in retaining their positions or being assigned to other jobs. There can be no doubt that in the clerical and semiclerical positions they have proved their worth, and will to a great extent be retained."

"Defies Time and the Elements"

CHASE DREDNAUT Motor Topping

TOPPING material that will fulfill your greatest expectations—Drednaut Motor Topping adds to the beauty of any car.

QUANTITY topping through and through—made to give the maximum of service—uniform in strength and finish.

Chase Drednaut Motor Topping (now over twenty-five years on the market) is positively weatherproof in every detail—protection from the severest of storms or the hottest suns—the top material that *"defies time and the elements"* and which often outlasts the life of the car itself. Easily cleansed, always attractive, economical.

AN OPPORTUNE TIME TO RE-TOP. The biggest step toward the rejuvenation of your old car is accomplished when a stunning, new top of Drednaut is substituted for that rusty-looking, probably-torn, old top. Now is the time to re-top and bring your cars up to the scratch. Dealers everywhere will furnish you with Chase Drednaut if you so specify.

Chase Drednaut retains its wonderful rich appearance over a long period of severe use.

Don't experiment with inferior materials—make sure by using genuine Chase Drednaut.

TOPICS - OF - THE - DAY

WHAT GERMANY MUST PAY

GERMANY HAS HAD HER WAR-DANCE and must now pay the piper. In 1871, Germany made France pay the full price of defeat; if she had won the present war, to use the words of a German business man, she "would have dictated peace at Buckingham Palace, and annexed the entire continent from the Ural Mountains to the Bay of Biscay." There is no indication that the Allies will dictate any such robber's peace, but they are determined, to judge from the pledges of Allied rulers, the emphatic declarations of the Allied press, and the stern comment of the man on the street in London and Paris and Antwerp and Chicago, to make Germany pay for the wreck and ruin she brought upon the world.

President Wilson's leadership in peace-making has been distrusted by some on the ground that he might be led to favor a "soft" peace with our beaten but unrepenting foe. He answered such critics when he told President Poincaré in Paris that he fully appreciated "the necessity of such action in the final settlement of the issues of the war as will not only rebuke such acts of terror and spoliation, but make men everywhere aware that they can not be ventured upon without the certainty of just punishment." This declaration must set at rest those anxious ones who feared Mr. Wilson "might be lenient with the German criminals," says the *Pittsburg Post*. In the paragraph just quoted, it seems to another Pennsylvania editor that Mr. Wilson "commits himself by all the laws of logic not merely to the doing of justice, but to the doing of punitive justice." There must be, we are told, "not alone the reestablishment of that which Germany has thrown down and destroyed, but that reestablishment must be attended by penalty for Germany's crime, such penalty as will be notable in history and stand monumental before future ages." Several other editors are convinced by recent utterances of the President that he will be found in complete agreement with the Allied leaders in regard to the demands to be made

upon Germany, whatever differences of opinion may develop in regard to such schemes for future peace as the league of nations. Indeed, it may be gathered from the dispatches of those newspaper correspondents who are trying to interpret the Presidential mind and forecast the decisions of the Peace Conference that

the essential difference of opinion between President Wilson and Allied statesmen may be purely one of emphasis. Mr. David Lawrence cables from Paris to the *New York Evening Post* that President Wilson believes that the method of righting even such fiendish wrongs as those committed by the Central Empires "should not partake of the nature of loot or new wrongs," and thinks that Socialist sentiment "for no annexation and no indemnities is still unchanged among the masses."

But all the European Allies, declared Mr. Lloyd George in his appeal to the electorate of England, "have accepted the principle that

the Central Powers must pay the cost of the war up to the limit of their capacity." This would seem to be a rejection of the "no indemnities" principle, but that formula "appears to be in process of abandonment by pretty much everybody" in this country, according to the *Venango Herald*, and the *New York Globe* voices the sentiment of many papers when it says:

"If there were any signs of contrition for the countless crimes committed it might be different. The defeated army, which murdered and raped and devastated the fair lands of France and Belgium, is welcomed back in Germany as a victorious one and glorified by the people. And in every German home to-night they are probably strafing America and Great Britain and France and Italy just as hard as ever. The bully is on his back. The flag he flies is white, but his heart is as black as ever."

In one of the most conspicuously German of American cities the stanchly patriotic *Milwaukee Journal* warns its readers against a propaganda to induce sympathy for Germany and secure a mitigation of the terms on which she will get peace. "Out

"LA MAISON BLANCHE."

As the French call the Murat mansion, which is President Wilson's official residence in Paris, his temporary White House while absent from Washington.

upon all such sickly sentimentality," says *The Journal*, in effect: "To put Germany where she belongs, to make her pay for the wrongs she has inflicted, to render her helpless to pounce upon the world in the future, that is a duty which we owe to civilization and to posterity." There is "a whirlwind of destruction rising against the deluded, the feeble, and the treasonable among Americans, those who are beginning to protect the unrepentant enemy country against punishment for its crimes." This whirlwind, declares the *Washington Post*, is the returning American Army, which has "caught the Boche in the basest acts of treachery and foulness," and coming home as a great political force will see to it "that the United States stands by its Allies to the end of the chapter of this war, which means that unless every American public official helps to make Germany pay for the damage she has caused, he must take the consequences." The contrast between "stricken France" and "unravished Germany" must be making a mighty and lasting impression upon the soldiers of all the Allied armies, the *New York Tribune* believes. And the *Philadelphia Public Ledger* sees in this contrast a plain proof that if Germany does not pay indemnities to the Allies, they will be paying indemnities to her. It asks us to face these facts:

"Germany has waged a war almost wholly on Allied territory. Correspondents accompanying the various Allied armies into the Rhine country are struck with the poignant, stinging contrast between the sleek, comfortable, unharmed German cities which slip into peace almost as easily as American cities and the burned, dynamited, tragedy-haunted French and Belgian cities. If there were no reparation to France and Belgium, Germany would have won the war. She would enter the profitable competition of peace with a heavy handicap in her favor. It would be as if one mill-owner burned his rival's mill and was not asked to pay for it. He would soon get all the trade."

Then, "Germany has fought a cheap war. It cost her less than it did Britain, and her indebtedness is to her own people." During the war American indebtedness abroad has been reduced by several billions, "and on top of that America has loaned Allied Europe eleven billions." *The Ledger* asks: "Is Germany to shoulder none of this debt? If so, her late war was the most profitable investment in history." Of course, "there will be preferred payments and deferred payments." Belgium, France, Italy, and Servia "can not wait." If German cash is lacking, or useless to these sadly reduced peoples, "German labor could quite fairly be drafted to this superlatively just task of reparation." There is talk that Germany might pay her debts by "dumping German goods" in Allied countries, and that a boycott might endanger payments. But in any case, observes the *Philadelphia paper*, "it is not likely that either German products or German immigrants will be welcomed in any Allied nation for many a day. There will be a sentimental tariff against them, whatever the fiscal authorities do." The limit of

indemnity is, according to this writer, "how heavy a burden can be safely laid upon the German people without risk of Bolshevism and repudiation on the one hand or a naked war of liberation on the other." Recent facts seem to indicate that Germany is "still stolidly Germany," and *The Ledger* concludes that there is "every prospect that the Peace Conference will have a solid German Government to deal with, and that it can safely impose conditions which will leave no doubt in the German mind for a generation as to who won the war."

After the signing of the armistice (on the basis, it will be remembered, of German acceptance of Mr. Wilson's "fourteen points"), the Cologne Chamber of Commerce began to prepare for peace by adopting a resolution "expressing the hope that the destruction of French and Belgian industries would allow a rapid recovery of German power." To *The Wall Street Journal*, which notes this little revelation of German idealism, it seems highly important that consideration should be given to a "fifteenth term for peace":

"In substance, that point should declare that Germany shall not profit through the wrecking of any Allied industry. Except to admit necessary foodstuffs, the blockade should not be lifted until every Allied country from England to Servia has been industrially rebuilt. One object of the wholesale murder of civilians

was to weaken industrially the enemy countries. The greater proportionate loss of man-power in the Allied countries should be met by restrictions on the entry of raw materials into Germany. Every piece of stolen machinery should be returned before her own industries are allowed to resume.

"One of the departments of the Government at Washington has in its files a report of a German commission on industry after the war. Reading this, one can understand the motive for what at one time looked like pure vandalism. Vandalism it was, by descendants of the Vandals, but it was a deliberate destruction of international competitors, killing the workmen—and workwomen—and destroying plants and machinery for the one purpose of removing competition. A physical injury to a child helped to weaken future competition in the world's trade; and it was upon the power gained thereby that Germany hoped to launch another war for world domination. . . .

"A peace that gives the cold-blooded perpetrators of these crimes an advantage over their victims would not be equitable. If any must suffer, let it be those who are guilty, but don't give them a start ahead of their victims."

So much for the desirability or necessity of presenting a bill to Germany at the Peace Conference. But how large will be the bill? Estimates run all the way from *The New Republic's* \$10,000,000,000 for "reparation only" to Lloyd George's \$120,000,000,000 to cover the whole cost of the war. This estimate of the total combined Allied claims against Germany, for expenses and actual damages, appears in the *New York Times*:

Great Britain.....	\$41,500,000,000
United States.....	18,000,000,000
France.....	26,800,000,000
Russia.....	21,500,000,000
Italy.....	8,500,000,000
Belgium, etc.....	7,100,000,000
Total.....	\$123,400,000,000

CHRISTMAS.

—Ireland in the *Columbus Dispatch*.

The British bill, it may be noted, includes \$4,000,000,000 for ship losses and \$3,000,000,000 for air-raid losses. *Le Matin* (Paris) estimates Germany's debt to France at \$68,000,000,000. This includes \$28,000,000,000 for the cost of the war, and twelve billions for the return of the 1871 indemnity with interest. Belgium's demands were discussed briefly in our issue of last week.

Secretary Daniels said recently that the United States will ask for no territory or indemnity. But representative papers like the *New York Times*, *Syracuse Post-Standard*, *Buffalo Express*, and *Sacramento Bee* all insist that while we might or perhaps should claim no war-expenses from Germany, "we must exact payment," in the words of the *Syracuse daily*, "to the last penny for losses suffered through illegal warfare." Germany's submarine campaign cost us, according to this paper's figures, 375,000 tons of shipping and 775 civilian lives. If we take the burden of payment for this property and these lives from the guilty shoulders of Germany it would only be to "pass it on to the innocent shoulders of the American taxpayer," which, the *New York Times* declares, would be "rank injustice."

To "pick the bones of Germany" by demanding an indemnity of 120 billions or even more is repugnant to some elements in Allied countries. Mr. Henry Dwight Sedgwick writes to the *Springfield Republican* to demand that "there be no talk of punishment" of any sort at the peace table. Socialists in all countries, says *The Republican* editorially, agree that the only safe plan is "for each nation to pocket its own" war-losses. Mr. George Bernard Shaw, of England, opines that Germany's punishment has already been terrible enough to satisfy everybody who is intelligent enough to understand "what the downfall and failure of a great Power mean." Rather than punish Germany, it is now our duty, the *Manchester Guardian* quotes him as saying, to help her. The most pressing thing to do "is to set her on her legs again; for nobody who is not a political lunatic can face the prospect of a European chaos." A like stand is taken by *The New Republic* in this country.

Even such uncompromising foes of Germany as the *New York Sun* and *Philadelphia Inquirer* admit the impossibility of collect-

should be made help pay the bill. If they are exempted it will, of course, diminish the total indemnities which can be collected from the Central Powers.

But some of our papers, notably the *Indianapolis Times* and the *Mobile Register*, are thoroughly convinced from recent in-

THE NEW SENTRY: THE WATCH ON THE RHINE.

—From *The Camp Lee Bugonet*.

formation contained in European dispatches that Germany is quite able to pay a reasonable indemnity. They cite the *London Daily Mail* as authority for a statement that Germany's war-debt, being owed mainly to Germans, should be repudiated or set aside until Allied claims are met. Then there are the German mineral deposits, whose value alone is set at something like four hundred billions. The large properties of the Hohenzollerns and the Junkers could easily be confiscated. In the *New York Tribune* Mr. Gustave Miller explains how Germany could pay an indemnity of 100 billion dollars on the instalment plan, with interest. This would mean an annual payment of five billions for thirty-nine and a half years. Here is his plan in brief:

First of all, Germany's war-debt is to be repudiated, and also the prewar debts of individual states. Germany will save large sums by the elimination of all expenditures for colonies, Army, Navy, and royal houses. The income from state domains can be increased very largely through introduction of methods of intensive cultivation. The profits of the Prussian *Seehandlung* (a state banking house) can be turned into the indemnity fund. German railroads, by economy and by raising rates, can be made to produce a greatly increased revenue, and the same is true of street-car lines and post-office, telegraph and telephone systems. The forests of Germany, which have been so largely used as hunting preserves, can be made to produce a revenue well in the millions. The entire output of the German iron-mines can be taken over and would produce alone a billion marks a year. Half that sum could be obtained from coal and lignite production. Tens of millions of marks could be obtained from utilizing Germany's rivers for generating electricity. Taxes on potash, beer, wine, salt, tobacco, and sugar would yield millions more. Still more funds can be obtained from an inheritance tax, stamp taxes on commercial paper, sales taxes, and an income tax levied chiefly on large incomes. During the years of indemnity-payment Germans are not to be allowed to emigrate. Profits and earnings will, of course, be greatly curtailed and the standard of living will be lowered, but the Germans will still be better off than during the war and much better off than the Belgians, the Servians, and the French in the occupied provinces. They will suffer, but "they deserve punishment; they must be made to repent and must be prevented from again attacking humanity, at least during this generation."

A GOOD THING—NOW.

—Fitzpatrick in the *St. Louis Post-Dispatch*.

ing anything like the whole cost of the war from Germany. One grave problem is presented by two correspondents of the *New York Globe* and *Chicago Daily News* in a dispatch from Paris. They ask whether such supposedly friendly peoples in Austria and Germany as the Poles of Posen, the Danes of Schleswig, Roumanians, Jugo-Slavs, Czechs, and Slovaks

MR. HEARST'S AMERICANISM

WILLIAM RANDOLPH HEARST confidently proclaims the purity and worth of his Americanism as preached daily to more than 3,000,000 readers by his nation-wide chain of newspapers, and declares that "it is not for me or for the Hearst papers to make any defense" as a result of the testimony recently laid before a Senate investigating committee by agents of the Department of Justice and of the Military Intelligence Service. In the course of this testimony we learn that Dr. Albert Feuhr, who before our entry into the war was attached to the German Embassy at Washington as a director of German propaganda, paid the following tribute to the Hearst press in a confidential communication to the Imperial Government at Berlin:

"The Hearst newspapers, with their sharply anti-English tendency, are much more effective in support of our cause than newspapers with pronounced pro-German orientation could possibly be."

Dr. Feuhr's judgment "seems to be well supported by the facts," remarks the *Peoria Transcript*, while other papers argue that even now danger lurks in Mr. Hearst's well-known and persistent hostility toward England and Japan. "No man can perform a worse service than to stir the sensitive chords of race feeling between the United States and Japan," affirms the *St. Louis Star*; and many editors on both sides of the Atlantic believe that the best guaranty of the future peace of the world will be found in the willingness of the United States and the British Empire to stand shoulder to shoulder in comradeship and understanding.

Captain Lester, of the Military Intelligence Service, read into the records of the investigating committee an editorial which appeared in Mr. Hearst's *New York American* on April 25, 1917, about three weeks after the United States entered the war. This editorial, which declared that we were being virtually made the catspaw of England, led to the following colloquy between Senator Sterling and Captain Lester:

SENATOR STERLING—"Since this was published after we entered the war, and since it is a bitter attack upon England, and intended to create suspicion and distrust of England, our principal ally in the war, would it be said to be other than simply pro-German? Would it be called anti-American, since it was published after we entered the war?"

CAPTAIN LESTER—"There is no question about that. . . . It was anti-American and pro-German."

SENATOR STERLING—"What would you say its effect as a whole would be?"

CAPTAIN LESTER—"If every official in the government service of the United States, from the Chief Executive, and every male citizen of the age of eighteen and up, had read that article and believed it, they would have quit, laid down."

SENATOR STERLING—"And there would have been no unconditional surrender by this time?"

CAPTAIN LESTER—"It would have been unconditional surrender by the United States."

SENATOR NELSON—"To Germany?"

CAPTAIN LESTER—"Yes, sir."

Before the same committee Mr. A. Bruce Bielaski, chief of the bureau of investigation of the Department of Justice, testified that before our entry into the war the Hearst organs "were the

most pronounced in favor of Germany," and of Hearst himself he said that "there is no other newspaper man whose attitude was so friendly to Germany." Even after we entered the war, according to this government official, Mr. Hearst's attitude "continued very questionable," and "many articles published in his papers, if published after the passage of the Espionage Act as amended, would have subjected him to prosecution." "It is certain," remarks the *Springfield Republican*, "that Berlin appreciated the services of these papers, which, it must be said in fairness, were not paid for." Altho a fund of nearly \$28,000,000 was dedicated to German propaganda here, the Department of Justice attributed Mr. Hearst's attitude solely to his anti-British and anti-Japanese bias. Some of Mr. Hearst's employees, however, according to Mr. Bielaski, were on the payroll of the German Government. In a Washington dispatch to the *Boston Christian Science Monitor* we read:

"One of the reasons why the International News Service was banned from Great Britain and France, Mr. Bielaski said, was because there were strong suspicions that in some of Dr. William Bayard Hale's dispatches to the Hearst papers were code messages from the German Government."

"Why did Mr. Hearst favor the German cause?" asked Knute Nelson, Senator from Minnesota.

"Because of his intense hatred of Great Britain, his close friendship with von Bernstorff, and his hatred of Japan," Mr. Bielaski answered in substance.

"On three counts particularly it was indicated that Mr. Hearst had played an obstructive game even after the United States entered the war.

"1. He opposed sending United States troops to Europe.

"2. He had, before the passage of the Espionage Act, published articles which in a veiled manner were commendatory of Germany.

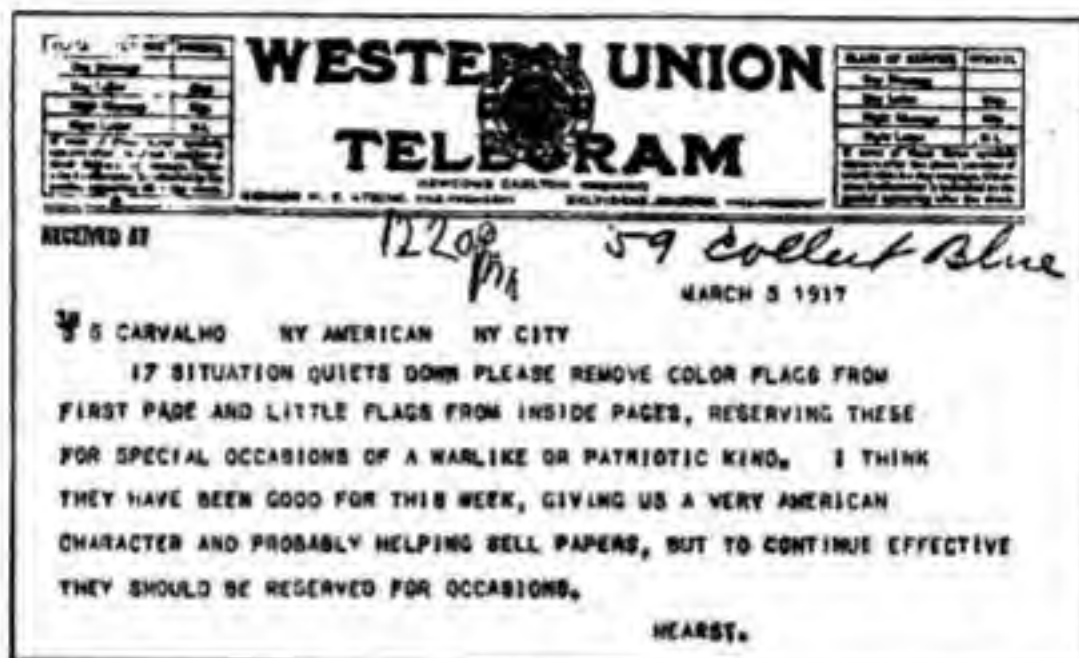

"3. His articles in favor of peace were not calculated to help the prosecution of the war."

Mr. Hearst's *New York American* reminds his critics that "previous to the month of April, 1917, we were at peace with Germany," and that until our entry into the war "it was the undoubted lawful right of every free American to sympathize with any one or with none of the European belligerents." It also declares that "the telegrams from Mr. Hearst to his editors, exhibited to the Senate Committee, emphasize the one idea that in all things his papers must be American—not British papers, not German papers, but every day and all the days American papers." "It is upon this vital point," the same editorial continues, "that the Hearst papers most strenuously differ from the lackey press wearing the livery of privilege and responding with alacrity to the push-button of the predatory interests." And in a letter address by Mr. Hearst to Mr. Brisbane and given to the press we read:

"There is a large Tory element in this country which seems to think now as it thought in the days of the Revolutionary War—that the only way to be pro-American is to be pro-English.

"I do not think so, and, in fact, the American histories that I have read in my school and college courses and since that time clearly demonstrate that the best way to be pro-American is sometimes to be anti-English. . . .

"Before America entered into this war I was, as I have frequently said in my instructions to the editors of my papers, neither pro-English nor pro-German. My attitude was that of *Mercutio*—'a plague o' both your houses.'"

WHAT THE FLAG IS GOOD FOR.

A telegram introduced at a hearing of the Senate Committee investigating German propaganda in America.

HIS LITTLE JOB.

—Brown in the Chicago Daily News.

Some of his brother editors, however—and Mr. Hearst suspects the voice of rivals—point out that his editorial brusqueness toward England was in marked contrast to his attitude toward Germany. They recall his characterization of the Kaiser and his associates as the “high-minded and humanitarian rulers” of Germany, and his insistence that “we are making a terrible mistake in this sentimental objection to submarine warfare.” And the *Indianapolis News*, remembering his assertion that the infamous Zimmermann note proposing an alliance of Mexico, Japan, and Germany against America was a forgery perpetrated by our own Attorney-General, observes:

“Tho Mr. Hearst says in his telegrams of instruction to his subordinates that he was neither pro-German nor pro-Ally, but simply pro-American, he seems to have been ready to believe that his own Government or its agents were guilty of the crime of forgery rather than believe anything evil of Germany.”

In *The Star* of the same city we read:

“Mr. Hearst cuts a very small figure before the country in the disclosures showing that he was actively promoting German interests up to almost the last moment before we declared war and was making charges against the Administration, such as charging Attorney-General Gregory with forgery, that would later have subjected him to arrest under the espionage law, a measure then pending and to whose passage he was violently opposed. Tho an American born and bred, he has lost the respect of honest citizens and belongs in the list of political and journalistic derelicts.”

Particularly offensive to many editors was Mr. Hearst's use of the American flag to give his papers “a very American character” and to increase sales. Says the *Washington Herald*:

“Mr. Hearst, in his explanation, says that he was glad to see his telegrams published. We can see him writhing in glee as he read them. He says they are all based ‘on a single and sincere desire to conduct my newspapers in the interests of the American people.’

“This high-sounding bunk would read well if we had not read the telegrams from Mr. Hearst ordering an American flag-dressing for his papers, even as he obstructed the cause for which that flag stood. The sobriquet ‘Star-Spangled Shammy’ never looked so becoming on Mr. Hearst as it did when his telegrams were released.”

And in the *Springfield Union* we read:

“Whatever may be the outcome of the disclosures concerning the attitude of Mr. Hearst toward the war, it would seem to be entirely proper and appropriate that he be prosecuted for using the flag for advertising purposes. Whenever his ‘neutrality’ was construed by the public as of the ‘made in Germany’ order, he sought to set things right by the free use of our national emblem in his various publications.”

MR. MCADOO'S RAILROAD “DEPTH BOMB”

PRESIDENT WILSON left for France with a final word to Congress that the question of the railroads was an unsolved problem to him, but some editors note at the same time that hardly was he gone than Mr. McAdoo, Director-General of Railroads, sends a valedictory plea to Congress that government control be extended for five years until January 1, 1924, with the comment that “the President has given me permission to say that this conclusion accords with his own view of the matter.” Director McAdoo has taken the nation off its feet by this proposal, remarks the *Philadelphia Inquirer* (Rep.), coming so soon after the President's announcement that he had no “confident judgment of his own.” *The Wall Street Journal* maintains that a second reading of the arguments in justification of Mr. McAdoo's railroad “bomb” “discovers such confusion of ideas among them that they are totally uncharacteristic of the Director-General at his best.” On the other hand, advocates of government ownership, such as the *New York American*, praise the McAdoo plan as sound and timely, and this Hearst journal adds that “Mr. McAdoo has shown splendid good sense in his letter to Representative Sims promulgating the plan to give public operation of the railroads at least a sporting chance to show what it can do under the easier peace conditions by continuing public operation for five years.” In his appeal to Congress Mr. McAdoo says in part:

“There is one, and to my mind only one, practicable and wise alternative, and that is to extend the period of Federal control from the one year and nine months provided by the present law to five years, or until the first day of January, 1924. This extension would take the railroad question out of politics for a reasonable period. It would give composure to railroad officers and employees. It would admit of the preparation and carrying out of a comprehensive program of improvements of the railroads and their terminal facilities which would immensely increase the efficiency of the transport machine. It would put back of the railroads the credit of the United States during the five-year period, so that the financing of these improvements could be successfully carried out. It would offer the necessary opportunity under proper conditions to test the value of unified control, and the experience thus gained would of itself indicate the permanent solution of the railroad problem.”

“The American people have a right to this test. They should not be denied it. It is to their interest that it should be done. In my opinion, it is the only practicable and reasonable method of determining the right solution of this grave economic problem.”

“I am not now and have not been for the last year interested in proving or disproving the theory of government ownership or any other kind of theory. The railroads have been operated for the last year with the purpose of serving efficiently the para-

mount needs of the war and at the same time furnishing the best possible service to the public whether such operation tended to prove or to disprove any theory of railroad control, no matter what it might be."

The *Hartford Post* (Ind.) reminds us that Congress, which has been complaining because it had not been treated as a coordinate branch of the Government, now has its opportunity, for the railroad problem is distinctly a legislative one. If Congress is not satisfied with Mr. McAdoo's plan, let it devise a better one, or let it arrive promptly at the conclusion that "no plan other than the former system of private ownership is possible," observes this journal, which proceeds:

"It was too much to expect that Secretary McAdoo's suggestions with reference to the railroads would be received with a unanimous and vociferous shout of approval. It trod upon too many toes. It hit, first of all, at the corporate owners of the railroads, fearful in any event of government ownership and increasingly fearful of it in event of their failure to get their property back for five years instead of the originally specified twenty-one months. And then it didn't appeal to those who want to bring about a transportation millennium by means of immediate public ownership. And those who want to make an issue for the political campaign out of the railroad question are likewise not suited."

The *Topeka Capital* (Rep.) holds that the railroad problem is one on which nobody has "an arbitrary opinion." It is an open question, and "fortunately party politics is not in any way as yet mixed in it." This journal also considers the problem "one for Congress rather than for the Administration to determine by the adoption of a definite policy," and points the way as follows:

"Either government control and private management and ownership, or government control and management and private ownership, or government ownership outright. When Congress determines among these three general policies, then the real problems of detail will come up for consideration; and that they are difficult, that there is no agreement on them, any more than on the policy itself, railroad executives being widely at sea, as well as Congressmen and public, is generally recognized."

Indorsements of Mr. McAdoo's plan appear in the *Mobile Register* (Dem.) and the *Baltimore American* (Rep.), which says:

"There is one argument for the five-year period that has not been set forth. This is with respect to the men abroad. The army of occupation following the first million to arrive will not get back—all of them—inside of two years, possibly, and events may make the period longer. It would be highly desirable to avoid the release of such bodies of men for the nation's industries at the time that the Government would be unloading the railroads. For upon the latter occurring there will be a sharp drop in wages, with wage unrest. This coming together with a big addition to floating labor through demobilizations, the situation might be made very undesirable, to say the least. Five years means carrying the system through the reconstruction period, and this appears to be wise."

Many objectors, however, base their opinion on Mr. McAdoo's statement that "this extension would take the railroad question out of politics for a reasonable period," and representative of this view is the remark of the *Norfolk (Va.) Pilot* (Ind. Dem.), which says:

"Should government control be extended for five years, politics would inevitably not only enter, in constantly increasing measure, into the operation of the railways during that period, but, at its close, would prove the decisive factor in determining the country's permanent policy toward its agencies of transportation. To prevent the one or the other would be humanly as impossible as to counteract the influence of the moon upon the tides of the sea. The hundreds of thousands of railway employees, all of them voters, would become welded into a mighty political machine, using its power to secure for its members high wages, short hours, and indulgent supervision, and certain to employ its full strength to render permanent a situation to which

it owed alike its origin and its continued existence. That there would and could be nothing even so much as approximating a 'fair test' under such conditions ought to be so obvious as hardly to require supporting argument. To expect it would be worse than idle."

As a concrete instance, a Washington correspondent of the *New York Tribune* quotes Senator Norris, of Nebraska, as charging that the railroad administration was used as a bludgeon against him during the recent campaign, and Mr. Norris is reported as having said:

"First came the big raise in wages for all the railroad men. Next came the President's appeal for the election of Democratic Senators and Representatives. Following this came the appeal of Director-General of Railroads McAdoo for a Democratic Congress. These were general, of course. Then the President made a special appeal for the election of my Democratic opponent, Mr. Moorehead."

"But now comes the rub. One week before election every employee of the railroad administration in the whole State of Nebraska got a letter from the secretary of one of the unions which started off with a line of congratulation about the nice raise, providing the best wages railroad men had ever enjoyed."

"It then called attention to the fact that this scale had been granted by the Democratic Administration, and smoothly worked on to the fact that the President and Mr. McAdoo had appealed for the election of a Democratic Congress. Then, after a few graceful words about helping those who help us, it suggested that it was the duty of every railroad man in Nebraska to vote for Moorehead, my opponent."

"Now, in my own town of McCook there is a normal Republican majority of about two hundred and fifty. I could normally carry it by about four hundred. But it is a railroad junction town, and the appeal to the railroad men cut in pretty deep. I carried the town by just eighty-five, and I estimate the fact that the railroads were being run by the Government cost me just five thousand votes in the State."

A strong objection by a Democratic paper comes from the *Montgomery Advertiser*, which says that every reasonable man not interested directly one way or another in the railroad problem must smile at this plan "to take the question out of politics," and adds:

"It is now the one dominant political issue at Washington. The next Presidential election will hang largely upon the issue, no matter what time is fixed for the roads to be returned to their owners. How is it possible to take the question out of politics, when a Presidential campaign will be waged in 1919? And how can the question be removed from politics when the Director of Railroads announces, as he has done, that wages of railroad-workers would certainly not be reduced as long as the Government operated the railroads?"

Then the *Charleston (W. Va.) Mail* (Ind. Rep.) objects that "the gross misuse by the Administration of the 'adjournment of politics plea' causes grave suspicion when a member of that Administration suggests the idea of taking the railroads out of politics," and the *Detroit Free Press* (Ind.) maintains that it can not agree with Mr. McAdoo's idea that a five-year extension of government control would take the railroad question out of politics, for "only the privately run enterprise can be kept out of politics. Public ownership and control immediately and of necessity places an enterprise in politics." The *New Orleans Times-Picayune* (Ind. Dem.) observes:

"Federal ownership of railways is by way of becoming a major political issue in this country. The present Congress established government control as a war-measure, fixing limits to the duration of that control which permit the American voters to determine the peace-time future of the railways. Certainly it has no mandate arbitrarily to extend the period of peace-time control and tie hard and fast the hands of the voters and of three Congresses to be elected by them. It seems strange that the President, within nine days after declaring that he had 'no answer ready' and urging Congress to institute a 'complete and impartial study' of the whole railway problem, should reverse his judgment and indorse a recommendation of snap judgment—for that, as it seems to us, is what Mr. McAdoo's proposal amounts to."

THE SEIZURE OF THE WIRES

GOVERNMENTAL OPERATION of every means of communicating intelligence, whether by mail, telegraph, or telephone, is frankly advocated by the Postmaster-General as he takes over the Atlantic cables and adds them to the land wires already under his control. If Mr. Clarence H. Mackay, president of the Commercial Cable Company, objects, then the leading officials of that company are ousted from all connection with their cable, which is put under control of President Newcomb Carlton, of the rival line. "We are marked for annihilation," exclaims Mr. Mackay, but "we will see about that," he adds, and starts a suit to enjoin the Postmaster-General from interfering with his property. A bill is introduced into Congress to continue government control until Congress decides otherwise, and Chairman Moon, of the House Committee on Post Offices and Post Roads, says in introducing it that the President approves the plan. Postmaster-General Burleson justifies the idea in a letter to Chairman Moon, saying:

"The principle which justifies government control of the postal service applies equally to all electrical means of communication. The Constitution, in giving Congress control over post-offices and post-roads, obviously contemplated, not particularly physical structures, but the communication of intelligence. . . .

"The wire service is a public utility of universal necessity and is adapted to the performance of no other function than that of conveying intelligence; and, disregarding the divergence of views as to government ownership of public utilities generally, it must be recognized that electrical agencies of communication stand alone as an essential utility performing a government function."

An extended survey of the situation has been made by the Post-office Department, Mr. Burleson continues, since the Government assumed control of the wire systems, and it "clearly appears that unification of control and operation is necessary to eliminate the waste and inherent defects of the competing and duplicating system which has heretofore existed." Mr. Burleson maintains that the Government alone can safely exercise the right of monopoly such as the wire service calls for, but urges that the "advantages of private initiative in research, investigation, and experimentation, and in other ways where possible and consistent with government monopoly, should not be lost in the inauguration of such a new system." Approval is voiced by the *New Orleans Item*, which argues that "one by one we will separate the few great things that belong to the people from the possession of small private monopolists, leaving to individuals what properly belongs to them, and keeping the peace among all by rendering justice as far as possible to all." And the *Cleveland Press* agrees. It remarks:

"There are some things that a Government such as ours, dealing with large units and actuated only by thought of service, can do better than any individual. In the first place, the individual hasn't the great capital or power for organization of the Government. In the second place, his very existence demands that he show a profit on every bit of business he does. Profit, not service, becomes the first consideration.

"Great emergencies show what are the things the Government can do best. The present war has been startling in this respect. We had not gone half-way toward getting our whole force into it before the railroads broke down and—Uncle Sam had to take them over. And then came these very telephones, telegraphs,

and cables that Vail is talking about. It was a case of our absolutely having to have the right kind of service whether the operating companies could give it to us at a profit or not. And our Government stepped in and got it for us.

"The war is over, or practically over. But has the emergency taught us our lesson? The danger is past. But the immediate future holds much of importance. In connection with this telephone-telegraph-cable-wireless scheme this is particularly true. . . .

"We are decidedly for the pooling of not only telephone- and telegraph-lines and cables, but the mails and wireless as well. But the people should hold the strings in matters in which they are so vitally interested, just as they have always held the strings on their mails and highways."

To those who urge that "the war is over" the *Savannah Press* replies:

"Assuredly there is more need, now that actual war-conditions have passed, for the control of the cables than when opportunities for German intrigue through other lands was practically prevented. It may or may not be a part of the policy of Mr. Wilson to keep the cable-lines permanently under governmental supervision; we confess that we would not be in the least perturbed to discover that such is his idea. It seems to us that such a plan would insure safety against the sorts of plots and intrigues which the German Government has long carried on through the intertwining lines of communication which the cables afforded. For preventive means against any future recrudescence of this sort of plotting, the control of cable- and telegraph-lines by governments seems to us a very rational and sane policy."

A survey of the press, however, shows that many doubt the wisdom of government control at this time. It is "unjustifiable, high-handed, and inexpedient," declares the *Rochester Post-Express*; it is "an unwarranted extension of power," objects the *Wheeling Intelligencer*, and "we may well ask ourselves if in making the world safe for democracy we have not endangered our own democratic Constitution." In fact, says the *Columbus Dispatch*, "Germany exercised no more drastic methods in conducting her government than may result from our Government acquiring by seizure the means of communication." Mr. Steenerson, ranking Republican member of the

Post Office Committee, states the peril in these words.

"The danger consists in establishing an army of men in office who are dependent on some one for their jobs. There never was a greater menace to a free government."

The *Chicago Tribune* devotes a strong editorial to the possibilities of political manipulation and interference with wire-messages, while the *Indianapolis News* writes caustically of the inefficiency of other utilities now under government management. "Unhand the American people," it exclaims, "and give them a chance at the world's business which they have saved in the war. They do not need the politicians to run the cables or the railroads. This is not a Spanish or a German country. The people have some initiative left," and we are reminded that—

"During the war we all surrendered to the main purpose—victory—but our rights, privileges, and conveniences were simply lent for a purpose and not surrendered. We did not flop overnight from a people believing in individual initiative to a socialistic and paternal nation. The little experience we have had with government control of wires and railroads was enough to cure us of any further tendency in that direction. The cable service has become a joke, the telegraph nearly as slow as Burleson's mail deliveries, the express business a mere wreckage of its former enterprise and efficiency, and as to the

"WE WILL SEE ABOUT THAT."

Says Mr. Mackay, as he sees his company "marked for annihilation" by Postmaster-General Burleson.

railroads, if we had been dependent on the methods of development and expansion now provided, we might have been as far behind in transportation as is China."

Government control of the wires "would be an infliction which this country will never endure," avers the *San Francisco Chronicle*, which proceeds:

"There was never a bureaucrat who was not crazy to extend his authority and increase the number of votes which he could control. An Administration which could control the railroad, telegraph, and telephone vote would, indeed, be very safely entrenched and might found a dynasty."

"From time immemorial the management of our postal service has been extravagant and inefficient. It was never worse than it is now. We endure it because government control of the mail service seems necessary, and we have not found any way to improve it. It is so big and so intricate that no one outside the service can tell just where improvements could be made, and those inside will not."

"In all countries in which the Government controls any form of communication by wire there has been ghastly failure. And for the support of the miserable service which they get they all have to fall back on the taxpayers. We do not precisely know the results under the former autocratic governments of Central

Europe, but elsewhere we do know. The telegraph and telephone services of the United States are marvelous creations of private enterprise. And, without oppressive charges, they pay their own bills and pay dividends on their cost, as they should, for the dividends are well earned."

"They are earned by the continuous alertness of their owners to encourage, develop—often at the cost of millions—and adopt new inventions, by civility to the public, responsibility for errors, perfect secrecy, and all-around efficiency. To turn over such admirable instruments of civilization to the ineptness, wastefulness, arbitrariness, unprogressiveness, and general inefficiency of a government bureau, and especially to such a monument of inefficiency as Postmaster-General Burleson runs, would be something like a relapse into barbarism."

"That is not the worst of it. Having got possession, under the war-power, this particular bureaucrat proposes to keep them. If our Constitution is still in force the telegraphs and telephones will automatically revert to their owners when peace is declared. If the Government wants them, and if, after an election in which it is an issue, the people authorize it, the properties can be condemned and paid for in cash. There is no other lawful way in which they can be got without consent of their owners."

"To grab them under the war-power and refuse to return them when peace is declared is nothing less than revolutionary."

TOPICS IN BRIEF

THE ghost of Edith Cavell will sit in the Peace Conference.—*Portland Oregonian*.

STILL, a league of nations might succeed altho projects of church union fail.—*Buffalo Enquirer*.

THE league of nations idea is a good one, provided the umpire question can be settled satisfactorily.—*Portland Oregonian*.

THE armistice terms should have required the Huns to tell the truth for a period of thirty days.—*Greenville (S. C.) Piedmont*.

AFTER we have beaten our swords into plowshares the next thing will be to straighten out our corkscrews into hat-pins.—*Kansas City Star*.

NOW that the Hun has paid the price for peace, the South would like to know what he is willing to pay for cotton.—*Greenville (S. C.) Piedmont*.

THE Crown Prince says he was sure the war was lost after the Marne. So he fought Verdun just to make absolutely certain.—*New York Tribune*.

ANOTHER international mystery is where the Bolsheviks of all lands obtain the funds with which they appear to be continually well supplied.—*Chicago Daily News*.

IT may prove to be just as impossible to seize the person of Wilhelm von Hohenzollern for punishment as it was to get an American army into France.—*Albany Journal*.

A SOUTHERN newspaper is so cruel as to remark that there would have been no opposition if it had been Congress that was going out of the country.—*New York Evening Post*.

OUR War Department bought 119,000,000 pieces of soap for shipment overseas in the last six months, which sounds as if we are preparing to get into contact with the Bolsheviks.—*Indianapolis Star*.

AND now our returning soldiers will soon be demanding of their mothers and wives doughnuts "like the Salvation Army used to make."—*Long Island City Star*.

AN American scientist recommends tooth-drawing as a cure for insanity. But his compatriot, Mr. Davis, could tell him that the treatment had no effect in the case of the Kaiser.—*Passing Show (London)*.

CIVILIZED countries willing to abandon conscription when Germany shows the way are like that wise Frenchman who was ready to abolish capital punishment "if the murderers would start first."—*Wall Street Journal*.

IF the Kaiser is indicted, tried, and condemned on all the charges individuals are trying to lodge against him, there will be so many executions ordered for him that the balance of his life will afford him practically no leisure.—*Detroit News*.

BILLY SUNDAY'S Kansas City friends will be glad to know that he's still hitting them up against the center-field fence. In a recent sermon Billy remarked that "the Kaiser has sunk so low he'll have to take an airplane to get to hell."—*Kansas City Star*.

IT is said that the English language will be used in the Versailles conference. In recognition of the presence of the President it seems to us the delegates would make the American language the official language, but we suppose the English delegates wouldn't be able to understand it.—*Houston Post*.

FIRST CRY OF A PRECOCIOUS CHILD!

—Harding in the Brooklyn Eagle.

FOREIGN - COMMENT

GERMANY'S RIVAL REVOLUTIONS

THE COLLAPSE OF THE GERMAN EMPIRE seems to have left the Fatherland in such a pretty state of confusion that no German quite knows where he owes allegiance. In Berlin a Socialist Government is more or less in control; Hamburg and its adjacent territory has been proclaimed "the Republic of the Elbe" under the presidency of an able seaman of the former mercantile marine. Bavaria has another government with a strongly nationalistic Bavarian tone, while yet another is to be found in Saxony. The German-speaking regions of Austria appear to have formed themselves into a republic desiring unity with the Germans to the north of them, but not receiving any too enthusiastic a welcome. Amid the conflicting and confusing news arriving directly and indirectly from Germany, it may be useful to explain the situation in simple terms. This we find in a succinct form in the *London Daily Mail*, which tells us that—

"The Socialist Coalition Government, which usurped power in Berlin on November 9 (consisting of the reunited Majority and Minority Socialist leaders), desires to convene a National Assembly on or about February 8 or 9 to decide the future form of Germany's government. It is proposed, for this purpose, to compile a new register of voters on January 2, to elect delegates to the National Assembly on February 2, and to open the Assembly six or seven days later. Meantime the Socialist Government at Berlin is arranging a complete redistribution of constituencies throughout what was formerly the German Empire. Elections of delegates to the National Assembly are to take place on its basis. Under this redistricting the Socialist Coalitionists believe they will obtain a large majority of the delegates, owing to the preponderance of the working-class vote."

But this Socialist coalition, to which all the other actual or nominal local republics in Germany seem to be yielding a sort of half-grudging leadership, has its determined opponents, of whom *The Daily Mail* says:

"Three separate schools of opposition to the Socialist coalition are in the field:

"1. The Liebknecht-Rosa Luxemburg 'Bolshevik' extremists.

"2. The Bavarian Republic, led by President Kurt Eisner, who mistrusts the Berlin régime because it includes Old Gangsters like Solf and Erzberger.

"3. The non-Socialist democratic classes, representing the *Frankfurter Zeitung-Berliner Tageblatt* school of progressive radicalism, industry, and high finance.

"All three of these oppositions more or less favor a national assembly and the earliest possible establishment of some republican form of government. But none of them completely trusts the dictatorship of Ebert, Haase, Scheidemann, and company. The non-Socialist democrats declare openly that the Ebert-Haase crowd wants merely to establish an autocracy of their own in succession on the ruins of the Hohenzollern autocracy.

"Meantime the Councils of Workmen and Soldiers throughout the country (barring Bavaria) appear to accept the authority of the Berlin Socialist coalition. Law and order still prevail, tho this state of affairs may alter any moment. Whether the pot will boil up and over to an extent which the extremely lady-

like German 'revolution' thus far has not witnessed remains to be seen. A fact always to be remembered is that the real rulers of Germany, the Junker bureaucracy, remain on their job, doing 'business as usual' under their ostensible Socialist masters."

Of these oppositions, undoubtedly the most important is Kurt Eisner's Bavarian Republic. It is in Bavaria that we find the first really constructive policy so far outlined by the German revolutionists. Eisner's policy, roughly stated, is that German unity shall continue and that German-Austria and Germany together shall form a United States of Germany, each constituent state occupying a position of equality with an end of anything in the shape of Prussian supremacy. Eisner's great achievement—particularly in his own eyes—is that he has succeeded in preventing anything like disorder in Bavaria, and in his proclamation he exults. This proclamation as quoted by the *Kölnische Zeitung* runs:

"The first actions of the revolutionary Government have produced important successes. Since the revolution the leading men of the Entente speak otherwise than they did before. Our appeal to the conscience of the world has not remained unheard. The spirit of the patriarch who leads the French Republic speaks to-day with human understanding and trust.

"The first actions of the revolutionary Government have produced important successes. Since the revolution the leading men of the Entente speak otherwise than they did before. Our appeal to the conscience of the world has not remained unheard. The spirit of the patriarch who leads the French Republic speaks to-day with human understanding and trust.

America promises a defeated enemy to ease the terrible crash by the provision of food. We hope that we shall also succeed in getting imports of raw materials. We are to-day confident that, thanks to our revolutionary and reasonable policy, the idea expressed in our note to the Entente is ripening to fulfilment—that the league of nations must be formed by the common labor of ourselves and our enemies to overcome the destructions of war.

"Relying upon the confidence of the enemy Powers, we regard it as all the more our task to prepare sincere community among the German tribes also. We believe and hope that a union of the German Empire and the German-Austrian Republic can not be postponed. We are resolved to carry through this national policy with a firm hand; the self-determination of Bavaria within the whole system must be maintained and secured. Desiring to achieve the aim of establishing the United States of Germany, including Austria, as the only possible solution of the national problem, we must in the immediate future carry through a more suitable arrangement of the German states, which, without any predominance of any one state and without impairing the freedom and independence of Bavaria, will also find the measures necessary for reasonable unity."

While Munich appears to be enjoying tranquillity, Berlin is having anything but a happy time. Liebknecht and his Spartacus group are raising a merry riot every day in the hope of bringing off some sort of Bolshevik revolution. The constant disorder in the former capital city is making the other parts of Germany a little tired, and the Catholic *Kölnische Volkszeitung* is quite annoyed about it. It writes:

"We would rejoice to see fire descend from heaven and reduce the horrible Babel of Berlin to cinders. . . . To hell with Berlin. The people there are without heart or soul and

THE HIDDEN HAND.

—*Sunday Chronicle* (Manchester).

are the implacable foes of all *Kultur*. In the great record book of humanity a monstrous debt of blood is inscribed against Berlin.

"We surely have not made ourselves acquainted with the revolting sentiments which we now know prevail in the Prussian capital. We have been wilfully blind to Berlin's immense moral cesspool and we refuse any longer to remain under the sway of Berlin."

That stalwart supporter of the new Socialist Government, the *Berlin Vorwärts*, is getting seriously worried by the attitude taken both at home and abroad toward the central authority of Berlin, and it solemnly warns the Government to clean house and hold a national assembly at the earliest possible moment:

"Information has been received that Admiral Beatty refuses to negotiate with delegates from the Workmen's and Soldiers' Council because they are not representative of any recognized Government. Furthermore, we learn that the food-supplies of which the United States had held out a prospect will be temporarily held up in Rotterdam and Copenhagen because the American Government intends to wait and see whether Germany is able to give the securities demanded by America for a free constitution and a fair distribution of supplies. We must be prepared for a declaration being made from this side, but negotiations can only be conducted through a government supported by a legally elected national convention.

"Until such declaration is made, there will be neither peace nor bread. What shall we do if such a demand is made, or, rather, what are we doing to forestall such a declaration? Germany must not give the impression that she is only establishing a democracy because she is forced into it by external powers."

HOW WILHELM HELD OUT—The paternal solicitude which the ex-Kaiser always showed for his starving people has often almost touched our hearts, but now we find that the Kaiser's sympathetic tears were crocodilean in character. The *Berliner Tageblatt* quotes from the *Frankfurter Volksstimme* an account of what Wilhelm Carle, a member of the Berlin Workers' and Soldiers' Council, found stored away in the Kaiser's castle. Carle writes:

"I requested those on duty to show me his Majesty's provisions—those, be it observed, of the Imperial private household, not of the Court, which is regarded as a state institution. I was readily shown into the large storerooms. I expected to find a store, but what I saw there surpassed all my expectations. Here in large, white-tiled rooms was everything, really everything one can possibly conceive in the way of food. No, I must correct myself. One can not conceive that after four years of war such enormous quantities of food could be stored. Preserved meats in great cans, white flour in sacks piled up to the high ceilings, thousands of eggs, gigantic basins of lard, coffee, tea, chocolate, jellies, and preserves of every kind, arranged in apparently endless rows. Hundreds of blue sugar-loaves, bags of peas and beans, dried fruits, biscuits, etc. One is speechless and involuntarily thinks of the old jest that the quantities are so great that one man alone can not form any idea of them. The value of the stocks amounts to several hundred thousand dollars.

"Were it not that these food-supplies are needed and can be better employed at the moment, I should like to suggest that they should remain undisturbed in a national museum as an everlasting token to the German people in order that their children and their children's children might still see how in Germany—while millions starved—'those by the grace of God' held out."

THE KAISER IN CANADA

THE ARISTOCRATIC RETREAT of the Kaiser in Holland may serve for a while, but sooner or later, we are told, the "guest" will have to depart. A correspondent of the *London Daily Mail* incautiously suggests that Wilhelm von Hohenzollern may retire to his estates in the Canadian Northwest. This raises the wrath of *The Mail*, which thinks that the Canadian Government should do something about it. This is what C. Fox Smith, of *The Mail*, says:

"What is Canada going to do with regard to the extensive land-holdings acquired by the ex-Kaiser through his agents on the Pacific coast of Canada?"

"During the years immediately preceding the war personal friends of the Kaiser were hard at work in British Columbia, partly in the now familiar processes, of 'peaceful penetration,' partly on the private behalf of their Imperial master and friend, perhaps with a view to the possibility of such a contingency as the present.

"In those days the Junker class had established a firm foothold in the British Columbian capital.

"The Counts Alvo and Bodo von Alvensleben, members of a family of undeniable *Almanach de Gotha* standing, were conspicuous alike in social and business circles. Their real-estate concern in Fort Street was one of the largest in the province, and the holdings of the firm included extensive water-frontages which would no doubt have been extremely useful to raiding German cruisers and submarines had they succeeded in extending their activities to the North Pacific.

"The birthday of the All-Highest was celebrated in the usual fashion at the Kaiserhof Restaurant—the rendezvous of the Victorian Junkers on such occasions—with plenty of speechifying and drinking.

"But the Alvensleben activities did not stop at such frivolities. Circumstances enabled me, during a connection with a government department, to obtain an interesting insight, in the light of later events, into the ramifications of the German system of penetration. So recently as the latter part of 1913 they were buying up large tracts of government lands both on the mainland and on Vancouver Island, the applications for purchase being made in the names of clerks and employees of the firm. I have seen as many as twenty such applications made at one time to the Provincial Lands Department, and tho at the time they might appear *bona fide* enough, the fact has now been pretty solidly established that the whole transaction ought to have been in one name alone—that of William Hohenzollern.

"On the outbreak of war the Counts Alvo and Bodo withdrew themselves, their aristocratic, duel-scarred, and dissipated countenances, and their underhand activities (which included the fomenting of trouble on the question of Indian immigration to British Columbia) into the State of Washington, whence they no doubt hoped to keep an eye on their interests and intrigues in their late headquarters. It is not known what has become of them since America came into the war, but it is to be hoped that their powers for mischief are at an end.

"In any case, it is certain that the whole of the Alvensleben transactions will be thoroughly investigated to their source, and that Canada will not 'stand for' any dealings with the ex-Kaiser or his friends."

While official Canada has, so far, shown no particular desire to have the "All-Highest War-Lord" domiciled in the West, official America has extended a generous hospitality to the Kaiser's devoted servants, the Alvensleben brothers. It is true they do not appreciate their dwelling—it is an internment-camp.

WILHELM.

The most recent portrait of the well-fed ex-Kaiser. He will be sixty years old on January 27.

WHO ARE THE SPARTACIDES?

A MYSTERIOUS GROUP of German Bolsheviks have recently made their appearance in the cable dispatches from Germany, which must have somewhat puzzled the American reader. This is the Spartacus group, or Spartacides, and they are, we are told, a party of extreme Socialists, led by Dr. Liebknecht and Rosa Luxemburg, who wish to see a proletarian autoeracy replace the old military autoeracy in the Fatherland. The name, they tell us, is derived from the fact that early in the war Dr. Liebknecht issued a number of anti-war pamphlets signed with the pseudonym "Spartacus." The choice of this name, a correspondent of the *Manchester Guardian* avers, is due to the fact that the revolutionists of 1848 had a partiality for signing their anonymous pamphlets with classical names, a habit which the Liebknecht group have revived. The original Spartacus, it will be recalled, was a Thracian soldier taken prisoner by the Romans, reduced to slavery, and trained as a gladiator. He escaped, proclaimed the freedom of all slaves, raised a powerful army, and several times defeated the Roman consuls who were sent against him. An unhappy augury for the success of Dr. Liebknecht and his Bolshevik followers lies in the fact that that Spartacus came to his defeat and death in a.c. 71 through dissensions among his followers.

The Berlin correspondent of the *Kölnische Zeitung* draws a graphic picture of the terrorism exercised in Berlin by the "Spartacus gangs." He writes:

"Dr. Liebknecht himself, whose imprisonment has obviously clouded his formerly keen intelligence, and probably turned his brain, spends his time in visiting barracks in Berlin, Spandau, and elsewhere, and inciting the men to refuse to allow any distinctions even of non-commissioned rank or to accept anything resembling orders from officers or under-officers or to admit them to the local councils. His chief of staff, Dr. Levy, who before the war was his business partner in his lawyer's office, is preaching fanaticism in Berlin to all and sundry.

"The word Spartacus goes through the city like a bogey. Civilians, soldiers, employees, capitalists, all feel themselves equally threatened. A sitting of the Prussian Lower House had to be adjourned because it was feared that the Spartacus gang was going to seize the building.

"The *Lokal Anzeiger* has several times failed to appear, as the result of repeated efforts by the Spartacus gang to seize it. Careful burghers chain up their house doors, and it would be well if the steadier elements of our workmen and soldiers would chain up the door of their hearts against the murderous and suicidal ideas of the Spartacus gang."

The Spartacides seem to have a particular predilection for embarrassing the newspapers, in order, we are told, to terrorize one or other of them into becoming a Spartacus organ. The *Manchester Guardian* writes:

"It seems that the Berlin newspapers are still having an anxious time. The writing of their leading articles is constantly being interrupted by the arrival of a handful of unscrupulous-looking bandits with a machine gun. It must not be supposed, however, that these intruders belong to the Independent Socialists, who recently formed the Coalition Government with the Social Democrats, or Majority Socialists. They belong essentially to the Spartacus group, a small collection of extremists, led by Liebknecht and Rosa Luxemburg, who had little or no following at all before the revolution. The group had few members, no newspaper, and only a mysterious connection with the Bolshevik *Isvestiya* since the Russian revolution.

"Not only is any newspaper to be provided with a military guard against its forays, but the Spartacus people have also been relieved of another newspaper that they had seized. Like the *Lokal Anzeiger*, the *Norddeutsche* has not submitted tamely to its forcible transformation into an *Internationale*, but has reemerged from its crisis as the *Deutsche Allgemeine Zeitung*, and announces that it will continue its policy as before. This means that the Spartacus group has still no newspaper of its own."

Having failed to keep the *Lokal Anzeiger*, which they seized, the Spartacides have produced a small daily sheet, which bears the name they gave to the *Anzeiger* when in their hands—*Die Rote Fahne*, or Red Flag.

THE HUN'S "UNDEFEATED" SOLDIERS

THERE IS A LACK OF HUMOR almost pathetic in the speeches that are being made over Germany to warriors now returning from the Western Front. Despite the fact these heroes are slinking back to their homes with the armies of the victorious Allies almost treading on their tails, the premiers, mayors, and other functionaries seem quite oblivious to the fact that the Rhineland is occupied by an enemy whom the "undefeated" soldier was entirely unable to keep out. For example, witness Premier Ebert's comic lucubration as reported in the *Berliner Tageblatt* when he welcomed the Prussian

THE SKIPPER WHO SKIPT.

WILHELM THE SKIPPER—"I have piled my ship on the rocks, but I seem to have saved my own skin—for the present."

—*London Opinion*.

Guards on their return to Berlin. With the utmost solemnity he remarked:

"Your deeds and sacrifices are unexampled. No enemy overcame you. Only when the preponderance of our opponents in men and material grew ever heavier did we abandon the struggle.

"You endured indescribable sufferings, accomplished incomparable deeds, and gave year after year proofs of your unshakable courage. You protected the homeland from invasion, sheltered your wives, children, and parents from flames and slaughter, and preserved the nation's workshops and fields from devastation.

"With deepest emotion the homeland thanks you. You can return with heads erect. Never have men done or suffered more than you."

As the American reader peruses this ebullition he is apt to wonder whether the "unexampled" deeds to which Premier Ebert refers were in any way associated with the performances of the German Army in Belgium, and whether they are holding their "heads erect" because in protecting their "wives, children, and parents from flames and slaughter" they are particularly proud of the infamous pillage, arson, and rapine that they successfully accomplished in France. On the other hand,

here and there a paper can be found that in an incautious moment will admit that Germany has lost the war. But even here we find the soldier of the Fatherland is still "unconquerable and unconquered." Hear the *Frankfurter Zeitung* on the subject. In a laudatory article it writes:

"We greet you, German soldiers. Germany has lost her war. But you have won yours. You have rescued German honor, and thus conferred upon our Fatherland the possibility of raising itself up and building anew. German soldiers, when one day you take your grandchildren on your knee and tell them all about this war, you need not be ashamed."

NO CLASH ON THE "FREE SEAS"

SUBTLE GERMAN PROPAGANDA, they tell us, has been at work both in America and England since the armistice was signed, endeavoring to stir up, if possible, friction between the two great English-speaking Powers. A certain success has been achieved, and at one time it looked as if American and British ideas might clash upon the subject of the "freedom of the seas," to which the President attaches so much importance. The British, at any rate, have sensed the danger and realized the source whence it came, and they are determined to let nothing mar the cordiality which has grown up between America and Britain during the war. The *London Spectator*, which, it is shrewdly suspected, reflects the views of the British Government, declares that the pivot on which the world's future turns is the deep and lasting friendship between the United States and Great Britain, and that while this point is kept firmly in view there is no possibility of misunderstandings. The *London* weekly contends that the freedom of the seas must be interpreted in the British sense, and that to discuss it at all before a league of nations is actually in existence would be a cardinal mistake. As a *quid pro quo*, the *Spectator* advocates that the Monroe Doctrine ought to be accepted as the public law of the world, duly formulated and confirmed with the sanction of all parties to the peace settlement. The *Pall Mall Gazette* thinks that the presence of President Wilson himself at the Peace Conference will be the greatest factor in eliminating any possibility of misunderstanding between the two countries, and says:

"Mr. Wilson will at last have an opportunity to see for himself the havoc wrought by the Germans in France and Belgium, and from personal conferences be able to understand the point of view of those who suffered from these infamous depredations."

"President Wilson has a judicial mind. No living statesman is better able to weigh evidence or more ready to face facts with courage and determination. Too much has been made of the letter of Mr. Wilson's 'fourteen points' and too little of their spirit. His reference to the freedom of the seas, for instance, has caused much discussion. As Mr. Lloyd George has pointed out, our Navy is a weapon not of offense, but of defense, and we do not mean to give it up."

"The war has demonstrated that not only our own safety but the safety of civilization itself depended upon our naval

supremacy. When a league of nations is established and has become not an idea to be aimed at, but a realized confederation of mankind, then, perhaps, we can modify our claim to sea-power."

Viscount Grey, former Foreign Minister of Britain, in a recent speech indorses the view of *The Pall Mall Gazette*, that too much has been made of the letter and not enough of the spirit of the "fourteen points." Misunderstanding of the freedom of the sea doctrine is due, he says, more to prejudice than fact, tho he slyly points out that the United States in actual practise does not accord as much freedom of the seas as does Britain. As reported by the *London Times*, he said:

"There is a considerable prejudice against the phrase in this country because freedom of the seas is believed to be a German phrase. It is an American phrase, not German, the Germans adopting it and using it for their own purposes in a sense to which Great Britain could never agree."

"Even in America there is some rule about foreign ships not being allowed to carry goods between American ports and between America and the Philippines. Some other countries have rules of the same kind. Britain never had a rule like that. We have been more completely for freedom of the seas in time of peace than any other nation."

That the British are not altogether in love with the phrase we can well understand when we recall just what the Germans meant by it. Here, for instance, is a definition of the term by Count zu Reventlow, of the *Berlin Deutsche Tageszeitung*, made only a little more than a year ago. He wrote:

"What do we Germans understand by the freedom of the seas? Of course we do not mean by it that free use of the sea

which is the common privilege of all nations in time of peace, the right to the open highways of international trade. That sort of freedom of the sea we had before the war. What we understand to-day by this doctrine is that Germany should possess such maritime territories and such naval bases that, at the outbreak of war, we should be able, with our Navy ready, reasonably to guarantee ourselves the command of the seas. We want such a jumping-off place for our Navy as would give us a fair chance of dominating the seas, and of being free of the seas during a war."

As an offset to any further sea aggression such as Count Reventlow's naval doctrines suggest, Britain welcomes our recently announced naval program, and in commenting on this the *London Daily Express* remarks:

"The British Government is ready to concede to the Government of the United States the freest of all free hands in naval development. It welcomes the idea of the extension of American sea-power as one of the best guaranties of the peace of the world. At the same time, the British Empire claims for itself

the fullest right to defend the arteries of commerce and communication which are the life-blood of an Empire bound by ties of blood, but separated by vast oceans. All we ask for the Empire is what we willingly concede to the Republic—freedom of action. It would appear that his Majesty's Government are in agreement with the Congress."

GERMANIA'S GLAD EYE.

CLEMENCEAU—"Eh bien, mon cher Président, if you know the old Jezebel as well as we do, you wouldn't be deceived by her approaches, even though she has disguised herself in that hat!"

—*Passing Show* (London.)

SCIENCE - AND - INVENTION

EXPERT MEDICAL ADVICE ON INFLUENZA

DISAGREEMENT AMONG PHYSICIANS at the recent Chicago meeting of the Public Health Association, regarding many important points in the character and treatment of influenza, is reported in the daily press. Nevertheless a substantial agreement on some other points quite as vital appears clearly from a reading of the medical journals, and practical suggestions for the home-care of patients will be found in a statement issued by the British Royal College of Physicians, quoted at the end of this article. Experts would seem to be at one in looking upon the present epidemic as simply a variety of a well-known disease prevalent, with occasional outbursts of violence, for hundreds of years. They agree that it is a germ disease and that it is very contagious at close range, altho probably not communicable through air, water, or material objects; that its danger consists largely in the likelihood that it will be accompanied or followed by a peculiarly virulent type of pneumonia, whose occurrence is favored by neglect or wrong treatment, and finally that not all persons are equally susceptible, those in weakened physical condition usually succumbing first. Points still open to discussion are the reasons for epidemics in general and for this one in particular, the nature of the precise germ or group of germs responsible for it, and the efficiency of various forms of preventive and curative treatment, including quarantine, as generally practised, inoculation with serum, the "influenza mask," and the use of various drugs. Regarding the outbreak itself, whose world-wide character has earned it the name of "pandemic," the writer of a leading editorial in *The Lancet* (London, November 2) speaks as follows:

"If those who feel ill would stay at home; if those who are well would avoid traveling in railway-carriages with the windows closed, or in unventilated trams and busses; and, above all, if the public would forego picture-palaces or other crowded places of amusement so long as the epidemic continues, much would be done to limit the spread in populous centers."

The fact that the army camps have been excellent places to study the disease unaffected by local conditions makes a recent article by Dr. George A. Soper, Major U. S. A., one of the most interesting reports on its progress. Dr. Soper, writing from the Army's Division of Infectious Diseases and Laboratories in Washington to *The Journal of the American Medical Association* (Chicago, December 7), states his belief that "had it not been for the pneumonia, the pandemic would not have attracted much attention." The disease has come in "waves," often with the violence of an explosion. He goes on:

"Within about a week after the outbreak of the influenza, there occurs an ominous prevalence of pneumonia. The pneumonia does not exist as a separate epidemic, but is always a follower of influenza. How the two diseases are related is not positively known. It is clear that the influenza paves the way for the pneumonia, if it does not actually produce it."

Steps taken by the military authorities to combat the disease fall under three heads, and apparently any efforts elsewhere must also be similarly classified. Major Soper gives them as "isolation, sanitation, and education." These he briefly explains as follows:

"1. By isolation is meant any and all procedures by which infected could be separated from the susceptible persons. Included in this list were steps for the prevention of crowding, quarantine, head-to-foot sleeping, the separation of heads at mess, and the use of cubicles and masks.

"2. Under sanitation may be included the cleaning and airing

of barracks and bedding, the oiling of floors to keep down the dust, the boiling of mess-kits, and many other procedures.

"3. Education, always a predominant motive in the Army, was applied as never before to the prevention of disease among troops. The medical officers were taught what to expect in the way of symptoms and what principles of prevention to put into effect. The men were taught something of the principles of disease-transmission and how to carry out their part of the work of prevention."

As a result of these methods the disease "is already practically gone in most army camps." Much can be done in military camps, of course, that can not be done in civil communities, but their example points the way. It must be said that some physicians have doubted the permanent efficacy of any kind of quarantine measures and have pointed out that in New York, where they have been few, the disease, on the whole, has been less violent than in Boston, where, after the first outbreak, they were exceptionally strict. Still, such measures have been chiefly relied on, altho in different degree, by most American cities, and their necessity has not been widely questioned. With regard to means of transmission, Dr. Soper is very clear. He says:

"It is a fundamental assumption that influenza is produced when, and only when, material from the mouth or nose of infected persons gets into the mouth or nose of some one who is susceptible. As is plainly recognized in respect to intestinal infections, the hand probably plays an important part in the transmission of influenza. Coughing and sneezing help greatly to spread the infection.

"It has long been known that interchanges of bacteria occur commonly from mouth to mouth under ordinary conditions of social intercourse. Most of these organisms are harmless under normal conditions of health. That their capacity for harm is sometimes increased, sometimes reduced, according to various circumstances, is highly probable. . . .

"The conditions that govern susceptibility to influenza are not understood. Good general health, absence of fatigue and of cold and hunger are methods of prevention which have long been advocated by many and which in spite of scientific criticism still have much to recommend them. Whatever conduces to low bodily tone is believed by most persons to favor infection. Some, however, hold that specific immunity either does or does not exist, and that wet feet, insufficient bedding, chill, hunger, and fatigue have nothing to do with susceptibility.

"Vaccination against pneumonia is practicable; but such preventive treatment is in the experimental stage as respects influenza. As to natural immunity, one attack is believed to protect against another, and some people seem to be immune without ever having experienced an attack."

If "low bodily tone" conduces to the disease, as Dr. Soper thinks, evidently his second point—"sanitation"—is of vital importance. Municipal action in this direction is hardly noticeable, owing to the stress placed on isolation. Such attention as is paid to it is individual, under the advice of the medical profession. When we come to the third head, "education," we find that more is probably being done by public bodies than in any previous epidemic. Leaflets have been scattered broadcast, through the medium of public and educational bodies, schools, public libraries, and associations of all kinds, to enlighten the public regarding the disease, its symptoms, and the methods of preventing and fighting it. From the supplements to the United States Public Health Reports by Surgeon-General Rupert Blue, we quote the following paragraphs, which not only show the extent of these efforts at popular education, but will serve to give our readers some idea of the devices and methods

(Continued on page 117)

HARVESTING SALT LAKE'S SALT

WE HAVE SALT ENOUGH in the United States to supply the world's needs for years to come; and, as a matter of fact, most of the salt that we used last year came from within our own borders. Curiously enough, the enormous deposits of the Great Salt Lake are just beginning to

A SNOW-HOUSE MADE OF SALT.
A Great Salt Lake refinery encased in its own product.

be touched. Our annual production is about seven million tons, and only 50,000 tons of it, or one part in 140, comes from the big lake. Geologists place the total of its available salt-deposits at 400 millions of tons, so that it alone would supply our national needs, at the present rate, for about sixty years, while if we should take no more from it annually in the future than we do now, it would last eight thousand years. At present Michigan and New York lead as salt-producing States, and Utah stands only ninth. Yet the salt-works at Salt Lake, including their refineries, are among the largest and most complete in the world. Says Stanley W. Todd, writing in *Popular Mechanics* (Chicago, November):

"Perhaps no salt ponds anywhere in the world possess so many natural advantages as the Great Salt Lake. Lying as it does in one of the great valleys of the Rockies, on the eastern edge of the great basin, the lake extends north and south for 75 miles, while its width varies from 30 to 50 miles. It has an average depth of 20 feet and is 4,218 feet above the sea-level. There is little rainfall throughout the year, and the ever-present sun, together with the flat shores, contributes to the ideal conditions of summer operation. The lake has no outlet and the water is as nearly saturated with salt as it can be, without crystallizing. That is, it is about 23 per cent. density, which is so heavy that the human body floats. Bathing in Salt Lake is, in fact, considered one of the novelties not to be overlooked by tourists.

"Great strides have been made in recent years in the methods of making high-grade salt, both by the grainer and the vacuum-pan processes. Solar evaporation and grainer methods are used at Salt Lake, the mill being located at a place called Saltair. A salt-pump stationed nearly a thousand feet from shore forces the water up on a sluiceway

leading to the mainland. The water flows into a canal that leads to the great salt-ponds some distance away. During the season when the harvesting is under way, the water is pumped from the lake at the rate of from 10,000 to 12,000 barrels a day, the pumping being carried on from ten to fourteen hours.

"The sluiceways and canals moisten the salt ponds for a week, until the salt, after the first evaporation tests, is about an inch deep. After a period of drying, the ponds are flooded again. The water is then 'skimmed,' much after the manner of skimming a pan of milk, to remove all floating foreign substances, and then sluiced into the ponds being worked. When the water is entirely evaporated, another layer of salt is left, this process being repeated until a thick depth of salt in its natural state has been deposited. Sometimes from four to five months are required to secure the proper amount of salt deposits.

"With the crude salt from two to six inches in depth, the harvest begins. Horse-plows, traction-engines, and other farming implements are used to plow up the salt deposits, which are handled by laborers equipped with wheelbarrows and placed in long mounds along a railroad spur, constructed to make access easy to the refinery a mile away. The salt is loaded in a semimoist condition into freight-cars.

"From the outside, the refinery has every appearance of a snow-house. When the cars arrive at this factory, their contents are loaded into an automatic elevator, which carries the salt to the upper parts of the plant and deposits it in stock bins. From these bins the moist salt is automatically fed, by worm-gear carriers, into three great 'driers' or drums, each 6 feet in diameter and 32 feet long. Through these hot air is forced under high pressure, drying and purifying the wet salt and making it ready for grinding."

From the driers, the salt goes to the grinding-machines, resembling coffee-grinders, which reduce the crude material to finer grades as follows: table salt, dairy salt, meat salt, ice salt, rock salt, and pickling salt. The writer goes on:

"As these crystals are all mixed together some method of sorting or straining the residue is necessary. This need has been met by what are probably the most ingenious machines in this method of salt-production—sieves or strainers. They are 9 feet high and operate automatically. When the salt enters the sieves at the top, it is shaken over the surface of different screens by hundreds of small iron hammers, pounding simultaneously on the edges. This works the salt down over the sieves and sifts it into individual bins.

"Then come the weighing and sacking of the salt. Automatic conveyers carry the product from the different bins under the sieves on the floor above to the weighing and sacking departments underneath. A single weighing-machine, under the guidance of an operator, weighs out the salt into the proper-sized bags with lightning rapidity and remarkable accuracy.

Illustration by courtesy of "Popular Mechanics," Chicago.

GREAT SALT LAKE'S SALT-WORKS ARE AMONG THE LARGEST IN THE WORLD.

The filled bags are then turned over to girls operating six sets of special sewing-machines. They can, in fact, turn out 12,000 completed bags of salt a day by this process. On the average, nine tons of salt pass through the refinery every hour of the day. From the time the first water is pumped into the salt-ponds until the finished product leaves the sacking-machine, no human hand touches the salt. It is claimed that the salt secured from Salt Lake is 99.98 per cent. pure.

"Between the grinder and the sieves, there are large quantities of fine 'salt-dust.' But this is not allowed to go to waste. It is mixed with the proper kind of sulfur and placed in molds, which undergo a hydraulic pressure of seven tons. In this way bricks of rock salt, 7 inches square by 14 inches long, are turned out in rapid succession. This salt, which is intended for cattle, is impervious to the elements and has no sharp corners to cut the tongues of horses or sheep, precautions being taken to avoid that. Such has been the demand for these sulfurized-salt bricks that men are working night and day turning them out."

VACCINATION AGAINST INFLUENZA

WARNING against too much confidence in the published accounts of the efficacy of influenza vaccine is given editorially by *The Journal of the American Medical Association* (Chicago, November 9). According to this journal, we have no record of any properly conducted and controlled experiments on human beings with influenza vaccines. No results of careful observations are as yet at hand. These things being so, the writer asks, what should a fair-minded and thoughtful physician say as to the face value of influenza vaccine? He goes on:

"Vaccination against epidemic influenza is in a wholly experimental stage. Nothing can be learned as to its real value from indiscriminate vaccination of the public. The physician who, in view of the severity of the epidemic, feels that he is justified in vaccinating his patients, should be fair to them and protect himself by informing the patient that he regards the procedure as wholly of an experimental nature. Pending developments, nothing should be done by the medical profession that may arouse unwarranted hope among the public and be followed by disappointment and distrust of medical science and the medical profession."

Doubt on so-called "official" influenza statistics in cities and towns is thrown by Dr. George A. Soper, of the United States Sanitary Corps, in an article contributed to *Science* (New York, November 8). Says Dr. Soper:

"The total number of cases of influenza in the present outbreak, inside and outside of the army camps, will never be accurately known. Altho it is beyond doubt that the disease which is prevalent in the camps is the same as that which is widely distributed in civil life, it is not to be assumed that all the cases which occur are officially reported or that every case which is supposed to be influenza is really that disease. At this season of the year there are always epidemics of colds and other respiratory infections. The weather this year has been particularly favorable to their occurrence. Under the present conditions of public anxiety, it is but natural that all cases of illness which at all resemble influenza should receive that designation. The net result of all the factors which enter into the matter is confusion. The army records have been systematically tabulated and studied from the first. When the pandemic has subsided the information to be derived from these data should be of much permanent value."

ELECTRICALLY HEATED TOOLS

ELECTRICITY REIGNS SUPREME wherever light, heat, or power is to be applied locally, or to a limited extent. The electric flat-iron, now so widely used, is a familiar example of its advantages—the heating of the tool by a device contained within the tool itself. Utilization of the electric current for heating appliances, devices, and tools in industrial plants has begun an extensive career, if we are to believe George J. Kirkgasser, who writes in *Industrial Management* (New York, November). Mr. Kirkgasser outlines applications of this use in eighteen different industries and shows and describes many of the simpler devices. More than one perplexing industrial problem, he tells us, may be solved by the adoption of some such elementary tools as these. The application of electricity for heating purposes, Mr. Kirkgasser asserts, brings methods into the lime-light and exposes inefficiency. The result may be that cycles of operations are rearranged, a reduced amount of manual labor found sufficient, and fewer cases of imperfect products turned out. Then, too:

"As another result of easy control of electricity the temperature can be maintained or varied automatically or manually to produce a more uniform product. With operations where automatic control of current and temperature is used the human element is eliminated.

"The applications of various appliances which have been more or less standardized do not offer a serious problem, since these devices perform somewhat similar functions in the various industries. But where the application is such that it involves a portion of the manufacturing processes, a closer study of the entire method of manufacture is sometimes necessary.

This is, however, desir-

able for many reasons—not the least being the fact that some time-worn methods are shown to be needless."

Electric furnaces for melting brass, steel-melting furnaces, and furnaces for heating, annealing, and forging steel all operate at a temperature of 1,800° F. and over, and we are told that the use of this type of apparatus, employing electricity for producing heat, has caused a big stir in the iron and steel industry:

"The United States is foremost in electric-steel output with 233 furnaces, not including this year's installations. Ten years ago there was one solitary electric furnace in this country, and the total output for the year was only fifty-five tons. In 1917 the estimated tonnage was about a half million tons.

Nearly every factory now uses electric soldering-irons, Mr. Kirkgasser tells us, either in production or in maintenance and repair work. Biscuit-manufacturers recently jumped into the big-user class by employing them for sealing the metal boxes in which crackers, biscuits, etc., are shipped to the boys in the Army. He says:

"Girls do this work, and the portability, cleanliness, and safety features made their use ideal. The number of motions as studied by an efficiency engineer are much fewer than with the iron heated in a gas-furnace, besides the elimination of the gas-fumes and impoverishing of the air, which is considerable where many gas-heaters are used and many employed. From the fire-hazard standpoint alone, the electric iron is worthy of its hire because of the great need for every building standing and the difficulty experienced in rebuilding should a fire occur."

FARMING A SALT-FIELD.

BABY TANKS AND WHAT THEY DID

WHO WON THE WAR? The answer is easy: it was won by teamwork. One of the dogs in the team was the baby tank, and well he did his part. Supplanting his earlier and more cumbersome predecessor, and being perfectly adapted to the work cut out for him, he did that work in unison with the infantry, which it was his duty to support. Now that the job is over, his picture comes out in the papers. A troublesome feature of military writing, says the author of an article in *The Scientific American* (New York, November 30), is that the most interesting things can not be described in full until they have ceased to be timely. A month past, when battles were still raging, a drawing of the interior details of a small French tank would have been most opportune. But military exigency prevented. Now the secret may be told. He goes on:

"The small tank shown in the accompanying drawing represents the outcome of improved tank tactics. These tactics caused the abandonment of the heavier and larger British and French tanks in favor of the smaller type.

"Thus the big Allied tanks, weighing in the neighborhood of twenty-five tons and carrying a crew of eight to ten men, were replaced early this year by the 'Whippet' tanks of the British and the 'Renault' tanks of the French, both these types being small, two-man tanks, carrying a single machine gun or small cannon as compared with the four to six guns of the larger tanks.

"Tank tactics are now based on the perfect coordination between tanks and infantry; and with the older, slower-moving tanks it was found well-nigh impossible to keep these two arms moving in perfect unison. Again, the early tanks were cumbersome, difficult to maneuver, and withal presented a more than fair mark to enemy gunners.

"Because of their size and

the large crews required, the number of tanks available for an attack was strictly limited. Furthermore, in actual practice the power of the tank and its ability to crush enemy defenses were found to be of secondary value only, since the main object is to carry guns, ammunition, and the crew.

"It remained for Louis Renault, of Billancourt, France, to develop a fast 'Baby' tank to meet the new requirements. This he did, and fleets of his tanks made their appearance this spring, shortly after their counterparts, the British 'Whippets,' had scored new victories against the enemy. The Renaults were a success from the start, being adopted by the French Army and later by the American forces fighting in France.

"The Renault tank, as will be noted in the accompanying illustrations, consists primarily of an elongated armored body measuring about thirteen feet in length, six and one-half feet in height, and a trifle over a yard in width, equipped with a set of caterpillar treads and a power plant. The armor varies from one-fifth to three-fifths inch in thickness, and is of a special chrome steel plate, capable of withstanding small-arms fire and the burst of small shells. The body is surmounted by a revolving turret which carries the single machine gun . . . with which the tank is armed. Some Renaults are provided with a short-barrel three-inch cannon, in which case the turret is rigid."

The interior is divided into two compartments—one for the crew and the other for the power plant. At the forward end sits the driver, and back of him the gunner, who operates the gun in the revolving turret. A wide belt or strap serves as a seat for the gunner, who can turn the turret to any point. Slits, one-eighth inch wide, afford a measure of vision for both men. Entrance is by doors immediately in front of the driver. To quote further:

"In the rear compartment are located the Renault engine, fuel tank, and oil tank; the radiator, which receives a constant stream of cold air by means of a special ventilator; and the other members of the power plant. The crank-handle for starting the engine extends into the forward compartment, directly behind the gunner.

BABY TANKS GOING INTO ACTION.

"The little monster weighs in the neighborhood of seven tons with its full equipment. It develops a speed of between six and seven miles an hour. While not as formidable a vehicle as the larger tanks, to be sure, the Renault readily shatters all forms of barbed-wire entanglements and solid brick walls."

WIRELESS: FETTERED OR UNFETTERED?

HAS WIRELESS TELEGRAPHY been freed from the chains of "static"—atmospheric electricity—or has it not? According to an announcement by the president of the Marconi Company, quoted recently in these columns, the company's engineer has perfected an invention that frees wireless altogether from such interference and increases its

value manifold. But now comes Mr. Newcomb Carlton, president of the Western Union Telegraph Company, which uses wires in its business, and alleges that the invention announced by the Marconi Company (which does without wires) is "a humbug." The Marconi people retort that Mr. Newcomb Carlton speaks that of which he knows not, and that Mr. Weagant, inventor of the device, will shortly describe it in a paper before the Institute of Radio Engineers. Meanwhile the American people preserves a judicial frame of mind and recollects that neither of the parties to this pretty little fight has condescended to tell us the principle on which the device in question works or the methods by which

attempted 'epoch-making progress' to call forth the slurs and ill-tempered comments of the ignorant or those whose interests were affected. Marconi's original invention met with similar skepticism and denunciation on the part of those whose scientific vision and business foresight was limited. No stock has been issued by the Marconi Company since I have been connected with it, nor is any new issue contemplated; the company's resources are abundantly sufficient for its purposes."

With respect to the statement that no competent disinterested engineer had confirmed the claims made for this invention, Mr. Nally said:

"The obvious reason for this is that technical details can not be disclosed until after the conclusion of peace, but I may say that it is the intention of the inventor to present a paper before the Institute of Radio Engineers covering completely the discovery and invention. Furthermore, the Marconi Company intends to invite a delegation of engineers chosen by various engineering and scientific bodies of the country to witness the operation of the static-preventing system immediately after the presentation of the technical paper. Obviously, such an offer would not be made unless the statements contained in the announcement could be supported by facts."

Seen at his office later by a *Times* reporter, President Carlton said further:

"We have investigated it and know all its details. That the invention will do something toward eliminating static under certain conditions there is no doubt, but to say that it is a cure-all, that it will do away with all difficulties under all conditions in all weathers and during every month of the year, is pure humbug. Every credit should be given to those who have made improvements on the wireless, and undoubtedly wireless will always have a place supplementary to the cable and telegraph, but to say that the cable and telegraph will be unnecessary is nonsense. If for no other reason than that the cable has privacy and reliability, it will always have a certain preference over the wireless."

A still later word appears in the *New York Evening Post*. According to this paper, Mr. Nally said:

"Non-progressives may be divided into classes. There is the man who says it can't be done, the man who fears it might be done, and, thirdly, the man who would like to say it shall not be done. Mr. Carlton is entitled to the distinction of adding another class for himself in that he, claiming cryptic knowledge of something he has not seen and could not know anything about, empirically condemns it."

"It is not a nice position for the head of a large corporation to take, but he is following historically in the footsteps of some other Western Union presidents, one of whom deflected the genius of Elisha Gray from developing the telephone. Another president, of similar 'low visibility' completely failed to encourage the genius of Edison, who was forced to work elsewhere than in the telegraph business, and whose wonderful achievements since are known to all mankind."

"But all this perhaps accounts for the lack of progress of science in land-line telegraphy, which has advanced very little beyond the days of Morse, and certainly not at all beyond the days of Edison's connection with it."

President of the Marconi Company, who claims wireless has been freed from the chains of "static."

it is utilized. All of us must evidently hold our breaths and wait for the meeting of the Radio Engineers. Says President Carlton, in an interview printed in the *New York Times*:

"The interesting statement by the Marconi Company, that wireless communication is now perfected, serves to remind me of similar predictions made by that organization and its friends during the last ten years, none of which have so far completely materialized. I have been in fairly close touch with the progress of wireless since 1908 and have observed an interesting coincidence between the predictions of epoch-making progress and the flotation of a fresh issue of stock. Had even a small part of these predictions materialized there would to-day be no marine cables or even land wires. I know something of what is now claimed to be the greatest step forward that has yet been made in wireless matters, and I venture to say that it will prove to be similar in character to many of the other much-heralded innovations. . . ."

"It should also be noted that thus far there is no confirmation of the value of this invention by any government department acquainted with wireless or by competent disinterested wireless engineers."

When Mr. Nally had read the above statement he said, as quoted by *The Times*, that it was the sort of a statement he would expect Mr. Carlton, "having cables of his own," to make. He continued:

"However, it is the fate of inventors and those who have

HOW AMERICAN ARTISTS PICTURE THE WAR

MOST BRANCHES OF THE FINE ARTS suspended work at the beginning of the war and tried to peer into the future with the self-same question: How is it to affect us? The graphic arts are already able to answer, that the war is over. And in the Allied War Salon, opened

that Marshal Foch is in military genius the peer of Napoleon, we can not visualize him as 'tying together' the episodes of the Great War after the manner of his predecessor; and, furthermore, his scene has been, on the whole, totally different from that of the Emperor. Trench warfare has called for almost any type of artist save a Raffet. It has called, rather, for the master

of detail. Here we come close to the secret of the present exhibition.

"Its most characteristic, most interesting qualities are those of the documentary record. There are pictures included, it is true, and to some of these we shall return with appreciation, but it is not in the group of large oil-paintings on its threshold that the war-salon makes its truest affirmation. That is to be sought, rather, in the collection of drawings made by the official artists of the United States Army. If the war has produced anything for us it has produced these snap shots in water-color or pencil. They vary in appeal according to the temperament of the draftsman. Capt. George Harding is notable for his dramatic spirit, for the picturesque *elan* with which he sketches our troops. Capt. J. André Smith is interested in making literal transcripts from nature. He and Capt. Ernest Peixotto and Capt. W. J. Aylward are students of topography rather than of military action. They supply the setting of the war, so to say, the traits of scarred landscapes and ruined buildings. In Capt. Wallace Morgan's drawings, as in those of Captain Harding, we get more of the soldier type, more of military

movement. Captain Morgan, by the way, is especially rich in touches of character. His poster, 'Feed a Fighter,' is a magnificent portrait. Looking at all these drawings in the mass—and they are so numerous that it is frankly impossible to deal with them otherwise—one kindles to their truth, to their unmistakable value as records. Their purely artistic significance is another matter.

"If we have been steadily skeptical as to the war's having any esoteric effect upon art it has been for the reason that in art you can never get away from the question of style. Not the most heroic of experiences will add that priceless element to an artist's equipment. He must be born with it or go without it to the end of his days. And without it he may be never so clever, never so faithful and proficient, and yet fail to strike twelve. That, in sober truth, is the conclusion to which we are forced by the drawings aforesaid. They are good drawings, properly to be preserved and admired for the light they will always throw upon the facts observed by the draftsmen. They are not, as drawings, as works of art, at all distinguished. The English have had the same experience as our own in this regard. Their men at the front have all done valuable work, but only one or two of them, G. Spencer Pryse and Frank Brangwyn, have put upon the common theme an uncommon stamp. Pryse, we may note in passing, is perhaps the most compelling figure in this show. His lithographs are large in conception and are executed with a fine, swinging stroke. Wherever a drawing of his is placed we are bound to pause. There are, of course, in the great body of black-and-white work here innumerable things that for one reason or another arrest and repay attention.

"THE MURDER OF EDITH CAVELL."

This poetic treatment by George Bellows shows the tragic theme "enveloped in an unearthly loveliness."

the American Art Galleries, New York, painters and draftsmen are giving us the evidence that, in the view of one critic at least, "it has exercised no mystical, talismanic influence." The artists of the world have suffered no 'laying on of hands,' says; "they have received no new and strange inspiration; they have been in no wise transformed by contact with the great war." Mr. Royal Cortissoz, critic of the *New York Tribune*, writes this, disarms opposition by laying aside the rôle of the artist. "In the presence of the immeasurable tragedy upon which the curtain has not yet been rung down," he says, "one hesitates from applying to these myriad impressions of it the ordinary touchstones of esthetic appraisal." His unwillingness to blame is perhaps helped by the fact that the artists bring him a new challenge. For this, too, he carries no censure because we must see that this failure of new doors to open in the realm of art was inevitable—by the very nature of the war. For proof we turn back to the Napoleonic era and the effect of its events on the French artist Raffet:

"That lucky lithographer had, in the first place, a colossal personality to place a romantic accent upon all that he did; and, secondly, he drew his designs in an epoch of open warfare. A battle was for him a glorious spectacle, playing naturally into the hands of a pictorial composer. In our own day all this has been changed. No matter how firmly convinced we may be

The savagery of Raemaekers, the daintiness in the etchings of Caproni, the humor in George Wright's Pelham Bay sketches, the consummate virtuosity of Forain, the humanness of Steinlen, the poetic grace of Charles Shannon—these and divers other strains of personal force unquestionably give pleasure. Nevertheless, among the draftsmen Mr. Pryse maintains an unchallenged supremacy, rising well above that subjection to detail which, as we have said, the nature of the war has irresistibly imposed upon most artists."

The painters who had not the fatigue of field work have "naturally been freer to throw off the all-pervasive handicap." Mr. Cortissoz "thinks it significant, tho, that Mr. Bellows's "Murder of Edith Cavell" is "a piece of most circumstantial realism."

"It is quite the finest thing Mr. Bellows has ever done, really rich in that deep, tenderly felt beauty which as a rule he would appear to disdain. The scale of color used in this canvas is not very broad. But the play of light and shade exploited within it is so subtle as actually to enrich the artist's tones. His tragic theme is enveloped in an unearthly loveliness. He is a poet on this occasion. Another realist who somehow rises above himself is Mr. George Luks, the contributor of several New York street scenes, packed with soldiers and crowds of people a-flutter with flags. Mr. Luks, like Mr. Bellows, is generally wont to make a virtue of brutality. Now it would seem that he, too, has been in Arcadia. He orchestrates his crowds and colors with a new gaiety, and, by the same token, with a new delicacy and skill. The 'Blue Devils on Fifth Avenue' is a truly rollicking picture, a *tour de force* that takes us captive as in a gust of high spirits. Mr. Paul Dougherty, the sea painter, has produced a noble canvas in his big 'Submarine Tragedy.' The scene is grandly realized. For this reason one could dispense with the aimed revolver of the Hun on the U-boat. It points a moral, but it tenses the heroic simplicity of the composition. Marines and shipyard motives frequently appear, as was to be expected, and there are a few of the allegorical pieces which were to be looked for as a matter of course. But among the painters, as among the black-and-white men, we are always coming back to such 'actualities' as Mr. S. J. Woolf's 'First-Aid Station at Seicheprey,' the snap shot translated into color."

The exhibition is held under the auspices of the Division of Pictorial Publicity—of which Mr. Charles Dana Gibson is chairman—of the Committee on Public Information. It enjoys the cooperation also of the Committee on Arts and Decoration, of the Mayor's Committee on National Defense, and of the American Federation of Arts.

The exhibition shows also in mass the posters that have served us in various "drives" and encourages the New York *Times* critic to believe we have made appreciable progress there, tho still behind the achievements of English poster artists. We read:

"Only a few of us will remember, through the swarming and oppressive sensations of the past four years, the utter discouragement of our first efforts in poster-making. We were tawdry and cheap almost in proportion to the stimulus and importance of the occasion. We helplessly revealed the unpreparedness not of our art but of our organization of art, activities for any such stirring emergency. Then the public helped us with its jeering apprehension of the failures on parade. There is genuine satisfaction in turning to the American section and finding such poster designs as those now familiar to our American public."

A BRITISH DRAMA OF LINCOLN

HAS LINCOLN EVER APPEARED as a character in a really serious American play? Last year he was seen by reflection in a piece whose leading character possessed many of his traits, and whose life moved within the circle of Lincoln's personal influence. For many years the vaudeville houses had presented before them a sketch which succeeded in suggesting the outer man through the actor's

Alongside the supply activities of the front lines, Mr. Wallace Morgan observes the signs of domestic life—women, children, and even chickens clinging to their homeland, though endangered by German shells.

physical equipment helped out by skilful make-up. Shall we receive the great Lincoln play from England, where the Emancipator has long been almost a national hero, and from which has come Lord Charnwood's biography? A play called "Abraham Lincoln" has been presented at the Repertory Theater in Birmingham, whose director, Mr. John Drinkwater, has recently brought out the piece of which he is the author. The excuse for it, as shown by Mr. H. W. Massingham in the *London Nation*, is that "England is at this moment interested in America." The central figure of the play leads Mr. Massingham also to "breathe a prayer that small bits of his character may be grafted on to our statesmen before they muddle the peace which another great American has enabled them to win." The *Nation's* editor turns away from what he calls the "syndicate of soullessness" that control the London theaters to this outburst in the "provinces":

"Mr. Drinkwater's task is a difficult one, in spite, or rather because, of the singular attraction, and indeed magnificence, of its subject. I imagine that Mr. Drinkwater has hardly had the time to study Lincoln in detail. Yet he is clearly alive to his charm. Lincoln was the most adorable of all the really great leaders of men. Fox was as delightful, but Fox had neither Lincoln's unflinching success nor his tragic end. Therefore, it would seem as if you might have in 'Father Abraham' a suitable hero of drama. Lincoln had style, humor, a wonderful personality. He was simple and subtle, glorious and physically uncouth, and he fell in the hour of victory for one of the greatest of wars and causes. What dramatist could ask for more? But there are difficulties. Lincoln stood alone. His rivals—Douglas, Chase, Seward—were not really comparable with him. He was never beaten save by Death. And tho he had extraordinary distinction, he was not romantic. Did he ever love a woman? It is doubtful. He was as melancholy as *Hamlet*.

but, unlike *Hamlet*, he did not fail. So winning, so compelling, were his powers that he was never even seriously thwarted. He rose steadily, and having attained the highest place, kept it. His failures were episodes; and his career therefore was almost bare of contrasts, of all that violent, imposing, pathetic material with which tragedy is mainly concerned. For death—even premature and violent death—is not tragic unless it is associated with some thwarted or ignoble strain in a man's life. That was not the case with Lincoln. He was eminently *felix opportunitate*. His sun sank suddenly, but in full splendor, and the career that so ended was that of a consistent, tho a

of the Second Inaugural, adds to it a piece of the last sentence of the Gettysburg speech, and dumps them both into an imaginary address delivered from the President's box in Ford's Theater within a few moments of the assassination.

"To do Mr. Drinkwater justice, this is his only serious offense, if one excepts a rather primitive caricature of Frederick Douglass. The larger lines of Lincoln's character do appear in the series of dramatic interludes—Lincoln's modest acceptance of the Presidential nomination, his battles of tactics with his always difficult Cabinet, his pardon of a young soldier sentenced to be shot for sleeping at his post, his refusal of Never-

Indianism—which form the main divisions of the play. The plan, with the connecting chronicle, spoken in verse by two players, separately or in unison, approaches that of 'The Dynasts.' The atmosphere is not magical or alluring, but it is Lincoln, and the feeling is Lincoln. More could not be expected, even of the collaboration of a Shakespeare with a Plutarch. The grand Lincoln touch—the spectacle of a man of simplicity, humanity, and nobility conducting so tortuous and cruel a thing as war, and coming miraculously unstained out of it—is a moral phenomenon. It might furnish a dramatic situation had there been any point in Lincoln's career when, in winning the war, he seemed palpably to be losing his soul. But that never occurred. The man who at its close refused to make examples of the leading rebels—who said, 'Enough lives have been sacrificed; we must extinguish our resentments if we expect harmony and union'—was as entirely captain of himself as of the American nation and of the cause of human freedom. Therefore it is that Lincoln's career, essentially flawless, is also undramatic. Mr. Drinkwater gives

it the appropriate moral and crown. If he has missed the chance which made nearly every one who came in contact with Lincoln fall in love with him, that again is a fault incidental to the method of the chronicle. Mr. Drinkwater has written a thoroughly interesting 'morality' play, and the public spirit which inspires such an act of education is beyond all praise."

TWO WARS IN SONG

TWENTY-FIVE YEARS WILL BE NEEDED to pass judgment on the songs that the war has inspired in us. So an editorial writer of the *New York Times* thinks, basing his prediction on the time taken to appraise the Civil-War songs. Many an article, and even book, has been written on that war, and they teach us that the songs of the old war "reflected more different shades of feeling than have to-day come to the surface." Our war has fortunately been so short that aside from the "Over There" mood, we have lived through no other state of mind. And the writer points out that "'Over There' was just as singable up to the very day of the armistice as it was when the soldiers began to cross the Atlantic." But the "hopes, disappointments, and renewed determination" of our Civil-War moods can be traced in the varying themes of its songs. Perhaps this contrast will serve the appraisers of a future generation as a useful index of the part really played by the United States in the conflict; a part that we now see in the exaggerated glow of the relations of victory. The Civil War had its "Over There," only differently phrased:

A NAPOLEONIC TRENCH PICTURED BY RAFFET.

The legend beneath reads: "The enemy does not suspect that we're here. It is now seven o'clock: we will surprise them to-morrow at four in the morning." Modern trench warfare, says Mr. Cortisov, "has called for almost any type of artist save a Raffet," who preserves for us the Napoleonic scene.

sublime, opportunist. And you may make anything of an opportunist but a hero. *Siegfried*, *Othello*, *Solness*, must die. But they must die ruined.

"I imagine that Mr. Drinkwater perceived this defect in Lincoln as the subject of emotional drama, and rightly abandoned the attempt so to treat him. All that the dramatist could do in this way with Lincoln would be to take one of the episodes of his life—to detach one of those beautiful touches and incidents that show how lenient he was, how high-minded with small or smaller men, how tactful; in a word, what an exalted and faultless gentleman. That is the work of comedy. But Mr. Drinkwater, with his serious bent of mind, is not a natural writer of comedies, and, moreover, in this particular stress of events it would be pointless to write a comedy about Lincoln. Therefore he has rightly chosen to present his play in the form of a dramatic chronicle of Lincoln's life, to present it with intention, and to make a fairly definite application to our own war."

But at this point the *Nation's* editor enters a caveat, for, as he says, "if there was one thing more than another which insures Lincoln's immortality, it is his style." Going on:

"He and another great orator, Bright, wrote and spoke magical English: at their best they could not do anything else. You can not alter a word in the Gettysburg speech any more than you can change a word in the Ode on a Grecian Urn. Mr. Drinkwater has found it necessary to compress a good many of Lincoln's sayings into a small compass in order to produce the continuous and illustrative effect at which he aims. That is pardonable. But Lincoln, the politician, is one man; Lincoln, the maker of words that glorify our speech forever, is another, and an absolutely inviolate personage. Therefore I hope that when Mr. Drinkwater produces his play in London he will relieve it of the blot which takes a portion of the last sentence

Copyrighted by Life Publishing Company

TOWARD MORNING.

Mr. Gibson's mordant cartoon shown in the Allied War Salon is apropos to the moment.

"In the first year of the Civil War such a song as 'Tramp, Tramp, Tramp, the Boys Are Marching' could not have been written; it needed the great losses of the North to bring it out.

"'Over There' was surely the great song of this war, as 'John Brown's Body' was of the other. George M. Cohan is entitled, not for the first time, to the credit of having his hand on the people's pulse, of being a real interpreter of their moods. 'The Yanks are coming, the Yanks are coming, and we won't come back till it's over, over there,' and the gay but threatening melody epitomized the whole struggle from the American viewpoint. Later Cohan struck another chord, 'When you come back, and you will come back, there's a whole world waiting for you,' but here he only touched a phase. In the earlier song he struck the national note, as George F. Root struck it in the old war with his 'Rally Round the Flag.' Root, too, had his song of a single phase, 'We are coming, Father Abraham, three hundred thousand more.' We may call Cohan the Root of this war.

"Next to Cohan must be placed Irving Berlin, with his 'I Hate to Get Up,' tho he wrote others. The two catchiest lines, those which paraphrase the bugle-call, were not original, having been used in the Army long before he entered it; but it was he who made a song around them, a song that was sung all over the country by soldiers and civilians, sung in France, too. Ivor Novello's 'Keep the Home-Fires Burning' was written before the war, but is entitled to rank as a war-song, because it was adapted to the purpose; and the same may be said of Zo. Elliott's 'There's a Long, Long Trail,' which the soldiers across the water sang on their marches.

"'Good-by, Broadway; Hello, France!' was first in the field, went well while it lasted, but was too commonplace to hold out. As popular a song as any was 'Joan of Arc,' which had two singular points about it. The author, Alfred Bryan, was also the author of 'I Didn't Raise My Boy to Be a Soldier,' which was in great favor among the pro-Germans and pacifists before we went into the war. When we did, it dropt out of sight instantly, and Bryan as quickly changed his sentiments and caught up with 'Joan of Arc,' which is as militaristic a song as could be written. It is irritatingly commonplace in words, but the music by Jack Wells is inspiring, and a French translation has been made of it which is a real poem, whereas Bryan's En-

glish words are bathos, made all the worse by such absurd mistakes as placing Normandy among the victims of the German invader. In place of that blunder the French translator used words which in English would read, 'The bells of Reims they sound in pain,' thus changing a turnip into a rose."

Sentimental songs were naturally the voice of the home people. "Your Boy and My Boy," "Hello, Central, Give Me No Man's Land," "Bring Back My Daddie to Me," and "America, Here's My Boy," tried to express the sentiments of sacrifice, of yearning for absent ones, of loneliness of those left behind in security, while the soldier with all his emotions needed for the work in hand sang "Pack Up Your Troubles in Your Old Kit Bag." There was a common meeting-ground too:

"We all joined the soldiers enthusiastically in Geoffrey O'Hara's 'K-K-K-Katy,' which, written by an army man, has real soldier humor. It ranks with 'The captain with his whiskers stole a sly glance at me,' the comic soldier-song of the old war. In fact, the presence of so many merely sentimental and worthless songs is a fact growing out of the shortness of this war; they could be duplicated in the earlier war. It was not until that struggle had grown deadly that we came to such desperately earnest songs as 'Rally Round the Flag.' Yet the early days of that war gave us, on the Confederate side at least, such a splendid thing as Randall's 'My Maryland!' and such a rousing battle-song as 'The Bonnie Blue Flag.' There has been nothing to approach them in the war just ended. As for the soldiers, they obstinately refused to sing martial songs set down for them, just as they have in this war; and where our soldiers sang 'The Long, Long Trail,' written before the war, so the soldiers of the Civil War sang 'The Years Creep Slowly By, Lorena,' written before that conflict. 'Dixie,' the greatest war-song of those days, was made so by the soldiers; it was in reality a minstrel melody written two years before the war.

"The two wars were linked in a noble fashion in one song. John Hay's fine poem, 'When the Boys Come Home,' written in Civil-War days, was set to fine music by Oley Speaks in 1917, and became the noblest musical expression that the A. E. F. ever found."

RELIGION-AND-SOCIAL-SERVICE

TREES TO KEEP GREEN THE MEMORY OF OUR HEROIC DEAD

A CHURCH IN TACONY, PA., has been the pioneer in a movement that may become of world-wide observance. It is to plant trees in memory of soldiers and sailors who died in the war. The more the suggestion spreads the wider it receives approval. Besides the memorial element in the act, it is a kind of reparation paid to universal nature for the devastation of some of her fairest countrysides. Then, too, it is a grateful recognition of the service rendered by inanimate nature in the great effort of defense. It has been said that France's great forests were more effective barriers against the Hun than anything that man has been able to build; and one of the most dramatic episodes in America's active participation in the war occurred in the depths of a vast forest. It is a coincidence worth noting that the poet-soldier with whom this paper has been most intimately associated wrote what many critics believe to be his best poem in praise of trees. It is this poem which the American Forestry Association has put forth in its *Bulletin* as a means of propaganda for its idea, and we reproduce it here. The church which has first put the new plan into execution deserves mention first. *The Bulletin* informs us that other churches are planning to do likewise:

"Four memorial trees have been planted on the lawn in front of the Episcopal Church of the Holy Innocents, Tacony, Pa., to keep fresh the heroic sacrifice of their lives by four of the town's sons who died in France. Two of the men were killed in action, the others died in hospitals close behind the battle-lines, according to a report to the American Forestry Association, Washington, which is urging the planting of living, growing trees to commemorate the brave deeds of America's soldier and sailor dead. Relatives and friends of the Tacony heroes participated in the planting; there was a brief address by Rev. Robert A. Edwards, rector of the church of which the men were members, and the choir sang appropriate hymns. Plans are being made in many other parts of the country to honor in similar manner the men who died in democracy's cause."

Next after this Tacony church comes a State of the South announcing itself as having taken definite action:

"In memory of her sons who gave their lives in the Great War, Louisiana is planning to plant 440 miles of 'victory oaks' and other suitable trees along Jefferson Highway, the State's principal road which runs from north to south and connects with the highway that extends all the way on to Winnipeg, Canada. The plan advocated by the American Forestry Association, Washington, has been approved by Governor Pleasant, who declares that 'no more fitting memorial could be reared to our soldiers, dead and living.' The details of the memorial have been turned over by him to M. L. Alexander, head of the department of conservation. The trees will stand about forty feet apart. Oaks will be used wherever possible, altho in some parts of the State other trees will thrive better."

"Many of the State governors and other officials, as well as patriotic organizations of various sorts throughout the country, also have written to the American Forestry Association expressing their hearty approval of this method of honoring this country's soldier and sailor dead."

"Let the cult which commemorates heroism and sacrifices be preached anew," says Mr. Robert S. Conklin, Commissioner of Forestry for Pennsylvania, "and our whole people be brought to a realizing sense of the terror and threatened destruction through which, happily, we have just come." He adds:

"There is no more suitable method of commemorating the deeds of heroism of our soldiers and sailors. Let the memorial trees be planted; let them be put in prominent places. . . . We feel there is no more beautiful method of commemorating the deeds of

heroism of our soldiers and sailors in the Great War than by erecting to their memory a memorial which will remain green and flourishing for scores of years and be a constant reminder by the return of each period revival of the fresh memory of the one in whose honor it has been planted."

Mr. Charles Lathrop Pack, president of the American Forestry Association, and a great many others, Governors of States, and men prominent in public life, give the scheme their hearty approval. Mr. Pack writes:

"What finer tribute can be paid the men who have given their lives in the great cause, what finer tribute can be paid that man or the man who came out of the struggle alive than the planting of a living tree in his honor—a living tree that will go on after him and keep fresh the memory of his deeds."

THE TREE

BY JOYCE KILMER

Who Gave His Life in
France

I think that I shall never see
A poem lovely as a tree.

A tree whose hungry mouth
is prest
Against the earth's sweet
flowing breast.

A tree that looks at God all
day
And lifts her leafy arms to
pray;

A tree that may in summer
wear
A nest of robins in her hair;

Upon whose bosom snow has
lain;
Who intimately lives with
rain.

Poems are made by fools
like me,
But only God can make a
tree.

PAPAL NEUTRALITY INDICTED AND DEFENDED

PRESIDENT WILSON'S VISIT to the Pope, which has been looked upon as likely to take place, can be undertaken "without danger of embarrassment because of the difference between the Vatican and the Quirinal." So a Paris dispatch to the *New York Tribune* announces, citing the precedent of King Edward's visit as establishing the etiquette of the program. What will be the subjects of conversation between the two remains a matter of interesting conjecture. *The Living Church* (Milwaukee) refers to "pressure" having been brought to bear upon the President "to use his influence with the Allies to secure representation of the Pope at the Peace Conference." It also calls to mind the secret correspondence published by the Russian revolutionists a year or more ago wherein it was shown that the Allies had agreed that no such representation should be allowed. This Protestant Episcopal organ sees the possibility of influence sufficiently strong to lead to a reversal of this determination and it "earnestly hopes" that "American public opinion will be emphatically recorded in dissent of any recognition of the Pope." In support of this view we read:

"It is quite possible that the facts may never be positively known; but the impression that the Kaiser promised the restoration of the Temporal Power of the Pope in the event of his victory seems to rest upon a very strong probability. It would give to the Kaiser a strong hold over the Pope during the continuance of the war, would be his most effective punishment of Italy, and would forever give him and his successors, along with the inherited privilege of Austria, a strong control over papal elections and policies. Through the Pope, the Kaiser would rule such portions of the world as would not have been brought under his more direct sway. It is inconceivable that all this advantage was not thought of by the Kaiser and by his Austrian catspaw, and the papal attitude throughout the war fits admirably into such an understanding.

"No doubt it is true that no certain evidence of this is in possession of the Allies. It may easily have been so insidious an understanding that actual evidence does not exist. But the Allies are at least justified in taking the ground that, once and forever, the temporal power of the Pope is ended and will never again be established. American opinion may well insist upon this and the American press lay stress upon it. It is not a matter of religious prejudice. It is not a matter of unfriendliness to a great, world-wide religious communion. It is rather a firm, unalterable determination that admits of no compromise. Rome never again shall, never again can, resume a temporal power over particular states nor a temporal influence over sovereign nations. And the sooner this is realized by the Pope and his associates—we believe it is already recognized approvingly by the vast majority of Roman Catholics in this country—the sooner will the Pope be freed from the imaginary imprisonment of his body and the real and vital imprisonment of his soul."

The Pope's attitude toward the belligerents during the war was one subjected to more or less bitter criticism in many countries along this line, so much so, in fact, that one of his spokesmen here reviews the question and pleads for a proper understanding in order that the ends of religion may be served. "Without the latter the benefits of victory can not be secured for Christianity," says the Right Rev. Monsignor Fay, domestic prelate to the Pope and chaplain to Cardinal Gibbons, who protests against what he names "baseless attacks and

THE POPE HOLDING A PEACE MEETING.

This painting, the first ever made of an assembly in this papal chamber, shows Pope Benedict receiving the Cardinals to offer special prayers for the end of the war. The time was shortly after Germany asked the United States for peace.

unwarranted assumptions concerning the purposes of the Catholic Church." But Monsignor Fay, speaking to a representative of the *New York Evening Post*, declares that he is "unable to understand why the impression prevails that the Pope has said nothing on moral questions, or that the Papacy has been dumb in the face of German atrocities." A review of the various activities of the Pope, we are assured, shows that he has indeed spoken on many occasions. "He protested against the rape of Belgium, against the breaking of treaties, against the use of the submarine, against the bombing of unarmed towns, and against the deportation of the Belgian population." The Monsignor qualifies:

"It is true that these things were done by diplomatic notes, except with regard to Belgium, when the Holy Father made his statements in open consistory; but these notes are the only way the Holy Father can express himself. What I conceive people would have him do would have been the condemnation of Germany that would have made it impossible for German Catholics to support their Government.

"It must always be remembered that when the Pope speaks he does not express a personal opinion, or an exalted official opinion, but he speaks as the head of the only international religious body in the world, and he speaks to be obeyed. He must, therefore, be much more careful than the heads of other religions who do not have the same authority over their followers that he does.

"If he had threatened Germany, he would have been absolving German Catholics from allegiance to their sovereign. The Holy

See has not used this authority since the sixteenth century, and it is the general opinion of Catholic theologians that it is not inherent in his place as pastor, and the Catholics of the English-speaking world obtain exemption from papal laws by professing that the Pope has no such power.

"It would have been horribly dishonest if the Pope had used the circumstances of this war to claim this power again. It could have been said, and not without justice, that the Pope had used the position of the Allies to claim an advantage which he could not have gained in normal times. It would have put German Catholics in the position of declaring that he was using the same circumstances to embroil them with their governments and make their lives impossible.

"The Church is supreme in her own domain, and the state is supreme in its own domain, and therefore the Pope must be most cautious in expressing views when those views have political complexion. He used his most efficacious means of protesting against Germany's actions, without imperiling the relations of any Catholic to any government, whatever it might be. And, indeed, as the German newspapers have not failed to point out, his condemnations have fallen on them, and not on the Allies.

"Even in the first days of the war, when the triumph of Russia, as then constituted, would have meant the destruction of the Catholics of Eastern rites united to the Holy See, only once did he speak, and then directly to the Russian Government, about the exile and imprisonment of the Archbishop of Lemberg, and the attempt to destroy the Catholics of Ruthenia by placing over them a bishop out of communion with Rome. This was not a condemnation of the Allies, but simply a condemnation of the Government of Russia.

"Catholics do not distinguish between the Papacy and the Catholic religion, altho in past times they have often distinguished between a reigning Pope and the Papacy. The Papacy is a necessary and constituent part of our religion."

"PRAYING GENERALS"—The pronounced religious tone of the leading officers on the Allied side is a quality that matches itself with the justice of their cause. Our readers have already seen how devout a man is Marshal Foch. That the head of the American forces as well as generals of the British are praying men is one of the personal factors noted by *The Congregationalist* (Boston), which sketches the scene on Thanksgiving day at Chaumont, the American headquarters in eastern France, where a formal service was held under the auspices of the leaders of our American Army with many dignitaries present representing the Allied nations:

"The commander of the American forces made an address in which all boasting was conspicuously absent and the serious and religious note was dominant. Here are some of his striking words with regard to recognition of the divine help without which even the superb valor of our troops might not have been crowned with success.

"Victory was our goal. It is a hard-won gift of the soldier to his country. Only the soldier knows the cost of a gift we now present to the nation. As soldiers inspired by every spiritual sentiment, we have each silently prayed that the success of righteousness should be ours.

"Great cause, indeed, have we to thank God for trials successfully met and victories won. Still more should we thank him for the golden future, with its wealth of opportunity and its hope of a permanent universal peace.

"With thankfulness, we humbly acknowledge that his strength has given us the victory. We are thankful that the privilege has been given to us to serve in such a cause."

"These words of General Pershing recall the remark credited to that stern British soldier, Lord Kitchener, when the news came to his London office in October, 1914, that General Joffre had thrown the Germans back at the Marne. 'Somebody has been praying.' Marshal Foch's well-known custom of taking a portion of every day for quiet meditation and prayer and the devout spirit of General Allenby, the conqueror of Jerusalem, must also be noted in this connection.

"That men of iron like these military leaders in the cause of freedom have all through these terrible months realized that 'if it had not been the Lord who was on our side, then the proud waters had gone over our soul,' should carry a powerful lesson to the whole world."

COST OF RUNNING THE RED CROSS

THE VALUE of our recent generous giving is emphasized in the report of the War Council of the American Red Cross. Funds so large pay the costs of their administration in the very interest they earn before they are disbursed. So, it is stated in a Washington dispatch in the *New York World*, that "for each dollar contributed by the American people for war-relief work more than one dollar and one cent is expended for that purpose, the extra cent being provided by interest on the funds." Expenses of operating the national and divisional headquarters of the organization come from a fund provided by membership dues, the war-fund not being drawn upon for any but relief expenditures. For the lover of details the correspondent has compiled a succession of interesting statements which we quote here:

"The total management expenses of the organization for the fiscal year was \$2,164,865. Included in this total was the amount necessary to maintain the organization at national headquarters in Washington, the heart and brain of the Red Cross, and the fourteen divisional headquarters, the arteries of the organization running through continental and territorial United States. These divisions have immediate supervision over some 3,864 chapters, which in turn divide themselves into many thousands of branches.

"The above total expenditure for the administrative bureaus at headquarters was divided as follows: War Council staff, which includes advisory committees and clerical forces reporting to the War Council, the latter body directing all Red Cross activities, \$58,537; general manager's office, \$111,640; department of development, which directs the money-raising and membership campaigns and the work of the chapter organizations, \$197,126; department of publicity, including costs of printing, postage, etc., \$197,812; department of accounts, \$76,222; office of treasurer, \$22,348; office of secretary, \$17,980; bureau of standards, \$36,329; department of foreign relief, \$5,685; bureau of cables, \$3,463; bureau of insurance, \$940; administrative supplies, \$40,816; operation of buildings and grounds, \$92,058. All the foregoing items refer to the national headquarters organization. The expenditure for maintaining the fourteen divisional headquarters was \$1,303,910.

"At the time the report was compiled there were 8,512 persons employed in various capacities at national, divisional, and the different foreign headquarters of the organization, close to 2,000 of this number being volunteer workers. More than 3,500 workers are employed overseas."

The small army of paid workers necessary for the enterprises undertaken number by this report 6,234. A majority receive between \$600 and \$1,000 a year in salary, tho \$1,500 and over is the wage for some. Specifically,

"There are 723 employees receiving salaries of from \$1,500 to \$2,000 a year, 214 from \$2,000 to \$2,500, 94 from \$2,500 to \$3,000, 77 from \$3,000 to \$4,000, 28 from \$4,000 to \$5,000, 16 from \$5,000 to \$6,000, 12 from \$6,000 to \$6,500, 6 from \$6,500 to \$7,800, and one \$10,000. The Red Cross is a great business as well as relief organization and requires specialists in many lines. Many of the executives are volunteers who gave up high salaries in private life to work for the Red Cross, not as 'dollar-a-year-men,' but absolutely without salary recognition.

"The unpaid workers on the roster are not to be confounded with the more than 8,000,000 volunteer women workers who perform Red Cross labors in the workrooms of the organization. The fact that these patriotic women give their services free, turning out last year alone finished articles with a value of \$44,000,000, makes it possible for the Red Cross to keep its operating expenses at such a low level.

"After \$107,716,348 had been appropriated for work in Europe and the United States there remained in the treasury on July 1, 1918, the beginning of the current fiscal year, the sum of \$50,879,023. . . .

"The appropriations for foreign relief were divided as follows: France, \$36,613,683; Italy, \$6,410,630; Great Britain, except Canada, \$3,684,529; Belgium, \$1,432,374; Russia, \$1,216,685; Roumania, \$2,714,610; Servia, \$1,000,582; Switzerland, \$807,937; Armenia, Syria, and Palestine, \$3,461,827; Canada, \$500,000; Poland, \$200,000; Portugal, \$6,000; miscellaneous foreign relief expenditures, \$1,739,813."

Peace - and Packages

Christmas boxes—straight from home—have made two million Yanks hilarious.

Cars and trucks sped delivery—just as they did back here.

Wherever the flag flies, the mission of motor vehicles is the same—to avoid delays, cut down congestion, and to rush deliveries.

They have become essential units in our national transport system.

That's why thousands of concerns who require

quick, dependable delivery at low cost equip their cars and trucks with good tires—United States Tires.

War tried and proved the surplus strength of United States Tires.

It is this tremendous and lasting vitality that guarantees longest life, highest type of service and lowest cost per mile.

Five distinct types for delivery and passenger cars. Both pneumatic and solid tires for trucks.

United States Tires are Good Tires

United States Tubes and Tire Accessories Have All the Sterling Worth and Wear that make United States Tires Supreme.

Don't let him camouflage *your* brakes

"Cheap" brake lining is often hidden beneath the brake bands. You only find this out when the lining quickly wears away or refuses to hold. Then the car goes back to the shop for *new* lining followed by another repair bill, and what is more important—your car is temporarily out of commission.

Make every dollar do the work of two. Save gas by coasting. Conserve it by stopping engine when standing. Buy good oil and tires. Get substantial *wear* at the brakes with Raybestos, *guaranteed to wear one year*. Raybestos "grips", it gives added security and insures satisfactory service.

Raybestos

BRAKE LINING

You can readily tell whether or not *your* brakes are lined with *real* Raybestos. Every inch of genuine Raybestos is edged with silver.

The Silver Edge Protects You from "Cheap" Substitutes
THE RAYBESTOS COMPANY, Bridgeport, Conn.

HUNGER—THE BLACK SHADOW

"I'M HUNGRY!"

How many dozens, scores, hundreds of times you have used those words! Very likely you have said it within twenty-four hours of the time of reading this article. And yet when you made that remark the chances are that you were indicating only a passing discomfort—a hunger that would probably be allayed within a few hours.

Quite another sort of hunger is that desperate kind toward which the future holds no gleam of hope. The hunger which you have so often felt is to the real hunger of famine as a mere rivulet to Niagara.

Such a comparison will serve to indicate to you the kind of hunger which Europe is already undergoing or is threatened with. Truly it needs no graphic presentation in map form to call famine a Black Shadow. And yet even a shadow may have gradations. To-day it is everywhere recognized as the duty of any nation where there is food to spare or where such a surplus can be created to destroy this shadow, making it lighter and lighter until at last it disappears and health and the opportunity for normal existence are restored to stricken peoples.

Obviously, famine can not be relieved in Europe—no matter how favorable shipping conditions or how successful conservation efforts—unless the situation is exactly understood. The best way to make clear the conditions in Europe to-day is by means of such a map as is given here. You will note that this map is dated December 1, 1918. Due allowance must be made for that fact, because what was true on that date in some particular country may grow better or worse almost overnight. One of the tasks before our people and our Government to-day is to strive to make every new hunger-map show conditions which are less acute.

Moreover, there are certain special conditions which make it imperative to relieve some countries sooner than others. To find an example of this, one need look no farther than Belgium, northern France, and Serbia. Even with small imagination it will be instantly recognized that those countries, devastated, undernourished, and stripped bare of food and agricultural equipment by enemy occupation, are in such straits as to require immediate relief—relief which is already being sent them from America.

Similar conditions resulting from warfare are to be seen in Roumania, Russia, Poland, Finland, and among the Czechs and

Jugo-Slavs. In all those regions, whereas there have been about five million deaths by war, deaths by famine in the same period have amounted to more than twenty million. Armenia has been given over to massacre. No food could be imported and only secret sowing and reaping have been possible.

Russia also has been torn by external and internal discord. There has been disruption of transportation and of all normal business life. Under three years of famine Poland has lost one-fourth of her population. In Finland the blockade has supplemented the distress caused by revolution, and the

same terrible conditions are unfortunately true among Czechs and Jugo-Slavs.

To be sure, there are portions of northern and eastern Russia where there is still a remnant of agricultural equilibrium. But such sections, like Roumania and Greece, are constantly threatened with famine.

As the map indicates, less acute hunger conditions exist in Italy, Bulgaria, Turkey, and Switzerland. But even so, the predicament of these lands is still serious. According to the map there is a sufficient present

food-supply in England, France, Spain, Portugal, the Netherlands, Ukraine, and the Scandinavian countries. But the threat of hunger lurks always in the background.

Of the four hundred and twenty million people probably included in the areas mentioned, only a small proportion at present have food enough to last until the next harvest. Now, it is true that the removal of the sea blockades will permit food to have access to many countries heretofore cut off from outside relief. Nevertheless, Belgium, Serbia, Roumania, Greece, the Czechs, and Jugo-Slavs must be helped systematically and immediately.

Time will prove a great factor in relief work. Some countries must be supplied at once; others can help themselves at the moment, provided they are given guaranties of food for the future.

As well as supplying food to stricken nations, we must contribute to their upbuilding in every way, for famine seldom ceases while nations are in chaos. Later maps may show different conditions from this presented above, but not for a long time will they indicate that there can be a slackening of aid, for it is no exaggeration to say that the Black Shadow of Hunger which hangs over Europe, in its spirit and evil possibilities, hangs over the entire world.

HUNGER MAP of EUROPE.

CURRENT POETRY

THE old year is dying—the year of victory—and the new year of peace is at hand. A young cadet in the air service has echoed what we must all be thinking this New Year in this poem from the *Denver Rocky Mountain News*:

THE NEW YEAR

BY THOMAS HORNSEY FERRIL

The last note of the sounding bugle dies.
The drums are still. Into the realm of years
Which are no more, where even memories
Are dead, and petty jealousies and fears
Have ceased to be, where bitterness has gone,
And only leaves behind a heritage
Of happiness, the Old Year passes on.
The echoes now are still. Time lifts the page
Of young men's blood and battle-fields of death,
And, as he turns it o'er, in love of them
Who gladly sacrificed their mortal breath,
The clear-voiced bells ring out a requiem.
And with the bells a New Year has begun;
Then beams the dawn of Hope, the night is done.

Our New Year of Peace has been brought about in great part, they tell us, by the Allied fleets, which have rendered the work of our soldiers possible. The English Poet Laureate tells us in the *London Times* of the knight-errantry of the sailor.

THE CHIVALRY OF THE SEA

BY ROBERT BRIDGES

Over the warring waters, beneath the wandering
skies,
The heart of Britain roameth, the Chivalry of the
sea.
Where Spring never bringeth a flower, nor bird
singeth in a tree;
Far, afar, O beloved, beyond the sight of our eyes,
Over the warring waters, beneath the stormy
skies.

Stanch and valiant-hearted, to whom our toil
were play,
Ye man with armor'd patience the bulwarks
night and day,
Or on your iron coursers plow shuddering
through the Bay,
Or 'neath the deluge drive the skirmishing sharks
of war;
Venturous boys who leapt on the pinnace and
rowed from shore,
A mother's tear in the eye, a swift farewell to say,
And a great glory at heart that none can take
away.

Seldom is your home-coming; for ay your pennon
flies
In unrecorded exploits on the tumultuous wave;
Till, in the storm of battle, fast-thundering upon
the foe,
Ye add your kindred names to the heroes of long
ago,
And mid the blasting wrack, in the glad sudden
death of the brave,
Ye are gone to return no more. Idly our tears
arise;
Too proud for praise as ye lie in your unvisited
grave,
The wide-warring water, under the starry skies.

While all our sailors show the chivalry of the sea, not all of them have the gift of expression of that Laureate of the Fleet who is known as "Klaxon." He is the commander of a British submarine, who has sung the deeds of the navies—our own and his—with a vigor and vim all through the war. His poems have been collected into a volume called "Songs of the Submarine" (McBride, Nast & Co., London and New York), which is sold for the benefit of the Red Cross. From it we take a few characteristic examples of our poet in his

varied moods. Here is a purely poetic fancy.

OVERDUE

BY "KLAXON"

In the evening—in the sunset—when the long
day dies,
Out across the broad Atlantic, where the great
seas go,
When the Golden Gates are open and the sun-
light flies,
The fairy Islands drift and fade against the
crimson glow.

In the evening, when the fiery sun was sinking
in the West,
St. Brendan and the chosen few went sailing out
to sea,
To the Westward—to the sunset—to the Golden
Isle of rest,
The haven of the weary men, the land of Faerie.

Is it only in the sunset we may find the Golden
Fleece?
Is it only to the Westward that the Fairyland is
found?
And those who went away from us and passed
from war to peace—
Are they looking still for Fairyland the wide
world round?

Then as I gazed across the dark the morning
answer came—
To eastward stretched the golden sea for many
a golden mile,
The far horizon joined the sky in dancing lines
of flame—
And drifting on the seas of dawn, I saw St.
Brendan's Isle.

Next a vivid picture of the silent watch in the North Sea—a poem full of spray and wind and cold:

WET SHIPS

BY "KLAXON"

"... And will remain on your Patrol till the
8th December. . . ." (*Extract from Orders.*)

The North-East Wind came armed and shod
from the ice-locked Baltic shore,
The seas rose up in the track he made, and the
rollers raced before;
He sprang on the Wilhelmshaven ships that reeled
across the tide.
"Do you cross the sea to-night with me?" the
cold North-Easter cried—
Along the lines of anchored craft the Admiral's
answer flashed,
And loud the proud North-Easter laughed, as the
second anchors splashed.
"By God! you're right—you German men, with
a three-day gale to blow,
It is better to wait by your harbor gate than
follow where I go!"

Over the Bight to the open sea the great wind
sang as he sheered:
"I rule—I rule the Northern waste—I speak, and
the seas are cleared;
You nations all whose harbors ring the edge of
my Northern sea,
At peace or war, when you hear my voice you
shall know no Lord but me."
Then into the wind in a cloud of foam and sheets
of rattling spray,
Head to the bleak and breaking seas in dingy
black and gray,
Taking it every lurch and roll in tons of icy green
Came out to her two-year-old patrol—an English
submarine.

The voice of the wind rose up and howled through
squalls of driving white:
"You'll know my power, you English craft,
before you make the Bight;
I rule—I rule this Northern Sea, that I raise and
break to foam.
Whom do you call your Overlord that dares me
in my home?"
Over the crest of a lifting sea in bursting shells of
spray,
She showed the flash of her rounded side, as over
to port she lay,

Clanging her answer up the blast that made her
wireless sing:

"I serve the Lord of the Seven Seas. Hal! Splendor
of God—the King!"

Twenty feet of her bow came out, dripping and
smooth it sprang
Over the valley of green below as her stamping
engines rang;
Then down she fell till the waters rose to meet her
straining rails—
"I serve my King, who sends me here to meet
your winter gales."
(Rank upon rank the seas swept on and broke to
let her through,
While high above her reeling bridge their shat-
tered remnants flew);
"If you blow the stars from the sky to-night, your
boast in your teeth I'll fling,
I am your master—Overlord and—Dog of the
English King!"

The sailor has always a tender spot for the "girl he left behind."

TO D. V. B.

BY "KLAXON"

They watch us leaving harbor for the greatest
game of all,
And wonder if we're coming back across the
greedy sea;
They never know the fighting thrill or high ad-
venture's call—
I rather think the women folk are better men
than we,
But I suspect they say of us as out to sea we go,
In all our panoply of pride from Orkney to the
Nore:
"It keeps them quiet, we suppose—they like the
work, we know—
And soon perhaps they'll tire and play some
safer game than War."

"Klaxon" pays a fine tribute to our boys in a half-humorous vein:

THE SAILOR'S VIEW

BY "KLAXON"

Too proud to fight? I'm not so sure—our
skipper now and then
Has lectured to us on patrol on foreign ships
and men,
And other nation's submarines, when cruising
round the Bight;
And 'seems to me—when they begin—the Yankee
chaps can fight.
Why, if I was in the Army (which I ain't—and
no regrets),
And had my pick of Generals, from London's
latest pets
To Hannibal and Wellington, to follow whom I
chose,
I wouldn't think about it long—I'd give the job
to those
Who fought across a continent for three long
years and more
(I bet the neutral papers didn't say in 'sixty-four
Of Jackson, Sherman, Lee, and Grant, "The
Yanks can only shout"—
That lot was somewhere near the front when
pluck was handed out);
But what the Skipper said was this: "There's
only been but one
Successful submarine attack before this war
began,
And it wasn't on a liner on the easy German
plan,
But on a well-found man-of-war, and Dixon was
the man
Who showed us how to do the trick, a tip for me
and you,
And I'd like to keep the standard up of Dixon
and his crew,
For they hadn't got a submarine that cost a
hundred thou',
But a leaky little biscuit-box, and stuck upon her
bow
A spar torpedo like a mine, and they and Dixon
knew
That if they sank the enemy they'd sink the
David, too.
She'd drowned a crew or two before—they
dredged her up again,
And manned and pushed her off to sea.—My oath,
it's pretty plain

Perfect Mesh with Bailey

Bailey Ball Thrust "stands up" under gear thrust and keeps gears properly meshed. Drive is taken on two teeth instead of one. No noise, no lost power, no back-lash, no breaking of gears

Prevents Ford Rear Axle Trouble

FRICTION creates wear and wear causes trouble. Plain flat washers used at left side of Ford and Chevrolet 490 differentials, have a sliding instead of rolling contact, (as in a ball bearing), grind together, create tremendous friction and therefore wear thin. This causes drive gear and pinion to get out of mesh or shift away from each other. The drive then is taken on the weak part of one tooth only, instead of firmly upon two, and in a short time the strain causes a snapping of the gear teeth, resulting in rear axle trouble and repair expense. Moreover, fine particles of metal created through washer friction get into the other axle bearings and lessen their life and service.

But the Bailey Ball Thrust bearing with its rolling, micro-chrome steel balls, creates no friction—hence no wear. It must therefore make gears mesh properly, run quietly, smoothly and without an ounce of power wastage.

Each Bailey Ball Thrust bearing possesses the strength to withstand six times the thrust (or pressure) applied at any time and so we can and do unqualifiedly guarantee every bearing installed, and we insist that our dealers repeat this guarantee to the car owner. *During 1918 alone approximately 100,000 of these bearings were installed and they made good.*

See your dealer or repairman—he undoubtedly carries this bear-

ing in stock. Most dealers do. He will tell you how Bailey Ball Thrusts have helped other Ford and Chevrolet 490 owners in preventing axle trouble. All other cars are equipped with ball or roller bearings to take this gear thrust in order to eliminate friction and wear. If he cannot supply you, write us direct, giving his name; we will see that you are supplied. Price \$3.75. (Canada \$5.00).

An interesting folder on Bailey Ball Thrusts will be sent upon request. You may like to refer to it later in the season if your car is now in storage. Send for it.

FLEET OWNERS—The small initial cost of installing Bailey bearings is completely overshadowed by the decided saving effected in power and repair costs. Moreover, cars that are Bailey equipped stay in operation instead of being "laid up" because of gears broken through worn washers. Show this advertisement to the foreman of your car-repair department—his opinion will be undoubtedly to the effect that your upkeep will be materially reduced with the installation of this bearing, especially in cold weather when washers wear very rapidly. May we send further details?

BAILEY BALL THRUST

They had some guts to give away, that tried
another trip
In a craft they knew was rather more a coffin
than a ship;
And they carried out a good attack, and did it
very well.
As a model for the future, why it beats the books
to Hell,
A tradition for the U. S. A., and, yes—for England,
too;
For they were men with English names, and kin
to me and you.
And I'd like to claim an ancestor with Dixon
when he died
At the bottom of the river at the *Housatonic's*
side."

Every now and then "Klaxon" plays
the fool with frank deliberateness. Hear
him extol the virtues of the Ship's Cat:

THAT BLINKIN' CAT

By "KLAXON"

In the Diving-room, where the O. O. D. his weary
vigil keeps,
Battered and scarred with years of strife behind the
door she sleeps,
Fighting her battles o'er again as ancient warriors
may
With bristling fur as she dreams anew of many a
noble fray,

Savage and silent
Swift in the onslaught
As the great eagle
Stoops to the victim;
Guard of the Gangway,
Dreadful—prolific,
Mother of hundreds,
Terrier-strafer,
Messenger-biter.

Hail to the guard of the *Maidstone's* gangway—
Skool!

Sing of the day the air was full of words like
"Alabaster."

When she ate a piece of the Corporal's hand and
bit the Quartermaster;

The day she fought with an Alredale dog and
drove him back to shore,

For the sake of her sixty little ones—she fought—
and had some more.

Faithful and loyal,
Guard of the Gangway,
Turning the dogs back—
Yelping and howling,
Biting her masters—
Corporals—any one,
Fiercely domestic,
Easily queen of—
Pugnacious obstetrics—
Motherly War.

Hail to the terror and pride of the *Maidstone*—
Skool!

Sing of the day she won the fray with a new
Pandora dog,

And the Quartermaster shone with pride as he
entered in the log:

"At 10 P.M. we doused our pipes and drew the
'Nettle's' fires,

At 10-15 six births aboard—that blinkin' cat
of ours!"

The "brothers of the landward side"
are not forgotten, and the deeds of Scot-
land's sons inspire his muse.

TO THE SCOTTISH REGIMENTS

By "KLAXON"

Land of sorrow—tear and weeping,
Granite rock and falling snow,
Where Romance is never sleeping,
Where the fires of freedom glow.

Where the spark has never died, be the cause
however lost,

Be the breath however humble that would fan
it to a flame

From the shieling—from the castle, did they ever
count the cost

Ere they went to meet a rebel's death and
perished for a name?

While England learned the Roman tongue and
paid her tax to Gaul—

The Caledonian tribute-clashed along the Roman
wall—

From East to West the sentinels looked out
toward the North—

"*Amboglanna has sent for aid,
For the heather is bright with target and blade
Away to the silvery Forth.*"

When the Scottish host looked down and scorned
to charge the foe

That fled around the fatal hill and crossed the
stream below

When the flowers of the forest fell and withered
in the light

"*Shoulder to shoulder around the King,
Hear the claymore whistle and sing
Our funeral song to-night.*"

The English knew it at Prestonpans—the wall
against their backs

When down the slope the clansmen came with the
long Lochaber ax.

The dew on the grass and the morning mist and a
roar of charging men—

"*Pipers playing on either flank—
"Steady the volleys, the leading rank!"
The fires were blazing then.*"

And the spark has gone to Flanders, as the
Prussian butchers know,

For they learned at Loos and Hulluch from the
Caledonian sword

The prayer of Anglo-Saxon priests a thousand
years ago—

"From the fury of the Northern men, deliver
us, O Lord!"

Finally, a sea poem from the *Ottawa*
Citizen:

THANKFULNESS

By JOHN F. WADDINGTON

The old ship, the bold ship,
The Clipper of the Sea,
Beneath whose prow the waters slip
Foam-white and wondrously—
The vessel taut has come to port,
The voyage, thank God! is done;
The freight—how dearly was it bought,
And yet how bravely won!

From island and from highland
They went, the strong, the brave—
Alas! some bleach upon the sand,
Some rot beneath the wave!
Thank God for Jesus on bended knees
Who, tho the tempest drives,
Through rage of waters, tumbling seas,
Come safely with their lives.

The white ship, the tight ship
Lies harbor-wise, heaved to;
Drop down the sails, the anchor trip,
Pay off her valiant crew.
The anxious breast is now at rest,
Th' adventurers of the Foam
Are of their sailor-gear divest,
And each one seeks his home.

The old ship, the bold ship,
The ship that we have manned—
The ensign at the masthead dip
To Him who wisely planned.
And tho she rides upon the tides
That sweep in from the main,
First shall we be, if God decides
We must to sea again.

Camouflage is parody in paint. Here
is a quaint story from *The Westminster*
Gazette:

CAMOUFLAGE

By SIR FREDERICK C. GOULD

The Bittern took Camouflage lessons,
For he wanted to look like a stick,
And a Futurist artist in khaki
Taught him the vanishing trick;
He pointed his feathers with markings,
And drilled him to stand like a log,
Till he looked not a bit like a Bittern,
But just like a bit of the Bog.

REVIEWS OF NEW BOOKS

LAMARTINE, MAN OF LETTERS AND STATESMAN

Whitehouse, H. Remson. *The Life of Lamartine*. Illustrated. 2 vols. 8vo, pp. xiv-454, x-527. Boston and New York: Houghton Mifflin Company. \$12. Postage, 30 cents.

Inevitable is it that coincident with the decline of interest in Teutonic things and literature—we would better say, perhaps, a repulsion against them—the normal trend is inevitably Francophile. When "democracy" is the slogan of the hour, it is fortunate that the life of one of France's most noted champions of popular rights should appear as, perhaps, the advance guard of a series of studies in French life and literature. The elaborate study here presented is the more welcome because its subject was not merely a statesman and a political leader, but was also a literary genius properly numbered among the French "Immortals." Indeed, it was one of Lamartine's vexations that his contemporaries regarded his standing as a litterateur to be so far above his possible achievement as a political idealist that the reputation of that latter seemed in danger of permanent eclipse. Yet his literary ability was by himself rated far below his powers, certainly below his preference and ambitions, in the field of statesmanship.

Alphonse-Marie-Louis Lamartine first saw the light at Macon, October 21, 1790. His father was an army officer, his mother a woman of good social position. The events of 1792-4, through which his father was imprisoned for eighteen months, led to the family's settlement on a very modest estate at Milly, near Macon. Literature was native in the family, and in this atmosphere, perfumed by the writings of Rousseau, Voltaire, Racine, Fénelon, Tasso, and others, the boy's genius expanded at home, tho the material environment was that of the higher peasantry. At eleven he went to school at Lyons, where the hypocrisy and brutality of the masters disgusted him, and he ran away. Next we find him at the Jesuit school at Belley. In his nineteenth year he was still delicate and gave up school to establish health. After his wander-years, speckled with love affairs of various degrees, in 1814 he returned and became a member of the Gardes du Corps, which in the condition of affairs brought embarrassment. Meanwhile he had begun writing, and in 1818 his drama "Saul" was completed, tho not accepted for the stage. In 1819 he became the rage in society in Paris for his poetry, and in 1820 his first volume of collected poems, "Méditations," achieved instant, phenomenal, and enduring success—in ten years close to 40,000 copies were sold. It brought him an appointment as Secretary of Legation at Naples. In 1820 he married an English girl—a Miss Marianne Eliza Birch, and within the year left his post. By 1823, a second volume of "Méditations" was ready, and other works were rapidly finished and sold at good prices. He had already a pension for his literary work. The "Chant du Sacre," a poem with political flavor, came out in 1825, and the author became Secretary of Legation at Florence, where the next year he became *Chargé*.

In 1830 he became an Academician. The next year he failed of election to the National Assembly, and was in the midst of a voluminous political authorship.

A New Car—the Jordan Brougham

Jordan is the first to offer this new and approved type of car—the Jordan Brougham. It takes the place of the more extravagant enclosed cars used in the past.

You should drive your own car today—and there is a distinct satisfaction in personally operating a compact car of this type, as contrasted with the old fashioned bulky car of excessive length and weight, always cumbersome and extravagant.

It will accommodate the average family, seating five people comfortably in the full width rear seat and two individual seats.

The light, all-aluminum body is virtually dust and rattle proof, with broad vision—yet it may be opened so as to be practically out-of-doors.

It is hung low to the ground with very broad doors.

The interior provides for comfortable intimacy. Upholstery in smart worsteds over Marshall cushion springs. Paneling and mouldings are in Circassian walnut.

There is a dome light, individual reading lamps, clock on the instrument board. Windows operate with improved lifts. Front is entirely enclosed with a sloping three-part, weather-proof, ventilated shield.

There are Macbeth green visor lenses. Optional colors, Liberty blue and Brewster green.

Because of its extreme utility and timeliness this Jordan Brougham will be widely imitated.

JORDAN

Brougham

JORDAN MOTOR CAR COMPANY, CLEVELAND, OHIO

Why a Two Wheel Tractor

One man plowing 8 acres a day. All the weight goes into the pull — this gives great power on the draw-bar.

Changing from rear carrying track in disc harrow in 5 minutes. Rear of tractor can be supported by one hand.

Cultivating corn last time. Tractor has ample clearance to straddle row. One man cultivating 14 to 20 acres a day.

WHEN designing the Moline-Universal Tractor we did not follow the automobile or motor truck, which are complete units in themselves and carry their loads. A farm tractor must pull its load and is useless unless operated in connection with some farm machine. Thus, we built a tractor which does the same work that farm horses do, which operates under the same conditions and in much the same manner—but faster, cheaper and better. A two-wheel type of tractor is best adapted to farm conditions, because—

Ninety-eight per cent of its weight is placed on the two big drive wheels and is available for traction. This eliminates dead weight and enables the Moline-Universal to pull as much as tractors weighing from 1500 to 2000 pounds more. The Moline-Universal has enough power for heavy requirements, yet operates economically on light jobs. This is essential because farm power requirements vary from light work such as cultivating to heavy work such as plowing, and a tractor must be able to do all work economically and efficiently.

The two-wheel construction enables the Moline-Universal to be attached close up direct to the implement, so that one compact unit is formed. **ONE MAN** controls the entire outfit from the seat of the implement—the best position to manipulate the implement and make adjustments for varying field conditions. Tractor and implement go forward, backward and turn as one unit.

The two-wheel construction gives the Moline-Universal ample clearance for cultivating. On many farms more hours are spent in cultivating than in any other operation. Unless a tractor can cultivate row crops it will not replace horses on such farms.

Wonderful success on thousands of farms in replacing man and horse power, proves that the Moline-Universal is fundamentally correct in design—it doubles a farmer's efficiency. You will find the Moline-Universal Catalog mighty interesting—it's free on request. Address Dept. 63.

Moline Plow Co., Moline, Ill.

*Manufacturers of Quality Farm Implements
Since 1865*

Mowing a 10-ft. swath. One man operates tractor and implement from the seat of the implement. A real one-man outfit.

MOLINE

UNIVERSAL TRACTOR

In 1832 a visit to Greece and Syria resulted in his noted prose-poem, "Voyage en Orient," which, however, shocked fervent Catholics. While in Lebanon in 1833 he received notice of election as Deputy from Bergues, and at once set out reluctantly on his return.

Here began a new career, in which he added the reputation of orator to that of poet. His assiduity in preparing his speeches was so great that he soon became the equal in forensic ability of such men as Guizot, Thiers, and Count Molé. And this was as effective with a mob of rioters as before the more august Assembly. His first speeches are of interest at the present juncture. He advocated interposition in Turkey and liberation of Christians from the Turkish yoke, predicting the fall of the Ottoman Empire. Asia and Africa were to be colonized from Europe. Later he abjured his designs on Turkey as "an immoral plan of expropriation of the Ottomans!" He advocated the payment to the United States of twenty-five million francs agreed on by the treaty of 1831, but this was not met till 1836. Meanwhile France and the United States ceased diplomatic interchange.

In politics, even amid the heated party feelings of the period, he maintained a position of independence that was a trial often even to his friends. And yet the course of events frequently justified his course in *media via*, the affiliation with one of the parties might have gained for him greater practical influence. He advocated the separation of Church and State, and the elimination of the former from educational control. Education he would have absolutely free. His advice secured the dissolution of the Jesuit institutions of learning in France. One of his misfortunes as a politician was to be in advance of his times. Not the least notable instance of this is his express conviction that France and Great Britain ought to be the closest of friends. Nevertheless on the abdication of Louis Philippe in 1848 it was Lamartine who controlled the mob and secured the Provisional Government. The mastery he there exhibited has seldom been equaled, perhaps never surpassed, as he saved for France the honored tricolor when the mob desired the red flag to replace it.

Lamartine never again rose to the intrepid heroism displayed on this occasion, tho his splendid services were again and again rendered in whole-souled idealism to his country, through the period of the Napoleonic presidency and reestablishment of the Empire. Meanwhile his pen was indefatigable. Native genius, unquestioned talent, and unwearied application brought contributions to French literature that in all fill forty volumes, prose, verse, and correspondence, some of it as fine as even France has produced. An exception must be made, however, of the histories written as pot-boilers in his declining years.

With Mr. Whitehouse the work involved in producing these two fine volumes has been clearly a labor of love. While the balance of judgment is sustained throughout, it was inevitable that something of enthusiasm should here and there reveal itself. And this is welcome, since the subject was worthy. While condemnation of youthful follies and errors is not withheld, the judgment is even and the whole portrayal is excellent. With the tasty work of the publishers embellishing the result of the author's pains, here is, if we mistake not, one of the most notable books of the year.

A FRENCH VIEW OF AMERICAN IDEALISM

Rodrigues, Gustave. *The People of Action: An Essay on American Idealism*. Translated by Louise Seymour Houghton. With an Introduction by J. Mark Baldwin, Corresponding Member of the French Institute. 8vo, pp. iii-250. New York: Scribner's Sons. \$1.50 net.

Here is a volume by a Frenchman remarkable for three things: 1. A preface infused with a Frenchman's native grace and inspired by profoundest gratitude to a people who, without thought of return, offered its best and its all for the redemption and salvation of a continent from ruthless savagery; 2. An introduction by one of America's leading psychologists (eminently qualified, therefore, to judge), pleasantly but firmly traversing the author's pronouncements, and here and there tactfully modifying them while conceding the fidelity to fact of that author's main conclusions; 3. An analysis, in 250 pages of text, of America and Americans that leaves us both proud of some traits we hardly knew we possessed and inclined to smile pleasantly at the discovery of some of our defects, while firmly resolved to correct shortcomings so felicitously revealed.

This delightful Frenchman first tells the legend, or rather the caricature, which, e.g., the Teutons have continuously repeated during the last twenty years, especially the last four and a half—America a mere El Dorado, the American a dollar-hunting materialist, laboring ever in a workshop whose prodigious activity aims only to gratify crude, elementary instincts.

But he tells this legend only to declare its utter falsity. America was born to civilization, never passed through savagery with its load of hereditary hates and hazards. It never knew an autocracy, its birthright was democracy, self-government. It had no harsh economic heritage of serfs and slaves and feudal lords. Hence the American is an individualist, a maker of money not as a means of enjoyment, but as a way to power, a utilitarian but an idealist throughout. Liberty means for him emancipation of intellect, the realization of the individual; it is the engine with which to conquer destiny, the stuff from which to manufacture character.

Keeping these essentials in sight, Mr. Rodrigues traverses the subjects of American education—with its liberty for the children, their moral equality with parents, and the sacrifice of "culture to utility"; of man, with his opportunities and the self-confidence that ensues; and of woman with coeducation and "every one a feminist." As to the social organization, anarchy seems to be a danger; the power of personality gets vent so that the weak is eliminated; there is a predominance of Puritanism in thought and action, the sense of justice is strong, and altruism is near by. Under "The National Ideal" he avers that individualism is so strong that "there is no American nation." A review and estimate are given of the Declaration of Rights, the Union ("a union not a unit"), the President, and the Law. "Justice and legality are the bases of the American nation" is a declaration that qualifies implicitly what precedes. A splendid review of the heterogeneous make-up, of our citizenship, and of our foreign policy appears under the title, "The International Ideal"—American isolation, with corresponding ideas of an army and of war.

If Americans constitute essentially "a people of action," what is the character of the American soul. It is not philosophic, nor religious, nor esthetic, nor sentimental.

The American is a realist—"the most powerful and daring of realists, but only this." His idealism consists in action. For him Roosevelt's dictum is true: "The great thing in philosophy is not logic, but impassioned vision." Religion and art are employed "to bring strength to life, to intensify effort, to augment the confidence of the robust." "Energy, virility, savor," characterize his literature. American idealism is "practical, an ideal of realization." To the American "the world is a real adventure with real danger."

Here is a brilliant book, brilliantly Englished by an experienced and sympathetic translator.

RELIGION IN KOREA

Starr, Frederick. *Korean Buddhism*. One volume. 8vo, pp. 154. Boston: Marshall Jones & Co. \$2 net.

To find the links in a chain of civilization that has for two thousand years bound a third of the human race in a large measure of spiritual unity is a fascinating pursuit. In its delights, it is quite equal to following the chain itself. The lure of discovering the missing link between the culture of early India and of China and Korea and that of Japan has moved the professor of anthropology in the University of Chicago to enter this veritable Aladdin's cave of literary and artistic treasures. Not that the art of Korea—decadent for five hundred years after the brilliant millennium of Buddhism—can equal that of Japan or China; but the whole field was until this decade virtually unexplored, if not unknown. We have in this book a rivulet of clear, simple text flowing through banks of illustrations, numbering thirty-seven. Both are of the highest value to the student of Far-Eastern religions and of racial and ethnic connections. Dr. Starr does not profess to be a historian, but he modestly furnishes a potico, hoping that some scholar will do for Korea what others have done for Japan. He has certainly enriched the field for the historian to enter and build. The story of Korean Buddhism, from 369 to 1392 A.D., is one of strenuous pioneer toil and eager enthusiasms, with that subsequent smiting of decay and paralysis which come of gross feeding on the wealth and political power of this world while forgetting religion's high mission. The Buddhism of Korea is that of the northern stream, or Mahayana, Amida being the central object of worship. Its edifices and imposing relics in architecture are of stone; as in Japan they are of wood and bronze, as being necessary in an earthquake country. The Korean temples, monasteries, and repositories of pictorial art are of wood. This peninsular Buddhism is not dead, but, as Dr. Starr conclusively proves, is in revival and may yet be a force with which Japan must reckon, whether for good or for evil. As making real additions to knowledge this is one of the remarkable books of the year.

GREAT BRITAIN AND HER EMPIRE

Lavell, Cecil Fairfield, and Payne, Charles Edward. *Imperial England*. 7½ x 5 in., pp. xv-395. New York: The Macmillan Company.

To have the estimate of the British Empire by two professors of an American college at a time when millions of Britons are performing such heroic and prodigious feats on the battle-field is particularly opportune. It would be a difficult task indeed to compress into our limited space any adequate mention of the survey attempted by these historians. What they have aimed to do is "to narrate the British Empire as it is, and to show the British Empire as it may be."

Empire as it now stands in the midst of the Great War." When the war began in 1914, "the British possessions included over eleven million square miles of territory, inhabited by about four hundred millions of people. Of this vast population, over three hundred millions lived in India; one-quarter of the rest were Asiatic, African, or Australasian, natives of all stages of development; and the sixty or seventy million white British subjects, the 'dominant race,' were scattered over the five continents and the seven seas."

When one considers the extent of this territory, most of it far removed from the parliament of Great Britain and Ireland, the diversified and unorganized populations embraced, he is a little puzzled to know what is the latent power that binds them all, so that in a great crisis like the present they are practically a unit. To get at the answer, we need to get behind the great political organism itself and discover the motives and aims that have made it possible. In the acquisition of territory mixed motives of course did prevail. Markets, wealth, and power did influence and determine betimes the expansive movement. We are reminded at this point by the authors that the "heroes of British expansion have not been statesmen of the Frederick or Bismarck time, but the men of action, the Wolfes, Clives, and Livingstones, cooperating with traders, missionaries, and home-seekers."

When one finds a vast population like India giving expression, through her Thirteenth National Congress of 1914, in these words, "India would stand by the Empire in all cases and at all hazards," we can not but feel with the authors of this book that this whole-hearted allegiance and fulfilment of her pledge is the natural reaction of certain qualities in British rule—tolerance, sympathy, and justice. "They have proved themselves the most politically minded and most politically gifted of all races, not only by making Britain the mother of parliaments, but by the discovery that rigidity, uniformity, and centralization do not supply the secrets of political union" . . . and furthermore, "the discovery that political boundaries, political forms, systems of law, are none of them of final and sacred consequence, that an infinite variety of institutions may be consistent with unity of spirit and harmony of action, that sympathy and good fellowship matter more than any external form."

In this historical interpretation of the British Empire, beginning with an outline of the growth of English liberty and the beginning of sea-power, there follows a narrative of the founding of the colonies and the development of British Colonial policy. There is no effort made to overlook the blunders and iniquities of British rule, but in spite of these "they have constructed the greatest and, on the whole, the most satisfactory political organization the world has yet known."

SPANISH-AMERICAN LIBERATORS

Robertson, William Spence. *Rise of the Spanish-American Republics. As Told in the Lives of Their Liberators.* Illustrated. Pp. 380. New York: D. Appleton & Co. \$3 net. Postage, 15 cents.

Seven biographies, which succeed a Historical Background and precede a conclusion rather analytical than historical, are comprised in this carefully written volume. They cover, Dr. Robertson says in his preface, "a distinct period in the history of Spanish America, the transitional epoch from 1808 to 1831, which may be said to lie between the colonial period

proper and the directly national period." The seven men upon whom so much history hinges were Francisco de Miranda, Miguel Hidalgo y Costilla, Agustin de Iturbide, Mariano Moreno, José de San Martín, Simon de Bolívar, and Antonio de José de Sucre.

Of this number, the best known to Americans were Bolívar and Iturbide; the least known, Mariano Moreno. Iturbide was Emperor of Mexico within the memory of men living to-day; he was shot at Padilla, in that country, on July 19, 1824. Bolívar, born in Caracas, South America, July 24, 1783, became the "Liberator of Venezuela" in 1813, and was practically its dictator; and later he created the Republic of Colombia, consolidating Venezuela and New Granada, and made his power felt through all South America. In San Martín and De Sucre, Bolívar had helpers of singular ability and leaders on whom he could rely. "If God should give to men the right to select members of their own family," Bolívar is said to have declared, "I should select for a son General Sucre." Together the two men labored and fought for the establishment of another republic—Bolivia; and it was as "the Liberator of Colombia, Peru, and Bolivia" that Bolívar died, December 17, 1830.

To obtain his material from original sources, Dr. Robertson, who is Assistant Professor of History in the University of Illinois, spent a year in South America, and delved deep into the libraries found there. The extent of his studies, in the Americas and in Europe, may be inferred from the bibliography appended to his work, which runs to twenty-nine pages. His indefatigable patience gives to his readers a volume both monumental and illuminating, with regard to a period romantic and historic to an uncommon degree, in which appeared many characters and much history associated with the lives and labors of these seven men so well portrayed here.

AS TO PROHIBITION

Stelzle, Charles. *Why Prohibition?* Pp. 316. New York: George H. Doran Company. \$1.50 net. Postage, 12 cents.

Introducing himself, the author of this book makes a frank confession—"I am a prohibitionist." He adds, frankly, "I hate the name"; and he tells why—"it is negative and limited." But it expresses what those members of the community wish done with the liquor traffic who oppose it, and because he wants the liquor business abolished he accepts the word, the policy, which means abolishment. Regulation, he knows, must mean perpetuation, for you can not regulate what you do not perpetuate. Mr. Stelzle was born on the East Side of New York, where workers hive and swarm. He was a worker, a shop-worker, several years. His appeal now is oftenest to workingmen, with and for whom he has labored chiefly these more recent years, on the platform and with his pen. How liquor hurts them he knows thoroughly. What prohibition would do for them he proves, with arguments and figures which can not be refuted. Therefore he closes his opening confession in these words:

"And so, standing squarely for prohibition—but with malice toward none and with charity toward all—here goes for the toughest fight that I can put up against booze."

Some of his assertions are as blunt as they are true. Referring to "Personal Liberty and Prohibition," he says:

"You can not do as you please in a

democracy—not even with the things that are most precious to you. There's your body, for example. You've tenderly cared for it all through your life. Suppose you try to kill it—to commit suicide. If you succeed, Billy Sunday says you'll go to hell. If you fail, the law says you'll go to jail."

Considering booze from the worker's standpoint, Mr. Stelzle makes a strong point thus:

"Because Bill Jones 'booze,' he's worth \$2.50 a day. Because Jim Smith is sober and clear-headed, he's worth \$3.50 a day. But the boss must strike a fair average, so he pays each \$3 a day."

"If there are two men like drinking Bill Jones in the shop and one like sober Jim Smith, the average wage will probably be only \$2.75 a day. But if there are two men like Jim Smith and only one man like Bill Jones, their wage will likely be \$3.25 a day."

"The more men like drunken Bill Jones there are in a shop, the lower will be the average wage. The more men like sober Jim Smith, the higher the wage."

Opening the seventh chapter, on "Organized Labor and the Saloon," Mr. Stelzle makes a significant prophecy, in view of his close relation to labor, on behalf of which his long and careful study of the liquor problem has been maintained:

"Organized labor's next big fight will not be against the capitalists, not against the Socialists—its old-time opponents. The next great conflict of organized labor will be within its own ranks!—it will be between the forces representing the liquor interests and those who are opposed to the saloon and its influence within the labor movement."

Mr. Stelzle is manager of what is called the "Strengthen America Campaign," being conducted by the Federal Council of the Churches of Christ in America, some of whose colored posters, in reduced facsimile, form the book's closing page.

SPAIN'S IMPERIAL RISE

Merriman, Roger Bigelow. *The Rise of the Spanish Empire in the Old World and the New.* Two vols. 8vo, pp. xxviii-529, xviii-357. New York: The Macmillan Company. \$7.50. Postage, 32 cents.

These volumes are symptomatic and prophetic. Serious interest in things Teutonic—history and literature—is eclipsed, and that interest will for long and to a considerable extent be focused upon things Spanish and Portuguese. During our "little war" with Spain there was, to be sure, a spasmodic and brief awakening to the existence of the people of the Iberian peninsula and of nations which traced thence their origins. But even before the Great War opened, a decade of hand-shaking, with now and then the shaking of a fist, had brought to our commercial, political, and scholarly consciousness the existence of the Latin peoples south of us. We had become aware of national temperaments different from our own, of ways of action and conduct in nearly all respects quite apart from our own "business-like" and perhaps brusque methods. Almost subconsciously we rightly accounted for these by referring them to racial traits inherited from Spain. But we hardly went further. If these peoples were too leisurely for our patience and we too hurried for their *mañana* practise, we dismissed the subject with a shrug—the world is wide, and we'll seek trade and fellowship elsewhere, said we.

All this is radically changing. Trade relations are developing with South and Central America and with the mother countries. To get along comfortably with those to whom we sell goods, with whom we

Feeding the World

Food! This one word today occupies the entire thought of humanity.

Production must be tremendously increased if the world is to be saved from starvation.

Europe, despoiled and depopulated, has become a continent almost entirely of consumption.

It remains for America to feed the world.

Last year, meeting its obligation, America furnished to other countries almost twelve million tons of food-stuffs.

But the need increases. And in 1919 America alone is pledged to contribute twenty million tons to hungry humanity abroad.

To accomplish the mighty task every acre must be made to produce to its maximum capacity.

The shortage in man power and horse power that menaces the undertaking can only be offset by mechanical power.

We must have tractors. And with them we must have tractor tillage implements that fit the ground best—that have the built-in quality to withstand the strains of racking service, day after day.

Oliver, as the world's largest manufacturer of plows and other tractor implements, is deeply conscious of its own responsibility in the emergency.

And Oliver will rise to that responsibility even if it means producing a plow a minute during every working day.

Grumm-Bernstein Truck equipped with Dayton Steel Wheels. Note their trim appearance—the suggestion of strength they convey.

The Engineer's Answer to the Wheel Problem

THE wheel has been called the foundation of the truck—for upon it depends truck performance.

And as truck tonnage and speed increased, proper wheel construction became more and more important. It was no longer a task for the wheelwright—but a problem for the engineer.

And now science, by the *skillful use of steel*, has put the wheel on the same plane of efficiency as all other truck construction. The Dayton Steel Wheel is the engineer's answer to the wheel problem. It was born of necessity.

Here is a wheel that withstands the most brutal road punishment, no matter how heavy the load or how great the speed. It dissipates the extreme shocks of the road, and prevents their full force from reaching axles, bearings and power plant.

The Dayton Steel Wheel retains its *true roundness* under all conditions of service and climate. It develops no "flats" to shred tires and pound bearings. Curb scraping and skidding do not affect its strength—and yet its lightness adds to carrying capacity. Once applied—the Dayton Steel Wheel needs no further thought or attention.

Dayton Steel Wheels *improve* truck performance, *increase* tire mileage and *prolong* the life of the truck. Their symmetrical lines add to truck appearance. Many manufacturers are making this modern equipment standard on their trucks. Look for the name Dayton on the spoke.

Our folder "The final motor truck wheel and why." will be gladly sent upon request.

are daily forming perforce more intimate connections, we need to understand them, to be able to look into their minds. We must know what lies back of the Spanish insistence upon a more elaborate etiquette than our own. How it is that pride of race obtrudes itself upon individual observation, and insists upon at least tacit recognition even in discussions of bills of goods and terms of credit. These are ingrained qualities general among the Latin races. They have a reason for being, and that reason is found in their historic development.

Professor Merriman, of Harvard, undertook a difficult task. Those of us who remember our schoolboy attempts to master the intricate history of the Greek states and our wonder that a clear account could ever be written or learned will find here a situation somewhat similar. For the topography of the country, in its rivers, ravines, mountain chains, and continental situation, reproduces in part many Grecian features, and has controlled the historic unfolding of the peninsula in a similarly intricate manner.

Professor Merriman charts the way well through a maze of complexities—going back to the days of the Biblical Tarshish and of Phœnician commerce. In a rapid survey in the introduction he comes down to the beginning of the reconquest of Spain from the Moors in the traditional cave of Covadonga in 718 A.D. He then traces the history of the little and bigger kingdoms of the peninsula—Castile, Aragon, Granada, Navarre, and the rest. He traces the steps which led to the ultimate unification of Spain under Ferdinand and Isabella. And he closes with the death of Ferdinand in 1516.

The story of the wars, intrigues, quarrels, and interdynastic and interracial struggles is not edifying in its details. But we have to remember that Moor and Christian, king and grandee, ruler and people, city and rural district, each furnished elements that contributed to temporary disagreement, but ultimately fused in the character of the people. Nobles, clergy, knightly orders, municipal inhabitants, rural dwellers, brought each their gifts to the melting-pot. And the sun of the subtropics added a fiery integer to the blood of all that has not entirely vanished during the centuries. The account here given is satisfying in the completeness of its survey. Economics, taxation, the army, commerce, the judicial system, education, art, literature, science, exploration, expansion overseas—all come under discussion, and their interconnections are well treated. Here is sketched what made for greatness in the Spanish make-up; we find also indicated the roots of what weaknesses the later centuries here revealed. It is a worthy account of unfolding during critical centuries.

Scholars will find especially helpful the evaluated lists of sources, treatises, and periodicals that follow each chapter. They point, no less than the text, to the industry and capability of the author.

OTHER BOOKS WORTH WHILE

Knowles, Sir Lees (Bart.). *The British in Capri, 1896-1908.* With numerous illustrations. 8vo, pp. 330. New York: John Lane Company. \$5 net.

Those whose knowledge of geography has been sharpened in these years will remember that Capri is the bold island at the south entrance of the Bay of Naples. It has not figured in this world-conflict; but its memorable history goes back to Tiberius, who made it one of his favorite abodes. For the two years mentioned in the title of this volume, however, it figured

rather largely, being taken by Sir Sidney Smith and held by the English, tho it was a minor sort of Gallipoli to them.

The present is a monograph, with full documentation, upon a minor episode in the Napoleonic wars. Except as one of those detailed contributions on a small phase of a large subject which are none the less necessary to the complete history, this volume is as a whole not of interest to the general reader. The first chapter is, indeed, a chatty account of the island as it now is, vivid in its picturing of a delightful spot. Then come chapters on Sir Sidney Smith, Joachim Murat, and Sir Richard Church, all of whom figured in the English taking or holding of the island. The Neapolitan and French accounts of the capture, the journal of events which led to its loss by the English, official papers which deal with the subject, and finally a chapter on Maj. John Hamill, who lost his life there, complete the contents.

The work is evidently a labor of love on the part of the author. It is painstaking, detailed, and fully illustrated with documents. Some of the pictorial illustrations are especially fine, and it shows up well as an excellent specimen of the publisher's art. Possibly it has interest also as foreshadowing the revival of the work of publication as "this terrible war" comes to its end.

Hamilton, Clayton (Editor). *The Social Plays of Arthur Wing Pinero.* Vol. II. "The Gay Lord Quex"; "Iris." New York: E. P. Dutton & Co. \$2 net.

This library edition of social dramas by one of England's most important playwrights has been needed. Not that it covers Pinero's lighter vein, as shown in his Court farces, and his picturesque mood as revealed in "Trelawny of the Wells," but that it offers in dignified form the high-water marks of Pinero's technique and seriousness. Technique of execution is nowhere better illustrated in the whole range of modern British drama than in "The Gay Lord Quex," and for sheer brutality of feminine analysis "Iris" is difficult to surpass. Mr. Hamilton, in his introductions, shows his admiration for Pinero better balanced than in his first volume. His analysis of play form and structure will be suggestive, not only to the student of the theater and of the art of dramatic composition, but to the general reader who, nine cases out of ten, is ignorant of the organic unity of the written play. Two other volumes will follow, the first having made available "The Second Mrs. Tanqueray" and "The Notorious Mrs. Ebb-smith."

Copplestone, Bennett. *The Silent Watchers.* New York: E. P. Dutton & Co. \$2 net.

A very sprightly narrative is this, told with excellent feeling and thorough comprehension of the British Navy's "points." With no effort at detail, the author portrays graphically the essential differences between the German and the British Navy, and analyzes elements which go to make the soul of the Navy. There is a philosophy running through his account; at the same time there is a satisfactory record of the British Navy's accomplishment since the war began. Himself not an official part of the Navy, yet he is a lover of the sea, and is joined to the service through blood relationship with it. His style has salt air in it; now and then it blows a gale of merriment; but in calm weather it is tempered by the accuracy of its contents, and its fairness even to the enemy.

PERSONAL GLIMPSES

THE CROWN PRINCE SEEN THROUGH THE EYES OF A RAGTIME BANJO-PLAYER AND OF HIS VALET

THE old adage that no man is a hero to his valet is strikingly proved in the case of the ex-Crown Prince, now Mr. Friedrich Wilhelm Hohenzollern, temporarily sojourning in Holland, and a little uncertain about where he will go from there. The impressions of Felix, former servitor of Fritz Wilhelm, are conveyed to us in an interview in the *New York Sun* with Mr. Edgar M. Moore, formerly a professional banjoist. We have ridiculed a man, a male human being of some sort beneath the skull and cross-bones of the busby of a Death's Head Hussar, says the *Sun's* interviewer, and then quotes Mr. Moore on Fritz Wilhelm's talent for military science, as follows:

Why, if any one had formed a regiment for him in platoons he couldn't by his own commands have done so much as march it down a perfectly straight street, let alone having halted or turned it if he found a stone wall at the end! Training? Nobody could train him. He was railroaded through Bonn and the military colleges.

Militarist? Tin soldier? I tell you he hated a uniform—wouldn't have one on when he could avoid it. What he liked was to lounge in his English tweeds. At first meeting you'd have taken him—his English is perfect, absolutely clean of accent—for a phenomenally worthless specimen of a low-class English squire from the countryside. He was what Americans used to call an Anglomaniac. He never dreamed of posing as a German warrior of blood and iron; he preferred to ape the English Johnny—the "nut" as they call 'em in London, the chap who used to hang around the stage-door of the Gaiety.

He wouldn't drink beer; said he loathed it. He wouldn't drink champagne. When he was in Berlin you could always find him nights in one of two or three of the most expensive night-life cafés, the Blumenthal, for instance. Champagne at 25 marks was the only drink they'd serve you there—perhaps you could have got cheaper drinks by making a row about it. But not Fritz. He stuck to his whisky pegs, and of course they had to please him. He said beer made people fat, and that was why his countrymen had no figures, and that he preferred to keep his. He'd never eat very much for fear of losing his slim waist—you've noticed what he has just said about that in Holland? It's perfectly true, and characteristic of him. I never knew of his taking pegs enough to make him drunk. He had a favorite brand of whisky—an English brand, of course.

Fritz Wilhelm loved to make fun of Germany and the Germans, we are told, and would joke about the stiff pouter-pigeon style of the German officer. His style was what he thought was the specially English grace in lounging, and Mr. Moore is further reported as saying:

After you'd known him a while you'd have realized that his mind was the mind of a rather dull boy of fourteen. No; I don't mean just mere silliness. I mean that kind of thinking was as far as he could go. And

his ego, his vanity, was exactly that kind. It was like a bragging kid in the recess yard. Don't the doctors have a special name for such a make-up? I can't think of the one I mean. Not a defective exactly, but a kind of a degenerate. Anyhow, "degenerate" surely goes. No; not in the way you might be thinking of. His "private life"—that's a funny name for it when it was spread plain as day all over Europe—wasn't where the degeneracy showed up. I mean that it showed up in general ways; I mean he—he wasn't "there"!

Felix, the valet, told me that what Fritz liked to read was Nick Carter in German translations. You could buy 'em, ten pfennigs a number, at the little notions shops, just the way you could here. And Fritz always had a stack of 'em on his dressing-table. Felix used to keep his accounts for him. Keeping that fellow's accounts was a job for a pretty nimble head, from what Felix said about it. He had an income of \$50,000.

You don't suppose that began to suffice him, do you? When it gave out he'd borrow where he could. Banks and money-lenders generally were shy of him; they knew him; but of course the good shops had to give him unlimited credit, so he'd buy expensive jewelry and furs and things on tick, and then he'd pawn or sell 'em for ready cash. He needed it. His dogs and horses and girls—he had new ones of each kind every time you saw him—ran into a little fortune for the upkeep every year. . . . "My God!" was the way Felix put it, "when Fritz succeeds to the throne Germany will go bankrupt in a year." He said Fritz's creditors, lined up four abreast, would have reached to China. And as for the Kaiser—he used to talk Fritz over with the valet very freely—he once screamed out, "The boy wants to turn the Royal Opera-house into a cockpit!"

"And that's your commander—'Army Group of the German Crown Prince,' and so on—who made the horrible blunders at Verdun!" Moore comments grimly. "Somebody made 'em, all right, but it wasn't he. I'd like to bet that he never originated a single order. It wouldn't surprise me if I should hear that he never even was there."

Later Mr. Moore and his partners were summoned to play in private before the then Crown Prince, who took part in the evening's performance by playing a guitar. He could play a little sort of vamp and had a very fair ear, but as Mr. Moore remarks:

Of course we kept down to him and covered him on his breaks. He could play in the keys of G, D, and F—he couldn't in B-flat. That's the hardest key, you know. He was always going to learn it, but never did.

"Well, Ragtime," he says—called me that from the first—"how am I making out?" I said if anything ever went wrong with him in the princeling business he could have a job with our band at any time. That tickled him to death. After that, whenever he had us to play anywhere or came across us in one of the cafés he'd stand up and grin and tell everybody.

"Ragtime says if I'm ever out of luck I can always get a job with the band." And then he'd guffaw.

It wasn't long before I got to know the valet. His name was Felix Makadoff, a Russian I think he was. They called him the Perfect Valet in Berlin. He sure was a perfect godsend to Fritz—about half his time was spent in covering some of Fritz's necks or getting him out of scrapes or

raising money for him. Felix was the highest type of that class of servant, a blamed sight better gentleman than his master, if I'm a judge. He'd served the Grand Duke Boris and other notabilities, and he knew the courts of Europe from the back-stairs side as plenty of powerful diplomats would have given their stars to know them. He spoke four languages perfectly, and had a first-rate education.

Later—not so very long ago—Fritz quarreled with Felix in one of his tantrums and turned him off after nearly twenty years of service no other human being could have given, and turned him off not only without a pension but without so much as a letter of recommendation. But that's Fritz all over. He didn't care for his position, he didn't care for his future responsibilities, he didn't care for his father and mother or for his wife, or his children or anybody or anything else under heaven—but himself and his hobbies, principally sports.

According to Felix, the Kaiser used to send for him all the time and try to draw him out about Fritz and what he was thinking and planning. Once Felix was shaving the Kaiser on a morning of the day of a big racing meet. The Crown Prince was entered to ride his own horse in a steeplechase over a dangerous course. The horse was a young one and mettlesome, and the Prince's father and mother were panic-stricken that he should take such a risk. Mr. Moore proceeds:

The Kaiser sent for Fritz while Felix was in the room. "Your mother and I ask that you withdraw your entry," he said. "Do you?" says Fritz. "Well, I can't, that's all; my friends know I'm going to ride, and a fine fool I'd look, wouldn't I?" "I forbid your riding!" says the Kaiser, getting excited. Fritz didn't say anything—just knocked the ash off his English cigaret like some dime-novel hero. "As your Emperor," stormed the Kaiser, "I command you to withdraw!"

Fritz was going out. "Command away!" he threw out over his shoulder. "Emperor or no Emperor, I'm going to ride that race if I lose the crown!" He did it, too. And the Kaiser—he was tramping up and down the room by that time—came bounding over to Felix. "*Mein Gott*, you see these gray hairs?" he screams. "That boy has been the cause! His doings are going to bring me to my grave!"

Discipline him, did you say? Nobody ever was able to discipline Fritz since he could walk. He may have been sent away at times to fortresses. I don't know. If he was, it made no impression on his mind. No, it wasn't that he was spoiled. It was natural; it was in him. He'd have his way, he'd do as he pleased, or die.

"I'm a throwback," he used to say of himself, meaning it in the dog-breeder's sense. No, I don't know what ancestral trait he imagined he threw back to. English characteristics, maybe. That was the way he explained himself, as far as he ever did.

He had several dogs always. I remember an Irish terrier, an English bull, and a couple of others, but none of German breeds. "Can't keep a German dog," he'd say. "That Irishman of mine eats 'em up faster than I can get 'em." And then he'd laugh. He used to make a point of saying such things where the thirty-third degree Germans, especially army men, could hear.

Naturally the army men detested him. Their name for him was "Cockney Fritz"—they made no bones of it, either. Of

course they'd been brought up to hate anything English. He wouldn't smoke a German-made cigaret, altho you could get them as good as any in the world. His were made for him in London. So were his clothes and his shoes, and everything else a man of his taste uses that could be made there. I know. Felix came by any quantity of clothes through him, of course. The last time I saw Felix he told me he had enough clothes saved up to last him the rest of his life.

Yes, sir—Fritz loved England. He used to slip over there *incognito* a lot oftener than the public ever knew. He'd take Felix along and they'd see a big prize-fight, or attend the Henley crew races, or some other sporting event. Then they'd do a show and London by lamplight and come home next day. Fritz used to say again and again that he'd love to live in England.

TEN MILITARY COMMANDMENTS OF MARSHAL FOCH

MARSHAL FOCH seems to be a master of psychology as well as of strategy. While playing the war-game on a gigantic scale, he does not neglect small details which help to promote colossal success. The needs of the rank and file are always in his mind and he spurs them to bravery and endurance like the fighting patriarchs of old. At any rate, he was imbued with some of the spirit of Moses when he promulgated ten commandments which have proved of incalculable worth on many hard-fought battle-fields. *Trench and Camp* quotes these inspiring laws as follows:

1. Keep your eyes and ears ready and your mouth in the safety-notch, for it is your soldierly duty to see and hear clearly, but as a rule you should be heard mainly in the sentry challenges or the charging cheer.

2. Obey orders first, and, if still alive, kick afterward if you have been wronged.

3. Keep your arms and equipment clean and in good order; treat your animals fairly and kindly and your motor or other machine as tho it belonged to you and was the only one in the world. Do not waste your ammunition, your gas, your food, your time, nor your opportunity.

4. Never try to fire an empty gun nor at an empty trench, but when you shoot, shoot to kill, and forget not that at close quarters a bayonet beats a bullet.

5. Tell the truth squarely, face the music, and take your punishment like a man; for a good soldier won't lie, he doesn't sulk, and is no squealer.

6. Be merciful to the women of your foe and shame them not, for you are a man; pity and shield the children in your captured territory, for you were once a helpless child.

7. Bear in mind that the enemy is your enemy and the enemy of humanity until he is killed or captured: then he is your dear brother or fellow soldier beaten or ashamed, whom you should no further humiliate.

8. Do your best to keep your head clear and cool, your body clean and comfortable, and your feet in good condition, for you think with your head, fight with your body, and march with your feet.

9. Be of good cheer and high courage; shirk neither work nor danger; suffer in silence, and cheer the comrades at your side with a smile.

10. Dread defeat, but not wounds; fear dishonor, but not death, and die game, and whatever the task, remember the motto of the division, "It Shall Be Done."

THE eagerness, everywhere, to secure the Cadillac is not solely due to its scarcity.

There is also a growing consciousness of the hardiness of the Cadillac and its consequent economy.

War has bred in America, a sober habit of buying things which endure.

In that respect, of course, the Cadillac—with its standardized construction—is unique.

This has been splendidly shown, on an extended and dramatic scale, in the terrific wear and tear of war-service on the French front.

And here at home, it is proving one of those essential and reliable agencies of transportation which Americans have learned to appreciate so keenly.

They have always valued the Cadillac as a magnificently smooth and steady piece of motive-power.

Now, with a newly-awakened sense of conserving their resources, they look upon it likewise as a prudent investment of uncommon value.

CADILLAC MOTOR CAR COMPANY • DETROIT, MICH.

SEEING THE WAR FROM AN
AMBULANCE

AN old saw has it that the road to the infernal regions is easy to navigate; whoever said it never drove an ambulance bound for the modern inferno—the battle-front. A letter from an experienced driver, just to hand, says: "Imagine this: a pitch black night, no lights, a road full of holes, each big enough to swallow a wagon and horses, and a constant stream of tumbrels, horses, and men. Try to imagine that and then see me plunging into that, bound to go where duty calls. When I get home, I feel sure I can tackle any machine, day or night, on any road in the U. S. A." Another ambulance-driver, Philip Dana Orcutt, tells his experiences in *The Red Cross Magazine*. Mr. Orcutt, a Boston boy of seventeen, instead of going to Harvard, joined the American Ambulance Corps in France; under military and draft age, yet he has managed to be under shell-fire for four months at Verdun. The story is written with the abandon of youth. He writes:

There is nothing quite so uncomfortable to hear as the near whistle of a shell. The more one hears the sound the more it affects him. There is something in the sharp whine which seems to create despair and induce subconscious melancholy. There is a feeling of helplessness and powerlessness that is most depressing. The thunder of the guns or the crash of the bursting shells can not be compared with the sound of this approaching menace. It is as if some demon from the depths of Hades were hurtling toward you, its weird laughter crying out, calling to you and chilling your blood. For the second of its passage a hush falls on the conversation, and the best jokes die in dry throats. But it is only for that second, and instantly laughter rings out again at some jest. Speculations or comments are made on the probable or observed place where it exploded, and all is the same except for that subconscious tenseness which, for the most part unrealized, grips every man while he goes about his work.

The first ordeal by fire is the easiest. It is then but a new and interesting sensation and experience. Later, after one has seen the effect and had some close calls, it is more of a nervous strain. The whine of a shell is very high-pitched, and after a time the sound wears distinctly on the nerves. It is a curious fact that, in spite of the philosophy developed, the longer a man has been under shell-fire the harder it is for him to stand it. By no means would he think of showing it, but he would not deny the fact. It is only the philosophy and callousness developed which keep the men from breaking down, and in many cases the strain on the nerves becomes so great that men do collapse under it. This is one of the forms of so-called "shell-shock."

The author feels it a duty to pay especial attention to the stretcher-bearers, whose work is often of the most trying kind, yet demanding courage of a high order. He says:

As one man remarked, "Our life out here is just one — *brancardier* after another." The *brancardiers*, or stretcher-bearers,

include the musicians—for the band does not play at the front—the exchanged prisoners who are pledged to do no combatant work, and others who volunteer for or are assigned to this work. These men are in the front-line trenches, where they bandage wounded men as they are hit, and carry them to the front *abri*, where the *major*, army doctor, gives them more careful attention. At the front *abri* are other *brancardiers*, who then take charge of these men and load them into our cars. We arrive at the hospital, and *brancardiers* there unload the ambulances and carry in the wounded. Inside the hospital other *brancardiers* nurse the wounded, as no women nurses are allowed in the *triage* hospitals.

A callous, hardened, dulled class of men, absolutely lacking in sentiment, yet doing a noble and heroic work. Who could do their work without becoming callous—or insane? We curse them often when they put a man in the car upside down or drop him, but we forget that when the infantry goes *en repos* the *brancardiers* stay at their posts, going out into No Man's Land every hour to bring in a countryman or an enemy. When, standing by the car, I see two *brancardiers* carrying a man up from the *abri*, and, after noticing that both his arms are broken, one in two places, that both legs are broken, that a bloody bandage covers his chest, and that the white band around his head is staining red, I see them drop him when a shell screams overhead, I curse them. But I forget that for the past two nights, with their *abri* filled with chlorin-gas, these same men have toiled faithfully in suffocating gas-masks, bringing in the wounded, caring for them, and loading them on our cars. I forget that these men have probably not had an hour's consecutive sleep for weeks, and that it may be weeks before they have again; that it is months since they last saw a foot of dry ground, or felt that for a moment they were free of the ever-present expectation of sudden death. It is something to remember, and it is to wonder rather how they do these things at all than why they seem at times a little careless or a bit tired.

Would the *brancardier* tell you this? When he sees you he asks after your comrades. He takes you in and gives you a cigaret and some *pinard* in a battered cup, and tries to find you a place to rest, all the time telling you cheerful stories and amusing incidents.

Concerning the night-driving, the writer gives it as his opinion that the *ambulancier* develops two instincts. The first is that in case of need he can find his own, or somebody else's, shelter and therein vanish promptly. The second is the something that guides one in the utter blackness of the night. His opinion is that it is better to follow the advice of the "inner voice" rather than memory. Furthermore, he states it is astonishing how few cars do tumble into holes, or get off the track in the dark. One of his experiences was to drive with a friend, in a Fiat, at over fifty miles an hour in pitch darkness and take every turn safely. Then he draws this contrast:

The *poilu* and the Tommy are vastly different. The Frenchman works himself up into a fanatical state of enthusiasm, and in a wild burst of excitement dashes into the fray. The Englishman finishes

his cigaret, exchanges a joke with his "bunkie," and coolly goes "over the top." Both are wonderful fighters, with the profoundest admiration for each other.

LIVING UNDER BOLSHEVIK SUPER-
FREEDOM

TO live in Russia while there was a Czar was to feel, not so much that one was walking on a slumbering volcano, as to have an uncanny suspicion that all around were wild, barbaric forces ready to ravage the moment the leash that held them snapt. This has happened, and something of the result is told by Mr. Mewes, of the staff of the *London Daily Mirror*, as follows:

I have just arrived in England from Petrograd, where I have been, almost continuously, since 1914.

To come out of Russia into England to-day is to emerge at a bound from the Middle Ages to modern times.

Freedom has transformed ordinary life in Petrograd something in this way:

It is a day toward the end of March, 1918, and I am looking from my window into the square below.

I see little groups of soldiers—revolutionary soldiers—stopping the passers-by. I imagine they are examining their documents.

But the first passer-by is removing his overcoat. The second is sitting on the pavement while a soldier gently but firmly removes his boots. A lady comes round the corner in a fur coat. She is quickly relieved of it. One man in a temper throws all he has in his pockets out on to the snow. There is a scramble among the soldiers.

It is eight o'clock, and as I have only just got up I may be dreaming. For corroboration I go to some friends—British officers—staying in the house. They join me and we see the "hold-up" in progress. Suddenly there is a sharp crack. Some one is shooting. The robber band takes to its heels. This is the reign of Freedom.

Robberies by broad daylight, exorbitant prices, the daily bread allowance a quarter of a pound per person, and a bread mostly straw and water, butter forgotten, restaurants with meager dinners at thirty rubles (\$15). Night life (apart from robbing)—there is none. No one dares go out at night. The theaters begin at five and end at 7:30. To compensate themselves for the vodka, self-denial ordinance of the beginning, the Red Guards go about on wine-smashing forays in private cellars. They drink what they can and destroy what they can't drink.

I know of women in Petrograd who have covered up their diamonds with little bits of cloth and sewn them on to their dresses in the form of rough buttons to preserve them from the common pillage. In the midst of the universal freedom the Republicans must, of course, be free to annex whatever they take a fancy to.

Petrograd is in a state of famine. The only people well fed there are the swaggering German officers. Often I used to see poor, ragged, half-starved Russian soldiers, who had fought and suffered in the war, slink by one of these overbearing supermen.

And the *bourgeoisie*, the famed, much-written-about *Intelligentsia*—what does it think? What is it doing?

It apparently doesn't think. And it certainly does nothing. The Russian is

Put One QUAKER Tire on your car

This is the only sure way to prove to your own satisfaction the service that QUAKER Tires will give you. When you see a car fully equipped with QUAKER Tires, you can rest assured that the owner first tried ONE TIRE and found, by comparison, that QUAKERS are "Miles Cheaper."

half-oriental. Oriental fatalism is in him. To-morrow or next day—who knows?—the Germans will be here to rescue us from "Freedom"! The *Intelligentsia* have developed an inordinate respect for the German.

"And meanwhile we are not going to continue fighting for British capitalism." A phrase I heard half a dozen times a day at least! While our dreamers sympathize with them they speak thus of us.

For the rest I ask: What have the *Intelligentsia* class in Russia done to prevent their country from being sold body and soul to Germany? Nothing!

During five months of Bolshevism I have watched the *Intelligentsia* swallow everything that Lenine, Trotzky, and company have cared to give them.

Their safe-deposits at the bank have been confiscated; many are without money, or means of earning any. Yet with typical Russian apathy they just wait. To-morrow! Perhaps. Or perhaps another day.

So it goes on, and our munitions, our guns, our money, our effort, are annihilated—or pass, where portable, to Germany.

Heavy British guns were sold to Germany for 200 rubles each. One Russian division sold their artillery to the Germans for 30,000 rubles and were well pleased. Our own guns are now hammering our men on the West.

THREE-THOUSAND-SIX-HUNDRED-FOOT FALL MADE HIS NOSE BLEED

THE little black pigs in the field below were badly frightened, and so were the mules, but the chap who was rushing earthward from the sky at express-train speed was more amused at their comical scurrying about than alarmed at his own prospective collision with the farm. When he started downward he took to his parachute, but found it wasn't working that day, so he calmly clambered back into the basket and awaited events. He wasn't kept waiting very long, either. It was John Pfeieger, the nineteen-year-old son of Mr. Paul Pfeieger, cotton merchant of New York, training in the Balloon School at Arcadia, Cal., who had this experience. He dropt 3,600 feet, and, altho a trifle jarred and sore, virtually escaped without a scratch. Writing to his parents from the hospital, he gives a cheerful account of this great fall. *Commerce and Finance* publishes the letter from which we make the following extracts:

I was up 3,600 feet, and had just reported that the manometer tube was out of order, so I was a little afraid something might happen and had tested my hand-valve, when suddenly I heard a crackling noise. I looked up; the rip panel had burst open and the basket was swinging wildly like a kite without a tail. I knew that under such circumstances it was all right to jump. I heard the phone ring, probably to warn me of the danger, then heard the cable break. I thought that both the telephone-wire and the winch cable had burst. So I took my phone off and both pair of glasses and jumped (the aneroid registered 3,000 feet altitude). Unluckily my parachute ropes got tangled up in the map-board hanging outside of the basket, and the parachute did not

open. I was hanging below the basket, so I had to chin myself up and crawl back in the basket. This was quite a job; the balloon was parachuting down, losing much gas and the basket swinging wildly. When I was ready—(I have just finished an egg-nog—without a kick—that the nurse was kind enough to bring me)—when I was ready to jump, a second time, the aneroid registered 1,000 feet, but I knew from the free ballooning experience that a thermometer of that kind takes some time to register the altitude accurately, and that I was probably much nearer the ground; I actually knocked on it with my forefinger and the needle jumped to about 800 feet. As it takes quite a while for a parachute to open—and I might have got tangled up again, moreover—the balloon did not seem to be coming down so awfully fast. I decided I was as safe in the basket as out. I came down on a big field. I was up 300 feet and saw two Mexican dagoes chasing their mule team that had broken loose, and also a lot of little black pigs running, scattered in all directions, seared to death. I really was chuckling, because I was not scared at all. I was coming down like in a free balloon descent, and was ready to land. I did land, but much harder than I expected to and I was knocked off my feet into the bottom of the basket. I might have fainted for a second or two. When I looked up again the basket was on its side and I crawled quickly out, expecting the basket to be dragged on the ground and the balloon to be caught in the wind; but nothing happened; all the gas was out, and had been for a long while, so they told me.

First, I just rested on my back for a couple of seconds, a little shaken up by the "impact"; then, seeing that I was not dead or dying (this is highly humorous now, but was not so much at the time), I felt my bloody nose—not broken; then my ankle, which was either broken or sprained. I thought that in either case it would swell right up, and took my legging off. Then the two farmers came running up. I told them to phone to the camp and ask for an ambulance for me. They both looked very excited, as if they had been facing a spirit, or getting the dying confession of the villain in the story; then, one ran and started grabbing the balloon in his arms, and the other ran toward the basket. I could see that they were either too bewildered or too stupid to understand. I called them back, and they helped me take my shoe and sock off.

Then a regular procession arrived—first a soldier with the mule team; then a couple of ladies almost crying from joy because I was a human being and not a corpse. A sailor, who was in the car, and the soldier carried me into the two ladies' car. Then a captain arrived in a side-car at about seventy miles per hour. And, finally, a big Air Service car came; I came back in it. A few hundred yards farther I met the end of that cheerful funeral procession; a few cars full of soldiers and the ambulance-car.

I have had already more than sixty persons in my room—from the commanding officer down—and they all looked at me as if to say: "You lucky hero, you! Three thousand six hundred feet and not a scratch!"

And I must confess I am a lucky dog. My nose and lips are a little swollen, my back a little sore from the shock, and my right ankle bruised and a little swollen; but I'll be as fit as ever next Monday, and ready to take my last flight over again.

What actually happened is that the whole balloon ripped open, and they

started hauling me down at once as fast as they could. The balloon spread open and then collapsed, and so on all the way down—this explains my rapid fall during the last 150 feet. Part of the balloon (a very small part) burned up, either due to friction of the winch cable against the bag during the time of hauling down or the action of the high-tension cables over which I dragged.

HUNTED THREE DAYS, U-BOAT SURRENDERS TO A MERE DRIFTER

HOW completely the deadly depth charges used by the Allied navies shattered the morale of submarine crews is succinctly put by Alexander Hurd in *The Illustrated London News*. He writes:

What may rank as one of the most curious incidents of the war waged on the enemy submarines occurred, when a German U-boat voluntarily surrendered to a lightly armed British drifter. That points to a remarkable change in conditions at sea. When the policy of piracy was first adopted by the Germans their submarines had things very much their own way, because few merchant ships were armed and the Navy was short of small craft. For some time the Germans were able to send to sea a large number of U-boats, and the officers and men of those vessels rather enjoyed the pursuit of what they regarded as a sport which was then associated with little danger.

But the conditions at sea changed some months ago. Instead of being the hunters, the submarines were quite as often the hunted:

Not only is the number of small craft being rapidly increased, but the ingenuity of the Allied navies, and conspicuously the ingenuity of the British Navy, is finding expression in a variety of ingenious devices. Considerable success has attended the recent mining policy; the hydrophone, which enables the movements of a submerged submarine to be heard, has been successfully developed, and what are described as "depth charges" are being used with increasing results.

Recently a lightly armed British drifter had an enemy submarine under gun-fire, and, doubtless much to the drifter's surprise, the commanding officer of the submarine indicated that he and his companions wished to surrender. The position of the British skipper was an embarrassing one. Nothing of the kind had ever occurred before—one of the most perfectly developed war-ships of her particular type surrendering to such an opponent. The captain of the drifter quickly determined that he could not refuse the surrender, but he took precautions against foul play. This particular submarine had been hunted persistently for seventy-two hours, and during that period no fewer than thirty-five depth charges had been dropt near her, each one producing a terrible explosion. The nerve of the officers and men was thus broken.

What, it may be asked, is a depth charge? It is one of the most deadly weapons employed. It consists of a kind of mine which is fitted with a hydrostatic valve; as the depth charge sinks in the water the pressure increases until it is sufficient to operate the valve, and then the depth charge explodes with terrific effect. Of course, the valve of the depth charge can be set to practically any depth.

as circumstances may decide. Some day we may learn first-hand from the Germans what it feels like to be submerged in the water when these devastating explosions occur one after another around a submarine. The crew must realize that at any moment the frail hull of the submarine may be pierced; in that case death under the most agonizing circumstances is their fate.

NON-CATHOLIC AMERICAN SOLDIER SLEEPS IN CONSECRATED GROUND

IT could not have happened anywhere except in France, this heart-catching little incident of the solution found by an old French *curé* for the problem of burying a non-Catholic American soldier. The whole village had loved the *Américain*, the whole village wished to do him honor, but he was not of the true faith, so how could he be buried in consecrated ground?

French chivalry struggled with French veneration for old religious customs, and the outcome is as pure and delicate a little idyll as ever got into a French storyteller's masterpiece. The *Chicago Tribune* carries the following report of it:

A very sick young American soldier left a truck-train in a little village in the Vosges, thinking he would be all right in a couple of days. He was the first Yank with whom the villagers had come in close contact, and everybody laid themselves out to minister to him.

The village *curé*, a kindly soul, took a deep interest in the boy. The priest's whole human life was embraced in the phrase, "*Pour la France*." So, for the sick doughboy he brought kniecknaeks and sweetmeats. The Yank could not talk French and the *curé* could not talk English, but they managed to make each other understood admirably.

The boy continued to grow worse, and one morning he died as the *curé* was holding his hands. The villagers brought great wreaths of wild flowers which filled the little room of the *curé's* hillside home. The mourning for the unknown American seemed to touch each of the little homes.

Then perhaps the biggest dogmatic problem of the gentle priest's life stared him in the face. Where could he dig the grave? The boy was not a Catholic, and no one ever had been buried in the village cemetery who was not a Catholic.

The cemetery ran along the priest's garden, separated by a thin stone wall. The villagers were wondering, too, where the grave could be made when they beheld the *curé* spading up the earth in his garden as close to the little stone wall as he could get. The boy had died "*Pour la France*," and should be put as near the holy ground as the venerable man could do it.

On the day of the funeral the villagers gathered in the garden, and with wet faces consecrated, as best they could, the resting-place of the non-Catholic. One great wreath of wild flowers covering the grave had worked in it in purple blooms the words "*Pour la France*."

A rude wooden cross was erected. The *curé* was still troubled because the boy was not in holy ground, but he told the villagers he had done his best. Then the villagers a few mornings after that saw a large hole in the priest's garden-wall, right beside the grave of the American soldier.

Some surmised that the priest himself had torn down the wall during the night.

Anyway, no wall now stands between the grave of the doughboy and the holy ground, and the grave always is covered with wild flowers and the little beadwork designs so common to French Catholic cemeteries.

It is further surmised that if the *curé* does mend his garden-wall, it will have a jog in it running out into the garden and around the mound of earth on which always are kept fresh blooms which spell the words "*Pour la France*."

WHAT A SOLDIER LEARNED WHEN HE WAS BLIND

BLINDNESS, black night, shut out from a beautiful world, surely that is a heart-breaking, hopeless condition? Not a bit of it, said a sturdy young Anzac. Sightless, he still felt he could aid his country, and with the wonderful spirit which reigns in that far-off land of exquisite beauty he was a gallant soldier in our fight for freedom. His story is one of hope, faith, and grit. This is it as told in *The New Success*:

This is the message of Signaler Tom Skeyhill, the young Australian soldier-poet who was wounded in Gallipoli in 1916, when his company made a brilliant charge against the Turks. As a result of shell-shock Skeyhill became totally blind. No hope was held out by the world's most famous eye specialist in Europe that he would ever regain his eyesight. Gradually he regained his health and strength, but day was everlasting night to him.

But this young Anzac was not made of the stuff that admits defeat. Sightless, he could still see that his country needed him, and his country meant the allied forces of the world fighting for democracy, for right, freedom, and justice.

Truly there is no black night for the soldier who has the spirit-lamp of a great resolution to light him on his way!

Somewhere in the ranks Tom Skeyhill knew he still could help, and he found that place. The flaming sword of his spirit could still lead hosts against Germany, and he could still signal victory, tho he might not see the flag he so proudly leapt to serve when his country entered the war against the Hun in 1914.

The lecture platform would be his post henceforth if the battle-field were denied him. Accordingly, Tom Skeyhill has told his simple and eloquent story whenever and wherever there was an audience to listen. "Germany must be beaten" was the message he set forth to spread. And those who heard the blind soldier were thrilled and inspired and made to feel as he felt, that one pair of perfectly good and desirable eyes were little enough to give for one's country.

Then—it was in May, 1918—he regained his eyesight in Washington! It came about almost as simply as one of the miracles in the Bible. He had been told that everything known to medical science had been done for his eyes. Maybe so, but when he heard of a doctor who hoped he could help him, Skeyhill agreeably submitted to another experiment. There might be something in it, and he needed his eyes.

Skeyhill went to the Garfield Hospital, still sightless, and lo, the miracle! He came out a few hours later, seeing!

Visualize a young crusader, a knight of the Holy Grail, and you have some idea of the spirituality of this soldier's face. He is all Englishman in his blond coloring,

in his bonny, blue eyes, but all colonial, thoroughly Australian in his lean, steel-like muscles and fleshless sinew.

But it is best to let the young fellow tell his own story. Meanwhile he it remarked that a man who can learn that folks are neighborly when he is blind, and can talk about the white hospital-wall, the first thing he saw when sight came back, as a subject for an epic poem, is the sort of man worth reading about, carefully. Now for the yarn:

"The battle in which I was blinded was fought on the Gallipoli peninsula, December 8, 1916. We were charging up a steep declivity when there was an awful, world-rocking explosion, and I, among others, staggered back and fell to the ground. I was unconscious for some time, but at last came a sense of returning consciousness, which was followed by the dread realization that tho still alive I was blind.

"Some philosopher has said 'happiness is the cessation of unhappiness.' There is a great deal of truth in this, one who has gone through the mill feels. It takes blindness or some such tragedy as the loss of communication with the good old world around and about us to make us realize the every-day blessedness of life and limb and sight.

"When I lost my sight I came to have a new realization of the neighborliness of people. I never realized the great throbbing heart of the world until I stood in the night waiting for a friendly hand to guide me. And that friendly hand was never lacking.

"Then came my hospital experience. At first I could see only pin-pricks of light," he begins, "but those flashes were like a wireless message of hope on a battle-field. A message that help is on the way to the rescue."

Signaler Skeyhill knows how to put things in terms of battle, for he has sent and received those messages that give back life and hope to hold on, to endure even the unendurable if rescue is in sight.

"Then waves of gratitude seemed to engulf me," he continues. "To have my sight again was happiness greater than I felt I could bear. Joy doesn't kill. I can testify to that. For my heart beat on steadily even while the light grew clearer about me.

"Barrie once declared that no one should try to write who couldn't write an interesting story about a hole in a wall. Well, I want to say that a bare white hospital-wall will always stand out in my memory as the most beautiful object in the world. For that wall was the first thing I saw when my sight was restored. 'An interesting story.' Why that wall is worthy of an epic poem!

"My one ambition now is to complete my lecture arrangements and get back into action, where every able-bodied man should be. There is a battle-line in France that needs strengthening, and it is there I want to be, fighting shoulder to shoulder with the gallant American lads, the brave French, the indomitable British, the fine Italians, and the men of Canada and Australia whose dash and daring have won the admiration of the world and the bitter hatred of the Huns, who haven't got the physical or moral courage to face us, man to man, in the open field.

"When I became certain that the return of my sight was not a cruel dream, and that henceforth I should be able to look upon the faces of my friends and view the

world as I did when, a light-hearted boy, I sprang to the colors in defense of the Empire menaced by the Hun, I could not help stopping for a brief moment and offering a silent prayer of thankfulness. No man who has not experienced the shock entailed in the loss of his sight can appreciate in the remotest degree the feelings which surge through me now that I am again in a land of light, and I know that I can go on as other men."

ELECTRICITY BRINGS LIGHT AND NEWS TO AMERICAN ESKIMOS

ELECTRIC LIGHT, especially needed in the long arctic nights, and equally important light on the rest of the world's doings are being supplied to one of Uncle Sam's Eskimo settlements, says a writer in *The Eskimo*, a magazine published up at Nome, Alaska, for the Eskimos. The writer, Delbert Replogie, is a teacher and wireless operator at Noorvik. He directed the installation of the electric plant whose effects he describes:

It seems strange to drive out of the darkness of an arctic night into the electric blaze of the lights of the Eskimo village of Noorvik on the Kobuk. The lights stream from the houses, government buildings, and street.

One has to live in Noorvik to find how much the lights mean to the people. Some of the good results are the following:

There is less eye-strain. Many an aged Eskimo woman whose eyes used to become wearied has been able to continue sewing by the soft, sure glow of the Mazda lamp installed in her home. A decided home pride and more cleanliness have come with the new light. And the people now have regular hours of sleep, since all the lights are turned off at 9:30, thus causing people to rise earlier and use more daylight in the winter.

All this has come without any financial expense to the people. The twenty families having lights did the work on the buildings for the light plant and the general village improvement. But the present two-kilowatt dynamo is too small for the demand and the village has already subscribed \$240, with the prospect of more, with which to buy a larger machine.

In connection with the local plant the Government has established a wireless set, and now we can keep in touch with the Nome radio, and through it with Mr. Loop (in charge of the Alaskan Division of the United States Bureau of Education at Seattle) and Mr. Shields (Superintendent of the Northwest District at Nome).

Through the Noorvik wireless the Bureau of Education quickly reaches the other villages in our part of the north-western district. Three times a week we relay messages to Selawik, where a receiving station was built by Frank Jones. The towns of Noatak, Kotzebue, and Shungnak can be reached by messenger. Through this station our department has been able to extend its courtesy to the Eskimo friend, the revenue cutter *Bear*; to the Post-office, and the Department of Justice.

Every day the daily news of the world comes to our wireless station. We make copies of the news bulletins for our own people and for the surrounding villages. The news is always read at the morning exercises of the Noorvik school. It tells them of world events and makes the

children interested in geography. They see the bigness of things. And the daily news has awakened the whole village to the meaning of the United States, its people and Government. Formerly the Government was only Mr. Loop, Mr. Shields, and the local teachers; now the Government means the expression of the will of the people and something men are living and dying for.

The Noorvik people have fittingly expressed their appreciation to Mr. Loop for the lights and wireless, and they are hoping that the people of other villages may soon know the advantages of these latest gifts of the Government of the people.

THE BITER BIT WHEN HUNS STEAL KAISER'S "DUTCH METAL" PRIZES

WHAT a delicious bit of irony when the Huns stole a gorgeous trophy from a Belgian firm, laid it at the feet of the All-Highest, with much pomp and solemnity, and then found out that it was a prize given by the All-Highest and so wasn't gold at all, but just plain counterfeit, spurious, worthless "Dutch metal." The bells of Potsdam didn't ring over that victory, nor did a special *communiqué* announce the triumph to a waiting world; in fact, it was shoved into a cupboard where the other Hohenzollern skeletons abide. The *New York Evening Sun* makes merry over the situation and is naughty enough to recall other examples of Hunnish honor as follows:

There is a queer corollary to the revelations recently made in New York that the trophy offered by the Kaiser as a prize for the transatlantic yacht race, valued at some ten or fifteen thousand dollars, and won by a member of the New York Yacht Club, was merely composed of pewter, or some other base metal, gilt, and worth at the most thirty-five dollars.

It seems that in 1907 Emperor William organized an international automobile race on the Taunus course, which was guarded throughout by soldiers of his army, the first prize being a massive gold cup, impressive more by reason of its size and weight than by its elegance. Naturally, the Imperial Crown and the initial letter "W" figured on it, not modestly, but monstrously. In the race there was a preliminary heat with ninety-two starters, and a final heat, with forty starters, at which Emperor William and most of the reigning sovereigns of Germany were present.

The celebrated Italian driver, Nazzaro, then in the employ of the Fiat Company, won the race with a Fiat car, and became the possessor of the trophy, valued at somewhere between twenty and thirty thousand dollars. Nazzaro being entitled by the terms of his contract with his company to all trophies, the Fiat concern purchased the Kaiser's cup from him at its officially proclaimed value. It was transferred to the Fiat show-rooms at Turin and insured for \$30,000.

Not long ago the Fiat Company decided to offer the trophy to the Italian Government as a war-gift, much in the same way as Mr. Marshall, of the New York Yacht Club, offered his transatlantic race imperial championship cup to the American Red Cross. On its being sent to the Italian Mint it was immediately discovered that

the trophy won by Nazzaro, that had for eleven years been supposed to be of gold, and therefore of considerable value, was merely of base metal, gilt, and worthless as intrinsically as it had always been from an artistic point of view. As soon as this was announced from the Royal Italian Mint, the Fiat Company resumed possession of the cup and turned in the amount of its originally estimated value to the war-fund of the Italian Treasury.

If the first prize was a sham, the second one was naturally no better, but in this case the laugh was on the Imperial confidence-man himself:

It may be added that the second prize in this Taunus international championship motor-race of 1907, which was under the immediate direction of Prince Henry of Prussia, was won by a Belgian automobile firm, which purchased from its chauffeur the Kaiser's second prize, a cup alleged to be of gold. One of the first things that the Germans did when they invaded Belgium in August and September of 1914 was to plunder the factories of this particular automobile concern of every vestige of their contents, machinery, tires, etc., leaving nothing but the bare walls. Among the loot thus carried off to Germany was the Kaiser's second prize at the Taunus international race; and since it has been restored to the *Vaterland* it has been prudently relegated to oblivion.

Thanks to Emperor William's trophies, awarded as prizes in transatlantic yacht races and in international motor tournaments, and alleged to be of gold, we now understand the true meaning of what is known in trade as "Dutch metal."

WHEN AND WHERE SHERMAN SAID IT

OUT of the mael and welter of war, in all ages, strong and unforgettable expressions have been evolved. It is not often that the circumstances of their birth are known. How Sherman's came into being is related in *Everybody's Magazine* in this wise:

You and I and the vaudeville artists and the popular-song composers and the after-dinner speakers and the contributors to the funny magazines have been saying for years and years that General Sherman said it.

"War is Hell."

Before his death the General tried to recall the when and where of his famous epigram, and even instituted a search in 1891 of his records and newspapers, without finding any evidence that would establish the matter.

Now comes John Koolbeck, of Harlan, Iowa, to solve the mystery. Mr. Koolbeck, who has been the active manager of a café in Harlan for twenty-four years, is an old soldier.

"It was in '63, after the battle of Vicksburg," says Veteran Koolbeck. "General Sherman was commanding both the infantry and cavalry of the Western Department. At that particular time the Army was crossing the River Pearl at Jackson, Mississippi, on a pontoon bridge. General Sherman sat on his horse at the water's edge in deep meditation. The infantry had crossed. Just as the cavalry, headed by General Winslow, of the Fourth Iowa Cavalry (I was his aide-de-camp), started across the bridge, General Sherman suddenly broke his silence with the re-

mark, 'War is Hell, boys.' He called it out to us in a loud voice. I was in the headline with General Winslow, so I heard him very clearly. We were going after General Johnson, of the Confederate Army, whom we had driven across the river. The realization that war is hell seemed to have come over the General suddenly. General Johnson had been worrying us. It was up to us to hurry after him and catch him. I think it was sort of sympathy for his troops that General Sherman wanted to express in his remark. It seemed like an attempt on his part to let the boys know that he knew war wasn't any fun, too, and that he knew they'd go on just the same. I can remember it as if it had been yesterday."

General Winslow is dead. The other members of his staff were considerably older than Mr. Koolbeek, so he believes that he is the only living man who heard General Sherman say "War is Hell," at the River Pearl.

HOW A FRENCH OFFICER CAME HOME

THE home-coming of soldiers in war-wrecked France often involved dramatic incidents. An Associated Press correspondent tells of a French officer, returning to Denain, which had been four years in German grip, to look for his wife and a baby he had never seen:

The correspondent was motoring along the highway leading to the recently freed city of Denain when a French officer beside the road asked for a ride. He said that his home was in Denain, where four years ago he left his wife to join the colors. Just after his departure his first child, a daughter, was born. Then came the German occupation.

Denain had been the center of a battle that had cost civilian lives. Neither the officer nor correspondent mentioned this fact, but undoubtedly both were thinking of it as the car sped over the shell-shattered road.

Turning into the street the first house was in ruins. He gave a nervous start, but said nothing. A few doors farther on was his home, and the car stopt across the street from it. The officer climbed out slowly and with an effort, his eyes fixt on the place.

There were no signs of life. The windows were shuttered, and on the door was a sign showing that German officers had been living there. Crossing the street, the officer pulled the bell with shaking hand. No one answered. He backed away and leaned against the car, trembling.

Then the door was opened and an aged woman servant appeared in answer to the bell. She was leading a beautiful baby girl, with a wealth of golden curls. The officer took one step toward the child and then halted. He was a stranger to his own flesh and blood. The child, behind the skirts of the nurse, peered out in fright. Undoubtedly her mother had told her many times during the *Boche* occupation that men in uniform were bad and that she must avoid them.

The horizon-blue uniform of France meant nothing to this tot. But the half-blind eyes of the old nurse had recognized her master and she held out her hands to him, repeating, "*Monsieur! Monsieur!*" in ecstasy. He crossed the road and grasped her hands, but the baby drew back still farther.

A door opened at the end of a long hall and a comely young matron came out. When half-way down the hall she caught sight of her husband. She stopt, her hands flew to her breast, and she swayed for a second, as tho about to fall. With a sobbing cry of joy she hurled herself into his arms.

The correspondent's car was already moving away, for outsiders were not needed to complete the scene.

PURE PRUSSIAN ON A DARK NIGHT SENDS HUNS ALL WRONG

HOWEVER much one may object to the German lingo, when grunted by a Prussian, it sometimes came in very useful when spoken by a man. A good story touching this is told in *The Stars and Stripes* (Paris, France). It appears there is a Corporal Kaler, who was not regarded with favor by his comrades, chiefly because he was born and raised in Germany. Outside of that he seemed to be "a regular fellow." Worst of all, he had to carry around the sinister name of Wilhelm, wished upon him in Munich, twenty-three years ago, at a time he couldn't help it. When he grew up, strange to say, he became a Socialist, with a rooted aversion to the Government in general and to the "Clown Prince" in particular. How he set himself right with the doughboys is told as follows:

With these convictions, smelling the battle from afar, he cried, "Ha! Ha!" and deserted from the German Navy shortly before the war broke out, at a time when his ship happened to be in Hoboken. Therefore, while his three brothers were serving in the German Army, he was out of reach in Grand Rapids, Michigan.

Then came a time when America decided to enter the war. So did Wilhelm—the very next day.

His knowledge of German made him a handy man about the regiment when it was ordered into the line, but it was not as an interpreter that this knowledge served him in good stead during the savage, free-for-all, wide-open warfare which marked the passage of Company M from the Ourcq to the Vesle. He used it to baffle and bewilder the *Boches* by more than one order roared out gutturally in the dark.

Once, when Kaler and part of a platoon were almost marooned as an outpost that had overreached itself, he could hear a column of Germans filing along the edge of their woods with evident intent to surround them. The German order was straight ahead, and from where Kaler and his pals lay quaking in the underbrush, they could see an endless succession of gray legs trotting by. Then, sharp and authoritatively, a voice from the bushes ordered: "*Gehen Sie zur rechten Seite.*" The column veered off obediently to the right, and before it could be steered back again Kaler and his bunch had made good their escape.

Another example of his promptness in using his knowledge of German and also his clear understanding of their machine education follows:

Again when, from his vantage-point on the edge of the woods, the corporal saw

four German prisoners break away from an American who was trying to bring them in, he called out across the field:

"*Kommen Sie vorüber.*"

The escaping four stopt dead in their tracks, wheeled, and hustled docilely over to the spot whence the voice had issued, and a moment later Kaler had them covered and started for the rear. Those were his four prisoners.

Another *Boche* he killed with his rifle and another died at the end of Kaler's bayonet. In spare moments between such tasks, he harangued the prisoners on their sin of working for the Kaiser. But how could they help themselves? they asked plaintively.

"Why, that's easy, come and fight with us," said Wilhelm.

LETTERS FROM THE FRONT TO THE FOLKS AT HOME

WAR'S horrors and hardships seem to have had no terror for the majority of our boys abroad. Many of them, indeed, deplored the efforts of newspaper correspondents to present frightful pictures to their readers. They dreaded the effect of such stories on their home folk, and in their own letters from the front purposely made light of their individual experience. While lying in a French hospital with a Maxim bullet within him and a shrapnel wound in his thigh, a young officer wrote to a friend in New York that, if he had his way, the heavy tragedians of the press would be doing life terms. We quote from *The Tribune*:

I read a story just after I got out of the fight near Soissons. It was practically what I had myself just gone through. I saw how what I had just seen and done could have been written up into one nearly as thrilling. You know when I read that story I got scared myself. I got thirsty and hungry and exhausted, and when I got through I said to myself that if the author of that story were present I'd blow his brains out. They make out that the fighting men are suffering tortures, but they aren't. In the lines I get it just as hard as the men—more so, if anything—as I have responsibility and worry added. Well, I'm only average, and I haven't lost any weight, or sleep, or anything. I never was better in my life, and the men are all healthy. If one is very slightly wounded he goes to the hospital and gets good care; also if he is sick or tired out. Remember, it is the people at home who are to be pitied, not we. The worst I've gone through since I've been in the Marine Corps was summer before last in Quantico. So much for that.

Don't think that because I go twenty-four hours without food or make a forced march I'm to be pitied. I'm not, because when I do get some monkey meat it tastes like chicken, and when I do go to bed I feel as tho I were in a feather-bed and I enjoy it twice as much.

War is hell all right, but if a fellow gets bumped off he doesn't suffer; it is his family. If he gets a blighty, he is happy; if he is maimed for life, he is out of luck. But the percentage of the last is small. So don't feel sorry for me, but let me feel sorry for you.

I can see the hero in the magazine story staggering forward, the shells bursting around him, his parched tongue sticking to

Mack
TRUCKS

Performance Counts

From coal pocket to consumer MACK Trucks are making the delivery of coal a certainty.

Over icy streets that keep horses floundering, MACK Trucks take their full rated load with the same certainty, the same resistless power, the same hauling economy as in warm weather.

In all sorts of heavy hauling—coal or corn, lumber or steel, cased food or broken stone—MACK Trucks show stamina and power, reserve strength and drive that get the heaviest loads through on time—with unimpaired efficiency—roads or no roads.

The embodiment of over twenty years successful experience in motor truck manufacture, MACK Trucks are built for hard work and continuous, dependable service. 50,000 miles with less than \$20 for repairs is a sample of MACK performance.

MACK Trucks for every service—capacities 1 to 7½ tons—special bodies and trailers.

Catalogue and full information on request.

his throat, men falling on right and left, something he knows not what is driving him on, on, and on to his objective; he falls; he gets up again, he prays for a pickle to quench his thirst; he falls again and bruises his knees; he tears his flesh on a blackberry bush, etc., etc. You know the type. It is a lot of rot, and if any one tells you that that was his experience, you recommend for him a bread and milk diet.

If his fate were left in the hands of the boys who have been fighting in France, the ex-Kaiser would soon be effectually removed from all worldly cares. In the midst of a great drive, Private N. K. Harris, of Battery C, 128th F. A., found time to write his mother at Gary, Ind., that "if I live to come home and tell you about it, you will understand more than ever why the Kaiser and the Hun must be made to suffer for all the suffering they have caused." And having thus relieved his mind, Private Harris proceeds to compliment the doughboys on their heroic qualities. We quote from the Gary *Evening Post*:

We in the artillery are having a pleasant vacation compared with the terrible inferno the doughboys (infantry) are wallowing in. You know I tried to get into the infantry, but all my desire to be a doughboy has been taken out of me. The doughboys are the heroes of this war, and all honor and glory to them. The aviators have a brilliant and dangerous career, the artillery is no bullet-proof job, the engineers work night and day, the ammunition-trains are most important, but the doughboy is the man who must go up against machine-gun nests, artillery-fire, before and behind, hand-grenades, barb wire, mines, and gas.

Charles Martin, who died with the marines, died a doughboy's death. That is the highest tribute possible to pay him.

When I tell you that we haul our cannons and caissons forward day and night, that we sleep in rain and mud when we get a few minutes' rest, that we eat only when the rolling-kitchen or the ration-wagon can get to us, and that in our regiment a boy or two has given up his life and a few have been wounded, and that, despite all that, we are having a cross-country camping trip compared with the infantry, you will appreciate the heroism of the doughboys, who are first in the fight, first to die, and who will be first to march into Berlin.

Am being plainer in this letter than possibly I should, and yet I want you to know that all you have read of this war can give you no idea of what it is.

It is so brutal and bloody and inhuman that men who never stooped to deal in philosophy before look upon the carnage of the battle-field and are forced to say: "And all this happens in a civilized world."

What we have seen only nerves us to face whatever is ahead of us, and steels us to die the easier if that is our lot, to avenge the fallen heroes whose mangled bodies line the roads and lie stiff and blood-clotted in thicket and field.

Don't worry about me. I know you are thinking of me all the time, and I know you realize the possibilities. Our regimental cannon are roaring now, and we all hope we are driving the Hun back to his lair. In the last four days the Yanks have forced the Hun to retreat from ten to

twenty kilometers all along this front, and we are glad we have played a small part in the victory.

Remember my thoughts are always of home, after victorious peace. Write often, and take care of yourselves.

One result of the war, judging from many letters from the front, is almost a complete change in national sentiment and sympathy. Less than five years ago some Frenchmen thought the Americans a race of cowboys and, thanks to sensational literature, the national occupation bank-robbing; while, on the other hand, some Americans thought France produced only pastry-cooks and dancing-girls. Now both nationalities are finding unblemished heroic and social qualities in each and emphasizing the discovery with profuse demonstrations of brotherly affection. After noting these past and present predilections, Clark Eichelberger, of Freeport, Ill., speaks of the probable effect of the change in a letter to his home folk. The following extracts from *The Journal-Standard* give his conclusions:

Our alliance and consequent visit to Europe is making us broader individuals, and a more sympathetic nation. For instance, we are learning to judge other people by more universal standards than our own. That we have houses of wood does not justify condemnation of the French for having dwellings of stone. A large population inhabiting a small territory for twenty centuries could not have sufficient trees. A comrade from the Far West, where thousand-acre farms are possible, sarcastically referred to the small French holdings as "gardens." He admitted his unreasonableness after considering that thirty-eight million Frenchmen live on a land in size comparable to Texas.

In other words, we are looking for causes. We realize how much of American liberty is due to economic freedom, resulting from our large territory. "America is living on her principal, Europe on her interest." Over here we discover other people as liberty-loving as ourselves, and to whom democracy means a greater achievement because of complex problems which we escaped.

It is not disloyal to give other nations deserved credit. Were a monument erected to the Allies, on which the names were carved in the order of the nations' sacrifices, above them all would be Belgium and Serbia. They sacrificed their lives to save the world. But such an admission on our part could not brand us unpatriotic.

Therefore, we are revising our democratic program to include the cooperation of others. For two generations we have felt a monopoly of liberty. Now France, England, Italy, Belgium, and others, by their immortal struggle, have proved their right to walk with us in search of the Holy Grail of Freedom.

Oh! America's future is so charged with possibility. The recognized champion of freedom, in the view of the New World, now one of its warriors in the Old, will be a leader in the dawning constructive era. Democracy is now a recognized principle—a recognition bought by the blood of millions. But this democracy, so dearly won, is not developed. Now must come years of contributions to the science of liberty. American genius must furnish

many new ideas. If with our broad principles we combine understanding and sympathy for other nations, and are willing to accept their cooperation, the democracy and national spiritual resources we may develop are unlimited.

I dream of it so much—it is my one mental recreation. The present gloom is penetrated by one light, that America and the whole world shall some day approach an ideal state—the Kingdom of Heaven on Earth.

High on a hill across the fields in front of my camp is a great tree, rising many times above the others, so tall it seems to look over all France, the whole world, and to touch heaven, communing with God. It seems to speak to me: "Courage, young man! For two thousand years I have stood here. I have seen flames from Caesar's burning villages; Joan of Arc led an army past me; the thunders of the Revolution stormed about me: All this seems a long time to you. But, no, it is merely the beginning. As each morning the mists rise from this valley between us, so all that has gone before is but the mist rising at the dawn of civilization."

Despite the hardships of war, hundreds of our fighters in France put on weight and found themselves better physically than they were before they went abroad. Home-sickness was bound to affect them at times, but "the fact that we have got the Hun on the jump," writes Private August Delp, a former law student at Meadville, Pa., "and that he is now begging for peace, is great consolation and encouragement." Private Delp then proceeds to philosophize over the war in his letter, which is printed in the *Meadville Tribune-Republican*:

When we realize that we are not only living history but making it; when we think that right shall triumph over might; when we resolve that democracy shall not be throttled by autocracy, but that even small nations shall be protected in their God-given right of self-determination; when we know that the principles in which our nation was conceived and to which it was dedicated shall triumph over the tyrant's power of divine right of kings—no sacrifice is too great. When military Germany by her ruthless warfare challenged peaceful America in the belief that her divine Kaiser could do no wrong and that the wings of the American eagle had not the strength to journey across the Atlantic to vindicate a wrong if committed, she challenged a foe worthy of her steel—a foe whose very existence was menaced by the obsolete doctrine of divine right of kings.

The spirit of '76 is prevalent in this new American Army, and we are firmly resolved, even as they were, that the tyrant's yoke shall rest on no people, but that law and justice should prevail as President Wilson outlined in his fourteen articles of January 8, and also his address of July 4. These noble aims are worthy of the effort and sacrifices that America is making; self-determination, universal disarmament, or at least reduction of armament, a peace league, and a peace tribunal whose authority is respected by all civilized nations.

I have had some very peculiar experiences over here. Have ridden on almost every kind of a conveyance, from box cars which were placarded "40 Hommes—8 Chevaux" to auto-trucks driven by

"In the Service of Liberty"

WITH the coming of peace the Wagner Company lays aside its war garb with a feeling of exultation, but with a deep sense of pride in the part which Wagner, Quality played in the winning of the war.

Its most notable participation was the depth charge, the Wagner Company being the only American manufacturer to supply the U. S. Navy with depth bombs which were used in sinking Hun submarines. The death knell of the submarine had the ring of Wagner, Quality in it.

Other Wagner war products were 4 in. naval guns and 3 in. gun mounts; 8 in. and 155 mm. shells, in enormous quantities; steel hubs for all 56 in. artillery wheels produced during our first year of war; millions of detonator fuses of intricate and

delicate mechanism; and large quantities of dummy naval shells for practice purposes.

In addition to these strictly war products, to produce which extra facilities were provided, a large part of the Wagner peace time output of motors, transformers, generators, converters, etc., was requisitioned by the Government and used to increase war production in other plants.

This and the restrictions placed on the use of materials for non-war uses, materially limited the ability of the Wagner Company to serve its regular patrons. These restrictions now having been withdrawn Wagner, Quality products again become available in greater quantities than ever, due to increased facilities brought about by war preparations.

The interesting story of Wagner participation in the war is being prepared for complimentary distribution. Do you want a copy?

Indo-Chinese. Have slept in almost any place from shell-holes and dugouts to tents and French billets. Have hiked and hiked up hill and down dale on almost every road in France. Have had the thrilling experience of dodging German souvenirs which came through the air sounding like an express-train and made a very large hole wherever they happened to light; have lived at times on hard-tack, canned beef, and water; have been bombed by *Boche* airplanes at night—and still am here to tell the tale.

I have also seen some interesting sights over here. One thing very noticeable is the quaint manner in which the houses are built—all stone with tile roofs. Another is the large number of churches—one in every village. There seems to be an endless number of these little villages here, each one having its *château*, and they appear to be remnants of the old feudalistic method of land tenure. It is a strange sight to see the villagers engaged in the pursuits of peace amid the activities of war. I have seen several aerial battles, and the Americans "brought home the bacon" every time. Indeed, one sees so many strange sights that nothing surprises him, but he realizes that when America does a thing, it is done right. He is also impressed by the army of millions which America trained in a few months and which now is successfully operating 3,000 miles from its base. The magnitude of this achievement can hardly be comprehended and the endless train of troops and supplies staggers the imagination.

Mingled feelings of gladness and regret were shown by the boys in France when the armistice was signed. In some camps there was natural relief over the close of the terrible conflict, but disappointment was felt that "Old Glory" had not been raised over Berlin before the Peace Conference was arranged. Along with it all, however, there came a psalm of praise for the heroic martyrs in the cause of freedom. Writing to his wife from the battle-field on November 13, Capt. Thomas Dyer, a young artillery officer of Cherokee, Okla., declares that the peace which has come to the suffering world is an everlasting monument to the bravery of the French people. We quote his letter from the *Cherokee Republican*:

I know you are thinking of me and are rejoicing with the rest of the happy humanity the world over because—was there ever such a reason?—peace, peace has come again to the stricken world. Peace bought by the precious blood of freemen. Words are all in vain to record the significance of the events of the terribly glorious last four years. Really one doesn't know how to begin, or, having begun, how to continue; for, of course, every human heart begins in devotion to our heroic dead. "How sleep the brave." Them we can never repay. "Lord God of Hosts, be with us (always) Lest we forget, lest we forget." God help us all to live worthily of their great sacrifice. Especially my heart goes out to those whose thresholds those dead will cross no more. These are the ones who bear our burdens for us. How futile are all our words. The most that we can do, how little it repays. It is God's opportunity. Especially do I appreciate France and her magnificent people. Who knows them must love them. How

When you think of
SYSTEM
you think of "Y and E"

There is much more to a "Y and E" filing or record system even than the beauty, the ease of operation, the durability, of "Y and E" filing equipment—

There is a fundamental system *idea*.

What enables you to find papers so quickly and so surely, when you use "Y and E" equipment, is not the equipment alone, but the "Y and E" *method of filing*. The method of filing is worked out for you by our System-planning Service, with the experience of nearly forty years. This service is a distinctly "Y and E" product, like our filing cabinets or filing supplies; and it is not charged for.

Inasmuch as no charge or obligation is involved, why don't you, like so many other executives, let us examine your present filing methods and see if we can suggest some way of improving them—not for our own edification, but for the good of *your* business?

A Lesson From the War in Work

In the record-breaking accomplishments of American industry the increased use of electric arc welding. This process repairs iron and steel products and the reclaiming of defective, worn

Every one who reads will find welding work that made successful welding repairs that ships and transports—the work made complete by electricity.

No manufacturer, with the exception of those who can afford to overlook the value of welding in his plant.

Look carefully at the specimens of the simplest form the many of your product requires the use of somewhat like specimens now, scrapping defective, worn or filling in a little molten steel, you will eventually use arc welding.

Remember that many former Competition is bound to be steel. The race will go on.

Read the Facts in This Book

Our 80 page book illustrated with over 200 photographs, will tell you just what you can do with this process. It has enabled many manufacturers to make great savings in their plants. Write for the book on your business letterhead.

everything that relates to iron and
o first adopt new methods.

Kind of Electric Current to be Used

practical commercial use of electric welding
uses *direct current*, at from 15 to 40 volts. This
gained by the use of welding apparatus such as
illustrated, which takes the regular shop supply
ent—either alternating or direct current—and
erts it into direct current in suitable form
welding.

u have failed in an attempt to use alternating
ent for arc welding, do not feel that you have
listed the possibilities. Consult a Lincoln
e engineer at any of our branch offices.

1—Welding steel tube into a steel sheet or larger tube. Any steel pipes or shapes can be welded together.

2—Section of a circular steel head welded into steel cylinder. Boiler and tank heads are economically joined in this way.

3—Plain joint between pieces of steel plate. Lap joints can be welded also. This weld is used in boiler shops, shipyards, automobile plants, etc.

4—Two pieces of steel plate welded to form "T" shaped structure. Frames, shapes, etc., can thus be made.

5—Badly worn steel shaft built up by welding on new metal, then machining to proper size. Broken and worn steel parts or parts wrongly machined can be made good as new.

6—Steel gear casting with defective or mis-run tooth, afterward built up by adding molten metal. Blow-holes, shrinkage cracks, and all similar defects can be perfectly repaired.

sublimely heroic they were in the darkest of despairing hours. It was the greatest privilege America can ever have to help them. And they seem quite unconscious of it all. One only hears, "You Americans, you are the saviors of our country," and with such sincerity and insistence that you are not permitted to deny it. But history will rightly judge the situation and freedom's voice will proclaim her greatest benefactor.

Believe me, I am quite as prone to embrace the French as they are our soldiers, and they must have done so many, many times when all the pent-up heartburnings and consuming anxiety of these perilous months were resolved into unbounded joy that acclaimed the signature of the armistice. Loving my own dear country as I am learning more and better how to do, and knowing just how desperate their situation has been, I think I understand in a measure how they feel. It must be as tho their beloved France has actually risen from the dead. Indeed, it is much like that, so dire has been her peril and such the trial they have undergone. It was the valley of the shadow. But, no, how different: and after all, how deathless are those that sleep in soldiers' graves. Do they not speak? Yes, they live; and to future generations they have left a heritage that must endure to the end of time. "From their mute lips a clearer note is borne than ever Triton blew from wreathed horn."

It was my own dear, brave granddaddy (the Pilgrim Bard) who so beautifully said, "I shall not die, the soldier said," and he knows whereof he speaks. You will find that poem in his musings. Well, to the living is the task of perpetuating that thing for which they gave their last full measure of devotion.

How the news of peace came to Paris is told in a letter from Private William R. Needham, of the American Expeditionary Forces, to his mother at Ithaca, N. Y. "Thank the Lord, I am over here," he begins, and then describes the scene:

I guess the war is over. Being in Paris on Monday, November 11, was worth all the hardships I have ever suffered. Can you imagine what the end of the war means to these people? I myself almost went crazy; and what I have endured is practically nothing by comparison.

The people prepared for the signing of the armistice. Saturday and Sunday almost all the people had flags under their arms. Taxies had flags on the roofs, sticking out of the windows, and every place imaginable. All were furred, of course.

At work Monday morning we could hardly wait for eleven o'clock. Eleven came, and nothing happened. At 11:10 I was standing near the door when I heard the boom of a big gun. Then came more and more, and all the bells in the city began to ring. At the same moment people came running out of houses, shops, and cafés, crying "*La guerre est finie! Vive la France! Vive l'Amérique! Vive l'Angleterre!*" Inside of five minutes there were flags hanging from almost all the windows of every building. The woman who lives next door to where we work came out with big bouquets of flowers, and five bottles of wine.

Work was over for the day. We put several American and French flags on the truck that we go to and from our work in; then we decorated ourselves with the flowers that the lady gave us, and then we

started for home. To get to camp it is a ride of a mile and a half down the Avenue Bois de Bologne, around the Arc de Triomphe, and down the famous Champs Elysées. Everybody was singing and waving at us and crying, "*Vive l'Amérique! Vive la France!*" There were flags on tanks, street-cars, taxis, wagons, and houses. All the girls threw kisses at us.

At camp the fellows had gone wild. We carried the piano out and put it in the middle of the street, and played and sang songs. All cars that came along we made go around the block. Finally, we put the piano on a truck and drove around the city, singing a tune often heard of old around "the Dutch" in Ithaca.

The scenes that night in Paris are indescribable; people paraded up and down the streets, singing songs and shouting, and waving flags. The cafés were jammed. An American could not walk fifty feet but a bunch of men and girls would form a ring and dance around him. Champagne was as plentiful as air. It was impossible to buy a drink; French soldiers took care of that. Yet that night I did not see one drunk. Everybody had plenty and was happy, but it was not carried to excess. The captured guns that have been in the Place de la Concorde were pushed all over town with people riding on them, singing and waving flags.

I will tell you all about it when I get home. It would take too long now; but, believe me, it was the gayest day in all my life. So it was, I guess, for thousands of others.

I am getting so I can parley the lingo enough to hold a small conversation. Most of the people understand a little English, too. There are some things I regret, now that the war is over. I wish I had come over sooner.

How it feels to be in command of the Sanitary Train of a Division guarding the welfare of horses, ambulances, and men, and to see a hospital in which his own son was a patient bombed by the Huns' long-range guns is told in vivid letter from Maj. Eric A. Abernethy, formerly of the medical staff of the University of North Carolina, now Commanding Officer of the Sanitary Train, 78th Division, American Expeditionary Forces. This communication, which may be said to describe accurately the feelings of our troops at the end of the war, and which was written on November 3, a week before the armistice, says:

The war is over—"La guerre est finie" is written in large and indelible letters across the pages of history. It is the end. There will be more fighting—how much I can't say, but I have seen the finish and am glad to say that I was in at the end. I am very tired. When we first went into action I was put in command of all the hospitals and ambulances (commanding officer of the Sanitary Train), succeeding Lieutenant-Colonel Colvin, and have begun to feel the strain. It's a big job to see that all the sick and wounded are taken care of, if one really takes the job seriously (which I have), and I am very tired—not physically but mentally. There are so many details—horses, trucks, ambulances, hospitals, drugs, a personnel of one thousand, an activity which reaches from the poor devil as he goes over the top till he reaches the Evacuation Hospital. Well, responsible if a leg is not properly handled, if a truck goes bad, if an ambulance is wrong. Responsible

for feeding and clothing my men, for feeding and handling the sick—a million details—division, corps, and army after me—all day and all night, and then shell-fire. Recently twenty-four nine-inch shells fell in my hospital area wounding my men and riddling a tent where my own boy was a patient—the hardest night I ever saw. Bombed night after night (tho I gladly say the Hun has not hit my hospitals except with shells, which was not intentional), three nights in a row, the most intensive bombing-raids of history, and they used my hospital as a marker and bombed everything, but it; a nasty long-range gun shelled me for eleven days, but never hitting me. My ambulances are riddled with holes, even one motor-cycle. One night a big bomb made a hole twenty-four feet in diameter and eight feet deep in the midst of one of my companies, burying seven men and six officers (killing no one). Moving at night without lights on congested roads fifty-seven three-ton truck loads using from 600 to 1,000 gallons of gasoline a day. Such has been my life for many weeks and I am tired. It's good to see the retreat; the Hun is far away. He has run like a chicken for two days (really a masterly retreat) but grim, starving men mark his path—dead horses, ruined towns—one trail of disaster. Just where he is to-night is hard to say. I heard three guns to-day—and ah, God, the noise of a big battle—how one's head aches, and how one hates it. And the bravery of my men—they have gone through hell and death and fire, and have not complained. Just a little of the life I have led. We have had marvelous escapes. I also personally have walked with death and beaten him out. Time and time again advanced formations have been blotted out with practically no loss.

To-night I sleep in a house of history. A great Emperor lived here once, but the splendor of the city in history—every house is a ruin—the streets are filled with holes and rock and brick and stone. If it rains to-night, well, to-morrow onward anyway.

A LITTLE CHILD SHALL LEAD THEM

AN Old-World proverb—as usual, the quintessence of folk-wisdom—says that children and dogs are great judges of character. Conversely it has been said that the truly good love children and animals. Pictures and stories born of the Great War are ever relating how true both statements are. This touching story about a baby is told in *Trench and Camp* (Camp Gordon, Ga.):

The troop-train was standing in a certain station awaiting orders. The boys, as they always do at such times, were leaning out of the car-windows, cheering, singing, chatting with little groups of bystanders who have stopt in at the station to bid the Sammies "Godspeed," and having a blithe and happy time generally.

The "Y" man was walking up and down the platform, keeping eyes and ears open to all that was going on, alert to render any man any service that might be within his power. Suddenly he noticed a great, tall, Lincoln-like fellow endeavoring to attract the attention of a young mother who was standing, babe in arms, close to the wall of the station some hundred feet away. The secretary sauntered up to the soldier and asked him what he wanted. "I want to talk to that woman

Why Gramm-Bernstein Trucks Have Such a Good Name

Any business man who investigates trucks, soon finds out that Gramm-Bernstein have what Americans call "a very good name."

A good name, in American business, is about the best thing a man or a house can acquire.

It can't be bought—it has got to be earned.

There's always a reason for it, and the reason is never hard to find.

In the case of Gramm-Bernstein, the reason is eighteen years old.

Began With An Idea Eighteen Years Ago

Gramm-Bernstein trucks have a remarkably good, clean reputation because of an idea that took hold of B. A. Gramm eighteen years ago.

It was such a big idea—to B. A. Gramm—and got such a grip on his imagination—that it pulled him out of a bank into a machine-shop, and a suit of overalls.

The idea was one of those insistent, persistent convictions, that take hold of an American and make him do things his friends think foolish.

Gramm gave up a nice, comfortable, two-by-four job in a country bank, because he saw good roads before there were any good roads—and trucks before there were any trucks.

Trucks His Main and Only Thought

While other "visionaries" were dreaming motor cars—he dreamed trucks.

He was a business man with a mechanical sense—or a mechanic with a business bent.

He thought of mechanics in business terms; and therefore began building a business vehicle even before business was ready to buy it.

Mr. Gramm had his troubles. But men of the far-seeing, ground-breaking type, are stubborn.

So he hung on and let the troubles

roll off—and just kept on building good trucks as well as he knew how.

A Good Name Richly Deserved

Gramm-Bernstein have a right to the good name that is now given them.

They earned it in struggle, and sweat, and hard, practical experience before most trucks were born.

The business reward came long ago, but the best reward of all arrived when America went into the world war.

B. A. Gramm has never wasted any time hunting for the spotlight.

But the governmental spotlight reached out with its long white fingers, and located him as soon as the War Department began building trucks.

Builders of First Liberty Trucks

The good name of Gramm-Bernstein counted for something when the Government sought practical truck experience.

Gramm-Bernstein built thousands of Government trucks at their big Lima plant. Theirs was the first fleet started on its way. Two Gramm-Bernstein features were adopted bodily for Liberty Trucks.

Gramm-Bernstein asks American business men, now, to look into their line when the truck question confronts them.

The New 1½-Ton Gramm-Bernstein

This is the first 1½-ton truck we know of that combines all the elements which make a successful truck.

On it has been concentrated the longest truck manufacturing experience in the business.

It meets, as we believe no truck has ever met before, the demand for a thoroughly reliable, long-lived, low-cost truck of this capacity, at an attractive price.

In every way, it is worthy of the good name of Gramm-Bernstein.

The Gramm-Bernstein line of trucks is complete, embracing all required capacities from 1½ tons to 5 tons.

The Gramm-Bernstein transmission is of special design, with gears continuously engaged and completely safeguarded from damage through careless or inexperienced gear-shifting.

over there with the baby," came the reply. The "Y" man glanced hastily at the soldier's face, was satisfied by the expression, and went to the young mother to ask her if she would grant the lad's request. She gladly did so, and this is what the soldier boy said to her:

"Lady, I have a little baby about the age of yours; I wanted so much to get home and see him once more, but I couldn't; would you mind my taking yours and kissing it? Life over there I imagine may be pretty tempting, and, as a father, I want to go across with a baby's kiss on my lips."

The mother lifted up her child to the soldier, who placed its wee arms about his neck, folded it in his great, muscular arms, and, amid the din and gaiety of the soldiers on the train and the citizens on the platform, he kissed it with the tenderness of a strong, true man. After he had given the baby back to its mother she then took the soldier's face between her hands, kissed him on the forehead, and said: "God bless you, my baby's father is over there."

HATE AS A WEAPON OF WARFARE A FAILURE

HATE is no foundation to build an enduring structure upon; this has been proved, time and again, in the history of men and nations. In pagan days an orator brought a crowded theater to its feet when he cried, "What concerns a man concerns me!" The great nations of the earth to-day are those belonging to the race of Tertullian, while the decadent and crumbling spring from the Goths and Vandals, followers of Attila and Genghis Khan. Never has it been seen more unmistakably true than to-day, when we see the composers of the Hymn of Hate retreating before the armed Brotherhood of Man. The spirit that defeated the Huns is told in the pages of *The Outlook* in this wise:

"By the side of a wood was a wounded German, both legs broken. He was lying on a stretcher, and lying beside him on the ground were two stretcher-bearers.

"We're all tired out and can't carry him a step farther. We've already toted him two miles, and he's nothin' but a *Boche* anyhow; we're going to leave him right here."

But the two secretaries protested and offered to spell the stretcher-bearers if they would take the wounded German on in. This agreed to, they started across the open field through the communication trench. Half-way across they found that the shelling of that morning had caved in the trench completely. What were they to do?

They must either go back to the woods or climb out and carry their wounded man along the parapet. They talked it over and agreed that if they carried the prisoner on their shoulders, being in plain sight of the German gunners, they would not be shelled, especially when the Germans could see that it was a German wounded man that they were carrying back. So on this supposition they started out along the parapet.

But they were new to the game of German warfare, and they soon found that they had started out on the wrong suppo-

sition, for in half a minute a terrific barrage of German shells was falling around them, some bursting within twenty feet of them. If it had not been for the fact that it had been raining for several days and the shells sank into the mud two feet before they exploded, the whole crowd would have been blown to bits.

As it was, they dropt their wounded prisoner on the parapet and "beat it," as the fifty-year-old preacher-secretary described it to me the next day.

One fellow afterward remarked that he never knew he could run so fast. Now comes the nub of the yarn; something to make every American proud of the men "over there."

"We reported to the major. He said to us, 'Boys, where is your wounded German?'"

"We left him back there on the parapet, sir."

The major, a typical American officer, looked at them a while and then said something that makes me thrill with the pride of being an American every time I think of it:

"Well, he may be nothing but a *Boche*, but we're Americans, and you'll have to go back and get your wounded prisoner. If you men don't want to go, I must go myself."

And back these two secretaries and a young lieutenant orderly went. The stretcher-bearers had disappeared. There was another barrage of shell-fire, and the men lay in a shell-hole for two hours; but at last they got their wounded German back.

"He may be nothing but a *Boche*, but we're Americans," is a sentence that ought to go down in history to the glory of the American officer.

Thousands of such cases have gone far—God alone knows how far—to win a glorious victory over hate-breeding *Kultur*. The hater hates even the dead, the real man loves and reverences even his enemy in death. As this incident proves:

Then there is another silhouette memory of France.

It is that of a little graveyard in a French field where two stone fences meet. It was springtime. There were five lads to be laid away that fair morning in God's Acre. There were three privates, a captain, and a German boy.

A few of us stood around this little quiet place with uncovered heads while the chaplain read the service. Then the first body was lowered into the grave, the salute fired and "Taps" sounded. Then came the second boy. Then the third, with the salute fired and "Taps" sounded. Then came the American captain, with the salute and "Taps." Then came the *Boche*.

The firing squad didn't know what to do about the *Boche*. The sergeant turned to the captain-chaplain and said, "Sir, shall we fire a salute for the German?"

We waited anxiously to hear the American officer's answer. It was a tense moment. But we were not to be disappointed.

"Boys, we are not fighting this dead German boy; this poor lad is out of it all for good. And, after all, he is just some German mother's son. We are not fighting him. We are fighting the German military caste, the German Government, the German nation, but not this dead boy. He had died on the field of battle. Yes; play 'Taps' for the *Boche*!"

THEY ALSO SERVED WHO ONLY STOOD ON GUARD

THE United States Guards didn't get to France, and there was no chance of their ever going across; they didn't see or do anything exciting; but the *New Orleans Item* says they contributed as surely to victory as their more fortunate brothers in the front-line trenches, and "their heroism, if anything, was of a higher order, for what can equal the heroism of doing a heart-breaking duty when the urge of glory is missing, when, in fact, one seems forgotten by his fellow man?"

After putting this question, *The Item* pays a glowing tribute to the men who, neglected, forgotten, overworked, kept our shipyards, arsenals, munition-plants, railroads, and federal buildings safe from the menace of the I. W. W. and the Kaiser's plotters. On them depended whether the line in front would hold or crumble, the writer declares, and then tells their story:

Before the division was organized the flames of this country were rolling almost as high as those of sacked France. Then this wall of khaki was thrown around the industrial centers where the resources of the nation were being fashioned into food and clothing and ships and weapons, and the world was safe.

One hundred and thirty-five thousand strong, the division is—a distinct military organization. It is composed of men from nearly every arm of the service—infantry, machine gun, engineers, signal corps—but whom some slight physical disqualification keeps from the more joyous service at the front, such as weak ankles, an impediment in the speech, cross eyes, poor hearing, or sickness. All wanted to go abroad, and the doctor's verdict was like a sentence.

Especially bitter has been the lot of the men who were kept back because they had pneumonia. Tho they be physically perfect in every organ and limb, it is a rule that no man can go into front-line duty for one year after having this disease. And there were many such—exiled to lonely posts in this country, who ate their hearts out with thoughts of their bunkies at Château-Thierry—but still carried on faithfully!

In New Orleans, the United States Guards number 950. Their barracks are on the river-front at Chalmette, Poland Street, French Market, Thalia Street, Washington Avenue, Dufoussat Street, Stuyvesant Docks, the grain elevators, Algiers and Jackson Barracks. And rain or shine, night and day, hot and cold, they have guarded every vital point in New Orleans since they first came last February. No one could get by without a pass.

On one classic occasion, a buck held up an automobile containing a major and four captains. They didn't have the proper credentials, and tho they were in a fearful hurry, they had to wait until the officer of the day (a second lieutenant) gave permission. It is an air-tight, chilled steel, asbestos protection all right, and as a result the millions of dollars of cannon and guns, food, explosives, and other supplies that have been going over our wharves have never been in any jeopardy.

Guard duty is disagreeable at best—even when there is hope of nobler employ ahead. It is a sort of open-air imprison-

OUTLINE OF MOTOR DRIVE

Driving Combination Conveyor Line

The Hard Drive That Seems Simple—and the G.T.M.

Fifteen belts had been devoured in the plant of the Allentown Portland Cement Company, Allentown, Penna., in three years by a small motor-drive that seemed to be simple and easy. The fifteen had been of every conceivable type and material. Their prices ranged from the cheap to the most expensive. One day a G.T.M.—Goodyear Technical Man—Mr. Ford from our Philadelphia Branch, called on the plant superintendent. He got a hearing immediately, and it surprised the G.T.M. Generally the first thing he got was a question about prices.

The G.T.M. explained the Goodyear Plan of selling belts only after a careful analysis of the drives to be served—and not as a grocer sells sugar. The superintendent took him to the motor-drive that looked so simple and easy, and told him how it fairly ate up dollars. The G.T.M. looked it over.

He found that the drive wasn't simple and easy at all. It transmitted power to drive a combination conveyor line and bucket elevator—without the use of reciprocal gears. All the strain and vibration of the conveyor and bucket elevator loads were directly on the belt. It just had to be kept exceptionally tight. In addition the drive was in a grinding room so that an excessive amount of gritty dust collected on it, got between it and the pulleys, and ground away at the belt face. The G.T.M. pointed out all these things to the superintendent. "That's true," said the latter, "and what are you going to do about it?"

The G.T.M. thought it over. Then he measured the pulleys, the distance between centers, and the belt speed. He figured for a few moments and told the superintendent that the drive needed a 31 foot 3 $\frac{3}{4}$ inch, 5 ply Blue Streak Belt—and added that a certain kind of fastener should be used.

Then he quoted the price. It was less than that of some of the previous belts. He got the order—not because of the price, but because his methods of studying the conditions and prescribing the proper Goodyear Belt seemed to the superintendent the logical method. The belt came, was installed March 23, 1917, and is still serving the drive. It has already given over a year and a half of service. The best average before that time had been four and a half months.

The saving effected was so great that the G.T.M. was asked to analyze other drives and to prescribe the proper belts. If you have a hard drive, especially if it is one whose belt-devouring nature seems unexplainable, ask a G.T.M. to call. One from the nearest Goodyear Branch will be glad to do so when next he is in your vicinity. His service is free—for the savings it effects for purchasers are so evident and material, that a gratifying volume of business from the plants analyzed is certain to be ours within a few years.

The Universal Office Oil

Buy a Handy Oil Can or bottle of 3-in-One for your office. Put it to work. See how *many* things it does *better* than any other oil you ever used.

3-in-One makes typewriters, billing machines, adding machines, numbering and dating stamps, cash registers, safe locks and hinges and all other office mechanisms work smooth and easy. Keeps them clean and bright, too—inside and out. Never gums or collects dirt as other oils do.

3-in-One

takes the squeak out of squeaky revolving chairs. It lubricates perfectly and prevents rust.

Have Jimmy, the office boy, use 3-in-One to clean the desks, chairs, file cases and other office furniture. Just a little 3-in-One on a damp cloth removes all grime, finger-marks and superficial scratches. Polish with a dry cloth and see the "new" look return. 3-in-One leaves no residue on furniture to finger-mark or catch dust.

Sold at all stores

East of the Rocky Mountain States, 15c, 25c and 50c in bottles; also in 25c Handy Oil Can

ment, and two hours a day is not far short of martyrdom. Imagine what it is, then, when the force is so short that the men have to double up!

That has always been the case here. Ours is a long harbor, an irregular harbor, and the number of men available for service here was just about double the posts necessary. That meant an excruciating routine of duty; no recreation, no entertainment; for only in extreme cases, such as death at home, could leave of absence be given.

And it wasn't asked, for no man would willingly add to the burdens of his mates. Consideration is one of the first lessons learned in the Army. The only break in the monotony was when they were detailed as firing-squads, to give the last honors to brother soldiers whose remains were sent home to New Orleans for burial.

And not a single complaint, not a fight, not an arrest during all these weary months! Never a let-up in the morale!

Isn't that a fine record, a fine tribute to the principles of Americanism?

Three weeks ago the Y. M. C. A. presented a baseball and glove and set of boxing-gloves to each of the river-front barracks. This is the first recreation they have yet had, and they are making the most of it. They take turns pitching and catching the ball, and they stand in line for the gloves. More recently there has been a dance or so in some of the mess-halls.

As would be expected, there are men from nearly every State in the Union among the Guards here, and from every walk in life—farmers, laborers, cowboys, skilled mechanics, newspaper men, professional men, and one minister. He by the way is the most soldierly looking of the lot—after the sergeant, of course. Sergeants are poured in more heroic molds than generals. One-bars are weak and flexible in comparison. They are a remarkably well-educated lot too, and as fine a bunch of officers and men, as you could find anywhere.

Peace has, of course, made them doubly anxious to get back home and away from their nightmare of monotony. But their high purpose still seals their lips against anything that might sound like complaint, and they don't express their longing. They really expect—the there is nothing official to that effect—to be home by Christmas, but they are making all preparations as if they expected to stay indefinitely.

A stove was being erected in a barracks at the French market. The officer in charge asked the private who was doing the work why he made a certain arrangement that entailed a little extra trouble. "Because," replied the latter, "we can put back the partitions when we take out the stove next summer."

That typifies the spirit. They hope to get out, but in the meantime there is no let up. The country—our country—above all! Individual hardships will pass with human life, but the country is eternal. The spirit that needs no burst of band or cheer of crowds to feed its pure flame! A tough, mean, disagreeable, villainous, miserable job had to be done, and that was all there was to it.

Looking at these men—these disappointed men—as they come in smiling from one dreary vigil over a railroad switch or a warehouse door, to eat, sleep, and rest up for another watch; who endure the rain, brave the cold, suffer the heat, and agonize under the mosquitoes, and have done this day after day, night after night, week after week, and month after month, without a single complaint, when we realize the high

Car owners! Co-operate!

Conservation is still a national service. The cost of demobilization and reconstruction must be balanced by individual economy. Make your car safe by installing gas-tight piston rings.

Worn piston rings waste from 25% to 50% of the gasoline and oil used.

Think what this amounts to for the whole Nation! Do your part now—install new piston rings. Every car that has run several thousand miles needs new piston rings. The rings wear out, and leave a gap through which compression escapes, and oil passes into the cylinder. Carbonization, pitted valves, knocking,—almost all such

engine troubles are largely due to worn and faulty piston rings.

Install Inlands—they'll save for Uncle Sam and you.

Any good mechanic can show you how the Inland patented spiral cut principle makes it the mechanically perfect ring. Absolutely gas-tight, because it has no gap, and because its patented Spiral Cut permits it to expand in a perfect circle, making a perfect seal against the cylinder wall. Strongest and most durable, because the width and thickness are equal all around—no weak or thin places. Low priced because of its simple one-piece construction.

3,000,000
Inlands are
now in use.

INLAND

ONE-PIECE PISTON RING

Overhaul now. It costs you much more to let your car run down, than to keep it up. Put your motor in A-1 shape. Do not wait until early spring when overhauling is heavy. Your garage man can give you best service now. See him about Inlands today. Send for our free booklet.

DEALERS: Jobbers everywhere stock Inlands—ask yours. Inland Machine Works, 1636 Locust St., St. Louis, Mo., U.S.A.

qualities that animate our military establishments, it is not so hard to understand the campaign that knew not a single reverse.

WHAT THE SPANIARD THINKS OF US TO-DAY

A THOUSAND warnings have come to us during the war that the wily German propagandist has been sowing his seed in Spain to convert the proud Castilians to the blessings of Teutonic Kultur and make them hate the Allied peoples. The main plank in the German propaganda was that William II. was the greatest man in the world, and of course that particular plank has been reduced to slivers. The whole war, in fact, has been a liberal education for all the neutral onlookers, and the German propaganda has been a waste of money. The Spaniard has kept his eyes open and has not been deceived. From such a standpoint the following article ought to be of more than passing interest; it is written by Miguel de Zaragoza, is entitled "The United States as Seen by a Spaniard," and is published in *Inter-America* (New York). Setting out with the information that the first time he ever heard the name of the United States was in the heart of Catalonia, in a school in Tarragona, a district whose inhabitants are known as "the Yankees of Spain," workers and democrats, he proceeds:

I—a son of Castilla the august—heard for the first time the name of the United States in a school in Tarragona. I was a young boy; I had barely completed my nine years; and I was getting ready to enter the institute. My teacher asked me one morning, during the lesson in geography:

"What do you know about the United States?"

"The . . . the United States . . . the United States."

And I, not knowing how to express to him what I knew in a better way, added, ashamed that I did not know more:

"The United States is . . . the greatest country in the world, where everything is invented, and where the most extraordinary things happen. . . ."

The master burst into laughter; ingenuously, and with a brusque transition, he changed his tone to say to me, by way of reproof:

"The United States is not that. Study the lesson better, as you will have to repeat it to me to-morrow; and never forget that the greatest country, for you, ought always to be your own."

I did not understand him well at that time, and I kept thinking that in Pontevedra, a few months before, and for a period of several days, my childish intelligence had been set wondering twice: when I heard a phonograph in the house of the Governor, and when I witnessed the installation of the electric system. These things, which seemed to be witches' tricks, together with telephone and telegraph, were from the United States. The land of Magic, that was the United States!

Then came the row with Cuba and the inflamed feeling against the States. "The only people who did not agree with either

the rulers or the newspapers were the poor mothers. Cuba to them was an enormous pit into which their sons, as the victims of yellow fever, were dropt." When, in the draft at the headquarters, the "black ball" came up for a soldier, that black ball meant Cuba. How many mothers cursed that name! "During the war we were served with the most fantastic statistics showing how miserably weak America was. Then the collapse." We read on:

The truth is that, for one reason or another, Spain became an enemy of the United States. The war separated the two peoples. This occurred twenty years ago: now they are friends, and another war—the one that envelops the world—may unite them even more.

Why not? France and England were mortal enemies of each other. So were England and the United States. So also, one of another, were all the countries that to-day are called Allies, and together are pouring out their blood in the struggle against Germany.

I reached the United States—already a good many years ago—bringing with me all the prejudices which my countrymen harbor traditionally. I thought I should find myself in an environment antipathetic, hostile, or strange to my customs and tastes. Nevertheless, I was inclined once more to be an optimist. Accustomed to living in different foreign countries, both in America and Europe, I had nothing to dread at being in another of them.

For the United States, the present does not exist. It might almost be said that the present for this immense people, which moves so fast, is the future for the rest of the peoples.

The North American, always moving, leads, by at least half a century, the vanguard of the races of the world. In order that this distance may not be shortened, he never rests. Every man of this country lives his own life over several times. Thus, the same man, at his different stages, is poor and rich, slave and master, in misery and all-powerful, and he is something greater still: he is always a man.

The writer then proceeds to pay a high tribute to the optimistic spirit of America, which he attributes in the main to our coeducational system, shrewdly remarking that one result is that the American woman is a woman who will always be worth more from being virtuous than from being innocent. As for the American man: "His life does not anticipate age. The more he prolongs his childhood, the more he prolongs his youth, so much the more does he extend his life during mature age." Summing the whole matter up, he says he is now able to answer the query set by his master in Tarragona, which he does in this way:

These are the men who have made the North American Republic great. If now we associate with the United States Cuba—the Cuba lost by Spain, and which the United States did not seek to retain possession of—how much shall we not be surprised to behold her converted into an ideal country, where no one is any longer sick with yellow fever, where the most scrupulous material and moral hygiene

were applied for the good of all. Spaniards can now visit it without fear and their mothers can remain in tranquillity on the other side of the Atlantic. The miracle was wrought by the United States.

If now we pass from Cuba to Panama—where the same yellow fever made the isthmus uninhabitable—we shall be equally astonished by the sight of another beautiful land, whose sanitary condition is as good as that of any region of the United States.

Something similar might be observed in Santo Domingo, as also in the Mexican city of Vera Cruz during the recent occupation: the Yankees carry health about with them.

Such is the lesson I could now recite to my master of Tarragona, if he should ask me what I know about the United States, the country of fabulous wealth, of surprising inventions; the one that favored the progress of the world with incandescent light, the lightning-rod, the typewriter, the airplane, the electric locomotive, the linotype, the machine gun, the telegraph, the sewing-machine, the phonograph, the metal armament of ships; the one that possesses, to its glory, the tallest buildings, the longest telescopes, the largest hydro-electric plants, the most important aqueducts, the most astounding railway-stations, the most sumptuous libraries; the nation that imagined the submarine *Holland*, precursor of the Spanish *Peral*, the French *Gymote*, the Swedish *Nordenfjells*, and that of the hated Germans. . . . It is the people that has entered the most horrible war witnessed by the ages, led by the banner of liberty, the banner of right, the banner of justice, and whose ambition is . . . the peace of the world!

A PLAN TO MAKE THE SCHOOLS MORE USEFUL

HOW a manufacturer would have our school system readjusted is told by James P. Munroe, vice-chairman of the Federal Board of Vocational Education, in an address before the National Education Association, printed in *The American City* (New York, November). From the manufacturer's point of view, Mr. Munroe tells us, a good deal of our teaching has been waste of effort. The manufacturer is fast learning that waste in his own business must come to an end, and he is inclined to turn about and demand that it be stopt in some other things in which he has an interest, including very particularly the business of schooling. This demand does not mean at all, Mr. Munroe assures us, that the schools should train boys and girls specifically for manufacturing. On the contrary, the industrial point of view calls for a broadening of education, not a narrowing of it. The schools have been kept out of touch with daily life; they should be extended to cover every useful phase of it. Says Mr. Munroe:

The first thing that a manufacturer would do with education, if he had the power, would be to make it real, immediate, and interesting to the growing child and youth. . . . It is only for a very short time that the school can hold the child at all; and from the point of view of a business man it is the wickedest waste that this short time should not be made as fruitful

THE radiator cover on your car should be equipped with Lift-the-Dot Fasteners. They are the most practical fastening you can use.

Lift-the-Dot Fasteners will not pull loose accidentally. They will not permit the cover to flap in the wind. They operate easily and are thoroughly reliable.

At the same time, these fasteners denote quality and add a "classy" appearance to the car. They are more expensive than ordinary fasteners but their beauty and efficiency are well worth the cost.

Builders of automobile bodies, and makers of fine motoring equipment, are using Lift-the-Dot Fasteners not only on radiator covers but on tops, curtains, bodies, dust hoods, and tonneau covers as well. Wherever you see Lift-the-Dot Fasteners on an automobile, you know that quality has been put first.

Lift-the-Dot Fasteners are now coming into general use on all kinds of leather and canvas articles such as luggage, musical instrument cases and sporting goods. The United States Government uses Lift-the-Dot exclusively on the more important articles of military equipment requiring fasteners.

The Lift-the-Dot Fastener is securely locked on three of its four sides. It is opened instantly by lifting on the fourth side—the side with the Dot. It is important to lift this side only as the Fastener cannot be opened by any amount of pulling from other directions.

Remember Lift-the-Dot. Look for the dotted side. Lift that side.

Getting There First

"WE have adopted Goodyear Pneumatic Cord Truck Tires for our work because they supply the requisite speed and stamina, at the same time greatly reducing truck repairs. As a matter of fact, they make hard work easy."—Mr. Clay Urie, of Clay Urie Auto Delivery Service, Toledo, Ohio.

WITH characteristic newspaper enterprise, Mr. Clay Urie, who handles the deliveries for the Toledo News-Bee, uses 1-ton trucks equipped with Goodyear Pneumatic Cord Truck Tires, to hurry each edition of this paper to newsdealers.

He began his initial trial of these tires on August 1, 1917, using them on a truck which was operated in direct comparison with a solid-tired unit.

Even a small margin of greater quickness in traffic and on the straightaway is important in newspaper delivery. Consequently the pneumatic-shod carrier demonstrated the distinct advantages of its tires for this work when it constantly scooped its sister truck.

Also, during the memorable drifting snows of last winter, which tied up solid-tired trucks, this Goodyear-equipped hustler continued to distribute capacity loads *on schedule*.

The firm traction supplied by its tires has served effectively to counteract wet and icy pavements even in cases where this truck has been compelled to sprint over them.

After the experimental set of these tires had been in service but a short time, it was

noted that the bills for mechanical repairs to this truck had taken a sudden and practically complete slump. This was simply because, although the truck often whirled fast across car tracks and rushed over rough stretches, the former solids were no longer transmitting the heavy jars to moving parts and other members.

At the time the photograph at the left was taken, all the tires on this truck had traveled 13,650 miles. Despite the fast starting and stopping, the driver's following of street car lines and other exactions of the service, their condition clearly indicates many more miles yet to be delivered by them.

Indeed, up to this point, the rear tires had never been removed from the rims, notwithstanding that they had averaged 30 miles daily, including Sundays, for more than 15 months.

This, in brief, is the story of how the pioneer Goodyear Pneumatic-Cord-equipped truck of Toledo led its owner to effect vital improvements in the News-Bee's delivery system.

But it is by no means an unusual narrative when placed beside others in which the pioneering exploits of Goodyear Pneumatic Cord Truck Tires are recounted.

THE GOODYEAR TIRE & RUBBER COMPANY, AKRON, OHIO

CORD TIRES

as is possible. And common sense teaches that the only way in which to render it fruitful is to make the school period interesting, to see that its subject-matter is comprehensible and to place before the child, as far as possible, a visible and understandable aim for the work that he is told to do. Make it interesting, simple, and with a definite objective, and there is almost no limit to the amount of work that one can get out of even the commonplace child; and that work will be secured with far less mental and physical fatigue, on the part of both pupil and teacher, than under the methods that now hold in most of our public and private schools.

The next thing that the manufacturer would bring about in education, if he could, is to make it businesslike. . . . Education should be treated as a business: the business of establishing health, mentality, and character, and should be subject, therefore, to the rules and methods of business, adapted, of course, to the age of the person concerned and to the special nature of the business that is being carried on. The essential thing is that the child, the parent, the teacher, and the citizen in general—all should realize and should act in accordance with this realization, that in the period between five and sixteen, eighteen, or twenty-one years of age, as the case may be, all of them ought to attend, industriously, earnestly, and with full understanding of what they are undertaking, to the business of making each particular child concerned into the best citizen, physically, mentally, and morally, that he is capable of becoming.

A third thing that the manufacturer would bring about, if he could, is an understanding on the part of the pupil in school of what his future responsibilities are almost certain to be. It is perfectly plain to you and me, it should be made equally plain to the boy, that he has an important part to play in the coming generation, that it is his business in the childhood and adolescent years to prepare himself for that part, and that his duties range themselves under three main heads: (1) the duty of earning as good a living as he possibly can, so that he may make due return for all that the community during his unproductive years has done for him; (2) the duty of establishing himself as a real part of society by marrying and bringing up a family; and (3) the duty of taking his full share in those common responsibilities for the welfare of the community as a whole which we lump under the general term of citizenship. . . .

A fourth thing that manufacturers are beginning to ask is why the schools keep themselves so much apart from the other educative forces of the community; why they do not cooperate with the parents, the industries, the civic life in general, using them as aids, as laboratories, as coteachers in the upbringing of boys and girls. . . . As a manufacturer who is somewhat familiar also with school conditions, I am convinced that the initiative must come from the school side, and that it is a legitimate duty of the schools to educate the parents, the industries, and the community in general as to what they can do and ought to do to help in this most important of all social duties—the preparation of boys and girls for an effective adult life.

How, then, can the schools and the industries help each other? In the first place, says Mr. Munroe, the school can use the factory, the farm, the office, or the store as a laboratory in which boys and

girls may get that acquaintance with real things which it is impossible to give in the schools. Again, the school may be treated as an adjunct to the factory, the store, and the farm, opening its facilities to boys and girls, men and women, who have had to go to work at an early age, or who have been denied proper schooling. A third method is division of time between school and industry during adolescence. A fourth way is through vocational schools, in which the pupil is deliberately prepared for his life-work. Says Mr. Munroe:

The machinery by which these several types of cooperation are to be brought about is that of the evening school, the part-time continuation school, and the cooperative day-school. . . .

The manufacturer has no anxiety as to the readjustment of our public and private schools to meet those exigencies which the war has so keenly brought home to us, provided education in the United States continues, as it has so well begun, to develop sound vocational education in its schools and colleges. The so-called academic studies will remain only after they have proved their right to live by reshaping themselves to meet the true needs of modern life, and the schools as a whole will get more and more awake to the fact that they are supported by the public, not to fit boys into an iron-clad system, but to fit a very varied and flexible system into the actual needs of individual boys.

This general awakening is being helped to an unexpected degree by the working of the so-called Smith-Hughes Law for the promotion of vocational education. Under that law every State in the Union has created a State Board for Vocational Education, and, in increasing amounts, the Federal Government stands ready to subsidize the teaching and supervision of secondary training. . . . To the manufacturer it is of great interest that at least one-third of the money appropriated by the State and matched by the Federal Government for the training in trades and industries must be used for part-time instruction. This provision emphasizes the interest of the Government in strengthening education at one of its weakest points. That point is the lack of educational supervision of the boy and girl between fourteen, when, in most cases, he can leave, and does leave, school, and sixteen, seventeen, or eighteen, when he arrives at the age for beginning really productive work. . . .

The part-time continuation school, thus fostered by the Smith-Hughes Law, has educational possibilities, I believe, beyond our present conception; but it can not be made really effective until the States pass, as they should, compulsory laws requiring school attendance between fourteen and sixteen for all youth—for the entire session if they are not at work, and for at least eight hours a week, out of their working time, if they are regularly employed.

Another form of education which the Smith-Hughes Law permits and encourages is the formation of evening classes for men and women at least eighteen years old, in subjects supplementary to their day employment. This gives new and added opportunities for those ambitious workmen who desire to fit themselves, as modern industry makes it so difficult for them to do within the industry itself, for those higher positions which are the first rungs on the ladder of industrial competence.

THE "DOMINIE" AT THE FRONT

"DOMINIES" are not much heard of these days of fancy titles, but when the time comes to describe some heroic deed done by a man uniformed in nothing but rugged, indomitable courage, why then "Dominie" is a mighty useful and completely satisfactory word. When the Hun was at the gates of Paris and the battle of Château-Thierry poured out its wealth of hero-stories about the Americans and their immortal stand, even in those days one story could make itself heard. It was about "Dominie" Clifford, the man who dragged his wounded colonel four hundred yards through a stubble-field, in a gas-mask, amid bursting shell and rifle-bullets ripping up his clothes—a little gray-haired Scotchman about fifty-five years old, with a decided objection to talk about himself. When cornered he talked about the marines in this way: One night about ten years ago in a little town in the West Indies where he was a missionary he bumped into three drunken marines just as an "M. P." hove in sight; the "Dominie" knew what that meant; so he promptly took them into his care. One of them he specially cared for and the boy braced up, then he lost sight of him. After ten years came Verdun, where he bumped into a staggering marine. Staring at the "Dominie" between hiccups he said; "Hello, ole fren. You don't know me, do you?" The "Dominie" didn't. "So thash the wa' yu' forget yer ole frens, ish it?" Continuing, "Shay, don' you remember that guy you got to shign the pledge back in the ole West Indies ten years ago?" The "Dominie" did; that marine has now earned two stripes and is still going strong. He couldn't forget the "Dominie." The way such men adapt themselves to circumstances is told in *The Independent*, which we continue to quote:

"Then there was Van," the doctor said. "Day before yesterday at Lury I met Van. I have been trying to help him quit cigarets for months, but the poor kid just couldn't do it. I came on him lying in the corner of a fence wounded seriously. He wanted a cigaret. I knew it wouldn't hurt him, so I lit the first cigaret that I've lit in forty years and put it in his mouth. I don't know as I ought to have done it, but I just naturally couldn't go by and leave that kid o' mine hungry for a cigaret while he was awaiting for the ambulance. Do you think I did right?"

"It would have been a crime if you hadn't done it," I said to him.

"Van looked up," said the doctor slowly and with tears in his eyes, "Van looked up at me and said, 'Doc, I know how you hate 'em, and yet you are big enough to light a cigaret for me. God bless you, Doc, and if I ever get well and get my strength I'll quit 'em, so help me God!'"

"Do you think he will?" I asked.

"No," said the doctor. "I buried him the next day."

Then we tried again tactfully to lead him back to his heroism, but he evaded

MOTOR TRUCKS **STABILITY** **TRAILERS**

Atterbury Motor Car Co.
Buffalo, N. Y.

Sept. 25, 1918.

Gentlemen: Before shipping in our motor truck business we expect a number of weeks visiting fourteen motor truck factories in the West and Midwest, and after consultation with a motor truck expert, who acted as our guide, and other truck engineers, we decided on the Atterbury line.

We are now convinced that no business was made, no Atterbury was ever broken, being constantly improved for power, speed, strength, weight and load. Atterbury always runs true in miles of use, which your drivers, who are only human, undoubtedly will be the testimony. The extra weight of which enables your product to stand up to the abuse.

Looking forward to entering mutual relationship with your company, we are

Yours very truly,
STABILITY MOTORS CO. CONTRACT

Over 566 miles of terrible roads

Atterbury dealers—despite the worst road conditions in years—are daily taking home their quota of Atterburys.

The trip of 566 miles from Buffalo to Philadelphia, over roads that defy description, was easy for the big Atterbury truck (pictured above) even with another big Atterbury on top of it.

Incidentally, this journey was made on 70 gallons of gas.

It is the trouble-proof simplicity of the Atterbury—and the fact that the Atterbury is made much sturdier than it needs to be—that makes Atterbury performance possible.

that part and said, "I must tell you about the trick the boys played on me."

"One afternoon when I was out they stole my coat and my cap and took off all of my Y. M. C. A. buttons and put marine buttons in their place. I knew it was against the rules to wear them, but when I came in I didn't notice it and went to the officers' mess with them on. The colonel calls me '*Padre*,' the major calls me '*Chaplain*,' and the boys call me '*Doc*,' you know," he said smiling.

"Well, the colonel looked at me funny like and he said, 'Well, *Padre*, I see you've joined the marines for sure now, and have the buttons and all, right with you.'

"I was embarrassed and said, 'I'll go home, sir, and take them off. I didn't know they were on.'

"Who put them on, *Padre*?"

"The boys, sir."

"Well, if the boys put them on they want them on, so on they stay," the colonel said to me."

The marvelous effect and influence such men have upon other men are told in a touching incident, which ought to shame some of us at home who can see no good thing save in our own little "ism." It was the last communion before a great and fierce fight:

"The boys themselves asked for it. They knew the big fight was on the next day and they asked if we might not have a communion service. I went and got some of that 'van rubbish' as I call it; the French call it '*vin rouge*,' and it being the best we could get, we had our communion with it. I told the boys what we were going to do and said that any who did not want to partake of the Lord's Supper could leave. Not a single soldier left."

"I took note of them and nine Catholics partook, thirteen Methodists, three Christian Scientists, nine Baptists, three Lutherans, three Congregationalists, two Episcopalians, one Hebrew, and twenty-three who did not profess any religion. Five of these took a definite stand for the Christ in that meeting. The next day most of them were dead."

He was subdued for a few minutes and we couldn't get him to talk. He was thinking of those dead boys of his. Then he reached into his pocket and pulled out an envelop. Reaching into the envelop he pulled out a five-dollar gold piece.

I took it in my hand and waited for the story, for the moment forgetting even myself that the old fellow was still evading his own heroic deed.

"The boy that gave me that I saw just before the big fight. I passed him as he went down under the camouflage into a communication-trench. He said, 'Doc, got any cigarets?'

"I had tried to get him to stop smoking, but couldn't resist the desire to give him some. It might be my last chance to serve him. I pitched him a whole package."

"Thanks, Doc; you're a good scout." Then he came back, handed me that five-dollar gold piece and said, 'Doc, take that. If anything happens to me, send it to mother.'"

"Did he get out all right?" I queried anxiously, for I knew that only a few of the boys who had taken that strategic village had gotten out.

"I am sending the gold piece to his mother this afternoon, along with a letter telling her of his heroic death," he said quietly.

That lad died in a strange way; all one

morning he'd been in the thick of it, then his major was wounded, the boy went back for help, passed all safely till a splinter hit his belt and he went down to death shot by his own bullets.

But all this, interesting as it was, was not what the interviewers wanted; they wanted the "Dominie's" story; at last, promising not to "spread on the taffy," they got the tale. Here it is:

Then followed as simple a statement as a Scotch dominie (economical with anything, especially words) could tell: of how he and Mr. Gibbons, the newspaper reporter whom the press later eulogized for having gone over the top with the marines, were waiting in the major's tent. They were to go down front. The major went off with the reporter and told the Dominie to follow with his orderly, a young lieutenant. The major and the reporter were barely out of sight when a runner came in with the news that the colonel was wounded seriously and was lying in an abandoned trench on the other side of the town, about four miles away at the far end of a wheat field.

The young lieutenant and the old "Y" secretary (whose colonel was the apple of his Scotch dominie's eye) started off for him. There were no stretcher-bearers in sight but there was a stretcher. They carried that with them. Amid a constant hail of machine-gun bullets they went through the town. Nobody knew which house was occupied by Germans and which by Americans. Machine-gun bullets were flying in every direction. They had to get through this village somehow to get to the wheat field. Finally they reached the field. Then they had to crawl for four hundred yards on their stomachs along a low hedge across this field, in full view of the Germans, the field swept by rifle and machine-gun bullets with now and then a shell falling perilously near. One fragment from a shell tore a hole in the old secretary's coat as he crawled and ripped the hedge at his left into bits.

The young lieutenant kept yelling back, "Keep your head down, Doc."

The old Scotch missionary chuckled as he told us this, pointing down to his rather prominent waist: "I was keeping down as close as I could get to the ground. I never did realize what a bother a stomach was before. I got to wishin' I had dieted all my life as we crawled along that hedge. As it was I was so close to the earth that I scratched my nose and flattened my stomach into a pancake."

After crawling four hundred yards in this manner they finally dropt into the abandoned trench and there the colonel was lying. His first question was: "I wonder how Bare is?" referring to his major. Then he handed over his maps to the young lieutenant and fainted.

For two hours the three of them lay in that shallow abandoned trench waiting for the fire to die down enough to let them crawl back again. As they lay there two gas-shells fell close and they had to don gas-masks.

After sundry interpretations of other stories by main force, the "Dominie" was dragged back to his own story, which concludes in this way:

"The colonel had a hard time getting his mask on so I tried to help him, but he wouldn't let me move. The trench was so small that when I moved my body was ex-

posed. I felt so sorry seeing him try to put that mask on with his left shoulder shot through, that I rolled over and helped him. That's where I twisted my back so that they had to send me to the hospital." He added these last words in disgust that he had been invalidated for such a slight pretext. It was not according to his wishes; we could see that in his whole attitude.

"After a while we decided to make a try for it. The machine guns were still sweeping the field and shells were falling now and then. But we got the colonel on the stretcher. The lieutenant went in front and I behind. We lifted the stretcher with the colonel in it to the top of the parapet. Then we shoved it out as far as we could in front of us. Then we pulled and pushed and lifted and crawled and rolled over and over, keeping our bodies close to the ground; and scraped and edged and squirmed and grunted; and finally we got the colonel across that stubbled field. It took us another hour and a half to get across that field. Then we had the village to go through, but about dark we got him to the woods, where it was comparatively safe. That's all there was to it. Not much of a story, hardly worth telling. Others would have done the same and are doing it every day up there. I don't want you to make a lot of what I did. Please don't! I feel so humble in the face of what the boys are doing. Bless them every one!"

HUNS' WAR-AIM WAS FRENCH CLOCKS

IT used to be said that the Huns were obliged to go to war with France every now and then so that they could steal a clock that would keep time—this being a thing no timepiece of Hun manufacture ever can do. Some remember that in the Franco-Prussian War the looters grabbed every clock they could get hold of. The leopard has not changed his spots. During the fighting along the Marne the Americans saw the old vagabond clock thieves at work in Château-Thierry, stealing every clock in sight. What a commentary upon the much-vaunted Hun efficiency! They can imitate a clock, but to save their souls they can not make one that will keep time. Upon this point *Munsey's* remarks with sardonic humor:

Is it not perhaps a favorable omen that the Germans, with all their much-vaunted efficiency, have never been able to construct a clock equal to the product of their neighbors? We know of an American gentleman whose constant support, as well as exasperation, during the present war has been a particularly illogical and unreliable German-made clock. In the darkest hours of the Allied cause, when the achievements of the enemy seemed to indicate an almost superhuman effectiveness of organization, he has found comfort and hope in the symbolic vulnerability of this atrocious clock—a clock equipped with an elaborate system of strikes and chimes which excel only in their ability to go astray.

The French have always rivaled the Swiss and the Dutch as the makers of fine clocks. We are not to be despised ourselves in that respect as any good Yankee timepieces can demonstrate. A few weeks ago a humorous weekly published the picture of a Tommy in a first-line trench, whose recently opened parcel from home

Templar

The Superfine Small Car

THE increased production demanded by Templar success will in no wise be permitted to result in a deviation from Templar quality standards.

The Superfine Small Car, the Templar, expresses quality ideals that know no compromise.

The utmost of practical economy and convenience—the Templar achievement—made imperative the elimination of cumbersome size and the strictest adherence to supreme quality standards of design, materials and workmanship.

The five passenger touring car has a high gear range of 3 to 60

miles per hour. Its quick acceleration and high climbing prowess are a revelation to those accustomed to larger and more expensive cars.

Its remarkably good appearance and finish (several optional color combinations), its comfortable and spacious interior, and its ease-of-driving and ease-of-riding explain its vogue with those who had formerly thought these virtues inseparable from cumbersome size.

Other Templar models are distinct leaders among their types of cars, and all are as efficient in performance as they are desirable in design.

Catalogue sent on request.

Templar Top-Valve Motor

The growing demand for this non-competitive car opens up new opportunities for the right kind of motor car merchants. We welcome your inquiries.

Peace Hath Her Victories No less Renown'd than War

BEHOLD her first victory. The economic triumph of truck transportation.

Our nation's expansion to new ambitions and new conditions requires quicker, wider distribution.

Industries, building—rebuilding—adapting themselves; Business, straining to reach beyond yesterday's horizon; cities and communities, tingling with growing pains, all demand a special, faster, more personal transportation than the old order can give.

And out of the lifting barrage of war, it comes in truck transportation, sped on the veterans that rushed men, big guns, shells, food, and more men to Verdun, The Somme, Chateau Thierry, St. Mihiel, and The Argonne —Goodrich De Luxe Truck Tires.

Their mettle proved in fire of battle transportation, Goodrich Truck Tires will stand you staunch and true in the hardest trials of peace.

Their tough, broad-shouldered De Luxe cushions, extra thick, lay more tread to the road. They lighten the burden of the load on the truck, and cut upkeep cost to the owner.

divulged a new alarm-clock. The recipient remarked:

"Well, now, that there certainly is a thoughtful gift."

We should not have said that there was a crying need for this horological specimen at the front. We do believe, however, that the Allied soldiers can press forward with the conviction that no race which is unable to manufacture a reputable clock is destined to rule the world.

THE GERMAN SOCIALIST AS A SOLDIER

WHAT manner of man is the individual Hun? This is a question which from the very early days of the war has been puzzling the American who could not understand how the *gemütlich* German every tourist knows and the devil in field-gray can be one and the same. The answer generally is that the German military machine has a very effective way of making its own kind of a soldier out of the patient, easy-going, comfort-loving Teuton. Some of our officers who have been questioning German prisoners are beginning to understand, and we quote from a recent issue of *The New Republic* a letter from an American officer which throws some light on the psychology of the intelligent German socialist who obeys orders which his mind revolts at and whose capacity to set up a new Government in the place of the old absolutism is yet to be demonstrated. This letter is written by Captain Heber Blankenhorn, of the Intelligence Service of our Army in France:

These last six days I have put in talking to the enemy, questioning him. . . .

In the great wire cages ———, a long way south, we mixed with the "catch." Picture a muddy hillside, some acres contained in barbed wire patrolled by a few Yanks with long bayonets, and with cattle-like inhabitants, dun-gray shapeless animals standing around or lying around most of the time, muddy lumps in the muddy prospect. They look so much alike and so drab. If the sun comes out the more energetic peel off some of their wrappings and wash a bit or rub themselves. They all cling closely to their poor possessions, a blanket, a mess kit, an extra cap or coat. You can have no idea what *Kanonenfutter* means until you've seen a mass of several thousand German privates. The German army system takes all—yokels and fine boys—fathers and free journeymen—and mashes them into mass formation, abolishes their souls.

Suppose you question these miserable men, with nothing left but their dirty wrappings, sleeping on the ground in the rain. Ask them about their treatment. Every one will instantly respond that his treatment is fine, that he is content, that he is glad to be in that cage. He is free in that cage. Free from the war and the German machine!

It is hard indeed to imagine these men as they were a few hours ago, "good soldiers" trying to kill Americans. I passed a group which was waiting blindly for the return of some American officer who had told them to stand there, perhaps an hour before. They looked so wretched, without a spark of life. "Achtung!" one of them cried to the right of me; one at the

left also called sharply, "Achtung!" (Attention!) The nine or ten sparkless forms hurled themselves upright, hands to trouser-seams rigidly, ramrods from ears to heels. Because I stooped and looked at them, because I was an officer, "Achtung!" sprang warningly from lips and "Achtung" smote their weary limbs into line. I wanted to laugh or swear at the poor fools. Instead I walked hastily away. . . .

One or two astonishing stories we have obtained. One young officer is anxious to go back into Germany to tell his people, "hochgeboren" diplomatic folk, what the Americans are like, and what they really are fighting for. But the most amazing is the story of Gefreiter F. W., with the ribbon of the 1st and 2d class Iron Cross, a "Sozial-Demokrat geboren." This stark, creased, desperate-looking soldier, to all outward appearance nothing but a "good soldier," told us his story in bitten-off sentences and in a post-card. In August, 1914, he had been mobilized. In four years of war he had had sixteen days of leave. He spent those four years in front of the first-line trenches, gunner of a fifteen-millimeter piece. His job was to lie out in a shell-hole with his gun, ahead of his own infantry. He was put there because he was a Social-Democrat. That was his explanation. Not even when his wife died did he get leave to go to the funeral. He was forty-two years old, a butcher once, employing men, with a good business and a house which he owned, and he had a post-card picture of it if we wanted to see it. The business had been sold for war-taxes. The baby died three months after the mother. His own mother was paralyzed, seventy-nine years old. He must have killed hundreds of men. At Cambrai, where he was out in front of his own infantry, the British sent eighteen waves against him and none broke through.

"Did he know Americans were before him in this last fight?"

Yes, he had heard so. And, in the fog on that morning two days before, he saw the Americans, some passing to left, others walking to right, and he said then and there, "I will shoot no American." He swore he fired not a shot. When some American soldiers called out in German to him he rose up from his lone shell-hole fort and surrendered.

"But if there had been negroes before me I'd have shot to the last shell," he added. It was this postscript that convinced me he was telling the truth.

We asked him who caused the war. "Die Weltspitzbuben," he said, "the rascals, the Prussian landlords." "Scheidemann?" "He spoke pretty well." "Haase, Ledebour?" "Ach, they told the truth." "Liebknecht?" "He talked too much." On one of his rare leaves in a café in Stettin a captain of the *Vaterlandspartei* had said that the war must go on. W. had said to him, "You fool, if you had lain out there in that devilish *Schweinerei* for four years in the mud, you'd have reason to know better—you office slacker." W. said that the captain said he'd shoot the soldier, and the soldier says he answered, "You ———, you reach back, and I'll slit your ——— throat." His *echt-deutsch* cuss words were venomous. I questioned him closely, through Walter as interpreter, but he stuck to it. "Do many common soldiers speak like that to officers?" "Many think it, the greater part think it, and more dare to say it now than ever did before."

Finally we looked at the post-card of his house shown by this haggard, wolfish soldier with the broken teeth, the scars,

HIGH SCHOOL COURSE IN TWO YEARS

YOU ARE BADLY HANDICAPPED if you lack High School training.

You cannot attain business or social prominence. You are barred from a successful business career, from the leading professions, from well-paid civil service jobs, from teaching and college entrance. In fact, employers of practically all worth-while positions demand High School training. You can't hope to succeed in the face of this handicap. But you can remove it. Let the American School help you.

FIT YOURSELF FOR A BIG FUTURE

This Course, which has been prepared by some of America's leading professors, will broaden your mind, and make you keen, alert and capable. It is complete, simplified and up-to-date. It covers all subjects given in a resident school and meets all requirements of a High School training. From the first lesson to the last you are carefully examined and coached.

USE SPARE TIME ONLY

Most people *idle away* fifty hours a week. Probably you do. Use only one-fifth of your wasted hours for study and you can remove your present handicap within two years. You will enjoy the lessons and the knowledge you will gain will well repay the time spent in study.

TAKE 10 LESSONS FREE

So that you may see for yourself how thorough and complete our training is, we invite you to take ten lessons in the High School Course—or any Course of specialized training in the Coupon below—before deciding whether you wish to continue. If you are not then satisfied you are not out one cent. We absolutely guarantee satisfaction.

Training Decides Pay

There is only one known way to increase your earning power—only one way to get the position you want. You must train. Let us assist you to acquire the knowledge you need. Check and mail the Coupon for Free Bulletin and full details of money-back guarantee.

AMERICAN SCHOOL OF CORRESPONDENCE

Name

Address

the cropped, mangy-looking head, the plowed forehead, and the almost glazed, glassy eyes. We got a shock. In front of the common dwelling with its fenced-in yard stood a man, a round prosperous person, obviously in the pose of owner, almost a self-important person, with a high choker collar, a noticeable tie and large waistcoat, with jowls and a well-tended mustache, with his blond hair slicked down on either side of a neat "part"—ridiculously the type of the fattened *bourgeois*. He was so prosperous, with his arm akimbo and his newspaper crumpled in hand.

He explained that that was he—that was Herr W., in peace.

We simply did not believe him. He explained that he'd lost forty-eight pounds in four years of war. I looked sharply at the card and the face and could make out the nose and brows the same—not a thing else.

That man, body and life, was as smashed as these French villages by the war. He had stayed out in the trenches, outside even of the trenches, hating the *Spitzbuben* who put him there. Walter remarked, "He has only his anger left." I rejoined, "But he can't do anything even with his anger." For, as with all Germans, despite the hatred that could make him swear, there seemed in him no spark of revolution, no hint of organizing resistance. He had killed hundreds of men at the behest of *Spitzbuben*, whom he railed at and who smashed him and his, but it never seemed to occur to him that he could do anything whatever about it.

THE DOVE NOT A PEACE BIRD

DOVES, according to popular tradition, are the last things in the world to connect with war. Doves and pigeons are, or were, pacifists of the most virulent type. Another cherished yarn has to go by the wall, for an authority says that "five minutes in a pigeon-cote . . . will result in a lifetime of wondering why the idealized bird was chosen as an emblem of peace, for this stout-hearted little bird, once called the "dove of peace," is now known and cherished as "the war-pigeon."

There "being nothing new under the sun," one is not surprised to find that the ancient Egyptians and Persians used pigeons, just as to-day, as messengers in war-time. Then from the Orient to Holland and Belgium and Merrie England came the birds, the ancestors of the pigeons that have played so important a part in driving the Huns to their lairs.

It brings the subject close home to us when we remember that in the Pigeon Division of the Signal Corps Louis Wahl and William Smead, of the New York "Zoo," are in charge and that Corp. Donald Carter, once in the Gardens, is in active service in France, among "the doves."

Mr. Lee S. Crandall, in *The Zoological Society Bulletin* (New York), has interesting things to say about the birds. After speaking of Smerles, "Owls," Dragoons, Horsemen, Skinnums, Cumulets, etc., he proceeds:

From this seeming chaos, after many vicissitudes, the racing homer, unequalled in speed, endurance, and intelligence,

finally was evolved. These three characters have remained the great objectives of the breeder, and color, markings, and other points commonly sought among domestic pigeons have been ignored. Many derivatives, bred for exhibition points only, have risen to popularity, but the racer, not always uniform in type and color, tho never failing in courage and love of home, still remains the pigeon of pigeons.

Having proved its value as a flier in Belgium, the newly evolved breed was quickly imported into England, and later was brought to America. The sport of pigeon-racing soon became popularized, and its devotees now number thousands. In America hundreds of races are flown yearly, under the auspices of local clubs and the larger national organizations with which they are affiliated. With the over-running of Belgium by the German hordes of pickers and stealers, the great majority of the famous studs of racing pigeons were seized and sent to Germany. However, the blood of these great strains is widely spread and strongly cherished in England and in America, so that they will not become lost to civilization.

Through a confusion of names, which has become wide-spread, the homing pigeon is almost invariably referred to in news reports as the "carrier." He is a carrier so far as service performed is concerned, but, unfortunately, that name was long ago preempted by an entirely different bird, closely related to the Dragoon and Horseman, and known as the English Carrier. This pigeon, while perhaps originally used for flying, now is useless for that purpose and is kept for exhibition only. It is a large bird, with extremely long neck and legs, and carries a huge mass of flesh about the eyes and on the beak. This misuse of names has caused much of the credit due the true homer to be given a pigeon which would not home from a distance of a mile.

Many misunderstandings have arisen as to the homing abilities of the war-pigeon. Many persons appear to believe that it is merely necessary to whisper a few directions in the bird's ear, toss it into the air, and watch it strike out for the destination indicated. Other fancies, still wider of the truth, are numerous. There is nothing supernatural about the homer. It simply has a strongly developed love of home, a wonderful sense of direction, and the strength and courage to return to its loft when released at a distance.

Sense of direction is strongly developed in most birds. We have only to consider the marvelous migration flights of many species to realize that this is true. In domestic pigeons this sense, doubtless native to the wild rock-dove, from which they are descended, has degenerated through countless generations of life in captivity. Only in the homer has it been retained and magnified by long-continued breeding and selection for this point alone.

All sorts of theories have been advanced as to how a homer finds its way, extraordinary sight, electrical influences, and so on, and so on. It would seem, however, that it is simply that mysterious sense direction, common to all birds, strengthened and developed by "the intensive training to which the young homer is subjected." One important part of this is, that, from the very first, the bird learns well its home surroundings. To continue:

"When free flying is begun, four hundred

miles is the greatest distance birds of the year usually are asked to accomplish, but exceptional youngsters occasionally have done six hundred. Five hundred miles is the most popular long-distance race for old birds, but contests up to 1,000 miles are flown yearly. Eight hundred miles were accomplished in one day by a famous bird, but distances over five hundred miles usually require more than a single day.

The speed at which homing pigeons fly is one of the first questions that comes to the mind of the inquiring layman. This varies greatly with the distance, the shorter distances naturally being flown in much faster time. Flights of one hundred miles, with a favoring wind, often are made at the rate of a mile a minute, or even better. Recent tests under the supervision of the Signal Corps showed that field messages sent by means of homing pigeons were delivered in much shorter time than by automobile or motorcycle.

The longest official distance flown by a homing pigeon was a flight from Denver, Colorado, to Springfield, Mass., 1,889 miles. A little more than twenty-three days were required for this feat, the bird flying only by day, gleaning its food from fields and poultry yards as it came.

The fastest time for 1,000 miles is one day and eleven hours, a truly remarkable performance. This bird, rejoicing in the name of "Bullet," still lives in Fort Wayne, Indiana. It is a satisfaction to know that both these world's champions were produced in America, giving assurance that the heritage of the now scattered lofts of Belgium has not been neglected in this country. Grandchildren of both these famous birds are included in the flock recently installed in the New York Zoological Park. Others of almost equally illustrious descent complete the new exhibit, which is proving of great interest to our visitors.

WHAT BISMARCK LEARNED FROM A RUSS PEASANT

THOSE who despair of the rescue of Russia from her sad chaos may well remember now the stubborn Russian fatalism that upholds the peasant through every evil with a firm faith in final victory.

"Nitchero!" Who that has ever lived in Russia has not wondered, pondered, and wondered again as to just what that word meant? A correspondent of the New York Times tells how no less a personage than Bismarck learned a lesson from a peasant's "nitchero." We quote:

Under Alexander II., as Prussian Ambassador, Bismarck was invited to an imperial hunt to take place ten or twelve miles from the capital. On the appointed day he started, but on the way something broke in his carriage, and he was obliged to ask one of the peasants to bring him to a certain village. The peasant appeared with an unusually small and lean horse attached to a queer, dilapidated sleigh with some hay in it. "How can you bring me on such a ratlike horse?" sternly asked the Prussian Ambassador. "Nitchero," answered quietly the peasant. Now, to this word *nitchero*, "nothing," the Russians give no end of meanings. It appears that nothing matters to them but life.

It was a winter day. The fresh snow had covered all the ground, and no road was seen anywhere. They started, and the ratlike horse flew like a bird. "Look out! You

This arrow shows how the large L-shaped part of the ring seals the bottom of the piston groove—also where the smaller ring is open.

This arrow shows how the smaller ring seals the bottom of the groove—also where the large L-shaped ring is open.

This cut shows how both the wall of the cylinder and the groove of the piston are double sealed where there are no openings in either of the two component parts of Double Seal Rings.

Dr. Kibbie and His Overland

It wasn't living up to the fine reputation of its kind—that old Overland of Dr. Kibbie's. It wouldn't climb anything around Fort Worth except on low. Its gasoline record looked as if there were a leak in the gas tank. Its oil bill was a caution. He did what anybody would do under the circumstances; he had the valves ground, the cylinders cleaned, and the motor tuned. But things didn't change much.

Right after a big automobile race in Texas he heard from an engineer friend that five of the winners used Double Seal Piston Rings to increase compression and power and speed. Dr. Kibbie thought he'd try them. He had his car overhauled again and the Double Seal Piston Rings put on every piston. The first time he took that Overland out he was surprised.

It certainly took the hills on high; and when the gas and oil mileages were checked up they proved to be twice as much per gallon as ever before. Of course the doctor couldn't quite believe that it would last.

It seemed too good to be true. But six months later, when we saw him

again, he said that the car was just as good on the hills—and the gas and oil bills were just as low—as on its first Double Seal day.

Thousands of other car owners say similar things about Double Seal Rings. Some of them had Double Seals put into old cars whose cylinders were worn, others into new cars whose motors somehow weren't just right, others had engines that "killed" annoyingly, others just had the usual trouble of too much carbon and too few miles per gallon.

Double Seal Rings are taking care of them all. Ask your garage man about them—and send for our booklet, **MAXIMUM ENGINE EFFICIENCY**, giving the reasons why.

Half the truck tonnage of America is carried on Firestone Tires

FIRESTONE leadership in the truck-tire field is being emphasized afresh by these Giant Cord Tires. Lower cost per ton-mile is their record wherever adopted. They save the truck, save gasoline and save time.

The Firestone Giant Grooved Tread Tire is indispensable for heavy duty in winter service. Its unique traction takes the truck through snowdrifts, mudholes and all the worst conditions winter brings.

There is a Firestone Tire for every load, road and condition of service. Call in the nearby Firestone man and consult with him.

"I break my neck!" warned Bismarek. "Nitchero!" replied the peasant, managing to avoid a collision with trees, for they were lying in woods. Presently there was a crash; the sleigh smashed against a tree, and the horse, the peasant, and the Ambassador were thrown on the snowy ground, and the latter's nose was bleeding.

"I will kill you!" yelled the angry Prussian. "Nitchero," the peasant replied, spitting snow to his nose to stop the bleeding. Bismarek was struck with the wonderful possession of the peasant. "Surely I miss the imperial hunt," he grumbled. "Nitchero," the imperturbable *muzhik* answered him, tying his smashed sleigh with rope.

Bismarek noticed on the ground a small piece of iron that was broken off the sleigh, and put it in his pocket. They started again on their swift run, and Bismarek was brought to the village in due time.

The Czar laughed heartily and the courtiers roared when Bismarek told them of his venture. Once in the capital, he ordered a jeweler to make a ring for him of the piece of iron he picked up in the woods, and put on it the inscription "Nitchero." And he wore that ring ever afterward. It told him that once man had a definite aim must go to it, minding no circumstances whatever; then no obstacles will prevent him from reaching his goal.

Bismarek had an unbounded admiration for Russia, holding her to be mighty, resourceful, immortal. If now alive, he would say that the Czar's resignation, the madness of the Bolsheviks, and the economic collapse of Russia—all that is "nitchero."

WHY RAILROADS LIKE MOTOR-TRUCKS

THE railroads, which once looked askance on the motor-truck as a competitor, now regard it with favor, as a feeder. It is also, we are told by a writer in *The Railway Review* (Chicago, November 30), doing much short-haul business that formerly went to the railroads; it is keeping merchandise out of congested terminals, supplying factories with raw materials, and speeding up essential products. It is showing the way to escape embargoes and tie-ups. It points the road to direct deliveries without terminal haul, is developing new sources of material, and is reducing time in transit. The writer goes on:

A few years ago motor-truck highway transportation was vigorously opposed by railroad traffic departments and under the prevailing conditions the business was making but little progress. However, with the competitive features of railroad transportation discarded, at least temporarily, a strong impetus seems to have been given to the movement to eliminate all forms of competition between steam and electric road, inland waterways, and highway transportation. We now see the Director-General of Railroads promoting inland water transportation by building a fleet of river barges and steamers and encouraging the use of canals; we have the statements of officials of the Railroad Administration that that organization is in hearty accord with every effort made to promote the use of motor-trucks in facilitating highway transportation, and we have the crowning act of railroad officials divert-

ing traffic from their own roads for shipment via these new transportation lines.

Of course, the underlying motive of this abandonment of what was once considered the prime essential of the business of transportation has been war-time efficiency—the concentrated efforts of all for the winning of the war. However, war-time efficiency is merely a phrase—a catchword. Efficiency is the same either in war or in peace, and if it is obtained by certain methods and practises under war-time conditions, these methods and practises will be the subject of comment and investigation when conditions are different. Their permanent retention will not be a matter of sentiment, just as the return to the old competitive conditions will not be a matter of sentiment, but will depend upon the economic results under a changed régime.

At the present time highway transportation, or, more particularly, motor-truck transportation, is being encouraged by the railroad transportation for the express purpose of relieving the rail-carriers of some of the burden of short hauls and for the purpose of relieving congested terminals. The railroads need this relief; their development has not kept pace with the development of the country's business, and consequently, in an emergency when the demands upon them are more than doubled, they must resort to supplementary means in order to perform properly their functions.

The total tonnage over highways is increasing in some States as much as 400 per cent. over last year. In the Cleveland-Akron area 61 per cent. as much freight is being moved by motor-express as the railroads are carrying. High development of the return-load idea is being pressed in all sections, particularly in Connecticut. In the vicinity of Cincinnati and Omaha live stock is being carried to the stockyards in increasing numbers. Rural express has reached a high point of efficiency in Maryland, New Jersey, eastern Pennsylvania, and southern New York. Arrangements are being made to connect the New York State barge-canal ports with farming communities by rural express. The writer goes on:

Shoe-manufacturers supplying our armies operate fleets of trucks between Boston and near-by shoe centers, carrying hides in one direction and finished shoes in the other. Cotton and woolen mills in New England do not await the arrival of slow incoming freight. They go and get their raw materials. Heavy machinery is delivered direct from shops and foundries in Connecticut to factories in New York. Wholesale grocers deliver in Washington from warehouses in Baltimore. Tons of chemicals are delivered with but one handling after they leave the chemical works.

With the coal problem primarily one of distribution motor-trucks have been performing a service that undoubtedly will be reflected in the character of the coal-bins for months to come. Not only have the motor-trucks relieved the railroads by transporting coal over short distances, but have gone so far in some districts as to haul coal direct from the mines to consumers. This is especially true in the Pittsburgh district, where hundreds of trucks throughout the summer have been engaged in hauling coal for Pittsburgh concerns direct from the mines to the company's own storehouse or cellars.

It is not an uncommon thing to see

dozens of trucks rolling over the hills south of Pittsburgh loaded with coal secured from small bank mines. Their number is steadily increasing, thereby releasing railroad-cars for long-distance hauling.

During September the Goodyear Tire and Rubber Company sent two of the trucks used on the Akron-Boston run from Boston to San Francisco. The trucks covered the 3,717 miles in 20.37 days. From Boston to Akron they carried cotton fabric and from Akron each truck transported 18,000 pounds of airplane tires to the Pacific coast. They averaged fifteen miles an hour the greater part of the way. These two trucks, like all units on the Akron-Boston run, are equipped with a sleeping compartment back of the driver's seat. The drivers work in shifts and the trucks are kept on the move night and day, one man sleeping while the other drives. These trucks now on the return trip are hauling a load of baled cotton from the Goodyear cotton plantation in Arizona to a Goodyear fabric-mill in Connecticut.

A real innovation of motor-truck transportation is the motor-truck refrigerator operated in intercity service by the Sullivan Packing Company, of Detroit, Michigan. It is, so far as known, the first truck in the country to be used for this purpose. When this company depended upon railroad delivery, two and one-half days were required to make a car-load shipment from the Detroit plant to the branch in Toledo. This loss in time involved shrinkage in meats. The truck, with a heavily loaded trailer in tow, completes the trip in six hours, carrying an average of 18,000 pounds of meat. The body of this truck is designed and built very much like the ordinary refrigerator freight-car. The wall and heavy side doors are made of aluminum, cork, and wood, an excellent non-conducting combination. Top filling tanks for ice and brine are loaded from the outside. The owners of this refrigerator have found it so satisfactory and economical that an extensive expansion is contemplated on highways within a radius of one hundred miles of Detroit.

WANTED: A NEW WORD

OUT amid the battle and agony; in the holocaust of gassed, tortured, torn, and dying men; fighting, daring, and struggling in the heart of swirling pestilential vapors a something has come which is so trenchantly splendid and heroic that it's hard to find a word strong enough, tender enough, to adequately describe it. It makes men out of boys; more, it shows itself—this "something"—among the "toughs," the "hard-boiled eggs." This is the theme of a virile and vigorous yarn which we quote from *Association Men*:

"Hard luck, pal?" said the doctor interrogatively, as the bearers set down a stretcher in the courtyard.

The boy shrugged his shoulders, actually shrugged them as well as he could, bundled up on that stretcher, and grinned wanly.

"Comin' fine if I can get you fellers to save that foot. She's smashed plenty. If you can't—all the same."

"We'll run you right in."

"Nix, bo, not me. I'm gettin' past all right, nothin' but my foot. You jest lemme be here and git busy with them guys that's hurt. I'm on the waitin' list."

They were coming back out of the hot

blast of the great battle—those boys of a certain division now famous throughout France and one day to be famous throughout the world. They were not coming back because they wanted to, nor because they had had enough of it; they were being brought on stretchers, wounded, gassed, shell-shocked, to an advanced dressing-station. Some of them seemed just boys. One could see them grit their teeth to hold back the moan of pain.

That was one boy. He belonged to an outfit that bears a name far and wide for being boiled-hard. Tough birds, you hear them called, rough-talking boys with the crust outermost. If you had seen them a month before, or two months before, when they had not had their purifying in blood and fire, you would not have prophesied that they would hold back in suffering to wait for one in greater suffering to be cared for first. It was an attribute that was not apparent to the casual eye. Hard-boiled, you would have agreed, and you might have felt a trifle sorry for the enemy that had to encounter them. But you would not have stood by with tears in your eyes—not in your eyes, but rolling down your cheeks—and have muttered again and again, "Here are men!"

But now they had felt the scorching breath of war. Suddenly they had been dropt into the furnace and had come out with the dross burned away. Something had happened. They were still hard-boiled. Their language was made up of the same words, but the words had taken on a new meaning, their very faces had taken on a new aspect. In spite of blood and grime, and the discoloration and burn of gas, you could see that something was present there which had been absent before—until you could not see at all for the flooding of your eyes.

Crude may be their language, but the words come clean from the heart. Last words of great men, some true, some doctored and polished, are trumpeted to a listening world; but for heroism, blended with tender thought for others, none can surpass the last words of one of the "toughs":

"I—got mine. . . . No use—sport. . . . Can't do—nothin' for —me. . . . Git—busy with some of them boys—you kin—help."

That was the spirit. That was the thing that had been burned into their souls by the hot breath of war. They had forgotten themselves. Jim was not thinking of Jim but of Mike. Mike was not thinking of Mike but of Jack. Each passed it on.

The dressing-station was small and many must lie outside until the men who were taken in first could be evacuated. You heard groans, but amid the groans you heard cheery, gritty words. "Oow . . . that leg! . . . How's Charlie makin' it? Anybody know? I seen him git it. . . . Oow . . . !

"They just took Charlie in. He wasn't sayin' much."

"Say, them stretcher-bearers ought to git the *Croix de Gier*, them birds ought to. See 'em fetch me back with them shells bustin' like it was rainin'? And would they hurry? Not a darn bit. I bolliers to them to git a move on or they'd git busted on the dome, but that little shrimp says for me to mind my own business, he was carryin' that stretcher. . . . Afraid if he hustled he'd shake me up and

hurt me some. Can you beat that? . . . Oow!"

"Two of them stretcher-bearers was Y. M. C. A. guys. What they doin' in that game?"

"Volunteered, one of them told me. I asked him. He's been workin' up in that dressin'-station right where she's happenin' ever since this busted out. I seen him there. Hain't had his clothes off for a week. Looks to me like he's about ready to crack. But he's always there with a cup of coffee, a cake of chocolate, or a cigaret. Now he's totin' stretcher. . . . Needs a stretcher himself, seems as tho."

"You're next, son," said a lieutenant-doctor. "Where'd you get it?"

"Leg and a chunk somewhere in the chest."

"Out of luck."

"Out of luck nothin'. Didn't I bayonet three of them Germans before they got me? Eh? . . . Luck."

The story goes that this division was called upon to stop the rush of five times its number. The story goes further and says they not only stopt the rush but caused a movement in the other direction. It was not an affair of hours but of days, days of constant, bitter, hand-to-hand fighting, with horrors added by the Hun that no American soldier has ever been called upon to face. But they had dammed the flood; had even swept it back for a little, and they were proud.

Great as were the achievements on the field, glorious tho the courage and daring against odds and fiendish treachery, above all soars the shining spirit of thought for the other fellow, that the "hard-boiled" found in that hell of hate. The writer continues:

A hurry call was sent to the distant Y. M. C. A.

"Can't you do something for these boys that are being brought in here?" the officer in charge demanded.

"What can we do?"

"Something to eat, and smokes. Coffee. A bite and a smoke do a wounded man more good than anything else. Do you know, some of those boys have been out there in that for two days with nothing to eat but hardtack!"

So the "Y" sent its men and its trucks; it made coffee, it brought such fruit as it could; it carried chocolate bars.

"Here you are sport," said one of them, coming into the courtyard. "Here's a cup of chocolate."

The boy raised himself painfully on his elbow and reached for the cup—then he motioned it away.

"I hain't hurt much—and there's a lot of guys here that's messed bad. You hain't got enough to go around. Git busy."

"I've got smokes and hot chocolate for every man. Go ahead."

"Honest? I won't be robbin' none of them birds?"

"Honest."

The boy drank—and was transformed. He lay back with a cigaret between his lips, with his eyes closed, and the expression on his dirty face was such a reward as few men ever earn.

"That's livin'," he said softly.

One boy was brought in with a broken leg. It had been an accident and not a wound won in battle. He had got in the way of a motor-truck.

"Jest fix me up out here what you can," he said.

"You get to the hospital, son."

"Nix. Hospital's for those fellows th hurt. I just got a busted pin. You me here and leave me here. . . . W you git a chance."

Everybody appears to have this "so thing." The strangeness of it all—our screaming, murderous gun-fire, scorch flames, noxious gases, frightful suffer something better than they had ever kn came to them. There is utter ignoring self, a thing wonderful to witness. continue:

"We've got to have a new word in language," said a captain-surgeon. "Ga won't do. These boys are something m than game. I've never seen anything l it. I don't know what it is." Even inured to suffering and to scenes of blo shed, wiped his eyes. "They're—they're why, hang it all, they're something! N body was ever like them!"

One man lay inside on a mattress on floor. His chest was rising and falling he struggled for breath.

"He's on his way," said the doctor to "Y" man who was acting as orderly, nurse assistant, anything.

The "Y" man went over and touch the boy's forehead.

"How about it, old man?" he said.

"Kind of—lonesome. . . . Maybe y . . . could sit . . . here still"

The "Y" man sat down and a ha struggled toward him. He took it and he it in his own, and he whispered to the b a moment. Maybe it was a prayer. Wh ever the words, it was a prayer. T wounded man lay still, his hand in t hand of the friend who had come to him his last dark moment—his last glorio moment. He was giving his utmost for h country. The "Y" man sat still un the hand grew limp and lifeless in h own, and then he moved away to oth errands, for it was a night demandi much of men.

The courage of the battle-field seem to be a common commodity; but t courage to bear pain without flinching; realize the approach of death witho crying out; to reach a moment when y know you must face life maimed, witho arm, leg, eye—and not to curse with bla rage or cry out with despair—that is o other kind of courage. But it was ther Not one man had it, but it seemed as if a those wounded had it—it was not the gam ness of the bulldog. It was something th had to do with the soul. It was greatnes it was fineness, it was a thing that con pelled the watcher to uncover his hea and stand bared in its presence.

They were Americans. Perhaps it wa their birthright. More likely it was a ne thing; newly born of the day and the bus ness of the day. Whatever it was, when ever and however it came, it was present This had been written with repression with a striving for understatement, with wish to tell the truth. The thing wa there. They brought it back with them.

"How are you making it, sport? . . . Here's a cup of coffee."

"You come around to me after you've given some to the boys over there. The need it."

That is what was there. It has reas something new into the meaning of the words American Soldier. As the docto said, some new word must be coined to designate it. It was born of battle and agony.

Getting Down to Business

Today American Business faces an era of stupendous possibilities. We are about to enter an age of industrial prosperity unmatched in history. The vast, unsuspected reservoirs of economic resources the war has tapped cannot be sealed up. They are known, open and flowing and must continue to flow for the benefit of all mankind. This is an obligation arising from the unquestioned Leadership in Finance, Transportation, Industry and Agriculture, which the fortunes of war have thrust upon America.

TO every thinking man, the future must be interpreted largely in terms of motor transportation.

New industries born of war's necessity must continue to serve in peace. They will need motor trucks.

The enlarged capacity of America's factories—none too great to meet our own and the world's requirements—must rely upon modern haulage.

Our standardized, fabricated ships are needed to carry America's goods to foreign lands. Their cargoes must "go down to the sea" in motor trucks.

The multiplied harvests of our power-operated farms can best be carried to market with motor trucks aiding railroad and ship.

Our soil is still rich with coal, ores, and petroleum. Better roads and more trucks are needed to release them.

We accept Federal's part in this great constructive peace period not only as an opportunity but as a duty.

That manufacturer falls short who sees in a motor truck only a power vehicle to be sold at a profit.

He must sense his larger obligation to supply haulage units that will assist in the fulfillment of America's great industrial destiny.

FROM the very beginning of its history, Federal has laid solid foundations.

"Federal" signifies—not a mere combination of specifications—but performance—quality of service—the assurance of haulage, reliable, efficient and economical.

What Federal signified before the war, Federals have proved many times over in their war-time record.

That record is the ample evidence of what may be expected of Federal in the coming period of business expansion.

Federal plans for the future are plans for growth in order to answer every haulage need for more trucks and the right kind of trucks.

The Federal Haulage Research Department will be developed still further so as to offer motor truck users information that will enable them to get the utmost of service from their trucks.

This is the purpose that animates the entire Federal organization as we are once more "getting down to business."

If in the following out of this purpose, Federal can help you in your business, you may rest assured that no details will be overlooked in our endeavor to serve you well.

For the benefit of motor truck users, present and prospective, Federal publishes regularly an interesting worth-while magazine, "Federal Traffic News," which discusses actual problems of haulage in various specific lines of business and shows how they have been solved. It contains a wealth of suggestion on motor transportation for the owner and operator of trucks. We will be pleased to send it to business executives on request.

Federal Motor Truck Company

Detroit, Michigan

FALLICK, THE LIGHTNING FITTER

A TAILOR who can fit six men a minute to complete suits of clothes would seem to have the wizards of Araby faded away to Never-Never Land, but he is just plain Sergeant Fallick, of that brand-new Yankee Army that has been doing a few other surprising things of late. Here is the story, as told in *The Mooseheart Magazine*:

"Seven, 32-27, 5½, 2, 7½, D!" yells Sergeant Joseph Fallick, and like magic another recruit is fitted from head to foot in khaki. A moment ago he was garbed as a citizen, now he is drest as a soldier. The numbers yelled out by Sergeant Fallick make you think of a quarterback calling out the football play. But it isn't football signals; the numbers are confined to the measurements of the soldier's duds.

Sergeant Fallick is the official outfitter for the men coming to Camp Pike, Little Rock, Arkansas. He can take a man's measure and fit him with clothes, hat, and shoes in just ten seconds. Imagine yourself walking into a clothing store, being measured and fitted and having your shirts, socks, suit, hat, and shoes in your arms in ten short seconds by the clock.

How does he do it? Why he measures the man with his eye and calls off the measurements as fast as he can wag his tongue. The garment handlers then throw the correct sizes at the rookie's head; he catches them on the run and goes to his barracks to put them on. Thus the men are fitted as fast as they can file in front of this rapid-fire tailor for Uncle Sam.

"I have fitted about 60,000 soldiers since I have been here," said Sergeant Fallick. "I can clothe 1,500 men a day. My average is six a minute. We give the soldier the best material in the clothes we supply him. Uncle Sam does not spare the dollar when he is buying clothes to fit his boys out in khaki. He has a monopoly on all the best materials in the country. That's why retail concerns can't obtain high-grade materials."

In the supply-depot there is a long chute between two doors. On one side of the chute a line of sergeants and lieutenants sits with the names of the men to be fitted. On the other side of the chute is a table. Back of this table there is a stock of soldiers' clothes. A dozen men are waiting along that table to carry each man's clothes out as he comes into the chute. Sergeant Fallick stands at the head of the line and as the rookies come to him in single file he "gets their measure" and yells out to the supply-men. The work is done so quickly that many men are puzzled. One rooky grabbed up his clothes and strung them out the door.

"Great snorts," he laughed, "that fellow takes your measure and your breath all at the same time." He looked at his new army clothes a moment and sighed. "Gee, no wonder he can fit you up so quick; nothing'll fit a guy after he gets th' junk!" But when the rookie got to his barracks and "drest up," he found he'd been well fitted.

"Most of the time I get 'em fitted right," said Sergeant Fallick. "Of course, sometimes we're out of the numbers I call and we give them the nearest we have to that size."

"My fitting vocabulary contains thirty-two numbers and I can fit anybody from the King of Siam to the High Mogul of Zanzibar. And aside from that I came to

the army to 'fight' the Hun and 'fit' him for a six-foot hole in the ground."

"New York's my home town," laughed Sergeant Fallick, "and I want to take a picture of the Statue of Liberty from New York to the Kaiser! I have never fitted the Kaiser with clothes, but I know I've got his number, all right! We'll fit him with a suit of wooden clothes."

Soldiers' clothes are a different proposition now from what they were in wars fifty years ago. In the Civil War the boys wore baggy blue pants that caught on rocks and bushes like a woman's skirt. To-day the soldiers' legs are drest to avoid the snags. Then there were the clumsy caps of Civil War days. They were too heavy in front and wouldn't stay on. Think of dressing the fighters in monkey caps that fall over their eyes when they move.

THRILLS OF WAR—BUT THE TRAGEDY OF PEACE

TO spend years on German sea-raiders, in German prison-camps, in German cattle-cars, to risk death from German guns, and from exposure on land and sea, to go through adventures "of the most penny-dreadful character," and then to come back unharmed to his own land and go to work on a Long Island farm and have his right arm crushed into uselessness in the teeth of a prosaic threshing-machine was the fate of one nineteen-year-old New York boy. Ralph Goodman, as Augustin Lardy tells the story in the *New York Herald*, was a fifteen-year-old messenger-boy when the European War broke out. The lure of the sea and the war drew him from his A. D. T. uniform to the nondescript garb of a mess-boy on the *Corea*. Here he had to "serve grub to about seventy-two of the crew—lascars, negroes, wops, Swedes, Hindus, Portuguese, Finns, and Russians from way up North." Six days out, the boy, who had taken his prize-fighter brother's ring name of Dan Goodwin, knocked out one of the lascars in a fight. That night the lascar attacked the pugilistic mess-boy in his bunk. Some one else kicked the lascar out of the bunk-room, and there was a hubbub, with the consequence that on the following day the captain of the *Corea* put Goodman to work shoveling coal for the stokers. But this work was too hard and he returned to the mess-room. At London the young adventurer left the ship, looked up and found a grandmother whom he had never seen, tried in vain to join the British Navy, and was finally sent back to the *Corea* by the American Consul. After two more trips Goodman got a job as able seaman with the White Star line. The date he remembers well: "It was December 1, 1916, and from that day began my real troubles." The young seaman shipped from Philadelphia on the *Georgic* carrying horses, munitions, and Christmas gifts to Britain. Perhaps this is the place to let Ralph Goodman begin to tell the story in his own words as taken down by the writer in *The Herald*:

The weather was as cold as time. Part of my job was up in the crow's-nest watching for German submarines or raiders. On Sunday, December 10, I came down on duty and went into the galley, asking the cook for something to warm me up. I was nearly frozen with my trick in the nest. The cook chased me out on deck for breakfast. The bos'n and I and some other sailors were chatting about the chances of being plugged by a torpedo when the bell rang for breakfast and we all made a run for the mess-hall, for it was first come first served, and he who gobbled most and fastest got the best. It was Sunday and so we were waiting for the plum duck, which is the English sailor's delight—the White Star liners are English boats—when—

Crash! The report of a cannon and the ship trembled a little. We sat around stunned and stupid for a moment, and then everybody broke for the deck. There, out to port, not more than one hundred yards away, was a ship—a long, rakish, black ship, with the imperial German eagle flying from her black masthead. She was racing alongside us just as easy as if she could sail around us three times in a circle without half trying. She was the notorious German raider *Mohave*.

Crash! There was a puff of smoke from her starboard gun and a smash—splinter—bang on our boat, and when we turned to look nothing was left of the 4.7, which we had mounted on our stern. Some shooting from those Germans, all right!

Everybody went wild. The captain and the officers danced around like chickens with their heads off. There was a rush for one of the two life-boats that had not been smithersed by the Hun shells. The sea was running rough and high and our boat was still moving, mind you. Out swung the boat from her davits and over the side she went, overcrowded with about seventy or seventy-five men. She struck the water and a big wave washed her out and another slapped her smash against the ship's side and then there were seventy or seventy-five men in the sea. The smashed boat was hanging by her ropes and banging against the ship and there were yelling and screaming and rushing about on board and not an officer with his head cool enough to keep order.

Up steps Scotty Adams, a boy whose job it was to look after some of the horses. Up he steps, cool as can be, and curses out the men calm and fluent for spoiling their chances of getting away in the remaining boat. He kept order, did Scotty. He made the men get into the boat one by one, saw to it that she was not overcrowded, saw to it that she swung out from her davits and dropt neatly into the sea. Then there was panic again. I was rushed over the side by frantic men. I grabbed a rope and managed to reach the Jacob's ladder. I was going down, rung after rung, when some fool heeled my fingers with one boot and stepped on my head with the other. Down I went. Splash! Ooh, that water was bitter cold! My boots I kicked off, and squirmed out of my jacket. Believe me, I was glad I had learned to swim off the docks of little old New York when I was a kid. I struck out for the German raider, riding easy and high, and every now and then pumping another shell into the liner just to keep in target practise, I guess.

A German life-boat was pulling toward us, the seamen grunting as they bent to their oars. I was dragged on board, like a drowned terrier. Somebody gave me a drink. It burned like Third Avenue

40,000

Airplane Plugs a Day

During the war, our obligation to the government we served, imposed upon us the seal of silence. Now we may with propriety set forth the full facts concerning AC Spark Plugs and the war.

At the outbreak of the war, army and navy engineers asked the spark plug makers to submit plugs in tests for an aviation motor of 125 pounds compression.

The result of these tests was overwhelmingly in favor of AC.

So AC Spark Plugs were chosen for standard equipment on Liberty and Hispano-Suiza airplane motors. These plugs were all of the basic AC design used for years by the leading motor car, truck and tractor manufacturers of this country. This we deem absolute proof of AC superiority.

Our War Program

AC Spark Plugs were standard equipment on Liberty and Hispano-Suiza airplane motors.

At the time of the signing of the armistice we were manufacturing 40,000 AC aviation plugs a day.

This exceeded the combined daily outputs for aviation of either English, French or American makers.

Thousands of AC Spark Plugs were furnished for ordnance tanks and trucks.

All Class B standardized army trucks were AC equipped.

By far the largest percentage of all army trucks were equipped with AC Spark Plugs.

We are proud of our opportunity to perform this service. Justly, also are we proud of the record we have made.

To our customers who were perhaps inconvenienced at times in their efforts to secure AC Spark Plugs while the war lasted, we make this explanation.

Now we resume with full energy the production of AC Plugs for civilian use.

Heretofore we have pointed to the overwhelming majority of motor car, truck and tractor manufacturers who use AC Plugs for standard equipment.

Now we call your attention to the endorsement won by AC Spark Plugs at the hands of the United States Government.

Such combined testimony demonstrates more emphatically than ever before our contention that AC Spark Plugs are by all odds the best spark plugs.

There is an AC Spark Plug specially designed for every make and style of motor. Use no other kind.

AC Spark Plugs will serve you best, just as they served the Government best under the acid test of airplane service.

Champion Ignition Company, FLINT, Michigan

whisky, but it warmed me up, despite my clothes freezing about me. Next thing I knew we were on board the German raider and we were being herded down below. There were six hundred men already there, survivors from other ships that had been sunk by the raider.

Some of the men were taking things philosophically and others were crying like a lot of women, for we could not say how many of us had been killed by the shell-fire or drowned. Later we learned that out of 127 in the crew 116 had been saved, which was mighty good work on the part of the Germans, seeing that most of us were picked up out of the water. Every now and then we could feel the recoil of a shot, and we knew the old *Georgic* was getting it good and plenty. Finally down the stairway steps the German captain, a fellow so proud that he never glanced at his own shoes. His mustache was turned up à la Kaiser, and his eyes, if they ever looked at you, were as cold and green as the sea itself. He opened his mouth and the whiskers of his mustache quivered like a cat's. He said:

"Amerikaners! Raus!" pointing to the deck with one sweeping, lordly gesture.

There were about thirty-one of us Americans and we went on deck, some of us coatless, most of us without shoes, like myself, and we stood there shivering while the cold bit into us. The Germans tied white bands about our arms to distinguish us from the French, English, Belgian, and other prisoners down below, and, as our country was not at war with Germany, we were given the run of the ship. We crowded to the rail, where we could watch the old *Georgic* still floating. She had been raked by shell-fire until her iron-work on deck had been hammered into fantastic shapes. The Huns had looted her clean of everything they had wanted, from shells and ammunition to food and clothing. They let fly a light torpedo at her and it struck amidships and knocked a great hole in her middle. She shuddered all over like a live thing, that ship, and after that, for seven and one-half hours she just lay on the water wabbling like a sick child, quivering like a woman sobbing, trembling like a baby with the ague. Crash!

They had let her have another light torpedo and the hole in her middle had been knocked into a bigger one. Dead horses began to float out of the hole and every now and then a live horse would jump out and swim around. There had been 2,500 horses in that ship, remember. Then a fine big white horse sprang out and swam strongly to us, half a mile away. Ah, he was a noble beast, that horse! Near us he neighed. An officer barked something in German and a sailor began shooting at the animal with a pistol. One shot hit and the horse screamed. Did you ever hear a horse scream? It sounds like a woman in agony and it makes your blood creep. He was right near us and we could see his eyes, wild, pleading fear of death in them. The officer cursed and clouted the sailor and jerked out his own pistol and fired once, and the horse sank immediately. That's the horse I have nightmares about sometimes.

Then the Germans gave the ship another torpedo, a heavy one this time, and she sort of broke up in the middle, seemed to balance herself for a second, and then went down, tilting her stern high in the air. It was a graceful, horrible sight.

One after the other the Germans nabbed ships and sank them. One, two, three

order it was. Somewhere somebody must have been giving information to the Germans, for they seemed to know just where to find the ships. Finally, there were nine hundred men in the hold of the raider, and I could tell you tales of men going mad of hunger and thirst and cold and sickness and brutality, but I have too many other things to tell. Then the raider captured a dirty little tramp steamer, the *Yarrowdale*, and formed a prize crew of fourteen German sailors and a brute of a lieutenant. They made us all sign papers never to fight against Germany and promised to dump us at some neutral port, and then put us on board the tramp in charge of the prize crew.

After that there were more horror and suffering. Nine hundred men penned in the bowels of a dirty little steamer! Typhoid broke out, dropsy, scurvy, and disease. Vermin crawled upon us and we were nearly starved. Men died like flies in winter. Once a fellow called Harrington spoke to a sailor, who slapped his face. Harrington knocked him down and when the sailor came for him with his bayonet or sword Harrington grabbed it. The German grasped the steel and Harrington yanked it through the Hun's hand, splitting the palm clean open. Then the crew piled on him and Harrington nearly died from his injuries. Once there was a revolt among the prisoners and the Germans came down with their guns clubbed. Some of us were battered to death and after that we were cowed. Once I saw that German lieutenant knock one of his men down and jump on his head with his boot-heels. They used to lower our slops in a bucket, and because we had been turned by pain and starvation into beasts we would fight among ourselves for the food. We were wolves. Twenty-one days were we on that ship, always sailing north under dull steam, it seemed. One whole day we lay in a port, and we understood that it was somewhere in Denmark. One morning we were told to herd on deck, and there we were in a land-locked bay. A neutral port? No, indeedy! It was Swinemunde, Germany, a naval base in the north of that country. Barefooted, jacketless, we were marched seven miles through the snow to a barracks where the whole nine hundred of us were herded again. We were fed every other day on acorn coffee, two slices of bread, and a bowl of cabbage-water that was called soup. That was two days' rations.

What's the use of going into all the dreary, agonizing details? Everybody knows how the Germans treated their prisoners. We were shipped across the country from prison-camp to prison-camp, for they did not seem to know what to do with us. Sometimes we would be locked in the cars—cattle-cars—for days at a time in indescribable filth. Always were we just this side of starvation, always were we hooted, jeered, pelted, cursed by the people. Germany was a desolate, saddened land. Every man was in uniform, and every woman was a toiler. There were no babies that I saw. They must all have starved to death. Now and then we would see *Zeppelins* overhead, hovering like evil dreams over a land that once had been smiling.

Once we were held in a prison barracks at Neustrelitz, on the outskirts of Berlin. Ambassador Gerard tried to get to us, but he was prevented. We passed through Hanover, Münster, and Essen, where the Krupp gun-works are, miles upon miles of smoking factories, running night and day. For a while we were held at Dulmen, the

main prison-camp for the Western Front where 140,000 French, British, Belgian, Indian, and captured troops of all other nationalities seemed to be herded. We were kept separate. There two American consuls, Osborne and another man I can't remember came to me and said they could do nothing. The English prisoners took pity on our condition and gave us food surreptitiously. After that we were shipped to Brandenburg, the death-camp of Germany, where the year before 7,000 out of 8,000 Russian prisoners had died of pellence. It was the naval prison-camp of Germany, but there were not more than sixty or eighty naval prisoners there. That Germany had captured in the war. One morning we Americans, about twenty-five of us now, were called out and lined up in the snow. Then the mighty Hindenburg himself came to sneer at us. He was an old man, huge, haughty, his face lined and seamed and hard as granite and red with rage. There were fifteen soldiers guarding him in front and fifteen guarding him in the rear. He told us in English: "Shame America! Shame! We would have won this war long ago if it had not been for your damned interference. You Americans are now under military rule. You will remain so until the war is terminated."

Harrington, the fellow who with Scott Adams had more nerve than any other men I have ever seen, shouted at Hindenburg that America would do as she pleased and Germany be damned. A soldier had of us felled Harrington with the butt of his musket.

The spotted fever broke out among us. Vermin were so thick on us that we ceased trying to be clean, and every day we became more and more brutish. When our tin of slops would be pushed in to us we would fall upon it like savage, starving pigs. I have watched two huge Englishmen shove each other's faces into bleeding because of a half slice of bread. We Americans stuck together. We were always shoulder to shoulder and any one who hit one of us hit all. See? That's how we pulled through. One day an English chum of mine wandered within the sixteen foot prohibited area next to the electric charged wire fence. A guard put a bullet through the prisoner's groin. Once I got into a fight with a little Portuguese, who pulled a knife from God knows where and got me through the shoulder.

I never felt the wound then. I got away with his knife and would have cut his throat. Scotty Adams and Harrington had pulled me off him. About once in four months we would get a bath. No soap, of course. Soap was more precious than gold in Germany. Several times we were told we would be released, but nothing ever happened. We ceased to hope.

But finally the American sailors were released and came home by way of Switzerland, France, and Spain. At Barcelona Ralph remembers, he saw Jack Johnson, the prize-fighter, "an exile and seedy and downcast." As Ralph concludes his own story:

I had come through all that hell of war without any damage to myself physically. I had gone through all that scarlet agony that I might return to peaceful America, where I went to work on a farm owned by a man called George H. Robinson, at Northport, L. I. And then I got my arm broken and wrenched and ripped, until now—

The Principle That Governs Remy Engineers

The Remy slogan, "Products of Constant Performance," is the principle which governs the decisions of Remy engineers.

Behind every effort is always the aim to design and build Remy products so that the thought and care you need give your Starting, Lighting and Ignition will be reduced practically to zero. The

progress Remy has already made in this direction is well illustrated by the growing preference for Remy products by leading automobile engineers.

They know how Remy products are made—what they will do—and that Remy Constant Performance enhances the service value of your automobile to you.

HOME LIFE OF THE JUGO-SLAVS

SOUTH SLAVS having sprung from a state of comparative unimportance into sudden prominence, it is but natural they should have awakened a new and general interest among the people of the United States. There is considerable curiosity as to their customs of living and their ideals which Miss Beatrice L. Stevenson, Ph.D., who is a specialist for the Jugo-Slavs in the Department of Work for Foreign-born Women, War Work Council of the Y. W. C. A., does much to satisfy in an interview with a representative of *The Christian Science Monitor*. She tells us something of the home life of the wives and sisters of the brave soldiers whose uniforms are now nearly as familiar to us as those of their Western Allies. To quote:

The women of Serbia more than once have astonished the enemies of their land by their stoical disregard of danger and their ultimate appeal to the fighting glory of their race, in succoring and providing weapons for their men in the hour of peril. Well known is it that in war-time women care for the wounded and attend to an important extent to the provisioning of the armies with food and clothing. These they carry to the troops across the hills or down the valleys as the case might require. Servian women have not hesitated to form themselves into bands for military drill and to organize their resources as fighting auxiliaries.

The men in Serbia never discourage the attitude of women who actively help the warrior. Knowing that it must be so, they realize that the Servian women are only doing what the women of their race had often been forced to do in times gone by. Now in the hinterland of Saloniki there is much opportunity to revive the traditions and the thrift which have left their mark for generations.

Altho the Servian woman has not shown herself ambitious to take the lead in public or political affairs, she has always been the great conservative force in the nation, and defended all national interests as if they were matters of pure patriotism. In her heart the fires of devotion never die, she cherishes the old traditions and customs, teaches her babe the histories and tales of past achievements, and inspires him with a determined belief in Servian destiny.

Among the Jugo-Slavs hospitality is highly developed. If one eats bread and salt with a stranger in Serbia it is taken to mean that such comrades will hereafter be fast friends. To be on terms of friendship with one member of the family implies friendliness with the whole household. The wives, mothers, and sisters of the host do not play so prominent a part in presenting the show of hospitality, but they carry out its behests. During the time of the Turkish invasions many and many an outlaw would be forced to seek the security and protection of the homes throughout Dalmatia and Bosnia. Relatives always received these outlaws in a friendly manner, and, without murmuring or mentioning added expense, would keep them willingly till such times as called for their departure.

In Montenegro when a traveler is prevented by bad weather from continuing his journey, he may enter the first house he finds. On arriving he greets the master with the words: "Pomoz Bog!" (God help

VOGUE

suggests:

that before you spend a penny on your new clothes, before you even plan your Spring wardrobe, you consult its series of great Spring and Summer Fashion Numbers, one of the most important of which is

THE LINGERIE NUMBER

(READY NOW)

In the next few months, during the very period in which Vogue's special Fashion Numbers appear, you will be selecting your entire wardrobe for the coming season, and paying out hundreds of dollars for the suits, hats, gowns, and accessories that you select. Ask any reader of Vogue, and she will tell you that

\$2 Invested in Vogue

a tiny fraction of your loss on
one ill-chosen hat or gown

Will Save You \$200

The gown you buy and never wear is the really expensive gown. Gloves, boots, hats, that miss being exactly what you want are the ones that cost more than you can afford.

Consider, then, that by the simple act of mailing the coupon below, and at your convenience forwarding \$2 (a tiny fraction of your loss on a single ill-chosen hat or gown), not only may you have before you, at this important season, Vogue's great special Fashion Numbers, but all through the next two seasons the numbers that follow them.

Here are the 9 numbers

★(Ten if you act promptly)

You will receive for \$2

Lingerie Number Jan. 1
The most daring and intimate of the Parisienne's thoughts on lingerie. The latest Fifth Avenue originations. Linens, laces, accessories.

Southern Number Jan. 15
Where to go, what luggage to take, what to wear; the first hint of the Spring mode.

Forecast of Spring Fashions Feb. 1
The earliest advance information from Paris on the new silhouette—saving you from the costliest of all errors, a wrong start.

Spring Millinery Feb. 15
Paris hats; appropriate gowns, veils and costumes.

Spring Patterns and New Materials Mar. 1
Patterns, weaves, colors, materials favored for Spring.

Paris Openings Mar. 15
The inimitable models of the Grandes Maisons, determining the mode.

Spring Fashions Apr. 1
The full pagantry of the Spring mode unfolded, with dollars-and-cents information in every line.

Bride Number Apr. 15
The bride, the bride's mother, the bridesmaids, the gifts, the breakfast, the luggage, the wedding trip, the reception, the new home.

Smart Fashions for Limited Income May 1
Must you economize? And yet look chic? A Vogue-trained dollar is a dollar doubled.

Summer Homes and Hostess Number May 15
Everything from doormats to coffee-cups; not forgetting the loveliest clothes for all the occasions of country life.

Vogue now makes a special offer—NINE issues for \$2 (yearly subscription price \$5).

If you mail the coupon attached now, your subscription will start with the Lingerie Number now ready, making TEN issues in all.

These are the all-important issues which unfold the Spring and Summer mode. Thousands of models will be shown from which you can select—and by the use of which, your gowns will, this season, be more attractive than ever before.

But, mail the coupon promptly, as the complimentary copy of the Lingerie Number must come out of a small reserve supply.

SEND NO MONEY

Don't bother to enclose a cheque or even write a letter. The coupon opposite will do and is easier and quicker. With one stroke of the pen you will solve your entire clothes problem. By acting today you will assure new and valuable ideas for the next two seasons and insure yourself against costly failures.

VOGUE, 10 West Forty-Fourth St., New York City
Please send me the **NINE** numbers of Vogue as described. I will forward \$2 on receipt of bill. (OR) I enclose \$2 herewith. It is understood that if this order is returned promptly, you will send me an extra complimentary copy of the Lingerie Number, making **TEN** issues in all.

The Bunion**

This shoe of ours fits the bunion as well as it fits the foot. It is built with the utmost care to relieve the painful joint of all pressure. A pocket shaped in the leather accommodates the bunion comfortably, guarding it, too, from outer dangers. Bunions of long standing can be forgotten in these shoes. We make them of softest, seasoned leather for men and women with the bunion pocket in varying sizes. Address Dept. F for information.

THE MOST FAMOUS QUESTION ANSWERER

Any question you would need to ask about a word in any meaning or significance you will find clearly and fully answered in Funk & Wagnall's NEW

Desk Standard Dictionary

80,000 vocabulary terms are contained in the 1,000 pages of this volume. There are 1,200 illustrations and 11,700 explanations of synonyms. It is also a book of information on every subject imaginable. Cloth bound, \$1.75; with thumb-notch index, \$2.05; half-leather, with index, \$2.50; full limp leather, with index, \$3.00. Postage, 10 cents extra.

FUNK & WAGNALLS COMPANY, 354-360 Fourth Ave., New York

How The Ants Milk Their Cows

The wonderful story of these little people, the ants—how they house, care for, and milk their "cows"; how they plant and raise their crops; how they build roads and houses; how they do all the other marvelous things they do—this fascinating story is only one of the many related in this delightful new book.

Knowing Insects Through Stories

By Floyd Brallier. An unusual collection of stories that unfold the amazing truths of insect life. The habits and characteristics of bees, butterflies, moths, grasshoppers, wasps, flies, and many other little people, are described with scientific accuracy in this entertaining and instructive book. Its style is simple enough for children, and its contents interesting enough for adults.

Cloth bound, profusely illustrated in beautiful colors. Price \$1.50 net; by mail \$1.75.

ye). The householder replies: "*Dobra ti sreda!*" (Good luck to thee). The women now come forward and kiss his hands, while he asks: "Can one pass the night in this honorable house? Ill luck has chased me till I know not what I do or whither I go." The host replies: "The house is God's and yours, and we shall surely find something to eat, be it but two potatoes, which with love and good will can not be divided."

The morning after the arrival of the guest the whole house is up early, and sees that everything he may require is ready for him when he arises. One of the women puts on his shoes and brings him water and a towel. When he has washed, he sits down to breakfast at which none of the women would join him under any consideration, but stand around and wait upon him. After he has eaten, he takes leave of the entire household, and the women kiss his hands, saying "*Zbogi i oprasti!*" (Good-by and forgive).

PARALLEL PORTRAITS OF TISZA AND KAROLYI

AT the moment when some people were thinking Count Michael Karolyi might prove to be the Gambetta of Hungary and make it safe for a Magyar democracy came cable reports that in despair at the outlook for his country he had committed suicide. Suicides and assassinations of world-figures in latter days have become so numerous and are so often denied that the average person receives such reports with doubt until they are officially confirmed. Of the assassination of the former Prime Minister Tisza of Hungary, who was the power behind the Austro-Hungarian throne, there is no longer question. And his reactionary character is contrasted with the progressiveness of Karolyi, the radical aristocrat, by Mr. Eugene S. Bagger in the *New York Evening Post*, who says that the four words, "from Tisza to Karolyi," condense for the Magyar people the political evolution of a century into four tempestuous years. We read:

Tisza and Karolyi—the two names stand as the embodiments not only of two opposed political ideas, two different conceptions of governmental theory, but as the symbols of two worlds: the Old World dominated by the obscurantist dogma of the super-race and super-caste, and the New World, not an ideal world indeed, but one striving toward the light on the arduous road called democracy.

Was it not but yesterday that Count Stephen Tisza ruled Hungary with the power of a military despot and dictated the policies of the camouflage empire of the Hapsburgs? It was at his command that, in those blessed days of peace, volleys of Bosnian infantry mowed down the Magyar workers, clamoring for the right to vote, in the streets of the Hungarian capital. It was at his command that the leaders of the opposition, noblemen, privy councillors, and ministers of God among them, were literally kicked and dragged by *gendarmes* down the steps of the Budapest Parliament, the "temple of Magyar constitutional liberty." One of these leaders was Count Michael Karolyi, the cousin of the Premier, and the second largest

temporal landowner in the country of limitless estates.

And to-day? Count Tisza is dead, his heart pierced by the bullets of Magyar soldiers whose brethren he had sent to the shambles by the hundred thousand—crushed by the very forces he more than anybody else, not even the Kaiser excepted, had helped to turn loose upon the world.

A good way to explain Karolyi is to contrast him with Tisza. Typical representatives, each in his way, of their race and caste, these two aristocrats have but one quality in common—indomitable courage, physical and moral. Bodily valor, however, is the common heritage of Magyar aristocracy whose life is a mixture of English outdoor exercises and the discipline of cavalry officers. The different manifestation in each of the quality called moral courage is the measure of the gulf that separated the two men. For Tisza, moral courage was an impenetrable armor behind which he defied the twentieth century in the terms of the fourteenth. He had a certain style, a simplicity of outline, which commanded the admiration even of his enemies. This style is not the property of cowards. Karolyi's moral courage helped him to battle his way through the Chinese wall of caste feeling and class interest, to face social ostracism for the sake of democratic ideas.

If sheer force of character and oneness of purpose are desirable standards, Tisza was by far the greater man of the two. He was a splendid specimen of Junkerdom—not of the Prussian variety, tho. He had no use for the scientific methods of oppression, did not believe in bribing people into submission. He was all for the whip and the saber as the instruments of political education for the masses—feudal baron merged into a Russian police general. His Magyarism was simply caste feeling and oriental exclusiveness. His stern religion finishes the picture. He was a Calvinist crusader—at the same time a devout servant of his Catholic master the King. A Cromwell willing to fight and die for the divine right of James II.

According to the *Evening Post* writer, the pragmatic test of social usefulness establishes the superiority of Karolyi. His mind is described as flexible and receptive, while Tisza's opinions were of cast iron. Karolyi is pictured as cosmopolitan in education and attitude, as Tisza was parochial—as European as Tisza was Asiatic. Socially and intellectually the two men compared as a granite statue of Sulla compares to a live Paris club-man, and we read that—

His activities as Radical leader did not tend to popularize Karolyi among his fellow aristocrats. They affected not to take him seriously—derided him as a crank and a doctrinaire.

Now members of the ruling caste had a very legitimate grievance against the "Red Count." Heir to the Karolyi entail, second only to that of the Prince Esterhazy and reputed to be worth about \$30,000,000, Count Michael started public life as president of the Hungarian Agricultural Union, the representative body of Magyar Junker reaction. One day he announced to that distinguished gathering of Magyar Westarps and Reventlows that he was through with them for good, that they were all wrong, that the future belongs to democracy, and that he was going to fight for the rights of the common people.

Imagine Mr. Schwab announcing at the Union League Club that he joined the

CLARK AUTOMOBILE HEATERS

DON'T LAY UP YOUR CAR for the winter. **Enjoy** driving—keep warm as toast—even in coldest weather—with a Clark Heater. The cost is small, operation simple and inexpensive. No flame—no smoke—no odor.

Keeps Car Warm Without Running Engine

The Clark Heater is self contained. Entirely independent of the engine. Gives warmth just the same whether car is running or idle. Looks like a foot rest. Handsomely upholstered with carpet. It's made of heavy metal sheet steel; asbestos lined. Uses our celebrated Clark Carbon Brick. One brick gives 12 to 16 hours heat—half a brick gives 6 to 8 hours heat. Clean, simple, easy to use. A wonderful comfort. Prices \$2 to \$10.

FAUST INSTANT COFFEE&TEA

For the most delicious cup of coffee or tea, merely put soluble powder in cup, add hot water and serve. Made in a second—No Waste—No Grounds or Leaves—No Boiling or Cooking—No Pots to clean.

Send dealer's name and city (foreign list) for coffee or tea. Dealers supplied direct or by any jobber. Jobbers—Write Us.

FAUST CHILE POWDER

IS A "DIFFERENT" SEASONING.

You use it instead of pepper, onion, etc. It's a combination of all of them, except salt. For salad dressings, meats, gravies, stews, soups, there's nothing quite so good. Sold by most dealers in 10c, 25c, and 1-lb. cans. If your dealer hasn't it, send 25c. for 3-oz. can and Recipe Pamphlet prepared by Henry Dietz, famous chef of historic Faust Cafe and Beer Hall.

Dealers—Ask Your Jobber. Jobbers—Write Us.

Until recently all Faust Instant Coffee known "over there" as U.S. French Coffee was being shipped to our soldiers. Victory necessities oblige us to again supply the public.

C. F. BLANKE TEA & COFFEE COMPANY, Saint Louis, Missouri.

I. W. W.! Karolyi was as good as his word. To his advocacy of universal and equal suffrage he soon added a persistent propaganda for land reform. He went from bad to worse—from the Left toward the Extreme Left.

The question naturally arises: Why does Karolyi not live up to his principles and turn over his vast estates to the Hungarian people? This is the favorite question of his hecklers. But he has an answer. In the spring of 1914 he came to the United States to enlist the aid of Hungarians in this country in the fight for universal suffrage and other reforms. At a mass-meeting in the Central Opera House the above question was put up to him. He replied:

"I will not give my estates to the Magyar people because I want the Magyar people to come and take them away. I won't give alms to my people, and I won't bribe them. The land rightfully belongs to them—when they will awaken to this, they'll go and seize it, and as far as I am concerned they are entirely welcome."

The probability is that the reports of Karolyi's suicide are correct. Yet even if he did break down under the terrific burden he bore, he remains a figure of no mean proportions in days when great men crowd the stage of the world. We read:

His enemies charge he is a theorist. This is, to an extent, true. But it means only that he is able to see things in perspective, to recognize that whatever the demand of the moment, ultimate expediency always coincides with general justice. He preached that the German alliance spelled disaster for Hungary when to say it aloud would have cost an ordinary citizen his neck. He said, in effect:

"Berlin and Vienna tell the Magyar Junkers, 'You give us recruits and taxes, and we give you a free hand to skin the Slavs and Roumanians alive—the Magyar peasants, too. The Slavs and Roumanians will resent the skinning and this you may point out to the Magyar people as the reason why they should give us recruits and money.'"

He did not hesitate to draw his conclusions. His overtures toward Paris and Petrograd, heartily applauded by all Hungarian radicals, were cut short by the outbreak of the war.

His record during the last four years is more or less known to the American public. In Parliament he opposed bitterly submarine warfare, demanded renunciation of all imperialistic aims and a peace program along Wilsonian lines, attacked the Germans whenever he saw a chance, and professed pro-Ally sympathies with increasing frankness. His endeavors were duly honored when, early in 1918, he was indicted for high treason on a charge brought by his own cousin, Count Emery Karolyi. The German Government appreciated his activities by establishing at Budapest a special secret service to watch him. The thing came out; there was a big scandal in Parliament, and Major Consten, the German secret agent, had to make a hurried exit.

Karolyi advocated just treatment for the subject nationalities ever since he turned Radical. Nevertheless, he was denounced by Slovak and Roumanian spokesmen as a Magyar chauvinist because of his insistence on the indivisibility of the Magyar state. His stand has its parallel in the attitude of Russian liberals toward the Ukraine. But there is every reason to assume that Karolyi has at last realized that the friendship of the Czechoslovaks

HEINE BOILERS

*A Contributing Factor to
the Winning of the War*

During the memorable struggle that has just been brought to a victorious close, it has been our proud privilege as well as our patriotic duty to devote our entire resources, facilities and output to the service of our Government.

Our large plants at St. Louis, Mo., and Phoenixville, Pa. (covering over 16 acres) have labored without stint or limit to supply power boilers for shell plants, ammunition factories, gun shops, arsenals, aircraft factories, Government navy yards, hospitals, textile, uniform and other essential industries—and to furnish 360 high-duty marine boilers with which to speed General Pershing's bridge of ships across the sea.

In the last few years our business has grown to many times its former volume—the capacity of both our plants has been greatly increased—many new departments have been added—and our organization has been brought to a new and even higher standard of efficiency.

Now—as the world turns its thoughts from war to peace—the Heine Safety Boiler Co., with its record of duty faithfully performed, and with all Government restrictions removed—places its increased facilities at the service of its regular patrons and ALL users of power boilers. Correspondence is invited.

HEINE SAFETY BOILER CO., ST. LOUIS, MO.

Shops—St. Louis, Mo., and Phoenixville, Pa.

Offices in principal cities

and Jugo-Slavs and Roumanians can be gained only through cooperation with their free national states. His whole development points in this direction.

Even his best friends would refrain from calling Karolyi a genius of the first rank. But his good-will, his sincerity, his zeal to do the right thing are coupled with a keen sense of justice, a European outlook and power to grasp the international foundations of genuine democracy. Above all, he lacks that cocksure, parochial, intolerant haughtiness which characterized almost all Magyar statesmen since the death of the two real Liberals, Deak and Eotvos.

COMPARATIVE CHARMS OF FRENCH AND AMERICAN GIRLS

THE relative fascination of American and French girls, which seems to have caused some uneasiness in certain quarters, was recently the subject of a cable dispatch from Farmer Murphy to the *Chicago Tribune*. The question had been asked whether the less independent but more strictly feminine French type might not have such an influence on our men in France as to compel the American girls to look to their laurels when the heroes return. This is what Mr. Murphy cabled from France:

The French girl's training is to look up to and coddle the men in the family. She is more of a listener than a talker; she is pleased with small attentions, and never fails to show appreciation of them. It was inquired if the contact of our men with these customs might not make them less willing to fetch and carry and obey the beck and call of our self-reliant American type of girl.

There was only one way to settle the question, and that was to ask the men themselves. The army edition [of the *Chicago Tribune*] last week stated the case to its readers and invited them to give opinions.

Many of the letters were very thoughtful and showed that the men have not answered offhand, but have seriously considered before answering. Several such are from privates. One of the surprises was the number who favored the French girl. Among the first batch the French probably had the majority, but then the American girl's defenders came to the front.

Be it understood that this is a discussion of types and not individuals, and there need be no heartburnings.

A private in the Medical Corps, who says he read the questions in the company of his fiancée, dares to write:

"I've had some opportunity to observe the French girls and wish to assure you and the folk at home that they have my entire approval."

One of the most complete answers is from a sergeant who emphatically declared he considered the French girl more thoughtful, agreeable, and less exacting than the American, and just to show that he is not prejudiced he wound up by saying he was going back to the States to marry the dearest girl in the world unless she has changed her mind.

Giving the reasons he favors the French girl, he said:

"The French girl expects nothing and is disappointed if she receives no more than that. The American girl expects everything and always is certain, in one or another, to make known her feeling

if she does not receive it. If you want a surprise ask a French girl to allow you to carry her umbrella or parcel, and, if she is not used to Americans, she will be just as surprised as you. It can not be denied that the French girl has won her way into the hearts of the Americans."

Another soldier who is going home to an American girl begs that his name be not used when he says:

"The charm of the French home life is a revelation. The French girls stand the beauty test every time. Their keen humor doesn't take the form of the verbal sparring and the cheap banter of the American debutante. They can talk well and intelligently, and, what is more, they can listen."

"We to the American girl who fails to listen long and patiently when the A. E. F. goes home. The French girls are ideal companions, friendly, natural, unaffected, and self-possessed in a quiet way, never seeking the center of the stage, and never conspicuous."

A sergeant who has lived in France for twelve years lauds the American girls.

"There is nothing doglike about the devotion of the American girl," he says, "but she is true blue and a real comrade through life, depending upon her worth, not her sex, to hold her beloved beside her and keep the respect of all men."

Joe Lucas, 4250 Campbell Avenue, Chicago, is for the American girl first, last, and all the time, and wants everybody back home to know it. One whole aero squadron votes the French girl adorable. So it goes, and the discussion is only beginning to warm up.

CHINA FINALLY DOPE FREE

CHINA greeted the war with enthusiasm because she realized the truth of the old proverb, "while the cat is away the mice can play." In this case the cat was the Great Powers and the play the resumption of the opium traffic that the "cat" has so effectively stopt. Alas for poor John Chinaman's pipe-dreams. Altho the Great Powers had their hands full elsewhere, a strong man has suddenly arisen in Peking and the "soothing pipe" will remain empty. *Oriental News and Comment*, the New York organ of the Far-Eastern Bureau, tells us the story. First it quotes a cablegram which runs:

President Hsu Shih-ch'ang of China has shown marked independence and patriotism by a decree just issued ordering the destruction of 1,200 chests of opium (valued at \$14,000,000) in Shanghai. This is the entire lot lately bought from the Shanghai Opium Combine. Considering the financial weakness of the Chinese Government, this act deserves special recognition. It also marks the President's personal strength of character, as it was generally understood that some of the strongest political men had large interests in the opium and were counting on munificent profits.

The Oriental News comments thus:

The decision of the Chinese President, Hsu Shih-ch'ang, to burn the stock of opium acquired by influential Chinese from the Shanghai Opium Combine for the purpose of reopening the traffic in China is a matter for praise and congratulation not only from Chinese, but from all civilized

nations. The President has risen to the occasion in a conclusive and effective way. The loss of the \$14,000,000 stock, to say nothing of the loss to the Government of millions in revenue, and at a time when the country is in financial straits, the loss of popularity among certain official circles personally interested in continuing the traffic seem to have weighed little in the President's mind before the significance to the Chinese nation of the proposed backward step. Some nations whose voices have been raised loudest in protest against developments in "backward" and "uncivilized" China might well take a leaf out of China's book and attempt what she has accomplished, the eradication of their own particular national evils. It is interesting to note that the western press makes announcement of President Hsu's decision as the result of the protests of Great Britain and the United States. That they had influence on the Chinese attitude is not to be doubted; but the strong sentiment of native Chinese of the better classes should not be lost sight of.

The provincial governors of China seem to have stood solidly behind the President, and they were prepared to make things uncomfortable for the local "hop fiends" in a manner peculiarly Chinese:

Provincial governors and influential Chinese citizens have worked hand in hand with foreigners to fight the evil. It is very interesting to note the preparatory measures taken by the four provinces in which the new opium syndicate was licensed to sell the stock it had purchased from the Shanghai Opium Combine. These provinces, Kiangsu, Kiangsi, Chekiang, and Hupeh, had determined on the following measures:

1. If the opium-dealer be a shopkeeper, all the banks and money shops shall refuse to have anything to do with him in money matters, so that he will have to close his shop for lack of funds and banking facilities. (The Chinese have long known the efficacy of the boycott. Both the United States and Japan have felt its force.)

2. If an employee of a shop deals in opium the shopkeeper shall dismiss the man, whose name will be published in the newspapers, so that he will not be able to find employment elsewhere.

3. If a wealthy man be discovered dealing in opium, his name should be given to the elder of his family, with the request that the guilty person be cast out from the family (one of the greatest of disgraces), and he shall be opposed by all as an alien without mercy.

4. Landlords and landladies shall not rent their houses to opium-dealers. If they do, they will be dealt with as if they were opium-dealers themselves.

5. If damage is done to opium-dealers and their properties, the Chamber of Commerce shall refuse to grant compensation.

We are inclined to think that even had the syndicate been permitted to follow its commercial career it would not have found very easy sledding, since the only provinces in which it was licensed to do business were ready armed to meet it.

Some distinguished foreigners, too, have been working to eradicate opium from China, and to one of them *The Oriental News* gives high praise:

Great credit is undoubtedly due the Chinese. But the work of disinterested foreigners must not be forgotten among whose names is prominent the name of

Troy Trailers

Designed solely from the demand-point of a vehicle to be hauled behind a high-speed motor truck.

The embodiment of the highest engineering skill—in construction, the equal of the best truck made.

The result of five years' experience in actual operation in practically every line of business—behind every good make of truck—all over this and many foreign countries. And back of it all, the experience in the building of high grade road vehicles of more than thirty years.

The above illustration shows a 5-ton Troy Trailer carrying full capacity of Goodyear products (and a truck built especially for hauling), on a recent 1440-mile trip from the Goodyear plant in Akron to Boston and back—up and down some grades of 18%—up some steady 5-mile climbs over the summits of the Allegheny Mountains. This is not a remarkable performance, in so far as the Troy Trailer is concerned. It is this same staunchness and flexibility of Troy Trailers that has made them such dependable and profitable units of transportation under everyday conditions, and with the average truck.

Under average conditions, a Troy Trailer will at least double the hauling capacity of any good make of truck, and cut hauling costs in half.

The Troy Wagon Works Co.
Troy, Ohio

Mrs. Elizabeth Washburn Wright, who not only put forth her best effort in China itself to arouse public opinion against a revival of the traffic, but in both Japan and this country brought the matter to the attention of the authorities, and again urged action. Mrs. Wright very fittingly undertook this work, inasmuch as a great deal of the credit for the work already done in eradicating the opium evil belongs to her husband, the late Dr. Hamilton Wright, American Commissioner to the Opium Conference in Shanghai in 1909 and American representative at the opium conference held at The Hague. Mrs. Wright has worked tirelessly making speeches, securing interviews, and writing articles.

What Mrs. Wright thought we can see from a recent article from her pen in *Millard's Review*, an English paper published in Shanghai:

A great obstruction in the form of opium has been placed in the path of China's progress. It is a many-times-told tale that China for decades fought against the introduction of opium into her country, and, finally, a victim of circumstances, succumbed to its use. Because China is fundamentally strong and moral she never ceased to fight against a great wrong that was being done her people. It was repugnant also to the better mind of the world that a nation like China of many strengths and potentialities was being slowly and, if not checked, irrevocably undermined. Ten years ago the question was definitely taken up at the instigation of America by an international commission which met at Shanghai to study the question and to decide upon some means to eradicate the evil.

Great Britain also approached the subject in her so-called ten-year agreement with China—by which she agreed gradually to reduce the importation of Indian opium into China until it should finally cease at the expiration of ten years, on China's promise that she would stop the smoking of opium among her people and cease the cultivation of the poppy. Six years followed, during which time three international conferences were held at The Hague and a convention drawn up by which China was guaranteed international cooperation and protection. With great vigor China set about her own reforms and demonstrated to Great Britain and the world her sincerity and justified the confidence which the United States had placed in her desire and ability to grapple with her problem. In fact, her energy and accomplishment were such that Great Britain voluntarily reduced the time of her agreement by three years, and in 1913 announced in Parliament that the Indo-China opium trade was at an end. For this act Great Britain deserves much credit. By abandoning a trade of many years' standing she gave up a large revenue to her Indian coffers and a source of livelihood to many of her Indian subjects. But England also had the cause of China at heart, and was more than glad to be rid of a question with which her own conscience had not been satisfied.

With the extermination of her poppy cultivation and by her rigidly enforced prohibition of opium-smoking China rose in the estimation of the world by leaps and bounds. The giving up of opium was no light task and comparable only to a universal restriction of all alcohol in the western world—or the use of tobacco; but opium, due to the nature of the drug,

was infinitely more subtle and difficult of handling. This action on the part of China demonstrates a quality of strength in her people that is not adequately grasped by the west. This eradication of a century-old vice was not put in force through the issuing of edicts by the Government alone, but was due to the imperceptible and immense pressure of public opinion—the opinion and belief of millions and hundreds of millions of inarticulate Chinese scattered throughout the vast distances of China, a force imbued with the simple and definite instinct of right.

WOMAN WEIGHED IN THE SCALES OF MEDIEVAL MAN

NOT a whit behind our day in their interest in the diverting discussion of the eternal feminine were the Middle Ages, Miss Eileen Powers tells us in the current *Cambridge Magazine* (Cambridge, England). The difference is that now the worm has turned, and woman has perked up sufficiently to return criticism for criticism of her lord, whereas in the older days she merely accepted him as an inevitability. The cause of medieval woman was valiantly attacked and defended by the men themselves. Miss Powers accounts for the situation by the influence of the Church, which on the one hand exalted women "by the promotion of morality and by the sacramental character given to marriage, by the creation of the type of the nun, and by the cult of the Virgin"; and debased them "by the rigid asceticism of early religious ideals and by the doctrine of the inferiority of woman." The effect of chivalry was similar, and another influence was the popularity of oriental tales stamped with contempt for women. The writer says:

It is from this complicated, two-sided attitude, that there sprang in the later Middle Ages a literary controversy, which has continued ever since, having for its subject the praise or blame of women. There is, indeed, no particular reason why such a controversy should ever cease, because there is no particular reason why any one should ever arrive at a conclusion. The antiwoman pamphlet has existed from the earliest times; but no such controversy exists as to the merits and demerits of men in the Middle Ages. As that inimitable woman, the Wife of Bath, expressed it:

By god, if women hadde written stories
As clerkes han with-inne his oratories,
They wolde han writen of men more wikkednesse
Than all the mark of Adam may redresse.

It has been reserved for our own day to produce the antiman pamphlet. The medieval man would have said, "See what comes of educating the creature—'whan she comth home, she rampeth in my face!'" Some of the poems written against women in this controversy are exceedingly entertaining. Sometimes they take the form of long didactic dissertations, in which the case against women is set forth at length and with no unnecessary mincing of language. Sometimes they are more serious social satires. Sometimes they take an allegorical form, resembling *fabliaux* or *exempla*; such is the tale of *chicherache*, the mythical monster, who could only feed on women who were obedient to their

husbands, and had had nothing to eat for the last two hundred years. Some again are quite short songs. A favorite device is to credit women with all the virtues, in which they are popularly considered to be most deficient, and then to add at the end of each verse the refrain, "The contrary is true."

In every place ye may well se
That women be trow as tyrtill on tre;
Not libral in langag, but ever in secrete,
And great joy among them is for to be.
Cuius contrarium verum est.

For tell a woman all your counsayle
And she can kepe it wonder weyll;
She had lever go qwyck to bell
Than to hire neybourne she wold it tell—
Cuius contrarium verum est.

Trow ye that they lyst to smatter,
Or ageynst ther husbondes to clatter?
Nay, thei had lever fast bred and water
Than for to presse such a matter—
Cuius contrarium verum est.

Thowe all the pacience in the world were dround
And nonne were left here on the ground,
Ageyn in women it myght be found,
Such vertu in them doth abownd.
Cuius contrarium verum est.

Crude—but effective!

All these poems have their counterpart in others singing the praises of women, which, if less piquant, have frequently great charm and tenderness. I need only mention a poem whose literary merits have gained for it a greater fame than any of the English antifeminine productions, the beautiful "Nut Brown Maid." But I can not resist quoting a naive and delightful little fifteenth-century song in praise of women:

I am as lyghte as any roe
To praise womene wher that I goo.

To onpreyse womene yt were a shame,
For a womane was thy dame;
Our blessed Lady beryth the name
Of all womene wher that they goo.

A womane is a worthy thyng,
They do the washe, and do the wrynge,
"Lullay! Lullay!" she dothe the synge,
And yet she has but care and woo.

A womane is a worthy wyght,
She serveth a man both daye and nyght;
Therto she puttyth alle her myght;
And yet she hath but care and woo.

This is something rather different from the praise of woman to be found in the chivalrous love-poetry of the period; it is less the praise of a lady than that of a plain woman; less romantic than domestic; and thence (I think) its charm.

Miss Powers gives some amusing accounts of the ideals of married life held by medieval writers, who assume that all women, if not nuns, are past, present, or future wives. We read:

The fundamental idea, based on the Bible, is that a woman is in subjection. Philippe de Navarre put the matter in a nutshell, "Our Lord," he says, "demanded that woman should be ever in subjection" (which is quite untrue); "in childhood she must obey those who are bringing her up, and when she is married she must obey her husband as her lord, and if she goes into religion, she must be perfectly obedient to her superior, according to the rule." Even the *Ménager de Paris*—a sensible *bourgeois*—likens a wife's love for her husband to the fidelity of a dog to its master, and declares that all his orders, whether just or unjust, important or futile, reasonable or unreasonable, must be implicitly obeyed. There is, of course, another side to the matter. It is obvious that, altho they insist upon the fact that the husband is always lord and master, these

Are these thousands of Stewarts making money for you?

If you buy a Stewart, you enjoy the benefits of our quantity production. For, by making thousands of Stewarts we are able to offer you quality trucks which—

1. Cost less to buy.
(Compare the prices.)
2. Cost less to run.
(Ask Stewart Owners.)
3. Give longer service.
(In 6 years no Stewart has worn out.)

These three facts mean savings to you and money saved is money made.

Many of the largest concerns in the world are users of Stewarts. They first bought one, then two, then three, until now many of them have large fleets of Stewarts. These repeat orders are the backbone of Stewart success.

Before you buy *any* motor truck compare it with the Stewart for quality and price.

Stewarts are quality trucks proven by the test of time.

MOTOR TRUCKS

What Do You Think They're Singing?

K-K-K-Katy"? "Smiles"? "Sweetheart"?
 "That's the Kind of a Baby for Me"?
 "The Tickle Toe"? Well, what would
 your crowd be singing at a lively party?

You can sing all these—and thousands more—old and new—if you have a Gulbransen to play them.

No trouble to read a song roll. The words are printed as big as **THIS** right on the paper and each word appears at the moment it should be sung.

Is Your Home Dull?

Do people seldom "drop in"? Do your parties "drag"? Cheer things up with music—songs the folks can join in. Nobody ever tires of music—the variety is endless.

The songs a mother sings to her baby—the rowdy chorus things the boys let out at stags—the good old hymns that mean so much in

church—the love songs a man likes to hear his dearest girl sing—

Yes, and the waltz the girls could "just die dancing to"—and today's jazz fox-trot with the words everybody wants to know.

Do You Know These Pieces?

These 24 pieces are the most popular right now. Several kinds of music are represented. Which of them would you pick out to play on your Gulbransen if you owned one?

Smiles
 Oh! How I Wish I Could Sleep
 Until My Daddy Comes Home
 'Till We Meet Again
 Oh! Frenchy
 Oh! How I Hate to Get Up in

GULBRANSEN

Player-Piano

It's So Easy to Play —this Gulbransen

Its pedals work so easily a baby can play the Gulbransen—just as shown in our famous trade mark. In fact, a certain baby *did* play the Gulbransen; that's where we got the idea for the trade mark.

You can be breathless from dancing—or exhausted by a hard day's work—yet play your Gulbransen enjoyably, delightfully. It seems to read your thoughts, so sympathetically does it respond to your touch.

Musical Possibilities That Equal Your Desires

If you appreciate the finer music—if your taste in quiet moments runs to the master composers—the Gulbransen is your instrument of instruments.

Muratore—world-famous tenor—plays a Gulbransen at home. Harold Henry—America's distinguished pianist—uses a Gulbransen in his studio to study the recorded playing of other virtuosi.

You must put preconceived ideas behind you when you come to consider the Gulbransen. It has taken the drudgery out of piano-playing. But left in it—yes, *put* into it for most of us—the opportunity to play with all the expression our imaginations can conceive.

The Leading Player—and Nationally Priced

For two years, more Gulbransens have been made and sold than players of any other make. Think what this means. It is an astonishing record.

tone—its delightfully easy operation. And the Nationally Priced plan of doing business—each model has but one price, the same to everybody, everywhere in the U. S.—burned into the back of each instrument before it leaves our factory.

Thinking men respect us for this policy. It makes the Gulbransen the standard of value wherever it is sold. National prices, war tax paid:

White House Model \$600 Town House Model \$485
Country Seat Model 535 Suburban Model 450

The most substantial piano dealers have naturally made the Gulbransen a feature of their business. There is such a dealer near you. Look for the Gulbransen trade mark—the Baby at the Pedals—in his window, or ask us for his name and address. We will gladly send you our catalog.

(Pronounced Gul-BRAN-sen)

GULBRANSEN Player-Piano

GULBRANSEN-DICKINSON COMPANY
3232 West Chicago Ave., Chicago

treatises do look for that degree of companionship between men and women, which must in many cases have existed. Moreover, the husband's reciprocal duty to his wife is not neglected; he is urged to treat her with courtesy, and never to rebuke her in public, and to love and cherish her if she be worthy; the idea that a good wife is an inestimable possession appears continually.

Finally, it may interest modern readers to know how the Middle Ages solved the evergreen problem of "How to be happy tho married." A little Italian treatise, written about 1300, purports to contain the twelve pieces of advice given by a mother to her daughter on the eve of the latter's marriage. They are as follows:

1. Avoid everything likely to annoy your husband. Don't appear gay if he is sad, or sad if he is gay.

2. Try to find out what dishes he likes, and if your taste does not accord with his, don't let him see it. In fact—Feed the brute!

3. If your husband has dropt off to sleep through illness or weariness, take care not to wake him, and if you absolutely must, do it gently and do not make him start.

4. Be faithful in love and do not rob your husband; don't give away or lend his possessions without his permission.

5. Don't appear too anxious to know your husband's affairs, but if he does tell you about them, keep his secrets and never repeat in public things told you in private, however trivial they may appear.

6. Love your family, especially those whom your husband loves, and don't find fault with them for little things.

7. Don't do anything of any importance without asking your husband's advice and always consider what he says to be best.

8. Don't make impossible or wrong demands upon him, which displease him and are contrary to his honor, so that no evil may come upon him through you.

9. Be careful always to look pretty and neat. Be suitably dressed without ostentation or exaggeration, for if you wear fast clothes your husband will think you are fast.

10. Don't be too familiar with your servants. It makes them scornful and disrespectful.

11. Don't want to go out too often. Man's sphere is outside; the sphere of woman is the home. Speak seldom, be modest, and don't frequent fortune-tellers.

12. Finally, and most important of all, do nothing which could possibly make your husband jealous, for thus you will lose his love. When he comes home, receive him with pleasure. Make much of him, and pay more attention to his relatives than to your own, and then he will act in the same way toward you. See that everything in your house runs smoothly. And always make yourself attractive.

A Little Hint.—Janet, aged nine, was taken by her mother to lunch at the house of a friend.

The hostess was of the talkative variety, and, in her enjoyment of certain interesting little incidents she was relating, quite forgot to give Janet anything in the shape of food.

After a lapse of several minutes, Janet could endure this situation no longer.

Raising her plate as high as she could, she demanded in a shrill voice:

THE SPICE OF LIFE

Live Question.—"Billson says he is living on two meals a day."

"Where does he get them?"—*Life*.

Hint to Wilhelm.—"One of the joys of not being an Emperor is the inconspicuity of ordinary failure."—*Richmond Times-Dispatch*.

Blame Located.—"SHE—"I wonder why men lie so?"

HE—"Because their wives are so inquisitive."—*Boston Transcript*.

Pale Word.—"SALESMAN—"I suppose you require a grand piano, madam?"

MRS. MEWNISHUNS—"Grand! I want a magnificent one."—*London Opinion*.

Her Plan.—"My husband is going to give me a lot of things for Christmas."

"How do you know?"

"I've bought most of them already."—*Judge*.

Carry It Back Again.—"DINER—"What do you call this stuff?"

WAITER—"Mock turtle soup, sir."

DINER—"Well, tell the chef he has carried his mockery too far."—*Tit-Bits*.

Useless.—"HUSBAND—"Have you brought your opera-glass?"

SHE—"Yes, but I can not use it."

HUSBAND—"Why not?"

SHE—"I have left my bracelets at home."—*London Opinion*.

Couldn't Catch Bobby.—"PAPA—"Bobby, if you had a little more spunk, you would stand better in your class. Now, do you know what spunk is?"

BOBBY—"Yes, sir. It's the past participle of spank."—*Chicago News*.

He's a Failure at Either Game.—"I hope that Wilhelm has not decided to take up politics," mused Senator Sorghum.

"Why?"

"Because a military man can be definitely disposed of, but a politician never quits."—*Washington Star*.

Sorry He Spoke.—"Any of you got a very old uniform?" asked the sergeant.

A private, scenting a new one, proudly displayed his frayed edges and stains.

"It isn't fit for much, is it?" commented the sergeant. "Parade at two-thirty for a coal-fatigue."—*Tit-Bits*.

Diplomatie Américaine.—"And you will take me to America with you *après la guerre*?" asked the demoiselle of the buck private.

"But, mademoiselle," remonstrated the diplomatic buck, "the customs-house officials would never pass such a priceless pearl as you!"—*The Spiker* (Army paper printed in France).

How It's Done.—"Say," said the new young Assistant Editor of the Big Magazine, breezing in with a basket full of poems, "I can't make head nor tail of these poems. I don't know what in thunder half of 'em mean!"

"Eureka!" shouted the Big Chief, embracing him. "Pick out the ones you don't understand, have the artists illuminate 'em in page frames that ain't artistic, and advertise the new school of literature!"

Where Pluck is Needed.—"There are few persons with courage enough to admit that they haven't got it."—*Life*.

Matrimony à la Mode.—"A few words mumbled by a minister constitute a marriage. A few words mumbled by a sleeping husband constitute a divorce."—*Smart Set*.

In Poor Company.—"The Belgians ought to do the right thing by King Albert and elect him President of Belgium. He deserves to be taken out of the king class."—*Albany Argus*.

A Dead Letter.—"Mrs. A.—"Your husband told my husband that his word was law at home."

Mrs. B.—"Yes, it's one of those laws that are never enforced."—*Boston Transcript*.

A Harder Thing.—"GREY—"How are you getting along in the stock market?"

GREEN—"Well, I'll tell you. I traded a lot of money for experience, and now I'm trying to reverse the process."—*Jersey City Journal*.

Unconsciously Ludicrous

The cases are quite numerous,
As well as quite mysterious,
When men appeared most humorous
When trying to be serious.

—*Washington Star*.

Might Be Lonely.—"Look here, now, Harold," said father to his little son, who was naughty, "if you don't say your prayers you won't go to heaven."

"I don't want to go to heaven," sobbed the boy, "I want to go with you and mother."—*Pearson's*.

New Pet Words.—"HE—"See that man over there? He's a bombastic ass, a wind-jammer nonentity, a conceited humbug, a parasite, and an encumbrance to the earth."

SHE—"Would you mind writing all that down for me?"

HE—"Why in the world—"

SHE—"He's my husband, and I should like to use it on him some time."—*Tit-Bits*.

When Bills Don't Count.—"Having made his payments for Liberty bonds, war-chest, rent, coal, gas, and groceries, the poor man was broke. But he needed winter clothes, so he compromised by digging through a closet and unearthing a heavy vest that belonged to a winter suit he had worn some years ago. He brushed the vest off and felt in the pockets.

Eureka! A discovery!

In the inside pocket of the vest was a roll of bills amounting to \$123.

And not one of them was receipted.—*Cincinnati Enquirer*.

Try This Plan.—"Miss Willing," began the young man as he wiped the perspiration from his brow, "are you fond of stories?"

"If they are new, Mr. Woodby," replied the fair maid. "I simply dote on them."

"But the one I was going to tell you, Miss Willing, is not new," said the young man. "It is, I might say, Miss Willing—or, Clara—the old, old story, but—"

"Oh, never mind, George," she interrupted. "Even if it is a chestnut, I'm

A TIRE *of* SELECT MATERIALS

THE best fabric tire that can be made, from the best materials that can be bought.

The New McGraw is the perfected product of years of tire building experience, and of a plant concentrated upon high quality manufacture. Daily capacity exceeds five thousand tires.

5,000 Mile Guarantee

The McGraw Tire & Rubber Company
East Palestine, Ohio, U. S. A.

COMPOUNDING in the McGRAW PLANT

The proper blending of high grade rubbers is the first step in the science of tire craft. Minerals also, such as sulphur and zinc oxide, are as necessary to the production of a quality tire as alloys are to the winning of gold.

McGRAW TIRES

A New Spirit of Good Will

Thanks to the opportunity given it by the War Department, at home and abroad, a new spirit of good will has grown up around Dodge Brothers Motor Car.

Wherever soldiers meet, this car is spoken of in terms of admiration, and even affection.

Soldiers grow to love the tools, and weapons, and implements, that serve them.

They admire, especially, the inanimate thing that shows grit, and endurance, in a tight place.

That is American—and that is the American soldier in particular—and that is the sort of glory being woven around Dodge Brothers Motor Car.

There will always be associated with it, the remembrance of the work it did in the world war—in army service on both sides of the ocean.

Thousands of American soldiers are coming back, now, from the camps in America, and the battle-front in France, telling how well that work was done.

They are telling it to their fathers

and mothers, their worshipping small brothers, their sisters, their sweethearts and their friends.

It is the central figure in many a stirring story told about the family fireplace.

To many a white-haired American mother, it means something more as it goes by than just a motor car.

She links it, somehow, with what her own boy did, with what America did, and with what America stands for.

Dodge Brothers are proud that theirs was the one car of its type and class chosen by the War Department.

They are prouder still that it has been taken into the hearts and homes of the American people.

The old folks, and the little folks who don't forget, are spreading a leaven of good will which will endure for years to come.

Dodge Brothers cherish this new spirit of good will, which has come out of the world war, as *their most valued possession.*

The gasoline consumption is unusually low
The tire mileage is unusually high

DODGE BROTHERS, DETROIT

CURRENT EVENTS

THE PEACE SITUATION

December 11.—Premier Lloyd George tells a meeting at Bristol that the Allied war-bill against Germany is \$120,000,000,000 and that Germany should pay to the utmost of her capacity. With regard to the freedom of the seas question, he says: "Wherever the request comes from, we are not going to give up the protection of the Navy so far as Great Britain is concerned."

A dispatch to the Jugo-Slav Bureau at Washington reports the National Council at Zagreb protesting to the Allied governments against Italian administration in the occupied territories of Dalmatia, Istria, and Göriz.

December 12.—The Federal Council of Churches of Christ in America has a cabled request from a Berlin University professor to petition the United States Government to soften the terms of the armistice.

Over \$60,000,000 of gold received from Russia by the Germans arrives in Paris under the armistice terms and is deposited in the Bank of France to the common account of the Allies.

The Brussels Chamber of Commerce adopts a resolution in favor of Belgian annexation of Zealand and the Maestricht enclave.

British advance guards enter the city of Bonn and take possession of the Rhine bridge. British troops hold all the great bridges across the Rhine at Cologne.

December 13.—President Wilson arrives at Brest and starts for Paris.

In a statement to Reuter's Premier Lloyd George wishes it made clear beyond all doubt that he stands "for the abolition of conscript armies in all lands."

General Pershing reports that the American Army marching into Germany has come to a stand on the Rhine from Rolandseck to Brey.

An Amsterdam message states that an American squadron has arrived at and taken command of Pola, the former Austrian naval base.

December 14.—President and Mrs. Wilson enter Paris attended by President Poincaré, Premier Clemenceau, and other eminent Frenchmen.

Replying to an address of welcome by President Poincaré at a luncheon tendered to himself and Mrs. Wilson, President Wilson says he will look upon the ruin wrought by the armies of the Central Empires with "the same repulsion and indignation that they stir" in the hearts of Frenchmen and Belgians, and appreciates the "necessity of such action in the final settlement of the issues of the war as will not only rebuke such acts of terror and spoliation, but make men everywhere aware that they can not be ventured upon without the certainty of just punishment."

Copenhagen has a dispatch from Treves stating that the armistice has been extended until 5 A.M. January 17, and the Allies have notified Germany that they reserve the right to occupy the neutral zone east of the Rhine from the Cologne bridgehead to the Dutch frontier.

At a special meeting of the Norwegian Parliament the Foreign Minister announces that the Government has asked the other Scandinavian countries to seek admission to the Peace Con-

Washington announces an agreement with the Allies to send a special civilian mission to investigate reports of atrocities committed in Poland.

Saloniki is informed that the village of Agathopulos, on the Black Sea, which is inhabited solely by Greeks, has been set on fire by Bulgarian troops.

December 15.—President Wilson attends church twice, lays a wreath on the tomb of Lafayette, and holds conferences with Premier Clemenceau and Colonel House.

A New York meeting of the League of Small and Subject Nationalities passes resolutions in support of civil and religious equality for all nations, which will be cabled to the President in Paris.

London reports the three great Rhine bridgeheads provided by the armistice occupied by advanced Allied forces—the British at Cologne, the Americans at Coblenz, and the French at Mayence.

December 16.—President Wilson is greeted by the President of the Municipal Council of Paris and the Prefect of the Seine and is presented with the gold medal of the city of Paris. In his address he insists that America shares France's indignation at the wrongs done by the Germans. Later he calls upon Premier Clemenceau and receives Premier Venizelos of Greece.

The American Jewish Congress in Philadelphia plans a delegation to present the political claims of the Jews at the Peace Conference.

The American Third Army, which now occupies more than 4,500 square miles in Germany, takes possession of the famous fortress of Ehrenbreitstein opposite Coblenz.

December 17.—President Wilson holds conferences with the Italian Ambassador to the United States and with Chairman Hurley, of the United States Shipping Board. In the evening he attends a dinner given to him and President Poincaré by the American Ambassador to France.

The Belgian Government announces that its delegates to the Peace Conference will be Paul Hymans, Emile Vandervelde, and Baron van den Heuvel.

The general syndicate of French hotel men announces that for ten years they will receive no native or now enemy countries as employee or guest.

The American Jewish Congress in Philadelphia adopts a resolution accepting on behalf of American Jewry the British Government's declaration for an independent Palestine to be developed into a Jewish commonwealth under British or Allied trusteeship.

THE CENTRAL POWERS

December 11.—The Hague reports Premier Beerenbrouck declaring in the lower chamber of Parliament that the ex-Kaiser is entitled to the right of sanctuary in Holland and his return to Germany can not be demanded.

A Copenhagen dispatch says the Prussian Guard entered Berlin December 10 and, favoring the Republic, refused to disarm.

The Cologne *Gazette* states that the directors of the Krupp munition-works have announced their intention to transform the plant into a factory devoted to the arts of peace.

Paris reports that legal action against the ex-Kaiser has been commenced by an organization of "Lille mothers."

ing that Holland would not be disinclined to a conference of foreign governments with regard to a new place of residence for the ex-Kaiser.

A cable from Budapest states that German-Austrian troops have crossed the Hungarian frontier and are looting.

An official dispatch to Washington says Marshal Foch has sent officers of the Allied armies to investigate the alleged pogroms in Poland.

December 13.—Amsterdam learns that the Ebert Government has designated January 1 as a day of general rejoicing in Berlin in honor of the revolution.

Seven frontier villages of the Grand Duchy of Baden have formally expressed their desire to become united to Switzerland, states a telegram from Bern.

A revolutionary Socialist tells the lower house of the Dutch Parliament, says a dispatch from The Hague, that Switzerland refused to admit the ex-Kaiser when he fled from Germany, and that Holland ought to have followed that example.

December 14.—A Munich mass-meeting calls for the immediate creation of a tribunal of workmen and soldiers, the resignation of Ebert and "other opponents," and the arrest of Scheide-mann, Ebert, and others connected with the "blood bath of Berlin."

Supporting the demand for quick summoning of the Reichstag, the *Berliner Tageblatt* declares "all measures must be taken to prevent Foch's armies from marching east of the Rhine."

December 15.—Dispatches from several European points state that there are 350,000 workmen on strike in Berlin, that only two small newspapers are being published, that two Socialist members of the German Government have resigned, and that the Spartacus group has drawn up a program for safeguarding the revolution.

A message from Vienna says the State Council of German Austria will send a note to all foreign governments demanding a plebiscite for the self-determination of the populations of Bohemia, Moravia, and Silesia.

December 16.—It is reported that the new Government of Poland has severed relations with Germany.

Delegates from Soldiers' and Workers' Councils of all Germany meet in Berlin to choose an executive committee and to vote on the date of the assembling of a national convention.

It is reported from The Hague that Count Wilhelm Hohenzollern has refused to accede to Holland's request that he voluntarily leave the country.

The resignation of W. S. Solf as German Secretary of Foreign Affairs is accepted.

Czecho-Slovak troops occupy the towns of Tetschen and Bodenbach, in German Bohemia, south of the German border.

The Central Congress of Delegates from Soldiers' and Workers' Councils opens in Berlin with the radical Spartacus group greatly outnumbered by Moderates. A resolution inviting Karl Liebknecht and Rosa Luxemburg to attend the Congress is defeated five to one.

The first elections to a German national assembly held by the former Duchy of Anhalt result in a victory for the Majority Socialists, who also gain control of the Anhalt national legislature.

In the election in Mecklenburg sixteen Liberals are chosen out of twenty-two delegates.

MUSTERED OUT

CALMLY and quietly, as a private enters the ranks, The Dayton Engineering Laboratories Company enlisted with thousands of other manufacturers to assist in winning the war.

Victory has been gloriously achieved and Delco, its duty done, is now mustered out of the service.

We do not desire to boast of Delco's part in the great struggle.

We have no wish to refer, in self-exaltation, to the sacrifices Delco has made.

To speak in such a manner, while thousands of our youth lie dead in Flanders, would be an egotistical sacrilege.

What Delco has done, what any manufacturer may have done, is small indeed when compared to the supreme sacrifice made even by a single soldier.

It is enough to say—loyally, and gratefully Delco has done what it could.

Honorably discharged, Delco once more takes its place in the ranks of American business.

And Delco is well prepared to take up its position as the foremost maker of electrical equipment for high-grade automobiles—equipment that represents the present-day maximum in quality, ability and certainty of performance.

The Dayton Engineering Laboratories Company
Dayton, Ohio, U. S. A.

Delco

The Master ^{ELECTRICAL} Primer is Guaranteed to Start Your Car Within Five Seconds in the Bitterest Zero Winter Weather

You eliminate trouble and annoyance when you equip your car with a Master Primer.

Wherever the Master Primer is installed, you have a button on the dash operates it.

Any owner of a garage can install a Master Primer in a short time. It starts immediately on the motor.

INSTANT motor starting—even on coldest days! That's what we guarantee the Master Primer will do for your car. Use any kind of gasoline in any kind of weather! Try it for 30 days at our expense. **IF IT DOESN'T ABSOLUTELY SATISFY**—if it doesn't eliminate delays—heating the carburetor with hot water—back-breaking cranking—**WE'LL GLADLY RETURN YOUR MONEY.** You won't be out a penny. Simply clip the coupon below and send it on.

30,000 in Use

on every kind of car. The Master Primer has never failed to deliver complete satisfaction yet—on any car. It has the O. K. of The Detroit Testing Laboratory—recognized as the nation's leading motor equipment test laboratory. Their tests prove that the Master Primer, in cold winter weather, will start a motor in from one to five seconds, **EVEN WITH LOWEST GRADES OF GASOLINE.** The Franklin, one of the most scientifically engineered cars in America, carries the Master Primer as standard equipment.

Cost is Trifling

\$12.50 and the coupon below brings the Master Primer to you, all ready for your car. Simply enclose check or money order, —and in a few days you will be experiencing the ease and convenience of Master Primer instant starting.

What the Master Primer Does

The Master Primer is an electrically heated vaporizer and it acts as an auxiliary carburetor. It takes the gasoline direct from the carburetor, vaporizes it by heat, and turns it into the manifold—a rich, hot gas that ignites on the first spark—**NO MATTER HOW POOR THE GASOLINE.** It eliminates necessity for auxiliary tanks of high test gasoline. **IT IS NOT A GASOLINE PUMP—it does away with pumping required by other primitive priming devices. It is trouble proof—it positively cannot drain the battery or interfere with the proper functioning of the carburetor.** It saves battery energy by preventing waste of electric current in starting, and will save its cost in repair bills, in a short time.

Operated By Button On Dash

The Master Primer in motoring convenience equals the self-starter. Kills starting worries. It removes the last obstacle to comfortable winter driving. *It is operated by a button on the dash.*

As Necessary As Self-Starter

—to comfortable winter driving. No matter what kind of primer or choker device your car may now carry, you need the Master Primer this winter. And there is no reason why you should be without one. All you need to obtain a Master Primer for a 30-day trial is to clip the coupon and mail, with the assurance that you will get your money back the moment that you are dissatisfied with it. Remember—thousands of Master Primers are being demanded this winter. *Make sure of receiving yours immediately. Send coupon at once.*

This Coupon Means Winter Driving Comfort—Clip It—NOW

Remember—30 Days Trial—Absolute Guarantee—Money Back if Not Satisfied

Master Primer Company, Detroit, Mich.

Gentlemen: Please send me a Master Primer, for which find enclosed \$12.50. If the Master Primer does not give absolute satisfaction, you are to refund the purchase price at any time within thirty days of purchase.

Archduke Maximilian of Austria as successor to his brother, former Emperor Charles.

It is reported from Bern that the Polish General Staff has called for the mobilization of the classes from 1883 to 1901, an army of 1,500,000 men.

RUSSIAN AFFAIRS

December 11.—The Associated Press hears that the formation of a new Russian Government, to be headed by former Premier Trepoff, is contemplated in Stockholm to carry on matters of state while awaiting the fall of the Bolsheviks.

Archangel reports that the Bolshevik forces were repulsed with considerable losses in the sector between the Dyvina and the railroad near Naresevo. In a counter-advance the Anglo-Russian troops took considerable booty.

London receives a wireless message stating that Grand Duke Nicholas, former commander-in-chief of the Russian Army, is now in command of a force of Cossacks in southern Russia.

December 12.—Stockholm learns that Russian ships have bombarded the coast from Narva to Asserein, but attempts of the Bolsheviks to land on the Estonian shore were frustrated.

Senator Johnson introduced a resolution calling upon the State and War Departments for full information regarding the United States policy in Russia, the number of American troops there, and casualties among them.

Advices reaching Washington through official channels state that executions are still numerous in Russia, the victims including many priests and monks. Conditions in Petrograd are "beyond human power to grasp."

December 13.—Washington announces that it is the purpose of the Allied governments to send troops to the western provinces of Russia to take the place of evacuating German troops.

London receives an official dispatch describing the situation in Estonia as desperate. The Bolshevik Government has declared the Estonian Government outlawed, and the latter is appealing to the Entente Allies for a supply of arms and ammunition.

Paris reports French marines entering Odessa, occupying the wireless station, and expelling all German soldiers from all military posts.

At the opening of the anti-Bolshevik convention of the Federation of Russian Organizations in New York City a resolution is adopted affirming fealty to the United States and the cause of democracy.

December 14.—Dispatches from Bern state that Bolshevik troops are marching toward Central Europe on a front of nearly 400 miles from the Gulf of Finland to the Dnieper River and are being joined by German soldiers, who are destroying everything in their path.

December 15.—Stockholm hears that Lenin favors abandonment of Bolshevik rule, but is opposed by his colleagues, who wish to hold out to the last.

December 16.—It is reported from Amsterdam and Basel that on the 14th the hetman of the Ukraine abdicated and the Government was taken over by a "Directory."

An English squadron in the Gulf of Finland has bombarded Bolshevik forces on the coast of Estonia.

loss of more than a thousand prisoners by Don Cossacks near Voronezh.

FOREIGN

December 11.—The State Department at Washington announces that all South-American countries have been asked by the United States to join in its suggestion to Chile and Peru that the interests of Pan-American unity demand an amicable settlement of their controversy over the provinces of Tacna and Arica.

The Brussels College of Aldermen decides that hereafter all contracts for commercial enterprises will contain a clause prohibiting the use of German materials.

December 12.—A Panama dispatch says negotiations have been begun by the United States for the purchase of property rights on the Island of Taboga, at the Pacific entrance of the Panama Canal.

Montreal reports a strike of policemen and firemen.

The Royal Ulster Yacht Club sends a cable challenge to the New York Yacht Club for the America's Cup on behalf of Sir Thomas Lipton.

December 13.—The Montreal strike is settled by the men returning to work after \$300,000 damage has been done and many persons, including several city officials, had been injured by rioters and looters.

December 14.—The Constantinople correspondent of the New York Tribune wires that the former Finance Minister informs him that Turkey's national debt, including the cost of all material received from Germany, is \$1,750,000,000.

December 15.—Dr. Sidonio Paes, President of Portugal, is shot and killed by an assassin while in a railway station at Lisbon awaiting a train to Oporto. His assailant is killed by the crowd.

December 16.—Former Premier Bratiano has been requested by the King of Roumania to head a coalition ministry.

Upon request of the Chinese Government, the Dutch Government recalls Minister Beelarts from Peking.

Lieut.-Gen. Jan C. Smuts resigns from the British War Cabinet.

Admiral Canto y Castro is elected President of Portugal.

DOMESTIC

December 11.—The War Department announces the abandonment of nineteen war-construction projects, including a number of nitrate and other chemical plants.

The New Jersey State Manufacturers' Council decides to form a permanent industrial commission for the betterment of economic conditions.

Secretary Daniels states that there are at present close to 524,000 men in the Navy, leaving a surplus of 174,000 to be released by July 1.

Resolutions demanding the termination of government operation of railroad, express, telegraph, telephone, and cable companies and their return to former owners are unanimously adopted by the New York Board of Trade and Transportation.

The War Industries Board announces that government steel prices will be suspended on January 1.

In his annual report Secretary of the Interior Lane proposes to have soldiers help to reclaim the nation's idle acres and suggests a vigorous national campaign to reduce illiteracy among

Director-General McAdoo recommends Congress to extend the period of government control of railroads for five years, ending January 1, 1924.

Mayor Hylan, of New York, issues warrants for five officials of the Brooklyn Rapid Transit Company on a charge of manslaughter arising out of the elevated-train wreck on November 1 that cost ninety-seven lives.

The Postmaster-General announces that aerial mail service between New York, Cleveland, and Chicago will be inaugurated December 18.

December crop estimates of the Department of Agriculture shows a total value of \$12,272,412,000 this year, an excess of \$614,380,000 over the former record year. The total acreage was 365,895,722, being 10,700,000 acres more than last year. The cotton crop is estimated at 11,700,000 bales. Last year 11,302,375 bales were produced.

December 12.—Railroad executives representing 125 roads and 92 per cent. of the mileage of the country issue a formal statement in Philadelphia opposing Director-General McAdoo's proposal to continue government control of the railroads until January, 1924.

Washington announces the invention and development of a practical system of multiplex telephony and telegraphy which will revolutionize wire service.

Secretary Daniels and officers of the Navy appear before the House Committee on Merchant Marine in advocacy of a bill empowering the Government to take over all privately owned wireless systems in the country.

An additional United States Government credit of \$3,200,000 is extended to Belgium, making her total loans from the United States \$213,320,000, and the aggregate for all the Allies \$8,223,540,702.

One month before the armistice, states the annual report of the Chief of the Bureau of Steam Engineering, the American Navy was operating 1,950 vessels of all descriptions, of which 264, carrying 42,000 men, were actively participating in the war in European waters.

December 13.—Capt. George B. Lester, of the Military Intelligence Bureau, testifies of the alleged connection of William Randolph Hearst, William Bayard Hale, and others with German propaganda in this country.

Two gunmen enter the East Brooklyn Savings Bank in the afternoon, kill the paying-teller and assistant treasurer, and escape with \$13,112.

Postmaster-General Burleson ousts Clarence H. Mackay and two other officials from any connection with the operation or control of the consolidated cables of the Commercial and Western Union companies, and appoints Newcomb Carlton, president of the Western Union, director of the combined lines.

The War-Trade Board announces almost unlimited export of commodities to the United Kingdom, France, Italy, and Japan and their colonies effective December 16.

Surgeon-General Ireland tells the Senate Military Committee that of 2,500 shell-shocked patients, all except about 300 were cured almost immediately by news of the signing of the armistice, being "the greatest experience in psychotherapeutics known."

A convention of representatives of metal industries at Atlantic City declares in favor of a protective tariff and the subsidizing of an American merchant marine, and protests against the Administration policy of post-war taxation.

Copyright 1918, Rex Manufacturing Co.

There's a Rex Top for Your Car

If You Own a Dodge Brothers, Buick, Oakland, Paige, Nash, Reo, or Lexington

And what is vitally important, it will fit your car like the proverbial glove. For there is a Rex All-Seasons Top that is specially designed and built for the make and model of automobile you now own, thus assuring mechanical and artistic co-ordination with the body.

After the Rex All-Seasons Top is installed on your touring car or roadster, there's every season comfort and protection for you and the members of your family.

The discomforts and handicaps of winter motoring vanish. Your car is at your service when you want it most of all—on the day when the weather is most inclement.

The Rex All-Seasons Top provides shelter against the cold and snow of winter, the chill and rain of autumn and spring, and the dust and showers of summer.

The Rex All-Seasons Top is economical as well as practical. Its installation changes the touring car or roadster into a sedan or coupé at a saving of \$300 or more over the cost of a closed body of the solid type.

And the sturdy but light-weight Rex All-Seasons Top, with permanent deck and glass side panels that may be entirely removed in fair weather, is just as sparing of gasoline, oil and tires as the cape-topped

car, and equally as active. The thousands of Rex-topped cars, factory-equipped and now in service, testify most eloquently to the truth of such a broad assertion.

The Rex All-Seasons Top is now available for immediate installation on the following makes: Dodge Brothers, Buick, Oakland, Paige, Nash, Reo, Lexington and others.

The distributor or dealer, from whom you bought your car, can supply you.

Rex Manufacturing Company
Connersville, Indiana

SPRING
Rain protection — jiffy curtains in place.

SUMMER
Complete ventilation — all panels removed.

Rex
ALL-SEASONS TOP

MANUFACTURED AND LICENSED
UNDER PATENTS THAT ARE BASIC

AUTUMN
Tonneau protection, forward panels removed.

WINTER
Weather-tight — all panels in place.

ALEXANDER LEATHER BELTING

THE BELT OF POWER

POWER properly put-to-work will make a watch or move a mountain. For more than half a century the words Alexander Leather Belting have been synonymous with power transmission.

ALEXANDER BROTHERS, Philadelphia
New York Chicago Boston Atlanta

Distributors of Alexander Leather Belting. Sole Leather, Harness and Strapping Leather and Leather Specialties in all principal cities of the United States and Europe

is introduced by Chairman Moon, of the House Post-Office Committee.

December 14.—A minority report of the Senate Committee on Privileges and Elections urges further action in the case of Senator LaFollette, of Wisconsin, looking toward his exoneration, censure, or expulsion.

General March announces that approximately half of the 1,700,000 men in the home camps on November 11 are specifically designated for early discharge.

A nation-wide campaign for the equalization of educational opportunity throughout the country is begun by the National Security League.

Captain Lester gives more information gathered by the Military Intelligence Bureau of the activities of W. R. Hearst and Dr. Hale to the Senate investigation committee, which is exploring German propaganda.

December 15.—The second annual report of the United States Shipping Board shows that from the time of its organization up to August 31, of this year, the Emergency Fleet Corporation had negotiated 495 contracts, aggregating 2,298 vessels, with a total of 14,119,130 dead-weight tons, involving an estimated cost of \$2,319,216,204.

Postmaster-General Burleson announces sweeping reductions in long-distance and toll telephone-rates to become effective January 21.

A statement issued by the War Council of the Red Cross shows that ninety-eight cents of every dollar of the money given to the organization is spent in actual relief work, only two per cent. being used to meet administrative expenses in the United States.

December 16.—Colorado's "bone-dry" law is signed by the Governor to go into effect at midnight.

Postmaster-General Burleson sends to the House Committee on Post-Offices and Post Roads a letter asserting the necessity of government ownership of telegraph- and telephone-lines, and saying that this can be paid for entirely through the savings which will be brought about by such ownership within the next twenty-five years.

Carter Glass takes the oath of office as Secretary of the Treasury.

The Department of Agriculture forecasts a winter wheat crop of 765,000,000 bushels, 80,000,000 bushels larger than any previous yield.

December 17.—The Ordnance Bureau of the War Department announces that it was making 500 guns of all calibers per month at the close of the war.

The President and Vice-President of the Marconi Wireless Telegraph and Cable Company testify at Washington their opposition to government ownership of wireless systems.

Walker D. Hines, Assistant Director-General of Railroads at former Chairman of the Santa Fé, issues a statement to the effect that the railroads should either be turned back to their owners at once or should be held for five years as suggested by Mr. McAdoo.

Four Army aviators are killed in an airplane collision at Geneseo, New York.

In accordance with a pre-election agreement, United States Senator Mulkey, of Oregon, resigns his seat in the Senate and is succeeded by Senator McNary, who was elected in November for the six-year term beginning next March.

The first great industrial combination completed under the provisions of the Webb Act to stabilize foreign trade is launched at New York by combining fifteen great copper companies, practically all the producers of the country, to form the Copper Export Association, a selling corporation.

Champion

Dependable Spark Plugs

For FORDSON TRACTORS
Champion Fordson Tractor
Plugs. Price \$1.00

For Fordson Tractors and Ford Cars

READE the advice contained in the Ford Motor Company's instruction book placed in every Ford car:

"There is nothing to be gained by experimenting with different makes of plugs. The make of plugs with which Ford Engines are equipped when they leave the factory are best adapted to the requirements of the motor."

Consider that Champion "X" is regular factory equipment on Ford cars, and has been continuously since 1911—

Consider that the Champion Fordson tractor plug is also regular factory equipment in Fordson tractors and that Fordson builders recommend *this* plug to Fordson owners—

Could there be stronger proof to guide you in the choice of spark plugs to handle and recommend to owners of Ford cars and Fordson tractors?

How much more does this make a truck worth?

THE truck owner loses \$10, \$20 or more
—every time magneto-trouble stalls
his motor.

Sometimes he is to blame for letting first-cost guide him in his selection of a truck.

For—by adopting a magneto cheaper than the Berling, a manufacturer can make his product seem to cost a little less—the maker has to pay from \$10 to \$50 extra for the Berling.

But how about the man who buys that truck?—won't it cost him much more than the extra cost of the Berling Magneto—if he has to put up with a less reliable magneto?

ERICSSON MFG. CO., BUFFALO, N. Y.

THE Berling Magneto's supremacy is due to years of strenuous tests by engineering departments.

The results of these tests form the sole reason why the Berling has been adopted by leaders in every branch of the automotive field.

Leaders do not buy magnetos on the basis of first-cost.

Berling Magneto

WORTH MORE DOES MORE

EXPERT MEDICAL ADVICE ON INFLUENZA

(Continued from page 22)

approved by government experts. Says General Blue:

"It is very important that every person who becomes sick with influenza should go home at once and go to bed. This will help keep away dangerous complications and will, at the same time, keep the patient from scattering the disease far and wide. It is highly desirable that no one be allowed to sleep in the same room with the patient. In fact, no one but the nurse should be allowed in the room.

"If there are cough and sputum or running of the eyes and nose, care should be taken that all such discharges are collected on bits of gauze or rag or paper napkins and burned. If the patient complains of fever and headache, he should be given water to drink, a cold compress to the forehead, and a light sponge. Only such medicine should be given as is prescribed by the doctor. It is foolish to ask the druggist to prescribe and may be dangerous to take the so-called 'safe, sure, and harmless' remedies advertised by patent-medicine manufacturers.

"If the patient is so situated that he can be attended only by some one who must also look after others in the family, it is advisable that such attendant wear a wrapper, apron, or gown over the ordinary house clothes while in the sick-room, and slip this off when leaving to look after the others.

"Nurses and attendants will do well to guard against breathing in dangerous disease germs by wearing a simple fold of gauze or mask while near the patient. . . .

"In guarding against disease of all kinds, it is important that the body be kept strong and able to fight off disease germs. This can be done by having a proper proportion of work, play, and rest, by keeping the body well clothed, and by eating sufficient, wholesome, and properly selected food. In connection with diet, it is well to remember that milk is one of the best all-around foods obtainable for adults as well as children. So far as a disease like influenza is concerned health authorities everywhere recognize the very close relation between its spread and overcrowded homes. While it is not always possible, especially in times like the present, to avoid such overcrowding, people should consider the health danger and make every effort to reduce the home overcrowding to a minimum. The value of fresh air through open windows can not be overemphasized.

"Where crowding is unavoidable, as in street-cars, care should be taken to keep the face so turned as not to inhale directly the air breathed out by another person.

"It is especially important to beware of the person who coughs or sneezes without covering his mouth and nose. It also follows that one should keep out of crowds and stuffy places as much as possible, keep homes, offices, and workshops well aired, spend some time out of doors each day, walk to work if at all practicable—in short, make an effort to breathe as much fresh air as possible."

A statement issued by the British Royal College of Physicians, and published in the *London Times Weekly* (November 15), declares that "this outbreak is essentially identical, both in itself and in its complications, including pneumonia, with that of 1890," and "has no relation to plague, as

some have suggested." The following timely advice is given to the public:

"Well-ventilated, airy rooms promote well-being, and to that extent, at any rate, are inimical to infection; drafts are due to unskilful ventilation, and are harmful; chilling of the body surface should be prevented by wearing warm clothing out of doors. Good, nourishing food, and enough of it, is desirable; there is no virtue in more than this. Alcoholic excess invites disaster; within the limits of moderation each person will be wise to maintain unaltered whatever habit experience has proved to be most agreeable to his own health. The throat should be gargled every four to six hours, if possible, or, at least, morning and evening, with a disinfectant gargle, of which one of the most potent is a solution of twenty drops of liquor soda chlorinate in a tumbler of warm water. A solution of common table salt, one teaspoonful to the pint of warm water, is suitable for the nasal passage; pour a little into the hollowed palm of the hand and snuff up the nostrils two or three times a day.

"Since we are uncertain of the primary cause of influenza, no form of inoculation can be guaranteed to protect against the disease itself. From what we know as to the lack of enduring protection after an attack, it might in any case be assumed that no vaccine could protect for more than a short period. But the chief dangers of influenza lie in its complications, and it is probable that much may be done to mitigate the severity of the affection and to diminish its mortality by raising the resistance of the body against the chief secondary infecting agents. No vaccines should be administered except under competent medical advice. No drug has as yet been proved to have any specific influence as a preventive of influenza. At the first feeling of illness or rise of temperature the patient should go to bed at once and summon his medical attendant. Relapses and complications are much less likely to occur if the patient goes to bed at once and remains there till all fever has gone for two or three days; much harm may be done by getting about too early. Chill and overexertion during convalescence are fruitful of evil consequences. The virus of influenza is very easily destroyed, and extensive measures of disinfection are not called for. Expectoration should be received, when possible, in a glazed receptacle in which is a solution of chlorid of lime. Discarded handkerchiefs should be immediately placed in disinfectant, or, if of paper, burned.

"The liability of the immediate attendants to infection may be materially diminished by avoiding inhalation of the patient's breath, and particularly when he is coughing, sneezing, or talking. A handkerchief should be held before the mouth, and the head turned aside during coughing or sneezing. The risk of conveyance of infection by the fingers must be constantly remembered, and the hands should be washed at once after contact with the patient or with mucus from the nose or throat. Each case must be treated, as occasion demands, under the direction of the medical attendant. No drug has as yet been proved to have any specific curative effect on influenza, tho many are useful in guiding its course and mitigating its symptoms. In the uncertainty of our present knowledge considerable hesitation must be felt in advising vaccine treatment as a curative measure.

"A period of enfeeblement following an attack of influenza should never be disregarded, as it is apt to mask the presence of other morbid conditions."

"Here's an Extra \$50!"

"—I'm making *real* money now! Yes, I've been keeping it a secret until pay day came. I've been promoted with an increase of \$50 a month. And the first extra money is yours. Just a little reward for urging me to study at home. The boss says my spare time training has made me a valuable man to the firm and there's more money coming soon. We're starting up easy street, Grace, thanks to you and the I. C. S."

Today more than ever before, money is what counts. You can't get along on what you have been making. Somehow, you've simply got to increase your earnings.

Fortunately for you there is an unfailing way to do it. Train yourself for bigger work, learn to do some one thing well and employers will be glad to pay you real money for your special knowledge.

You can get the training that will prepare you for the position you want in the work you like best, whatever it may be. You can get it at home, in spare time, through the International Correspondence Schools.

It is the business of the I. C. S. to prepare men for better positions at better pay. They have been doing it for 27 years. They have helped two million other men and women. They are training over 100,000 now. And they are ready and anxious to help you.

Here is all we ask—without cost, without obligating yourself in any way, simply mark and mail this coupon.

INTERNATIONAL CORRESPONDENCE SCHOOLS BOX 48778 SCRANTON, PA.

Explain, without obligating me, how I can qualify for the position, or in the subject, before which I mark X.

INVESTMENTS - AND - FINANCE

OUR WAR-DEBT AND OUR ABILITY TO PAY IT

IT is contended by a writer in the New York Times *Analyst* that "historic precedents justify the hope that reduced operating expenses will create a sufficient tax-accumulation to retire our bonds as they fall due." First, he recalls what our condition was before the war, when we were "a modest nation" compared with what we are now, our national debt "less than that of our largest city." Our net debt during the war, however, has grown to \$17,000,000,000, but it is a debt that we "owe to ourselves," and a further comforting fact is that "nearly every civilized country has due to us balances that will take a generation to settle." Citing a maxim of finance, that "the measure of power lies in unlimited credit," he notes that our situation now as to debt, "instead of being a cause for alarm, is rather an indication of the new place the United States has taken among nations." He proceeds:

"Let us first analyze our national debt and then try to gather the full meaning of the words Banker for the World. In round figures, the war has cost us 22½ billions, of which 8 billions have been loaned to our Allies and 14½ billions spent by the United States. Bear in mind, however, that nearly all of the cost has gone across the counter of American producers. Nearly 28 billions have been raised by bonds or certificates, of which more than 10 billions in short-time paper have been redeemed and been paid. The net amount raised by loans has, therefore, been about 18 billions, while taxes and custom revenues produced something more than 5½ billions.

"Money owed by a Government to its own people is a source of strength. Liberty Loans have made 20,000,000 people more nearly partners in the success of the American enterprise than the franchise had accomplished since we separated from England. Money owed to a government by the nations of the world, with whom it is in active commercial competition, is another line of fortifications in defense of the frontier. Let us, then, consider our debts and our debtors, and how we both propose to pay. Our long-time loans may be scheduled as follows:

First Loan	\$2,000,000,000
Second Loan	3,808,706,000
Third Loan	4,170,819,450
Fourth Loan	6,289,947,000

\$16,967,832,450

"The totals of each of the above loans have changed substantially since allotment, through conversions with a correspondingly increasing charge on the service. However, the gross amount is substantially unchanged. Of the old loans the Treasury statement of March 31 showed the following totals:

Consol. 2's of 1930	\$599,724,000
4's of 1925	118,489,000
Panama Canal 2's, 1906	48,954,140
Panama Canal 2's, 1908	25,947,490
Panama Canal 3's, 1911	50,000,000
Conversion 2's, 1945-7	28,894,500
Postal Savings 2½'s, 1911-7	10,728,300
Postal Savings 2½'s, 1918	202,100,000

\$1,184,986,390

"The short-term loans in the shape of certificates of indebtedness and War-Savings Stamps at the present writing are as follows:

4½% certificates, Series E	\$625,493,000
4½% certificates, Series 4F	625,216,500
4½% certificates, Series 4G	614,069,000

\$1,875,778,500

"In addition to the above a series of

certificates of indebtedness, designated as TA, bearing interest at four per cent. and maturing July 15, 1919, was issued to a small amount in anticipation of next year's income taxes. The sale proved to be slow, and further issuance was discontinued and a new issue for the same purpose and of a similar maturity bearing interest at 4½ per cent. was substituted. The sale of these securities through the agency of the Federal Reserve Banks is in the nature of a continuous operation, and no totals so far have been announced.

"The sale of War-Savings Stamps and certificates has increased the national debt by \$1,257,000,000, or within 400 million of the maximum under the first authorization. A second series, however, amounting to two billion dollars, has been authorized, so that the operation will probably continue into the coming year. The Treasury for the fiscal year 1917-1918 estimated receipts of \$661,200,000 from this source and about a billion for 1918-1919. The first estimate was out of line, owing to the difficulty in getting the plan into smooth operation. Subsequent results have, however, justified the average of expectations.

"The prewar debt, in the light of recent figures, is almost negligible, and the outstanding certificates in anticipation of taxes and the Fourth Liberty Loan will be redeemed in due course by the flow of funds owing to the Government in taxes and subscription payments. The problem of how to deal with the eighteen-billion-dollar war-debt is the vital question. How much of this sum represents a charge on the coming generation and how much an invaluable national asset? We have loaned abroad the following items:

Great Britain	\$3,745,000,000
France	2,445,000,000
Italy	1,190,000,000
Japan	325,000,000
Belgium	183,530,000
Greece	18,790,000
Cuba	15,000,000
Romania	12,000,000
Roumania	6,000,000
Libya	5,000,000
Czechoslovak Republic	7,000,000

\$7,919,870,000

"Here, then, are figures totaling nearly half of our war-debts that are not only self-supporting but also a double-edged weapon in the international market. In the first place, they represent money spent at home on American goods, from which the American manufacturer has taken his toll of profit; and in the second place, they have put the world in our debt to an extent that will be difficult to pay in the normal manner of exchange of goods.

"Imports of foreign commodities or even gold will take a decade to halve the debt, for the gold can not be spared, nor do we wish it, and our creditors will find it difficult to increase their exports to a point capable of bringing about a balance in their favor. The imports from Europe are bound to be offset by our own exports, some able economists predicting a balance of a billion dollars in our favor for the next five years. Regardless of the demands to be made upon us from this source, it is probable that the peak-load of expenditure has been reached and the period of readjustment and redemption set in.

"Charging off, then, our loans to the Allies as an asset, let us then consider how we may best meet the bill due the American people. Vague discussions of the creation of a huge sinking-fund have been heard, altho, for some reason or other, in history these operations have not been entirely successful. Fortunately the bulk of our debt has an early callable date, and the Treasury has recently come in for much applause by advocating no more loans unless they be in the nature of a one to five-year currency. Experience teaches that

There Are Hard Days Ahead For the Wasteful Motor Car

TODAY when you are considering a motor car, you have something more definite in mind than a year ago, because your standard is bound to be different than it was then. You are buying a car to ride in—as much as you require—but you are naturally more exacting as to costs, comfort, and staying qualities of the car.

Everybody recognizes the fact that the performance of motor cars in general is unchanged. And the live question now is which car will give you a *full measure* of usefulness—and still stick to the new standard of *keeping down waste*.

Cars that insisted upon bulky, wasteful, rigid weight before the war now find themselves out of line with the trend of public thought and unable to change for months to come on account of the material situation. And with the people frowning upon waste, there will be hard days ahead for the wasteful motor car.

It's all summed up in the old question of unnecessary motor car weight and rigid construction. Unnecessary weight means unnecessary expense to move it—more fuel; and, combined with rigidity, it gives tires no chance to wear out—they are pounded out long before they should be.

The Franklin Car, on the other hand, anticipated these requirements sixteen years ago. It has always been built on the principle of utility, cutting out all excessive weight at the outset, and relying on flexibility instead of rigidity, and now, without change, it meets your need and desire for a car to use—a car to ride in with the utmost safety, comfort, reliability at the least expense.

The fineness of the product is best indicated by the facts of Franklin performance in the hands of owners under all conditions.

FRANKLIN AUTOMOBILE COMPANY SYRACUSE, N. Y.

Get the habit of doing things right. This will mean greater production; less waste; increased earnings. Work for good times all the time.—W. B. Wilson, U. S. Secretary of Labor.

The Trustee and the Individual Investor

The steady growth of our trust fund business is significant. It shows that trustees are beginning to recognize very generally that they command from us advice of value.

The individual investor, such a service is of equal importance. He rarely has the time or facilities for thoroughly investigating the investment situation, and it is the part of wisdom for him to seek the best advice available.

We shall be pleased to have you consult us about current offerings of Bonds and Short Term Notes will be sent upon request for circular D-96.

Handsomely illustrated book, just issued, explains why Omaha is twelfth in bank clearings, although 34th in population. Prepare for after the war business now by investigating this rich agricultural territory which will not be adversely affected by the reconstruction period.
BUREAU OF PUBLICITY
Dept. 17 Chamber of Commerce, Omaha

the full benefit and effect of war-taxes are rarely felt until after the war. England, after the Napoleonic wars, came back with a rapidity that astonished the Exchequer itself. Taxes rolled up in such a volume and expenses dropt with demobilization to such an extent that the Government found itself anticipating the callable date in national debts by market purchases, and even then it was found convenient gradually to reduce the scale of taxation.

"Our experience after the Civil War was very similar to England's, and the Treasury's surplus annually accumulated to a point that forced the Government to buy back at high premiums the bonds it was not privileged to call. This was true, tho to a lesser degree, with the Spanish war-loan.

"It seems as tho the two operations of liquidating our own debts and the debt of Europe to the United States dovetailed perfectly into one gradual and stupendous task. While Europe is paying her indebtedness to us without interfering with the development of international trade by the sale of foreign securities in our home market our buyers here must receive the tools to operate with through the redemption and repurchase of their Liberty Bonds. In this half of the deal safety, as usual, lies in the middle course. It is hoped that taxes will be maintained at a level that will infallibly provide funds for first redemptions with a sufficient surplus to get a flying start by purchase around the present low levels."

OUR SAVING STILL AS NECESSARY AS IN WAR-TIME

That there is still the same great need of saving in this country as before the armistice was signed, the reason being that reconstruction will require the use of all our resources, was contended by the Federal Reserve Board in a statement recently prepared for circulation throughout the country. The Board is confident that the present "is no time for relaxation, either of our financial precautions or measures which must be regarded as vitally necessary to insure the conservation of our banking and credit resources." As the armistice foreshadowed the end of "the most remarkable era in American finance," so it marked the opening up of another "which will be replete with new and momentous problems." For a long time to come the liquid capital of the country "will be inadequate to meet the needs of the world." Some process of husbanding it must, therefore, be applied. The statement continues:

"Immediately the problem will be that of preventing credit from expanding too far, and, so far as practicable, of reducing any excess that already exists. The economic history of the period immediately succeeding wars of the past has shown that in practically every instance there has been a tendency toward the use of bank funds for the purpose of promoting the development of industries and enterprises involving a considerable investment of capital.

"The Federal Reserve banks are the one unexhausted reservoir of banking credit in the world. To them is assigned the function of maintaining the liquid character of the assets held against the demand obligations of the banks, and, by regulation of discount rates, to regulate, as conditions permit, the uses and limits of credit. This function, almost of necessity, has been temporarily suspended during the war, but, with the return of peace, a resumption of the duties of the reserve system as a regulator of credit again presents itself. Reduction of loans on war-paper is a problem to be faced at once by the banks, for the transition period will, it is stated, unquestionably involve new and large needs for credit and capital. Present conditions in the

world are quite different from those which existed after previous wars, because all the leading countries are involved. To-day banking and credit inflation is general, while there has been far-reaching alteration in the distribution of gold. A gradual redistribution of the gold-supply is, therefore, to be looked for as one of the features of the financial future.

"Coincident with the reduction of domestic war-loans there may probably be expected to develop a direct demand upon our banking resources for accommodation designed to facilitate the movement of goods to other countries. Such accommodation has been extended in large measure ever since the opening of the European War—first, through the extension of loans to belligerent countries, privately placed with bankers in the United States, and, later, when the United States itself became a belligerent, through the issue of government bonds, whose proceeds were advanced to foreign countries and were then used by them in payment for supplies purchased in the United States. It may be possible, as has already been intimated, that additional credits may from time to time have to be opened in favor of the Allied nations, but from this time forward the bulk of our foreign financing will necessarily return to a peace basis, and the services of our banks will lie in supplying the means for financing the movement of consumable goods to the foreign countries by which they are most needed.

"One effect of the war has been to produce shortages of materials of production in many different directions, a fact which implies that the reserve stock of such articles, always relatively small, as compared with total consumption, has been allowed to become exhausted. To meet all current demands, and thus to reestablish such reserve stocks, will be a task calling for the increase of production in many lines, particularly as the current requirements of the European nations for material to be used in reconstruction systems will constitute an abnormal addition to current needs. It must be expected, therefore, that the demands of the nation and of the world for capital and for goods will continue to be more or less active for a good while to come. The fear of depression of trade export in many quarters need not be entertained with respect to trade as a whole; depression may be expected only in those lines in which demand has been suddenly suspended or curtailed in the process of readjusting consumption and production."

In conclusion, the Board insists that this demand for capital "must be met from the ordinary sources of saving and accumulation and not through the creation of banking credit." Merely to rely upon bank loans as the source from which to draw the means for supporting industrial operations "would raise the question whether, instead of resorting to intensive saving, accompanied by reduction of prices, we had resolved to fall back upon inflation of bank liabilities and of the currency."

FEWEST FAILURES IN TWENTY-SIX YEARS

General trade in November after being active during the first week of the month was rather quiet in the last two-thirds, or since the armistice was signed, and yet *Bradstreet's* finds that "business failures reflected few signs of this." In fact, the later weeks of November saw "a largely reduced number of casualties," the net result being "a strikingly small total of failures and a reduction in liabilities." One of the causes for quiet in November the writer believes to have been the fact that traders were "making up their minds what the

Starts Motors Instantly In Cold Weather

Cold weather has no terrors for the motorist whose car is equipped with an Imperial Primer. One stroke of the Plunger, within easy reach on the dashboard, sprays vaporized, fireable mist of gasoline into the manifold and enables you to start instantly.

An Imperial Primer on your automobile prevents the usual winter-time drain on batteries and self-starters, a feature which alone is worth many times the price asked.

Imperial Primer

*For All Makes of Cars
Tractors and Trucks*

Imperial Primer Outfit with Gas Line Tee, \$5.50

consists of Primer Pump, Gas Line Tee, Manifold Spray Fittings and Tubing, readily installed on any make of car, including Fords. When ordering this Outfit, always specify outside diameter of main gasoline line tubing.

Imperial Primer Outfit with Auxiliary Tank, \$6.00

is similar to the Gas Line Tee Outfit, except that it has an auxiliary tank which holds 1½ pints of gasoline, instead of the Gas Line Tee. All connections made with the well-known Imperial Compression Couplings.

You should be able to purchase an Imperial Primer from your dealer. If not, write us, and we will see that you are supplied promptly.

Other Imperial Products

We will be pleased to mail you free, detailed information regarding method of operation, economies effected, etc. Many views illustrate various uses of Imperial Equipment.

Oxygen and Acetylene Gases Now Available

Now that the restrictions have been removed on oxygen and acetylene gases, Imperial Welding and Cutting Equipment is again available for use in industrial work. War has shown the value of Imperial Outfits both at home and abroad, and the work of peace-time readjustment will prove them to be equally effective.

Manufacturers will more than ever need to maintain maximum production by reducing costly delays to a minimum, reduce manufacturing costs and reclaim scrapped parts—all can be accomplished with Imperial Equipment. Industrial Plants, Mills, Mines, Garages, Ship Yards will save thousands of dollars, speed up production and avoid costly delays by using

IMPERIAL WELDING AND CUTTING EQUIPMENT OXY-ACETYLENE PROCESS

Safe, speedy, efficient, economical, a single operation often pays for the original cost of an Imperial Outfit. Welds anything in metal, and cuts everything in wrought iron and steel. Portable, it is always ready for use, and any mechanic can readily operate it. Imperial Equipment is built up to a quality standard, not down to a price—that is why it is the best "buy" on the market.

JOBBER AND DEALERS: Imperial Products are quick, easy sellers. Write to us for complete details and special proposition.

IMPERIAL BRASS MANUFACTURING CO.

CHICAGO, ILL.

new order of things will mean to things commercial and industrial."

So far as failures were concerned, however, the month made a fine showing. There were only 549 reported to *Bradstreet's* for the whole month, a decrease of 20 per cent. from October, 16 per cent. from the low level of July, and 43 per cent. from November a year ago. This total was the smallest total recorded in any month since 1893, when the compilation of failures by months was begun by *Bradstreet's*. Liabilities for November totaled only \$9,642,486, a sum 11 per cent. smaller than in October, and 12 per cent. below that of November a year ago. On this subject it is further stated:

"For eleven months of the calendar year failures number only 8,810, a decrease of 26 per cent. from the like period of 1917, and a trifle more than half what they were in 1915, the high-water mark year for failures in the country's history. Liabilities for eleven months totaled \$128,016,124, a decrease of 14.6 per cent. from 1917, just one-half what they were in 1915, and 60 per cent. less than in 1914. The failures, assets, and liabilities monthly and quarterly for two years past follow:

1918	Number	Assets	Liabilities
January	1,219	\$7,244,374	\$16,521,531
February	914	6,512,520	11,468,734

False Notions On Teeth-Cleaning

All Statements Approved by High Dental Authorities

They Ignore the Film

The old idea of brushing teeth was to remove food particles. Some ways also aimed to polish teeth.

But time soon proved those methods insufficient. Teeth still discolored, still decayed. Tartar formed, and pyorrhea remained undiminished. Statistics show that tooth troubles constantly increased.

Millions of users have discovered that the tooth brush fails to save their teeth.

Now science knows the reason. It lies in a film—a slimy film—which dentists call bacterial plaque. It constantly forms on the teeth, and it clings. It gets into crevices, hardens and stays. Old-time brushing methods could not properly combat it.

That film is what discolours, not the teeth. It hardens into tartar. It holds food substance which ferments and forms acid. It holds the acid in contact with the teeth to cause decay.

Millions of germs breed in it. They, with tartar, are the chief cause of pyorrhea. Thus tooth troubles are largely traced to that film.

Science now has found a way to combat that film. It has proved itself to many able authorities by four years of clinical tests. Today it is embodied in a dentifrice called Pepsodent. And we offer you a Free tube to let you prove it out.

The Scientific Way

As a cleanser and polisher, Pepsodent holds supreme place among tooth pastes. But it also goes further.

It is based on pepsin, the digestant of albumin. The film is albuminous matter. The object of Pepsodent is to dissolve it, then to constantly prevent its accumulation.

But pepsin alone won't do. It must be activated, and the usual activating agent is an acid, harmful to the teeth. So pepsin long seemed forbidden.

Now science has found an activating method harmless to the teeth. Five governments have already granted patents. That method, used in Pepsodent, makes the use of active pepsin possible.

Before it was offered to users, able dental

authorities proved its value by clinical tests. They placed its results beyond question. Now we offer the proof to you in the shape of a home test.

Send the coupon for a One-Week Tube. Use it like any tooth paste and watch results. Note how clean the teeth feel after using. Mark the absence of the film. See how teeth whiten—how they glisten—as the fixed film disappears.

A week's trial will convince you that Pepsodent does what nothing else has done. You will see that your teeth are protected as they never were before. You will not return after that, we think, to any old-time method.

Cut out the Free coupon now.

Return your empty tooth paste tubes to the nearest Red Cross Station

ADVANCE IN GUARANTEED STOCKS

The market for guaranteed stocks is seldom active, and has not been active recently, but *The Wall Street Journal* finds a "considerably firmer tone compared with a month or two ago evident in these issues." This trend it declares to have been "in sympathy with the upward movement in the market for high-grade bonds," a fact which is explained by their known desirability for investment purposes. There are stocks in this class which "compare most favorably with the best grade of bonds." The writer gives interesting details as follows:

"Pittsburg, Fort Wayne & Chicago original (now preferred) stock is outstanding to the amount of \$19,714,285. There are no bonds on the property, so that dividends on this issue represent a first claim on the earnings, irrespective of lease to Pennsylvania Railroad, by which 7 per cent. dividends are guaranteed. This property can be regarded as self-sustaining under almost any condition, as it comprises 468 miles main line trackage from Pittsburg to Chicago. The preferred stock is followed by \$52,436,300 guaranteed special (now common) stock, entitled to 7 per cent. dividends under terms of lease to Pennsylvania. Special dividend, estimated around \$5 a share, is expected shortly from funds accumulated in the treasury of company, understood to consist in part of sinking-fund cash in excess of amount that was needed to retire its bonds which were paid off at maturity, and not refunded by new bond issue.

"American Telegraph & Cable stock, the property of which company is leased to Western Union until 1932, is quoted around 57-62. While the company at one time was regarded as being overcapitalized, it is a question whether its cables could be duplicated at present costs for labor and material at anywhere near the \$14,000,000 capitalization of the company. Cable business to Europe has been exceedingly heavy for the last few years, and even if the lease expired now instead of in 1932, there is little question that stockholders would be given a new lease on satisfactory terms. In the meantime the price of the stock has discounted possible reduction in rate in 1932, and the yield is so high as to afford a holder opportunity to amortize part of cost of stock out of dividends, if he is conservatively inclined. Following table gives present quotations for a number of important guaranteed stocks compared with a month ago:

	Guarantee	Price Now	Month Ago
Albany & Sus.	D. & H.	180-190	163-165
Amer. Tel. & Cable	West. Un.	57-62	53-57
Cleve. & Pitts. original	Penn.	68-73	65-70
Erie & Pittsburg	Penn.	55-65	50-60
Lack. Rail. of N. J.	D. L. & W.	70-75	67-72
Little Miami R.R.	Penn.	85-95	80-90
Morris & Essex	D. L. & W.	72-78	67-71
Northern Central	Penn.	72-78	68-73
Pitt., Ft. Wayne & Chi. orig.	Penn.	130-140	120-130
Remondel & Saratoga	Del. & Hud.	115-130	110-125
United N. J. R.R. & Canal	Penn.	187-195	188-190

"At present prices many of these stocks yield in excess of 5 and 6 per cent. and are highly regarded for permanent investment purposes. Market for such securities

Trailmobile

Trade-Mark Reg. U.S. Patent Office

Thousands in Use

Good Roads are preserved by reducing the amount of load carried on each wheel.

Cuts Hauling Cost to the Bone

The Motorless Motor Truck

SIZES

- 1,250 lbs.
- 1,500 lbs.
- 2,000 lbs.
- 3,000 lbs.
- 7,000 lbs.
- 10,000 lbs.

Also semi-trailers

Bodies for every business

Orders filled subject to Government requirements and restrictions

WITH a Trailmobile a truck hauls twice as much; a driver gets double the work done with practically the same effort; less gasoline and oil are used than would be required for two trucks; standing time is reduced because the Trailmobile can be loaded while the truck is away; a light truck and a Trailmobile can travel faster than a heavy truck.

With a Trailmobile attached, a passenger car or roadster can do the work of a one or two-ton truck, delivering farm produce to the market, hauling tools and building materials, making long distance deliveries.

Trailmobiles cost little to buy. They only increase the operating expense of the truck that hauls them about 10 per cent. Maintenance costs practically nothing. So economical is Trailmobile Transportation that it makes it profitable for many to use Trailmobiles and truck where the operation of truck alone would not be warranted.

Trailmobiles are built like a truck by automotive engineers. They have truck axles, truck bearings, truck wheels and a truck frame. They carry full loads at truck speeds without undue strain on themselves or the power unit. They track perfectly and do not sidesway.

"Economy in Hauling," a booklet, tells how the Trailmobile is saving money for its many users. You should read it, no matter what kind of hauling you have to do—light or heavy. Write today.

THE LEXICOGRAPHER'S EASY CHAIR

In this column, to decide questions concerning the current use of words, the Funk & Wagnall New Standard Dictionary is consulted as arbiter.

Readers will please bear in mind that no notice will be taken of anonymous communications.

"L. H." Jewell, Kan.—"Which is correct, 'The audience all rose to its feet,' or 'The audience all rose to their feet?'"

"Their feet" is better, as the word "all" is used, but why say more than "The audience rose." Inasmuch as it could not well rise otherwise than upon its feet?

"R. C. S." Portland, Ore.—"Is the expression, 'Hardware and Plumbing Supplies Jobbers,' meaning jobbers of hardware and plumbing supplies, correct?"

The sentence submitted is awkward in form and sound. It would be better to start the sentence with the word "Jobbers," as you do in explaining what you mean. It is well worth the additional preposition.

"C. N. C." White Salmon, Wash.—"Kindly tell me why in the chronological tables the birth of Christ is listed 4 p.m. when one would naturally expect that date to be a.m."

The actual date of the birth of Christ is uncertain, but the majority of authorities place it in 4 p.m. which means that the Christian era was started four years too late.

"P. J. T." Michigan City, Ind.—"Kindly give the proper pronunciation of the name *Katisha* from the opera 'Mikado'."

Katisha is pronounced *ka-tisha*—a as in fat, i as in hit, a as in attic.

"F. T. A." Lakewood, N. J.—"Kindly explain the difference between the Russian and the Christian calendars. I understand that there is thirteen days difference in the dates. Is their date earlier or later than ours? At what time did this difference change from twelve to thirteen days?"

According to "The New International Encyclopedia" (vol. iv, p. 321), "So perfect was the Julian style of reckoning that it prevailed generally among Christian nations, and remained undisturbed till the accumulation of the remaining error of 11 minutes or so had amounted, in 1582, to 10 complete days, the vernal equinox falling on the 11th instead of the 21st of March, as it did at the time of the council of Nicea, 325 A.D. This shifting of days had caused great disturbances by uniting the times of the celebration of Easter,

and hence of all the other movable feasts, and, accordingly, Pope Gregory XIII., after careful study with the aid of Clavius, the astronomer, ordained that 10 days should be deducted from the year 1582, by calling what, according to the old calendar, would have been reckoned the 5th of October the 15th of October, 1582; and, in order that this displacement might not recur, it was further ordained that every hundredth year (1700, 1800, 1900, etc.) should not be counted a leap year, excepting every fourth hundredth beginning with 1600. In this way the difference between the civil and natural year will not amount to a day in 3000 years. In Spain, Portugal, and part of Italy, the Pope was exactly obeyed. In France the change took place in the same year, by calling the 10th the 20th of December. In the Low Countries the change was from the 15th of December to the 25th; but it was resisted by the Protestant part of the community till the year 1700. The Catholic nations, in general, adopted the style ordained by their Sovereign Pontiff; but the Protestants were then too much inflamed against Catholicism in all its relations to receive even a purely scientific improvement from such hands. The Lutherans of Germany, Switzerland, and, as already mentioned, of the Low Countries, at length gave way in 1700, when it had become necessary to omit 11 instead of 10 days. A bill to this effect had been brought before the Parliament of England in 1583, but does not appear to have gone beyond a second reading in the House of Lords. It was not till 1751, and after great inconveniences had been experienced for nearly two centuries from the differences of the reckoning, that an act was passed for equalizing the style in Great Britain and Ireland with that used in other countries of Europe. It was then enacted that 11 days should be omitted after the 2d of September 1752, so that the ensuing day should be the 14th. A similar change was made about the same time in Sweden and Tuscany. Russia and Greece are now the only countries using the old style; a practice which renders it necessary, when a letter is thence addressed to a person in another country, that the date should be given thus: April 1-14 or June 27-July 10. It will be observed that the years 1800 and 1900, not being considered by us as leap years, have interjected two more days, making the difference 13 days between old and new style." Therefrom it may be seen that the Russians are 13 days behind us. Before the Gregorian reform, the error increased by one day in about 160 years.
